Yokohama release notes

The ServiceNow® Yokohama release includes new products and applications, as well as additional features and fixes for existing products. Read the release notes to learn about the release, prepare for your upgrade, and upgrade your instance.

Yokohama highlights

Unlock productivity at scale with AI Agents
Go beyond "better chatbots" and take action with AI innovations that are built for the future.

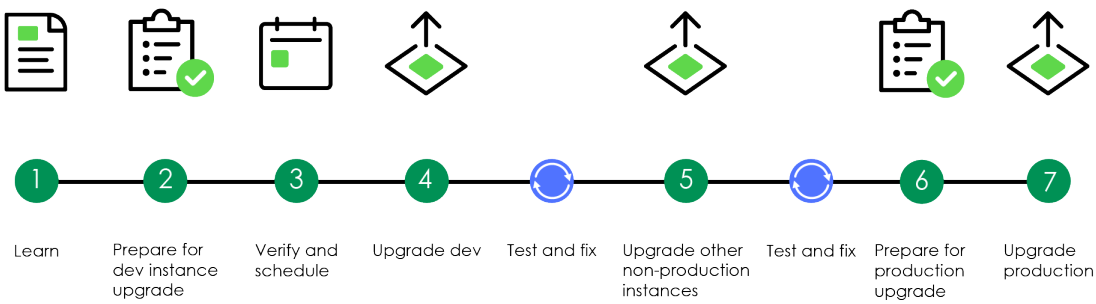
Connect, understand, and take action with Workflow Data Fabric
Deliver dynamic, context-rich, and accessible experiences for work at enterprise scale.

Supercharge any process with end-to-end automated workflows
Accelerate implementation, supercharge observability, and drive self-service across your entire business.

For more information about products and features in the ServiceNow AI Platform Yokohama release, see the Yokohama General Availability release highlights.

Path to successful upgrades

Upgrading your instance involves planning, testing, and validation. The release notes guide you through completing all of the phases and tasks for a successful upgrade.



Start your upgrade journey

To use the release notes in your upgrade process, choose the upgrade phase that you're ready to start with. It's recommended you complete the phases in the order listed. For a guide to the redesigned release notes experience, see Using the release notes.

- Release notes for upgrading from Xanadu
- Release notes for upgrading from Washington DC
- Release notes for upgrading from Vancouver

Yokohama General Availability release highlights

High-level overview of products and features in the ServiceNow AI Platform Yokohama release.

Overview of the Yokohama General Availability (GA) release

ServiceNow AI Platform

ServiceNow AI Agents

- ServiceNow AI Agent Studio: Design custom AI agents using natural language prompts. Allow multiple agents to work together and share data with chaining for smarter automation. Execute dynamic workflows and interact with and monitor agents in real time.
- Conversational subflows and actions: Create conversational subflows and actions in Workflow Studio to be deployed in Virtual Agent. Automatically generate flow inputs and outputs within conversational responses through Now LLM.
- Voice input for Now Assist: Use simple voice commands to unlock summarization skills with Now Assist. Improve accessibility and usability for people with disabilities. Help ensure more efficient and productive experiences for all users.

Data

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Workflow Data Fabric: Connect structured, unstructured, or streaming data to continuously monitor and improve operations.
- External Content Connectors for search: Index and search unstructured and document data across multiple enterprise sources. Extend AI Search to content and metadata repositories such as Confluence Cloud and SharePoint. The range of connectors will continually expand to bring in additional content sources such as Google Drive, Teams, Slack, Salesforce, Workday, and more.
- CSDM version 5: Extend unified data models from internal technology workflows to external products and services. Design responsible and compliant AI into technology workflows.
- User Experience Analytics: Visualize metrics and interactions through a comprehensive dashboard. Monitor and optimize operational key performance indicators (KPIs) to improve user experience and drive adoption.
- Data snapshots in Performance Analytics: Improve data analysis with multi-level breakdowns to group and filter indicator sources. Automate data collection to streamline workflows and reduce manual management.

Accessibility

- Text Adjust: Allow users to replace fonts and configure text spacing on ServiceNow or any web page. Enhance user experience with personalized solutions that improve visual and cognitive accessibility. Address WCAG 1.4.12 requirements.

Platform Security

- Data Privacy enhancements
  - Data Privacy: Discover sensitive data using AI/ML. Find sensitive data that doesn't conform to traditional rule-based patterns, such as names, street addresses, IP addresses, etc. Scheduled jobs can scan common attachment formats, PDF, DOC(X) and TXT and notify admins when sensitive data is discovered. Expanded discovery and anonymization capabilities to include data in journal fields for classic UI applications.
  - Field Encryption Enterprise: Bring and manage your own key to comply with internal and regulatory requirements. Leverage Access Observer to discover which resources are accessing which field to inform encryption policies. Protect sensitive data without impacting workflow functionality or user experience.
- Authentication enhancements
  - Zero Trust Access: 'Continuous authentication' enables customers to require a high assurance session before allowing access to sensitive data. The continuous authentication policy uses data classification or table designations as the criteria to require high assurance of a user's identity before granting access to data.
  - MFA enforced by default: MFA is required for all internal users* as part of our commitment to strengthening instance security and helping to prevent unauthorized access. All internal users* will self-enroll in MFA within a 30 - day period starting with the upgrade to Yokohama. Administrators will have the ability to modify the MFA policy to extend the enrollment window or exempt specific users, roles, or groups from the MFA requirement, if necessary.

    *Single-sign-on and integration accounts are not affected.
- Authorization enhancements

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Security data filters: Replace the need for query business rules as a security control, alleviating complexity and reducing performance issues.
- Related records: Restrict or grant access to projects and their related or child entities, without relying on complex access controls.
- Access Analyzer: Reduce user access troubleshooting time by granting the new AA_Admin role to authorized non-admin users.

- Log Export Service enhancements
  - Planning storage requirements is simplified with Log Export Service (LES) reports which provides visibility into log consumption.
  - Sending granular log contents to multiple sources is now supported with LES Kafka topics.
  - The addition of topics allows for subscribing to multiple different subsets of tables in sys audit as well as enabling tailoring of retention policies in customer infrastructure.
- Domain Separation enhancements
  - Existing instances can use Domain Separation guided setup to install Domain Separation.
  - Automates common tasks such as Domain creation, index creation and delta data check.
  - Creates a job summary report that highlights additional configurations needed prior to using Domain Separation.

Workflow Data Fabric

Now Assist updates

- Rapidly create custom spokes and RPA bots using natural language.
- Execute spoke actions in third-party systems directly with Now Assist.

Automation Center

- Connection Manager: Manage integrations, pagination, and data mapping with guided instructions. Centralize third-party automation tools to manage integrations, ETL, processes, and lifecycle optimization.
- Evaluation projects: Discover out-of-the box evaluation projects on every Yokohama instance. Make HRSD & CSM service managers aware of their ability to create process mining projects for case management. Utilize Process Mining insights to understand and optimize case management processes.

Process Mining

- Work notes analysis: Distill work notes on inefficient process transitions into actionable insights. Accelerate time to process improvements by understanding the detailed, documented reasons for bottlenecks.
- Process configuration Guided Setup: Enables SMEs (process analysts) to streamline and scale the creation of process configuration records. Increase business stakeholder adoption through pre-built process configurations from SMEs that makes it easier to set up a Process Mining project. Close the gap for tables where process configuration records aren't available via BU content packs and custom tables.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Integration Hub

- External content connectors: Enable secure access to enterprise data with GenAI-powered search from a single-entry point. Integrate third-party content sources like SharePoint and Confluence natively into AI Search.

Technology Workflows

Service Operations

- Digital End-User Experience enhancements
  - DEX score: Combine application and device health, user sentiment, and service experience metrics for full digital experience visibility.
  - Push notifications: Deliver pop-up alerts and status insight notifications to help employees be more informed and successful with self-service.
  - Network experience: Analyze network /application issues to identify bottlenecks and proactively address potential issues.

IT Service Management

- AI Agents: Quickly deploy AI agents with out-of- the-box use cases for change, major incident, and incident processes. Utilize preset or custom guard rails to protect your data.
- Now Assist for IT Service Management enhancements: Revamped conversational chatbot and risk analysis to reduce incidents. Automated surfacing of relevant knowledge and catalog items as employees submit requests.
- Additional ITSM enhancements:
  - DevOps: Enable DevOps teams to easily build custom orchestration integrations with intuitive tooling.
  - Digital Product Release: Create release plans for complex, multi-product initiatives via guided setup experiences.
  - Success Dashboard: Extend measurement of your implementation to AI Agents predefined success metrics.
  - Service Operations Workspace: Automatically surface relevant user information via DEX when a major incident occurs directly to response teams.

IT Operations Management

- Service Observability: Centralize critical signals and bridge workflows to increase agility and reliability. Calculate blast radius and reduce mean time to resolution (MTTR) by overlaying changes to your application to underlying infrastructure. Define and track service goals that align to your business objectives.
- Synthetic monitoring: Trigger alerts when public or private endpoints become unavailable using remote monitors. Monitor availability and response time for critical HTTP and API endpoints. Reduce MTTI/MTTR by providing operators with relevant outage context quickly, including affected services.
- Alert correlation using network traffic: Address alerts and issues before they become incidents or outages. Reduce alert noise and streamline response by exploiting the hidden logic in network traffic. Group and manage relevant alerts even without a fully mature CMDB.

Configuration Management Database (CMDB)

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- API Insights: Drive regulatory compliance by assessing APIs. Identify unauthorized endpoints or outdated protocols. Centralize API visibility from cloud and internal tools, including dependencies, optimizing configurations, and streamlining governance. Weave APIs into core IT workflow including change management, knowledge bases, and service operations.
- API Service Graph Connectors: Instantly establish API visibility using popular API management tools. Automatically ingest and refresh trusted data with connectors certified to work. Enable compliance to regulation and security initiatives with full API detail that also works with your established change and incident process.
- CSDM version 5: Extend unified data models from internal technology workflows to external products and services. Harmonize IT solutions on a single system of record and action for human and AI agents. Design responsible and compliant AI into every technology workflow.

Software Asset Management

- Now Assist for Software Asset Management
  - Gather publisher insights on software estate across software inventory, configuration health, and license compliance. Simplify software publisher outcomes and opportunities based on complex licensing rules. Understand compliance requirements and determine necessary actions to remediate risk and optimize spend.
- Software Asset Management guided setup: Guide users through success goal creation to reconciliation with their chosen product setup. Improve user experience with easy-to-follow steps to set up a new product.
- SAP S/4HANA Cloud support – public: Use the Integration Hub spoke to connect to SAP S/4HANA Cloud public edition. Populate data in the user subscription table to capture user information and applied roles for the user. Track the number of licenses used with the reconciliation process that leverages the FUE conversion model.

Hardware Asset Management

- Asset attestation: Create, assign, and monitor the completion of asset attestations to reduce gaps in asset data. Validate serialized asset usage for hardware not contained in corporate offices. Minimize security and compliance risks by verifying asset chain of custody.

Strategic Portfolio Management

- Now Assist for Strategic Portfolio Management
  - Project Task Monitoring: Autonomous monitoring and optimizing project operations. Real-time visibility into project health. Autonomous monitoring and optimizing project operation.
  - Story Generation: Generate detailed, high-quality stories from epics with AI Agents.
- Portfolio financials
  - Review cost rollups across approved, forecasted, and actuals. Analyze breakdowns by categories, cost types, or timeframes. Ensure alignment with budget to help prevent overspending.

Enterprise Architecture (formerly Application Portfolio Management)

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Now Assist for Enterprise Architecture
  - Architecture decision record summarization: Simplify details into concise summaries for faster decisions and improved efficiency.
  - Conversational Catalog requests: Create application, integration, and architecture review requests via a conversational interface.
  - Enterprise Architecture Diagrammer: Generate models and summaries of models from simple text prompts.

Operational Technology Asset Management

- Unified OT workspace for industrial and hardware assets: Manage OT, OE, and hardware assets using a single, integrated interface. Streamline asset lifecycle workflows with a unified set of tasks to reduce downtime risks and improve asset tracking.
- Firmware management: Ingest data from third-party discovery tools, identify devices, and parse firmware models. Normalize data based on curated content library of firmware versions to provide actionable profiles. Enable ServiceNow OT security tools to manage vulnerabilities and operational disruptions.
- Firmware content library and normalization: Produce a normalized set of discovered firmware based on a content library curated by ServiceNow. Normalized firmware results in standardization of firmware publishers, version numbers, release dates and UNSPSC codes. Normalized firmware content is enriched with Common Platform Enumeration (CPE) vulnerability data per the National Institute of Standards and Technology group firmware.

Risk and Resilience

- Business Continuity Management (BCM)
  - Smart Assessments for BIA templates: Leverage Smart Assessments capabilities, copy templates, prefill answers, scoring functions, filtering, etc. within BIA templates. Configure logic to calculate the RTO, RPO, Recovery Tier, CIA values based on the BIA responses. Enhanced user experience for building BIAs to address varied continuity requirements.
  - Task management in exercises and crisis events: Identify duplicate tasks across exercises and crisis event to remove redundancy. Contextualize dependencies across plans to understand potential impact to RTO, RPO. Visualize the execution order of the tasks via a Gantt chart.
- Environmental, Social, and Governance Management (ESGM)
  - Forecast planning and analysis: Create multiple what-if scenarios to model a future path. Assess potential changes and plan interventions by adjusting specific variables. Forecast data for metrics with predefined models.
  - Formula tree: Gain a better understanding of complex calculations with an intuitive representation of the formula's structure. View values in addition to calculations in the hierarchical formula tree. Identify errors or inconsistencies by breaking formulas down into their individual components.
- Integrated Risk Management (IRM)
  - Now Assist for Integrated Risk Management: Leverage the Summarize button on the Issue Overview page to generate a summary of the entire issue including actions taken and resolution. Provide feedback on the issue, copy the summary, or post the summary into work notes.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Smart Assessment Engine for compliance case analysis: Seamlessly integrate risk assessment into compliance case management on the app. Generate more meaningful assessment scores based on responses and data types. Automatically prefill responses.
- Digital Operational Resilience incident reporting, data model and service mapping visualization: Leverage a new workflow to meet regulatory reporting requirements for both IT and security incidents. Auto trigger compliance cases, notifications and assessments with relevant CMDB ties to drive informed remediation actions. Autogenerate initial, intermediate and final reports for DORA and classify major incidents appropriately.

- Privacy Management
  - New privacy assessment experience: Information object categories help to streamline data governance, improve clarity for business users, and enhance accuracy. Automatically calculate and continuously monitor processing activity risk scores with new criticality factors.
- Third-party Risk Management (TPRM)
  - Pre-populated questionnaires, Excel template: Pre-populated questionnaire responses for entities and engagements associated with the same active third-party. Leverage Microsoft Excel template for questionnaires – downloaded, completed, and imported in the vendor portal.
  - Dashboards for third-party insights, custom analytics: Personalize the dashboard with a preferred layout to quickly gain insights. Explore assessment data at various levels to prioritize and analyze key metrics. Customize report layouts, widgets, and data views and workflows for oversight of entire TPRM program.

Security Operations

- Now Assist for Security Operations
  - Security incident wrap-up generator: Automate workflows for analysts to close security incidents. Auto-generate close codes, resolution notes, and post incident analysis. Enable analysts to use natural language to ask follow-up questions and update content.
  - Correlation insights: Provide analysts quick views or records correlated to the security incident based on asset, user, or observable.

Core Business Services

HR Service Delivery

- Now Assist for HR Service Delivery
  - Journey generation: Accelerate journey creation through intuitive, natural language design tools. Increase manager productivity with streamlined and personalized employee development creation paths. Enhance user experience by simplifying complex journey mapping processes.
  - Growth plan generation: Enable employees to input details about their goals and growth outcomes in a simple text format. Generate draft growth plans with personalized activities, learning courses, and skill validation programs.
- HR appointment setting experience for deskless workers: Allow deskless workers to schedule in-person or virtual HR meetings via the employee service portal.

Health and Safety

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Exposure management: Identify exposures and link associated risk assessments and safety records. Conduct exposure assessments using a condition builder for precise tracking. Assign follow-up actions to help ensure worker safety and proper exposure management.
- Permit to Work: Request out-of-the-box permit types and add associated work orders, inspections, or safety records. Configure required checklist and approval flow to fit unique needs. Manage requested permits and directly cancel, suspend, or reopen permits within the Health and Safety Workspace.

Workplace Service Delivery

- Now Assist for Workplace Service Delivery
  - Workplace Concierge: Speed up reservations, service requests, and guest management through a conversational AI. Access intelligent workplace assistance anywhere, on any device. Enable employees to add external visitors to a reservation during the reservation process.
- Kiosk Indoor Mapping experience: Employees and visitors can raise cases directly from kiosks throughout the workplace. Intuitive UI to search and navigate spaces, view space details, booking options, and occupancy data. Configure map display and activate map features like reservations and data displays.
- Map Printing: Configure and generate printable map formats with customizable options. Customize printing configurations including zoom, font size, collation, legend, numbering, location pin, etc. Print maps directly from the location directory and Workplace Central.

Source to Pay Operations

- Now Assist for Source to Pay Operations
  - Decrease cases handled by support channels through self-service options. Minimize wait times for simple queries like payment inquiry status.

CRM

Customer Service Management

- Now Assist for CSM
  - Now Assist in portal case form: Provide answers directly in the case form instead of a list of articles.
  - Virtual Agent topic scheduling assistant: Easily schedule, re-schedule, and cancel appointments.
- Voice interaction page and call controls: Manage call transfers, conferences, hold, and mute via third party CCaaS call controls. Create consistency in agent experience across all channels through universal inbox. Streamline efficiency with direct workspace access to consult and blind call transfer controls.
- Embedded CCaaS components: Merge AI and automation tools from CCaaS and ServiceNow into Agent Workspace. Empower agents with natively embedded Genesys tools.
- Unified routing on 3rd party CCaaS: Consolidate ServiceNow chat and case routing policies on third party CCaaS. Drive intelligent routing orchestration by centralizing routing for all channels into one system. Enhance agent experiences by enabling call acceptance directly from the agent. Inbox Lower administrative

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

overhead by unifying routing policies, skills, and queue management into one system.

- Unified CCaaS Workforce Engagement Management: Embed Genesys WEM and key insights from ServiceNow in one place. Drive accurate forecasting, scheduling and optimize agent performance through bi-directional data syncs.
- Email as an interaction: Transform emails into interactions rather than automatically creating a case, reducing unnecessary cases. Promote clear distinction between interactions for initial receipt and cases for investigation and resolution of customer queries. Categorize and populate case intake through AI-generated recommendations.

Sales and Order Management

- Self-service order placement: Provide an omnichannel ordering experience via the self-service portal.
- Configure, Price, and Quote enhancements: Provide product recommendations during quote creation. Apply volume-based pricing to drive higher sales while also improving efficiency. Generate quote PDFs outlining product and pricing details. Display parent and child product offerings on quote lines in a hierarchical view.
- Case management for invoice operations: Capture and track invoice exceptions and disputes data to help ensure timely payments and improve cash flow.

Field Service Management

- Smart Assessment for Field Service Questionnaire: Streamline information capture with visualized instructional guidance. Generate questions based on conditional dependencies. Improved user experience with grouped inputs and the ability to add comments or upload attachments.
- Capacity console: Analyze and measure allocated versus used capacity across one or more territories to inform resourcing decisions. Identify and assign work to available resources based on configurable booking thresholds. Improve demand forecasting accuracy using selected date ranges and territories.
- Dispatcher enhanced territory filter: Navigate and multi-select territory hierarchies. Filter based on territory hierarchies, identifying resources at various levels of granularity.
- Advanced task dependencies: Define dependencies in the work order task template. Complete work sequentially to help ensure prerequisites are met by configuring task relationships. Proactively alert dispatchers when tasks are completed ahead of schedule or delayed.
- Appointment booking slot recommendations: Allow customers and agents to select from recommended time slots. Schedule technician visits based on the nature of the work and significance of the customer relationship. Suggest appointment slots that account for agent availability and capacity.

Industry Solutions

Financial Services Operations for Banking

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Now Assist for Financial Services Operations
  - Report a dispute: Manage rising dispute cases and inquiries with AI-powered case intake. Autonomously collect all relevant details from the cardholder and seamlessly hand-off cases to human agents. AI is grounded in pre-defined case intake requirements with a conversation audit trail stored on the case.
- Dispute Playbook enhancements
  - Chargeback Flow: Automate chargebacks amongst dispute case stakeholders. Shorten resolution time by automatically triggering required actions to process a dispute case. Aggregate communication between merchants and acquiring banks into a single interface. Reduce development time with preconfigured chargeback flows for fraud and consumer disputes. Adhere to tight SLA time-frames by allowing individual transactions to progress independently.
  - Full Visa Resolve Online (VROL) integration: Communicate directly with Visa Resolve Online (VROL) across the entire dispute process. Embed Visa callouts across resolution steps. Reduce manual errors by dynamically exchanging information between ServiceNow and VROL. Help prevent unnecessary disputes by identifying associated transactions, such as overlooked refunds.
- Ethoca Alerts integration: Strengthen customer satisfaction by stopping fraudulent transactions before merchants fulfill orders. Minimize dispute processing expenses and chargebacks by stopping orders prior to fulfillment.
- Updated rules content pack for Visa: Automatically maintain Visa rules updates with built-in, bi-annual rules maintenance. Easily re-deploy updated rules across your dispute processes for faster resolution experiences.

Financial Services Operations for Insurance

- Now Assist for Financial Services Operations
  - Virtual Agent scheduling assistant: Schedule, re-schedule, and cancel appointments. Reduce case count with increased booking handled through Virtual Agent. Improve customer satisfaction with an easy-to-use, conversational experience.
- Insurance Claims: Manage complex claims via multi-adjuster support and persona-specific workspaces for improved productivity and customer satisfaction. Tailor claims processes to fit unique business needs and effortlessly deploy end-to-end claims workflows with intuitive configuration. Incorporate additional lines of business with ease through configurable framework and data model.
- Service Bridge for Financial Services Operations: Eliminate navigating multiple systems by sending and receiving requests within ServiceNow. Improve resolution times by receiving structured requests in a single system of action. Reduce the cost to serve with direct, actionable communication between relevant parties.
- Voice interaction page and call controls: Create consistency in agent experience across all channels through universal inbox. Expedite resolution times by eliminating back-and-forth between CCaaS CTI. Boost efficiency with direct workspace access to consult and blind call transfer controls.
- Embedded Contact Center as a Service (CCaaS) components: Merge AI and automation tools from CCaaS and ServiceNow into Agent Workspace. Natively embedded Genesys tools help to serve customers faster.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Unified Routing on 3rd party CCaaS: Centralize routing for all channels into one system. Enable call acceptance directly from the Agent Inbox. Unify routing policies, skills and queue management into one system.
- Unified CCaaS Workforce Engagement Management (WEM): Embed Genesys WEM and key insights from ServiceNow in one place. Drive accurate forecasting, scheduling and optimize agent performance through bi-directional data syncs. Optimize staffing and scheduling decisions and reduce administrative effort.
- Email as an interaction: Transform emails into interactions rather than automatically creating a case, reducing unnecessary cases. Promote clear distinction between interactions for initial receipt and cases for investigation and resolution of customer queries. Categorize and populate case intake through AI-generated recommendations.

Manufacturing Commercial Operations

- Now Assist for Manufacturing Commercial Operations
  - Intelligent answers in portal case form: Provide answers directly in the case form instead of a list of articles.
  - Virtual Agent scheduling assistant: Schedule, re-schedule, and cancel appointments. Reduce case count with increased booking handled through Virtual Agent. Improve customer satisfaction with an easy-to-use, conversational experience.
- Order Management
  - Self-Service Order Placement: Enable customers to configure products and place orders via self-service portal. Streamline order placement and fulfillment processes and increase conversion rates by making it simpler for customers to complete orders.
  - Case Management for Invoice Operations: Create cases for multiple invoices or for specific invoice lines. Increase operational efficiency by avoiding bottlenecks and disruptions in invoice processing workflow.
- Quote PDF Generation in Quote Management: Generate quote PDFs outlining product and pricing details for customer review.
- Email Interactions: Transform emails into interactions rather than cases to avoid creating unnecessary case creations. Promote clear distinction between interactions for initial receipt and intake and cases for the investigation and resolution of customer queries. Categorize and populate case intake through AI-generated recommendations.
- Service Bridge - Copy from Service Catalog to Remote Catalog Item: Enables the copy of standard portal catalog items to the Service Bridge Remote Catalog, eliminating the need to manually recreate Service Catalog items in the Service Bridge Remote Catalog.
- Embedded CCaaS components: Merge AI and automation tools from CCaaS and ServiceNow into Agent Workspace. Utilize natively embedded Genesys tools.
- Unified routing on 3rd party CCaaS: Centralize routing for all channels into one system. Enable call acceptance directly from the Agent Inbox. Unify routing policies, skills and queue management into one system.
- Unified CCaaS workforce engagement management: Embed Genesys WEM and key insights from ServiceNow in one place to optimize staffing and scheduling decisions and reduce administrative effort. Drive accurate forecasting, scheduling and optimize agent performance through bi-directional data syncs.

Technology

- Now Assist for Technology, Media and Telecommunications (TMT)
  - ALE - Case summarization for Customer Success: Use Gen AI to summarize records for customer success engagement and get a clear summary of key details. Quickly catch up on onboardings with AI-generated case summaries. Maintain constant communication with customers using AI-generated summaries for key touchpoints.
  - Transform Mapping Assist: Auto-generate field transformations for fields mapped between instances, identifying matches to reduce time consuming and error prone manual entry. Leverage automation to boost productivity of Service Bridge administrators and reduce integration errors.
- Technology Provider Service Management
  - ALE - Health and Risk Frameworks: Define, manage, and track key indicators to establish an overall health score for customer engagement. Define, create, and manage relational risks and take action to remediate. Get clear insights into risk signals and create repeatable plans to address them.
  - ALE - Success Blueprint Builder and Initiative Roadmap: Customize and automate templates for success blueprints, objectives, and outcomes. Organize objectives, outcomes and initiatives with a timeline view to see the status, timing, and priority of all success initiatives.
  - Test Diagnostics for Technology Product Support Case Type: Resolve issues with complex diagnostic tests that are configured and embedded directly into your workspace. Organize and run diagnostics directly in the platform to pinpoint root causes. Enable everyday support agents to diagnose issues independently.

Telecommunications

- Now Assist for Technology, Media and Telecommunications (TMT)
  - Service Bridge mapping: Auto-generate field transformations for fields mapped between instances, identifying matches to reduce time consuming and error prone manual entry. Leverage automation to boost productivity of Service Bridge administrators and reduce integration errors.
  - Test summarization extension for Customer Service Problem Management: Generate concise explanations and contextual notes, making test results easier to understand for quicker insights and more informed decision-making. Prioritize high priority issues with enriched summaries. Provide clear and contextual test summaries to align stakeholders, driving effective discussions and data-driven decisions.
  - Case summarization for Customer Success: Accelerate onboarding and customer success engagement status with a clear summary of key details.
- Telecom Service Management (TSM)
  - Health and Risk Frameworks for Customer Success: Define, manage, and track key indicators to establish an overall health score for customer engagement. Clarify, create, and manage relational risks and take action to remediate. Get clear insights into risk signals and create repeatable plans to address them.
  - Remote Catalog Client Transcript for Service Bridge: Help ensure quality and accuracy with scripts reviewed and approved by the consumer administrator before activation.
- Telecom Service Operations Management (TSOM)

- Patterns-based network discovery: Discover physical network inventory directly from network elements using both SNMP and CLI interfaces. Keep inventory data up-to-date and synchronized with live network resource data, and maintain an accurate, complete CMDB with automated network discovery.
- Telecom Discovery Service Graph Connector: Standardize Nokia Atliplano vendor equipment integration with out-of-the-box multi-vendor PON network discovery. Discover a complete physical network inventory with detailed resource information by connecting to vendor management systems via REST APIs.
- Telecom Reconciliation: Identify and resolve discrepancies between live network inventory and CMDB inventory to help ensure alignment and boost productivity. Auto-generate discrepancy reports detailing the type of discrepancy. Provide engineers with recommended corrective actions and the flexibility and control to choose between manual or automated methods to resolve discrepancies. Improve operations by automatically aligning the operational status of network resources.

- Strategic Portfolio Management for Telecommunications (SPMT)
  - Private 5G construction template: Provide pre-defined workflows for site assessment, equipment procurement and installations. Track milestones for spectrum licensing and regulatory approvals in real time. Integrate risk management module helping to ensure regulatory compliance. Allocate resources for multi-site deployments leading to reduced costs.
  - Fiber broadband rollout template: Manage dependencies with workflow automation and tracker for permits and approvals. Offer centralized view of deployment progress to maximize coverage and minimize costs. Provide onboarding dashboards for customer-ready services, enhancing customer acquisition.
- Telecommunications Network Inventory (TNI)
  - Design & Assign Playbook Experience: Improve customer experience with faster network designs and fewer errors. Visualize a step-by-step canvas view of the design and assign process. Leverage an end-to-end playbook for comprehensive understanding of activities and actions. Leverage framework capability, build custom Design & Assign playbooks to align with your unique products, services, and business processes.
  - Network Site User Interface: See capacity threshold violations on a map and remove the need to sift through excessive data. Accelerate network issue resolution with color-coded operational statuses for sites, circuits, and topologies. Enhance CSAT and meet SLAs by quickly identifying and addressing network events.
  - Enhanced Change Management - Multimodal: Leverage out-of-the-box change management status naming for a clear understanding of workflow stages. Reduce the time to plan, build, modify, and maintain network activities by configuring the platform to align with your business processes. Reduce design errors and fallout by aligning customer status with network status activities.

Public Sector Digital Services

- Now Assist for Public Sector Digital Services
  - Chat summarization: Deliver faster services by allowing agents to quickly understand the context of newly-assigned cases. Boost customer experiences and reduce the need to repeat information already provided to virtual agent. Improve operations by collecting consistent case resolution data.

Healthcare and Life Sciences Service Management

- Healthcare Operations Core: Enable care teams to request support directly from EMR systems, connect with service departments, and track requests with full visibility. Configure healthcare organizations, manage hierarchies, and control access for care teams. Standardize and customize cases for support service departments, enabling care teams to efficiently report biomedical, IT, and general hospital operations issues.
- Care Team Portal: Enable full visibility into all support cases requested by care teams, including from other team members. Add or remove care team members dynamically to maintain up-to-date collaboration. Capture relevant Epic or other EMR parameters on cases, enriching data for IT and support teams.
- Care Team Operations for Healthcare IT: Standardize IT case management, enabling care teams to request support for EMR and IT-related needs. Facilitate IT support requests through the Care Team Portal with preconfigured, intuitive workflows. Synchronize healthcare IT cases with incidents, giving care teams visibility into reported IT issues while enabling IT teams to resolve them efficiently.
- Care Team Operations for Biomed: Streamline biomed case management, extending healthcare operations to address corrective maintenance needs. Enable direct biomed support requests through the Care Team Portal, using preconfigured record producers. Synchronize biomed cases and work orders, providing visibility into reported issues while allowing biomed teams to resolve them efficiently—without duplicative updates.

Retail Service Management and Retail Operations

- Retail multistore case generator: Minimize configuration needed for OOTB multi-location retail case assignment. Create child cases for multiple stores at once. Improve site productivity by assigning cases directly to managers and tracking completion at each location.
- Retail portal: Increase store productivity with centralized retail cases, catalog items, and quick links with a streamlined interface designed for store teams. Improve store team experience and highlight key metrics like case count and escalations based on store persona. Display retail-specific content OOTB, allowing teams to focus on tailoring the portal for their unique needs.

Application Development

App Engine

- AI Agents for runtime workflows: Apply the same AI enhancements to custom applications as those offered in ServiceNow workflow solutions. Enhance user experiences and expand self-service through AI-powered runtime features. Create and deploy AI agents with custom applications.
- ServiceNow Studio: Build and scale automations faster with a unified development experience across all ServiceNow builders. Manage all metadata in one place with cross-scope editing. Track work, deploy safely, and maintain instance integrity with developer-friendly update set management.
- App Engine Management Center enhancements: Quickly assess whether an app meets production criteria with readiness score. Accelerate deployment of critical apps by using development best practices to determine automatic approvals. Gain confidence that deployed apps match company defined best practices.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Creator Studio enhancements: Set parameters on forms to auto- populate fields based on selected values of another field. Make forms more useful for requesters by populating values on their behalf.
- Now Assist for Creator
  - App summarization: Add AI generated app summaries to app descriptions in ServiceNow Studio. Enable admins to easily identify the purpose of applications during deployment and detect duplicate applications. Provide developers and admins deeper visibility into apps being deployed, what they do, and how they will function.
  - Form generation: Use natural language to describe and create request forms in Creator Studio. Empower low-code developers with AI Agents embedded in Creator Studio.
  - Table summarization: Provide admins with a summary of a table included in an app being deployed. Write a text summary of the purpose of the table.
  - RPA bot generation: Generate bot workflows from instructions and process descriptions. Support the learning curve of RPA Desktop Design Studio by lowering the development barrier.
  - Test generation: Increase automated test coverage by reducing the effort of creating and maintaining test cases. Generate ATF tests and test cases from text, Excel upload or story records. Reduce the barrier of adoption for Automated Test Framework.
  - Now Assist in Process Mining: Identify root cause of inefficient process transitions and suggest remediations. Analyze work notes related to inefficient transitions and provide the most relevant reasons. Help process owners better understand stage transitions in their workflows.

App Engine for Enterprise Resource Planning

- OData query capabilities: Transform ERP data with advanced OData queries and customer fields in Model Manager. Order data by one or more fields in the 'Use ERP Data' flow action. Maintain the input, output field names per the business requirement.

ServiceNow Impact

Impact Store Application

- Impact Store Application: Access Impact capabilities directly where you work using the new Impact store application. Take action on Impact insights and recommendations faster. Get a walk-through of the new experience and features in a guided tour.

Value & Adoption

- Strategic Portfolio Management integration: Automatically transfer Impact recommendations and insights into Strategic Portfolio Management. Assign work items to the appropriate portfolio and track execution status. Improve accountability and help ensure recommendations are correctly actioned.

Health & Observability

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Proactive code check: Reduce future tech debt by aligning new code to best practices. Scan code in sub-production environments to identify issues. Link directly to the issues to fix them before deploying to production.
- Instance Observer enhancements: Automate correlation analysis to identify root causes, reducing the need for manual data sifting. Improve efficiency in addressing issues by quickly pinpointing underlying problems through correlated metrics and logs.

Expertise & Training

- Implement and adopt Now Assist quickly with these new Now Assist accelerators:
  - Jumpstart Your Now Assist Skill Kit
  - Jumpstart Your Now Assist for Customer Service Management
  - Jumpstart Your Now Assist for Virtual Agent

Expertise & Guidance

- Implement and adopt ServiceNow products quickly with these new accelerators:
  - Jumpstart Your Employee Management
  - Jumpstart Your Knowledge Management
  - Jumpstart Your Resource Management
  - Jumpstart Your Legacy Workflow Migration
  - UX Fundamentals*

  *UX Fundamentals is only available for Advanced & Total plans.

- Configuration Assist add-on: Get hands-on help from experts to deploy unused capabilities and act on Impact accelerator and platform health findings. Align a Technical Consultant or Business Process Consultant to a targeted product area. Choose the engagement length and coverage that best fits your needs.

Upgrading to the Yokohama release

Upgrade to the ServiceNow AI Platform Yokohama release today. Take advantage of these ServiceNow resources to help you stay current.

Get your Yokohama release upgrade kit

Go to the Release and Upgrades forum on the Community. Find everything you need to get started on your upgrade, including a summary of new features, demos, key resources, and more.

ServiceNow Releases and Upgrades community

Ask questions and get answers from ServiceNow experts and peers, get access to the latest best practices and resources, and register for releases and upgrades community events for additional support.

Learn about the Yokohama release

The Yokohama release includes new features and improvements built on the ServiceNow AI Platform®.

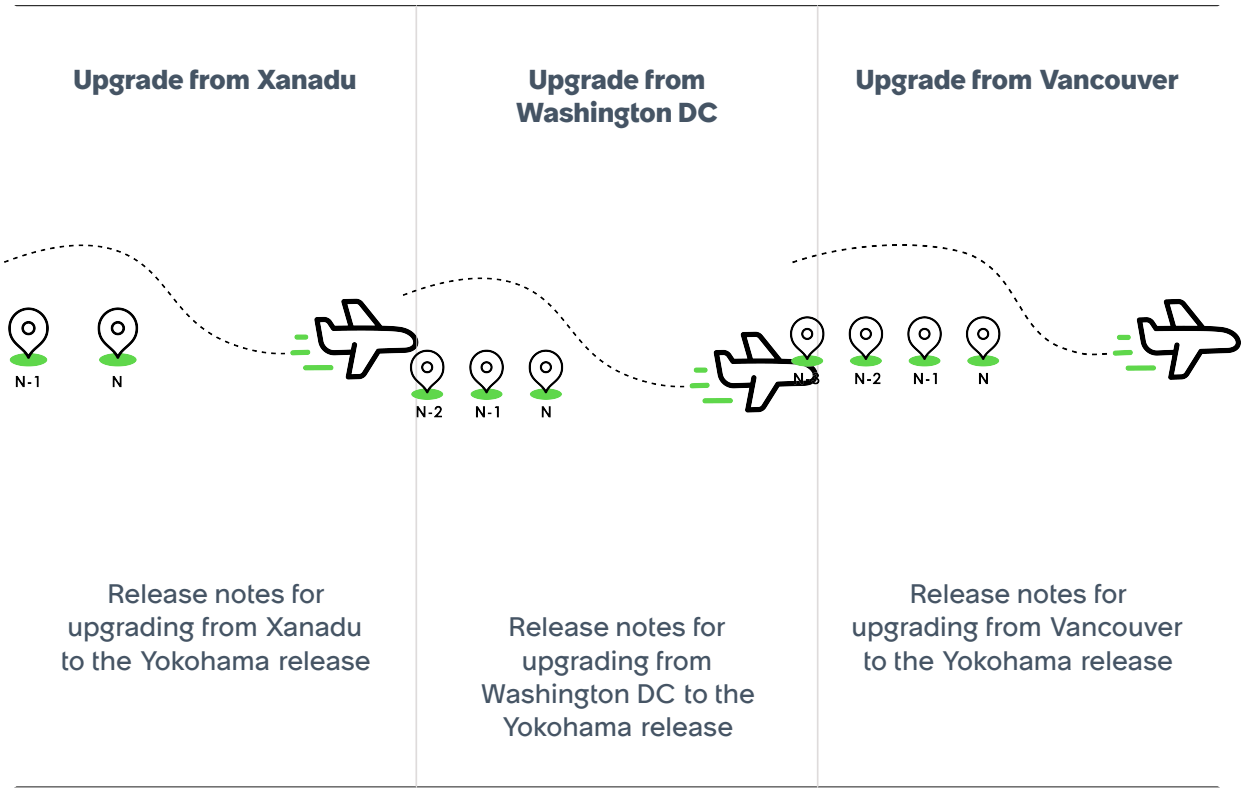
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Release dates

- Early availability: January 30, 2025
- General availability: March 12, 2025

Release notes for upgrades

Before you upgrade, review release notes from your current version to the Yokohama release. The release notes offer valuable information about new functionality, notable changes, and available fixes. They help you determine whether the upgrade contains functionality you need and fixes that resolve any issues affecting your instance. The release notes can also help you determine whether items you previously customized are being upgraded.



Release notes for upgrading from Xanadu

When you upgrade from the Xanadu release, understand the fixes in each release version, notable changes for the user interface, browser support, plugin updates, and each feature's upgrade and migration tasks if applicable.

Updated features and products

Other products were changed and updated in the Yokohama release. For more information, refer to the release notes topics, which are organized by product area.

AI Experiences release notes

AI Experiences has new and updated features in the Yokohama release.

AI Control Tower release notes

The ServiceNow® AI Control Tower application provides a centralized workspace for AI stewards to manage and monitor AI within the enterprise. The AI Inventory, based on a unified AI asset data model on the ServiceNow AI Platform® along with associated governance business processes are available in this workspace.

Important:
AI Control Tower is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

AI Control Tower highlights for the Yokohama release

Yokohama Patch 11

- Review changes to Now Assist usage measurement.
- Some Now Assist skills, agents, and agentic workflows are on by default.
- Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications.
- AI connections are introduced in AI Control Tower using Service Graph Connectors. AI connections are combination of hyperscalars, AI apps, and agentic AI frameworks. The AI Service Graph Connectors available from March 2026:
  - AWS
  - Microsoft - Azure Foundry and Copilot
  - n8n
  - GCP Vertex AI

- LangGraph
- Salesforce

Yokohama Patch 6

- Monitor the performance of guardrails enabled through Now Assist Guardian using the Health tab.
- Measure and improve the quality of interactions with virtual agents using the Evaluation tab.

Yokohama Patch 3

- AI Control Tower helps customers manage and oversee performance, risk profile & workforce transformation while also helping to seamlessly embed AI into enterprise strategy.

- - Create an AI steward role.
  - Use the AI Asset inventory to catalog AI-related artifacts.
  - Use the AI skills Approvals to review and approval flows.
  - Create a AI Control Tower Workspace.

Important information for Upgrading AI Control Tower to Yokohama

General availability release, no upgrade.

AI Control Tower Features

Yokohama Patch 6

Health tab in AI Control Tower

Monitor and evaluate the effectiveness of offensive content and prompt injection guardrails active on your AI assets.

Evaluation tab in AI Control Tower

Measure and improve the quality of interactions with virtual agents using the Evaluation tab.

AI model providers

Explore AI model providers

Enable choice for third party model providers powering ServiceNow® skills and agents.

Yokohama Patch 3

AI Control Tower

- A single pane view of the AI inventory, its state, and its risk and compliance posture.
- Lifecycle to manage AI asset onboarding and deployment.
- Helps user oversee and manage AI Asset inventory's risk profile with regard to enterprise policies and global regulations, as defined by the user, with a focus on privacy, data governance, and ethical AI.
- AI Case management to oversee AI asset-related inquiries and cases, enabling faster response and improved tracking.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Multi-instance management to synchronize AI asset inventory from sub-prod to prod instances to initiate governance early in the build process.
- Control settings to block only "other" skills in Now Assist AI deployment pending approvals.

AI Control Tower

- AI Steward role- Facilitate and coordinate governance activities between innovation, legal, security, risk and compliance teams.
- AI Asset inventory- Unified data model on the ServiceNow AI Platform to catalog AI Model, datasets, prompts, and other related artifacts including Now Assist and AI leveraging Generative AI Controller.
- AI skills Approvals- Review and approval flows for Now Assist skills and other related assets like AI Models and AI datasets deployed through Now Assist or generative AI Controller.
- AI Control Tower Workspace- Intuitive workspace to surface governance tasks, reports, inventory, and insights.

UI changes

Yokohama Patch 3

Enhancements to landing page dashboards for AI steward.

Changed in this release

Yokohama Patch 11

Changes to Now Assist usage measurement

Starting with Yokohama Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Some Now Assist skills are turned on by default

The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.

Configure ACLs for AI agents and agentic workflows

Configure the access control lists for who can discover and trigger AI agents and agentic workflows in their guided setups in AI Agent Studio. You can determine whether an AI agent or agentic workflow behaves as a dynamic user or as an AI user. You can also specify if an AI agent or agentic workflow can be available to all authenticated users or publicly available.

Activation information

The AI Control Tower application is installed as part of the generative AI Controller.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Browser requirements

The AI Control Tower application supports all the browsers.

Accessibility information

The AI Control Tower application supports all the platform accessibility features.

Localization information

Yokohama Patch 3

The AI Control Tower application isn't localized

Yokohama Patch 3

AI Risk and Compliance

Conversation Insights release notes

The ServiceNow® Conversation Insights application delivers Inferred customer satisfaction (CSAT) scores, with underlying factors that improve CSAT actionability. Conversation Insights is a new application in the Yokohama release.

Conversation Insights highlights for the Yokohama release

- Augment conversations with insights based on the Inferred CSAT score. The Inferred CSAT framework provides an estimated score computed using AI in real time by analyzing the entire sequence of the conversation.
- Use underlying factors like Resolution, Confusion, Effort, Empathy, Next Steps, Frustration, Transfers, and Escalations to provide explainability to the Inferred CSAT scores.
- Leverage the Inferred CSAT framework and Conversation Insights [sn_aci_insights] table linked to the Conversation [sys_cs_conversation] table to create adhoc dashboards and workflows for conversational analytics applications.

See Conversation Insights for more information.

Important:
Conversation Insights is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Conversation Insights features

Inferred CSAT

Inferred CSAT provides an estimated score computed using AI in real time by analyzing the entire sequence of the conversation.

CSAT factors

The following CSAT factors provide explainability to the Inferred CSAT score.

- Resolution
- Confusion
- Effort
- Empathy

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Next Steps
- Frustration
- Transfers and Escalations

AI Agent Analytics dashboard

The AI Agent Analytics dashboard includes visualizations with Inferred CSAT scores and factors by default.

Activation information

Install Conversation Insights by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Related ServiceNow applications and features

AI Agent Analytics dashboard

Track the AI agent use and efficiency gain on your instance through the AI Agent Analytics dashboard. The dashboard can reveal trends in how AI agents are used to improve the time to resolution and the number of tasks closed.

Conversational Analytics dashboard

The Conversational Analytics dashboard helps you improve Virtual Agent (VA) interactions with users by providing insights into conversational data.

AI Control Tower

The AI Control Tower dashboard displays a comprehensive overview of the AI status, AI inventory, and other AI-related metrics.

Document Intelligence release notes

The ServiceNow® Document Intelligence application is an artificial intelligence (AI) solution that quickly and accurately categorizes and extracts information from documents. Document Intelligence was enhanced and updated in the Yokohama release.

Document Intelligence highlights for the Yokohama release

Yokohama Patch 6

- Summarize content in document and image attachments with the document and visual insights AI agent.
- Use Google Gemini and Anthropic Claude on AWS as AI model providers for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI.

Yokohama Patch 3

- Boost productivity by using the document and visual insights AI agent in Now Assist to autonomously analyze and extract data from documents and images.

Early Availability

- Speed up your document processing workflows and quickly extract the text and tables from your documents by using Now Assist.
- Save time looking for the information that you need in a document and quickly find the answers to predefined questions by using Now Assist.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

See Document Intelligence for more information.

Important:
Document Intelligence is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Yokohama Patch 6

New third-party AI model provider options available for all Now Assist applications

Google Gemini and AWS Claude are available for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI.

Yokohama Patch 3

Document and visual insights AI agent

Use an AI agent to help process tasks that analyze and extract data from documents and images.

Early Availability

Now Assist in Document Intelligence

Use Now Assist in Document Intelligence to extract information from documents and provide answers to defined questions using generative AI.

Changed in this release

Yokohama Patch 6

Document and visual insights AI agent enhancements

Generate a summary of document and image attachments with the document and visual insights AI agent.

Activation information

Install Document Intelligence by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes. The Document Intelligence application (sn_docintel) depends on the Document Intelligence plugin (com.glide.platform_ml_di), the Predictive Intelligence plugin (com.glide.platform_ml), and the Document Intelligence UIB component (com.sn_docintel_iframe). For more details, see Install Document Intelligence.

Related ServiceNow applications and features

Accounts Payable Operations

Use Document Intelligence for Accounts Payable Operations to extract information quickly and accurately from invoice documents that are received as attachments via email, as well as create invoice records in the Accounts Payable Operations application.

Customer Service Management

Use Document Intelligence for Customer Service Management (CSM) to extract relevant information from email and case attachments, such as account numbers or customer addresses, and add that information to cases.

Financial Services Operations

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Use Document Intelligence integrated with the digital workflows in the Financial Services Operations applications to help your organization quickly automate document processing and accurately extract information from documents to the ServiceNow AI Platform.

Automation Center

Use Document Intelligence for Automation Center to discover automation opportunities for document processing using DocIntel automation metrics.

Generative AI Controller release notes

The ServiceNow® Generative AI Controller application enables you to use generative AI capabilities with third-party large language model (LLM) providers on the ServiceNow AI Platform. You can reduce complexity and enhance the user experience in your organization by generating and summarizing content, analyzing user sentiment, and writing unique prompts. Generative AI Controller was enhanced and updated in the Yokohama release.

Generative AI Controller highlights for the Yokohama release

Yokohama Patch 11

- Review changes to Now Assist usage measurement.
- Some Now Assist skills, agents, and agentic workflows are on by default.
- Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications.

Previous Patch releases

- Protect your users by configuring settings for anonymization of personally identifiable information (PII) with the Data Privacy application.

See Generative AI Controller for more information.

Important:
Generative AI Controller is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Important information for upgrading Generative AI Controller to Yokohama

Generative AI Controller is installed and updated when you install or update any Now Assist application. If you have issues installing or updating applications, see this knowledge article for steps that may address your issue. Otherwise, you can make a Support case.

New in the Yokohama release

yokohama-patch-13

Connect Generative AI Controller to your Azure OpenAI deployment by configuring a custom resource path in your bring your own key (BYOK) model configuration. Use this when your Azure OpenAI endpoint includes a path segment that Generative AI Controller does not add by default.

Yokohama Patch 10

Administrator access to Gen AI log

Access the Gen AI log [sys_generative_ai_log] table to gain insights for debugging purposes. Records related to HR remain restricted to HR admins.

Enhanced AI asset inventory

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Track the enhanced AI asset inventory through AI Control Tower using new metadata fields in the Model [sys_generative_ai_model_config] and Prompt [sys_generative_ai_config] tables. Gain better visibility into AI asset status and life-cycle details, such as retirement dates.

Yokohama Patch 8

AI Model Version Mappings

Review the mappings between AI model versions, their providers in the Gen AI Model Version Mapping [sys_gen_ai_model_version_mapping] table. It shows mapping between source and target models, along with associated metadata, such as skill type, model type, resource associations, and provider information.

Yokohama Patch 6

Identify third-party LLM information

Access the Gen AI Log Metadata [sys_gen_ai_log_metadata] table to identify which LLM model, version, and requested language was used to generate the AI content.

Restrict LLM usage based on the domain

Enable or disable Now Assist for each domain so that you can restrict the use of LLMs and avoid using AI for data processing, if needed.

Yokohama Patch 1

Global Model selection for conversational skills

Enable Now Assist Admins to choose between GPT4.o and Now Assist LLM model for data routing at a global level. This ensures compliance with any regional restrictions and helpful for APAC users who may face limitations with US-based models, such as GPT-4.0.

Changed in this release

Yokohama Patch 11

Changes to Now Assist usage measurement

Starting with Yokohama Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Some Now Assist skills are turned on by default

The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.

Configure ACLs for AI agents and agentic workflows

Configure the access control lists for who can discover and trigger AI agents and agentic workflows in their guided setups in AI Agent Studio. You can determine whether an AI agent or agentic workflow behaves as a dynamic user or as an AI user. You can also specify if an AI agent or agentic workflow can be available to all authenticated users or publicly available.

Yokohama Patch 1

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Configure Data Privacy and Data Discovery to protect the personally identifying information (PII) of your users.

Generative AI Controller has changed to use the Data Privacy application instead of the Sensitive Data Handler to help anonymize PII. The process for choosing what gets anonymized and how has shifted to different tables and forms that your administrator must configure for your organization.

Deprecations

The dependency on Sensitive Data Handler has been removed. Regular expressions that are configured with Sensitive Data Handler are applied to the Data Privacy application with a fix script when you upgrade to Yokohama.

Activation information

Generative AI Controller is a ServiceNow AI Platform feature that is available with activation of a Now Assist application. For details, see Installing Generative AI Controller and Install Now Assist plugins.

Related ServiceNow applications and features

Agent Chat

The ServiceNow® Agent Chat provides various features that agents and requesters can use to streamline the agent and end-user chat experience. Agent Chat also provides features that managers can use to monitor and assist agents.

AI Search

The ServiceNow® AI Search application provides a consumer-grade search engine for Service Portal, Now Mobile®, and Virtual Agent. Intelligent query features help you quickly find the answers that you need.

Customer Service Management

The ServiceNow® Customer Service Management (CSM) application enables you to provide the service and support that your external customers need. For example, your customers can communicate and get the help through the web, email, chat, telephone, and social media.

Dynamic Translation

The ServiceNow® Dynamic Translation application enables you to dynamically translate text entered in an application or in a chat window for a seamless localization experience.

Field Service Management

The ServiceNow® Field Service Management application enables you to manage work orders and related tasks, resources, skills, assets, and locations. Use this application to dispatch work order tasks and agents to the customer location for performing any kind of field work, such as install, repair, or maintain equipment.

Generative AI Controller

The ServiceNow® Generative AI Controller lets you integrate third-party large language models (LLMs) with your workflows.

HR Service Delivery

The ServiceNow® HR Service Delivery application gives your employees the service experience that they deserve. By providing employees with a single place to manage their work needs while shielding them from back-end complexity, you can deliver a great experience to meet the demands of a current-day workforce.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Knowledge Management

The ServiceNow® Knowledge Management (KM) application enables the sharing of information in the Knowledge Base. A Knowledge Base contains articles that provide users with information such as self-help, troubleshooting, and task resolution.

ITOM AIOps

The ServiceNow® ITOM AIOps product includes the ServiceNow® Event Management and ServiceNow® Metric Intelligence applications, which help you track and maintain the health of services in your organization.

IT Service Management

The ServiceNow® IT Service Management (ITSM) solution provides scalable workflows to manage and deliver IT services to your users all through a single cloud-based platform. The ITSM solution can help increase your agents' productivity, resolve issues quickly, and improve user satisfaction.

Security Operations

The Now Assist for Security Operations application permits security analysts to resolve security incidents faster with generative AI skills. Analysts and managers can condense long activity streams on security incidents into concise, easy-to-read summaries and automatically generate closure notes. Now Assist for Security Operations is a new application in the Xanadu release.

Workflow Studio

ServiceNow® Workflow Studio enables you to integrate workflow authoring, configuring, and monitoring into a single page experience.

Configurable Workspace UI

ServiceNow® Workspace is a graphical user interface that puts multiple tools on one page, including the tools that agents use to find, research, and resolve issues.

Knowledge Graph release notes

The ServiceNow® Knowledge Graph enables you to create and manage knowledge graph schema for the out of the box (OOTB) integrations for Virtual Agent. Knowledge Graph is a new Now Assist platform capability in the Yokohama release.

Knowledge Graph highlights for the Yokohama release

Yokohama Patch 11

- Review changes to Now Assist usage measurement.
- Some Now Assist skills, agents, and agentic workflows are on by default.
- Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications.
- Knowledge Graph now supports aggregate queries.
- Improved accuracy for Now LLM Service.

Yokohama Patch 8

- Admins can create Knowledge Graph schema with Workflow Data Fabric tables that enables users to retrieve data from different systems without moving them. This ensures efficiency and security when working with external tables.

Yokohama Patch 6

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Use Google Gemini and Anthropic Claude on AWS as AI model providers for Knowledge Graph in addition to Now LLM Service and Azure OpenAI
- Select your preferred large language model (LLM) provider for Now Assist platform. Apart from Now LLM Service, the platform supports Azure OpenAI GPT-4.1 and GPT-4.1 mini, Google Gemini 2.0 Flash and 2.5 Pro, and AWS Anthropic Claude 3.7 Sonnet LLM providers with ServiceNow® third-party model strategy.
- Supports nodes from parent and grandparent nodes from the hierarchy.
- Supports CMDB queries in Now Assist panel.

Yokohama Patch 3

- Seamlessly integrated with Now Assist in Virtual Agent, AI Agents and AI Search enabling personalized search results and context driven skills execution.
- Seamless Integration with Now Assist in Virtual Agent for Natural Language Query.
- Use Knowledge Graph as a tool to complete custom tasks for AI Agents.

Yokohama Patch 1

- Knowledge Graph helps you in transforming large amount of data into a semantic representation, fostering more connected and customized user experiences.
- Knowledge Graph boosts Virtual Agent by enabling large language models (LLMs) to provide contextually relevant responses tailored to each user.
- Knowledge Graph creates a complex data model called Knowledge Graph schema with numerous entities and their relation within a few steps.
- Knowledge Graph admins can use Knowledge Graph to create and manage the Knowledge Graph schemas. These Knowledge Graph schemas are the customized Knowledge Graph that consist of nodes, node properties, and edges.

See Knowledge Graph for more information.

Important:
Knowledge Graph is enabled automatically in your BU Generative AI Application. For details, see the "Activation information" section of these release notes.

Knowledge Graph features

Test a Knowledge Graph schema

Enter a query and test the Knowledge Graph schema using different LLM options. You can also add previous conversations before you run the query.

Access Knowledge Graph Schema

Knowledge Graph now has a new NLQ graph schema available prebuilt along with user profile schema. See KB article for schema attributes.

Leverage Knowledge Graph prebuilt integration with Virtual Agent

Knowledge Graph provides the following new prebuilt integrations:

- Integration with Now Assist Virtual Agent: Helps requesters with personalized responses on people queries and Natural Language queries. Also supports people citation card.

Leverage Knowledge Graph prebuild integration with AI agents

Knowledge Graph provides the following prebuilt integrations:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Integration with Now Assist AI agents for User Context: Helps users with personalized responses.
- Integration with AI agents as a tool: Used to perform specific tasks that are assigned to the AI agents.

Exploring Knowledge Graph

Knowledge Graph helps requesters with personalized responses using its Integration with Now Assist Virtual Agent for User Context.

Use Knowledge Graph integration with Now Assist Virtual Agent for Slot filling to helps pre-fill the slots for Virtual Agent topics using Natural Language Querying feature of Knowledge Graph.

Leverage Knowledge Graph prebuilt integration with Virtual Agent

Use the Knowledge Graph integrations with Now Assist Virtual Agent to utilize Knowledge Graph APIs built with LLM models, for personalized responses and slot-filling fields to execute LLM topics and skills in Virtual Agent.

Using Knowledge Graph Designer

Use Knowledge Graph designer to manage Knowledge Graph schemas, their nodes, node properties and edges. You can also use the interface to create, edit, duplicate, or delete a Knowledge Graph schema.

Changed in this release

Yokohama Patch 11

Changes to Now Assist usage measurement

Starting with Yokohama Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Some Now Assist skills are turned on by default

The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.

Configure ACLs for AI agents and agentic workflows

Configure the access control lists for who can discover and trigger AI agents and agentic workflows in their guided setups in AI Agent Studio. You can determine whether an AI agent or agentic workflow behaves as a dynamic user or as an AI user. You can also specify if an AI agent or agentic workflow can be available to all authenticated users or publicly available.

Activation information

Knowledge Graph is a ServiceNow AI Platform feature that is active by default if you have downloaded the Generative AI for BU.

Additional requirements

Ensure that your instance is upgraded to XP7.

Related ServiceNow applications and features

Now Assist

ServiceNow® Now Assist uses generative AI that is designed to enhance user productivity and efficiency through conversation and proactive experiences.

Now Assist in AI Search

The Now Assist in AI Search ServiceNow® Store application combines the power of search with the Now LLM Service generative AI model to answer questions in user searches with actionable AI-generated summaries of relevant Knowledge articles.

Virtual Agent

Unlock your enterprise productivity with ServiceNow® Virtual Agent. Increase deflections by empowering your employees and customers to serve themselves using a friendly messaging interface, featuring prebuilt conversations powered by artificial intelligence.

Now Assist release notes

The ServiceNow® Now Assist experience brings generative AI to your organization. You can improve productivity and efficiency by delivering better self-service, recommending actions, delivering answers, and providing your users with AI Search. Now Assist was enhanced and updated in the Yokohama release.

Now Assist highlights for the Yokohama release

Yokohama Patch 11

- Review changes to Now Assist usage measurement.
- Some Now Assist skills, agents, and agentic workflows are on by default.
- Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications.
- Use the Now Assist context menu open prompt feature to create and edit knowledge articles.
- Use Advanced settings to add conditions to hide or show the Now Assist Context Menu quick actions.
- Create multiple Now Assist context menu configurations for the same field.
- Use the Enable for extended tables option in parent table configuration, to enable or disable the inheritance model for the child table configurations.

Yokohama Patch 8

- Use the Now Assist Readiness Evaluation app to automate the implementation assessment process before implementing Now Assist agentic and generative AI.

Yokohama Patch 6

- Enable administrators to set up a security access control list (ACL) that checks user authentication for Now Assist context menu skills and new setup options. This gives them control over who can use Now Assist context menu skills and actions, as well as the built-in options like shorten, elaborate, and change tone.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Use Google Gemini and Anthropic Claude on AWS as AI model providers for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI.
- Select your preferred large language model (LLM) provider for Now Assist out-of-box skills. Apart from Now LLM Service, the platform supports Azure OpenAI GPT-4.1 and GPT-4.1 mini, Google Gemini 2.0 Flash and 2.5 Pro, and AWS Anthropic Claude 3.7 Sonnet LLM providers with ServiceNow® third-party model strategy.
- Select a display option for custom Now Assist context menu event with an option to suppress the modeless window.
- View the numbered citation and links to the source of information when you use Now Assist context menu for Email reply recommendation.

Yokohama Patch 3

- Access and monitor your Now Assist skills in the skill list or grid view. By toggling between the layouts, you can navigate from the Now Assist skills to specific products and then back to the skills page.
- Identify and mark duplicate articles in the list view by using Now Assist in Knowledge Management and take action as required.
- Apply the Now Assist Sentiment Analysis application to each record so that you can assess how satisfied your customers are. With this feature, you can make better decisions to improve customer experience.
- Use the Now Assist context menu guided setup to create a Now Assist context menu configuration.
- Use the Now Assist context menu to deploy the custom skills created using Now Assist skill kit.
- Monitor how the Now Assist context menu is being used across the different applications with the new Now Assist context menu usage dashboard.
- Customize the ServiceNow skills with new prompts or providers in the Now Assist Skill Kit for your specific business needs.
- Enable your users to use voice to interact with the Now Assist panel by enabling the Voice Input setting.
- Use the new Conversational Q&A option in the Now Assist panel to achieve an enhanced and accurate query resolution.
- Generate a record summary, share or copy the summary, and provide feedback by using the Summarize option in the Now Assist context menu.
- Customize and choose between the casual, formal, or sympathetic tone by using the Now Assist context menu.

See Now Assist for more information.

For more Platform Now Assist feature release notes, see the following topics:

- AI Search release notes
- Document Intelligence release notes
- Now Assist Skill Kit release notes
- Now Assist in Virtual Agent release notes

Important:
After purchasing a generative AI product, you can install it from ServiceNow Store. For details, see the "Activation information" section of these release notes.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Important information for upgrading Now Assist to Yokohama

If you customized UI actions or other items that are associated with Now Assist skills, ensure that your customized code is updated with the new skill releases. Otherwise, certain functions may not work as expected.

If you run into issues when you're upgrading a Now Assist product, see KB1637452: Issues and mitigation for Now Assist (Generative AI) Applications and Plugin updates. You may need to log in to view the article.

New in the Yokohama release

Yokohama Patch 10

Monitor sensitive topic invocations

Access the Gen AI Metrics [sys_generative_ai_metric] table to review the logged invocations of sensitive topics and gain insights into how these topics are being triggered and monitored.

Yokohama Patch 8

Now Assist Readiness Evaluation

Use the Now Assist Readiness Evaluation app to help you evaluate your organization's readiness to implement agentic and generative AI Now Assist capabilities.

Assessments for agentic AI include:

- IT Service Management (ITSM)
- Customer Service Management (CSM)

Assessments for generative AI include:

- AI Search
- Virtual Agent (VA)
- IT Service Management (ITSM)
- Customer Service Management (CSM)
- HR Service Delivery (HRSD)

Results shown are estimates. You should evaluate results provided by Now Assist Readiness Evaluation for accuracy and appropriateness for your use case.

Yokohama Patch 6

Manage large language models

Choose and update your preferred large language model (LLM) provider at the instance, skill or skill group level for Now Assist out-of-box skills with ServiceNow® third-party model strategy.

Deactivate skills that are not compliant with any of the LLM providers and access the audit history to view updates by the AI steward.

Configure multilingual service for Now Assist applications

Manage the default and supported languages by the different LLM providers under Multilingual service for translation.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Access the citations to the articles referenced from the knowledge base. Explore references and insert the suggested reply to your email.

Now Assist Guardian supports third-party LLMs

Extend guardrail support to third-party LLMs, such as Amazon Bedrock, Google Cloud (AI Studio and Vertex), and OpenAI to ensure any inappropriate content is logged and blocked during content generation.

Increase the maximum response token limit for custom skills

Increase the maximum response token limit for Now Assist custom skill beyond default value 1000 to support dynamic pricing based on output tokens and calculate the price for each skill executed per assist.

Yokohama Patch 3

Exploring Now Assist

Access the Now Assist skills through an identifier tab on the Now Assist Admin console, and find the associated workflows.

Navigate to your skills by using the intuitive list or grid view. The skill details are displayed, which means that you don't have to make additional selections.

Access the Data privacy section under Now Assist Admin settings. View and edit the data privacy policies that apply to your Now Assist skills.

Accessing the external content in Now Assist panel Q&A capability

Get relevant answers to your questions from external content sources, such as Microsoft SharePoint, Google Drive, and Confluence Cloud, within the Now Assist panel, without manual indexing. Each response shows the source of information to reference later.

Enhanced log visibility

- Access the Generative AI Metric table [sys_generative_ai_metric] to gain insights into the guardian logs and determine if they are for monitoring only or for both logging and blocking. Each guardrail shows its status value as Monitor, Block, or Off, to help administrators to manage their security policies.
- View the logs of masking that involve personal identifiable information (PII) in the Generative AI Metric table [sys_generative_ai_metric]. You can identify which data is masked, the type of request, system response, processing time, errors, or error codes.

Define the output field destination so that you can select any multi-line text field from the base table You can customize incident forms and improve the usability of the resolution notes generation skill.

Enable requesters to extract information from emails and email attachments to generate tasks. This email-to-task agentic workflow effectively addresses the challenge of task creation from emails.

Identify and review duplicate Knowledge articles

Identify duplicate Knowledge articles by using Now Assist capabilities. You can review the list and deselect articles that you don’t consider to be duplicates.

Streaming responses

Enable streaming responses on the Now Assist panel. Only synthesized responses are streamed.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Multiple Now Assist panels

Create separate, independent Now Assist panels that work across Next Experience and ServiceNow® Studio app shells.

Create Now Assist context Menu configuration

Create a Now Assist context menu configuration for a streamlined custom skill deployment process with the help of a guided setup.

Yokohama Patch 1

Now Assist Guardian analytics

Monitor the performance of offensive content and prompt injections guardrails with the help of the Now Assist Guardian analytics dashboard.

Configuring Now Assist settings and features

For custom skills, explore an additional display option in the form of **Conversational experiences**. You can select Now Assist Virtual Agent to assist you with the display.

Create and activate a Now Assist skill copy, and have both the original skill and its copy to remain active simultaneously.

Now Assist Context Menu usage dashboard

View and monitor the use of the Now Assist context menu across the different applications. Gain insights into the usage patterns, frequency, and effectiveness of the context menu actions with the Now Assist context menu usage dashboard.

Customizing ServiceNow skills in the Now Assist Skill Kit to tailor skills to meet your specific business requirements.

Clone the skills provided by ServiceNow in Now Assist applications by using the Now Assist Skill Kit so that you can edit the prompt or change the AI service provider. By editing the prompt, you can choose the additional inputs to be considered by the large language model (LLM) and arrange the formatting and content of the LLM response. After the skill is edited, you can activate the edited skill in the Now Assist Admin console to enable it.

Enabling the voice input for the Now Assist panel

Enable the Voice Input setting for the Now Assist panel in the Now Assist Admin console. This setting gives users a voice-to-text input option to access the skills in the Now Assist panel in any supported language. After it's enabled, the option is available in individual user accessibility preferences.

Setting your data overflow processing preferences to control your data

Set your data overflow processing preferences to control your data. By default, all Now Assist network traffic is managed within ServiceNow datacenters, but during periods of high traffic, the traffic is burst to Microsoft Azure datacenters. You can choose whether you want to opt out of cloud bursting from the Now Assist Admin console data overflow processing settings.

Using multi-turn Q&A in the Now Assist panel

Ask questions and get relevant answers directly in the Now Assist panel. The system remembers your previous questions for effortless follow-ups and pulls answers from multiple sources to give you the best results. You can select the source name in the response to access the full Knowledge article for more details.

Using dashboard and visualization export in the Now Assist panel

Export Platform Analytics dashboards and data visualizations through conversations. You can select from several output formats, and download or email the files.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Summarize records with the Now Assist context menu

Generate summaries by using the Now Assist context menu for the Core UI and Workspace. You can also expand or collapse the summary card, regenerate the summary, copy and share the summary, or provide feedback.

Email recommendations using the Now Assist context menu

Select and choose the tone of your content with the change tone feature. You can select from the elaborate, shorten, casual, formal, or sympathetic tone.

UI changes

Edit a Now Assist skill

You can now view the Helpful resources and Frequently asked questions (FAQ) tabs on the list view of the Now Assist skills page.

Email reply recommendation

The email response creation skill offers guidance in choosing the most appropriate template based on the user's specific context. Additionally, it identifies the potential errors when a response isn't generated as intended.

Now Assist data sharing opt-out moved to Data sharing and processing tab.

The opt-out button in the data sharing card from the Now Assist Admin Account page has moved to the Settings page on the **Data sharing and processing** tab.

Now Assist context menu

You can now open the Now Assist context menu by selecting the Now Assist context menu icon ( ) for effortless access.

The Now Assist context menu enables users to automatically select a sentence, paragraph, or the entire content even if they initially make a partial selection. Administrators can configure the selection to be a sentence, paragraph, or the entire content.

The dynamic header label next to the Now Assist context menu icon can be customized to display the query status.

The new Now Assist context menu icon ( ) was updated with an enhanced animation.

Changed in this release

Yokohama Patch 11

Changes to Now Assist usage measurement

Starting with Yokohama Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Some Now Assist skills are turned on by default

The new default behavior works as follows:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- New customers: When you install a Now Assist product, designated skills are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.

Configure ACLs for AI agents and agentic workflows

Configure the access control lists for who can discover and trigger AI agents and agentic workflows in their guided setups in AI Agent Studio. You can determine whether an AI agent or agentic workflow behaves as a dynamic user or as an AI user. You can also specify if an AI agent or agentic workflow can be available to all authenticated users or publicly available.

Previous Patch releases

Configure multilingual service for Now Assist applications

Enable translation settings is now Multilingual service in Now Assist admin console.

Default email client for email recommendation skill

The Seismic email client is enabled by default on Core UI with the activation of email recommendation. This client provides the Generative AI application features for creating email responses, draft management, and template management.

Now Assist panel response **Now Assist panel response**

With the carousel experience removed, the Now Assist panel now generates a synthesized response for any user inquiry. This response includes content from Knowledge articles, flows & actions, skills, and links to those articles, instead of only the Now Assist panel skills.

Activation information

Now Assist features are available with activation of any Now Assist plugin from ServiceNow Store. The following plugins are available:

- Now Assist for Accounts Payable Operations (APO)
- Now Assist for App Engine
- Now Assist for Configuration Management Database (CMDB)
- Now Assist for Collaborative Work Management (CWM)
- Now Assist for Creator
- Now Assist for Customer Service Management (CSM)
- Now Assist for Employee Experience
- Now Assist for Enterprise Architecture (EA)
- Now Assist for Operational Sustainability (formerly ESG)
- Now Assist for Field Service Management (FSM)
- Now Assist for Financial Services Operations (FSO)
- Now Assist for Hardware Asset Management (HAM)
- Now Assist for Health and Safety
- Now Assist for HR Service Delivery (HRSD)
- Now Assist for Integrated Risk Management (IRM)

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Now Assist for IT Operations Management (ITOM)
- Now Assist for IT Service Management (ITSM)
- Now Assist for Legal Service Delivery (LSD)
- Now Assist for Operational Technology Manager (OTM)
- Now Assist for Order Management
- Now Assist for PSDS
- Now Assist for Security Incident Response
- Now Assist for Software Asset Management (SAM)
- Now Assist for Supplier Lifecycle Operations (SLO)
- Now Assist for Sourcing and Procurement Operations (SPO)
- Now Assist for Strategic Portfolio Management (SPM)
- Now Assist for Telecommunications, Media and Technology (TMT)
- Now Assist for Third-party Risk Management (TPRM)
- Now Assist for Workplace Service Delivery (WSD)
- Now Assist for Vulnerability Response

Additional requirements

The Next Experience UI Framework must be enabled before you can use the Now Assist panel.

Browser requirements

Now Assist supports various browsers, including Google Chrome and Microsoft Edge. Now Assist isn't supported in Microsoft Internet Explorer.

Accessibility information

Voice Input for Now Assist

Administrators can enable an optional voice input setting for the Now Assist panel in the Now Assist Admin console. This feature gives users a voice-to-text input option to access the Now Assist skills in the panel in any supported language. For more information, see Enable voice input for Now Assist panel.

Once enabled, the Enable voice input for the Now Assist panel option are available in individual user accessibility preferences. See Configure Next Experience accessibility preferences for more information.

Voice-to-text input can help users with mobility impairments access generative AI skills without using a keyboard. This feature can also be useful to blind or low-vision users, neurodivergent users, non-native language speakers, or mobile users on the go, such as field service agents.

Localization information

Now Assist supports Dynamic Translation for Yokohama.

Related ServiceNow applications and features

Agent Chat

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

ServiceNow® Agent Chat provides various features that agents and requesters can use to streamline the agent and end-user chat experience. Agent Chat also provides features that managers can use to monitor and assist agents.

AI Search

The ServiceNow® AI Search application provides a consumer-grade search engine for Service Portal, Now Mobile, and Virtual Agent. Intelligent query features help you quickly find the answers that you need.

Document Intelligence

The ServiceNow®Document Intelligence (DocIntel) application is an artificial intelligence (AI) solution that enables any organization to automate and accelerate the process of extracting data from documents. That data can easily be integrated into larger automation workflows to save time and resources.

Dynamic Translation

The ServiceNow® Dynamic Translation application enables you to dynamically translate text entered in an application or in a chat window for a seamless localization experience.

Generative AI Controller

The ServiceNow® Generative AI Controller lets you integrate third-party large language models (LLMs) with your workflows.

Knowledge Management

The ServiceNow® Knowledge Management application enables the sharing of information in Knowledge Base. These Knowledge Base contain articles that provide users with information such as self-help, troubleshooting, and task resolution.

Configurable Workspace UI

ServiceNow® Workspace is a graphical user interface that puts multiple tools on one page, including the tools that agents use to find, research, and resolve issues.

Now Assist Analytics release notes

The ServiceNow® Now Assist Analytics application helps Now Assist admins monitor the usage and performance of generative AI features and capabilities offered under Now Assist. Now Assist Analytics was enhanced and updated in the Yokohama release.

Now Assist Analytics highlights for the Yokohama release

- Track the usage and adoption of your Now Assist implementation.
- Monitor the performance of guardrails enabled through Now Assist Guardian.
- Gain insights into the search performance in Now Assist self-service experiences.
- Track the estimated efficiency and productivity gains enabled through Now Assist.

See Analyzing Now Assist performance for more information.

Important information for upgrading Now Assist Analytics to Yokohama

Now Assist Analytics is installed and updated when you install or update any Now Assist application. If you have issues installing or updating applications, see this knowledge article for steps that may address your issue. Otherwise, you can make a Support case.

New in the Yokohama release

Yokohama Patch 1

Usage and adoption

Monitor key usage and adoption indicators of your Now Assist implementation.

Custom skill details

View usage and performance indicators of custom skills from the predefined custom skills dashboard page.

Now Assist Guardian analytics

Monitor the performance of guardrails enabled through Now Assist Guardian.

User search analyzer

Gain insights into the search performance in Now Assist self-service experiences like Now Assist in Virtual Agent.

Now Assist context menu analytics.

Monitor the usage and performance of Now Assist context menu actions.

Now Assist value insights

Track the estimated efficiency and productivity gains enabled through Now Assist.

UI changes

Overall health

The Overall health dashboard page has been renamed to Usage and Adoption. The new page includes more indicators on usage and adoption of Now Assist.

Activation information

Now Assist Analytics features are available with activation of any Now Assist plugin from the ServiceNow Store. For more information, see Install Now Assist plugins.

Browser requirements

Now Assist Analytics supports various browsers, including Google Chrome and Microsoft Edge. For more information, see Browser support.

Related ServiceNow applications and features

Now Assist Admin console

The Now Assist Admin console provides you with quick and effortless access to monitor the usage, performance, and value of Now Assist Analytics.

Now Assist Skill Kit release notes

The ServiceNow® Now Assist Skill Kit application enables AI developers to create custom skills and to have greater flexibility with Now Assist's generative AI capabilities. Now Assist Skill Kit was enhanced and updated in the Yokohama release.

Now Assist Skill Kit highlights for the Yokohama release

Yokohama Patch 11

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Review changes to Now Assist usage measurement.
- Some Now Assist skills, agents, and agentic workflows are on by default.
- Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications.

Yokohama Patch 6

- Use UI Builder to deploy custom skills.
- Import data into Now Assist Skill Kit with a CSV file.
- Use AI to create ground truth for your data.
- Use a custom data generator to create synthetic datasets.

- Users can create synthetic data in Now Assist Data Kit.
- Generated synthetic data can be saved as a dataset.
- Add and manage tools of a custom skill, visually in the new Tools editor, including conditional execution of tools.
- Customize ServiceNow skills with new prompts or providers in Now Assist Skill Kit to suit your specific business needs.

See Now Assist Skill Kit for more information.

Important:
Now Assist Skill Kit is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Important information for upgrading Now Assist Skill Kit to Yokohama

If you customized UI actions or other items that are associated with Now Assist skills, ensure that your customized code is updated with the new skill releases. Otherwise, certain functions may not work as expected.

If you run into issues when you're upgrading a Now Assist product, see KB1637452: Issues and mitigation for Now Assist (Generative AI) Applications and Plugin updates. You may need to log in to view the article.

New in the Yokohama release

Yokohama Patch 6

New skill deployment option

Deploy skills using UI Builder.

Choose a language for data generation

When you create synthetic data, you can select what language you want to receive the data in.

AI-assisted ground truth

Use AI to assist creating ground truth for your data.

Import data with a CSV file

Import data from a CSV file to create a dataset.

Create a custom data generator

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Create and use a custom data generator to create synthetic data.

Customize ServiceNow skills in Now Assist Skill Kit to tailor skills to meet your specific business requirements.

Eligible skills provided in ServiceNow Now Assist applications can be cloned in Now Assist Skill Kit so that you can edit the prompt or change the AI service provider. Editing the prompt enables you to arrange the formatting and content of the large language model (LLM) response. After the skill is edited, activate the edited skill in the Now Assist Admin console to enable it.

Add and manage tools visually in the new Tools editor, including decision branching, to execute different tools for your skill.

Adding decision branches between tools enables you to define the conditions that must be met for a tool to run. If no conditions are met, the default branch's step is executed.

UI changes

Now Assist Skill Kit add tools function moved to Tool editor tab.

The ability to add and edit tools for Now Assist Skill Kit previously appeared on the **Prompt editor** tab. It now appears on the **Tool editor** tab.

Changed in this release

Yokohama Patch 11

Changes to Now Assist usage measurement

Starting with Yokohama Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Some Now Assist skills are turned on by default

The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.

Configure ACLs for AI agents and agentic workflows

Configure the access control lists for who can discover and trigger AI agents and agentic workflows in their guided setups in AI Agent Studio. You can determine whether an AI agent or agentic workflow behaves as a dynamic user or as an AI user. You can also specify if an AI agent or agentic workflow can be available to all authenticated users or publicly available.

Activation information

Localization information

Now Assist supports Dynamic Translation for Yokohama.

Now Assist in Document Intelligence release notes

The ServiceNow® Now Assist in Document Intelligence application uses generative AI to extract information from documents, summarize document content, and provide answers to predefined questions. Now Assist in Document Intelligence was enhanced and updated in the Yokohama release.

Now Assist in Document Intelligence highlights for the Yokohama release

Yokohama Patch 13

- Now Assist in Document Intelligence skills are on by default.

Yokohama Patch 11

- Review changes to Now Assist usage measurement.
- Some Now Assist skills, agents, and agentic workflows are on by default.
- Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications.

Yokohama Patch 6

- Summarize the content in document and image attachments with the document and visual insights AI agent.
- Choose a large language model (LLM) to generate predictions for extraction and Q&A (question & answer) use cases.
- Use Google Gemini and Anthropic Claude on AWS as AI model providers for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI.

Yokohama Patch 3

- Boost productivity by using the document and visual insights AI agent to autonomously analyze and extract data from documents and images.
- Streamline document data extraction by automating document tasks.
- Use Virtual Agent to ask questions about the document content.
- Extract the data from invoices with Now Assist for Accounts Payable Operations (APO).

Early Availability

- Speed up your document processing workflows and quickly extract the text and tables from your documents.
- Save time looking for the information that you need in a document, and quickly find the answers to predefined questions.

See Now Assist in Document Intelligence for more information.

Important:
Now Assist in Document Intelligence is available in ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Now Assist in Document Intelligence release

Yokohama Patch 13

Document and visual insights AI agent enhancements

The document and visual insights AI agent can recognize and provide citations for multiple attachments.

Yokohama Patch 6

LLM selection for use cases

Configure a different LLM to generate predictions for extraction and Q&A use cases.

New third-party AI model provider options available for all Now Assist applications

Google Gemini and AWS Claude are available for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI.

Yokohama Patch 3

Document and visual insights AI agent

Use an AI agent to help process the tasks that analyze and extract data from documents and images.

Full automation for document data extraction

Automatically extract the document data and process the document task without agent review.

Data extraction from accounts payable (AP) invoices

Extract data from invoices with Now Assist for APO.

Document chat in Virtual Agent

Integrate Now Assist for Virtual Agent with Now Assist in Document Intelligence to enable the chat responses that are based on the document content.

Attachment summarization in ITSM

View the summaries of attachments with the record summary in ITSM.

Early Availability

Document extraction

Extract the data from documents by using LLMs to provide the recommended field values.

Document Q&A

Use generative AI to find the answers to the predefined questions in a document.

Setting up use cases for Now Assist in Document Intelligence

Set up Document Intelligence use cases to enable agents to use the document extraction and document Q&A skills.

UI changes

Yokohama Patch 3

Usability enhancements to use case setup features

Various features for the use case setup are updated to create a more effective user experience:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- **Field** is changed to **question** in the field form for Q&A use case setup.
- **Single field** is changed to **Field** in the field form for the document extraction use case setup.
- An **Additional Details** field is added to the table form for the document extraction use case setup as a way to help the large language model (LLM) extract the relevant information from the document.

Changed in this release

Yokohama Patch 13

Document and visual insights AI agent enhancements

Tools used by the document and visual insights AI agent are consolidated to improve performance.

Now Assist in Document Intelligence skills are now turned on by default

The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills are turned on automatically.
- Existing customers who are upgrading: Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.

Yokohama Patch 11

Changes to Now Assist usage measurement

Starting with Yokohama Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Some Now Assist skills are turned on by default

The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.

Configure ACLs for AI agents and agentic workflows

Configure the access control lists for who can discover and trigger AI agents and agentic workflows in their guided setups in AI Agent Studio. You can determine whether an AI agent or agentic workflow behaves as a dynamic user or as an AI user. You can also specify if an AI agent or agentic workflow can be available to all authenticated users or publicly available.

Yokohama Patch 6

Document and visual insights AI agent enhancements

Generate a summary of document and image attachments with the document and visual insights AI agent.

Activation information

Now Assist features are available with activation of any Now Assist plugin from ServiceNow Store. The following plugins are available:

- Now Assist for Accounts Payable Operations (APO)
- Now Assist for App Engine
- Now Assist for Configuration Management Database (CMDB)
- Now Assist for Collaborative Work Management (CWM)
- Now Assist for Creator
- Now Assist for Customer Service Management (CSM)
- Now Assist for Employee Experience
- Now Assist for Enterprise Architecture (EA)
- Now Assist for Operational Sustainability (formerly ESG)
- Now Assist for Field Service Management (FSM)
- Now Assist for Financial Services Operations (FSO)
- Now Assist for Hardware Asset Management (HAM)
- Now Assist for Health and Safety
- Now Assist for HR Service Delivery (HRSD)
- Now Assist for Integrated Risk Management (IRM)
- Now Assist for IT Operations Management (ITOM)
- Now Assist for IT Service Management (ITSM)
- Now Assist for Legal Service Delivery (LSD)
- Now Assist for Operational Technology Manager (OTM)
- Now Assist for Order Management
- Now Assist for PSDS
- Now Assist for Security Incident Response
- Now Assist for Software Asset Management (SAM)
- Now Assist for Supplier Lifecycle Operations (SLO)
- Now Assist for Sourcing and Procurement Operations (SPO)
- Now Assist for Strategic Portfolio Management (SPM)
- Now Assist for Telecommunications, Media and Technology (TMT)
- Now Assist for Third-party Risk Management (TPRM)
- Now Assist for Workplace Service Delivery (WSD)
- Now Assist for Vulnerability Response

For more information, see Configuring Now Assist in Document Intelligence.

Additional requirements

Now Assist in Document Intelligence requires the installation of the Document Intelligence application (sn_docintel) and at least one Now Assist product.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Related ServiceNow applications and features

Document Intelligence

Use Document Intelligence to streamline the extraction and classification of data from a variety of documents. Document Intelligence is designed to work with existing automated systems, making operations more efficient and saving effort.

Now Assist

Improve the productivity and efficiency in your organization, deliver better self-service, recommend actions, provide answers, and empower your users to search more effectively.

Now Assist Skill Kit

Use the generative AI skills in Now Assist products to meet the needs of users in different workflows, including case or incident summarization, chat summarization, resolution notes generation, and code generation.

Now Assist in Contract Management

Use Now Assist in Contract Management to analyze contracts for non-standard and missing clauses, and extract information from signed contracts to automatically add in the contract repository.

Predictive Intelligence release notes

The ServiceNow® Predictive Intelligence application enables you to create and train machine learning models to help improve performance, efficiency, and flexibility to your systems. Predictive Intelligence was enhanced and updated in the Yokohama release.

Predictive Intelligence highlights for the Yokohama release

- Learn which classes contribute the most to your model's predictions by adding Model Explainability to Workflow Classification solutions.
- ITSM Predictive Intelligence Workbench is deprecated in the Yokohama release.
- New advanced options for classification solutions are available from Yokohama Patch 4.

See Predictive Intelligence for more information.

New in the Yokohama release

Model Explainability

Learn which classes contribute most to your model's predictions by optionally adding Model Explainability to Workflow Classification solutions. Model Explainability provides a new tab labeled **Feature Importance** where you can run an analysis of each class's contribution to the overall prediction.

Leverage new advanced options for classification solutions, from Yokohama Patch 4.

- Configure include only top N labels. Limit the classification model to use only the top most frequent labels. You can choose a number as the limit.
- Minimum records needed for label to include it. Set a threshold for the minimum number of records a label must have in your dataset to be included in model training.
- Remove others label. Reduce noise in the model and enhance predictive accuracy by removing records with the label "others" from training data.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Use LightGBM algo for classification model training. Enable the LightGBM (Light Gradient-Boosting Machine) algorithm for training classification models.
- Config parameters for model config in classification. Customize training behavior by including a dictionary of parameters in the JSON format.

Deprecations

With the Yokohama release, ITSM Predictive Intelligence Workbench is deprecated and no longer supported. To obtain the latest experience for this functionality, install the Task Intelligence for ITSM application (com.snc.itsm_ml_task). For more information, see ITSM Predictive Intelligence Workbench release notes.

Activation information

Predictive Intelligence is a ServiceNow AI Platform feature that is available with activation of the Predictive Intelligence plugin (com.glide.platform_ml). For details, see Install Predictive Intelligence.

Related ServiceNow applications and features

Document Intelligence

Document Intelligence is an artificial intelligence solution that enables any organization to automate and accelerate the process of extracting data from documents.

Task Intelligence

Task Intelligence uses machine learning to train solutions with your data and achieve important outcomes.

ServiceNow AI Lens release notes

With ServiceNow AI Lens, which is a ServiceNow® Now Assist application, you can use generative AI to scan, extract, comprehend, and synthesize data to optimize your workflows. ServiceNow AI Lens is a new application in the Yokohama release.

ServiceNow AI Lens highlights for the Yokohama release

Yokohama Patch 11

- Trigger ServiceNow AI Lens from the Now Mobile® application to extract data from artifacts and auto-fill fields in a form.
- Fill the Catalog Item form fields by triggering ServiceNow AI Lens from Service Portal.

Yokohama Patch 6

- Use the Lens actions to define default instructions, trigger options, custom context, transform response logic, and post processing instructions for ServiceNow AI Lens execution.
- Configure Lens actions to launch ServiceNow AI Lens from any part of the ServiceNow AI Platform, such as a workspace form or a portal.
- Trigger ServiceNow AI Lens from a Virtual Agent conversation on a mobile device or in a portal.
- View captured images that are now attached to the record that is auto-filled using ServiceNow AI Lens.
- Use Google Gemini and Anthropic Claude on AWS as AI model providers for ServiceNow AI Lens in addition to Azure OpenAI.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Yokohama Patch 3

- Boost productivity by scanning artifacts and auto-filling information into forms instead of manually entering the information into forms.
- Provide specific instructions to ServiceNow AI Lens on what to do with the data that it captures.
- Get insights from multiple images so that you know what actions to do next.

See ServiceNow AI Lens for more information.

Important:
ServiceNow AI Lens is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Yokohama Patch 11

Auto-fill the Catalog Item form in the Service Portal

Fill the Catalog Item form fields by triggering ServiceNow AI Lens from Service Portal. ServiceNow AI Lens extracts data from one or more artifacts and auto-fills the relevant fields in the form.

Handle post-processing in the standalone mode

The following fields have been added to handle post-processing timeout for previewing data in the standalone mode:

- **Wait for processed response**: Option to wait for ServiceNow AI Lens to display the output of post-processing on the Preview window. If turned on, it waits for the post-processing output. If turned off, it doesn't wait for post-processing output, but post-processing continues in the background.
- **Max wait time**: Maximum time ServiceNow AI Lens waits to display the output of post-processing. If the output doesn't appear within this duration, the session times out while the post-processing continues in the background until complete.

Use ServiceNow AI Lens in Now Mobile®

Trigger ServiceNow AI Lens from the Now Mobile® application to extract data from artifacts and auto-fill forms on your mobile device.

Yokohama Patch 6

ServiceNow AI Lens UI enhancement

Use ServiceNow AI Lens to launch the scanner window by using the context defined in Lens actions or as a standalone application. You can preview the gathered insights or extracted data. You can also see the logged-in user and instance details.

Use Lens actions to customize Lens behavior

- Define Lens behavior depending on how ServiceNow AI Lens is triggered and what context is set. With Lens actions, you can customize how a classic form is auto-filled. You can define default instructions, trigger options, custom context, transform response logic, and post processing instructions for the ServiceNow AI Lens execution.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

For example, you can define a Lens action that is used when Lens is triggered from an instance to populate a form of a table. You can also define form fields that must be used as context.

- As part of your integration logic, configure a Lens action as one of the steps to invoke a ServiceNow AI Lens service from any part of the ServiceNow AI Platform, such as a workspace form or portal.

Use ServiceNow AI Lens in Virtual Agent

Trigger ServiceNow AI Lens from a Virtual Agent conversation by using ServiceNow AI Lens topic in Virtual Agent.

Auto-attach images to a record

View captured images that are automatically attached to the record that is auto-filled using ServiceNow AI Lens. You can view the images to understand the source of the auto-filled information.

New third-party AI model provider options available for all Now Assist applications

Use Google Gemini and Anthropic Claude on AWS as AI model providers for ServiceNow AI Lens in addition to Azure OpenAI.

Yokohama Patch 3

Capture data

Get actionable insights from such visual data as images, handwritten notes and forms, emails, websites, and applications. For example, ServiceNow AI Lens can scan an email to gather data for auto-filling the fields on the Incident form.

Act on visual data

Provide instructions to Now Assist on what to do with the captured data. For example, you can convert the extracted data into a JSON format.

Launch from ServiceNow forms

Launch ServiceNow AI Lens from a form to fill the extracted data automatically into the form fields.

Use as a standalone application

Use ServiceNow AI Lens as a standalone application for previewing extracted data when you're connected to a ServiceNow instance.

UI changes

Yokohama Patch 11

Changes in the scanner window UI

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The UI of the scanner window has been changed. See the following

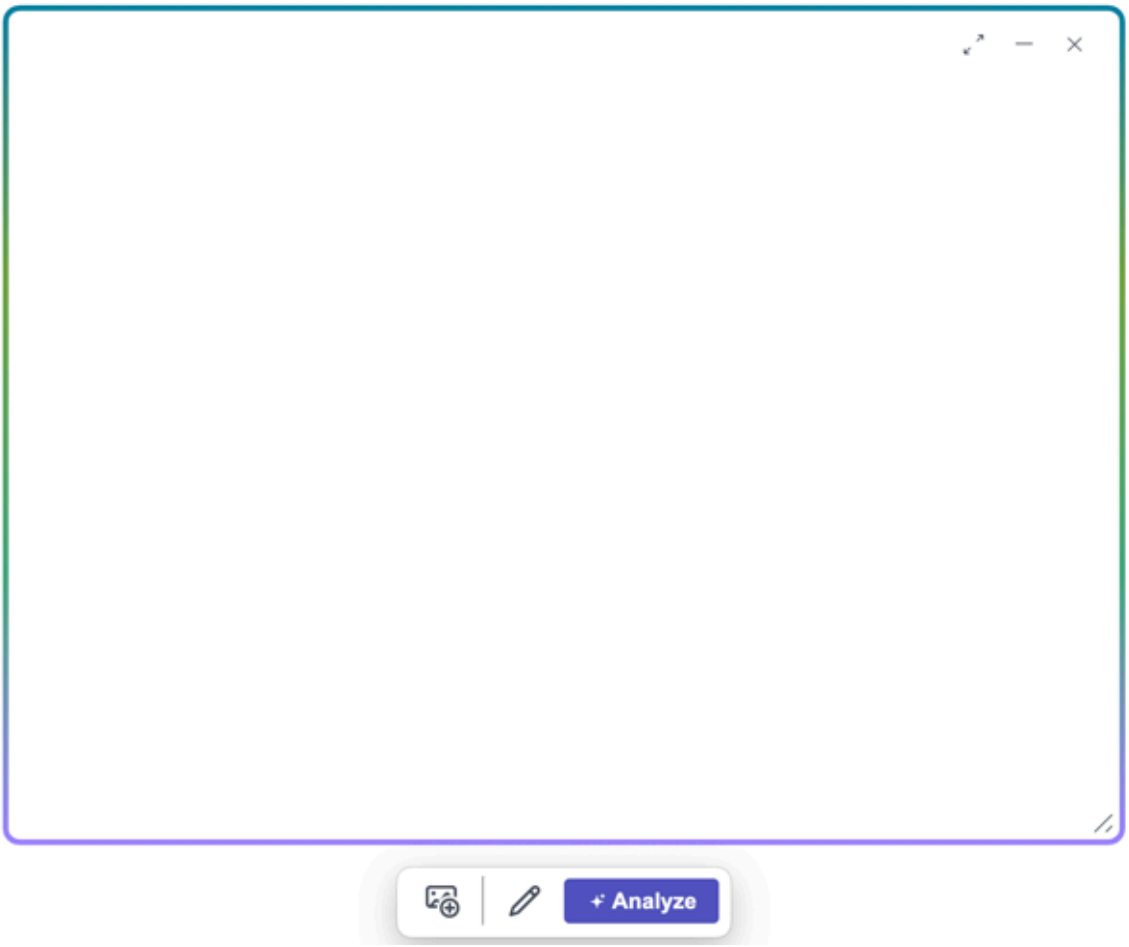

image.

When you open the scanner window, the toolbar is displayed outside of it. However, when you maximize the window, the toolbar moves inside.

Changed in this release

Yokohama Patch 11

Changes to Now Assist usage measurement

Starting with Yokohama Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Some Now Assist skills are turned on by default

The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.

Activation information

ServiceNow AI Lens is available with activation of any Now Assist plugin from the ServiceNow Store. For more information about the prerequisites for using ServiceNow AI Lens, see Configure ServiceNow AI Lens.

Related ServiceNow applications and features

Now Assist

Help improve productivity and efficiency in your organization, deliver better self-service, recommend actions, provide answers, and empower your users to search more effectively.

Now Assist Admin console

The Now Assist Admin console provides you with quick and easy access to the important information that you must set up, configure, and monitor in Now Assist applications and features.

Now Assist skills

Now Assist products provide generative AI skills that are tailored to meet the needs of users in different workflows, including content summarization in Docs.

API release notes

ServiceNow® APIs let you build custom applications and experiences. APIs were enhanced and updated in the Yokohama release.

API highlights for the Yokohama release

- Use server-side JavaScript APIs in scripts to change the application functionality.
- Run client APIs whenever a client-based event occurs, such as when a form loads, a form is submitted, or a field value changes.
- Use inbound REST APIs to interact with various ServiceNow functionalities within your application.

See API implementation and reference for more information.

Changed REST APIs in Yokohama

API	Endpoints
Attachment API	POST /now/attachment/file: A new parameter, creation_time, can be used to capture attachment creation times when the Now Mobile app is offline and the attachment is uploaded to a record at a later time.

Changed scoped classes in the ServiceNow Store

Application	App Version	Class	Methods
Lead to Cash Core	V1.4	LeadtoCashCore - Scoped	Enhanced the performance of the Commit Instance API to improve number generation for the number field: • effect(): The *_records_count* return object is added to provide details about newly inserted records for a particular table, such as the table name and number of inserted records. • commitInstance(): A new additional parameter, useNumberGenerator, is added to optionally generate and apply sys_ids to new table records in bulk.
ATF Test Generator and Cloud Runner	2.7.2	TestGenerationApi – startJob(String tableEncodedQuery, String userEncodedQuery, String catalogEncodedQuery, Number maxTestCount, Number maxTestCountPerTable, Number maxTestCountPerItem, String email, Boolean separateUpdateSetPerScope, String scopeForGeneratingTests, String suiteName)	Added the *testSuite* parameter allowing you to set the name of the new test suite that is created during test generation.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Changed client classes in the ServiceNow Store

Application	App Version	Class	Methods
Customer Service Management	v1.2	openFrameAPI - Client	subscribe(): Added new events • openframe_wrap_up_submitted • openframe_heart_beat
Mobile SDK	v2.9.0	NowChatTheme interface - Android	Updated available chat UI color defaults.
Mobile SDK	v2.9.0	NowWebTheme interface - Android	Updated available web view UI color defaults.
Mobile SDK	v2.9.0	NowChatThemeable protocol - iOS	Updated available chat UI color defaults.
Mobile SDK	v2.9.0	NowWebThemeable protocol - iOS	Updated available web view UI color defaults.

Changed global classes in the ServiceNow Store

Application	App Version	Class	Methods
ATF Test Generator and Cloud Runner	2.7.2	TestGenerationApi – startJob(String tableEncodedQuery, String userEncodedQuery, String catalogEncodedQuery, Number maxTestCount, Number maxTestCountPerTable, Number maxTestCountPerItem, String email, Boolean separateUpdateSetPerScope, String scopeForGeneratingTests, String suiteName)	Added the *`testSuite`* parameter allowing you to set the name of the new test suite that is created during test generation.

Changed REST APIs in the ServiceNow Store

Application	App Version	API	Endpoints
Accounts Payable Operations	v2.0.0	AP Invoice API	Add properties supporting bill-to address information. • POST /sn_spend_intg/ap_invoice/cxml • POST /sn_spend_intg/ap_invoice/json
ATF Test Generator and Cloud Runner	2.7.2	Cloud Runner Test Generation - POST /now/sn_atf_tg/test_generation	Added the *`testSuite`* parameter allowing you to set the name of the new test suite that is created during test generation.
Order Management	v11.3.0	Product Order Open API	The *`productSpecification`* request parameter has changed from required to optional.

© 2026 ServiceNow, Inc. All rights reserved.

Changed REST APIs in the ServiceNow Store (continued)

Application	App Version	API	Endpoints
			• PATCH /sn_ind_tmt_orm/order/productOrder/{id} • PATCH /sn_ind_tmt_orm/productorder/{id} • POST /sn_ind_tmt_orm/order/productOrder • POST /sn_ind_tmt_orm/productorder
Order Management	v12.5.0	Product Inventory Open API	The *`productSpecification`* request parameter has changed from required to optional. These endpoints now retrieve all product inventory records. In prior releases, product inventory records without a specified product specification weren't returned. • POST /api/sn_prd_invt_/product • GET /api/sn_prd_invt_/product • GET /api/sn_prd_invt_/product/{id}
Product Catalog	v14.1.0	Product Catalog Open API	The ability to specify product bundles has been added to the following endpoints: • GET /sn_tmf_api/ catalogmanagement/catalog • GET /sn_tmf_api/ catalogmanagement/catalog/{id} • GET /sn_tmf_api/ catalogmanagement/ productOffering • GET /sn_tmf_api/ catalogmanagement/ productOffering/{id} • PATCH /sn_tmf_api/ catalogmanagement/ productOffering/{id} • POST /sn_tmf_api/ catalogmanagement/ productOffering • GET /sn_tmf_api/ catalogmanagement/ productSpecification • GET/sn_tmf_api/ catalogmanagement/ productSpecification/{id} • PATCH /sn_tmf_api/ catalogmanagement/ productSpecification/{id} • POST /sn_tmf_api/ catalogmanagement/ productSpecification

Activation information

The following APIs are available by default:

- *`Attachment`*
- *`Console`*

- The `Verify Entitlements` API requires the Entitlement Verification (com.sn_ent_verify) plugin to be activated.

App development and low-code release notes

The ServiceNow AI Platform® has new and updated automation, as well as and no-code, low-code, and platform developer features in the Yokohama release.

App Engine Studio release notes

The ServiceNow® App Engine Studio (AES) application enables creators of varying skill levels to build applications that meet the immediate needs of your organization. App Engine Studio was enhanced and updated in the Yokohama release.

App Engine Studio highlights for the Yokohama release

Use the App Readiness and Compliance report in App Engine Management Center (AEMC) to check if apps are ready to go live.

See App Readiness and Compliance Report for more information.

Important:
App Engine Studio is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Important information for upgrading App Engine Studio to Yokohama

Due to a new process for assigning groups in AEMC, the same version of the Application Intake plugin must be activated on each of your instances.

For more information, see App Readiness and Compliance Report.

New in the Yokohama release

App Readiness and Compliance Report

As an App Engine Admin, use the App Readiness and Compliance report in AEMC to check if the apps you're making are ready to go live. You can run an instance scan suite that looks for any issues that can impact app deployments. This feature helps determine if the app is prepared for use in the real world.

Activation information

Install App Engine Studio by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Related ServiceNow applications and features

Access Control

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Work with access controls and roles for an application in AES.

Catalog Builder

Edit the catalog items that you create in AES.

Change Management

Control the life cycle of all changes systematically and facilitate changes with minimum disruption to IT services.

Configuration Management Database (CMDB)

Build logical representations of assets, services, and the relationships between them that comprise the infrastructure of your organization.

Create applications without writing code using Creator Studio

Edit apps built in Creator Studio and add features to customize functionality.

Decision tables in Workflow Studio

Add decision rules and use decision tables to decouple decision logic from code.

Email notifications

Create and edit email notifications that are automatically sent when a record is created or updated. Email notifications are also used as a reference in flows or can be triggered by an event.

Zero Copy Connector for ERP

Simplify the use of Enterprise Resource Planning (ERP) data from the system of record, such as SAP.

ERP Semantic Mining (ERP-CM)

Find legacy application candidates with custom ERP data that can be replatformed onto the ServiceNow AI Platform.

Flows in Workflow Studio

Edit the flows that you create in AES.

Integration Hub - Import

Import data into existing tables in AES.

Mobile App Builder

Add mobile experiences in AES.

Now Assist for app generation in ServiceNow Studio

Create applications through a conversation with generative AI.

Playbooks

Edit cross-functional processes and consolidate them into automated task-oriented views.

Table Builder

Work with data models in a table format. Table Builder is exclusive to AES.

UI Builder

Edit the experiences that you create in AES.

Workflow Studio

Integrate workflow authoring, configuring, and monitoring into a single page experience.

Workspace Builder

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Edit and customize workspaces built in AES.

Creator Studio release notes

The ServiceNow® Creator Studio product is a guided application development experience that enables business process experts to create request-based applications without the barriers of traditional low-code development. Creator Studio was enhanced and updated in the Yokohama release.

Creator Studio highlights for the Yokohama release

- Create forms quickly by using Now Assist.
- As of Creator Studio version 27.2.2, revamped navigation means you can more easily see what's in your app.
- Populate any question on the form based on the answer given for a record choice question.
- Use answers to form questions to trigger an activity in playbooks.
- Switch seamlessly between no-code, mid-skill, and pro-code app development experiences for a more unified development platform with the new experience switcher.

See Creator Studio for more information.

Important:
Creator Studio is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Generate a form from text prompts using the Build with Now Assist tab

Enable users to generate forms automatically from text prompts by using the Build with Now Assist dialog box.

Auto-populate question values on a form

Help users complete forms faster with the new **Add auto-fill** option, which automatically populates answers based on answers to questions that are record choices.

Use catalog variables in playbook activities and decisions

Playbook activities and decision branches can now be triggered by answers to one or more questions on a form when you configure the conditions.

Select your development experience

Seamlessly change between development environments using the new experience switcher. Depending on the products and versions that are installed and the role you have, you can switch between the following environments:

- Creator Studio to get a no-code experience
- ServiceNow Studio to get a platform coding experience
- ServiceNow IDE to get a pro-code ServiceNow experience

Test forms with the new Try it button

As of Creator Studio version 27.2.2,you can test using published forms through a **Try it** button. After you submit the form, any associated playbooks run and their results appear in the generated record that opens in a new tab within Creator Studio.

Change the table for an app

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

As of Creator Studio version 27.2.2, admins can change the table where data from apps built in Creator Studio is saved.

Seamlessly open apps in ServiceNow Studio

As of Creator Studio version 27.2.2, you can open an app in ServiceNow Studio to make additional, more complicated edits by selecting an **Open with ServiceNow Studio** link from the app's tile on the Creator Studio home page.

UI changes

Navigation moved from header to sidebar

As of Creator Studio version 27.2.2, the navigation has moved from the application header to a navigation panel so you can more easily see what's in your application. The following changes have been made:

- The **Forms in your app** section of the navigation panel enables you to easily access forms. If an app has multiple forms, each of them appears separately in the navigation panel.
- Automations appear in the navigation panel under the form they're associated with. The link to **Add automation** now appears under each form.
- The form submissions section has been renamed **List configurations** and now appears in the **Manage your submission configurations** section of the navigation panel.
- The submitted record configuration is now available in the **Record details** in the **Manage your submission configurations** section of the navigation panel.
- A search box in the new navigation panel enables you to search all forms and automations in an app.
- A bookmark icon ( ) in the navigation panel enables you to bookmark an app for faster access.

Streamlined app creation

As of Creator Studio version 27.2.2, the following changes have been made when you create an app:

- A new page appears asking you what type of app you want to build, such as a Service Desk app. Note that admins can choose not to display this page.
- Choosing a template, adding a form, and previewing it is now a separate process rather than being done during the app creation process.

Form preview change

As of Creator Studio version 27.2.2, the way you preview forms has changed in the following ways:

- The option to select between **Portal**, **Now Mobile**, and **Virtual Agent** experiences has moved to the top of the preview.
- You can preview only the form you're currently viewing rather than being able to switch between forms in the preview.
- The preview no longer shows the record details and workspace configuration. Those items have moved to the new navigation panel.

Request App Workspace more intuitive to use

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

As of Creator Studio version 27.2.2, the Request App Workspace has been streamlined to help fulfillers find and analyze requests more easily. The following changes have been made:

- The **Home** view has been removed, so the **Lists** view now appears by default.
- The **Analytics** view has been renamed **Dashboard overview**, and the analytics **Home**, **Data Visualizations**, and **KPIs** tabs have been removed.
- A link to the **Request App Workspace** now appears in **All** > **App Engine** > **Workspaces**.

Search for apps on the home page

Quickly find the app that you're looking for using the new search bar on the Creator Studio home page.

Save and quickly find apps with bookmarks

Bookmark apps to find them faster using the new **Bookmarks** pill on the home page.

Changed in this release

Playbooks use only published forms

As of Creator Studio version 27.2.2, forms must now be published (marked as ready) before you can use them to create an automated playbook.

Hide the App Engine Studio template with a new system property

As of Creator Studio version 27.2.2, Creator Studio users who have both App Engine Studio (AES) and Creator Studio installed will no longer see the AES template when they create an app. Admins can choose to show the AES template using the new `com.glide.creator_studio.template_deny_list` system property.

Form location removed from form creation

Defining the catalogs and topics for a form is now accomplished by modifying the form settings rather than being done during the form creation process. If you haven't defined a location for a form, you are prompted to do so before you can mark it as ready.

Activation information

Install Creator Studio by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Additional requirements

You must have the App Engine Enterprise license to use Creator Studio.

Related ServiceNow applications and features

App Engine Management Center

Track and manage your Creator Studio requests, deployments, applications, and collaborative developers using App Engine Management Center.

App Engine Studio

Open Creator Studio apps in AES to add more complexity to the app, such as email notifications and additional security.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Catalog Builder

Create or edit a catalog item using a visual and guided experience.

Form Builder

Visually create, configure, and customize the different form views for your users using the form editor in Form Builder.

ServiceNow Studio

ServiceNow Studio provides a unified experience for all ServiceNow development activities, enabling admins and developers to extend base system solutions and create custom apps with ease.

Workflow Studio

Integrate workflow authoring, configuring, and monitoring into a single-page experience.

Workspace

Address customer requests and issues in a workspace, which provides a suite of tools where agents, case managers, help desk professionals, and managers work with tools to resolve customer needs.

Zero Copy Connector for ERP release notes

The ServiceNow® Zero Copy Connector for ERP application (formerly known as ERP Data Hub) enables you to connect to the ERP (Enterprise Resource Planning) system of record, query remote tables, and build data models to use ERP data on the ServiceNow AI Platform. Zero Copy Connector for ERP was enhanced and updated in the Yokohama release.

Zero Copy Connector for ERP highlights for the Yokohama release

Yokohama Patch 3

- View charts and graphs on the Zero Copy Connector for ERP home page dashboard.
- Accelerate your adoption of Zero Copy Connector for ERP using content packs.
- Preview entities in the Model Manager.

Yokohama Patch 1

- The name of the application has been changed from ERP Data Hub to Zero Copy Connector for ERP.
- Export and import custom ERP models between instances.
- Enhance communication security between SAP systems and your ServiceNow instance by using the SAP Secure Network Communication (SNC) connection option.
- Manually name, edit, and maintain model manager fields.

See Zero Copy Connector for ERP for more information.

Important:
Zero Copy Connector for ERP is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Yokohama Patch 3

Zero Copy Connector for ERP dashboard

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

View charts and graphs about transactions on the home page dashboard.

Implement and deploy faster with ERP content packs

Use prebuilt content packs containing models to get Zero Copy Connector for ERP running on your instance faster.

Preview entities in the Model Manager

Preview operations, fields, values, inputs, and outputs in the Zero Copy Connector for ERP Model Manager instead of having to open App Engine Studio.

View detailed software information

View software information including machine type, node name, supported database, and more.

Yokohama Patch 1

Export and import Zero Copy Connector for ERP custom models

Share custom models between instances using export and import instead of re-creating the custom models.

Use an SAP Secure Network Communication (SNS) connection

Configure an SAP Secure Network Communication (SNC) connection to have a certificate-based authentication to access SAP production data based on X.509.

Control model manager field names

Manually edit and maintain model manager fields for a more customizable model management experience.

More easily create a new table transform map from an extraction table

Select and map source fields with target fields when creating a table transform map from an extraction table.

Enhanced $orderby OData query capability

Specify the order, ascending or descending, in which data should be returned from an output variable.

Use guided tours in Zero Copy Connector for ERP

Learn about features and complete tasks through interactive steps by taking guided tours within Zero Copy Connector for ERP.

Changed in this release

Yokohama Patch 3

View Zero Copy Connector for ERP software information

From the Zero Copy Connector for ERP system form, view detailed system information including machine type, node name, supported database, and Unicode status.

Preview model entities before adding to a model

In the Model Manager, confirm you are adding the correct entity by examining and verifying read table entities before adding the entity to a model.

Yokohama Patch 1

ERP Integration application name change

The name of the application has been changed from ERP Data Hub to Zero Copy Connector for ERP.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Removed in this release

The sn_erp_integration.enableJobModification property has been removed and is no longer required in order to schedule an extraction.

Activation information

Install Zero Copy Connector for ERP by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Additional requirements

SAP ECC and S/4 HANA are currently the only available systems that integrate with Zero Copy Connector for ERP.

Related ServiceNow applications and features

ERP Semantic Mining (ERP-CM)

Identify ERP application candidates from your system of record with custom data to re-platform using ServiceNow AI Platform® low-code apps.

Build apps using App Engine Studio

AES consumes Financial Services Remote Tables as ERP data pills to help you create custom low-code apps and flows based on migration candidates.

Remote tables

Financial Services Remote Tables connect the ServiceNow AI Platform to third-party sources or to another instance so you can retrieve external data and optionally cache it in the memory.

Workflow Studio

Integrate workflow authoring, configuring, and monitoring into a single-page experience. Consolidate Playbooks, Workflow Studio, Workflow Studio, Integration Hub integrations, and Decision Builder into one design environment.

ERP Semantic Mining release notes

The ServiceNow®ERP Semantic Mining (ERP-CM) product enables ERP (Enterprise Resource Planning) consultants and architects to identify customizations and recommend candidates for replatforming from the ERP system onto the ServiceNow AI Platform. ERP Semantic Mining was enhanced and updated in the Yokohama release.

ERP Semantic Mining highlights for the Yokohama release

Yokohama Patch 3

- Easily clear a blocked ETL (extract, transform, and load) processing flow when an automatic or manual synchronization of ERP data between the ERP system of record and your ServiceNow instance is not successful by using the **Reset AI/ML analysis** option.

Yokohama Patch 1

- View charts and graphs on the new ERP Semantic Mining home page dashboard.
- Take guided tours with interactive steps to learn about features and interactively complete tasks in ERP Semantic Mining.

New in the Yokohama release

Yokohama Patch 3

Reset AI/ML analysis to control the ML training

Use **Reset AI/ML analysis** option to clear the AI/ML analysis so the flow can run again.

Yokohama Patch 1

ERP Semantic Mining dashboard

View statistics about mining results and candidates on the home page dashboard.

Guided tours in ERP Semantic Mining

Learn about features and complete tasks through interactive steps by taking guided tours within ERP Semantic Mining.

Updated home page

The new home page provides a dashboard showing metrics through charts and graphs related to ERP Semantic Mining.

Changed in this release

Yokohama Patch 1

Faster initialization

In addition to daily total application statistics, the SQLM and APPSTATS initial scan now also retrieves all monthly total application statistics up to the current date.

Activation information

Install ERP Semantic Mining by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Related ServiceNow applications and features

Zero Copy Connector for ERP

Zero Copy Connector for ERP enables you to simplify the use of ERP data from the system of record such as SAP. You can also create extraction tables on the ServiceNow AI Platform to transform data and create ERP models.

App Engine Studio

App Engine Studio consumes remote tables and extraction tables from the ERP system to enable you to create custom low-code apps and flows based on the migration candidates.

Remote tables

Financial Services Remote Tables connect the ServiceNow AI Platform to third-party sources or to another instance so that you can retrieve external data and optionally cache it in the memory.

Workflow Studio

Integrate workflow authoring, configuring, and monitoring into a single-page experience. Consolidate Playbooks, Workflow Studio, Workflow Studio, Integration Hub integrations, and Decision Builder into one design environment.

Integration Hub release notes

The ServiceNow® Integration Hub application extends the ServiceNow® Workflow Studio automation capabilities by enabling you to integrate your instance data with data in external systems. Integration Hub was enhanced and updated in the Yokohama release.

Integration Hub highlights for the Yokohama release

- Get alerts and alert notifications for your Stream Connect integrations.
- Use error evaluation with Data Stream actions to catch step errors and specify error behavior for each step.
- Edit, configure, and create connection aliases in the Action Properties section of actions in Workflow Studio.

See Integration Hub for more information.

New in the Yokohama release

Stream Connect alerting

- Get alerts for your Stream Connect integrations. Stream Connect uses both active and scheduled monitoring to detect events across multiple Stream Connect components. If an issue is detected, an alert is created, and a message is logged to the Stream Connect Log.
- Specify alert thresholds by configuring alerting properties. For example, you can specify a maximum amount of time to process the current message queue. If the estimated processing time exceeds your specified time, an alert is generated.
- Receive alert notifications via email, SMS, or the ServiceNow® mobile app. Notifications contain detailed alert information, including the alert number, level, and a description. You can configure notification settings based on alert types, severity, and user preferences.

View producer statistics in the Stream Connect dashboard

Get detailed information about Stream Connect producers and their performance, including a producer's status and type, the number of bytes and messages produced to a topic, and producer data trends over time, in the Stream Connect dashboard.

Check data usage in the Stream Connect dashboard

View total data usage and data usage per month and topic with the Stream Connect dashboard. Data usage history is available for the last 12 complete months plus the current month.

Use error evaluation with Data Stream actions

Catch step errors and specify error behavior for each step in a Data Stream action. Create your own error conditions by specifying when an action returns an error state and the status codes and messages they return.

View connection aliases in integration actions

Edit, configure, and create connection aliases in the Action Properties section of actions in ServiceNow® Workflow Studio. View connection error details for connection aliases that are not set up or configured.

UI changes

Create an HTTP(s) connection **Options to specify the MID Server capabilities and MID application in a connection record**

The Configure Connection form, that you use to configure a connection between your ServiceNow instance, and a third-party application now provides the following fields when you select **Auto-Select MID Server** from the MID Selection list.

- Capabilities: The capabilities that the MID Server must support to be eligible for selection.
- MID Application: The application that the MID Server must support to be eligible for selection.

Activation information

Integration Hub is included in Workflow Data Fabric and is available with activation of an Workflow Data Fabric subscription package. For details, see https://www.servicenow.com/now-platform/workflow-data-fabric.html.

Removed in this release

Important:

- Starting with the Yokohama release, Microsoft Teams Spoke is being prepared for future deprecation. It will be hidden and no longer activated on new instances but will continue to be supported. Microsoft Teams Graph Spoke provides the latest experience for this functionality.

  For more information, search for the term `Microsoft Teams Spoke for ServiceNow IntegrationHub` in Plugins planned for deprecation.

- Starting with the Yokohama release, Gremlin Spoke is being prepared for future deprecation. It will be hidden and no longer activated on new instances but will continue to be supported. Spoke Generator provides the latest experience for this functionality.

  For details, see the Deprecation Process [KB0867184] article in the Now Support knowledge base.

Related ServiceNow applications and features

Workflow Studio

ServiceNow® Workflow Studio enables process owners to automate approvals, tasks, notifications, and record operations without having to code. You can use the Workflow Studio design environment to author flows and actions and to view the results that they produce.

App Engine Studio

ServiceNow® App Engine Studio (AES) is a development tool for creators of varying skill levels to build applications that meet the immediate needs of your organization.

MID Server

The Management, Instrumentation, and Discovery (MID) Server is a Java application that runs as a Windows service or UNIX daemon on a server in your local network.

The ServiceNow® MID Server enables communication and the movement of data between a ServiceNow instance and external applications, data sources, and services.

Robotic Process Automation (RPA) Hub

Use the ServiceNow® Robotic Process Automation (RPA) Hub to enable end-to-end automation for your organization. With a combination of UI interactions, element-based automations, and APIs that interact between the various business applications, you can emulate user actions and eliminate mundane and repetitive human activities.

Connections and Credentials

Credentials and connection information are required to gain access to a computer or network device for ServiceNow® Discovery, ServiceNow® Service Mapping, and ServiceNow® Cloud Management, or to perform work using ServiceNow® Orchestration. When adding content to share on the ServiceNow® Developer Site or the ServiceNow® Store, you can configure connections and credentials relevant to your environment without modifying the built content.

Next Experience Developer (NED) Tools release notes

The ServiceNow® Next Experience Tools application enables you to create the components to track and enhance page performance and improve overall developer productivity. NED Tools was enhanced and updated in the Yokohama release.

Next Experience Developer (NED) Tools highlights for the Yokohama release

Reduce troubleshooting time with enhanced component visualization, filters for traces, and new event filters.

See Next Experience Developer Tools for more information.

UI changes

Component visualization

Highlighted components feature a tooltip that displays the element tag name and element ID.

Changed in this release

Time filters for events

Icons were added to each event to enable you to select a timeframe when filtering events.

Subtree filters for events

Scroll and search through a selected portion of the component tree.

Filters for traces

Filter traces with front-end filters to streamline span visualizations, specialty filters to view targeted waterfall analysis without losing overall context, and level filters to adjust the detail display in span visualizations.

Activation information

Download Next Experience Developer Tools from the Google Chrome Web Store.

Next Experience Developer Tools requires Google Chrome.

Now Assist for App Engine release notes

The ServiceNow® Now Assist for App Engine application enables creators to enhance custom applications with AI agents and skills that application users can leverage at runtime. Now Assist for App Engine is a new application in the Yokohama Patch 3 release.

Now Assist for App Engine highlights for the Yokohama release

Yokohama Patch 11

- Review changes to Now Assist usage measurement.
- Some Now Assist skills, agents, and agentic workflows are on by default.
- Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications.

Yokohama Patch 3

- Create and deploy AI agents within custom applications, helping to empower creators and accelerate time-to-value.
- Build custom AI agents and skills for the unique workflow of an application using Now Assist Skill Kit and AI Agent Studio.
- Leverage AI agents and skills created with Now Assist for App Engine in custom applications at runtime, helping improve efficiency.

See Now Assist for App Engine for more information.

Important:
Now Assist for App Engine is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Now Assist for App Engine features

Yokohama Patch 3

Create an AI agent

Create a custom AI agent in AI Agent Studio to assist your application users with their tasks.

Create a skill

Create a custom skill for Now Assist, enabling you to have greater flexibility with the generative AI capabilities available on the ServiceNow AI Platform.

Changed in this release

Yokohama Patch 11

Changes to Now Assist usage measurement

Starting with Yokohama Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Some Now Assist skills are turned on by default

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.

Configure ACLs for AI agents and agentic workflows

Configure the access control lists for who can discover and trigger AI agents and agentic workflows in their guided setups in AI Agent Studio. You can determine whether an AI agent or agentic workflow behaves as a dynamic user or as an AI user. You can also specify if an AI agent or agentic workflow can be available to all authenticated users or publicly available.

Activation information

Install Now Assist for App Engine by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Additional requirements

Check your entitlements to determine whether you have access to the Now Assist for App Engine application.

Related ServiceNow applications and features

AI Agent Studio

With the ServiceNow® AI Agent Studio application, you can create, manage, or test AI agents and agentic workflows all in one place.

Now Assist

ServiceNow® Now Assist uses generative AI that is designed to enhance user productivity and efficiency through conversation and proactive experiences.

Now Assist Admin console

The Now Assist Admin console provides you with quick and effortless access to the important information that you need to set up, configure, and monitor Now Assist applications and features.

Now Assist AI agents

The ServiceNow® Now Assist AI agents are entities that mimic human-like intelligence by using large language models (LLMs).

Now Assist Skill Kit

ServiceNow® Now Assist Skill Kit enables you to create and publish custom prompts and skills for Now Assist.

Now Assist for Creator release notes

The ServiceNow® Now Assist for Creator application includes generative AI skills that can make developing on the ServiceNow AI Platform more efficient. Now Assist for Creator was enhanced and updated in the Yokohama release.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Now Assist for Creator highlights for the Yokohama release

Yokohama Patch 11

- Review changes to Now Assist usage measurement.
- Create, edit, and deploy fully functional ServiceNow applications using the Build Agent in the ServiceNow IDE.
- Generate catalog items conversationally and preview them during the creation process with Now Assist in Catalog Builder.
- Choose an AI model provider for all Now Assist for Code skills in the script editor.

Yokohama Patch 8

- Removed the now.assist.creator role as a requirement for test generation.

Yokohama Patch 6

- Use Google Gemini and Anthropic Claude on AWS as AI model providers for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI.

Note:
Additional AI model providers are supported for the following Now Assist for Creator skills:

  - App generation
  - App summarization
  - Catalog item generation
  - Code generation
  - Flow generation
  - Flow summarization
  - Playbook generation
  - Process Mining
  - RPA bot generation
  - Spoke generation
  - Test generation

Yokohama Patch 3

- Summarize what a flow or subflow does by using generative AI.
- Generate playbooks from inputs that refer to active actions, flows, subflows, content from installed spokes, or activity definitions.
- Create automation and UI components in Now Assist for app generation.
- Use the code explain and summarize feature of Now Assist for Code to explain and summarize the code. This feature is supported by both Now LLM Service and the Azure OpenAI model providers.
- Use the Client Script Summarization skill to generate a high-level summary and a detailed explanation of a client script.

Yokohama Patch 1

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Enable your users to create applications by using the Now Assist for app generation skill even if they don't have the admin role.
- Use the improved application preview before generating an application by using the Now Assist for app generation skill.
- Enable your RPA Desktop Design Studio users to create and edit automations and activities, and extend automation logic flow with Now Assist for RPA Hub.
- Enable your ServiceNow Studio users to generate a summary of an app.
- Use the **Quick Actions** button in the Now Assist for Code enabled script editor to edit code and add comments.
- Use the prompt modal in inline or floating mode with Now Assist for Code.
- Now Assist for Code now supports both Now LLM Service and Azure OpenAI model providers. When you select the Azure OpenAI model provider, all requests for the Now Assist for Code model are redirected to Azure OpenAI for evaluation and response. Additionally, you get access to the Code Explain and Code Summarize features.
- Use the auto-complete feature of Now Assist for Code to get contextually relevant code suggestions while typing.

See Now Assist for Creator for more information.

Important:
Now Assist for Creator is available in ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Yokohama Patch 11

Build Agent, an autonomous AI agent for ServiceNow application development

Build Agent, located in a chat panel within the ServiceNow IDE, functions as an autonomous AI agent capable of independently generating a complete ServiceNow application. It can handle various code-related tasks, such as rewriting tables, explaining code, validating and improving existing applications, fixing application errors, and more.

Generate catalog items conversationally with Now Assist in Catalog Builder

Create catalog items and record producers efficiently using the conversational interface within Catalog Builder. Communicate your requirements and specifications for your desired catalog items through guided conversation. Now Assist for catalog generation helps to simplify and streamline the catalog item creation process.

Yokohama Patch 6

New third-party AI model provider options available for Now Assist

Google Gemini 2.0 Flash, Google Gemini 2.5 Pro, and AWS Claude 3.7 Sonnet are available for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI GPT-4.1 and GPT-4.1 mini.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
Additional AI model providers are supported for the following Now Assist for Creator skills:

- App generation
- App summarization
- Catalog item generation
- Code generation
- Flow generation
- Flow summarization
- Playbook generation
- Process Mining
- RPA bot generation
- Spoke generation
- Test generation

Yokohama Patch 3

Add columns to existing tables with Now Assist for app generation

Add columns to existing tables in Now Assist for app generation.

Add flows in Now Assist for app generation

Create a flow when creating an application in Now Assist for app generation. Enhance an existing application by adding a flow.

Add workspaces in Now Assist for app generation

Create a workspace when creating an application in Now Assist for app generation. Enhance an existing application by adding a workspace.

Configure an event handler with Now Assist

Use Now Assist in UI Builder to configure event handlers. At present, you can configure links to a destination, open or close modals, and view load requested event handlers using Now Assist in UI Builder.

Create a flow or subflow from an image

Create a flow or a subflow from an image by using Now Assist. Capture the detailed process in an image and attach the image to Workflow Studio. Now Assist generates a preview of the flow that you can modify and regenerate.

Enable Code Explain and Summarize

Support Code Explain and Code Summarize features with the Now LLM Service. Ensure compliance with any regional restrictions and help APAC users who may face limitations with US-based models.

Summarize client scripts

Use client script summary generation to get both a high-level summary and a detailed explanation of the client scripts.

Summarize a flow or subflow

Summarize what a flow or subflow does by using generative AI.

Support additional components in the RPA Bot generation skill

Support 97 additional components with Now Assist for RPA Hub.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Support Retrieval Augmented Generation (RAG) with playbook generation

Generate playbooks from inputs that refer to custom actions, flows, subflows, content from installed spokes, or activity definitions. Include the names of commonly used and recently published actions, subflows, flows, and activity definitions that are available on your instance in your playbook generation requests.

Time out long running app summaries

Time out app summary generation after two minutes.

Use the Now LLM Service with Now Assist for app generation

Choose Now LLM Service or OpenAI GPT-4o to ensure compliance with any regional restrictions. This feature is helpful for APAC users who may face limitations with US-based models, such as GPT-4.0.

Yokohama Patch 1

Create applications in ServiceNow Studio by using Now Assist with the guided app creator role

Enable your users with the guided app creator role (in addition to users with the admin role) to create applications with the Now Assist for app generation skill.

Create and edit automations and activities and extend automation logic flow in RPA Desktop Design Studio by using Now Assist

Use the Robotic Process Automation (RPA) bot generation skill in RPA Desktop Design Studio to create and edit automations and activities through short text instructions and preview options. This feature helps you to accelerate automation development because new and existing users can develop and build faster automations.

Enhance the automation logic by using the **Build automation** option, starting from components or from an empty design surface that is based on text instructions.

Summarize an app in ServiceNow Studio

Use the new Now Assist for app summary generation skill to quickly generate a summary of an app. You can then copy the summary to the app description, and then use the summaries to find duplicate or redundant apps.

Generate and edit automated tests faster by using the Test generation skill

Use the new Test generation skill to generate automated tests faster by simply describing your test requirements. Review the generated test, make edits directly, or refine your original prompt to generate a revised version of the test.

UI changes

Yokohama Patch 1

Find files faster when previewing an application in the Now Assist for app generation skill

Filter the app files list and narrow the search when previewing an application that is created with the Now Assist for app generation skill.

Enhanced visibility of apps created by the Now Assist for app generation skill

On the ServiceNow Studio home page, apps that are generated by AI display the AI indicator.

Changed in this release

Yokohama Patch 11

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Changes to Now Assist usage measurement

Starting with Yokohama Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Some Now Assist skills, agents, and agentic workflows are turned on by default

The skills are automatically available to appropriate role users for the application, such as ITIL roles on incident forms or change forms. This change simply activates the skill and does not touch the roles that may be needed to use the skill. The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills and agentic workflows are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill, agent, or agentic workflow is turned on automatically (the AI asset was never configured and turned on, then turned off again). Previously configured skills and agentic workflows that were turned on, then off, remain inactive.

Configure ACLs for AI agents and agentic workflows

Configure the access control lists for who can discover and trigger AI agents and agentic workflows in their guided setups in AI Agent Studio. You can determine whether an AI agent or agentic workflow behaves as a dynamic user or as an AI user. You can also specify if an AI agent or agentic workflow can be available to all authenticated users or publicly available.

Previous Patch releases

More easily identify changes when previewing and updating applications

When previewing an application, any requested changes made by the Now Assist for app generation skill are listed when the preview pane loads.

Edit applications without having to change the scope manually

When editing applications, the Now Assist for app generation skill now changes the scope that you're working in to the scope of the application automatically.

More easily query Analytics Generation

Analytics Generation now uses a semantic filter instead of Natural Language Query (NLQ), resulting in less rigid requirements for queries.

Yokohama Patch 1

Improved query engine for Analytics Generation

Starting in Yokohama Patch 1, analytics generation supports GPT-4o for generating queries, to provide better accuracy in responses. These improvements include support for up to two levels of dot-walking based on user utterances.

Removed in this release

Yokohama Patch 12

- Spoke generation has been removed from Now Assist for Creator. See the ServiceNow Store website for additional information.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Activation information

Install Now Assist for Creator by requesting it from ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Related ServiceNow applications and features

App Engine Studio

ServiceNow® App Engine Studio (AES) is a development tool for creators of varying skill levels to build applications that meet the immediate needs of your organization.

Integration Hub

Automate integration tasks using ServiceNow components for ServiceNow® Workflow Studio, or develop custom integrations. A separate subscription is required.

Integration Hub available spokes

Activate spokes to enhance your Workflow Studio experience with integration-specific content. Use prebuilt flows and actions to automate your integrations or create your own integration automation.

MID Server

The Management, Instrumentation, and Discovery (MID) Server is a Java application that runs as a Windows service or UNIX daemon on a server in your local network. The ServiceNow® MID Server enables communication and the movement of data between a ServiceNow instance and external applications, data sources, and services.

Now Assist

Use AI recommendations to select the next component in your flow. The system generates recommendations based on the current position in the flow and the flow component names listed before.

Process Automation Designer

ServiceNow® Playbooks enables process owners to author cross-enterprise workflows and create a single, unified process. You can also use Playbooks to provide end users with a simplified, task-oriented view of your process.

Robotic Process Automation (RPA) Hub

Use the ServiceNow® Robotic Process Automation (RPA) Hub to enable end-to-end automation for your organization. With a combination of UI interactions, element-based automations, and APIs that interact between the various business applications, you can emulate user actions and eliminate mundane and repetitive human activities.

RPA Hub release notes

The ServiceNow® RPA Hub application enables end-to-end automation for your organization. RPA Hub was enhanced and updated in the Yokohama release.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

RPA Hub highlights for the Yokohama release

- Use generative AI to create and edit automations, activities, and extend automation logic flow through text instructions and preview options in the RPA Desktop Design Studio.
- Run multiple unattended robots on different user sessions at the same time on the same Windows Server machine using the high-density robots feature.
- Use new sample automations that were added in the RPA Desktop Design Studio that cater to different use cases.
- Leverage the communication capabilities of the SSH protocol in the automation processes with the new Secure Shell (SSH) connector in the RPA Desktop Design Studio.
- Use the SAP connector to identify the screens and elements and to automate workflows on SAP graphical user interfaces (GUI).
- Use Google Gemini and Anthropic Claude on AWS as AI model providers for RPA bot generation skill in addition to Now LLM Service and Azure OpenAI.
- Enhanced access controls for RPA bot generation skill.

See Robotic Process Automation (RPA) Hub for more information.

Important:
RPA Hub is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Important information for upgrading RPA Hub to Yokohama

Upgrade any of these currently installed Microsoft Software Installers (MSIs) by downloading the RPA applications:

- RPA Desktop Design Studio
- Attended Robot
- Unattended Robot
- Unattended Robot Login Agent

For more information, see Download the RPA applications from RPA Hub.

The following upgrade information is applicable only when you're upgrading from San Diego or Tokyo to Yokohama.

Based on the number of records in the application file table, you may experience a delay while upgrading the RPA Hub applications from Tokyo or earlier releases to Yokohama.

Before upgrading RPA Hub to Yokohama, you must set the value of the *glide.rollback.blacklist.TableParentChange.change* system property to **false**. If this property doesn't exist in the System Property [sys_properties] table, add the property and set its value to false. For more information on how to add a property, see Add a system property.

After you upgrade to Yokohama, the bot process definitions change to the new structure, which is the bot process configuration.

Although the bot process configuration doesn't replace the bot process completely, most fields are moved from the bot process to the bot process configuration. If you upgrade to Yokohama without updating the system property value, the tables don't extend the Application File [sys_metadata] table. To update the table changes manually, see the Restructuring RPA Hub

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

tables to sys_metadata in Utah and beyond release [KB1223629] article in the Now Support Knowledge Base.

New in the Yokohama release

New third-party AI model provider options available for all Now Assist applications

Google Gemini and AWS Claude are available for RPA bot generation skill in addition to Now LLM Service and Azure OpenAI.

Enhanced ACLs for security measures

Enhanced access controls for RPA bot generation skill for Now Assist for RPA Hub in compliance with AI security directives.

Access to RPA bot generation skill is now restricted to users with the RPA developer or RPA admin role. These roles contain the RPA Hub Admin user role (sn_nowassist_admin.user).

RPA bot generation

Use the Robotic Process Automation (RPA) bot generation skill in RPA Desktop Design Studio to create and edit automations and activities through short text instructions and preview options, accelerating automation development for both new and existing users. For more information about creating automations using Now Assist, see Create an automation with Now Assist. For more information about creating activities using Now Assist, see Create an activity with Now Assist.

Enhance automation logic using the **Build automation** option, starting from components or from a blank canvas based on text instructions. For more information, see Build an automation with Now Assist.

High density robots

Enable multiple unattended robots to run simultaneously on the same Windows Server machine using the high-density robots feature. These unattended robots run automations in separate Remote Desktop Protocol (RDP) sessions. For more information, see High density robots in Unattended Robot and Set up Windows Server machine for high density robots.

Sample automations

Use sample automations to jumpstart your automation journey with a library of pre-built automations.

The following unattended and attended sample automations were added to the Sample Explorer and home page of RPA Desktop Design Studio:

- User Creation in Badging App
- Universal Timezone Converter
- Decode Barcode and QR Code to Text
- PDF Text to Images
- PDF to Word
- HTML to CSV
- Word Operations
- Excel Operations
- Highlight Excel Rows
- City Weather Reports

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Tiff to PDF
- Add Word Footer
- Date Delta Across Apps
- File Ops: Copy, Delete, Move
- Extract Data from JSON to Excel
- Automate Offer Letters
- Summarize Sales Data
- Invoice Data Extraction to Excel
- Download File from URL
- Health Check Bot

Secure Shell (SSH) connector

Establish an Secure Shell (SSH) connection to a remote server and execute commands in the RPA Desktop Design Studio. In the UNIX environment, SSH is the preferred way to access remote systems. Robots often interact with remote systems such as UNIX servers.

The connector comprises three methods:

- Connect: Establishes an SSH connection.
- Run Command: Executes commands over an established connection.
- Disconnect: Disconnects the session that was established using connect method.

Ensure to install the SSH plugin from the Plugins Manager as a prerequisite.

Bypassing the legal notice

In RPA Hub, enable the *sn_rpa_fdn.bypass_legal_notice* system property to authorize the unattended robot to clear the legal notice message set by the system-level policy. This property ensures that a legal notice isn't displayed during the robot's login process.

What's New tab in the Help Center for RPA Hub

Learn about the following newly released RPA features in your instance in the What's New tab in the Help Center for RPA Hub:

- Now Assist for RPA Hub
- High density robot

SAP connector

The SAP connector helps identify the screens and elements and automating workflows on the SAP GUI. For example, create and save a vendor entry. The SAP Connector is built by Bristlecone, Inc.

New methods for Universal app connector

In the RPA Desktop Design Studio, the following three new methods for Universal app connector are added.

- GetValue: Retrieves a value from an element.
- SetValue: Assigns a specified value into an element.
- Click: Performs a click action on an element.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

UI changes

Build with Now Assist wizard

In the RPA Desktop Design Studio, create an automation with Now Assist by selecting the **Create automation** button and follow the next set of steps in the Build with Now Assist wizard.

Create an activity with Now Assist

In the RPA Desktop Design Studio, create an activity using Now Assist by selecting and holding (or right-clicking) **Activities** in the Project Explorer. Then, select the **New activity using Now Assist** option.

Build an automation with Now Assist

In the RPA Desktop Design Studio, extend the automation logic using the **Build automation with Now Assist** option. On the design canvas, select a component and hover over the AI icon ( ). Select the AI icon ( ) to open the Build automation with Now Assist window, you can describe the automation logic based on the selected components.

High density robots

In the Robot form of RPA Hub, the **High Density Robot** and **Screen Resolution** fields are added to support the high-density robot feature.

Enhanced user experience on the Sample Automation home page

The following options have been added to enhance user experience on the Sample Automation home page in RPA Desktop Design Studio:

- Pagination: Scroll through different pages containing sample automations using the pagination option.
- Search bar: Filter and display only the automations that contain the search keyword in their title or description using the search bar option. The search is case-insensitive and dynamically updates the list of displayed automations based on the search query.

Changed in this release

Changed fields for the Unattended Robot application

In the Unattended Robot dialog box, the **RPA Hub** field name has been changed to **Instance URL**.

Embedded Task Automation in RPA Hub

Trigger attended bot processes (attended automations) from the ServiceNow forms in the Workspace experience apart from initiating them from a classic UI or the Attended Robot application.

Microsoft Software Installer (MSI) compatibility

Older MSIs that are related to Attended Robot and RPA Desktop Design Studio from the RPA Hub store release versions 7.0.3 and 9.0.0 are compatible and can be used with the current store release version (12.0.X) of RPA Hub. For Unattended Robot, the latest MSI must be installed, as it is not backward compatible.

However, there are some limitations:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Any new automation components available in the latest version aren't available in the older versions. For example, the SSH connector in version 12.0 doesn't work in older versions.
- Components of the same name with different parameters aren't backward compatible.

If robot machines use older MSIs than the current instance version, they won't have the new features from later versions. For example, features released after version 10.0 won't work in version 10.0 MSIs. Only features from version 10.0 are available in that version.

TerminateByName component behavior change

The TerminateByName component stops processes or applications only within the current user session.

Activation information

Install RPA Hub by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Install the Now Assist for RPA Hub application to add the generative AI capability and turn on the Robotic Process Automation (RPA) bot generation skill to use generative AI to create automations. For more information about these tasks, see Configure Now Assist for RPA Hub and Turn on the RPA bot generation skill.

For cumulative release notes information on RPA Hub, see RPA Hub release notes.

For cumulative release notes information on RPA Desktop Design Studio, see RPA Plugin Bundle release notes.

For cumulative release notes information on Now Assist for RPA Hub, see Now Assist for RPA Hub release notes.

If you have previously downloaded the application from the ServiceNow Store and a new version is available, you can update it in your ServiceNow AI Platform instance at **All** > **System Applications** > **All Available Applications**.

Additional requirements

To use the Unattended Robot application, the hardware requirements for a single robot are as follows:

Hardware requirements for standard robots

Resource	Minimum	Recommended
CPU	2 cores of Intel 1.8 GHz 64-bit processor	4 cores of Intel 2.4 GHz 64-bit processor
RAM	4-GB RAM	8-GB RAM
Disk space	Minimum 50-GB free disk space after installing the OS, patches, and base software	Minimum 100-GB free disk space after installing the OS, patches, and base software

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

To use the Unattended Robot application, the minimum and recommended hardware requirements for a high density robot are multiplied by the number of runtimes. Multiple robots execute jobs concurrently on the same Windows Server machine. For example, with three users concurrently executing jobs, the minimum hardware requirements for a high density robot are:

- 6 cores of Intel 1.8GHz 64-bit (6 cores of 1.8GHz 64-bit per runtime).
- 12 GB of RAM (4 cores per runtime).

To use the Unattended Robot application, the software requirements for a standard robot are:

- Operating system: Microsoft Windows 10, Windows Server 2016, Windows Server 2019, Windows Server 2022.
- NET framework: Windows 4.7.1 or greater.
- DPI scaling setting must be deactivated.

To use the Unattended Robot application, the software requirements for a high density robot are:

- Operating system: Windows Server 2022.
- NET framework: Windows 4.7.1 or greater.
- DPI scaling setting must be deactivated.

If you are upgrading to Yokohama, verify that you have the latest robot MSI from Yokohama installed. The older versions of the robots do not work.

An unattended robot is mapped to only one machine. This is applicable for standard robot.

Virtual Machines (VMs) that are used for the Unattended Robot application must be persistent and constantly on.

To use the Attended Robot application, the hardware requirements are:

Hardware requirements for Attended Robot

Resource	Minimum	Recommended
CPU	Intel Processor (1vCPU)	Intel Processor (4vCPU)
RAM	4-GB RAM	8-GB RAM
Disk space	Minimum 20-GB free disk space after installing the OS, patches, and base software	Minimum 50-GB free disk space after installing the OS, patches, and base software

To use the Attended Robot application, the software requirements are:

- Operating system: Microsoft Windows 10 or Windows Server 2016 or Windows Server 2019.
- NET framework: Windows 4.7.1 or greater.
- DPI scaling setting must be deactivated.

An attended robot is mapped to only one user.

To use the RPA Desktop Design Studio application, the hardware requirements are:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Hardware requirements RPA Desktop Design Studio

Resource	Minimum	Recommended
CPU	Intel Processor (At least, Core i5)	Intel Processor (Core i7).
RAM	4-GB RAM	8-GB RAM
Disk space	Minimum 20-GB free disk space after installing the OS, patches, and base software	Minimum 50-GB free disk space after installing the OS, patches, and base software

To use the RPA Desktop Design Studio application, the software requirements are:

- Operating system: Microsoft Windows 10 or Windows Server 2016 or Windows Server 2019.
- NET framework: Windows 4.7.1 or greater.
- Monitor with 1920x1080p resolution.
- DPI scaling setting must be deactivated.

Browser requirements

ServiceNow workspaces don't support mobile devices. For more information about the list of supported browsers, see Browser support.

Accessibility information

Accessibility improvements

Accessibility improvements were completed to support WCAG 2.1 Level AA conformance.

Localization information

RPA Hub supports international languages. For more information, see Internationalization support for RPA Hub.

Related ServiceNow applications and features

Workflow Studio

ServiceNow® Workflow Studio integrates with RPA Hub for a seamless robot execution. You can use the Workflow Studio design environment to author flows and actions, as well as view the results they produce.

Table Builder release notes

The ServiceNow® Table Builder application is a centralized way to build tables, forms, and display logic. Table Builder was enhanced and updated in the Yokohama release.

Table Builder highlights for the Yokohama release

- Transition to NOW Design Systems (NDS) icons from the previous custom table builder icons.
- Launch the Table Builder App from the App Navigator.
- Consistency in role assignment during the table creation process to avoid access issues for the developers.

See Table Builder for more information.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

UI changes

Transition to NOW Design Systems (NDS)

Shift from the previous custom table builder icons to the NOW Design System (NDS) icons in the user interface.

Launching App from the App Navigator

You can directly access Table Builder by searching it. You can find Table Builder in the search results of the app navigator.

Accessing Table Builder

At least one role with Read permissions should be assigned to each table during creation to ensure proper Access Control List (ACL) setup and help prevent access issues for developers.

Activation information

Table Builder is available without App Engine Studio.

Browser requirements

Internet Explorer isn't supported.

Related ServiceNow applications and features

App Engine Studio

App Engine Studio (AES) is a guided, low-code tool for developing rich web applications to store information, automate business processes, and solve business problems.

Launching from the App Navigator

ServiceNow IDE release notes

The ServiceNow® integrated development environment (IDE) application enables developers to create scoped applications in source code in an IDE based on Visual Studio Code for the Web on the ServiceNow AI Platform. ServiceNow IDE was enhanced and updated in the Yokohama release.

ServiceNow IDE highlights for the Yokohama release

- Convert existing scoped applications to support development in source code.
- Use TypeScript in JavaScript modules.
- Install and use npm packages from private registries.

See ServiceNow IDE for more information.

Important:
ServiceNow IDE is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Important information for upgrading ServiceNow IDE to Yokohama

ServiceNow IDE version 1.1.4 is active by default on instances on the Yokohama release. Update to ServiceNow IDE version 2.0 or later to use the latest features. For information about updating ServiceNow IDE, see Updating applications.

New in the Yokohama release

Convert scoped applications for use in the ServiceNow IDE

Convert existing scoped applications to support development in source code in the ServiceNow IDE.

Use TypeScript in JavaScript modules

Create an application that uses the TypeScript template to use TypeScript in modules and compile them to JavaScript when building your application.

Use npm packages from private registries as third-party libraries

Install npm packages from a private registry to use as third-party libraries in your application.

Switch between development experiences

Work in the right environment for your task by using the experience switcher to switch between developing in ServiceNow IDE, ServiceNow Studio, and Creator Studio.

Activation information

ServiceNow IDE is active by default starting in the Yokohama release and available for upgrade in the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Related ServiceNow applications and features

ServiceNow SDK

The ServiceNow SDK is used in the background of the ServiceNow IDE as the application packaging service that builds applications and provides the ServiceNow Fluent APIs for developing applications in source code. Scoped applications created or converted with the ServiceNow IDE or ServiceNow SDK can be developed with either application.

ServiceNow SDK release notes

The ServiceNow® software development kit (SDK) enables developers to create scoped applications in source code locally in Visual Studio Code Desktop and upload changes to a ServiceNow instance. ServiceNow SDK was enhanced and updated in the Yokohama release.

ServiceNow SDK highlights for the Yokohama release

- Create and develop applications in source code using an upgraded ServiceNow SDK CLI workflow.
- Refer to content from a file from properties in ServiceNow Fluent APIs.

See ServiceNow SDK for more information.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Important information for upgrading ServiceNow SDK to Yokohama

Upgrade to the latest version of the ServiceNow SDK with the `now-sdk upgrade` command. For more information, see Upgrade the ServiceNow SDK.

ServiceNow SDK version 3.0 supports integrating with ServiceNow instances beginning with the Washington DC release.

Note:
For more information about minor releases of the ServiceNow SDK, see the ServiceNow IDE, SDK, and Fluent articles in the ServiceNow Community.

New in the Yokohama release

Version 3.0

Init command replaces create and convert commands

Create a custom scoped application or convert an existing scoped application from a ServiceNow instance or local directory to support development in source code using the `now-sdk init` command.

Download application metadata and transform it into source code

Download application metadata (XML) from a ServiceNow instance and transform the metadata into ServiceNow Fluent source code.

Refer to content from a file in ServiceNow Fluent APIs

Use content from files in ServiceNow Fluent APIs by referring to the file from a property using the syntax `Now.include('path/to/file')`.

Map metadata to custom directories

Map any application metadata to output directories that load only in specific circumstances using the `$meta` property in ServiceNow Fluent APIs.

Specify a path to a custom tsconfig.json file

Use the `tsconfigPath` parameter in the `now.config.json` file for your application to specify the location of a `tsconfig.json` file with custom options for transpiling TypeScript into JavaScript during the build process.

Changed in this release

Version 3.0

Subcommands replaced with parameters on the auth command

Configure authentication credentials with the `--add`, `--delete`, `--list`, and `--use` parameters of the `now-sdk auth` command.

Dependencies command installs type definitions

Download TypeScript type definitions for Glide APIs and script includes from a ServiceNow instance based on the scripts in your application.

Build command includes --frozenKeys parameter

Validate that the auto-generated `keys.ts` file is up to date for continuous integration (CI) builds by setting the `--frozenKeys` parameter to true with the `now-sdk build` command.

Deploy command renamed install

Install or update an application on a ServiceNow instance using the `now-sdk install` command.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Automated Test Framework Test API supports two-way synchronization

Synchronize changes to Automated Test Framework tests made outside of source code into source code definitions and back to metadata.

Table API supports licensing configurations

Create a licensing configuration [ua_table_licensing_config] to track subscription counts for a table with the `licensing_config` object in the `Table` API.

Table API supports remote tables

Create a remote table with the `scriptable_table` property in a `Table` object.

Removed in this release

- The `now-sdk convert` command has been removed. Use the `now-sdk init` and `now-sdk transform` commands instead.
- The `now-sdk fetch` command has been removed. Use the `now-sdk transform` command instead.

Activation information

The ServiceNow SDK is available as a Node Package Manager (npm) package from the public npm registry and installed locally. For information about installing the ServiceNow SDK, see Install the ServiceNow SDK in an application.

Additional requirements

You must have Node.js and Node Package Manager (npm) installed to install the ServiceNow SDK. For more information, see Install the ServiceNow SDK in an application.

Related ServiceNow applications and features

ServiceNow IDE

The ServiceNow IDE uses the ServiceNow SDK as its application packaging service to build applications, and the ServiceNow SDK provides the ServiceNow Fluent APIs for developing applications in source code in the ServiceNow IDE. Scoped applications created or converted with the ServiceNow SDK or ServiceNow IDE can be developed with either application.

ServiceNow Studio release notes

The ServiceNow® ServiceNow Studio application provides a unified experience for all ServiceNow development activities, enabling admins and developers to extend base system solutions and easily create custom apps. ServiceNow Studio was enhanced and updated in the Yokohama release.

ServiceNow Studio highlights for the Yokohama release

- Work in the best development environment for your task by using the experience switcher to switch between developing in Creator Studio, ServiceNow Studio, and ServiceNow IDE.
- As of version 27.2.4, the ServiceNow Studio File Navigator performance has been improved for large applications.
- As of version 27.2.4, you can easily identify apps created in Creator Studio or ServiceNow IDE by looking at the App Details page in ServiceNow Studio.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- As of version 27.2.4, the file creation experience is now a full-page, guided process with built-in security checks. Admins see all application files, while delegated developers only see file types they have permission to create within the specified scope.
- As of version 27.2.4, users with Write permission for an application description can use Now Assist for app summary generation to generate an app summary. The Summarize button is disabled for users without access to edit the app description, preventing failures after clicking.

See Building applications with ServiceNow Studio for more information.

Important information for upgrading ServiceNow Studio to Yokohama

ServiceNow Studio no longer has to be downloaded from the ServiceNow Store. It's available on the ServiceNow AI Platform by default.

New in the Yokohama release

Change your development experience in ServiceNow Studio

Use the best tool for your app development by switching between Creator Studio, ServiceNow Studio, and ServiceNow IDE.

Summarize the contents of an app in ServiceNow Studio

Help prevent duplicate app creation by summarizing the contents of an app using Now Assist app summary generation in ServiceNow Studio and using the summary if accurate as the app description.

Modify an app's settings in ServiceNow Studio

Change settings or see related links for an app from the app details page. Refresh your app to load updated details.

Create an application in ServiceNow Studio

In the November 2024 release, only admins could create apps in ServiceNow Studio. Now, users with Guided Application Creator (GAC) roles can also create applications.

File Navigator performance has been improved for large applications

As of version 27.2.4, smaller apps load all files on open, while larger apps (exceeding a configurable limit) load a subset initially, with additional files available on demand. Search for files in larger apps will perform server-side calls to decrease load times. Contact your ServiceNow support team to change the app size limits.

Create an app file in ServiceNow Studio

As of version 27.2.4, use the new full-page, guided file creation experience to create any type of file for which you have permission.

Viewing app origination information in ServiceNow Studio

As of version 27.2.4, the app details page for each app shows which development environment your app was created in. Use this information to switch between environments as needed in the course of app development and deployment.

Changed in this release

Modify an app's settings in ServiceNow Studio

The App settings icon in ServiceNow Studio used to open a small modal where only a few settings could be updated and the app could be deleted. In this release, the icon opens a Core UI view of all the app settings and related links for the app.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Create an application in ServiceNow Studio

As of version 27.2.4, the available options at the success page for creating an application changed from **Go to app dashboard** to **View App Details** and **Create File**.

Activation information

ServiceNow Studio is a ServiceNow AI Platform feature that is active by default.

Localization information

As of version 27.2.4, there is Right-to-Left language support for ServiceNow Studio.

Related ServiceNow applications and features

Access Control

Work with access controls and roles for apps and files in ServiceNow Studio.

Catalog Builder

Create and edit catalog items directly in ServiceNow Studio.

Decision tables in Workflow Studio

Add decision rules and use decision tables to decouple decision logic from code.

Email notifications

Create and edit email notifications that are automatically sent when a record is created or updated. Email notifications are also used as a reference in flows or can be triggered by an event.

Flows in Workflow Studio

Create and edit flows, subflows, and actions directly in a Workflow Studio tab within ServiceNow Studio.

Integration Hub - Import

Import data into existing tables in ServiceNow Studio.

Mobile App Builder

Add mobile experiences in a Mobile App Builder within ServiceNow Studio.

Now Assist for app generation in ServiceNow Studio

Create applications through a conversation with generative AI.

Playbooks in Workflow Studio

Edit cross-functional processes and consolidate them into automated task-oriented views.

Table Builder

Work with data models in a tabular format in a tab within ServiceNow Studio.

UI Builder

Create and edit experiences in a tab within ServiceNow Studio.

Workflow Studio

Integrate workflow authoring, configuring, and monitoring into a single-page experience within ServiceNow Studio.

Workflow Data Fabric Hub release notes

The ServiceNow® Workflow Data Fabric Hub application unifies data from across the enterprise, providing access to external data in real time without needing to copy it to your instance. Workflow Data Fabric Hub is a new application in the Yokohama release.

Workflow Data Fabric Hub highlights for the Yokohama release

- Access enterprise data from external data warehouses including Snowflake, Google BigQuery, and Amazon Redshift, data lakes such as Databricks, and databases, including Oracle.
- Retrieve data from external sources in real time without copying any data to your instance using zero copy connections.
- Enrich AI agents and workflows on the ServiceNow AI Platform with external data using data fabric tables.

See Workflow Data Fabric Hub for more information.

Important:
Workflow Data Fabric Hub is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Workflow Data Fabric Hub features

Established connections

Retrieve real-time data from external sources directly in the ServiceNow AI Platform, without copying any data to your instance using zero copy connections.

Data fabric tables

Enable data consumers to access external data on the ServiceNow AI Platform to power AI features and build applications using data fabric tables.

Activation information

Install Workflow Data Fabric Hub by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Workflow Data Fabric Hub is also available with activation of the Zero Copy Connectors app (sn_data_fabric_zcc), which requires a separate subscription. For details, see Request Zero Copy Connectors.

Workflow Studio release notes

The ServiceNow® Workflow Studio application provides a single location to access all process automation applications. Workflow Studio was enhanced and updated in the Yokohama release.

Flows, subflows, and actions in Workflow Studio release notes

The ServiceNow® Workflow Studio application enables process analysts to automate work without having to code and to build multi-step flows from reusable components. Workflow Studio was enhanced and updated in the Yokohama release.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Workflow Studio highlights for the Yokohama release

- Create a flow or a subflow from an image by using Now Assist.
- Debug flows and subflows from a dedicated debugging tab.
- Pause a flow until it receives a specific message from the flow API.
- Run a published Now Assist skill from an action.
- Save flow triggers for reuse in other flows.

See Exploring flows for more information.

Important:
Workflow Studio is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Yokohama Patch 3

Add and edit flows in Now Assist for app generation

Create a flow when creating an application in Now Assist for app generation. Enhance an existing application by adding a flow.

Call a Now Assist skill from an action

Run a published Now Assist skill from an action. Configure the Now Assist skill inputs and skill outputs from the step inputs and step outputs.

Check for conversational compatible actions

Run a compatibility check on new or all actions to determine if they are conversational compatible. Review the inputs of an action to determine if their data types are compatible.

Check for conversational compatible subflows

Run a compatibility check on new or all subflows to determine if they are conversation compatible. Review the inputs of a subflow to determine if their data types are compatible.

Create a flow or subflow from an image

Create a flow or a subflow from an image by using Now Assist. Capture the detailed process in an image and attach the image to Workflow Studio. Now Assist generates a preview of the flow that you can modify and regenerate.

Display text descriptions of the data used by actions and flow logic

See a natural language description of the data each component of a flow uses. Understand what data flow triggers, actions, and flow logic blocks use without having to open their configuration details.

Generate skill and input descriptions for conversational actions

Configure conversational settings for conversational actions by generating skill and input descriptions with generative AI.

Generate skill and input descriptions for conversational subflows

Configure conversational settings for conversational subflows by generating skill and input descriptions with generative AI.

Set default values for action inputs

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Set a default value for a conversational action input. Hide action inputs that have a default value if you don't want users to change the input value in a conversation.

Set default values for subflow inputs

Set a default value for a conversational subflow input. Hide subflow inputs that have a default value if you don't want users to change the input value in a conversation.

Summarize a flow or subflow

Summarize what a flow or subflow does by using generative AI.

Support additional input data types for conversational actions

Support conversational actions that have Dynamic Choice and Array of Objects input types.

Support additional input data types for conversational subflows

Support conversational subflows that have Dynamic Choice and Array of Objects input types.

Create the recommended automation type

Answer a few questions about your automation and Workflow Studio displays recommendations on whether you should create a playbook, flow, subflow, action, or a data stream.

Yokohama Patch 1

Configure conversational settings

View the subflows and actions that are conversational compatible. Configure conversational settings to make a subflow or action available to conversational interfaces.

Yokohama Early Availability

Debug flows and subflows

Debug flows and subflows from a dedicated Workflow Studio tab. Set breakpoints and step through a paused flow to review configuration and runtime values.

Save a flow trigger for reuse in other flows

Save a set of trigger definitions as a reusable trigger. Enable flow authors to select the saved trigger from some or all application flows. Specify whether flow authors can see the trigger details or add conditions to the trigger.

Use the Flow API to send a message to a paused flow

Send a specific message and payload response to a flow that is paused and waiting for a message.

Wait for a specific message from the Flow API

Pause a flow until it receives a specific message from the flow API. Specify the string message that resumes running the flow, and optionally provide a time out value to resume the flow if no message is received after a specific amount of time.

UI changes

Yokohama Patch 3

Display text descriptions of data changes

See a natural language description of the data each component of a flow uses. Understand what data flow triggers, actions, and flow logic blocks use without having to open their configuration details.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Activation information

Workflow Studio is a ServiceNow AI Platform feature that is active by default.

Get the latest Workflow Studio features by updating the app from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Accessibility information

ARIA label improvements

Added and updated ARIA labels to support screen readers.

Keyboard navigation improvements

Improved keyboard navigation with working with actions, flows, and subflows in Workflow Studio.

Reflow improvements of canvas headers and footers

Added support for the reflow of canvas headers and footer content in Workflow Studio actions, flows, and subflows. These components can be zoomed up to 400% through your browser settings without loss of content or functionality.

This enhancement helps users with low vision or who have trouble seeing web content in a browser due to monitor size, device type, poor lighting, or other situations.

Related ServiceNow applications and features

Integration Hub

Automate integration tasks using ServiceNow components for ServiceNow® Workflow Studio, or develop custom integrations. A separate subscription is required.

Integration Hub available spokes

Activate spokes to enhance your Workflow Studio experience with integration-specific content. Use prebuilt flows and actions to automate your integrations or create your own integration automation.

MID Server

The Management, Instrumentation, and Discovery (MID) Server is a Java application that runs as a Windows service or UNIX daemon on a server in your local network. The ServiceNow® MID Server enables communication and the movement of data between a ServiceNow instance and external applications, data sources, and services.

Robotic Process Automation (RPA) Hub

Use the ServiceNow® Robotic Process Automation Hub to enable end-to-end automation for your organization. With a combination of UI interactions, element-based automations, and APIs that interact between the various business applications, you can emulate user actions and eliminate mundane and repetitive human activities.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Playbooks in Workflow Studio release notes

The ServiceNow® Playbooks builder within the ServiceNow® Workflow Studio application enables playbook owners to create multiple-flow processes in a diagram or task board interface. The Playbooks builder was enhanced and updated in the Yokohama release.

Playbooks highlights for the Yokohama release

- Add custom translations for playbooks.
- Restart playbook activities that have ended in error.
- Create a checklist directly in the side panel without needing a checklist template.
- Generate a playbook via API in other ServiceNow applications such as IT Operations Management (ITOM).
- Generate playbooks from inputs that refer to active actions, flows, subflows, content from installed spokes, or activity definitions.

See Exploring playbooks for more information.

Important:
Workflow Studio is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Important information for upgrading Playbooks to Yokohama

After you upgrade to Yokohama, update the Workflow Studio application in the ServiceNow Store.

New in the Yokohama release

Translate playbooks content

Add custom translations for labels, descriptions, and UI Layout properties in your playbooks.

Restart playbook activities that end in error

Configure activities so that end users can restart any activity that ends in an error and variant conditions are automatically re-evaluated when playbooks are restarted.

Support for Retrieval Augmented Generation (RAG) with playbook generation

Generate playbooks from inputs that refer to custom actions, flows, subflows, content from installed spokes, or activity definitions. Include the names of commonly used and recently published actions, subflows, flows, and activity definitions available on your instance in your playbook generation requests.

Generate playbooks with the OpenAI GPT-4o LLM

Use the OpenAI GPT-4o LLM to generate a playbook from text.

Add more fields in Create Task activities

Add more fields in a more configurable Create Task activity.

Create a checklist directly in Workflow Studio

Create a checklist directly in the side panel without needing a checklist template.

UI changes

Trigger label updated

The trigger is now labeled "Start" in Workflow Studio.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Changed in this release

Change triggers in any playbook

Edit triggers when you duplicate a playbook, in a variant, etc.

Deprecations

- If you have the old Create Task activity in your existing playbooks, it will continue to function. You just can't add the extra fields that are available only in the new Create Task activity.
- If you have the old Checklist activity in your existing playbooks, it will continue to function. You just won't be able to update the checklist directly in Workflow Studio the way that you can with the new Checklist activity.

Activation information

The application comes with the Workflow Studio ServiceNow Store app. Workflow Studio is part of the ServiceNow AI Platform® and is available by default. Get the latest Workflow Studio features by downloading the latest Workflow Studio app in the ServiceNow Store, as well as related applications like the Process Automation Content and Process Automation Experience Demo applications. The application can be downloaded for patch fixes.

To use the playbook generation feature in Workflow Studio, download the Now Assist for Creator application.

Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Localization information

Using OpenAI LLMs for playbook generation is not available in the APAC region.

Related ServiceNow applications and features

Workflow Studio

ServiceNow® Workflow Studio consolidates , Workflow Studio, Action Designer, Integration Hub integrations, and ServiceNow® Decision Builder into one design environment. Author, configure, and monitor all of your workflows in a streamlined experience.

Flow Designer

ServiceNow® Workflow Studio enables process owners to automate approvals, tasks, notifications, and record operations without having to code. You can use the Workflow Studio design environment to author flows and actions and to view the results they produce.

Playbook Experiences

ServiceNow® Playbook experiences enable you to customize the default playbook user experience for your agents.

Decision Builder in Workflow Studio release notes

The ServiceNow® Workflow Studio application provides an intuitive interface that you can use to create and manage decision tables. Workflow Studio was enhanced and updated in the Yokohama release.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Workflow Studio highlights for the Yokohama release

- Filter condition and result columns in decision tables to show only relevant rows, simplifying large table edits.
- Use the lookup icon to select a reference record from the default list view and the info icon to preview the record.
- Use the pagination feature to switch between pages by selecting the page you'd like to see.
- Activate rows or Deactivate rows to include or exclude the logic in that row while executing the decision tables.

See Exploring Decision Tables for more information.

New in the Yokohama release

Filter decision tables

Apply filters to both condition and result column values in decision tables. Once filters are applied, only the relevant decisions are displayed, making it easier to refer or edit large tables.

Use enhanced reference record

When choosing a reference value as a condition or result, a new lookup icon enables you to select the reference record from the default list view. Additionally, you can preview the selected reference record by selecting the info icon.

Set rows active or inactive

Turn the rows on or off. Activating a row includes its data while executing a decision table, while deactivating a row excludes it. This feature helps you to temporarily use or skip conditions without deleting them.

UI changes

Pagination

Use the pagination feature to switch between pages by selecting the page you'd like to see.

Activation information

Workflow Studio is a ServiceNow AI Platform feature that is active by default.

Get the latest Workflow Studio features by updating the app from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Related ServiceNow applications and features

Workflow Studio

Integrate workflow authoring, configuring, and monitoring into a single page experience.

Exploring flows

Flows automate a repeatable multi-step process. When the flow trigger conditions are met, the flow runs a sequence of reusable actions and flow logic to complete the process.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Exploring playbooks

Workflow Studio playbooks enable process owners to author cross-enterprise workflows and create a single, unified process. Build the underlying processes for playbooks that Playbook Experience agents and fulfillers use.

Next Experience Components release notes

The ServiceNow® Next Experience Components are the components used to build custom user interfaces. Next Experience Components was enhanced and updated in the Yokohama release.

Next Experience Components highlights for the Yokohama release

- Build rich UI experiences with prebuilt system or custom components. To view the Next Experience Components API reference, usage guidance, and ServiceNow® UI Builder setup documentation, visit the Developer site Next Experience Components doc.
- Use common web component patterns and principles, such as a JavaScript framework, immutable data, and simple action handlers.
- Reuse components across multiple user interfaces to create a cohesive experience for your end users.
- Use preset property values to configure properties and event handlers automatically for a component so the component is ready to work when you add it to a page. Presets can connect to a controller that acts as a data resource for the component. For more information, see Automatically configure components using presets and Bind data to UI Builder pages using controllers (advanced feature).

New in the Yokohama release

Components

Component	Description
Active call	Handles phone calls as part of the Interaction controls component (ICC). Manages call functions, including actions such as disconnect, mute, hold, record, and transfer.
Animation	Places Lottie animations in Next Experience pages or components created in UI Builder.
Dialpad	Dial a phone number in Workspace.
Feedback	Captures detailed feedback from users for AI products or skills through a series of pre-determined options or free-text responses.
Filter group	Groups up to 3 filter components into a single container with configurable **Apply**, **Clear**, and **Reset** buttons that apply to all filters in the group.
Flyout menu	Menu that organizes multiple levels of options within a hierarchical structure.
Knowledge view	Embeddable container that renders a Next Experience Knowledge article view.
Loader custom	Renders custom animations with an optional progress bar and label.
Skeleton loader	Decorative placeholder for generated content.

Changed in this release

Components

Component	Enhancement
Appointment calendar	• Select multiple slots • Add customizable categories for appointment slots • Hide past and unavailable slots • Add contextual tags in appointment slots • Configure number of rows displayed in each slot in the Day and DAYMOBILE views • Configure container height adjustment
Attachments	• Option to download all attachments • Revised delete attachment confirmation popup message
Avatar	Configure avatar to behave as a button or a link.
Calendar	• DST support with multiple time zones in the Calendar and Timeline views • Hide header • Multiple time zones in the Timeline view • Scroll control for the Calendar and Timeline views
Email composer	Now Assist generative AI suggestions for all email scenarios, email templates, response templates, and quick messages.
Email composer (mini)	Now Assist generative AI suggestions for all email scenarios, email templates, response templates, and quick messages.
Form	• Configuration panel updates • Form controller configuration panel updates
Form templates	• Sort templates alphabetically and by last used. • New tab for Favorites for you to add and remove templates. • Larger cards that don't truncate template name and description, and show Last used timestamp.
Highlighted value	• Medium size variant. • Custom tooltip property.
iFrame	Send messages to iframed document.

Components (continued)

Component	Enhancement
Kanban Board	• Multi-select in cards • Configure selecting dependency lines • Add secondary header
Modeless dialog	Make the dialog dynamic and automatically resize to fit the content.
Node Map	• Force layout for representing graphs without structure or hierarchy • Custom popover configuration in Hierarchical, Layered, and Force layouts • Customizable nodes in non-unified layouts • Self-referencing nodes denoted with edges looping back to the node • Export maps in JPG and PNG • Aggregate or segregate multiple connections between the same nodes
Pill	Display the selected pill state which doesn't display by default.
Quick filter	• Configure section headers in typeahead dropdown • Configure footer action button • Configure placeholder text value for input field
Record lookup	• Search for contacts by name, phone, or email • Preview shortlisted results in a paginated form • Quickly link or unlink a shortlisted contact to a case • Edit details for a record without accessing the parent record • Hide record header • Configure search results • Render highlighted values in the linked card • Qualify search results using specific conditions (reference qualifiers) • Hide fields with empty values • Hide link button • Expand or collapse card
Stepper	• Standardized font size (small or medium) for all steps • By default, pagination adjusts to display the current selected step

Data visualizations

Chart	Enhancement
Bar	Percent (%) information added to chart tooltips and data table below chart.
Bubble	Percent (%) information added to chart tooltips.
Geomap	Percent (%) information added to chart tooltips and data table below chart.
Heatmap	• Percent (%) information added to chart tooltips and data table below chart. • When the metric value is set to "Count," show a zero (0) when no data is available.
Pivot table	• When there's no value in the selected dataset or for the configuration, choose the display format. • Data sources limit increased from 10 to 15.

Time series	• Percent (%) information added to chart tooltips and data table below chart.
	• Support for business calendars such as Gregorian, fiscal, and any manually added calendar.
	• For all chart formats, except "column:"
	  ○ When there's no value in the selected dataset or for the configuration, choose the display format.
	  ○ For table data sources, when there's no data for a specific time on the chart, show a continuous line without gaps.
	• Show a chart and graph data table for easier screen reader access.
	• For line, spline, area, and step charts, have a marker show at each data point on the chart including where values are zero (0) or missing.
	• For a chart with up to 3 metrics, you can add alternative Group by's for each metric for the user to select from.
	• Sorting when data is grouped.
	• New Date range option to set the period end date to update automatically to the current date.

Templates

Template	Description
Dashboards	• Pills at the top of the page display any categories assigned to the dashboard • User avatars at the top of the page indicate real-time editing

Bundles

Bundle	Enhancement
Record list	• Condition builder available in the list header • If live list is enabled, infinite scrolling is enabled by default

Activation information

Next Experience Components is a ServiceNow AI Platform feature that is active by default.

Accessibility information

For Next Experience Components accessibility conformance, refer to the ServiceNow Horizon site Components section.

Related ServiceNow applications and features

UI Builder

UI Builder is a low-code tool that enables you to build pages for workspace and portal web-based experiences.

Configurable Workspace UI

Use components to build custom workspace experiences for agents who solve internal or external customer issues.

Conversational Interfaces release notes

Conversational Interfaces includes enhancements and changes in the Xanadu release.

Updates are available for the following Conversational Interfaces applications on the ServiceNow AI Platform.

Now Assist in Virtual Agent release notes

The ServiceNow® Now Assist in Virtual Agent application uses generative AI skills in your conversational experiences. Now Assist in Virtual Agent uses large language models (LLMs) to create a natural-language conversational experience that can improve the success of your self-service workflows. Now Assist in Virtual Agent was enhanced and updated in the Yokohama release.

Now Assist in Virtual Agent highlights for the Yokohama release

Yokohama Patch 11

- Review changes to Now Assist usage measurement.
- Some Now Assist skills, agents, and agentic workflows are on by default.
- Create and manage LLM-based chat and voice assistants within Assistant Designer, a centralized assistant administrator experience.
- View a people citation's org chart in the interactive view. The interactive view opens to the right of the chat conversation area.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Notice several UI improvements to enhanced chat and enhanced chat's full-page experience, including an updated input bar, gradient borders, copy message icon for received messages, and more.
- Enable voice input to allow users to use a microphone to type the input. Voice input is only available for Now Assist panel Platform assistant.

Yokohama Patch 6

- Use Google Gemini and Anthropic Claude on AWS as AI model providers for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI.
- Use agentic conversations and view agentic conversational processing flow steps.
- View extended entities and records in standard and enhanced chat conversations if they’re associated with the Knowledge Graph natural language query (NLQ) schema.
- View suggested search queries previously performed in the portal's search bar within enhanced chat conversations.
- Work with the simplified subheader of enhanced chat.
- Delete closed enhanced chat conversations.
- Expand the fallback options.
- Enter into web search mode manually via the input bar.

Yokohama Patch 3

- Use enhanced chat to provide users with a conversational experience within a resizable and movable chat window that includes the ability to have multiple active conversations. Enhanced chat enables users to choose their way of engaging with Now Assist on their ServiceNow portals from a variety of entry points. Enhanced chat includes synthesized responses after entering a search query into a portal's search bar. If Now Assist in AI Search is turned on, enhanced chat also offers an optional full-page experience where your users can enter into a full-page chat experience after entering a search query into a portal's search bar. Enhanced chat also offers an updated, modern look and feel along with chat controls to resize and move the chat window.
- View an expanded list of inline citations for both standard and enhanced chat. New inline citations for external content and people searches are available.
- View and work with suggested actions after completing an action in Now Assist in Virtual Agent.
- Stream responses for Now Assist LLM - enhanced chat conversations.
- Upload or drag documents and images into a standard or enhanced chat.
- Automatically switch to the user's detected language in enhanced chat conversations when language detection is turned on.
- Use the Web Search custom skill to search for an answer on the internet.

Yokohama Patch 1

- Stream responses for Now Assist LLM chat conversations.

See Now Assist in Virtual Agent for more information.

New in the Yokohama release

Yokohama Patch 11

Assistant Designer

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Create and manage LLM-based chat and voice assistants within Assistant Designer, a centralized assistant administrator experience. Assistant Designer is comprised of three main areas: Assistants, Asset library, and Analytics.

Configuring assistants overview

- Access the **Assistants** tab within Assistant Designer by navigating to **All** > **Assistant Designer**. The **Assistants** tab is only available for customers who have the Now Assist license. NLU-only customers don't have access to Assistant Designer.

View assistants

- View chat and voice assistants within the **Assistants** tab of Assistant Designer.
  - The card view is the default view for the assistants.
  - An inactive (gray) or active (green) label is shown for each assistant.
  - Activate, deactivate, test, edit, or delete an assistant.
  - A display experience label is shown on each chat assistant card.
  - A domain label is shown on assistant cards if an assistant is created outside of the global domain. If assistants are only created within the global domain, the label isn't shown.
  - The ability to view or edit an assistant depends on the domain that the admin has access to.
  - The name and date are shown for when the assistant was last updated.
  - Voice assistants show a voice icon and label on the card. Voice assistants can't be tested within Assistant Designer.
  - The map view shows the assistant hierarchy where you can open, turn on or off, or delete an assistant.
- View the side panel for quick access to **Pick up where you left off**, **Recent activity**, and **Resources**.

Create a voice assistant

- Start creating an AI voice assistant by providing a name and description. Tag to a business unit to analyze your voice assistant.
- Power your voice assistant with agentic experience by adding AI agents.
- Personalize your voice assistant by choosing a language, adding a welcome message, and an AI voice persona.

  Note:
  The supported languages are:
  - English
  - German
  - Spanish

- Secure the voice interactions by setting up caller authentication methods and safeguards.

Create a chat assistant

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Add basic details such as a name and description for your chat assistant, and set your assistant as a primary assistant. The Basic details page within the UI has replaced the Overview page.
- Now Assist panel – Platform (default) assistant can be set as a primary assistant and linked to secondary assistants. Now Assist panel – Developer assistant doesn't have this option.
- The name and description of the Now Assist panel assistants can't be changed.

Use agentic support for a chat assistant

- Let the assistant use AI agent skills and agentic orchestration. Admins can choose between agentic or standard (Q&A) modes depending on business needs and user experience goals. Turn on or off the **Prioritize AI agents during skills discovery** feature.

Assign search sources to a chat assistant

- Restore search sources back to the default (Now Assist Multi-Turn Catalog Ordering and Now Assist Q&A).
- Now Assist panel - Platform (default) assistant now has the option to copy an existing search configuration.
- Dynamic global search configuration has been added to the list of search application configurations.
- Create or configure additional search sources by selecting the **External Content Connectors** link. This replaces a card view.
- Manage knowledge articles by selecting the **Knowledge Center** link.
- In edit mode, search sources are found within the Information Sources sub-tab.

Add a Knowledge Graph schema to a chat assistant

- Adding a Knowledge Graph schema has moved from the Information sources page to its own page.
- Add a Knowledge Graph schema is now available for the Now Assist panel - Platform (default) assistant. For the NLQ schema, if Global Graph or Global Graph Mini is selected, you have the option to select tags for specific workspaces that are active on the instance.
- Define the mapping relationship between individual workspaces on the instance and predefined Knowledge Graph tags when Global Schema is selected for NLQ.
- In edit mode, Knowledge Graph is found within the Information Sources sub-tab.

Add assets to a chat assistant

- By default, all Now Assist skills (Now Assist Q&A, Now Assist multi-turn catalog ordering, Now Assist topics, subflows and actions, custom skills, and AI agents) are turned on. Therefore, the Now Assist skills page has been removed.
- Map an asset to an assistant. Assets are the building blocks of each assistant, providing them with instructions and functionality for helping users. Assets include topics, subflows and actions, custom skills, and AI agents. For Now Assist panel - Developer assistant, only topics (asset type) is available.
- In edit mode, assets are found within the Information Sources sub-tab.

Display your chat assistant on a portal, channel, or mobile app

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Leverage Now Assist capabilities in Google chat.
- Use **Prominent action button override** to allow a different chat assistant other than the default assistant to be launched on a mobile app.
- In edit mode, display experiences are found within the Settings sub-tab.

Display your assistant on Platform or ServiceNow Studio

- The **Add ServiceNow Platform** drop-down menu has replaced the **Add agent experience** drop-down menu. A Now Assist panel assistant can't be added to other display experiences.
- In edit mode, display experiences are found within the Settings sub-tab.

Brand an assistant

- Minor enhancements to the look-and-feel of the standard chat preview pane.
- In edit mode, branding is found within the Settings sub-tab.

Manage an assistant chat experience

- A standard chat preview pane is shown for the default greeting topic (Now Assist – Greeting) and the default closing topic (Now Assist – Closing). Selecting custom topics won’t show a preview pane.
- Fallbacks have a standard chat preview pane and each fallback is shown if toggled on.
- For the Now Assist panel - Platform (default) assistant, web search, record producer, and custom fallback are available options. End this chat and survey are available for the standard chat experience.
- In edit mode, chat experience is found within the Settings sub-tab.

Enable additional chat features

- Web search, response streaming, document uploads, and closed chat were moved from the Manage chat experience page to its own page. By default all chat features except web search are turned on.
- Response streaming can be turned on at the assistant level regardless of whether Dynamic Translation is turned on or off. However, response streaming doesn't work when Dynamic Translation is being used.
- In addition to web search, response streaming, document uploads, and closed chat, Now Assist panel Platform assistant has voice input. Voice input allows users to use a microphone to enter the input.
- In edit mode, additional chat features are found within the Settings sub-tab.

Review chat assistant settings

- New sections that have been added include: Agentic support, Knowledge Graphs, Assets, and Chat features.
- Testing an assistant has been removed from the Review page.

Test a chat assistant

- Test a chat assistant from **Assistant Designer** > **Assistants** tab or from within each page while in edit mode.

Edit a chat assistant

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Edit a chat assistant from **Assistant Designer** > **Assistants** tab. You will be directed through an edit flow with a slightly different UI from the create flow.

Analyzing assistants

- Monitor, evaluate, and optimize the performance of your AI-powered assistants within the **Analytics** tab of Assistant Designer.

Copy received messages

Use the copy message icon in the feedback panel to copy received Virtual Agent responses.

New system properties

- Set the *com.glide.cs.nass.synthesized_response.disabled_popover.hide* to `true` to hide the popover for disabled catalog items for Now Assist in Virtual Agent and Now Assist panel's enhanced chat.
- Set the *sn_ais_assist.enable_pi_in_nba* property to `true` to allow conversational history-based suggested actions and fill multiple suggested action slot options.
- View the *sn_nowassist_va.enable_nass_show_all_options* property to decide whether to allow the **View all options** link in an enhanced chat conversation's greeting topic.
- The *com.glide.interactive_view.enabled* property opens an interactive side panel view next to the chat window. The default value is `true` to activate AI Engagement Experience on your instance.

View org chart in the interactive view

Select **View org chart** from the people citation's popover in Now Assist panel's enhanced chat or Now Assist in Virtual Agent enhanced chat/enhanced chat's full-page experience. The person's organizational chart appears to the right of the chat conversation in an area known as the interactive view. You can switch between multiple organizational charts via a drop-down in the interactive view if you open multiple people citations' org charts in the same conversation.

Yokohama Patch 8

Select continue or move to next task button

The **Continue to next task** button appears in the new **Ready to move on to your next task** card whenever multiple questions are found in a single standard chat user's message. The **Move on to the next task** citation appears at the end of an enhanced chat's synthesized response whenever multiple questions or requests are found along with an action in the user's single message. Whenever either **Continue to next task** (standard chat) or **Move on to the next task** (enhanced chat) is selected, the second question or request is reviewed and a synthesized response is sent back regarding the user's second question or request.

Multiple questions in a single user message are answered consecutively

Virtual Agent can answer multiple questions that were submitted in a single message query. Now Assist panel or Now Assist in Virtual Agent answers the multiple questions consecutively in a response.

Now Assist in Virtual Agent system properties

Use *sn_aia.use_agents_in_planner* to configure AI agent discovery behavior. The default value is `true`, preferring AI agents over assets including

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

catalogs, topics, Q&A knowledge base articles, workflows, and sub-workflows. When set to `false`, there's no preference for AI agents. AI agents and assets are treated the same.

Yokohama Patch 6

Configure additional user interface and experience options for enhanced chat

Customize and configure the Search Toggle Button Label for enhanced chat's full-page experience. Additionally, you can configure the Enable Unread Conversation Count Display and Left Panel Header Label for enhanced chat and enhanced chat's full-page experience.

New third-party AI model provider options available for all Now Assist applications

Google Gemini and AWS Claude are available for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI.

View agentic conversations processing steps

View agentic conversational processing steps and stop the flow, if needed.

View extended entities and records

View extended entities and records in standard and enhanced chat conversations that come from the additional custom tables associated with the Knowledge Graph natural language query (NLQ) schema such as:

- Assets
- Incidents
- Recently viewed knowledge base articles
- Requests
- Tasks

View suggested queries in the portal's search bar and chat window

View the most frequently asked queries in the portal's search bar and enhanced chat's Virtual Agent. Any search query entered into the portal's search bar or Virtual Agent is incorporated into the greeting topic for future conversations as a suggested query. Suggested queries are only included in the Virtual Agent greeting topic whenever no promoted assets are designated.

Work with suggested queries

Two system properties were added to enable the suggested queries feature: *`sn_nowassist_va.enable_suggested_queries`* and *`sn_nowassist_va.max_suggested_queries`*.

Configure AI search answers OneExtend capability for web search

Configure the AI Search answers capability via `sys_one_extend_capability.list` to establish the web search AI provider and work with API keys, if needed.

Expanding AI provider support for web search

OpenAI, Perplexity, and Google Gemini support web search.

Configuring assistants overview

Enhancements to Now Assist in Virtual Agent assistants and Now Assist panel Platform and Developer assistants. Options vary for Now Assist panel assistants.

Create a chat assistant

- Configure assistants by domain.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Now Assist in Virtual Agent assistants: By default, all global skill types are turned on in Now Assist Admin console.
- Now Assist panel Platform assistant: By default, all global skill types, except for Catalog skill, are turned on in Now Assist Admin console.
- Now Assist panel Developer assistant: By default, Now Assist Topic skill is turned on in Now Assist Admin console. No other skills are available for the Now Assist panel Developer assistant.

Display your chat assistant on a portal, channel, or mobile app

- Now Assist in Virtual Agent: For mobile search widgets, allow the search bar to open into a full-page experience.

Display your assistant on Platform or ServiceNow Studio

- Now Assist panel Platform assistant: Enable enhanced chat for a conversational experience that includes a dynamic, movable, and resizable chat window, plus access to multiple active conversations.
- Now Assist panel Developer assistant: Not applicable.

Assign search sources to a chat assistant

- Now Assist in Virtual Agent:
  - Add internal and external search sources, such as catalog items and Microsoft Sharepoint, from a drop-down list.
  - Add a slot filling schema to input user information from your organization's Knowledge Graph. Add a Natural language query schema to allow users to perform a data query during a conversation.
- Now Assist panel Platform assistant:
  - Add internal and external search sources, such as catalog items and Microsoft Sharepoint, from a drop-down list.
  - Add a slot filling schema to input user information from your organization's Knowledge Graph. Add a Natural language query schema to allow users to perform a data query during a conversation.
- Now Assist panel Developer assistant: Not applicable.

Manage an assistant chat experience

- Now Assist in Virtual Agent:
  - Select a custom greeting topic, closing topic, error topic, and survey for your assistant.
  - Select one or more fallback options: live agent, web search, record producer, end this chat, and custom fallback.
  - Enable web search fallback option and web search mode to allow users to search the web from within a chat window.
- Now Assist panel Platform assistant:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Select a custom greeting topic or error topic for your assistant.
- Fallback options don't apply to Now Assist panel Platform assistant.
- Enable web search mode to allow users to search the web from within a chat window.

- Now Assist panel Developer assistant: Not applicable.

Now Assist panel

Use the enhanced Now Assist panel for a more intuitive and personalized experience. The updated Now Assist panel is re-sizable and can be moved anywhere on the ServiceNow AI platform.

Yokohama Patch 4

Now Assist in Virtual Agent system properties

Enable pinning a chat window on a portal by using the *sn_nowassist_va.enhanced_chat_pin_enabled.<portal-url>* system property.

Yokohama Patch 3

Use enhanced chat

Enhanced chat is a conversational support experience within a resizable and moveable window that also includes the ability to have multiple active conversations and superior search capabilities. Using enhanced chat's full-page experience further intertwines chat and search capabilities by redirecting users into a full-page chat after entering a query into a portal's search bar.

View inline citations

View the expanded list of inline citations for standard and enhanced chat:

- Catalog
- Topic, subflows, or actions
- Q&A Knowledge Base articles
- External content connections

Note:
External content connections now include the following connection types:

- Microsoft SharePoint
- Confluence
- Atlassian Jira Cloud
- Google Drive
- Microsoft Teams
- Predefined web sources
- ServiceNow® documentation
- Slack

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- People

> **Note:**
> If Knowledge Graph is turned on, you can view information about a person. The people information in the Virtual Agent response typically includes their title, department, location, and email address. The people popover shows additional information.

Use suggested actions

View suggested actions that were related to your prior conversation and that you consider doing next. After completing a conversational catalog request, conversational subflow, or Virtual Agent topic, two suggested actions appear after a `Here's what you can do next` header.

Stream enhanced chat responses

Stream LLM response messages as they're generated instead of the response text appearing all at once to end users. Responses stream in either one letter or one word at a time.

Use language detection to automatically switch the conversational language for enhanced chat conversations

Automatically switch the conversational language to the user's detected language during LLM enhanced chat conversations when language detection is turned on. This automatic switch can occur when a user enters an utterance at the start of a new conversation or within the portal home page's search field.

Recognize the Boolean user input control during dynamic translation

Recognize the Boolean user input control in chat conversations during dynamic translation.

Adjust Shorten responses toggle to impact Show more option in chat

For bot text responses, adjust the **Shorten responses** toggle in Virtual Agent Designer to turn off the **Show more** option on the user side. When **Shorten responses** is turned off, the **Show more** option does not appear in the chat to the user and the full answer is displayed rather than a truncated response.

Configuring assistants overview

In addition to configuring Now Assist in Virtual Agent assistants, admins can configure the default Now Assist panel assistants. Options may vary for Now Assist panel assistants.

Create a chat assistant

- If multiple assistants are created, users can chat simultaneously with multiple assistants. Conversations are independent from each other.
- Turn on or off Now Assist panel (agent or creator) assistant. Contact support to configure Now Assist panel assistants.

- Now Assist Topic skill must be turned on at the assistant level for document uploads to be activated when managing the chat experience. For more information, see Manage an assistant chat experience.
- Create and manage agentic workflows in Now Assist AI Agents Studio and assign the workflows to the assistant.

Display your chat assistant on a portal, channel, or mobile app

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Display Now Assist in Virtual Agent enhanced chat, with or without the full-page experience, on your portal or mobile app. This dynamic window includes the ability to have multiple active conversations and search capabilities. To use enhanced chat, portals and mobile apps require AI Search to be enabled. For more information on the prerequisites, see Portal prerequisites for enhanced chat and Mobile app prerequisites for enhanced chat.

Manage an assistant chat experience

- Upload documents to Now Assist in Virtual Agent standard chat or enhanced chat experience. The Now Assist topics skill must be enabled in Now Assist skills. For more information on file formats, see Upload documents in a chat.

Review chat assistant settings

- Document uploads appear as active if it's turned on when managing the chat experience.

Upload documents in a chat

Upload or drag and drop files to Now Assist in Virtual Agent (standard chat or enhanced chat). The assistant analyzes and understands the content of the files, and a user can ask questions about the content of the files or get a summary.

Now Assist in Virtual Agent system properties

Enable suggested actions in Now Assist in Virtual Agent so that users are offered options for what they can do after completing a prior action. Suggested actions is applicable to standard and enhanced chat, mobile, and Microsoft Teams.

Web Search custom skill

Use the Web Search custom skill to query the internet for information using a third-party AI. The skill triggers when the LLM and AI Search cannot provide an answer. Both values are shown in the System Properties [sys_properties] table item *`sn_nowassist_va.websearch_fallback_enabled`*. Set a chosen definition (such as Perplexity) to `true` in the AI Search answers OneExtend capability along with its matching API in the Credentials list. You can set one definition and credential to true at any one time.

Yokohama Patch 1

Stream chat responses

Stream LLM response messages as they're generated instead of the response text appearing all at once to end users. Responses stream in either one letter or one word at a time.

Benefit from Knowledge Graph integration

Receive fewer Virtual Agent slot-fill questions during conversations whenever Knowledge Graph is activated.

Receive personalized synthesized response answers with Knowledge Graph integration

Discover more personalized conversational catalog, topic, subflows, or action responses and receive more personalized answers for Q&A Knowledge Base synthesized responses. Personalized responses may appear depending on whether the questions or requests sent to Virtual Agent trigger the Knowledge Graph user profile schema. These personalized responses are slot-filled based on the following table and column attributes:

Configuring assistants overview

Now Assist skills:

- An alert appears, at the assistant level, if a global level skill is turned off.
- By default, all global level skills are turned on in the Now Assist Admin console, except for subflows and actions.
- Custom skill is a new skill that has been added to the list of Now Assist skills.

Display experience:

- Select the chat launcher function to open an assistant.
- Select a custom mobile app, integrated with the mobile SDK, to open an assistant.
- Custom apps section appears if the mobile SDK plugin is installed.

Information sources:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Add an external search source to your assistant's search profile.
- Create custom skills in the Now Assist Skill Kit and assign the skills to the assistant.
- Associate Knowledge Graph with an assistant if Knowledge Graph is enabled.

Chat experience:

- Promoted topics has been renamed to promoted assets.
- Tags appear in promoted assets indicating whether it's a topic, subflow, or action.
- Streaming responses can be activated if Dynamic Translation is deactivated.
- Activate or deactivate pre-chat surveys as an admin with the sys_properties.list item *com.glide.cs.nass.prechat.enabled*.

Review:

- Shows whether stream responses is turned on or off.

Using Now Assist in Virtual Agent

Search through external content connections such as Microsoft SharePoint or Confluence if external search sources are added to information sources when Configuring assistants overview.

Select an inline citation to show a popover containing a link to an article or source, or a description and action to start a request.

Citations with an action are shown after a second clarifying question from Virtual Agent.

Change the order of the fallback and revisit options in the **View more options** results list that appears in the synthesized response. Use the *sn_nowassist_va.synth_response_revisit_position* system property with either the *BEFORE_FALLBACK* or *AFTER_FALLBACK* values.

Show or hide the **Need more help** button in the synthesized response by using the *show_view_more_for_synthesized* system property.

Turn on or off regular results in Virtual Agent from the following Now Assist Search Results Output Types table using the parameter *now_assist_va_search_results_output_type.list* parameter.

Use prechat and postchat surveys with GPT4o and LLAMA. Users can select data pills or enter strings for responses.

Use new prebuilt topics for prechat and postchat surveys in LLM conversations.

UI changes

Yokohama Patch 11

UI Virtual Agent Designer updates

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Use a new option in the Actions on row icon to remove an LLM assistant from a given asset.
- View a tooltip if you try to promote more than six topics for a given LLM assistant.
- View a list of available asset types and their descriptions when you select **Create asset** in the Asset library tab.

UI chat assistant updates

- Configuring a chat or voice assistant is done in **All** > **Assistant Designer** > **Assistants** tab. **All** > **Conversational Interfaces** > **Assistants** contains a **Manage assistants** button that directs you to Assistant Designer.
- Chat and voice assistants are shown in both card and map views.
- Pages within the chat assistant setup have been removed, added, or moved to a different spot within the create or edit flow.
  - The Overview page has been replaced by the Basic details page.
  - Assign Now Assist skills page has been removed. Admins no longer need to turn on/off Now Assist skill types at the assistant level in Now Assist Admin console and no longer need to assign Now Assist skill types at the assistant level.
  - When adding search sources, an **External Content Connectors** link directs you to create or configure external sources. (This replaces the External Content Connectors card.) The following sections have been removed from the search sources page: Now Assist topics, Custom skills, AI agents, and Conversational subflows and actions. They are now within the Assets page.
  - Knowledge Graph was moved from the Information sources page to its own page.
  - Assets such as topics, subflows and actions, custom skills, and AI agents are added on the Assets page. In the display experience for Now Assist panel assistants, a **ServiceNow platforms** header is shown.
  - Minor enhancements to the standard chat preview pane when branding an assistant.
  - Promoted assets tab within the Chat experience page has been moved to the **Information sources (sub-tab)** > **Asset visibility** > **Promoted** while in edit mode.
  - Web search mode, response streaming, document uploads, and closed chats have been moved to its own Chat features page.
  - Testing a chat assistant is no longer part of the Review page. Access it from the **Assistant Designer** > **Assistants** tab, or on each page while in edit mode.
  - Editing a chat assistant is done from the **Assistant Designer** > **Assistants** tab.

UI enhanced chat updates

- Dynamic processing messages for agentic conversations are now consolidated under one View AI Steps header rather than under several View AI Steps headers.
- The **View all options** link shows below the suggested or promoted topics cards on the greeting topic in Now Assist in Virtual Agent and Now Assist panel's enhanced chat. At least one suggested or promoted asset has to be enabled for this link to show.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- The auto-complete suggestion type in the Ask Now Assist header appears at the top of the portal search bar's drop-down list. The results in the Ask Now Assist header can now show more targeted search results from AI Search rather than the GlideRecord. The entered search term can appear highlighted in bold after you have configured AI Search as the source for Ask Now Assist suggestions. For more information about this configuration, see Configure AI Search as the source for Ask Now Assist suggestions.
- The static and dynamic choice nodes now appear differently in standard and enhanced chat depending on the number of choices for single-select options. For example:
  - 2-5 choices appear as pills
  - 6 or more choices appear as a choice list with a scroll bar
- The input bar for enhanced chat has moved all icons below any inputted text. Uploaded documents appear above any inputted text.
- The float, pinned, and 90% screen views of enhanced chat now have a gradient border around them.
- The enhanced chat full-page experience was updated so that the Now Assist and Search button tabs that were originally center-aligned buttons are now left-aligned tabs that no longer look like buttons.

Yokohama Patch 8

Agentic conversation processing messages for Now Assist panel and Now Assist in Virtual Agent

Before receiving a response, you receive acknowledgment messages from the Virtual Agent and on-screen processing messages to let you know where the agent is at in the agentic processing flow. The on-screen processing messages appear in present tense until the processing flow is complete. After the processing flow is complete, then the on-screen messages change to past tense and a View AI Steps section header appears above the processed messages. You can expand the collapsed View AI Steps section header to view the processed messages.

Yokohama Patch 6

UI chat updates

- The enhanced chat navigation area was updated. The New Chat, Chats, Support, and Settings icons were reworked into a simplified subheader. Additionally, each chat title now appears in the simplified subheader.
- The enhanced chat's subheader reflects conversational modes in a banner whenever you enter into a specific mode, such as web search, live agent, or document upload.
- In the enhanced chat's **Chats** > **Closed chats** section, hover over a chat to view the delete option and complete the delete confirmation prompts.
- Minor animations occur in the following five enhanced chat transitions:
  - Hovering over the chat icon.
  - Minimizing and opening the chat icon.
  - Transitioning from a floating chat window to a pinned chat window and vice versa.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Transitioning from a floating chat window to a 90% modal and vice versa.
- Transitioning from a pinned chat window to a 90% modal and vice versa.

Note:
Transition animation doesn't apply to custom icons.

UI admin guided setup updates

- **Manage search profile** button replaces the search profile text link.
- **Add external search sources** drop-down list has been replaced with **Add search sources** drop-down list to include internal and external search sources.
- The simple and advanced views within the Chat experience page are consolidated into a single view.
- **Copy existing configuration** button is featured more prominently, and it's shown with information about its use.

Yokohama Patch 3

UI chat updates

- The summary card in a Now Assist in Virtual Agent conversation was updated to a more modern look and feel.
- The default chat widget button for enhanced chat and standard chat now differs on the portal.
- An Ask Now Assist header now appears with suggested searches in a drop-down on the portal's search bar.
- The Boolean choice, static choice, and dynamic choice controls were updated to a more modern look and feel for requesters.

Yokohama Patch 1

UI chat updates

- The **New messages below** button in Virtual Agent was replaced with a simplified down-arrow indicator.
- The **New messages above** button was deprecated because Virtual Agent now auto-scrolls to the top of the oldest new message.
- The Input text bar was updated to a more modern look and feel.
- The start a new conversation icon was updated.

Changed in this release

Yokohama Patch 11

Changes to Now Assist usage measurement

Starting with Yokohama Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Conversational Platform Now Assist skills are active by default

The following Platform Now Assist skills are active by default and no longer visible in Now Assist Admin console:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Now Assist Multi-Turn Catalog Ordering
- Now Assist Q&A Genius Results
- Now Assist Topics
- Subflows and actions
- Custom skills
- AI agents

Yokohama Patch 6

Additional fallback options

There are up to five fallback options that can be presented to end users:

- **Search the web**: Triggers web search mode and uses the internet to search for the results.

  Note:
  Only the last query entered into the conversation is considered when entering web search mode via the fallback option.

- **Request a live chat**: Triggers live agent mode and routes you to a human support representative.
- **Create a generic ticket**: Creates a record.
- **End this chat**: Ends the chat.

  Note:
  This option is only available to standard chat conversations.

- **Custom fallback option**: Presents a fallback Virtual Agent topic.

Web search mode enhancements

Manually enter into web search mode via the input bar for standard and enhanced chat conversations. Web search mode includes in-line citations and the associated sources. A web search mode banner appears in enhanced chat conversations that end users can use to end the mode.

Profanity recognition response

If Now Assist Guardian is enabled and the end user's request contains profane content, the Virtual Agent responds with a message prompt to re-enter an appropriate request without profanity or offensive content.

Yokohama Patch 3

Standard chat

The existing Now Assist in Virtual Agent LLM conversational behavior received a terminology update and is now referred to as standard chat.

Yokohama Early Availability

Dynamic Translation calls

If native translation is enabled, a Dynamic Translation call is only made if an unsupported language for native translation is used.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Deprecations

- In Patch 11, *sn_aia.use_agents_in_planner* system property has been removed. The system property was used for configuring AI agent discovery behavior.
- In Patch 11, Now Assist skills page in the assistant admin guided setup has been removed due to the skills being turned on by default.
- In Patch 6, Bing support for the searching and scraping search result type is no longer supported when adding a web search tool in Now Assist Skill Kit.
- In Patch 4, support for Now Assist in Conversational IVR was removed.

Activation information

Note:
When you upgrade to Yokohama Patch 8 or later, agentic AI is the primary orchestration in Virtual Agent. For more information about agentic AI, see Agentic conversations in Virtual Agent.

Now Assist features are available with activation of any Now Assist plugin from the ServiceNow Store. The following products are available:

- Now Assist for Accounts Payable Operations (APO)
- Now Assist for App Engine
- Now Assist for Configuration Management Database (CMDB)
- Now Assist for Collaborative Work Management (CWM)
- Now Assist for Creator
- Now Assist for Customer Service Management (CSM)
- Now Assist for Employee Experience
- Now Assist for Enterprise Architecture (EA)
- Now Assist for Operational Sustainability (formerly ESG)
- Now Assist for Field Service Management (FSM)
- Now Assist for Financial Services Operations (FSO)
- Now Assist for Hardware Asset Management (HAM)
- Now Assist for Health and Safety
- Now Assist for HR Service Delivery (HRSD)
- Now Assist for Integrated Risk Management (IRM)
- Now Assist for IT Operations Management (ITOM)
- Now Assist for IT Service Management (ITSM)
- Now Assist for Legal Service Delivery (LSD)
- Now Assist for Operational Technology Manager (OTM)
- Now Assist for Order Management
- Now Assist for PSDS
- Now Assist for Security Incident Response
- Now Assist for Software Asset Management (SAM)

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Now Assist for Supplier Lifecycle Operations (SLO)
- Now Assist for Sourcing and Procurement Operations (SPO)
- Now Assist for Strategic Portfolio Management (SPM)
- Now Assist for Telecommunications, Media and Technology (TMT)
- Now Assist for Third-party Risk Management (TPRM)
- Now Assist for Workplace Service Delivery (WSD)
- Now Assist for Vulnerability Response

For more information, see Configuring assistants overview.

Additional requirements

Now Assist in Virtual Agent requires a license for Virtual Agent and at least one Now Assist product.

Browser requirements

Now Assist in Virtual Agent supports various browsers, including Google Chrome and Microsoft Edge. For more information, see Browser support.

Localization information

Dynamic Translation is supported for non-streaming Now Assist Virtual Agent conversations. For details, see Configure multilingual service for Now Assist applications and .

Yokohama Patch 7

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Create and manage LLM-based chat and voice assistants within Assistant Designer, a centralized assistant administrator experience.

Yokohama Patch 6

- Start the create flow for all supported conversational assets directly from Virtual Agent Designer.
- Enhance the user experience with Slack response message streaming capability.

Yokohama Patch 3

- View people information in the synthesized response along with people citation when you search a person in Microsoft Teams chat.
- AI agent support for Virtual Agent.
- View AI agents and agentic workflows in Virtual Agent Designer.
- Select AI agents to handle tasks in the AI Connector utility. See AI Connector utility, Managing AI agents in Assistant Designer, and Using AI agents in Virtual Agent topics for more information.

Yokohama Patch 1

- Enhance the user experience with Microsoft Teams response message streaming capability.

Yokohama Early Availability

- Enhance the overall voice-based chat experience in Conversational IVR with Now Assist.
- Generate synthesized responses in Slack conversations with Now Assist.
- Generate synthesized responses in Microsoft Teams conversations with Now Assist.
- View custom skills in Virtual Agent Designer.

See Virtual Agent for more information.

New in the Yokohama release

Yokohama Patch 7

Assistant Designer

Create and manage LLM-based chat and voice assistants within Assistant Designer, a centralized assistant administrator experience. Assistant Designer is comprised of three main areas: Assistants, Asset library (previously Virtual Agent Designer), and Analytics.

Conversational settings for Assets in the Asset library **Conversational settings**

Manage the settings for an asset directly from the Asset library page.

Yokohama Patch 6

Create a Virtual Agent topic

Start the create flow for all supported conversational LLM assets directly from Virtual Agent Designer.

Assistants in Virtual Agent Designer

The Now Assist Panel - Platform (default) assistant is now available in Virtual Agent Designer.

AI Connector utility

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Select AI agents to handle tasks in the AI Connector utility. For more information on AI agents in Virtual Agent Designer, see Managing AI agents in Assistant Designer and Using AI agents in Virtual Agent topics.

Virtual Agent Designer **Table bot response control**

Slide the new **Show links for each record** toggle switch to activate links for each record in the output in your Virtual Agent conversation.

Virtual Agent server

- In chatHandshake, set *dynamic_step_loader_enabled* to `true` to send stacked Agentic AI messages to server. Set *dynamic_step_loader_enabled* to `false` to avoid sending messages.
- Pre-chat and post-chat surveys are now available for Anthropic Claude on AWS and Google Gemini LLMs. For more information on surveys, see Chat surveys.

Yokohama Patch 3

AI Connector Utility

Link custom skills to generative AI to add their functionality to LLM conversations.

AI agents and agentic workflows in Virtual Agent Designer

View AI agents and agentic workflows created in AI Agent Studio in Virtual Agent Designer.

Shorten responses option for bot text response

For bot text responses, use the **Shorten responses** toggle in Virtual Agent Designer to turn on the **Show more** option in the chat on the user side.

Yokohama Patch 1

Application scope for topics

Select the application scope for topics in Virtual Agent Designer.

Yokohama Early Availability

Synthesized response in Slack conversations

Generate synthesized responses in Slack conversations with Now Assist.

Virtual Agent feature support in Microsoft Teams conversations

Generate synthesized responses in Microsoft Teams conversations with Now Assist.

Custom skills in Virtual Agent Designer

View skills created in Now Assist Skill Kit in Virtual Agent Designer.

Chat surveys

Create chat surveys compatible with LLM-enabled user inputs, aside from the Carousel user input.

UI changes

Yokohama Patch 6

Changes to Virtual Agent Designer list view

- Tabs have replaced pills in the Virtual Agent Designer list view.
- Hover over the tooltip icon () to see information about the assistant you have selected from the drop-down menu.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Use the new **AI agents** and **Agentic workflows** tabs to select from the types of topics on the home page, along with **Topics**, **Subflows**, **Actions**, and **Custom skills**.
- When a promoted asset has a conditional property that determines the context in which appears for an assistant, it's marked as **Condition applied** under **Show more**.

Yokohama Patch 1

UI chat updates

- The `New messages below` button in Virtual Agent was replaced with a simplified down-arrow indicator.
- The `New messages above` button was deprecated because Virtual Agent now auto-scrolls to the top of the oldest new message.
- Input text bar was updated to a more modern look and feel.
- The start a new conversation icon was updated.

Topic Properties tab

- Create a topic form: Read improved topic description field helper text and tooltip.
- Change the application scope for Virtual Agent Designer topics: View the current scope setting on the Virtual Agent Designer topic properties tab.

Topic Flow tab

- View an updated `Unpublished changes` message on the header bar.
- Hover over the `Unpublished changes` message to get info on which changes are not yet published.
- Recover unsaved changes using the **Recover changes** button that appears on the header bar if you close a topic without saving.
- Both message and button appear on the header bar if you add a node to the canvas before closing without saving.

Testing LLM topics

View a `Matching` badge next to the skill activated during testing.

Custom skills in Virtual Agent Designer

Use an updated Virtual Agent Designer list-based home page that includes custom skills.

Changed in this release

Yokohama Patch 6

Test assistant options

The **Test** button in the Virtual Agent Designer canvas directly opens up the chat widget.

Dynamic Translation calls

For Now Assist, if native translation is enabled, a Dynamic Translation call is only made if an unsupported language for native translation is used.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Table bot response control

Use the new **Show links for each record** toggle switch to activate links for each record in the output in your Virtual Agent conversation.

Deprecations

Support for Now Assist in Conversational IVR was removed.

Activation information

Virtual Agent is a ServiceNow AI Platform feature that is available with activation of the Glide Virtual Agent plugin (com.glide.cs.chatbot), which requires a separate subscription. For details, see Activate Virtual Agent.

Note:
The Glide Virtual Agent plugin initially installs the Topic Recommendations and Conversational Analytics applications. Subsequent updates to these apps must be installed from the ServiceNow Store.

ServiceNow® Virtual Agent Lite is a subset of the Virtual Agent platform that is available to ServiceNow® IT Service Management (ITSM) customers. It doesn't require activation and works with ITSM Virtual Agent Lite conversations, which are also available to ITSM customers.

Browser requirements

Virtual Agent supports various browsers, including Google Chrome and Microsoft Edge. For more information, see Browser support.

Localization information

The ServiceNow® Localization Framework is integrated in Virtual Agent.

Related ServiceNow applications and features

Now Assist

Now Assist uses generative AI that is designed to enhance user productivity and efficiency through conversation and proactive experiences.

Conversational Interfaces Console

The ServiceNow® Conversational Interfaces Console enables you to install, manage, and monitor your virtual and live agents to support your users through chat.

Prebuilt Virtual Agent topics, topic blocks, and ServiceNow NLU models

The following ServiceNow® business applications provide prebuilt Virtual Agent conversation topics, NLU models, and, in some cases, topic blocks as reusable components.

- ServiceNow® Customer Service Management
- ServiceNow® Field Service Management
- ServiceNow® HR Service Delivery
- ServiceNow® Instance Security Center
- ServiceNow® IT Service Management

© 2026 ServiceNow, Inc. All rights reserved.

- ServiceNow® Project Portfolio Management
- ServiceNow® Universal Request

Natural Language Understanding

Virtual Agent integrates with the Natural Language Understanding (NLU) application, which provides the NLU Workbench for creating NLU models. Virtual Agent uses these models to recognize and process user utterances, intents, and entities in bot conversations.

Customer Service Management release notes

The ServiceNow® Customer Service Management application has new and updated applications and features in the Yokohama release.

Agent experience for CSM release notes

The ServiceNow® Agent experience for CSM provides customer service agents with the tools that they need to find, research, and resolve customer issues and questions. Agent experience for CSM was enhanced and updated in the Yokohama release.

Agent experience for CSM highlights for the Yokohama release

- Alert agents about the status of current chats by using color-coded session tabs to indicate service level agreement (SLA) threshold timers, chat duration, and unread message counts.
- Create form templates or modify existing templates with enhancements to the form template feature.
- Integrate enhanced knowledge guidance on the Front-line case page and enable agents to attach and add links to knowledge articles in comments, work notes, or emails by using modeless dialogs.
- Display native voice configurations in CSM Configurable Workspace with the Voice interaction record page that agents can use to handle phone calls.
- Dedicate time after each call or chat for agents to finalize interaction details.

See CSM Configurable Workspace for more information.

Important:
The following applications are available in the ServiceNow Store:

- CSM Configurable Workspace Bundle v5.0
- Customer Central Bundle v1.0

For details, see the "Activation information" section of these release notes.

New in the Agent experience for CSM release

Chat interaction session tabs

Use the following features to provide your agents with information about their current chats:

- Display informational messages in the session tabs that notify the agent of the current chat condition such as "Chat is in wrap-up" or "Chat has ended."
- Use background colors to distinguish between the active and inactive tabs. For inactive tabs, configure different colors to alert agents to the chat threshold timers.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Use a counter to display the number of unread chat messages.
- Use a separator in the chat window between the older messages and the newer unread messages.
- Configure a minimum of one and up to a maximum of three chat SLA threshold timers that alert agents to unread messages in inactive chats. For each level, you can also select a time value and a unique color.

Voice interaction record page

Enable Contact Center as a Service (CCaaS) providers to display native voice integrations in CSM Configurable Workspace that agents can use to handle phone calls.

Interaction wrap-up for call and chat

Provide agents with enough dedicated time after each call or chat to finalize the interaction details and wrap up their work before starting a new conversation.

Customer history component

Enable agents to view a customer's activities in the contextual side panel. Agents can search and filter the activities in the list and select a date range. For more information about the Customer history component, see Next Experience Components documentation.

Quick start tests for Customer Service Management

After upgrades and deployments of new applications or integrations, run quick start tests to verify that Customer Service Management works as expected. If you customized Customer Service Management, copy the quick start tests and configure them for your customizations.

Changed in this release

Form template enhancements

Use the following form template enhancements to create or edit templates as needed:

- The **Templates** tab in the configurable side panel displays larger template cards with the template name and an expanded description. Users can view different lists of templates, mark their favorites, and sort templates either alphabetically or by last used.
- The template form displays template fields in a clearly labeled form section and displays the line numbers and headings for each template line to improve readability
- The template tab header displays "Edit template" when a user opens a template in edit mode.

Front-line case page integration with knowledge guidance

Enable agents to attach and add links to knowledge articles in comments, work notes, or emails by using modeless dialogs.

Resurface special handling notes

Display the special handling notes for a case at any time by selecting **Special handling notes** from the More actions menu on the case record action bar.

Customer Central application moved from family to store release

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Starting with the Yokohama release, the Customer Central application (com.sn_csm_customer_central) has moved to the ServiceNow Store. Any new enhancements to this application are delivered through the Customer Central store app.

Customer Activity Guided Setup now accessible from a new location

Use the following updates in Guided Setup to enhance navigation and access customer history configurations:

- Access the Customer Activity Guided Setup from **All** > **Customer Central** > **Customer Activity** > **Guided Setup**.
- View Activity Contexts, Activity Types, Activity Groups, and Activity Type Templates within Guided Setup. You can also access them in the menu by navigating to **All** > **Customer Central** > **Customer Activity** > **Guided Setup**.
- Customer Activity has been renamed to Customer History, maintaining the same functionality.
- Access the Business Rule in the Activity Feed where it is now listed independently alongside Activity Types, Activity Groups, and Activity Type Templates for improved accessibility. Previously, it was nested under Activity Types.

Front-line case page lookup component

The Front-line case page includes the following enhancements:

- Includes the Consumer lookup component.
- Uses advanced search to look up contacts and consumers.
- Contact and consumer record cards can be collapsed to display more record space.

Action bar layout

The following interaction record pages include an action bar with a single action layout:

- CSM Interaction record page
- CSM voice interaction record page

Comment and Work note modeless dialogs

Create and use form templates that add content to the **Additional comments** and **Work notes** fields on a case record. Automatically display a modeless dialog that includes the content from the form template and then post that content to the activity stream.

Front-line case page contextual side panel

The Record Information tab in the contextual side panel includes the Overview and Active SLA cards. The contact card and timeline card have been removed to improve the page load time.

Recommended Actions AI search replaces Agent Assist

Recommended Actions AI search replaces Agent Assist in the contextual side panel for the following record pages included with the CSM Configurable Workspace:

- CSM default record page
- Front-line case page
- CSM Interaction record page (for type = Chat, Video, Walkup, Email)

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Customer History component features

Use the following features to provide agents real-time updates and customer history details:

- Automatically refresh the Customer History component when account, contact, or consumer details change.
- Prompt agents to add missing account or contact details instead of leaving fields empty.
- Display an empty component until an agent links a contact using the lookup component, then show the contact's details.
- Enables agent to view updated customer information directly in Customer History on the Front-line Case page.

Deprecations

Starting with the Yokohama release, Customer Service CTI Demo Data is being prepared for future deprecation. It will be hidden and no longer activated on new instances but will continue to be supported. ServiceNow Voice with Amazon Connect provide the latest experience for this functionality. For details, see the Deprecation Process [KB0867184] article in the Now Support Knowledge Base.

Activation information

CSM Configurable Workspace is available with activation of the Customer Service plugin (com.sn_customerservice). For details, see Activate Customer Service Management.

Install CSM Configurable Workspace by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Browser requirements

ServiceNow workspaces don't support mobile devices, Internet Explorer, or Microsoft Edge. Instead, use Microsoft Edge - Chromium or one of the other supported browsers listed in Browser support.

Related ServiceNow applications and features

Customer Service Management

Use the Customer Service Management application to provide the service and support that your external customers need.

Now Assist for Customer Service Management (CSM)

Use the ServiceNow® Now Assist for CSM application to summarize customer chat conversations on interactions, summarize case details, and generate case resolution notes.

Next Experience UI Builder

Next Experience UI Builder is a low-code web user interface builder that enables developers to build pages for workspace and portal web-based experiences. Use the base system and custom web components to build your pages.

Workspace UI

ServiceNow® Workspace is a graphical user interface that puts multiple tools on one page, including the tools that agents need to find, research, and resolve issues. CSM Configurable Workspace is a customer service-specific implementation that provides tier 1 agents with the tools that they need to respond to customers and to resolve cases.

Case management for CSM release notes

The ServiceNow® Case management for CSM application enables customer service organizations and support teams to collaborate on customer problems proactively to resolve issues. Case management for CSM was enhanced and updated in the Yokohama release.

Case management for CSM highlights for the Yokohama release

- Create cases for invoice-related services such as invoice disputes or requested corrections with the Case management for Invoice Operations application.
- Use process mining to mine the configured base system project to investigate the causes of long resolution times.

See Case management for Customer Service Management for more information.

New in the Yokohama release

Case Management for Invoice Operations

Use the Case Management for Invoice Operations application (com.sn_csm_invoice) to create cases for multiple invoices or for specific invoice lines. Agents can use these cases to process invoice-related services such as invoice disputes or requested corrections.

Process mining

Use the following features to find process improvement opportunities:

- Use work notes analysis to learn the operational reasons behind activity transitions. This feature is Now LLM based.
- Mine the configured base system project to investigate the causes and get a clear view of the long resolution times and delays.

Quick start tests for Customer Service Management

After upgrades and deployments of new applications or integrations, run quick start tests to verify that Customer Service Management works as expected. If you customized Customer Service Management, copy the quick start tests and configure them for your customizations.

Changed in this release

Process mining

Use the process mining enhancements to improve processes as needed:

- Removed the viewer role from all records in the Process Mining Content Pack for Customer Service Management (CSM).
- Set process configurations as read-only templates, deletable only by a process mining administrator. You can enable customers to copy the template or import specific parts into their custom configuration.

Case lines and workflows

The Case Line table (sn_case_line) includes the **Install base** and **Asset** reference fields. These fields display information based on the selected account and product.

Deprecations

Starting with the Yokohama release, Customer Service CTI Demo Data is being prepared for future deprecation. It will be hidden and no longer activated on new instances but will continue to be supported. ServiceNow Voice with Amazon Connect provides the latest experience for this functionality. For details, see the Deprecation Process [KB0867184] article in the Now Support Knowledge Base.

Activation information

Customer Service Management is available with activation of the Customer Service plugin (com.sn_customerservice). For details, see Activate Customer Service Management.

Browser requirements

ServiceNow workspaces don't support mobile devices, Internet Explorer, or Microsoft Edge. Instead, use Microsoft Edge - Chromium or one of the other supported browsers listed in Browser support.

Related ServiceNow applications and features

Now Assist for CSM

Use the ServiceNow® Now Assist for CSM application to summarize customer chat conversations on interactions, summarize case details, and generate case resolution notes.

Communities

From the Customer Service Portal and Consumer Service Portal, enable your customers to connect, engage, and collaborate by using the ServiceNow® Communities application. Customer Service agents can create cases from the community discussion threads and resolve cases by using the community content.

Continual Improvement Management

Use ServiceNow® Continual Improvement Management to request improvement opportunities. You can implement phases and tasks to meet performance goals, track progress, and measure success. You can also view, create, and associate improvement initiatives from within the Process Mining application.

Integrating with Customer Project Management

The Customer Project Management plugin (com.snc.csm_ppm) enables you to create projects for a customer account by using the ServiceNow® Project Portfolio Suite with Financials application. It also gives end users visibility into their projects from the Customer Service Portal. This plugin requires the Project Portfolio Suite with Financials plugin (com.snc.financial_planning_pmo).

Event Management

Customer Service Management provides an integration with ServiceNow® IT Operations Management Event Management. This integration enables you to create cases proactively from alerts either manually or through automation. Customer service agents can track the accounts and the corresponding install base items that are affected by the alert. Agents can also track the operational status of an account's install base to better correlate customer issues and provide faster responses.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field Service Management

Customer Service Management includes an integration with the ServiceNow® Field Service Management application. With this integration, you and your customers can perform the following tasks:

- Field service technicians can view customer account and contact information on work orders and work order tasks in the Field Service Management application.
- Customer service agents can create work orders from cases in the Customer Service Management application.
- Customers and consumers can view the case-related work orders from the Customer Service Portal and Consumer Service Portal.

Flow Designer

Workflow Studio components enable you to invoke flows or subflows that are designed as part of a workflow and to find out the output or execution status of the flows or subflows.

Knowledge Management

From the Customer Service Portal and Consumer Service Portal, enable your customers to search for shared information by using the ServiceNow® Knowledge Management application. Customer service agents can resolve cases with the knowledge content.

Process Automation Designer

Customer Service Management provides an integration with the ServiceNow® Playbooks application. This integration provides the ability to configure processes such as playbooks.

Process Mining

ServiceNow® Process Mining helps analysts and process owners analyze the effectiveness of their business processes. Create automated business process flows from your data so that you can monitor and more quickly discover inefficiencies in your processes.

IT Service Management applications

Customer Service Management includes integrations with the following ServiceNow® Service Management applications: Incident Management, Problem Management, Change Management, and Request Management. With these integrations, you can create incident, problem, change, and request records from customer service cases. Customers can also submit requests from the Customer Service Portal.

Next Experience UI Builder

Next Experience UI Builder is a low-code web user interface builder that enables developers to build pages for workspace and portal web-based experiences. Use the base system and custom web components to build your pages.

Workforce Optimization for Customer Service

Manage and maintain the productivity of your workforce from a single application using ServiceNow® Workforce Optimization for Customer Service. With this application, you can help to route work to members of your team, manage your team's skills and schedules, and monitor their performance.

Workspace UI

ServiceNow® Workspace is a graphical user interface that puts multiple tools on one page, including the tools that agents use to find, research, and resolve issues.

CSM Configurable Workspace is a customer service-specific implementation that provides agents with the tools that they need to respond to customers and to resolve cases.

Data management for CSM release notes

The ServiceNow® Data management for Customer Service Management application enables you to organize and manage the data for both your internal users and external customers. Data management for Customer Service Management was enhanced and updated in the Yokohama release.

Data management highlights for the Yokohama release

- Track the status and other information that is related to the Customer Life Cycle workflows by using the Sales and Order Management Request Tracker (sn_tmt_core_inbound_queue) table.
- Track pricing and subscription information for products and services on the CSM Configurable Workspace by using the revenue metrics on the sold product form.
- Integrate Strategic Portfolio Management (SPM) project management with business locations to create and manage projects across your organization.

See Data management for Customer Service Management for more information.

Important:
Business Location and Install Base Management are available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Naming customer relationship records

Use the Type field through related party configurations to name records in the account team member, contact relationship, consumer relationship, and household member relationship tables. With this functionality, you can identify the relationship that is based on the industry use case.

Ordering customer relationship records

Organize records in tables such as account team members, consumer relationships, and more by using the **Order** field. You can set the order manually or auto-populate it based on the selected Type through related party configurations. This way, you can arrange records logically based on your use case.

Enhancements to the declarative responsibility framework

Enhance the declarative responsibility framework to simplify administration and access management by enabling administrators to do the following tasks:

- Add new granular roles for accessing customer data that is based on responsibility definitions.
- Include additional entities in the framework.

Subscription metrics for sold products

Enable agents to track and analyze the pricing information for products and services by using the pricing and subscription revenue metrics on the sold product form on the CSM Configurable Workspace.

Project Management for business locations

Integrate SPM project management with business locations to support operations such as opening, closing, or modernizing locations. With the project management

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

integration, your teams can track the timelines, collaborate, and execute the business location-facing tasks more effectively.

Work orders for business locations

Fulfill Field Service Management (FSM) work orders at business locations. This way, you can enable location members to view and complete the assigned tasks. By using the existing business location data, you can streamline work order assignments.

Enhanced data fields for business locations

Track additional information about business locations by using new fields for opening and closing dates, status, and description.

Staff movement between internal business locations

Enable managers to transfer the staff between internal business locations. You can streamline updates for organizations that have frequent staff movements.

Company-owned, third-party operated business locations

Assign external staff to internal business locations to support various operating models, including company-owned, third-party operated locations.

Customer Life Cycle workflows for Sold Products and Product Inventory records

Use the Customer Life Cycle workflows to do the following tasks:

- Create a Modify, Suspend, Resume, and Disconnect order for single or multiple root product inventory records that are associated with a service specification.
- Select multiple root product inventories to perform the modify action to create both orders and quotes.
- Track the status of the Modify, Suspend, Resume, and Disconnect flows on sold products and product inventory record by using the Sales and Order Management Request Tracker (sn_tmt_core_inbound_queue) table.

Inbound Request Configuration table

Use the Inbound Request Configuration [sn_tmt_core_inbound_queue_config] table to enable configurations that determine how a flow is executed, whether synchronous or asynchronous.

Use the **Trigger Notifications** field on the Inbound Request Configuration [sn_tmt_core_inbound_queue_config] table to enable configuration of notification types, whether default, custom,or no notifications.

Activate Customer Life Cycle Management Self-Service

Enable customers who are primary contacts associated to a sold product to perform the Modify, Suspend, Resume, and Disconnect actions on the Business portal.

.

Billing account store application

Use the new CSM Billing Account Core store app that provides a foundational data model for managing billing accounts across organizations and users. It enables businesses to define, organize, and maintain billing relationships, supporting accurate billing, payments, and scalable financial operations.

UI changes

Specification Class on Product Inventory related list

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The **Specification class** field on the Product Inventory related list provides information on whether the selected product inventory record has a product specification or service specification that is associated with it.

Changed in this release

Product Inventories configurations for Customer Life Cycle Management workflows

Perform the Modify, Suspend, Resume, and Disconnect operations on product inventory records directly from the Product Inventory related list on the Accounts page.

Grant write access to account relationships

Enable administrators and customer service managers to update account relationship records.

Enable write access to contact relationships

Enable administrators and customer service managers to update the contact relationship records.

Populate the Type field in relationship tables using the fix script

Migrate the account manager responsibilities from the account team member relationships to the new responsibility access configurations. The updated framework enables you to manage access settings more efficiently.

Update roles within relationship agent and relationship contributor

Modify the roles of the relationship agent and relationship contributor to include the new granular roles that can grant access by responsibilities.

Notification for case tasks at business locations

View the notifications for the case tasks that are associated with the business locations on the Business Location Service Portal (BLSP). This way, your location members can stay informed about their pending tasks.

Case resolution by location staff at other business locations

Enable your location staff, whether at company-owned or third-party-owned organizations (internal and external business locations), to handle and resolve issues from other eligible business locations.

Inbound Request Configuration table

The Inbound Queue [sn_tmt_core_inbound_queue] table is renamed to Inbound Request table.

Use the **Request Configuration** field on the Inbound Request [sn_tmt_core_inbound_queue] table to reference the Inbound Request Configuration [sn_tmt_core_inbound_queue_config] table while executing synchronous or asynchronous flows.

Activation information

Customer Service Management is a ServiceNow AI Platform feature that is available with activation of the Customer Service Management plugin (com.sn_customerservice). For details, see Activate Customer Service Management.

Additional Customer Service Management features are available with the activation of other plugins. For details, see Additional plugins for Customer Service Management.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Sales Customer Relationship Management is a ServiceNow AI Platform feature that is available with the activation of the Lead to Cash Core plugin (com.snd.l2c.core). For details, see Exploring Sales Customer Relationship Management.

Starting from the Yokohama release, the following plugins are available on ServiceNow Store for quicker and better maintenance:

- Install Base Management (com.snc.install_base)
- Install base characteristics (com.snc.install_base_characteristics)
- Customer Service with Service Portfolio management (com.snc.csm_spm)

For details, see Configure install base.

Starting from the Yokohama release, the Business Location plugin (com.snc.business_location) is available on ServiceNow Store for quicker and better maintenance. For details, see Activate business locations.

Browser requirements

Starting with the Yokohama release, data management for Customer Service Management doesn't support mobile devices and Internet Explorer. For more information, see Browser support.

Related ServiceNow applications and features

Communities

From the Customer Service Portal and Consumer Service Portal, you can enable your customers to connect, engage, and collaborate by using the ServiceNow® Communities application. Customer Service agents can create cases from community discussion threads and resolve cases with the community content.

Field Service Management

Customer Service Management includes an integration with the ServiceNow® Field Service Management application. With this integration, your technicians, agents, consumers, and customers can perform the following tasks:

- Field service technicians can view customer account and contact information on work orders and work order tasks in the Field Service Management application.
- Customer service agents can create work orders from cases in the Customer Service Management application.
- Customers and consumers can view the case-related work orders from the Customer Service Portal and Consumer Service Portal.

Workforce Optimization for Customer Service

Manage and maintain the productivity of your workforce from a single application by using ServiceNow® Workforce Optimization for Customer Service. With this application, you can efficiently route work to your team, manage your team's skills and schedules, and monitor their performance.

Workspace

ServiceNow® Workspace is a graphical user interface that puts multiple tools on one page, including the tools that agents use to identify, research, and resolve issues. CSM Configurable Workspace and CSM Agent Workspace are customer service implementations that provide tier-1 agents with the tools that they use to respond to customers and to resolve cases.

Sales Customer Relationship Management

The Sales Customer Relationship Management applications enable you to manage the product sales and order fulfillment life cycles in your organization. It includes pre-sales opportunities, sales quote generation, order capture, order fulfillment, and post-sales engagement.

Intelligence for CSM release notes

The ServiceNow® Intelligence for CSM applications enable customer service organizations and service operations to configure and implement Guided Decisions, Recommended Actions, and Task Intelligence features. The Intelligence for CSM applications were enhanced and updated in the Yokohama release.

Intelligence for CSM highlights for the Yokohama release

- Enabled Recommended Actions for chat interactions so that agents can select relevant actions that are based on the chat context.
- Integrated enhanced knowledge guidance on the Front-line case page and enable agents to attach and add links to knowledge articles in comments, work notes, or emails by using modeless dialogs.
- Enabled Recommended Actions – AI search for CSM default record page and CSM interaction record pages for the video, chat, walk-up, and email channels.
- Automated the mapping configuration for search results along with default guidances.

See Intelligence for CSM for more information.

Important:
The following applications are available in ServiceNow Store:

- Recommended Actions (sn_nb_action)
- Recommended Actions for Customer Service (sn_cs_nb_action)
- Task Intelligence for Customer Service (com.snc.csm_ml_task)

For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Recommended Actions - Front-line case page integration with knowledge guidance

Enable agents to attach and share knowledge article links in comments, work notes, or emails by using modeless dialogs.

Recommended Actions - Default guidance for search results

Enable agents to view search results for any records. Use a default guidance for any search sources that don't have a dedicated, mapped guidance.

Recommended Actions - Improved timeout handling for resource generators

Handle timeout errors when calling Machine Learning (ML) resource generators. The system uses a subflow API with a 1-second timeout ensures the RA generation engine prioritizes faster response times by terminating stalled ML prediction calls.

Recommended Actions - Custom guidances

Use a custom guidance to provide actions that are based on the search results from the Case, Problem, Incident, or Change Request tables. Agents can use these actions to link records to the current case and copy resolution codes and notes from resolved cases.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Recommended Actions - Field values for predicted records

Leverage the actual field value for a predicted record and show it in a custom guidance in place of the display value.

Recommended Actions for Customer Service - Display Recommended Actions on the CSM Interaction record page

Enable agents to view Recommended Actions in the contextual side panel on the CSM Interaction record page. The search tab dynamically displays relevant actions based on the context of the chat interaction.

Recommended Actions for Customer Service - Interaction Context record

Use the Interaction Context record to display the search results from the Knowledge table. The results are based on the interaction's short description. This context record includes a search-mapping record that maps knowledge results to the Share KB in chat interactions guidance.

Recommended Actions - Question font size customization for a Decision tree

Enables you to customize the font size of questions in a Decision tree for a better look and feel. This font size is applied to the questions in the decision trees of playbooks, and recommendations, within the CSM Configurable Workspace and service portal.

Recommended Actions - Control the visibility of completed guidance information

Allows you to manage the visibility of the completed guidance history information of a decision tree in playbooks, and recommendations for an agent, within the CSM Configurable Workspace, and service portal for a streamlined experience.

Recommended Actions – AI search on CSM default record page, Front line case page, and CSM interaction record page

The Recommended Actions – AI search is introduced on the CSM default record page, Front-line case page, and CSM Interaction record page (for the chat, video, walk-up, and email type channels) and it's enabled by default for new customers. The default guidance is also enabled for these pages. Agents can attach and share knowledge article links in comments, work notes, and emails.

Recommended Actions - Catalog item source type for AI search

Search and filter the catalog items easily in the AI search tab of Recommended Actions in the CSM Configurable Workspace.

Recommended Actions - Ability to have multiple active contexts for the same table

Enables multiple active contexts for the same table, so that tailored recommendations are displayed in the CSM Configurable Workspace:

- For different user personas based on their requirements.
- For different Predictive Intelligence models or AI model variants.
- For the same record in different channels, such as chat, email, and so on.

Recommended Actions - Ability to inherit active rules and their recommendations from a parent table context to extended table context

Assign the active rules and their recommendations from the parent table context to the extended context table for a streamlined process.

Recommended Actions - Asynchronous evaluation for recommendations

Enables you to configure loading behavior at the context level by choosing between synchronous and asynchronous modes. In the asynchronous mode,

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

recommendations load in the background without blocking the UI, allowing agents to interact with the record immediately.

Activation information

Customer Service Management is available with activation of the Customer Service plugin (com.sn_customerservice). For details, see Activate Customer Service Management.

Browser requirements

ServiceNow workspaces don't support mobile devices, Internet Explorer, or Microsoft Edge. Instead, use Microsoft Edge - Chromium or one of the other supported browsers listed in Browser support.

Related ServiceNow applications and features

Customer Service Management

Provide the service and support that your external customers need with Customer Service Management.

Now Assist for CSM

Summarize customer chat conversations on interactions, summarize case details, and generate case resolution notes with the ServiceNow® Now Assist for CSM application.

Document Intelligence

Extract the data from documents and integrate the data into automation workflows to save time and resources by using the Document Intelligence artificial intelligence (AI) solution.

Predictive Intelligence

Improve processes across the platform, such as automatically populating fields when a case is created, categorizing and routing work, and suggesting case resolutions through the Predictive Intelligence artificial intelligence.

Now Assist for Customer Service Management (CSM) release notes

The ServiceNow® Now Assist for CSM application brings generative AI to Customer Service Management (CSM). You can improve productivity and efficiency by delivering better self-service, recommending actions, and delivering answers. Now Assist for CSM was enhanced and updated in the Yokohama release.

Now Assist for CSM highlights for the Yokohama release

Yokohama Patch 11

- Review changes to Now Assist usage measurement.
- Enabled is_template for all Now Assist skills and added support to clone and customize any base system GenAI skill in the Now Assist Skill Kit.
- Defined the navigation path for Sentiment Analysis dashboard in Core UI to make accessing sentiment analysis data easier.
- Track trending case topics with insights, visualizations, and customizable filters for deeper analysis with the Trending topics dashboard.
- Monitor customer sentiment across cases with LLM-powered insights and track the sentiment trends in the dashboard.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Enable agents to access customer, case, and product details instantly through natural language queries with the Provide customer 360 insight agentic workflow.
- Auto-generate work notes and comment recommendations to help improve agent efficiency with the activity response generation skill.
- Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications.

Yokohama Patch 6

- Enable security in Now Assist for CSM and AI agents and agentic workflows by enforcing access control lists (ACLs) and user identity-based permissions.

Yokohama Patch 3

- Analyze your customers' sentiment and sentiment trends in your cases and the reasoning behind it.
- Use case resolution steps to generate recommended actions based on the data clusters from previously closed cases.
- Integrate the support for public web content in search queries for both standard and conversational search.
- Use enhanced AI agents and new standalone AI agents for more specific tasks. For example, the Duplicate identifier AI agent identifies the duplicate interactions and cases from the customers and then consolidates the information.

Yokohama Patch 1

- Improve agent productivity by managing long-running cases with the Triage cases AI agent.

Yokohama Early Availability

- Use the Now LLM Service scheduling assistance when booking an appointment through Virtual Agent. You can use this scheduling assistance to schedule, reschedule, or cancel an appointment.
- Help requesters find solutions by using Genius Results to reduce the number of cases created and decrease the effort needed by agents to close them.
- Use the Now Assist panel global skill search to ask questions and fetch answers from knowledge articles.

See Now Assist for Customer Service Management (CSM) for more information.

Important:
Now Assist for CSM is available in ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Yokohama Patch 11

Enabled the is_template property

Enabled the is_template property for all Now Assist skills to ensure consistent cloning. Added the ability to clone any base system GenAI skill and customize it in the Now Assist Skill Kit (NASK) to reduce setup time and simplify skill modification. Applies to all Now Assist for CSM skills.

Access Sentiment analysis dashboard in Core UI

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Defined the navigation path in Sentiment Analysis dashboard in the Core UI interface to make it easier for users to locate and access sentiment analysis data without searching through multiple menus.

Sentiment trends analysis dashboard

Get a comprehensive view of customer sentiment across case. The dashboard uses LLM-powered insights to explain sentiment changes and lets you drill down to find root causes and real time insights—helping managers take targeted actions.

Trending topics dashboard

Get a comprehensive view of trending topics across cases along with insights and visualizations to facilitate deeper analysis. This feature helps support teams track trend progression, regional impact, and drill down into specific trends using customizable filters.

Provide customer 360 insights agentic workflow

Use the provide customer 360 insights agentic workflow to provide synthesized and relevant customer insights to live agents via conversations. This agentic workflow is designed to support human agents by responding to natural language queries regarding cases, customer history, products, and interactions. This feature expedites access to vital information and case resolution, identifies patterns, and leverages past similar cases for guidance as well as triggers actions from the Now Assist panel.

Activity response generation skill

Use the activity response generation skill to automatically generate recommendations for resolution notes, work notes, and comments. This feature helps agents add meaningful updates to case records, improving efficiency, and interaction.

Now Assist context menu configuration for extended tables within resolution notes

Configure output fields for resolution notes through the Now Assist context menu configuration page so skills apply to extended tables without any additional setup.

Yokohama Patch 6

Triage cases agentic workflow security directives

Implement security on AI agents and agentic workflows through ACLs and user identities.

Now Assist for CSM Gen AI security directives

Implement security in Now Assist for CSM skills through ACLs and user identities.

Yokohama Patch 3

Sentiment analysis on a case

Make informed decisions on cases that are based on your requester's sentiment and the reasoning behind it. You can update the sentiment when new comments or emails from your customers come in to ensure that the sentiment is always up to date.

Sentiment analysis on an account

Track the sentiment of a business-to-business account and analyze it by using various filters and sorting dashboards. You can get the right insights and reduce the number of escalated cases.

Suggested steps in Recommended Actions

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Use Recommended Actions to generate suggested resolution steps for cases. You can increase agent productivity by outlining the next best actions for unfamiliar cases and automatically providing logical next steps.

Support for conversational subflows and actions in the Now Assist panel

Use natural language to describe your intent to trigger a subflow or action. This feature helps to improve your agent productivity and enables them to accomplish everything in one place within the Now Assist panel.

External web content in Q&A Genius Results

Provide the support for your public web content so that your requesters can use search queries in both standard search and conversational search. You can also see whether the content is internal or external, with direct links to the source.

Troubleshooting steps identification AI agent

Gather context from cases, identify missed fixes, and troubleshoot potential solutions by using the Troubleshooting steps identification AI agent.

Yokohama Patch 1

Triage cases AI agents use case

Use the Triage cases AI agents use case to improve agent productivity through faster assessment.

Available AI agents use case

AI agent use case	Description
Triage cases	Use AI agents to handle all routine cases coming in through email and other offline channels, so that it improves customer satisfaction and reduces resolution times.

Yokohama Early Availability

Conversational search in the Now Assist panel with results from knowledge articles

Ask questions directly within the Now Assist panel. If the answer is found in the knowledge bases (KBs), the answer is shown with the source information. If the answer isn't available in the KB search, you’re redirected to the global search experience for further assistance.

Now Assist in Virtual Agent-Scheduling Assistant via GenAI

Use the enhanced scheduling assistant with Now LLM Service capabilities to make it more conversational, enabling users to easily schedule, reschedule, and cancel appointments.

Now Assist in portal case form

Guide requesters through a self-service flow to find solutions to their problems by using Genius Results. You can reduce the number of cases created and decrease the effort required by your agents to close open cases.

Changed in this release

Yokohama Patch 11

Enhancement in case summarization skill flow

The **Define trigger** step has been added to the case summarization flow. This step enables admins to choose between the User Trigger option, where users select a

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

button to generate a summary, and the Automatic Trigger option, where summaries are automatically generated based on specified conditions.

Enhancement in email reply recommendation skill

Generate reply suggestions in the compose area using preset templates that include headers, footers, and signatures.

Unified admin experience for Now Assist skills

Skills cloned in Now Assist Admin console can now be edited in Now Assist Skill Kit. This update unifies the admin experience across Now Assist Admin and Now Assist Skill Kit, enabling users to add headers, configure prompts, and manage Now Assist skills in one location. The migration supports case summarization and resolution notes generation.

Role configuration required for agentic workflows and AI agents

Agentic workflows and AI agents included with Now Assist applications require additional security configuration. If you select *`Users with selected roles`* for your user access security controls for an agentic workflow or AI agent, you must add the installed roles, or they will not execute. Data access settings must also include these roles. See the documentation for the agentic workflow or AI agent for the specific roles you must add.

Display sentiment scale in case list view

Added sentiment scoring to both the case record page and list view across cases, giving agents immediate visibility into the emotional tone of customer interactions. The sentiment scale ranges from very positive, positive, neutral, negative to very negative.

Yokohama Patch 8

Multilingual Support

Enhanced multilingual support in chat summarization, resolution notes, and knowledge generation. Leveraged native multilingual LLMs for improved fluency and domain specificity, addressing translation inconsistencies across Tier 1 and Tier 2 languages.

Yokohama Patch 3

Triage cases agentic workflows enhancements

Added new standalone AI agents to check duplicate cases and split some existing standalone AI agents to focus on more specific tasks. The AI agents available are the Triage cases planner AI agent, Context validator and analyzer agent, Duplicate identifier AI agent, Informational queries AI agent, Transactional queries AI agent, Case creation AI agent, Entity extraction AI agent, Document verification AI agent, and Email response AI agent.

Now Assist in Portal case form enhancement

Added the new **Ask** *`Now Assist`* button that opens a contextual chat window so that a requester can carry the conversation forward. If no results are found or if the requester isn't satisfied with the result, they can get further assistance by selecting the button to chat and get an answer, which helps to avoid case creation.

Yokohama Early Availability

Email reply recommendations enhancements

Refined the AI-generated reply recommendation to create the best response for users by applying tone changes in the Now Assist context menu. Additional tone options, including casual, formal, and sympathetic, are available.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Chat reply recommendation enhancements

Added the chat reply recommendation enhancements to respond in a conversational tone and get feature parity in the Now Assist Admin console:

- Refined the AI-generated reply recommendation to create the best answer for your users by applying tone changes in the Now Assist context menu. Additional tone options, including casual, formal, and sympathetic, are available.
- Added parity with the chat summarization Now Assist Admin console capabilities. The Now Assist Admin console can specify the portal and channels for chat reply recommendations and assign additional support roles.

Case summarization enhancement

Detailed feedback option is now available for negative feedback in the generated case summary.

Xanadu Patch 7: Extended the capabilities of the case summarization feature so it can now be used on custom tables.

Activation information

Now Assist features are available with activation of the Now Assist for CSM plugin. For more information, see Install Now Assist plugins.

Starting with Vancouver Patch 4, Now Assist for CSM is supported.

Starting with Xanadu Patch 7, Customer Service Management AI agent collection is supported.

Additional requirements

The Now Assist for CSM application requires a Customer Service Management Pro Plus or Enterprise Plus license.

Related ServiceNow applications and features

Now Assist

Help improve the productivity and efficiency in your organization, deliver better self-service, recommend actions, provide answers, and empower your users to search more effectively.

Now Assist Admin console

Use the Now Assist Admin console to provide you with quick and easy access to the important information that you need to set up, configure, and monitor Now Assist applications and features.

Now Assist panel

Use this conversational interface in CSM Configurable Workspace to summarize a chat, a case, or resolution notes so that you can get the context of this information more quickly.

Now Assist skills

Use the Now Assist products to provide generative AI skills to meet the needs of users in different workflows, including case or incident summarization, chat summarization, resolution notes generation, and code generation.

Customer Contracts and Entitlements release notes

The ServiceNow® Customer Contracts and Entitlements application provides the foundation for storing and managing customer service contracts and entitlements. Customer Contracts and Entitlements was enhanced and updated in the Yokohama release.

Customer Contracts and Entitlements highlights for the Yokohama release

- Enable customers to create contracts from product inventory.
- Added a new workspace view for service contracts and entitlements in Customer Service Management workspace for efficiently managing service contracts and entitlements.
- Enable initiation of contract renewal automatically based on the configured date and pricing details.
- Calculate the price of future renewals of contracts with a markup or mark down percentage of the current contract price.
- Validate the contract end date to the product offering end date.

See Customer Contracts and Entitlements for more information.

Important:
Customer Contracts and Entitlements is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Create contracts from product inventory

Enables customer to create and manage contracts for product inventory records.

New workspace view for service contracts and entitlements

A new workspace view named Service Contract Workspace has been added for customers on service contracts and entitlements in the Customer Service Management workspace. This view is set as the default view and can be changed by an administrator.

Enhancement on contract lines and entitlements

View location and subscription pricing information on contract lines and entitlements.

Automatic renewal of contracts

Enables customers to configure the date and pricing details of contract renewal while creating initial contracts.

Enable renewal opportunity creation

Create an opportunity or an opportunity and quote when you renew service contracts and service contract lines.

Co-terminating of Contract lines

Enables customers to assign same start and end date to multiple quote lines.

End-of-life check

Alert customers when the contract end date is exceeding the product offering end date during quote processing. Customers can then match the contract and product offering end date if required.

Renewal Uplift feature

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Enables customers to set the pricing parameters of future renewals of contracts. You can select the markup or mark down percentage of the current contract price or you can apply the market price of the contract at the time of renewal.

Activation information

Install Customer Contracts and Entitlements by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Customer Contracts and Entitlements is available with activation of the Customer Contracts and Entitlements (com.sn_pss_core) plugin, which requires a separate subscription. For details, see Configure Customer Contracts and Entitlements.

Note:
With the activation of Customer Contracts and Entitlements, new contracts and entitlements are created using the new data model only. The new entitlement verification APIs and change workflows are based on the new data model. Older contracts and entitlements can still be viewed but not modified.

Related ServiceNow applications and features

Flow Designer

ServiceNow® Workflow Studio components enable you to invoke flows or subflows that are designed as part of a workflow and used to find out the output or execution status of the flows or subflows.

Order Management

Order and fulfillment agents can use ServiceNow® Order Management to fulfill customer orders created from the Sales Agreement Management application.

Install base management

ServiceNow® Install Base Management is used to capture a customer's use or purchase of a product across any industry with the Customer Service Management application.

Next Experience UI Builder

ServiceNow® Next Experience UI Builder is a low-code web user interface builder that enables developers to build pages for workspace and portal web-based experiences. Use the base system and custom web components to build your pages.

Product Catalog Management

ServiceNow® Product Catalog Management organizes products into catalogs and categories so that agents can easily find and add products and services to a quote.

Pricing Management

ServiceNow® Pricing Management helps you set pricing for products and services that can be added to a quote. Pricing Management also enables agents to make pricing adjustments to products in the quote.

Workspace

ServiceNow® Workspace is a graphical user interface that puts multiple tools on one page, including the tools that agents use to find, research, and resolve issues. CSM Configurable Workspace and CSM Agent Workspace are customer service-

specific implementations that provide tools to the tier 1 agents that they must use to respond to customers and resolve cases.

Self-service and omnichannel engagement for CSM release notes

With ServiceNow® Omnichannel support, your customers can use chat on self-service portals or consumer messaging apps to connect with your organization, or connect using email or phone. ServiceNow® Omnichannel and self-service applications were enhanced and updated in the Yokohama release.

Omnichannel and self-service highlights for the Yokohama release

- Integrate with contact centers using Contact Center Integration Core to import data from a third party contact center as a service (CCaaS) application.
- Better integrate with contact centers by adding call controls to Agent Workspace with Interaction Controls Component (ICC).
- Enhance B2B customer support through ServiceNow® self-service capabilities with the new Business Portal.
- Provide a consistent experience for agents handling omnichannel interactions through email interactions, which preserve the context for agents by associating the email conversation between the agent and the customer.
- Improve contact center efficiency by helping avoid the creation of duplicate cases through the use of the Email as an Interaction feature.

See Omnichannels for communicating with customers, Self-service for Customer Service Management, and Playbooks for Portals for more information.

Important:
Engagement Messenger, Playbooks for Portals, and Omnichannel applications are available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Business Portal

Support your customers through the Business Portal self-service capabilities, such as knowledge articles, service catalogs, case management, Virtual Agent, and others. Help reduce maintenance effort through low-code configurations on pages with configurable widgets.

Email as an Interaction

Enhance case management with the Email as an Interaction feature.

- Transform emails into interactions, enabling customer communication to be tracked in a central location and help avoid unnecessary case creation.
- Manage straightforward customer inquiries via email, create cases for more complex issues, or link emails to existing cases.
- Notify agents on email responses received from customers.

Contact Center Integration Core

As an admin, import data automatically from a third-party contact center as a service (CCaaS) application to facilitate external routing and third-party telephony integration in their ServiceNow® instance.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
The Contact Center Integration Core is a framework that includes voice call features, which doesn't work unless CCaaS implements it.

- Import records such as queues, skills, and wrap-up codes from a third party into your ServiceNow instance.
- Maintain data consistency between your ServiceNow instance and third-party systems. Verify that chats and cases are routed to the correct agent and that the correct wrap-up codes are available when dispositioning an interaction.

Interaction Controls Component (ICC)

As an agent, manage calls, such as muting, holding, and transferring, directly within the Configurable Workspace. As a part of the new Voice interaction page experience, the ICC framework helps improve workflow efficiency and promotes a consistent agent experience across all channels.

Note:
ICC must be integrated with your specific Contact Center as a Service (CCaaS) plugin to establish the telephony connection.

Connect customers with field agents or third-party support teams in the embedded call interface. Choose between the following transfer options:

- Consult transfer: Share the call context with the external contact before transferring the customer.
- Blind transfer: Immediately transfer the call to the external contact.

OpenFrame Integration to Interaction Controls Component (ICC)

ICC is a new component for a native call controls interface embedded in Agent Workspace. With the ICC component, you can do the following:

- Create the state context in OpenFrame to read the state of idle and active call state, and the state of the transfer.
- Provide iframe sandbox parameters to allow iframe access to security features and to enable additional iframe restrictions.
- Create an extension point implementation to create and get phone log segments.

Integrating Conversational SMS with AWS End User Messaging

Integrate the ServiceNow SMS channel with AWS end-user messaging to engage in conversations with Now Virtual Agent and live agents to address and resolve any customer queries or issues.

UI changes

Using the email interaction page

The following UI elements have been added to the Email Interaction page:

- A **Contact** card to simplify the process of adding and viewing customer information.
- A **Customer History** tab that displays the details of previous conversations between the customer and the agent.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Changed in this release

Using the email interaction page

Manage and view customer-related information and past conversations while interacting with customers via email.

Using the Now Assist in Virtual Agent enhanced chat in self-service portals

Receive comprehensive and detailed answers with intelligent search and conversational experiences using Now Assist in Virtual Agent. The search results are synthesized from Knowledge Base articles, Virtual Agent articles, and catalog items with links to the sources. The agent retains conversation context across multi-turn questions, promoting continuity and relevance in responses.

Activation information

Install the Engagement Messenger, Playbook for Portals, and Omnichannel applications by requesting them from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Browser requirements

Internet Explorer isn't supported.

Related ServiceNow applications and features

Field Service Management

The Field Service Management application helps you manage work orders and related tasks, resources, skills, assets, and locations. Assign work order tasks and dispatch agents to a customer location to perform field work.

Knowledge Management

From the Customer Service Portal and Consumer Service Portal, enable your customers to search for shared information using the ServiceNow® Knowledge Management application. Customer service agents can use knowledge content to help resolve cases.

IT Service Management applications

Customer Service Management includes integrations with the following ServiceNow® Service Management applications: Incident Management, Problem Management, Change Management, and Request Management. With these integrations, you can create incident, problem, change, and request records from customer service cases. Customers can also submit requests from the Customer Service Portal.

Workforce Optimization for Customer Service CSM release notes

The ServiceNow® Workforce Optimization for Customer Service application enables you to efficiently route work to your team, manage your team's skills and schedules, and monitor their performance. Workforce Optimization for Customer Service was enhanced and updated in the Yokohama release.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Workforce Optimization for Customer Service Highlights for the Yokohama release

- Equip managers with comprehensive, real-time insights for continuous optimization.
- Enable managers to take prompt action with key alerts organized by priority.
- Provide real-time visibility into performance KPIs, work item status, and agent performance.

See Exploring Workforce Optimization for Customer Service for more information.

Important:
Workforce Optimization for Customer Service is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Manager Workspace landing page

Empower managers with real-time insights and actionable metrics, organized in a unified view, to drive performance optimization and facilitate prompt action.

Note:
Existing customers on release versions prior to the Yokohama release can still view the old Legacy Manager Workspace landing page.

Activation information

Install Workforce Optimization for Customer Service by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Accessibility information

Screen reader support has been extended to ARIA labels for buttons in CSM Workforce Optimization for Customer Service. The support provides users who rely on assistive technology with an explanation of button actions, such as the toggle button.

Related ServiceNow applications and features

Advanced Work Assignment

Automatically assign work items to your agents based on their availability, capacity, and skills using ServiceNow® Advanced Work Assignment.

Skills Management

Assess the skills that your organization needs, identify gaps, and plan for the hiring and training of your teams using ServiceNow® Skills Management.

CSM Workspaces

Agents can swap shifts, manage their time-off requests and approvals, and complete assigned training using ServiceNow® CSM Agent Workspace.

Employee Service Management release notes

Employee Service Management has new and updated features in the Yokohama release

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

HR Service Delivery release notes

The ServiceNow® HR Service Delivery application improves the employee service experience by automating HR interactions and providing a single platform for all HR services. HR Service Delivery was enhanced and updated in the Yokohama release.

Case and Knowledge Management release notes

The ServiceNow® Case and Knowledge Management application enables you to standardize the documentation, interaction, and fulfillment of employee inquiries and requests, which helps to improve HR efficiency and services over time. Case and Knowledge Management was enhanced and updated in the Yokohama release.

Case and Knowledge Management highlights for the Yokohama release

Use HR Benchmarks to provide instant visibility into your key performance indicators (KPIs) and trends, as well as comparative insight relative to the industry averages of your peers and to the industry top performers.

See Case and Knowledge Management for more information.

New in the Yokohama release

HR Benchmarks

Use your key performance indicators (KPIs) to compare your performance with global benchmarks, which contributes to improved performance for your organization. Gain deeper insights by comparing your performance with your peers based on industry, size, or region, and implement recommendations for improving performance.

Employee passport

Enable movement of employee data between departments and agencies for tracking, compliance, and regulatory purposes. Enable employee profile data, such as employment history and progression to be made available across different ServiceNow instances.

Survey responses

View employee responses by selecting the **View Responses** related link on an HR case. The **View Responses** related link displays responses that are collected from an employee via the survey form sent through the HR task of type **Collect Employee Input**.

Personal Data Rights in HR Service Delivery

- Enable employees or alumni to request their personal information reports and have better visibility of their personal data that is held in the database of an organization.
- Include an approval step before deletion of data, confirming better compliance and audit capabilities with respect to General Data Protection Regulation (GDPR) requirements.
- Have HR Agents manage the approval process by generating reports using the Real-Time Business Intelligence (RTBI) configuration from the Data Classification (com.glide.data_classification) plugin.

Deprecations

The CTI Demo Data for HRSD (com.sn_hr_cti_demo) plugin is being deprecated. Use Workflow Studio instead.

Activation information

Case and Knowledge Management is a ServiceNow AI Platform feature that is available with activation of the Human Resources Scoped App: Core [com.sn_hr_core]. See Activate Case and Knowledge Management for more information.

Related ServiceNow applications and features

Agent Workspace for HR Case Management (Configurable)

The ServiceNow® Agent Workspace for HR Case Management application enables you to interact with employees, respond to inquiries, and resolve issues quickly.

Agent Workspace for HR Case Management release notes

The ServiceNow® Agent Workspace for HR Case Management application enables you to interact with employees, respond to inquiries, and resolve issues quickly. Agent Workspace for HR Case Management was enhanced and updated in the Yokohama release.

Agent Workspace for HR Case Management highlights for the Yokohama release

- The HR Triaging Dashboard enables you to review your teams' case assignments through cases displayed as cards. Once you set up a layout for HR services, priorities, or assignment groups, moving of case cards between lanes, auto-updates the HR service, user assignment, or priority of cases.
- Provide a convenient and efficient way for deskless workers to seek in-person or remote assistance, report issues, and receive guidance from HR agents through designated walk-up centers.

See Agent Workspace for HR Case Management (Configurable) for more information.

Important:
Agent Workspace for HR Case Management (Configurable) is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Survey responses

View employee responses collected from an employee via the survey form sent through an HR task.

Response templates

Display response templates based on the language preference of selected user.

Copy a case in Agent Workspace for HR Case Management

Avoid having to fill in the fields of a case manually by creating a copy of a case to auto-populate the case values.

HR Triaging Dashboard

View your teams' case assignments based on categories such as priority, HR service, or HR assignment group. Drag a case card from one lane to another to automatically update the priority, HR service, or assignment group of a case.

HR Walk-up

Provide a convenient and efficient way for users to seek in-person or remote assistance, report issues, and receive guidance from HR agents through designated walk-up centers.

Page configurations

Configure the layout and functionality of the HR Agent landing page or HR case page. You can preview your settings before implementing them.

PDF template preview

Preview a PDF document template attached to an HR case rather than being able to preview only HTML document templates.

Link child cases

Associate child cases to an HR case.

Delegation list

View cases delegated to you or that you have delegated to other HR agents. The Delegation list appears only when you have activated the Granular Delegation (com.glide.granular_service_delegation) plugin.

Agent Workspace for HR Case Management contextual side panel

- Apply template values to the HR case without having to fill in values manually.
- Download or delete multiple attachments at once.

Configure fields for Bulk case request

Configure fields that you want to view in the User segment group form in bulk case request through the Case Creation Configuration form.

Activation information

Install Agent Workspace for HR Case Management by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Related ServiceNow applications and features

HR Service Delivery

Improve the employee service experience by automating HR interactions and providing a single platform for all HR services. Replace manual and siloed processes with cross-functional digital workflows for increased efficiency. Align business goals with employee needs, including onboarding, career growth, and other transitions.

Now Assist for HR Service Delivery (HRSD)

Summarize case information, generate resolution notes, and summarize chat information using GenAI capabilities. Enable your agents to understand the chat and case context and to propose quicker resolutions to requesters.

Now Assist for HR Service Delivery (HRSD) release notes

The ServiceNow® Now Assist for HR Service Delivery (HRSD) application enables agents to summarize case information, generate resolution notes, and summarize the chat information for an interaction. Your agents can understand the chat and case context and propose quicker resolutions to your customers. Now Assist for HR Service Delivery (HRSD) was enhanced and updated in the Yokohama release.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Review changes to Now Assist usage measurement.
- Some Now Assist skills, agents, and agentic workflows are on by default.
- Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications.

Yokohama Patch 6

- Use Google Gemini and Anthropic Claude on AWS as AI model providers for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI.
- Create a copy of the KB generation skill to create custom templates.
- View the list of sources that are used to generate an email reply recommendation.
- Select citations to view the source articles and industry research from Galileo AI Assistant for HR.
- Leverage an AI agent to generate a step-wise fulfillment plan for an HR case from both Core UI and Agent Workspace for HR Case Management.
- Make career conversations easy to create and track using the growth conversations agentic workflow.

Yokohama Patch 3

- Automate the resolution of routine employee inquiries by using the Resolve noncritical HR cases agentic workflow.
- Receive research-backed responses to HR management queries that are sourced from both internal knowledge bases and The Josh Bersin content library.
- Use the new Growth & Performance AI agents to streamline your employee growth discussions in Career Conversations.

Yokohama Patch 1: Improve agent productivity by managing long-running cases with the Triage cases AI agent.

Yokohama Early Availability

- Use the new Virtual Agent topics to place employee requests in the Human Capital Management (HCM) system.
- Use Knowledge Graph to create personalized knowledge models in the form of Knowledge Graph schemas.
- Create Journey Accelerator plans by using Now Assist for HRSD in Journey designer.

See Now Assist for HR Service Delivery (HRSD) for more information.

Important:
Now Assist for HRSD is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Yokohama Patch 6

Resolve HR cases agentic workflow

Generate a step-wise fulfillment plan for an HR case by selecting the **Generate Plan** button on the HR Case. HR agents can add prompts to further refine the AI generated fulfillment plan before the plan is published to the work notes of the case.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Growth Conversations agentic workflow

Use the new growth conversations workflow to streamline your employee growth discussions in Career Conversations.

New third-party AI model provider options available for all Now Assist applications

Google Gemini and AWS Claude are available for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI.

Generate a knowledge article from HR Agent Workspace with Now Assist

Create a copy of the KB generation skill to create custom templates that are based on your organization's requirements. When a skill copy is activated, the main skill is automatically deactivated.

Generate an email reply recommendation by using Now Assist for HR Service Delivery (HRSD)

View the list of KB articles, related records, and current records that are used to generate email reply recommendations.

Generate onboarding ramp-up plan agentic workflow

Simplify employee onboarding with AI agents that gather inputs, structure tasks, enable manager review, and deliver personalized onboarding plans.

Yokohama Patch 3

Resolve HR cases agentic workflow

Use the Resolve noncritical HR cases agentic workflow for faster mean time to repair (MTTR) cases, automate the resolution of routine employee inquiries, and reduce the costs for HR operations organizers.

Available agentic workflows

Agentic workflow	Description
Resolve noncritical HR cases	AI agents detect criticality and retrieve relevant knowledge-based responses to automate the resolution of employee queries.

Access knowledge from internal and external content sources

Find reliable answers to HR management queries from multiple data sources, including the research and articles from The Josh Bersin Company, with attribution to each source.

Override sensitivity detection false positives

Proceed with the interaction when the virtual agent incorrectly identifies a phrase as containing sensitive information.

Create a growth conversation with the help of an agent in Now Assist

As a manager, use the growth conversations preparation AI agent to schedule and prepare for employee growth discussions. The agent provides a clear summary of employee activity and career journey, with data-driven talking points to make conversations more focused and impactful.

Note:
This feature is available when you have both Now Assist for HR Service Delivery (HRSD), which will install Now Assist for Talent and HR Talent AI Agent Collection

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Yokohama Patch 1

Help resolve tuition requests agentic workflow for Now Assist for HRSD

Use the Resolve policy use case for faster mean time to repair (MTTR) cases that require validation that is based on the policies that are built for tuition reimbursement.

Available AI agents use case

AI agent use case	Description
Resolve policy for tuition reimbursement	AI agents resolve tuition reimbursement requests by connecting to various parties (for example, the manager for approval) and resolving the case, while keeping the human agent in the loop.

Yokohama Early Availability

Now Assist for HRSD Virtual Agent topics

Use the Now Assist for HR Service Delivery (HRSD) Virtual Agent topics to place employee requests in the HCM system. Examples of requests are when an employee requests time off or updates their personal details.

Use Knowledge Graph in Now Assist for HRSD

Create and manage personalized knowledge models as Knowledge Graph schemas that are represented as nodes, edges, and their properties. Virtual Agent uses the assigned Knowledge Graph schema to resolve employee requests and queries.

Create a journey using Now Assist

Create Journey Accelerator plans by entering prompts to Virtual Agent without having to manually create lists and forms.

Changed in this release

Yokohama Patch 11

Changes to Now Assist usage measurement

Starting with Yokohama Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Some Now Assist skills are turned on by default

The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.

Configure ACLs for AI agents and agentic workflows

Configure the access control lists for who can discover and trigger AI agents and agentic workflows in their guided setups in AI Agent Studio. You can determine whether an AI agent or agentic workflow behaves as a dynamic user or as an AI

Manager Hub highlights for the Yokohama release

- Enable manager-employee conversation scheduling.
- Track skill proficiency and assign targeted learning for effective development by using the Kill score analysis panel.
- Enable managers to view all direct and indirect reports by using multi-manager reporting to improve team productivity and engagement.

See Manager Hub for more information.

Important:
Manager Hub is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Know your team members

View employee availability and schedule conversations with employees using the **Create a conversation** panel if you do not have Microsoft Outlook integration enabled or the **Schedule a conversation** panel if you do.

View employee cards in Skills Expectations section

Track skill proficiency, assign targeted learning, and view in-depth skill progress bars to monitor employee development by using the **Skill score analysis** panel.

Know your team members

Enable managers to view all direct and indirect reporting details, daily team stats, and other employee details such as tasks submitted for approval, upcoming time off, and employee profiles.

Activation information

Install Manager Hub by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Skills Foundation

Get an in-depth understanding of your team's skills by reviewing the skill set from Manager Hub.

Contract Management Pro release notes

The ServiceNow® Contract Management Pro is a contract lifecycle management solution that's easy to use and adopt. You can use it to set up contract document templates, clauses, clause variations, and to initiate contract requests. It also supports Now Assist driven contract analysis and metadata extraction, e-signatures, wet signatures, and external storage systems.Contract Management Pro was enhanced and updated in the Yokohama release.

Contract Management Pro highlights for the Yokohama release

- Link parent contracts during drafting and negotiation phases to inherit parent contract terms.
- Pause and resume an in-progress signature process when updates to the signatory list are required.
- Perform wet signature in the electronic signature workflow. The enhanced electronic signature workflow capability provides flexibility to complete the signature process when the signatories want to do a wet signature instead of an electronic signature.
- Upload the contract document directly from the Microsoft Word add-in for ServiceNow Contracts instead of selecting it from your system.
- Use Logout icon ( ) to log out from Microsoft Word add-in for ServiceNow Contracts.
- Change the application scope to edit a contract template in the Microsoft Word add-in for ServiceNow Contracts. This option is only visible to the administrators.

See Contract Management Pro for more information.

Important:
Contract Management Pro is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Link parent contract requests

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Establish a hierarchical relationship between the parent and child contract requests by using the **Link** option in the **Related contract requests** tab during drafting and negotiation phases.

Establish a hierarchical relationship between the parent and child contract requests and automatically inherit the configured fields from the parent request by using the **Link and inherit fields** option in the **Related contract requests** tab during drafting and negotiation phases.

The linked parent contract request appears in the **Related contract requests** tab and displays the parent-child hierarchy. The contract repository records that are associated with the parent and child contract requests are automatically linked after the contracts are signed.

Use the **Remove linked contract** option in the **Related contract requests** tab to remove the linked parent contract request when you have linked a wrong contract request or the linking is no longer required.

Perpetual contracts

Select the **Perpetual** check box in the Details tab of a contract request to classify it as a perpetual contract. When this check box is selected, the contract end date must be blank.

The **Perpetual** check box is available in contract requests that are initiated from Sales Customer Relationship Management and Source-to-Pay Operations.

Signature workflow for a contract request

During the electronic signature process, one or more signatories can now choose to use a wet signature. In this scenario, the contract fulfiller uploads the partially signed document and sends the uploaded document to the remaining signatories to complete the signature process.

Add document content controls using Microsoft Word add-in for ServiceNow Contracts

Logout and application scope change functionality in Microsoft Word add-in for ServiceNow contracts.

Changed in this release

Select contract type while initiating a third-party contract

In the Initiate contract window, the **Type** field appears when you select the **Third party paper** option. You can specify whether the contract request is for a single contract or multiple contracts.

If you select **Single contract**, a **Contract type** field appears where you can define the type of contract document. This field isn't available when you select **Multiple contracts**.

Classify contract requests as a single or multiple contracts type based on selected documents

When you're creating a third-party contract review request from Employee Portal, you can now select a single contract document to classify it as a single contract type. By selecting multiple contract documents, you can classify them as a multiple contracts type. The **Type** field in the contract request reflects this selection by displaying either **Single contract** or **Multiple contracts**.

Use scripts to define additional conditions for a clause variation

You can now define the clause conditions on the fields and variables of a table that isn't directly linked to the contract template table. The **Advanced script** check box

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

in the Clause Variation form enables you to add custom logic to determine when a clause variation is used in a contract.

Configure tables in a contract template to append or add fields from related tables

You can now use scripts to insert additional data from the related table fields into the dynamic tables of a contract. The **Advanced script** check box in the Column Mapping form enables you to configure dynamic tables in a contract template to display additional data from related table fields by appending it to existing columns or adding it as new columns.

Contract Management Pro configurations are available on the Contract Request table

You can now set up the following Contract Management Pro configurations directly on the Contract Request [sn_cm_core_contract_request] table to centralize the configuration on a single table and improve consistency and reusability across business units:

- Contract templates
- Template rules
- Internal signatory rules
- Clause and clause variation setup
- Contract configuration
- External storage and e-signature integrations
- Mappings for Now Assist contract metadata extraction and Now Assist contract analysis

The Contract Request table is automatically selected for a new configuration. You can manually select a different table, if necessary.

Note:
To avoid configuration issues, ensure that you select the same table across all related configurations.

Configure dynamic tables for contract template

You can now set up the contract template on the Contract Request [sn_cm_core_contract_request] table. When you select the Contract Request table, the **Table** tab in the Microsoft Word add-in displays an additional field, called the **Parent request table** field, that you can use to select the source parent request table.

Additionally, the **Table** field has been renamed to **Lookup table** where you can select the table from the data that is populated into the contract document.

If the template isn't based on the Contract Request table, only the **Lookup table** field is shown.

Signature blocks enabled by default for new contract templates

When you're creating a contract template, the **Signature blocks** check box in the Word Template New Record form is selected by default. If you want to configure the participant-based signatories for the contract template, you can clear the check box.

Copy fields from parent request to contract request

You can now configure the `ContractManagementExt` extension point to automatically copy the required fields from the originating business unit record to the contract request when it's initiated.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Modify signatories

Enable contract fulfillers to pause an ongoing signature process, make necessary changes to the list or order of signatories, and then resume the process without restarting the entire workflow by using the **Modify Signatories** and **Resume signature** options. This feature is supported only for the Docusign electronic signature provider.

Signature workflow for a contract request

The wet signature process has been enhanced for better control and clarity. Wet signature requests are sent one signatory at a time, starting with the first signatory in order. When the signatory signs and returns the document, the fulfiller manages the remaining signatures.

Resend signature request

Enable contract fulfillers to manually trigger a signature request when needed, instead of relying on automated reminders by using the **Resend signature request** option.

Configuring signatories in Contract template using Microsoft Word add-in

Signature placeholders in contract templates are now mapped to the e-signature tool tags (such as Docusign), instead of signer fields to help accommodate changes in the signatories. The values in the signature blocks are filled in by the signatories during the signing process.

Upload and parse a Microsoft Word document that includes content controls

Upload the contract document directly from the Microsoft Word Add-in instead of selecting it from your system.

Activation information

Contract Management Pro is a ServiceNow AI Platform feature that is available with activation of the Contract Management Pro (sn_cm_pro). For details, see Install Contract Management Pro.

Related ServiceNow applications and features

Contract Management Pro

Use Contract Management Pro to set up contract document templates, clauses, clause variations, and to initiate contract requests. It also supports Now Assist -driven contract analysis and metadata extraction, e-signatures, wet signatures, and external storage systems.

Now Assist in Contract Management

The ServiceNow® Now Assist in the Contract Management application analyzes a contract for missing and non-standard clauses. It also enables you to review and add the information to the mapped fields in the contract repository, eliminating the need to manually update the contract repository.

Now Assist in Contract Management release notes

The ServiceNow® Now Assist in Contract Management uses generative AI capabilities to analyze a contract for missing or non-standard clauses and conversational search to query documents using natural language. It also includes agentic AI capabilities that automatically extract metadata and obligations from signed contracts and calculate reminder dates for contract renewals or terminations. Now Assist in Contract Management was enhanced and updated in the Yokohama release.

Now Assist in Contract Management highlights for the Yokohama release

Yokohama Patch 11

- Review changes to Now Assist usage measurement.
- Some Now Assist skills are now turned on by default.
- Use AI-powered obligation extraction to automatically identify and capture key obligations from signed contracts, and then review, edit, approve, or reject them within the contract playbook to create obligation records automatically.
- Activate the Contract obligation extraction skill in the Now Assist Admin console to enable automatic obligation extraction.
- Use Now Assist powered conversational search to query contract documents using natural language and dialogue-driven queries, making it easier to find relevant information.
- Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications.

Yokohama Patch 6

- Use the contract playbook to review and update the AI extracted metadata and reminder date for contract renewal or termination.
- Use Google Gemini and Anthropic Claude on AWS as AI model providers for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI.

Yokohama Patch 3

- Activate and configure the contract metadata extraction skill for Contract Management Pro in the Now Assist Admin console.
- Activate and configure the contract analysis skill for Contract Management Pro in the Now Assist Admin console.
- Use the Manage contract repository agentic workflow to autonomously set milestone reminders for the notice period of contract renewals or the notice period for termination of contract renewals.

See Now Assist in Contract Management for more information.

Important:
Now Assist in Contract Management is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Important information for upgrading Now Assist in Contract Management to Yokohama

If you're upgrading to Now Assist in Contract Management starting with Yokohama Patch 3 from a previous version and you have customized use cases, run a fix script to migrate the existing data to the Now Assist Admin console.

1. Navigate to **All** > **System Definition** > **Fix Scripts**.
2. In the **Name** field, search for `Upsert DI skill config`.
3. In the script, add the use case ids that you want to migrate to the Now Assist Admin console.
4. Select **Run Fix Script**.

For more information, see Post-upgrade steps for Now Assist in Contract Management.

New in the Yokohama release

Yokohama Patch 11

Changes to Now Assist usage measurement

Starting with Yokohama Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Automated obligation extraction

Use the manage contract repository agentic workflow to automatically identify and capture key contractual obligations from signed contracts and create obligation records in the contract repository. The AI agent in the manage contract repository agentic workflow uses the Now Assist Contract obligation extraction skill to extract key contractual obligations from contracts.

Using contract playbook to review AI-extracted obligations

Review extracted obligations in the contract playbook, with options to edit, approve, or reject each obligation. Approved obligations are added as obligation records in the contract repository while rejected obligations are deactivated.

Contract obligation extraction skill in Now Assist in Contract Management

Configure and map use cases for obligation extraction skill in the Now Assist Admin console to automatically extract key contractual obligations from signed contracts. The AI agent in the manage contract repository agentic workflow uses the Now Assist Contract obligation extraction skill to extract key contractual obligations from contracts.

Conversational contract search and insights Workflow

Contract documents are often complex and stored across multiple formats and repositories, making keyword-based search inefficient and error-prone. The new Now Assist powered conversational search feature enables you to search contract documents using natural language and dialogue-driven queries.

The conversational search feature does not support searching within contract documents that are scanned PDFs.

Some Now Assist skills are turned on by default

The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.

Now LLM LTS support for Contract Management Pro

Long term stable (LTS) models are part of Now LLM Service and provide longer model stability windows for regulated industries. These models can integrate with tools to provide governance, monitoring, and compliance controls.

Yokohama Patch 6

Reviewing AI-extracted results in the playbook

Use the playbook within a contract repository record to review the metadata extracted by the AI agents in the Manage contract repository agentic workflow. You

can make necessary changes to the extracted information, and submit it to update the contract repository. If the contract end date is available, the **Review contract reminders** tab appears in the playbook, enabling you to review and update the AI-calculated contract reminder date and specify recipients for contract renewal or terminations.

New third-party AI model provider options available for all Now Assist applications

Google Gemini and AWS Claude are available for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI.

Select large language models for use cases in Now Assist in Contract Management

Select a large language models (LLM) provider at for a contract analysis or metadata extraction use case. The selected LLM is applicable only for the specific use case and overrides the LLM selected for Now Assist in Contract Management skills.

Yokohama Patch 3

Manage contract repository agentic workflow

Use the Manage contract repository agentic workflow to improve productivity by autonomously creating milestone reminders for the notice period of contract renewals or the notice period for termination of contract renewals.

Agentic workflows

Agentic workflows	Description
Manage contract repository	Uses AI agents to retrieve contract details such as renewal notice period, termination notice period, or auto-renewal clause information, and determine the average lead time for similar contracts to create contract milestone reminders for the notice period of contract renewals or the notice period for termination of contract renewals.

Changed in this release

Yokohama Patch 11

Automated obligation extraction

Use the manage contract repository agentic workflow to automatically identify and capture key contractual obligations from signed contracts and create obligation records in the contract repository. The AI agent in the manage contract repository agentic workflow uses the Now Assist Contract obligation extraction skill to extract key contractual obligations from contracts.

Using contract playbook to review AI-extracted obligations

Review extracted obligations in the contract playbook, with options to edit, approve, or reject each obligation. Approved obligations are added as obligation records in the contract repository while rejected obligations are deactivated.

- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.

Now LLM LTS support for Contract Management Pro

Long term stable (LTS) models are part of Now LLM Service and provide longer model stability windows for regulated industries. These models can integrate with tools to provide governance, monitoring, and compliance controls.

Yokohama Patch 6

Extract metadata from signed contracts automatically

Use the AI agents in the Manage contract repository agentic workflow to automatically extract metadata from signed contracts and calculate the contract reminder dates for contract renewal or termination. You can review the AI results in the contract playbook and update it if necessary before saving it.

Contract metadata extraction use cases

Support for 14 additional metadata fields in the CM Pro - Contract Metadata Extraction use case available in the base system.

Yokohama Patch 3

Configuring contract metadata extraction

Create a use case and its associated fields for contract metadata extraction in the Now Assist Admin console to define the information that you want Now Assist to detect in a signed contract.

Create a use case mapping in the Now Assist Admin console to map a use case to specific tables and define conditions to apply the use case for metadata extraction.

Configuring contract analysis

Create a use case and its associated question groups for contract analysis in the Now Assist Admin console to identify the non-standard and missing clauses in a contract.

Create a clause mapping Now Assist Admin console to map question groups of a use case to active clauses in the clause library to display suggestions for non-standard clauses in a contract.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Create an expected response mapping in the Now Assist Admin console to map questions of a use case to an expected response to identify the non-standard clause in a contract.

Create a use case mapping in the Now Assist Admin console to map a use case to specific tables and define conditions to apply the use case for contract analysis.

Activation information

Now Assist in Contract Management is a ServiceNow AI Platform feature that is available with activation of the Now Assist in Contract Management (sn_cm_gen_ai). For details, see Configure Now Assist in Contract Management.

Browser requirements

Now Assist supports various browsers, including Google Chrome and Microsoft Edge. Now Assist isn't supported in Microsoft Internet Explorer.

Related ServiceNow applications and features

Contract Management Pro

Use Contract Management Pro to set up contract document templates, clauses, clause variations, and to initiate contract requests. It also supports Now Assist - driven contract analysis and metadata extraction, e-signatures, wet signatures, and external storage systems.

Now Assist

Improve the productivity and efficiency in your organization, deliver better self-service, recommend actions, provide answers, and empower your users to search more effectively.

Now Assist Admin console

Use the Now Assist Admin console to provide you with quick and effortless access to the important information that you need to set up, configure, and monitor Now Assist applications and features.

Now Assist skills

Use the Now Assist products to provide agentic AI skills to meet the needs of users in different workflows, including case or incident summarization, chat summarization, resolution notes generation, and code generation.

Legal Service Delivery release notes

The ServiceNow® Legal Service Delivery streamlines legal operations by automating request intake, managing legal matters and investigations, and enabling secure collaboration across departments. Legal Service Delivery was enhanced and updated in the Yokohama release.

Legal Hold Notification release notes

The ServiceNow® Legal Hold Notification application helps organizations manage their legal obligation to preserve relevant information when a legal hold is issued. It enables you to create legal hold notifications, add custodian details, and send notices to preserve legal hold-related documents. Legal Hold Notification is a new application in the Yokohama release.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Legal Hold Notification highlights for the Yokohama release

- Streamlined legal hold life cycle: Streamline the legal hold workflow by enabling you to create legal hold matters, assign custodians, issue notices, track acknowledgments, and ensure compliance throughout the process.
- Enhance custodian engagement by sending them legal hold notifications and reminders to ensure timely acknowledgment and accountability throughout the legal hold process.
- Reduce legal risk compliance with a controlled closure process. When the legal hold is officially closed, the Legal Hold Notification application stores detailed information about the preserved data.

See Legal Hold Notification for more information.

Important:
Legal Hold Notification is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Legal Hold Notification features

Legal hold matter management

Manage legal hold matters by submitting, updating, tracking, and closing them through a streamlined process that reduces effort and ensures organizational compliance.

Submitting legal hold matter

Submit a legal hold matter to initiate the data preservation process when a legal hold is issued.

Issuing legal hold notice

Issue a legal hold notice to custodians to initiate timely data preservation, ensure accountability, and reduce the risk of data loss.

Legal hold notice acknowledgement

Record custodian acknowledgments of legal hold notices to confirm their responsibility to preserve data and ensure accountability.

Assign new custodians

Assign newly identified custodians to existing legal hold matters to ensure comprehensive and up-to-date data preservation.

Acknowledge reminders

Send reminders to custodians who haven't acknowledged legal hold notices to ensure accountability in data preservation.

Closing legal hold matter

Close a legal hold matter once the hold is lifted to complete the data preservation life cycle.

Activation information

Install Legal Hold Notification by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Browser requirements

The Legal Hold Notification application works with the latest stable versions of popular web browsers. To find the list of supported browsers, see Browser support.

Related ServiceNow applications and features

Legal Service Delivery

Connect employees and legal teams through a unified platform with intelligent workflows, streamlining legal requests and managing complex matters efficiently via the Legal Counsel Center.

Legal Service Delivery Practice Applications

Legal practice applications in the Legal Service Delivery suite provide solutions for the specific needs of different legal practice areas.

Now Assist for Legal Service Delivery (LSD)

Summarize a legal request or legal matter to understand the context, refresh the summary, and post the summary to the work notes.

Contract Management Pro for Legal Service Delivery release notes

The ServiceNow Store Contract Management Pro for Legal Service Delivery application enables you to configure and automate the legal contract lifecycle by creating contract document templates, clauses, and clause variations. You can submit, review, finalize, and manage legal contract requests. The application also supports e-signatures and external storage systems. Contract Management Pro for Legal Service Delivery was enhanced and updated in the Yokohama release.

Contract Management Pro for Legal Service Delivery highlights for the Yokohama release

- Initiate and manage amendment requests for existing contracts.
- Record producer to initiate an amendment request from the Employee Center.

See Contract Management Pro for Legal Service Delivery for more information.

Important:
Contract Management Pro for Legal Service Delivery is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Contract amendments

Contract amendments enable you to formally change, add, or remove terms in an existing contract without replacing the entire agreement. The Amendment feature enhances contract lifecycle management by enabling you to initiate, track, and finalize amendments to existing contracts with audit trail.

A new field, **Request type**, has been added to clearly distinguish between contract and amendment requests.

Each amendment is linked to its parent contract, and you can easily view the amendment history directly from the contract request. Additionally, a record producer is available in the base system, allowing you to submit and monitor amendment requests efficiently.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The following related lists are now available within the contract repository record to provide amendment details:

- Contract Requests: Displays all contract and amendment requests associated with the contract.
- Amendment Field Changes: Shows a detailed log of all field changes made through amendments, enabling easy tracking of modifications over time.
- Contract Documents: Provides access to all documents related to the contract, including those generated or updated as part of amendment processes. The signed contract and its amendment documents are stored in a centralized repository under the parent contract for easy access and managing all related documents from a single location.

Activation information

submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Browser requirements

The Now Assist for Legal Service Delivery (LSD) application works with the latest stable versions of popular web browsers. To find the list of supported browsers, see Browser support.

Related ServiceNow applications and features

Legal Service Delivery

Use to connect employees and legal teams through a unified platform with intelligent workflows, streamlining legal requests and managing complex matters efficiently via the Legal Counsel Center.

Now Assist Admin console

Use the Now Assist Admin console to provide you with quick and easy access to the important information that you must set up, configure, and monitor Now Assist applications and features.

Now Assist

Use to improve productivity and efficiency in your organization, deliver better self-service, suggest actions, provide answers, and empower your users to search more effectively.

Now Assist skills

Use the Now Assist products to provide generative AI skills to meet the needs of users in different workflows. These AI skills include case or incident summarization, chat summarization, resolution notes generation, and code generation.

Employee Center release notes

The ServiceNow® Employee Center application is a multi-department dynamic portal for service delivery and employee engagement. Employee Center was enhanced and updated in the Yokohama release.

Employee Center highlights for the Yokohama release

- Resolve tasks created from submitted negative feedback with the Integrated experience and service feedback functionality.
- Enable employees to seek assistance through virtual or in-person appointments, or by joining walk-up queues for immediate support.
- Host live company events seamlessly in the employee portal with streamlined pre-event communications and a drag-and-drop editor for easy content creation.

See Employee Center for more information.

Important:
Employee Center is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Favoriting topic pages

Enable one-click access for employees to their most frequently accessed topics through topic pages added to the Favorites widget.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Single-click taxonomy sync

Sync taxonomy updates across Advanced Portal Navigation hierarchy levels with one click.

Guided Self-Service enhancements

- Admins can provide more detailed answers or guidance to a Guided Self-Service response by adding rich media, including images and videos and formatted text.
- Employees can review and edit their previous responses.
- Employees can search for and discover Guided Self-Service processes using AI-powered search.

Enhanced apps discovery and visibility preferences (Employee Center Pro)

Employees can search for authorized work applications using the AI-powered global search bar.

Appointment booking with HR representative (Employee Center Pro)

Employees can schedule in-person or virtual appointments to get help through a quick link in the Mega Menu or Quick links widget.

Rich Content Editor updates (Employee Center Pro)

Build more visually engaging content in microsites and news through additional formatting elements including bulleted and numbered lists, table or grid layouts, and accordion lists.

Portal shortcuts for content authoring (Employee Center Pro)

Content authors can now easily edit or create news articles and banners using shortcuts in the Content Experiences or News widgets. The system auto-generates publishing plans, streamlining content delivery to the selected widget and reducing the effort needed for configuration.

Integrated experience and service feedback (Employee Center Pro)

- Set a rating threshold that automatically generates a feedback task.
- Receive feedback tasks from negative feedback submitted through Now Mobile®.
- Receive automated email notifications when feedback tasks are completed.
- Track your feedback responses through the Feedback Analytics dashboard for portal, email, Virtual Agent, kiosks, and Now Mobile®.

Live company events hosting and communications framework (Employee Center Pro)

Live company events can now be hosted directly in the Employee Center Pro portal, with prebuilt configurations to streamline the pre-event communications and handle traffic surges. Content authors can easily create and share event content using the drag-and-drop Rich Content Editor, combined with mass-publishing capabilities similar to news articles.

Improved topic search ranking

The Topic content search widget now ranks topics based on user clicks, improving the relevance of search results and making it easier for employees to find their frequently used topics.

Quick start tests for Employee Center

After upgrades and deployments of new applications or integrations, run quick start tests to verify that Employee Center works as expected. If you customized Employee Center, copy the quick start tests and configure them for your customizations.

Activation information

Install the Employee Center plugin by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Related ServiceNow applications and features

Now Mobile app

Now Mobile® application enables users to manage and create tasks and access other company resources from their mobile device.

Install the Now Mobile® application from ServiceNow Store to install the default taxonomy for the employee content store application. This application auto-assigns the employee taxonomy to the Mobile Employee Service portal (MESP) record.

ServiceNow Add-in for Microsoft 365 release notes

The ServiceNow Add-in for Microsoft 365 provides an extensible framework to invoke multi-department service workflows in ServiceNow® Employee Center embedded in Microsoft 365 apps. ServiceNow Add-in for Microsoft 365 is a new application in the Yokohama release.

ServiceNow Add-in for Microsoft 365 highlights for the Yokohama release

- Access any catalog form in Employee Center and submit requests within Microsoft 365 apps.
- Load any ServiceNow form or navigate to a link in Employee Center.
- Map message or appointment fields in Microsoft Outlook to be auto-populated in ServiceNow catalogs or forms.
- Configure extension points to support messages and appointments in read and compose modes.

See ServiceNow Add-in for Microsoft 365 for more information.

Important:
ServiceNow Add-in for Microsoft 365 is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

ServiceNow Add-in for Microsoft 365 features

Create a manifest file

Create a manifest file with the configurations that you want to enable for the ServiceNow Add-in for Microsoft 365.

Map email fields to a catalog item

Map fields from an email or meeting invite to copy and auto-populate a catalog form.

Map email fields to a form

Map fields from an email or meeting invite to copy and auto-populate a ServiceNow form.

Configure single sign-on for ServiceNow Add-in for Microsoft 365

Enable employees to access the add-in from any Microsoft 365 app without having to sign in to Employee Center.

Activation information

Install ServiceNow Add-in for Microsoft 365 by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Additional requirements

You must have Microsoft Outlook 2019 or a later version to use ServiceNow Add-in for Microsoft 365.

Related ServiceNow applications and features

Employee Center

Use Employee Center embedded in Microsoft Outlook by loading any catalog form.

Journey designer release notes

The ServiceNow® Journey designer application enables managers and employees to create and track journeys. Journeys include transition plans, such as promotions, offboarding, onboarding, and role changes for employees. Journey designer was enhanced and updated in the Yokohama release.

Journey designer highlights for the Yokohama release

Yokohama Patch 3

- As a journey user, track your journey more effectively—view real-time journey states, follow your progress with an improved progress bar, and easily filter your journeys to find exactly what you need.
- As a manager, request the status of an employee's journey to quickly understand progress and take timely, informed action.
- Managers can instantly summarize the information that appears on the Journey detail page to acquire an overview of an employee's journey. The summary that is generated also reflects the blockers that are impeding the journey's progress and the steps required to resume the journey's progress.
- View banner messages on the Journey detail page when your journey status is marked as 'Overdue' due to others' pending tasks. The messages are tailored based on personas and help you understand the reason of the overdue task.
- Use the updated 'All Tasks' filter, which now matches the overall task count shown in the progress bar. Read the revised tooltip on the Progress Bar that states, 'Completed tasks include skipped tasks.' Check the information icon on the 'All Tasks' filter to understand that 'Some of the total tasks may not be visible to you in this Journey,' ensuring clarity on task visibility.

- As a manager, managing the journey of reportees using Journey designer you can draft a journey with custom plans and tasks with help from Now Assist. Provide an AI prompt so that Now Assist can help you build a journey that matches your career goals and aspirations.
- The following Lifecycle Events flows have been migrated to flows.
  - HR Activity Set Trigger Check
  - Lifecycle Event Notification
  - Lifecycle Event Case Approval

Related ServiceNow applications and features

Employee Center

The Employee Center portal is a standard multi-department dynamic portal for service delivery, and employee engagement. Employee Center mobile capabilities enable employees to stay connected regardless of when, where, and how they're working.

Now Assist for Workplace Service Delivery (WSD) Release Notes

The ServiceNow® Workplace Service Delivery application improves the employee workplace experience by automating workplace management and provides a single platform for all workplace services. Now Assist for Workplace Service Delivery (WSD) is enhanced and updated in the Yokohama release.

Now Assist for Workplace Service Delivery (WSD) release notes

The ServiceNow® Now Assist for Workplace Service Delivery (WSD) application enables agents to summarize case information, generate resolution notes, and summarize the chat information for an interaction. Your agents can understand the chat and case context and propose quicker resolutions to your customers. Now Assist for WSD was enhanced and updated in the Yokohama release.

Now Assist for Workplace Service Delivery (WSD) highlights for the Yokohama release

Yokohama Patch 11

- Review changes to Now Assist usage measurement.
- Some Now Assist skills, agents, and agentic workflows are on by default.
- Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications.

Yokohama Patch 6

- Help map admins configure the map during bulk updates to Indoor Mapping using the Automate map updates AI agentic workflow.
- Optimize a maintenance case based on the space utilization rate of the location where a maintenance case is created using the Optimize cleaning activities AI agentic workflow.

Yokohama Patch 3

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Manage temporary space closures AI agentic workflow for emergency meeting room maintenance. This team of AI agents block a space for maintenance and move any existing reservations from the blocked room to a new location.
- Help manage workplace reservations for updating existing event planning reservations. This team of AI agents retrieve the reservation from workplace case details, analyze the reservation, and update the workplace case notes.

See Now Assist for Workplace Service Delivery (WSD) for more information.

Important:
Now Assist for WSD is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Yokohama Patch 6

Optimize cleaning activities agentic workflow

Use the Optimize cleaning activities agentic workflow to manage cleaning and maintenance schedules of a maintenance case based on the space utilization rate of the location where a maintenance case is created.

Automate map updates agentic workflow

Use the Automate map updates AI agentic workflow to configure the map during bulk updates to Indoor Mapping.

The Map Admin Agent autonomously retrieves the sources for the CAD file and resumes the import task. If the correct source isn't found, the agent moves the task to the Waiting user input state.

Yokohama Patch 3

Manage temporary space closures agentic workflow

Use the Manage temporary space closures agentic workflow when an emergency maintenance request is created.

Available agentic workflows

Agentic workflows	Description
Manage temporary space closures	AI agentic workflow blocks a room for emergency maintenance and moves any existing reservation from the blocked location to another.

Help manage workplace reservations agentic workflow

Use the Help manage workplace reservations agentic workflow for updating a planned event reservation's time, date, or duration.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Available agentic workflows

Agentic workflows	Description
Help manage workplace reservations	AI agentic workflow autonomously reschedules events happening in the workplace and update an existing reservations date, time, or duration.

Changed in this release

Yokohama Patch 11

Changes to Now Assist usage measurement

Starting with Yokohama Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Some Now Assist skills are turned on by default

The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.

Configure ACLs for AI agents and agentic workflows

Configure the access control lists for who can discover and trigger AI agents and agentic workflows in their guided setups in AI Agent Studio. You can determine whether an AI agent or agentic workflow behaves as a dynamic user or as an AI user. You can also specify if an AI agent or agentic workflow can be available to all authenticated users or publicly available.

Activation information

Install Now Assist for Workplace Service Delivery (WSD) by requesting it from ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Related ServiceNow applications and features

Use this conversational interface to summarize a chat, a case, or resolution notes so that you can get the context of this information more quickly.

Talent Development release notes

The ServiceNow® Talent Development application enables managers and employees to identify and track career growth and development opportunities. It supports career growth through conversations, talking points, and ongoing development tracking. Talent Development was enhanced and updated in the Yokohama release.

Talent Development Core release notes

The ServiceNow® Talent Development Core application supports an end-to-end process for individuals and managers to take control of their career growth and development plans. Talent Development Core was enhanced and updated in the Yokohama release.

Talent Development Core highlights for the Yokohama release

Yokohama Patch 3

- Use the new Growth & Performance AI agents to streamline your employee growth discussions in Career Conversations.

- As an employee, Credly integration now enables you to display your digital credentials better demonstrating your skills in a tangible way.
- As an administrator, use Achievements and Credentials, to view various forms of digital credentials such as badges, awards, certifications.
- As an employee that meets the Talent Development user criteria, you can add custom opportunities with help from ServiceNow® Now Assist. Provide an AI prompt so that Now Assist can help you build a growth plan that matches your career goals and aspirations.

See Talent Development Core for more information.

Important:
Talent Development Core is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Yokohama patch 8

Create a growth conversation with the help of an agent in Now Assist

As a manager, use the growth conversations preparation AI agent to schedule and prepare for employee growth discussions. The agent provides a clear summary of employee activity and career journey, with data-driven talking points to make conversations more focused and impactful.

Note:
This feature is available when you have both Now Assist for HR Service Delivery (HRSD), which will install Now Assist for Talent and HR Talent AI Agent Collection

Yokohama patch 6

Credly integration

As an employee, Credly integration now empowers you to display your digital credentials better demonstrating your skills in a tangible way.

View user credentials

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

As an administrator, Achievements and Credentials now enables you to view user credentials and use achievement credential templates to sync credentials from third-party credential providers, for example: Credly

Import latest badges and related skills with the **Refresh credentials** option.

Credential badges are displayed in the skill activity insights.

Skills related to Credentials (badge template) are synced to the user profile. New skills identified are added to the harmonisation queue. Once imported, dynamic skills are associated with the respective user profile.

Note:
Credential Core has a soft dependency on Skills Foundation (8.0).

Create a growth plan with the help of Now Assist

As a Talent Development user, manage your career growth by creating a growth plan with the help of Now Assist. With Now Assist, you can provide details to craft a prompt that describes your career goals.

Note:
This feature is available when you have both Talent Development Core and Now Assist for HRSD installed.

UI changes

Credly Badges

As an employee, view your achievement badges on your employee profile. (Available across multiple applications within Talent Development Core).

Create a growth plan with the help of Now Assist

You can create growth plans with the help of Now Assist. Employees can select the **Build with Now Assist** button to access help from Now Assist.

Review skills

A new **Review skills** button has been added in Career Conversations that employees can use to rate their proficiency for each skill they've added.

Activation information

Install Talent Development Core by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Mentoring

The ServiceNow® Mentoring application is a platform that connects individuals seeking mentorship with experienced mentors. It creates a seamless experience for both mentees and mentors.

Learning

The Learning application enables you to discover, manage, and engage with career development content. It enables users to configure learning catalogs that contain course items from both internal and external learning systems.

Skills Foundation

The ServiceNow® Skills Foundation application is an AI-driven platform that you can use in your organization to develop a workforce that is based on skills.

Employee Center

ServiceNow Employee Center portal is a standard multi-department, dynamic portal for service delivery, and employee engagement.

Manager Hub

The ServiceNow® Manager Hub increases a manager's self-service and proactive engagement with their team by providing insights and recommended actions for what's most urgent and important to drive team success. It enables managers to grow as leaders through curated and personalized resources.

Mentoring release notes

The ServiceNow® Mentoring application offers improved networking opportunities and enables individuals to forge meaningful connections. Mentoring was enhanced and updated in the Yokohama release.

Mentoring highlights for the Yokohama release

- Auto-close mentoring relationship a certain number of days after the due-date. Configure the number of days followed by a grace period to allow any final interactions before auto-closure.
- Store a Mentoring snapshot of all overlapping preferences at the time of the relationship acceptance by the mentor. Derive skills tagged to Mentoring Relationships based on the snapshot.
- As a mentee, view Match Insights with a particular Mentor to understand how well they are matched before choosing the Mentor.
- As a mentee, share mentoring preferences and timeline information with your manager that help in the validation of your skills.

See Mentoring for more information.

Mentoring is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Snapshot of preferences

Store a Mentoring snapshot of all overlapping preferences at the time of relationship acceptance by the mentor.

Mentor match insights

Mentees and Mentors can view suggested matches based on their enrolled preferences or skills.

UI changes

Share mentor names and key dates with my manager check box

A new **Share mentor names and key dates with my manager** check box is introduced in the mentee preferences form. Selecting this check box shares information with your manager and helps them validate your skill levels.

Activation information

Mentoring can be installed with the activation of the Employee Connections plugin, which is part of Talent Development Core. For more information, see Talent Development Core.

Related ServiceNow applications and features

Skills Intelligence

The ServiceNow® Skills Foundation application is an accessible and dynamic artificial intelligence (AI) platform that effectively solves the challenge of managing and using skills-related data.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Skills Foundation highlights for the Yokohama release

- Skill Harmonization lets you import and combines skills from the external learning management system (LMS) to have one source for skills.
- Integrating Workday Learning skills and Workday Employee skills into the current import flow and relate them to the respective employees in the ServiceNow system.
- Support for dynamic skills import requests from Credly (OOTB source) and other external sources. The skills are verified with the skills library (exact or mapped match), and new skills are added to the queue for processing. The harmonized skills are then linked back to the source using metadata.

See Skills Foundation for more information.

Important:
Skills Foundation is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Bring in skills through Skills import

Import skill sets from the Workday Employee spoke using the existing import flow in the Skills Workspace. The imported sets of skills can either be the full list of skills from a given input or a subset.

Import skills data from the external systems with the new Integration option in the Skills import.

Automatically identify skills that are similar to the existing skills in the library (cmn_skills) and display them in the Existing matches section.

Import skills from any external source and harmonize them with the new **Custom import** option.

Activation information

Install Skills Foundation by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Additional requirements

The Skills Workspace plugin (sn_skills_int_ws) must be installed to access the workspace experience.

Related ServiceNow applications and features

Workday Learning Spoke

Use the Workday Learning spoke to import course related skills from the Workday Learning instance to your ServiceNow instance.

Workday HR Spoke

Use the Workday HR spoke to import all skills users have in their Workday profiles to your ServiceNow instance.

Talent Feedback release notes

The ServiceNow® Talent Feedback application allows managers to request feedback on employee skills from the employee's collaborators. Talent Feedback is a new application in the Yokohama release and is compatible with Xanadu and Washington DC releases.

Talent Feedback highlights for the Yokohama release

- Add multiple perspectives by gathering skill feedback from an employee's collaborators to gain a more well-rounded view of their capabilities.
- Enhance skill visibility by assessing skills when managers don't work closely with employees or have different domain expertise.
- Support skill validation by providing managers with qualitative inputs to validate employees' skills.
- Identify growth opportunities by uncovering skill gaps and learning needs.

See Talent Feedback for more information.

Important:
Talent Feedback is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Talent Feedback features

Request and view feedback

As a manager, request skill feedback for your team members on any skills from the employee's collaborators.

View feedback and skill activities

As a manager, view all the feedback received for a skill along with skill activities, during skill validation to get a full-fledged view of an employee's proficiency.

Request feedback

As an employee, receive feedback requests in your Employee Center To-dos, where you can provide feedback and skill rating for one or more skills in the request.

Decline a feedback request **Accept or deny feedback requests**

As an employee (feedback provider), you can choose to decline requests that are not relevant to you.

Activation information

Install Talent Feedback by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Additional requirements

The Skills Foundation plugin (sn_skills_int) must be installed to be able to request skill feedback on Talent Feedback.

Related ServiceNow applications and features

Skills Foundation

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Manager Hub

The ServiceNow® Manager Hub increases a manager's self-service and proactive engagement with their team by providing insights and recommended actions for what's most urgent and important to drive team success. It enables managers to grow as leaders through curated and personalized resources.

Opportunity Marketplace release notes

The ServiceNow® Opportunity Marketplace application transforms internal mobility, providing employees with a unified hub to explore career opportunities. Opportunity Marketplace was enhanced and updated in the Yokohama release.

Opportunity Marketplace highlights for the Yokohama release

- Opportunity owners can select multiple user criteria when creating opportunities.
- Import an opportunity from the ServiceNow Project Workspace. Importing a project from the Project Workspace is only available with the Project type opportunity.

See Opportunity Marketplace overview for more information.

Important:
Opportunity Marketplace is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Create project opportunities by importing project details from Project Workspace

Opportunity owners create gigs, projects, and volunteer opportunities. Opportunity details for Project type opportunities can be imported from projects in the ServiceNow Project Workspace. These opportunities are different from internal jobs. OPM enables you to manage any opportunities that you create and track applications. The ability to create opportunities is based on user criteria.

Select multiple user criteria groups

Access to opportunities is controlled by assigning user criteria groups to an opportunity. From the Opportunity details page of the Create an opportunity widget, you can select multiple user criteria to manage access to the opportunity.

UI changes

A new step is added in the task for creating opportunities.

You must select how you want to get started with creating an opportunity.

- **Create using an existing project** enables opportunity owners with the correct assigned roles to import details from Project Workspace projects.

  Note:
  This option is only visible when both Project Workspace and Opportunity Marketplace are installed.

- **Create on your own** enables Opportunity Marketplace opportunity owners to create opportunities of type **Gig**, **Project**, or **Volunteer**.

Enable selection of multiple user goups to manage which groups of users can view an opportunity.

Select multiple user criteria groups from the **Who can view this opportunity?** field on the Opportunity details widget page.

Changed in this release

Import Project Workspace project information to create an opportunity

Opportunity Marketplace opportunity owners can create Project Opportunity types by importing projects from the ServiceNow® Project Workspace.

Note:
Creating a project opportunity type by importing a project file is only available to users with both ServiceNow Project Workspace and Opportunity Marketplace installed.

An opportunity owner must have the following roles assigned to them to create a Project type opportunity by importing project details from Project Workspace.

reource_user **Resource management process**

If you're assigned the resource_user role, you can be a resource requester.

sn_ppm_read

The sn_ppm_read role provides read-only access to the Portfolio, Program, and Timecard dashboards along with the Resources report to the assigned users.

Select multiple user criteria groups

Opportunity owners can select multiple user criteria groups from the **Who can views this opportunity?** field on the Opportunity details page. For more information, see Create opportunities in Opportunity Marketplace.

Activation information

Install Opportunity Marketplace by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Related ServiceNow applications and features

Talent Development Core

Talent Development Core helps employees identify growth and development areas, create a plan, and track the success of the plan.

Career Conversations

Career Conversations support an end-to-end process for individuals and managers to create and manage career growth conversations.

Opportunity Marketplace

Opportunity Marketplace enhances career mobility. It provides employees an intuitive experience to explore career opportunities. Customizable match preferences are seamlessly integrated with your Applicant Tracking System (ATS) to enhance employee engagement with transparent and efficient career development.

Leader Hub

Leader Hub empowers organizational leaders to understand the strengths of their teams, identify gaps in skills, and facilitate changes that are simultaneously conducive to their workforce and the achievement of desired business outcomes.

Employee Goals

The ServiceNow® Employee Goals application lets employees view and track their career goals from the Employee Center. This application is a tool that enables employees to stay focused and aligned with your company's strategic objectives, resulting in improved overall organizational performance.

Mentoring

The ServiceNow® Mentoring application is a platform that connects individuals seeking mentorship with experienced mentors. It creates a seamless experience for both mentees and mentors.

Learning

The Learning application enables you to discover, manage, and engage with career development content. It enables users to configure learning catalogs that contain course items from both internal and external learning systems.

Career Conversations

Supports an end-to-end process for individuals and managers to create and manage career growth conversations.

Skills Foundation

The ServiceNow® Skills Foundation application is an AI-driven platform that you can use in your organization to develop a workforce that is based on skills.

Employee Center

The ServiceNow Employee Center portal is a standard multi-department, dynamic portal for service delivery and employee engagement.

Manager Hub

The ServiceNow® Manager Hub increases managers self-service and proactive engagement with their team by providing insights and recommended actions for what's most urgent and important to drive team success. It enables managers to grow as leaders through curated and personalized resources.

Enterprise Architecture release notes

Enterprise Architecture (formerly Application Portfolio Management) has new and updated features in the Yokohama release.

Enterprise Architecture (formerly Application Portfolio Management) Release Notes

The ServiceNow® Enterprise Architecture application unites strategic and operational teams, enabling organizations to achieve their business objectives.Enterprise Architecture was enhanced and updated in the Yokohama release.

Enterprise Architecture highlights for the Yokohama release

Yokohama Patch 6

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Select a fiscal period on the Application Rationalization pages using the new fiscal period filter option. The fiscal period filter enables you to view application rationalization data for the selected fiscal period.
- Evaluate the technical debt score for business applications using the Technology Reference Model (TRM) technical debt indicator. This helps you to identify high-risk business applications and enables you to prioritize modernization and rationalization.
- Generate business process modeling diagrams and model the future state of the business processes using Enterprise Modeling and Visualization.
- Associate business capabilities to a business application from the business application related list.
- View the past due certification tasks for your business applications from the Application Portfolio tab of the Insights section.
- Generate scores for indicators and scoring profiles in the Enterprise Architecture Workspace.
- Read-only access to the#Enterprise Architecture Workspace is added to the business stakeholder role (sn_apm.apm_read).

Yokohama General Availability

- Generate business process modeling diagrams and model the future state of the business processes using Enterprise Modeling and Visualization.
- Associate business capabilities to a business application from the business application related list.
- View the past due certification tasks for your business applications from the Application Portfolio tab of the Insights section.
- Generate scores for indicators and scoring profiles in the Enterprise Architecture Workspace.
- Read-only access to the#Enterprise Architecture Workspace is added to the business stakeholder role (sn_apm.apm_read).

Important:
Enterprise Architecture is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Yokohama Patch 6 Application rationalization page enhancements

- Apply the fiscal period filter to filter and view business applications for a specific fiscal period.
- Apply the application rationalization filters to filter and view specific business applications on the bubble chart or list view page. An indicator is displayed on top of the filter icon to show the number of filters currently applied.
- View the business application technical debt indicator score on the application rationalization list view page. On the application rationalization bubble chart view page, you can use the TRM technical debt indicator to form the bubble size based on the indicator score.
- Export the list view of application rationalization data to Excel or CSV file format. You can use the data to obtain insights, share with stakeholders, and prepare for analysis.
- Business applications with Retired or End of Life lifecycle stage aren't displayed on the Application Rationalization bubble chart page.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Enterprise Modeling and Visualization in the EA Workspace

- Create diagrams for business process maps using the specific shapes related to the business processes.
- Search shapes within the shape libraries.
- Reorganize the order of shapes in a shape library according to your requirement.
- Show or hide shapes in different diagram types.
- General shapes can be rotated.
- Enhanced the overall appearance of the diagram by hiding the connector ports and displaying them only when hovering over the shapes.
- Open the Enterprise Modeling and Visualization diagrams from the following sections:
  - From the Architectural Artifacts related list of a business application, business capability, or a business process record.
  - From the My approvals tab of the Needs Attention section on the EA Workspace home page.
  - From the Architectural Artifacts section of the Portfolio page.
- Added support for all ArchiMate shapes.
- Model Value stream diagrams.
- Create diagram actions for newly added custom shapes that can be used in Enterprise Modeling and Visualization to create diagrams.
- Add custom shapes to use in the Enterprise Modeling and Visualization.
- Create your own modeling diagrams using the Blank diagram option.

Business application related list enhancements

In the **Architectural Artifacts** tab of the business application related list, selecting the **New** button displays a modal to create an architectural artifact.

Architectural Decision Records (ADR) enhancements

- Create artifact type Architectural Decision Records (ADR) in one step.
- Create and add multiple pages to the Architectural Decision Records (ADR) from the Artifact content tab.
- In the Architectural Decision Records (ADR) page, you can tag the following:
  - Tag a user
  - Tag a record
    - Architectural artifact
    - Business application
    - Business capability
    - Business process
    - Digital integration (requires the digital integration plugin)
    - Digital interface (requires the digital integration plugin)
    - Information object

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

  - TRM product (requires the TRM plugin)
  - Value stream (requires the value stream plugin)
- Request approval workflow for Architectural Decision Records (ADR).
- The version drop-down list is added to the Architectural Decision Records (ADR) page header. Select a version from the drop-down list to open the specific ADR version.

Data Certification changes

In the Enterprise Architecture Workspace, the certifications data is saved to and fetched from the CMDB Data Management Task Control (cmdb_data_management_task) table.

If your certification data is still fetched from the Certification Schedules (cert_schedule) table, you might consider migrating your certification policies to the CMDB Data Management Task Control (cmdb_data_management_task) table. For more information, see Convert legacy certification schedules into Data Manager Certification policies and Publish a draft Data Manager policy in CMDB Workspace

Regenerate indicator scores in Enterprise Architecture Workspace

Generate a score for application and capability indicators for a particular period. Also, generate scores for an application scoring profile and capability scoring profile, to calculate scores for all indicators attached to that particular scoring profile.

Business stakeholder role for Enterprise Architecture Workspace

Read-only access to the#Enterprise Architecture Workspace is added to the business stakeholder role (sn_apm.apm_read).

TRM technical debt form

The *`TPM Discovered Technologies and Lifecycles`* scheduled job fetches the server details for the TRM products.

Technology portfolio management (TPM) enhancements

- Added a restart button on the TPM Logs page to restart the Populate TPM Discovered Technologies and Lifecycles scheduled job, in case the job is stuck and doesn't refresh the log data for more than an hour. For more information, see View TPM logs and Restart Populate TPM Discovered Technologies and Lifecycles scheduled job.

UI changes

Application Rationalization page enhancements

- Added the **Score for fiscal period** filter drop-down.
- Added a filter button.
- Removed the previously available filter drop-downs.
- Added the export icon.
- Added the technical debt column on the list view page.
- Added the technical debt indicator in the bubble size list under the settings of the bubble chart page.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

View business capabilities associated with a business application

Added the **Business Capabilities** tab in the business application related list. **Add** and **Remove** buttons are added to associate or dissociate a business capability with a business application.

Business application related list enhancements

The business application related list is reorganized and the available tabs are:

- Business Capabilities
- Information Objects
- Architectural Artifacts
- Digital Interfaces
- Digital Integrations
- Application Model Lifecycle
- CI Scores
- Architecture Reviews

Insights section enhancements

A new card "Past due certification tasks for business applications" is added in the **Application Portfolio** tab of the Insights section. The following cards are removed the **Application Portfolio** tab of the Insights section:

- Open quarterly certifications for business applications
- Open on demand certifications for business applications

Enterprise Modeling and Visualization enhancements

- In the Diagrams page, added an option to create a business process map.
- Added a field in the shape library element form to show or hide the shape for different diagram types.
- The following categories are added for the ArchiMate shapes:
  - ArchiMate- Application Layer
  - ArchiMate- Business Layer
  - ArchiMate- Technology Layer
  - ArchiMate- Relationships
- Enhanced the Enterprise Architecture shape library with new shapes for Value Stream and Value Stream Stage.

Architectural Artifacts enhancements

- In the Architectural Artifacts list of the Portfolio page, selecting the **New** button displays a modal to create an architectural artifact.
- In the architectural artifact details page, the **Upload Version** button is renamed to **New version** version.
- In the architectural artifact related list, the following tabs are removed:
  - Role permissions
  - User Criteria permissions

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

  - User permissions
  - Group permissions
- Added the **Share** button in the architectural artifacts **Details** tab in the Portfolio page to share the architectural artifacts with users and groups.
- In the architectural artifact related list, renamed the Architectural Artifact Versions tab to Artifact versions.
- In the **Artifact versions** tab, the New button is removed.
- In the Portfolio page, the Architectural Artifact Versions section is removed from the Information Portfolio. Added the **New version** button at the artifact version details page.
- In the architectural artifact **Details** tab, the Access Setting section is removed.
- In the architectural artifact **Details** tab, the **Download artifact** button is removed. Added the **Download** button on the artifact version page.

Configure certification policies

In the Setup page, the Certification Schedules section is renamed to Certification Policies.

Regenerate indicator scores in Enterprise Architecture Workspace

The following buttons are added to generate scores for indicators and scoring profiles:

- The **Regenerate indicator score** button is added in the Indicator record.
- The **Generate scores** button is added in the Scoring Profile record.

Create diagram action

An option to open diagram actions list for the Enterprise Modeling and Visualization in the Setup page.

Create a blank diagram using modeling in the EA Workspace

In the Enterprise Modeling and Visualization, an option to create blank diagrams is added.

Restart Populate TPM Discovered Technologies and Lifecycles scheduled job

The **Restart** button added on the TPM Logs page to restart the Populate TPM Discovered Technologies and Lifecycles scheduled job.

TRM technical debt form

The technical debts table [sn_apm_trm_standards_technical_debt] displays the server details for the TRM products along with the associated business applications details, and the reason for the technical debt.

Portfolio list view

New modules and features have been added in the Portfolio section.

Add additional category details for TRM products

The **Other Category** field is added in the Request TRM Product form and the Create TRM product form. Using this data, you can filter for TRM products using additional categories details.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Activation information

Enterprise Architecture (formerly Application Portfolio Management) is available with activation of the Enterprise Architecture (com.snc.apm), which requires a separate subscription. For details, see Enterprise Architecture.

Now Assist for Enterprise Architecture (EA) release notes

The ServiceNow® Now Assist for Enterprise Architecture (EA) application introduces generative AI skills into the Enterprise Architecture Workspace. You can summarize Architectural Decision Records (ADR) in the Enterprise Architecture Workspace. Now Assist for Enterprise Architecture (EA) is a new application in the Yokohama release.

Now Assist for Enterprise Architecture (EA) highlights for the Yokohama release

Yokohama Patch 11

- Review changes to Now Assist usage measurement.
- Some Now Assist skills, agents, and agentic workflows are on by default.
- Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications.

Yokohama Patch 1: Generate and summarize Enterprise Modeling and Visualization diagrams for business applications hierarchy, using the Enterprise architecture diagrams AI agent.

Yokohama Early Availability

- Generate a summary of Architectural Decision Records (ADR) in the Enterprise Architecture Workspace.
- Request a business application or a digital integration using Now Assist in ServiceNow® Virtual Agent.

See Now Assist for Enterprise Architecture (EA) for more information.

Important:
Now Assist for Enterprise Architecture (EA) is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Now Assist for Enterprise Architecture (EA) features

Yokohama Patch 1 **Using Enterprise Architecture Diagramming AI agent**

Use the Enterprise architecture diagrams AI agent to create Enterprise Modeling and Visualization diagrams for business applications hierarchy and summarize them.

Yokohama Early Availability **Now Assist for Enterprise Architecture (EA)**

- Use the ServiceNow® Now Assist for Enterprise Architecture (EA) application to summarize Architectural Decision Records (ADR) in the Enterprise Architecture Workspace. Use the Architectural Decision Records (ADR) to explain your infrastructure. ADR is a type of artifact that helps you to understand the background of a specific architectural decision.
- Register a business application and a digital integration with an interactive generative AI experience using Now Assist in Virtual Agent. For more information, see Now Assist for Enterprise Architecture (EA).

UI changes

Yokohama Patch 3 **Agentic workflow name update**

Renamed the Enterprise Architecture Diagrammer AI agent to Enterprise architecture diagrams AI agent.

UI name updates

- In the All menu, renamed the **Features** option under **Now Assist Admin** to **Skills**.
- On the Now Assist Admin page, renamed the **Now Assist Features** tab to **Now Assist Skills**.

Changed in this release

Yokohama Patch 11

Changes to Now Assist usage measurement

Starting with Yokohama Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Some Now Assist skills are turned on by default

The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.

Configure ACLs for AI agents and agentic workflows

Configure the access control lists for who can discover and trigger AI agents and agentic workflows in their guided setups in AI Agent Studio. You can determine whether an AI agent or agentic workflow behaves as a dynamic user or as an AI user. You can also specify if an AI agent or agentic workflow can be available to all authenticated users or publicly available.

Activation information

Now Assist features are available with activation of the Now Assist for Enterprise Architecture (EA) plugin. The Now Assist for Enterprise Architecture (EA) application requires an Enterprise Architecture Pro plus license. For more information, see Install Now Assist plugins.

Related ServiceNow applications and features

Now Assist

Help improve productivity and efficiency in your organization, deliver better self-service, recommend actions, provide answers, and empower your users to search more effectively.

Now Assist Admin console

The Now Assist Admin console provides you with quick and effortless access to the important information that you must set up, configure, and monitor in Now Assist applications and features.

Now Assist panel

Use the Now Assist panel to interact with and get assistance from generative AI.

Now Assist skills

Now Assist products provide generative AI skills that are tailored to meet the needs of users in different workflows, including content summarization in docs.

Operational Sustainability Management release notes

The ServiceNow® ESG Management application helps you to manage all your environmental, social, and governance (ESG) commitments. ESG Management was enhanced and updated in the Yokohama release.

ESG Management highlights for the Yokohama release

- Model and prepare for potential outcomes with what-if scenario analysis tools that can help with your strategic planning.
- Review the calculated metric definition data by using a formula tree so that you can access detailed information on the operands, metric definitions, metrics, and emission factors.
- Streamline ESG metric tracking and enable trend analysis with enhanced Metric data tasks that support choice and HTML response formats and table improvements.
- Import your historical metric data by using an import template to update and manage metric data within your organization.
- Assign data owners dynamically for metrics that are based on configurations.

See Operational Sustainability Management (formerly Environmental, Social, and Governance) for more information.

Important:
ESG Management is available in ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Forecast planning and analysis

Model and prepare for potential outcomes by using forecast planning analysis. With these tools, you can create, save, or visualize multiple scenarios.

Formula tree

Explore the calculated metric definitions by reviewing a structured and visual representation of the entire calculation chain. By using a formula tree, you can access the calculation details and view how the different metrics and emission factors are interconnected.

Historical metric data

Import the historical metric data by using a pre-defined import template with instructions. With this process, you can update and manage the metric data within your organization and help to ensure that all data complies with the established business rules.

Dynamic filtering for Microsoft 365 for ServiceNow Reporting

Filter the fields dynamically and set up dependencies by using related fields. In the Microsoft 365 add-in, you can configure fields so that cascading filters are supported dynamically. You can select a value in a field and have the related fields

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

automatically update to show the relevant options. This process helps you to streamline data entry and improve efficiency.

UI changes

Forecast planning and analysis

The forecast planning analysis module is now included in the List view of the Operational Sustainability Workspace.

Changed in this release

Result types

If you have the ESG manager [sn_esg.metric_manager] role, you can now configure either text, choice, or HTML format options for responses to qualitative metric data tasks that are related to manual metric definitions, including both initial and overridden responses. These options help you achieve more precision and detail in your data collection process.

Metric data table filters and side panel enhancements

If you have the ESG data owner [sn_esg.data_owner] role, you can now apply filters by using the filter menu and reject or approve tasks from the metric data table side panel. Data owners can now multi-submit and assign approvers to multi-approve or reject tasks, with the option to use choice and HTML response formats.

Data owner assignment types

If you have the ESG Manager [sn_esg.metric_manager] role, you can now configure the Data Owner Assignment type to be either simple or advanced for manual metric definitions. When you select the Simple option, the system assigns the specified Data Owner or Data Owner Group to the Metric Data Task. If you choose the Advanced assignment option, which is available with the GRC: Approver Configurator application, you can set custom configuration conditions, tables, or data owners to dynamically assign data owners.

Table added to the GRC: Metrics application

The following tables were added to the GRC: Metrics application:

- sn_grc_metric_import_job
- sn_grc_metric_data_import
- sn_grc_metric_st_import_log
- sn_grc_metric_st_transform_history
- sn_grc_metric_import_template

Table added to the ESG content accelerator application

The sn_esg_content_issb_citation table was added to the ESG content accelerator application.

Table added to the Forecast planning analysis application

The following tables were added to the Forecast planning analysis application:

- sn_grc_forecast_analysis
- sn_grc_forecast_context
- sn_grc_forecast_data
- sn_grc_forecast_parameter_data

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Database view added to the Scope 3 emissions management application

The sn_esg_scope3_asset_emissions database view was added to the Scope 3 emissions management application.

Changes made to the sn_grc_metric_data_task table

In the sn_grc_metric_data_task table, the job_submitted, job_errors, choice, overridden_choice, html, and overridden_html columns were added. The type="string" attribute was added to the state column.

Changes made to the sn_grc_metric_metric table

In the sn_grc_metric_metric table, the period_date, data_owner_type, data_owner, and data_owner_group columns were added. The type="string" attribute was added to the domain_area column.

Changes made to the sn_grc_metric_parent_data table

In the sn_grc_metric_parent_data table, the formula_operands columns, and html columns were added.

Changes made to the sn_grc_metric_base_definiton table

In the sn_grc_metric_base_definiton table, the formula_tree, result_type, choice_table, choice_field, choice_condition, data_owner_assignment_type, source columns were added. The type="string" attribute was added to the frequency column.

Changes made to the sn_grc_metric_data_by_entity table

In the sn_grc_metric_data_by_entity table, the html column was added.

Attributes modified in the sn_grc_metric_collector_data table

In the sn_grc_metric_collector_data table, the display="true" attribute was removed from the collector_definition column.

Attributes modified in the sn_grc_metric_data_process_queue table

In the sn_grc_metric_data_process_queue table, the reference_cascade_rule="delete" attribute was added to the metric_definition column.

Attributes modified in the sn_grc_metric_definition table

In the sn_grc_metric_definition table, the type="string" attribute was added to the type, method_type columns.

Changes made to the sn_esg_msoff_intg_o365_reporting_configuration_filter table

In the sn_esg_msoff_intg_o365_reporting_configuration_filter table, the related_fields column was added. The display="true" attribute was added to the field_name column in the sn_esg_msoff_intg_o365_reporting_configuration_filter table.

System properties are added to the GRC: Metrics application

The following properties were added to the GRC: Metrics application:

- com.glide.event_manager.grc_metrics_queue.even.load.distribution.enabled
- com.glide.event_manager.grc_metrics_queue.claim_limit

Deprecations

Business rules were deactivated and moved to common script include methods as part of GRC Metrics. For more information, see the KB article: KB1734660.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Activation information

Install ESG Management by requesting it from ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Field Service Management release notes

The ServiceNow® Field Service Management application automates processes, enhances communication, and transforms field service delivery with AI-powered workflows to resolve customer needs efficiently, transparently, and proactively. Field Service Management was enhanced and updated in the Yokohama release.

Field Service Management highlights for the Yokohama release

- Define configurable rules that you can use to derive recommendation scores and optimize your appointment booking slots.
- Create advanced dependency relationships among tasks to enhance scheduling accuracy.
- Optimize your task assignments by using dependencies that align with the overall objectives and constraints of your resource allocation.
- Streamline your capacity and resource management by using enhanced visualization in the Capacity Console.
- Calculate the work duration for a work order task more accurately by using the Agent Efficiency feature.

See Field Service Management for more information.

Important information for upgrading Field Service Management to Yokohama

- Upgrading to Yokohama may extend the upgrade maintenance time of a customer due to Appointment Booking. The Appointment Booking configuration tables get extended to the Application File [sys_metadata] table as a part of the upgrade. After upgrading to Yokohama, re-parenting occurs automatically and the duration of the re-parenting depends on the number of records in Application File [sys_metadata] table.
- Effective March 1, 2025, Google has designated the Places API, Directions API, and Distance Matrix API as Legacy services. The newer versions of these services are Places API (New) and Routes API. You can't enable or generate new API keys for these legacy services. However, you can continue using these services with the existing API keys. If you need to create a new Google API key after March 1, 2025, you must enable the new APIs from Google Console and upgrade to Yokohama Patch 3 version or higher to ensure compatibility.

New in the Yokohama release

Dispatcher Workspace

Use Dispatcher Workspace to perform the following tasks:

- View the Field Service agent's real-time location and completed daily route.
- Use a condition builder to filter relevant resources. You can also extend existing tables to filter custom fields.
- Use advanced filters with hierarchical structures to filter territories.
- View task scheduling conflict messages in the Dispatcher Workspace to improve visibility and facilitate resolutions for dispatchers.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field Service Agent Efficiency

Use Agent Efficiency to perform the following tasks:

- Define the agent efficiency criteria to calculate the Agent Efficiency for a task.
- Calculate the estimated work duration for a work order task more accurately based on the Agent Efficiency feature.
- Enhance manual task assignment and dynamic scheduling for a task by leveraging Agent Efficiency.
- Optimize Intelligent Task Recommendation by incorporating Agent Efficiency values so that dispatchers can assign tasks more effectively.

Appointment Booking

Use Appointment Booking to perform the following tasks:

- Replicate the application and service-based configurations across instances.
- Grade the appointment booking slots by recommended or available slots to ensure optimal scheduling.
- Use the seismic appointment booking calendar across all user interfaces to ensure a consistent and seamless scheduling experience.

Task dependencies

Use task dependencies to perform the following tasks:

- Enable administrators and dispatchers to define advanced task dependencies, such as start together or start after start, so that you can ensure that tasks are executed in the right order.
- Enable dispatchers to create task dependencies within or between work orders.

Schedule Optimization

Use Schedule Optimization to perform the following tasks:

- Enable dispatchers to optimize resource assignments that are based on the dependency relationship between tasks.
- Generate more accurate scheduling and assist your field technicians in navigating traffic conditions more effectively by configuring Schedule Optimization. You can consider time-of-day and set up intraday scheduling to leverage real-time traffic data when certain conditions are met.
- Use new optimization features, such as **Maximize consecutive collocated task assignments** and **Minimize task start times**, when you're creating a policy.
- Provide greater control over task distribution by enabling a new drip feed property, **Number of tasks**, to enhance your scheduling capabilities.
- Expect more reliable and efficient task scheduling due to resolved conflicts between the various scheduling engines.
- View the task scheduling conflict messages on the task, user, and group records when optimization is in progress.

Capacity and Reservations Management

Use Capacity and Reservations Management to perform the following tasks:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Leverage the capacity console to efficiently manage resource allocation across territories and demand channels so that you can enable your teams to analyze field technician performance and make data-driven decisions.
- Set flexible reservation rules to define the minimum and maximum resource allocations so that you can enable dynamic adjustments to capacity based on shifting demands.
- Create recurring capacity assignments for specific days of the week for long-term capacity planning and management.
- Enable multiple overrides for the same date range to address demand fluctuations so that you can manage exceptions with more precision and flexibility.

Scheduling Health dashboard

Use the Scheduling Health dashboard to view these additional Schedule Optimization metrics:

- Tasks without skills
- Technicians without skills
- Tasks without parts
- Technicians without parts

Business location-based work management

Enable your staff across various industries to efficiently manage work orders. Your employees can resolve tasks that are specific to their assigned location, while your managers can oversee the tasks across their assigned locations. You can reinforce your security by ensuring that your staff can only access the work orders that are related to their designated locations.

Managing agents and tasks from Workforce

Use Workforce to perform the following tasks:

- Enable additional users to use Workforce by adding additional managers to assignment groups.
- Enable managers to view the event management tab when Workforce Optimization for Field Service is active.

Smart Assessment for Field Service Questionnaire

Use Smart Assessment templates to perform the following tasks:

- Migrate from a survey-based questionnaire to Smart Assessment based questionnaires.
- Create work order questionnaires.
- Set up detailed instructions that include rich text and images.
- Configure conditional questions based on responses of all other types of questions and across sections.
- Allow additional comments or attachments on a question's response.
- Improve the work order questionnaire in the Mobile Agent® application by implementing a paginated layout, providing instructions with questions, and offering in-line choices.

Planned Work Management

Seamlessly migrate monthly and annual plans from Planned Maintenance to Planned Work Management.

UI changes

Field Service Agent Efficiency

- Configure and define the Agent Efficiency criteria.
- Add an Agent Efficiency value for an agent.
- The **Planned work duration** and **Agent efficiency criteria** fields were added.

Appointment Booking

An optional seismic appointment booking Calendar with slot recommendation is available for Appointment Booking.

Task Dependency

- Upstream task is renamed as Predecessor task.
- Downstream task is renamed as Successor task.
- New fields were added to define advanced task dependencies.

Work order questionnaire

- You have in-line choices for a question when completing a work order questionnaire through the Now Mobile Agent application.
- You can add additional information to a question when completing a work order questionnaire through the Now Mobile Agent application.

Smart Assessment for Field Service Questionnaire

Added a toggle to enable Smart Assessments for a work order questionnaire.

Changed in this release

SLAs in Dispatcher Workspace

The SLAs breached query on the Dispatcher Dashboard in Dispatcher Workspace has been updated to look at the SLAs that are associated with the work order tasks only instead of the work orders and work order tasks. The SLA breached counter on the task cards is also static, instead of real time. For more information on changing the SLA timer on task cards, see the Enable the **SLA timer on work order task cards** property on Configure settings for Dispatcher Workspace.

Assignment groups and territories in Dispatcher Workspace

You must save the default assignment groups or territories in Dispatcher Workspace to load when you open Dispatcher Workspace. If you don't have the defaults saved, then you must select the assignment groups or territories to appear every time you open Dispatcher Workspace. This change is made to improve the performance of Dispatcher Workspace. For more information on saving the default assignment groups, see the Groups section on the **General** tab on Enable Dispatcher Workspace settings. For information on saving default territories, see Select Territories in Dispatcher Workspace. Administrators can disable this by setting the *sn_fsm_disp_wrkspc.enableEmptyState* system property to false.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Work order questionnaire

Availability of inline choices for a question and the ability to add additional information for a question when completing a work order questionnaire through the Now Mobile Agent application.

Role to access opportunities

The Opportunity Writer sn_opty_mgmt_core.opportunity_writer role has been replaced with the Opportunity Contributor sn_opty_mgmt_core.opportunity_contributor role. Field service technicians can use the new Opportunity Contributor[sn_opty_mgmt_core.opportunity_contributor role to create and view opportunities.

Google Maps APIs for Field Service Capabilities

Upgrade to the new Places API (new) and Routes API for Field Service Capabilities.

Effective March 1, 2025, Google has designated the Places API, Directions API, and Distance Matrix API as Legacy services. The newer versions of these services are Places API (New) and Routes API.

You can't enable or generate new API keys for these legacy services. However, you can continue using these services with the existing API keys. Enable the new APIs from Google Console to continue using the API services without any issues.

If you create a new Google API key after March 1, 2025, enable the new APIs from Google Console to use these services with the new API keys.

For more information see, KB2111488, KB2112054, and Changes to Google Maps Platform automatic volume discounts, monthly credit, and services transitioning to Legacy status.

Removed in this release

The approval for new requests workflow was removed from the Field Service Management Business Process configuration. Existing customers that use this workflow are unaffected. New customers can use ServiceNow® Workflow Studio to build the approval for the new requests workflow. For more information on Workflow Studio, see Flow Designer.

Deprecations

- Starting with the Yokohama release, Approval Workflow for FSM is being prepared for future deprecation. It will be hidden and no longer activated on new instances but will continue to be supported. For details, see the Deprecation Process [KB0867184] article in the Now Support Knowledge Base.
- Starting with the Zurich release, the **Enable capacity** constraint for Schedule Optimization is being prepared for future deprecation. It will be no longer be applied for Schedule Optimization. For details, see the Deprecation Process [KB0867184] article in the Now Support Knowledge Base.

Activation information

Field Service Management is a ServiceNow AI Platform feature that is active by default.

Leverage advanced features of Appointment Booking, such as the appointment slot recommendation, by activating the Advanced Appointment Booking (com.snc.advanced_appointment_booking) plugin.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Define the task dependencies for a work order task and schedule tasks based on the dependency by activating the Field Service Task Dependencies (com.snc.fsm_task_dependency) plugin.

Integrate agent efficiency metrics with Field Service Management to define and use the efficiency of agents to estimate the work duration for tasks by activating the FSM Agent Efficiency (com.snc.fsm_agent_efficiency) plugin.

Related ServiceNow applications and features

Financial Management

Field Service Management integrates with the ServiceNow® Financial Management application to allocate, track, and report expenses in your organization.

Note:
The Financial Management for CSM plugin (com.snc.financial_management_for_csm) is no longer available for direct activation. You can request this plugin through Now Support Customer Service.

Customer Service Management

The Customer Service with Field Service Management plugin (com.snc.csm_fsm_integration) integrates the Field Service Management and ServiceNow® Customer Service Management (CSM) applications to enable you to view account and contact information on work orders and work order tasks in the Field Service Management application.

Service Portfolio Management

Field Service Management integrates with the ServiceNow® Service Portfolio Management application to enable you to create work orders directly from project tasks.

Workspace

ServiceNow® Workspace is a graphical user interface that puts multiple tools on one page, including the tools that agents use to find, research, and resolve issues. CSM Configurable Workspace and CSM Agent Workspace are customer service-specific implementations that provide tier 1 agents with the tools needed to respond to customers and to resolve cases.

Now Assist for Field Service Management (FSM) release notes

The ServiceNow® Now Assist for FSM application brings generative AI to Field Service Management. Now Assist for FSM was enhanced and updated in the Yokohama release.

Now Assist for FSM highlights for the Yokohama release

Yokohama Patch 11

- Review changes to Now Assist usage measurement.
- Some Now Assist skills, agents, and agentic workflows are on by default.
- Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications.

Yokohama Patch 6

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Use Google Gemini and Anthropic Claude on AWS as AI model providers for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI.
- Clone and customize skills.
- Edit prompts using the Now Assist skill kit.

Yokohama Patch 3

- Enable Field Service technicians to access a virtual assistant from the mobile application with Now Assist in Virtual Agent.
- Use Now Assist in Virtual Agent for mobile to summarize work order tasks.
- Explore conversational search in the Now Assist panel with results from Knowledge Base articles.

See Now Assist for Field Service Management (FSM) for more information.

Important:
Now Assist for Field Service Management (FSM) is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Yokohama Patch 6

New third-party AI model provider options available for all Now Assist applications

Google Gemini and AWS Claude are available for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI.

Custom template and custom prompt support

As an admin, you can clone the KB generation skill and customize the input fields. You can also clone the Work order task summarization skill, then access the skill in the Now Assist skill kit, and update the prompts.

Yokohama Patch 3

Create an Assistant for Field Service Management to do the following:

- Initiate the Now Assist panel from a work order task record or the **My tasks** tab.
- Provide technicians with a consistent and intuitive interface for quick and effortless interaction.
- Display a summary of work order tasks.

Use conversational search for technician support to do the following:

- Enable technicians to ask questions in natural language for quick and clear answers.
- Enable technicians to receive accurate and reliable responses sourced exclusively from the Knowledge Base.
- Provide technicians with context-aware follow-ups, including related parts or steps, for better support.

Changed in this release

Yokohama Patch 11

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Changes to Now Assist usage measurement

Starting with Yokohama Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Some Now Assist skills are turned on by default

The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.

Configure ACLs for AI agents and agentic workflows

Configure the access control lists for who can discover and trigger AI agents and agentic workflows in their guided setups in AI Agent Studio. You can determine whether an AI agent or agentic workflow behaves as a dynamic user or as an AI user. You can also specify if an AI agent or agentic workflow can be available to all authenticated users or publicly available.

Yokohama Patch 6

Removed prompt headers

The prompt headers have been removed from the work order summarization skill to support third-party Large Language Models (LLMs). You can now customize prompts via a hyperlink to the Now Assist skill.

Activation information

Now Assist features are available with activation of the Now Assist for FSM plugin. For more information, see Install Now Assist plugins.

Additional requirements

The Now Assist for FSM application requires Field Service Management.

Related ServiceNow applications and features

Now Assist

Improve the productivity and efficiency in your organization, deliver better self-service, recommend actions, provide answers, and empower your users to search more effectively.

Now Assist Admin console

Use the Now Assist Admin console to provide you with quick and effortless access to the important information that you need to set up, configure, and monitor Now Assist applications and features.

Now Assist skills

Use the Now Assist products to provide generative AI skills to meet the needs of users in different workflows, including work order task summarization and Knowledge Base article generation.

Financial Services Operations release notes

Financial Services Operations has new and updated features in the Yokohama release.

Financial Services Operations applications

The Financial Services Operations solution works with the following applications:

- Service Bridge - connects multiple ServiceNow instances to provide seamless support and service experiences, and enables exchange of service requests between different entities to facilitate effective and consistent communication. See Service Exchange release notes.
- Field Service Management - enables you to create and view all work orders and appointments related to your case, depending on your business needs. See Field Service Management release notes.

Dispute Rules Content Pack for Visa release notes

The ServiceNow® Dispute Rules Content Pack for Visa application provides questionnaires for dispute-related information intake under various dispute categories according to Visa guidelines. Dispute Rules Content Pack for Visa was enhanced and updated in the Yokohama release.

Dispute Rules Content Pack for Visa highlights for the Yokohama release

Apply Visa Resolve Online (VROL) release 25.2 revision changes to Dispute Rules Content Pack for Visa questionnaire.

See Dispute Rules Content Pack for Visa for more information.

Changed in this release

Visa Resolve Online (VROL) version 25.2 updates

Updated the dispute questionnaire provided through Dispute Rules Content Pack for Visa to align with Visa Resolve Online (VROL) release 25.2 revision changes.

Activation information

Install Dispute Rules Content Pack for Visa by requesting it from ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Related ServiceNow applications and features

Playbooks for Customer Service Management

ServiceNow® Playbooks for Customer Service Management provide a way to visualize business process workflows in a simple, task-oriented view for consistent responses to commonly encountered situations.

Financial Services Card Operations

The ServiceNow® Financial Services Card Operations application digitizes and automates the card operations of your financial institution, enabling quick processing of credit card applications and card transaction disputes.

Financial Services Credit Operations

The ServiceNow® Financial Services Credit Operations application enables the management of credit cases and tasks that are used in Financial Services Operations workflows.

Integration Hub

Automate integration tasks by using ServiceNow components for ServiceNow® Workflow Studio, or develop custom integrations.

Integration Hub available spokes

Activate spokes to improve your Workflow Studio experience with integration-specific content. Use prebuilt flows and actions to automate your integrations or create your own integration automation.

Ethoca Spoke

The Ethoca Spoke connects ServiceNow® to Ethoca APIs, enabling customers to handle dispute management and fraud prevention more efficiently and securely, reducing the need for chargebacks. Ethoca Spoke was enhanced and updated in the Yokohama release.

Ethoca Spoke highlights for the Yokohama release

Leveraging Ethoca Spoke actions enable issuers to:

- Resolve disputes efficiently at a faster pace, reducing chargeback costs
- Enhance collaboration between stakeholders, thus improving the customer experience

See Ethoca spoke for more information.

Important:
Ethoca Spoke is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Changed in this release

Ethoca spoke actions

The following Ethoca Spoke actions were built for Ethoca Alerts API in version 3.0.0:

- Create Transaction Alert
- Look up Transaction Alert Status by Batch
- Look up Alert Status
- Look up Alert Outcome by Batch Stream

Note:
To enable the Look up Alert Outcome by Batch Stream action, install the ServiceNow IntegrationHub Action Template - Data Stream (com.glide.hub.action_type.datastream) plugin.

Activation information

Install Ethoca Spoke by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Integration Hub available spokes

Activate spokes to enhance your Workflow Studio experience with integration-specific content. Use prebuilt flows and actions to automate your integrations or create your own integration automation.

Integrating with spokes

Integrate spokes with ServiceNow® Financial Services Operations (FSO) applications to enable flow designers to provide specific actions within Workflow Studio for those applications.

Financial Services Card Operations release notes

The ServiceNow® Financial Services Card Operations application supports dispute agents by providing the necessary data to expedite dispute resolutions and improve the overall experience. Financial Services Card Operations was enhanced and updated in the Yokohama release.

Financial Services Card Operations highlights for the Yokohama release

- Resolve friendly fraud disputes by incorporating friendly fraud detection and resolution in the existing dispute flow for Visa transactions. You can take actions such as crediting the customer, denying the dispute, or initiating an exception process.
- The Financial Services Card Operations data model is updated in this release with reparented tables to align the data and manage the dispute transactions more effectively. See Financial Services Card Operations for more information.
- Enhance the card disputes process with an updated end-to-end Visa disputes playbook that now includes support for reviewing associated transactions and handling pre-arbitration, arbitration, and appeals.
- Manage and work on multiple disputed transactions for a case with individual playbooks for each disputed transaction.
- Integrate new VROL subflows into the enhanced Visa card disputes playbook.

Important:
Financial Services Card Operations is available in ServiceNow Store. For details, see the "Activation information" section of these release notes.

Important information for upgrading Financial Services Card Operations to Yokohama

During the upgrade to Yokohama, the Financial Services Card Operations plugin reparents the Card Disputes Transaction table [sn_bom_credit_card_disputes_transaction] to the Financial Task table [sn_bom_task] in Financial Services Operations Core.

Reparenting leverages the benefits and advancements of ServiceNow® Financial Services Operations Core while preserving the functionality of existing applications.

Note:
If your instance uses the Card Disputes Transaction table [sn_bom_credit_card_disputes_transaction] and it contains a large amount of data, you may experience increased upgrade times.

© 2026 ServiceNow, Inc. All rights reserved.

New in the Yokohama release

Detect friendly fraud

Resolve friendly fraud disputes with predefined rules to ensure consistent and precise detection of friendly fraud in Visa disputed transactions. Agents can decline requests, issue credits, or proceed with chargebacks, allowing for tailored responses based on the situation.

Enhanced Visa disputes playbook

Leverage an updated card disputes processing flow to associate additional transactions, manage multiple transaction disputes, and handle pre-arbitration, arbitration, and appeal requests to Visa for allocation and collaboration chargeback workflows.

Changed in this release

Visa Resolve Online (VROL) version 25.1 updates

Updated the following columns to align with release 25.1 revision changes:

- The **is_parcelado** column has been removed from the dispute intake table.
- The domain value description for the **DisputeResponseReason** column has been updated from **Copy of ATM Cash Disbursement or Load Transaction** to **Copy of ATM Cash Disbursement**.

Activation information

Install Financial Services Card Operations by requesting it from ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Related ServiceNow applications and features

Financial Services Operations Core

Enables the extension of tables from Financial Services Operations Core to the Financial Services Card Operations application.

Dispute Rules Content Pack for Visa

Run chargeback eligibility rules and determine the reason code for a dispute as part of the Visa disputes playbook.

Financial Services Operations Core release notes

The ServiceNow® Financial Services Operations Core application provides a data model that enables financial institutions to create flexible data structures that meet their business needs. Financial Services Operations Core was enhanced and updated in the Yokohama release.

Financial Services Operations Core highlights for the Yokohama release

The Claim Base [sn_bom_claim_base] table has been updated in this release with additional fields. These fields were previously available only to specific applications. They're available in the Claim Base table and can be used across all other claim applications in this release.

See Financial Services Operations Core for more information.

New in the Yokohama release

Added new VROL integration subflows

Enables seamless integration with the card operations dispute management playbook with VROL subflows. The following new VROL subflows have been added:

- Look Up Transaction Inquiry Results
- Accept Dispute
- Conduct Cardholder Purchase Inquiry
- Look Up Transaction Details
- Look Up Dispute Response Details
- Create Dispute Pre-Arbitration
- Look Up Dispute Pre-Arbitration Details
- Create Dispute Pre-Arbitration Response
- Look Up Dispute Pre-Arbitration Response Details
- Submit Dispute Filing
- Look Up Dispute Filing Details
- Mark Batch Queue Item as Read

Changed in this release

Visa Resolve Online (VROL) version 25.1 updates

Updated the following subflows to align with release 25.1 revision changes:

- Submit Dispute questionnaire
- Submit fraud report

Related ServiceNow applications and features

Playbooks for Customer Service Management

Now Assist for Financial Services Operations (FSO) release notes

The ServiceNow® Now Assist for Financial Services Operations (FSO) application brings generative and agentic AI to Financial Services Operations. Features include AI agents, case summarization, disputes intake via Virtual Agent, and support for third-party language models. Now Assist for FSO was enhanced and updated in the Yokohama release.

Now Assist for FSO highlights for the Yokohama release

Yokohama Patch 11

- Now Assist for FSO skills and AI agents support model updates in Now LLM Service.
- Some Now Assist skills, agents, and agentic workflows are on by default.
- Review changes to Now Assist usage measurement.
- Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications.

Yokohama Patch 6

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Use Google Gemini and Anthropic Claude on AWS as AI model providers for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI.
- Implement security in Now Assist AI agents and Now Assist for FSO skills with Access Control Lists (ACLs).

Yokohama Patch 3

- Streamline the friendly fraud dispute resolution process for human agents and make informed decisions by using the Now Assist friendly fraud AI agent.
- Maintain positive customer relationships by using the AI agent to craft responses with the right tone and language.
- Enable agents to evaluate and review the amount being disputed, the customer relationship, and the outcome of the detection logic.

Yokohama Patch 1

- Streamline the card dispute submission process for cardholders with a dispute intake workflow by using Now Assist in Virtual Agent.
- Use a conversational, natural language interface that makes data collection more engaging and less tedious compared to a traditional form.
- Increase efficiency by inferring information from the customer's responses in the conversation.

See Now Assist for Financial Services Operations (FSO) for more information.

Important:
Now Assist for FSO is available in ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Yokohama Patch 11

Long term stable models

Long term stable (LTS) models are part of Now LLM Service and provide longer model stability windows for regulated industries. These models can integrate with tools to provide governance, monitoring, and compliance controls.

Yokohama Patch 6

New third-party AI model provider options available for all Now Assist applications

Google Gemini and AWS Claude are available for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI.

ACL security implementation

Enable security implementation to execute AI agents, agentic workflows, and generative AI skills through ACLs and user identities in Now Assist for FSO.

Predefined ACLs are provided for case summarization, Disputes intake via Virtual Agent, and the Help resolve friendly fraud AI agent and agentic workflow.

Yokohama Patch 3

Using agentic workflows in Now Assist for Financial Services Operations (FSO)

Resolve disputes that are flagged as friendly fraud with comprehensive guidance from the friendly fraud AI agent. Leverage the AI agent's step-by-step recommendations and detailed responses to explain the decisions made regarding

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

disputes. Based on the AI agent recommendations, issue credit to customers, decline disputes, or initiate an exception process.

Yokohama Patch 1

Disputes intake via Virtual Agent

Provide an intuitive dialog-based channel experience for your customers to submit details on a dispute case. The dispute intake via Virtual Agent leverages questions that are required by the card processing networks. Now LLM Service rephrases these questions in a conversational format and infers the answers for the unanswered questions from customer responses.

Changed in this release

Yokohama Patch 11

Role configuration required for agentic workflows and AI agents

Agentic workflows and AI agents included with Now Assist applications require additional security configuration. If you select *`Users with selected roles`* for your user access security controls for an agentic workflow or AI agent, you must add the installed roles, or they will not execute. Data access settings must also include these roles. See the documentation for the agentic workflow or AI agent for the specific roles you must add.

Some Now Assist skills are turned on by default

The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.

Changes to Now Assist usage measurement

Starting with Yokohama Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Activation information

Install Now Assist for FSO by requesting it from ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Additional requirements

The Now Assist for FSO application requires a Financial Services Operations Professional Plus or Enterprise Plus license.

The ServiceNow® Now Assist application uses generative AI that is designed to enhance user productivity and efficiency through conversation and proactive experiences.

Now Assist in Virtual Agent

The ServiceNow® Now Assist in Virtual Agent enhances productivity and empowers customers with a self-service interface for submitting a card dispute.

Using agentic workflows in Now Assist for Financial Services Operations (FSO)

The predefined ACLs in this release apply to the AI agents and agentic workflows in Now Assist for FSO.

Implement access control in Now Assist AI agents

Configure and manage ACLs for agentic workflows and AI agents in the AI Agent Studio

Visa Spoke release notes

The ServiceNow® Visa Spoke enables the ServiceNow AI Platform to connect with the Visa Resolve Online (VROL) API suite and Visa Stop Payment Service (VSPS) APIs, providing seamless access to Visa's card, payment, and dispute resolution services. Visa Spoke was enhanced and updated in the Yokohama release.

Visa Spoke highlights for the Yokohama release

- Manage card disputes with Visa Resolve Online (VROL) and card-on-file payments with the Visa Stop Payment Service (VSPS) API suite using Visa Spoke.
- Accept and close dispute items in a queue with Visa Spoke actions.
- Download images from an endpoint using Visa Spoke actions.
- Handle card operations and dispute resolution services with Visa Spoke actions.

See Visa Spoke for more information.

New in the Yokohama release

Visa Stop Payment Service (VSPS) integration

The Visa Stop Payment Service (VSPS) enables Visa card issuers to stop card-on-file payments (including recurring and installment payments) from being authorized, cleared, and settled through VisaNet. This service helps Visa issuers handle cardholder stop payment requests.

The following Visa Spoke actions allow clients to integrate with VSPS APIs and work through the platform:

- Create Stop Payment Instruction by Merchant Identifier Request Builder
- Create Stop Payment Instruction by Merchant Identifier Response Parser
- Create Stop Payment Instruction by PAN Request Builder
- Create Stop Payment Instruction by PAN Response Parser
- Create Stop Payment Instructions by Merchant Category Code Request Builder
- Create Stop Payment Instructions by Merchant Category Code Response Parser
- Look up Eligible Transactions for Stop Payment by PAN and Date Range Request Builder

- Look up all linked stop payment instructions by stop instruction id Response Parser
- Look up stopped transactions by PAN Request Builder
- Look up stopped transactions by PAN Response Parser
- Look up stopped transactions by stop Instruction id Request Builder
- Look up stopped transactions by stop Instruction id Response Parser
- Cancel Multiple Stop Instructions Request Builder
- Cancel Multiple Stop Instructions Response Parser

Important:
Visa Spoke is available in ServiceNow Store. For details, see the "Activation information" section of these release notes.

Changed in this release

Visa Resolve Online (VROL) version 25.1 updates

Updated the following Visa Spoke actions to align with Visa Resolve Online (VROL) release 25.1 revision changes:

- Submit Fraud Report Request Builder
- Look up Fraud Report Details Response Parser
- Look up Dispute Response Details Response Parser
- Look up Dispute Details Response Parser
- Submit Dispute Questionnaire

Visa Resolve Online (VROL) version 25.2 updates

Updated the following Visa Spoke actions to align with Visa Resolve Online (VROL) release 25.2 revision changes:

- Submit Dispute Questionnaire
- Hypersearch Request Builder

For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Related ServiceNow applications and features

Integration Hub

Automate integration tasks by using ServiceNow components for ServiceNow® Workflow Studio, or develop custom integrations. A separate subscription is required.

Integration Hub available spokes

Activate spokes to enhance your Workflow Studio experience with integration-specific content. Use prebuilt flows and actions to automate your integrations or create your own integration automation.

Integrating with spokes

Integrate spokes with ServiceNow® Financial Services Operations (FSO) applications to enable flow designers to provide specific actions within Workflow Studio for those applications.

Governance, Risk, and Compliance release notes

Governance, Risk, and Compliance new and updated features in the Yokohama release

Advanced Risk release notes

The ServiceNow® Advanced Risk application enables you to identify, analyze, evaluate, treat, and monitor risks that could impact your organization in achieving its business objectives. Advanced Risk was enhanced and updated in the Yokohama release.

Advanced Risk highlights for the Yokohama release

Some Now Assist skills, agents, and agentic workflows are turned on by default

The skills are automatically available to appropriate role users for the application, such as ITIL roles on incident forms or change forms. This change simply activates

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

the skill and does not touch the roles that may be needed to use the skill. The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills and agentic workflows are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill, agent, or agentic workflow is turned on automatically (the AI asset was never configured and turned on, then turned off again). Previously configured skills and agentic workflows that were turned on, then off, remain inactive.

- Use generative AI to generate risk assessment summaries and highlight key insights for better context.
- Reassess completed risk assessment projects to evaluate risks based on new insights or changing conditions.
- Copy risk responses from a previous risk assessment during reassessment of a risk assessment project.
- Reassign assessors for multiple risk assessment projects to optimize resource allocation.
- Remove risks from a risk assessment project during the assessment to streamline focus on relevant risks.
- Enable and manage the risk response task workflow from the Risk Assessment Methodology (RAM) form.

See Advanced Risk Assessment for more information.

Important:
Advanced Risk is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Generative AI risk assessment summarization

Generate a risk assessment summary from your inherent, residual, target risks, and control effectiveness data using the Now Assist for IRM application. The summary highlights key insights to help your approvers quickly understand the context before approving the risk assessments. You can also analyze details such as open issues, risk response tasks, action items, and calculated risk scores to support your approval decision. Check your entitlements to confirm whether you have access to risk assessment summarization.

Reassess a risk assessment project

Review completed risk assessment projects to reflect new insights or changing conditions. All previously assessed risks in this project are automatically carried over and reassigned to the designated assessor. Confirm continuity, minimize manual effort, and enhance efficiency in your risk management process.

Copy risk responses from the previous assessment

Copy responses from a previous risk assessment during the reassessment of a risk assessment project to streamline the assessment process. All prior responses are automatically copied, saving time and maintaining consistency.

Remove risks from assessment

As a risk assessor, you can remove risks from the risk assessment project while performing the assessment, which also removes all responses associated with

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

that risk. Removed scoped risks remain part of the project but are marked as not applicable for reporting purposes. However, removed ad hoc risks are completely deleted.

Manage risk response task workflow

Manage and enable the risk response task workflow from the RAM form to enable users to create, delete, remove, edit, and link risk response tasks within an assessment.

Reassign assessor for a risk assessment project

Reassign assessors for multiple in-progress risk assessment projects simultaneously to minimize disruptions during stakeholder transitions.

Configure risk color styles for the Next Experience

Define and preview colors for the risk and advanced risk components in the Next Experience through a configurable system rather than having to use hex codes. The transition has been made from a hex code color management system to a configurable system that supports the highlighted value component colors. This feature addresses theming and accessibility issues. You can define the color and variant, and preview them using the Next Experience color styles tab on the Risk color style form.

Note:
The default color for the customized risk color style is set to Critical, with the variant set to Primary. You can manually change the color and variant based on the requirement.

Changed in this release

Yokohama Patch 11

Some Now Assist skills are turned on by default

The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.

Changes to Now Assist usage measurement

Starting with Yokohama Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Activation information

Use the Risk Management application with the ServiceNow® Advanced Risk application to identify and monitor high-impact risks, improve your risk-based decision-making, and reduce reaction time.

GRC Risk Workspace

Using Risk Workspace with the ServiceNow® Advanced Risk application provides a simplified user experience with a single-pane view for all your risk-related activities.

AI Risk and Compliance release notes

The ServiceNow® AI Risk and Compliance application to manage your artificial intelligence (AI) capabilities ethically, mitigate AI risks, and ensure compliance. AI Risk and Compliance is a new application in the Yokohama release.

AI Risk and Compliance highlights for the Yokohama release

- Manage AI systems, models, and datasets across their entire life-cycle with consistent governance for better visibility, control, and compliance.
- Perform impact assessments for AI systems, models, and datasets to identify high-risk AI assets.
- Perform risk assessments on individual risks associated with an AI asset based on additional information and testing.
- Manage and oversee AI-related cases and incidents through a structured case management process.
- Build a compliance-ready AI asset inventory aligned with regulatory requirements using the AI framework content pack.

See AI Risk and Compliance for more information.

Important:
AI Risk and Compliance is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

AI Risk and Compliance features

AI asset lifecycle management

Manage the complete life-cycle of AI assets, from selecting appropriate AI systems to developing, deploying, and monitoring AI models and datasets. This feature helps maintain a centralized inventory, confirms consistent governance practices, and improves traceability and oversight across all stages of AI development and usage.

Perform impact assessment on an AI use case

Perform impact assessments to identify how AI systems, models, and datasets affect fundamental rights. This feature detects potential risks, such as copyright issues, algorithmic bias, privacy breaches, misinformation, and surveillance concerns, to support better oversight and risk management.

AI asset inventory risk management

Identify individual and specific risks associated with AI assets, such as AI systems, models, and datasets. Perform risk assessments on each identified risk separately.

AI case management

Manage and track cases or incidents related to AI use cases across the organization. This feature provides a structured approach to documenting,

© 2026 ServiceNow, Inc. All rights reserved.

investigating, and resolving AI-related issues and cases, supporting consistent oversight and accountability.

AI framework content pack

Use the default AI framework content pack to prepare a compliance-ready inventory of AI assets. The content pack provides mappings to key AI regulations and standards, such as the European Union AI Act and the National Institute of Standards and Technology (NIST) AI Risk Management Framework (AI RMF). This feature helps organizations to align AI governance activities with regulatory requirements.

AI Risk and Compliance workspace

See a comprehensive overview of all your AI inventory-related information in the AI Risk and Compliance workspace. The AI Risk and Compliance workspace enables you to:

- Identify the risk classification of AI asset inventory.
- Identify the compliant and noncompliant controls for authority documents and policies.
- View AI systems based on state and department.
- View the AI assessments and risk assessments information.
- View information related to the control attestation, indicators, AI issues, AI cases, and policy exceptions.
- Generate report to help leaders identify, assess, and mitigate risks.

360° Relationship Visualization of AI assets

Explore the relationships between critical AI assets that impact your business, including controls, risks, and issues.

Collaborate with internal users

Collaborate with internal users by starting chats focused on the ethical, transparency, and accountability aspects of AI assets. Use discussions to document considerations, share feedback, and drive informed decision-making throughout the AI asset life-cycle.

Roles installed with AI Risk and Compliance

The following roles related to AI Risk and Compliance for managing AI systems across the enterprise were added:

- AI Risk and Compliance Admin [sn_grc_ai_gov.ai_risk_and_compliance_admin]: Configure AI Risk and Compliance and delete AI systems.
- AI Risk and Compliance Manager [sn_grc_ai_gov.ai_risk_and_compliance_manager]: Initiate impact assessment, risk assessment, and control attestations. Manage the life cycle of the AI system.
- AI Risk and Compliance Analyst [sn_grc_ai_gov.ai_risk_and_compliance_analyst]: Initiate impact assessment, risk assessment, and control attestations. Manage the life cycle of the AI system.

> **Note:**
> AI Risk and Compliance Analyst can perform these actions only on the records assigned to them.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- AI Risk and Compliance User [sn_grc_ai_gov.ai_risk_and_compliance_business_user]: Create an AI case on the Employee Center and work on the assigned tasks. Perform control attestations.
- AI Risk and Compliance Reader [sn_grc_ai_gov.ai_risk_and_compliance_reader]: Read the AI systems and AI impact assessments.

Activation information

Install AI Risk and Compliance by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Related ServiceNow applications and features

Use the AI Control Tower application with AI Risk and Compliance to manage AI asset inventory life cycle.

Audit Management release notes

The ServiceNow® Audit Management application supports activities related to planning audit engagements, implementing engagements, and reporting findings to an audit committee. Audit Management was enhanced and updated in the Yokohama release.

Audit Management highlights for the Yokohama release

- Analyze relationships between different variables, such as assessing risks and controls, by using the Matrix report in Audit Workspace.
- Manage your documents and work papers in Audit Management as cloud files.
- Upload documents from your local computer as cloud files and link them to any record in your ServiceNow instance.
- Share a single cloud file with multiple records by linking it to any GRC record.
- Benefit from accessibility improvements to create a configurable workspace that supports Web Content Accessibility Guidelines (WCAG) 2.1 Level AA conformance.

See Audit Management for more information.

Important:
Audit Management is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Matrix report in the Audit Workspace

Analyze relationships between different variables by using a Matrix report that presents data in a structured format. Assess and document risks and the internal controls designed to mitigate those risks through the Risk and Controls Matrix.

Entity Based Access for Audit Management

Entity-based access enables you to create configurations for entities, entity classes, and entity types. When a user is qualified based on these configurations and has the minimum required roles, they can access to the following tables:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Engagement
- Test Plan
- Control Test
- Observation
- Control to Engagement
- Test Plan to Engagement
- Risk to Engagement
- Issue to Engagement
- Entity to Engagement

Changed in this release

Reflow for Configurable Workspace

The Audit Management configurable workspace supports reflow, which enables pages and content to be zoomed up to 400% through your browser settings without loss of content or functionality.

Activation information

Install Audit Management by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Accessibility information

Accessibility improvements

Accessibility improvements were completed to create a configurable workspace that supports WCAG 2.1 Level AA conformance.

Reflow

The Configurable Workspace supports reflow, which enables pages and content to be zoomed up to 400% through your browser settings without loss of content or functionality. Additionally, content can be enlarged without scrolling in two dimensions at a width equivalent to 320 CSS pixels or a height equivalent to 256 CSS pixels. Page layouts are transformed into a vertical, stacked view automatically when users increase browser zoom to 400%. This enhancement helps users with low vision or who have trouble seeing web content in a browser due to monitor size, device type, poor lighting, or other situations. Reflow can be turned off with a system property for instances, experiences, and pages. See Reflow for Configurable Workspace.

Business Continuity Management release notes

The ServiceNow® Business Continuity Management application gives your organization the capability to continue to deliver products and services at an acceptable level when a disruptive incident occurs. Business Continuity Management was enhanced and updated in the Yokohama release.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Business Continuity Management highlights for the Yokohama release

- Use the latest assessment template to perform a Business Impact Analysis.
- Create nested plans in an event so that you can activate cross-references to multiple plans.
- Use the hierarchical view in the plans to organize nested event tasks according to their dependencies.
- Use the Crisis map functionality that includes the latest UIB components.

See Business Continuity Management for more information.

Important:
Business Continuity Management is available in ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Using latest assessment template for conducting BIAs

Conduct a Business Impact Analysis (BIA) by using the latest assessment template. The assessment template enables you to create questions of different types and automate the responses from existing data sources. You can configure the logic for calculating the recovery tier, recovery point objective, recovery time objective, or maximum tolerable downtime.

Adopting UIB page for improved performance

Leverage the Crisis map functionality that includes the latest UIB components. By adopting the UIB components, you can help to minimize development efforts and get more configuration options within the Crisis map application.

You can filter alerts by their state (active or inactive), severity level, location (regions), or source. You can refine your search, perform detailed queries, or edit actions on the alerts, so that it's easier to find both the alerts and assets on the map. Additionally, you can set the secondary values such as urgency, severity, category for the alerts in the Details card.

Using nested plans

Create nested plans in an event so that you can activate cross-references to multiple plans. You can use the hierarchical view to organize nested event tasks according to their dependencies with the work-breakdown structure (WBS) functionality. You can also monitor the progress bar to track the creation of related plans, event assets, or event tasks.

UI changes

Using latest assessment template for conducting BIAs

- The BIA form displays the assessment questionnaire that is based on the latest assessment template. The **Assessments** tab in the BIA record page has been enhanced to eliminate repetitive UI actions and reduce large empty spaces. The latest assessment template includes additional question types such as drop-down, references, text, attachments, check boxes, date, time, and number value inputs.
- The PDF template for the BIA has been updated to include the questions and answers that are based on the latest assessment template.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Adopting UIB page for improved performance

The enhancements to the Crisis map user interface are:

- Alerts are displayed in the side panel of the Crisis map application.
- The alert details page includes the **Open alert** and **Dismiss alert** UI actions, which enable you to either open or dismiss alerts.
- The active alerts can be sorted by using the **Severity**, **Created**, **Updated** fields, and can also be toggled from top-to-bottom or bottom-to-top by using the Toggle option.
- The alerts display can be updated with the Refresh icon .
- The active and dismissed alerts are now displayed on the Alerts page.

Using nested plans

The enhancements to the nested plans user interface are:

- The hierarchical view shows the nested event tasks.
- The progress bar displays the progress of the creation of related plans, event assets, or event tasks.

Changed in this release

Using latest assessment template for conducting BIAs

You can use the latest assessment template to conduct the Business Impact Analysis (BIA).

Activation information

Install Business Continuity Management by requesting it from ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Browser requirements

Business Continuity Management requires the following browsers:

- Google Chrome
- Firefox and Firefox Extended Support Release (ESR)
- Microsoft Edge Chromium
- Safari 12.0 and later versions

Accessibility information

Various accessibility issues in the Crisis map application have been resolved with the implementation of the Geomap [sn_geo_map] component, which has replaced the FAM Map [sn-fam-map] component.

Continuous Authorization and Monitoring release notes

The ServiceNow® Continuous Authorization and Monitoring (CAM) application provides a standardized approach to defining an authorization package and walking through the seven stages of the National Institute of Standards and Technology (NIST) Risk Management Framework (RMF). CAM was enhanced and updated in the Yokohama release.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

CAM highlights for the Yokohama release

- Import catalog and System Security Plan (SSP) models with the new CAM Open Security Controls Assessment Language (OSCAL) import landing page.
- Export and import SSP models and catalog models in the OSCAL format.
- Export control objectives as a catalog in the OSCAL format.
- Generate additional reports in Microsoft Word format, such as a Security Assessment Plan (SAP), Authorization to Operate (ATO) Letter, and Executive Summary.
- Generate reports based on a Microsoft Word template.

See Continuous Authorization and Monitoring for more information.

Important:
Continuous Authorization and Monitoring is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

OSCAL Import landing page

Import files for catalog and SSP models on the new OSCAL Import landing page. Once the import process is initiated, you can check the status under the Import status section.

OSCAL Export button

Export selected control objectives in the OSCAL format with the new **OSCAL Export** button while in the control objectives list view.

ATO artifacts in Microsoft Word

Generate ATO artifacts from an authorization package in the Microsoft Word format. In CAM Workspace, you can use the **Generate SSP** drop-down list in a selected authorization package to generate the following reports:

- Security Assessment Plan (SAP)
- Authorization to Operate (ATO) Letter
- Executive Summary

This enhancement verifies that all ATO artifacts are formatted consistently and can be shared and reviewed.

Changed in this release

Generate the OSCAL SSP model of an authorization package

Export the SSP model of an authorization package in the OSCAL format. The exported report contains only the control objectives linked to the authorization package and their additional information, such as inherited controls and the hierarchy of the control objectives.

Generate ATO artifacts in Microsoft Word and HTML templates

Use the Document designer plugin (com.sn_grc_doc_design) to create report templates in Microsoft Word. A new property module has been introduced to select the template type as a Microsoft Word template in addition to an HTML template.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Activation information

Install CAM by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Common Core release notes

The ServiceNow® Integrated Risk Management (IRM) application enables your organization to continue to provide its business services during adverse operational events, such as a pandemic, extreme weather, or hacking. Integrated Risk Management was enhanced and updated in the Yokohama release.

IRM highlights for the Yokohama release

- Generate a GRC issue action plan by using the agentic AI workflow.
- Segregate data by entities and granular access management when using entity-based access.
- Summarize an issue by using generative AI to provide quicker context gathering and contextual awareness. With this feature, you can improve the efficiency and productivity of your analysts on GRC issues.
- Use the enhanced GRC licensing summary dashboard to understand the licensing treatment for users that are added to the group by roles that are mapped or assigned to the group.
- Select a user record on the licensing summary dashboard and select the role hierarchy to see all the parent roles that are assigned to the user and their role hierarchies.
- Monitor the email activity from the Overview page for regulatory agencies.
- Update and add content by using Microsoft 365 for ServiceNow Reporting, which is now integrated with the Document designer application.
- Add up to 20 columns in a table and in a content block by using the Document designer application.
- Select and reorder columns by using the Document designer Microsoft Word add-in while creating templates.

Yokohama Patch 11

- Some Now Assist skills are now turned on by default.
- Review changes to Now Assist usage measurements.

For detailed documentation, see Common Governance, Risk, and Compliance features.

Important:
IRM is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Entity Based Access

Implement data segregation and detailed access management so that users can access only the permitted data through entity-based access. Administrators can grant access to an entity's related records by adding users or user groups or by using entity user fields for entity-based access configuration. You can enhance your data security and minimize the risk of unnecessary data exposure while ensuring that only authorized users can access an entity's related records.

Gen AI issue summarization

Optimize the GRC issue resolution agentic AI workflow in the Integrated Risk Management application to help your issue managers and analysts resolve GRC issues with AI agents in the Now Assist panel. This workflow makes the issue resolution process more efficient by introducing targeted solutions for key steps in the issue management life cycle.

Gen AI issue summarization

Summarize an issue by using the Now Assist for IRM application to provide quicker context gathering and contextual awareness. You can quickly analyze the issue records, including the description, activity log, and remediation tasks, and then generate a concise summary that provides you with a concise context of the issue to help you resolve it. Check your entitlements to determine whether you have access to issue summarization.

Searching user groups to understand the licensing treatment

Use the enhanced GRC licensing summary dashboard to understand the licensing treatment of users that are added to the group by roles that are mapped or assigned to the group.

Overview of an agency record

View the pie charts that depict the total number of emails that are sent to the various regulatory domains. On the overview page of a regulatory agency, you can view the domains where the maximum number of emails were sent and access the Emails Tracker page directly from an agency record. You can also filter and display only the relevant emails that were sent to a specific agency.

Document designer integration

Update and add content by using Microsoft 365 for ServiceNow Reporting, which is now integrated with the Document designer application. You can insert data and reports into a Microsoft Word document.

UI changes

Create data relationships

The **Data Relationship** tab has been added to the template configuration record as part of the configuration process for the Document designer Microsoft Word add-in.

Changed in this release

Column Organization

You can select and reorder columns when adding a table into your template by using the Document designer Microsoft Word add-in. You can now organize your content better to meet your reporting needs.

Create content configurations

You can add up to 20 columns in a table and content block by using the Document designer application. You now have more flexibility with customizing your table and content block to meet your reporting needs.

Yokohama Patch 11

Some Now Assist skills are turned on by default

The new default behavior works as follows:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- New customers: When you install a Now Assist product, designated skills are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.

Changes to Now Assist usage measurement

Starting with Yokohama Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Deprecations

The template data relationship table has been removed and deprecated for the Document designer application.

Activation information

Install Integrated Risk Management and Now Assist for IRM by requesting them from ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Compliance Case Management release notes

The ServiceNow® Compliance Case Management application helps you to report, investigate, analyze, and resolve a compliance case or raise a compliance request in a centralized location. Compliance Case Management was enhanced and updated in the Yokohama release.

Compliance Case Management highlights for the Yokohama release

- Empower compliance professionals to perform assessments on compliance cases using the Smart Assessment Engine.
- Utilize the unified **Tasks** page on Employee Center to complete your assessments.
- Benefit from accessibility improvements to create a configurable workspace that supports Web Content Accessibility Guidelines (WCAG) 2.1 Level AA conformance.

See Compliance Case Management for more information.

Important:
Compliance Case Management is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Smart assessments in Compliance Case Management

Utilize the Smart Assessment Engine to assess if your employees are compliant with the necessary regulations. The compliance case administrator configures the questionnaire, and when an action task moves from the **Draft** to the **Assigned** state, the assessment is sent. After the assessment, the compliance case manager examines the nature of the non-compliance and its impact on the organization. Based on the findings, appropriate remediation measures are identified and

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

implemented to resolution. To use the smart assessment, a new property called enable_smart_assessments (sn_grc_case_mgmt.enable_smart_assessments) is introduced with the default value as *true*.

Unified Task-driven UI experience

As a business user, use the **Tasks** page on the Employee Center for a consolidated view of all your tasks, enabling you to access and complete them efficiently. This page provides an easy way to manage all your assessments in one place, enabling you to view and perform tasks seamlessly.

Changed in this release

Roles updated for smart assessment

The following roles in Compliance Case Management have been updated with respect to smart assessments.

- sn_comp_case.compliance_case_admin
- sn_comp_case.compliance_case_analyst
- sn_comp_case.compliance_case_business_user
- sn_comp_case.compliance_case_manager

Reflow for Configurable Workspace

The Compliance Management configurable workspace supports reflow, which enables pages and content to be zoomed up to 400% through your browser settings without loss of content or functionality.

Activation information

Install Compliance Case Management by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Accessibility information

Accessibility improvements

Accessibility improvements were completed to create a configurable workspace that supports WCAG 2.1 Level AA conformance.

Reflow

The Configurable Workspace supports reflow, which enables pages and content to be zoomed up to 400% through your browser settings without loss of content or functionality. Additionally, content can be enlarged without scrolling in two dimensions at a width equivalent to 320 CSS pixels or a height equivalent to 256 CSS pixels. Page layouts are transformed into a vertical, stacked view automatically when users increase browser zoom to 400%. This enhancement helps users with low vision or who have trouble seeing web content in a browser due to monitor size, device type, poor lighting, or other situations. Reflow can be turned off with a system property for instances, experiences, and pages. See Reflow for Configurable Workspace for details.

Operational Resilience release notes

The ServiceNow® Operational Resilience application supports organizations to help keep business services running during adverse events like pandemics, severe weather, or cyber attacks. Operational Resilience was enhanced and updated in the Yokohama release.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Operational Resilience highlights for the Yokohama release

- Align with the CSDM model to set up configurable main node configurations, which are used to retrieve CSDM and their dependency data.
- Add the primary origin to an operational vulnerability, and the impacted areas are automatically included. The vulnerability can then be viewed from any impacted area.
- All CSDM objects, dependencies, and their red flags can be rolled up based on the entity hierarchy.
- Use Smart Assessment for evaluating an Operational vulnerability.

See Operational Resilience for more information.

Important:
Operational Resilience is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Measure resilience metrics using the CSDM model

Define the entity types and pillars in Operational Resilience and generate the entities. Establish relationships between CSDM objects, including business services, service offerings, business processes, and application services. Specify the type of main node configuration that you want to use by setting the *sn_oper_res.opres_csdm_main_node_config* property.

After generating the entities and setting up the main node configurations, you can import CMDB data into Operational Resilience for reporting. CSDM and their dependencies are updated weekly while the red flags data is calculated daily. The outcome is displayed on the Homepage or in the related list of the CSDM objects.

Specify the primary origin of an operational vulnerability

Identify the primary origin of an operational vulnerability in its record. Once the primary origin is specified, its upstream dependencies are automatically included in the impacted areas, enabling you to view the operational vulnerability from all affected perspectives.

Using Digital resilience incident reporting

Assess whether any critical services are affected and classify the reported incident as a major incident if necessary. Notify regulators of major incidents, categorized by their severity and security ratings.

The Digital resilience incident reporting module, accessible from the Operational Resilience Workspace, is integrated with Incident Management and Security Incident Response to generate and share reports in the format that is specified by the regulators.

You can generate an initial report within 24 hours, an intermediate report within 72 hours, and a final report within 1 month. All of these reports are automatically triggered by the application from the time that the incident is classified as a major incident.

UI changes

Business services dashboard

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The Business services dashboard has been added to display business services data.

New modules for services and processes

The Services, Business Services, Service Offerings, and Business Processes modules have been added to the Operational Resilience Workspace. Operational Resilience managers use these modules to manage the services, business services, service offerings, and business processes used in Operational Resilience reporting.

Entity Types and Pillars modules

The Entity Types and Pillars modules have been added to the Operational Resilience Workspace. These modules enable Operational Resilience managers to update the entity types and pillars directly from the Workspace.

Primary origin tab

The **Primary origin** tab has been added to the Operational vulnerability record to identify the main source and report the upstream entities of the vulnerability.

Addition of classes to the assessment form

The Business Service and Offering classes have been added to the **Scope** tab of the assessment form, enabling you to assess the business services and service offerings alongside services. Once the assessment is complete, the importance and impact tolerance of these items are displayed in the Importance and Impact Tolerance columns on the **Scope** tab.

Addition of classes to the scenario analysis form

The Business Service and Offering classes have been added to the **Scope** tab of the scenario analysis form, enabling you to analyze the business services and service offerings alongside services.

Addition of classes to the self-attestation form

The Business Service and Offering classes have been added to the **Scope** tab of the self-attestation form, enabling you to self-attest the business services and service offerings alongside services.

Digital resilience incident reporting module

The Digital resilience incident reporting module is used to report the Information and Communication Technology (ICT) related incidents to the regulators.

Activation information

Install Operational Resilience by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Browser requirements

Business Continuity Management requires the following browsers:

- Google Chrome
- Firefox and Firefox Extended Support Release (ESR)
- Microsoft Edge Chromium
- Safari 12.0 and later versions

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Related ServiceNow applications and features

Risk Management

Use the Risk Management application to identify and monitor high-impact risks, improve your risk-based decision-making, and reduce the reaction time from days to minutes.

Advanced Risk Assessment

Use the Advanced Risk application to identify, measure, and track risks. The application includes the workflows for risk assessments and events, ensuring efficient management of your organization's risk profile.

Policy and Compliance Management

Use the Policy and Compliance Management application to create and manage policies, standards, and internal control procedures that are mapped to external regulations and general guidelines.

Business Continuity Management

Use the Business Continuity Management application to ensure that your organization can keep delivering products and services at an acceptable level even when faced with disruptive events.

Vulnerability Response

Use the Vulnerability Response application to enable security users to analyze security data, implement changes, and generate security incidents.

Incident Management

Use the Incident Management application to restore normal service operation while minimizing impact to business operations and maintaining quality.

Security Incident Response

Use the Security Incident Response application to manage the life cycle of your security incidents from initial analysis to containment, eradication, and recovery.

Digital Operational Resilience Management

Use this application for uploading and downloading of all individual DORA tables. It is automatically installed when the Digital Resilience Third-party Information Register is activated.

Data registry

Use this application to visually explore the relationships between the different types of critical data that affect your business, such as controls, risks, and issues.

Policy and Compliance Management release notes

The ServiceNow® Policy and Compliance Management application provides a centralized process for creating and managing policies, standards, and internal control procedures that are cross-mapped to external regulations and benchmarks. Policy and Compliance Management was enhanced and updated in the Yokohama release.

Policy and Compliance Management highlights for the Yokohama release

- View the compliance score at the entity level based on the hierarchy of entities.
- Eliminate duplicate citations associated with the authority documents when you download UCF content.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Revise your policies and update the policy text periodically by integrating with Microsoft SharePoint.
- Enable policy owners and reviewers to collaborate, review, and redline policies by using policy authoring and the redlining feature.
- The Issues widget has been removed from the Compliance Workspace landing page to enhance the performance.
- Enable data access by implementing Entity-Based Access controls.
- Recommend similar control objectives using generative AI. You can then retain, dismiss, or merge duplicate control objectives.

See Policy and Compliance Management for more information.

Important:
Policy and Compliance Management is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Calculate compliance score and roll up to entity

View a comprehensive compliance score at the entity level that includes all the child entities rolled up to the parent entity along with the compliance score of the parent entity's direct controls.

Elimination of duplicate citations from UCF Shared list download

Eliminate duplicate citations associated with the authority documents when you download UCF content. You can retain one citation as active and mark the duplicate citations as inactive. Move the control objectives of the duplicate citations to the active citation, and update the duplicate citation records with the Source ID of the active citation.

Improve compliance workspace performance

Improved the performance of the compliance workspace by removing the issue widget to ensure a faster and smoother user experience. You can still access issue details from the "Issues Overview" section.

Entity based access

Entity based access aims to provide a more granular approach to data access, ensuring that users can only access data through entity-based access. The entity-based access has been enabled for controls, attestations and policy exception to control mappings. Administrators can grant access to an entity's related records by adding users or user groups, or by using entity user fields for entity-based access configuration.

Deduplication of control objectives

Using Generative AI, identify and recommend similar control objectives. You can choose to accept a control objective as duplicate, dismiss those that are not similar, or retain a control objective as primary in which details from all other similar control objectives are merged. Additionally, the system automatically copies related records, including policies and risk statements, to ensure comprehensive information is maintained in one location after retiring the accepted control objectives.

Changed in this release

Yokohama Patch 11

Some Now Assist skills are turned on by default

The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.

Changes to Now Assist usage measurement

Starting with Yokohama Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Deprecations

GRC DevOps Accelerator is now deprecated and no longer supported or available for new activation. For details, see the Deprecation process [KB0867184] article in the Now Support Knowledge Base.

Activation information

Install Policy and Compliance Management by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Browser requirements

GRC: Policy and Compliance Management requires the latest public release and two previous release versions of the following browsers:

- Google Chrome
- Firefox and Firefox Extended Support Release (ESR)
- Microsoft Edge Chromium
- Safari 12.0 and later versions

Privacy Management release notes

The ServiceNow® Privacy Management application enables you to manage your organization's privacy risks and compliance to protect your customers, employees, and suppliers. Privacy Management was enhanced and updated in the Yokohama release.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Privacy Management highlights for the Yokohama release

- Integrate criticality factors into assessments and processing activities thereby simplifying the assessment process, and reducing the workload for privacy teams.
- Use the Smart Assessment Engine to capture details regarding information objects and hierarchies, updating all details within the assessments and eliminating the need to separately update processing activities.
- Implement information Object (IO) categories such as biometric data, to align with regulatory classifications and bridge the gap between requirements and user understanding.
- Empower privacy case analysts to perform assessments on privacy cases using the Smart Assessment Engine

See Privacy Management for more information.

Important:
Privacy Management is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Leverage criticality factors to evaluate the initial risks associated with processing activities. Integrate these factors into privacy assessments and automatically generate a criticality score upon assessment approval. These factors are also added to processing activities, enabling you to make updates at any time. Integrating these factors in a privacy assessment eliminates the need for a separate criticality assessment. This consolidation reduces the workload for the privacy teams.

Smart assessments in Privacy Management

Use the new and improved assessment experience that enables:

- capturing the data elements, the information object attributes, hierarchies
- building the assessment questionnaire

This new experience enables responders to update all the necessary details within the assessments, eliminating the need to update the processing activity separately.

Configure information object categories

Implement Information object categories to tag and classify information objects effectively. For example, attributes like iris scans and fingerprints are often referred to as biometric data, or email addresses and phone numbers can be tagged as contact information. Information object categories enable you to categorize these information objects under these broader classifications. This approach is useful in the following ways:

- Enhances compliance with regulations such as GDPR, CCPA, and so on by accurately capturing and tracking required data categories.
- Improves clarity for business users, ensuring they can easily identify and work with terms they’re familiar with while adhering to regulatory standards.
- Streamlines data governance by creating a structured framework that supports both regulatory needs and business operations.

Smart assessment for privacy case management action tasks

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Use the new assessment experience of Smart Assessment Engine for privacy case action tasks. Only when an action task moves from the **Draft** to the **Assigned** state, the assessment can be sent. To use the smart assessment, a new property called enable_smart_assessments (sn_grc_case_mgmt.enable_smart_assessments) is introduced with the default value as *true*.

Changed in this release

Tagging of information object tags

Use the **Data classification** field to tag information objects instead of using the tag icon.

Initiating privacy assessment

When you initiate a privacy assessment from either an entity or a processing activity, you're no longer redirected to the **Create new privacy assessment form**, instead, a new pop-up window appears where you can specify all the assessment details.

Activation information

Install Privacy Management by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Regulatory Change Management release notes

The ServiceNow® Regulatory Change Management application enables you to check upcoming regulatory changes, assess their impact, and implement risk and compliance-related changes. Regulatory Change Management was enhanced and updated in the Yokohama release.

Regulatory Change Management highlights for the Yokohama release

- Summarize a regulatory alert by using the Now Assist summarization skill.
- Use Regulatory mapping with AI to help organizations identify, track, and manage regulatory requirements that are specific to their industry.
- Set up a recommendation context.
- Analyze the potential impacts of a new regulation to assess whether it's likely to achieve the required business or regulatory compliance objectives.

Yokohama Patch 11

- Some Now Assist skills are now turned on by default.
- Review changes to Now Assist usage measurements.

See Regulatory Change Management for more information.

Important:
Regulatory Change Management is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Generating a summary of a regulatory alert

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Transform your detailed regulatory information into concise, business-focused summaries that emphasize the most critical changes and impending deadlines. You can significantly cut down the time that is required to interpret complex updates, ensuring that no vital details are overlooked. By streamlining compliance processes, your organization becomes more efficient and minimizes the risks.

Regulatory mapping with AI

Leverage artificial intelligence to help your organizations identify, track, and manage regulatory requirements that are specific to their industry. AI automates the mapping of incoming regulatory changes to internal business operations, such as citations and control objectives, making it easier to ensure compliance. By analyzing the incoming regulatory changes and vast amounts of internal regulatory data, AI highlights the relevant policies for association and mapping, which helps your organization to streamline the compliance process and reduce manual effort.

Recommendation contexts and templates

Enable your administrators to use a framework engine to create decision templates for primary records. This framework simplifies the enterprise decision-making processes and includes the configurable user interface elements that provide contextual insights and improve the display of these elements. By integrating this framework, your organization can help to ensure that every recommendation is both relevant and informed.

Impact radius extension

Identify the impacted areas of your business operations, such as the citations, control objectives, policies, risks, controls, and authority documents, that you can add to a regulatory alert. You can then conduct a review for implementation acceptance that triggers a change management program by assigning ownership and accountability through a Change Task. Additionally, an existing dashboard was improved so that you can get a clear overview of the impacted business operations.

Regulatory assessment for a regulatory alert

View the new Regulatory assessments related list for a regulatory alert. This list displays the uniquely generated regulatory assessments that are powered by the Smart Assessment Engine application so that you can analyze and track the completion status for compliance users. Your users with the sn_grc.business_user role can work on these assessments.

UI changes

Changes on the action task form

The Category: Compliance section and the Category: Risk section on an action task form have been removed. They're replaced by the **Impacted area table** field and the **Impacted area** field.

Assess impact

The **Initiate Impact Assessment** button is now called the **Assess impact** button.

Changed in this release

Overview page of regulatory alerts

The Overview page for regulatory alerts includes a drop-down menu that enables you to track the progress of a regulatory assessment. Additionally, you can view the counts of completed, open, and overdue regulatory assessments.

Home page updates for Regulatory Change Management

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

On the Regulatory Change Management home page, within the Tracking section, a new drop-down menu has the Regulatory Assessments or Risk Assessments options. With these options, regulatory change managers can see the number of open and overdue assessments to help them efficiently monitor the status of their assessments.

Regulatory assessments in the Tasks pane

The Tasks pane in the Compliance Workspace now displays all the Regulatory assessments.

Yokohama Patch 11

Some Now Assist skills are turned on by default

The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.

Changes to Now Assist usage measurement

Starting with Yokohama Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Removed in this release

- Related documents related list will be hidden for both the workspace and classic view for a regulatory alert.
- The entity class configuration has been removed and is no longer necessary for conducting an assessment. You can select the entities now when you send the risk assessment.
- Starting with the Yokohama release, all open assessments for a regulatory alert, whether they're risk assessments or regulatory assessments, aren't marked as canceled and remain open even after an alert is marked as applicable.

Activation information

Install Regulatory Change Management and Now Assist for IRM by requesting them from ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Smart Assessment Engine release notes

The ServiceNow® Smart Assessment Engine (SAE) application is designed to streamline the creation, distribution, and management of assessments. It enables you to evaluate your assessors by creating customizable assessment templates with detailed instructions and questions. The Smart Assessment Engine enhances efficiency, helps reduce manual effort, and provides valuable insights for informed decision-making. SAE was enhanced and updated in the Yokohama release.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Smart Assessment Engine highlights for the Yokohama release

- Configure default responses for questions.
- Copy an existing SAE template with all questions, sections, instructions, and configurations to save time.
- Filter questions in an assessment to display only unanswered questions.
- Search for text within assessment sections, subsections, and questions.
- Auto-copy responses to all assessments when combining assessments, saving time and effort.
- Calculate scores for assessment responses at the assessment, section, or subsection levels.
- Set up post-assessment actions based on assessment responses.
- Benefit from accessibility improvements to create a configurable workspace that supports Web Content Accessibility Guidelines (WCAG) 2.1 Level AA conformance.
- Descriptive images are now supported in the guidance section for questions.

See Smart Assessment Engine for more information.

Important:
Smart Assessment Engine is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Copy an assessment template

Create a copy of an existing smart assessment template, including all questions, sections, and existing configurations. This feature enables you to duplicate a fully configured assessment, so you don't need to recreate the content. You can then customize the copied template to fit new requirements or scenarios.

Filter unanswered questions

Filter questions in the assessments to display only unanswered questions, helping you focus on the remaining questions.

Using the template designer

Search for text within assessment sections, subsections, or questions, enabling you to locate specific information or keywords. This feature enhances navigation and enables you to find relevant content without manually scrolling through the entire assessment.

Auto-copy responses to all templates

Replicate your responses across all applicable assessments while combining assessments by enabling the auto-copy feature. It saves time and effort by copying your answers consistently without the need for manual repetition.

Automate responses

Set up automatic responses for questions to enable assessors to complete assessments efficiently. You can either create default responses for all question types or define a script to fetch and map the values or data to responses.

Assessment scoring and analysis

Calculate meaningful scores for assessment responses at the assessment, section, or subsection levels. These scores can then be used for reporting.

Post-assessment automation

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Automate actions based on assessment responses. Template designers can predefine actions using a rule engine, such as updating fields, creating follow-up assessments, or generating other records.

Descriptive images in assessment questions

Attach descriptive images in the guidance section of the assessment questions. This means that template managers can include helpful visuals to assist respondents, making the instructions clearer and easier to understand.

Activation information

Install Smart Assessment Engine by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Accessibility information

Accessibility improvements

Accessibility improvements were done to create a configurable workspace that supports WCAG 2.1 Level AA conformance.

Additional requirements

Check your entitlements to determine whether you have access to the post-assessment automations and response automation for the SAE application.

Third-party Risk Management release notes

The ServiceNow® Third-party Risk Management (TPRM) application provides a centralized process for managing your portfolio of third parties and their engagements, assessing and scoring risk, and performing remediation. TPRM was enhanced and updated in the Yokohama release.

Third-party Risk Management highlights for the Yokohama release

- Pre-populate questionnaires for entities and engagements that are associated with the same active third party by using responses from complete questionnaires.
- Respond to questionnaires by using a Microsoft Excel questionnaire template.
- Explore and analyze assessment data at various levels by using the Third-party insights dashboard and the TPRM custom analytics dashboard.
- Stay aligned with stricter regulatory compliance and emerging third-party risk governance by using the new Standardized Information Gathering (SIG) questionnaire content available for 2025.

See Third-party Risk Management for more information.

Important:
Third-party Risk Management is available in ServiceNow Store. For details, see the "Activation information" section of these release notes.

Important information for upgrading Third-party Risk Management to Yokohama

Starting with the Vancouver release, if you're a VRM user upgrading to TPRM, from an earlier release, you must run each upgrade sequentially to ensure that fix scripts run correctly. This

means upgrading from one release to the next rather than skipping to the latest release. Not running scripts in the correct order can result in data inconsistencies, broken functionalities, and conflicts.

For more information on upgrading from VRM to TPRM, see Third-party Risk Management upgrade information.

For existing TPRM customers, after upgrading to version 20.2.4, data from the Industry column in the Company [core_company] table is automatically migrated to the tprm_industry column. Migration can take several hours depending on the number of records in the Company [core_company] table. After migration, a system log message confirms that the migration is complete. Review the Company [core_company] table content and update any customizations referencing the Industry field to use tprm_industry. After verifying the migration and updating customizations, you can drop the Industry column.

New in the Yokohama release

TPRM personalized dashboards

Improve your decision-making process by exploring and analyzing your assessment data at various levels by using the Third-party insights dashboard and the TPRM custom analytics dashboard. If you have the Third-party risk manager [sn_vdr_risk_asmt.vendor_risk_manager] or Third-party risk assessor [sn_vdr_risk_asmt.vendor_assessor] role, you can create and share your own dashboards and reports. If you're a third-party risk manager, you can also customize the report layouts, widgets, and data views to prioritize key metrics and workflows that align with your individual roles and risk programs.

New Standardized Information Gathering (SIG) questionnaire content

Use the updated SIG templates for 2025 after upgrading to version 20.1.x as part of the Third-party Risk Management application. The latest SIG questionnaires help your organization stay aligned with stricter regulatory compliance and emerging third-party risk governance, covering a wide range of security and privacy concerns.

Quick start tests for TPRM

Verify that TPRM works as expected after upgrades and deployments of new applications or integrations by running quick start tests. If you customized TPRM, copy the quick start tests and configure them for your customizations.

UI changes

TPRM personalized dashboards

The Third-party insights dashboard and the TPRM custom analytics dashboard are now available from the Dashboards page of the Vendor Management Workspace.

Third-party portal import modal

The import modal now enables you to respond to questionnaires by using a Microsoft Excel template. You can download the questionnaire, complete it according to the included instructions, and import the final version into the Third-party portal.

Changed in this release

Pre-populate responses using questionnaires

If you have the Third-party risk assessor [sn_vdr_risk_asmt.vendor_assessor] or Third-party risk manager [sn_vdr_risk_asmt.vendor_risk_manager] role, you can enable third-party and engagement contacts to review and update responses only

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

if necessary by pre-populating questionnaires for engagements and entities with responses from completed questionnaires that are associated with the same third party. The attachment, duration, and signature type responses are excluded. This feature also helps ensure data consistency and accuracy.

Microsoft Excel questionnaire template

Streamline the due diligence process by enabling third-party and engagement contacts to respond to questionnaires using a Microsoft Excel template by downloading the questionnaire as a template, completing it according to the included instructions, and importing the final version into the Third-party portal. This feature update enhances flexibility by enabling third-party and engagement contacts to provide information outside the third-party portal. Third-party risk assessors [sn_vdr_risk_asmt.vendor_assessor] and Third-party risk managers [sn_vdr_risk_asmt.vendor_risk_manager] can access this feature and respond to questionnaires on behalf of Third-party and engagement contacts through the Vendor Management Workspace.

Codes and additional identification information for ICT third-party service providers

If you have the third-party assessor role [sn_vdr_risk_asmt.vendor_assessor], help ensure compliance with DORA regulations by adding additional code types and a legal name to third-party and third-party engagement records in the digital resilience third-party registers within the Vendor Management Workspace. Include this information when the legal name of a third party differs from its commonly recognized name, or when you need to record multiple identification codes like a EUID, LEI, or Country code. When supply chain, assessment, or contract records are associated with a third party or third-party engagement using the EUID code type, all relevant fields will be automatically populated.

Function types for ICT third-party service providers

If you have the third-party assessor role [sn_vdr_risk_asmt.vendor_assessor], help ensure compliance with DORA regulations by using Business capability as an additional function type for function records in the digital resilience third-party registers within the Vendor Management Workspace.

Multiple legal entities making use of the services for contracts

If you have the third-party assessor role [sn_vdr_risk_asmt.vendor_assessor], add multiple legal entities that are using services as part of a contract record in the digital resilience third-party registers within the Vendor Management Workspace. Including all entities that are using services associated with a contract is essential for maintaining transparency, helping ensure compliance, and enhancing operational resilience.

Activation information

Install Third-party Risk Management by requesting it from ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Use Operational Resilience Workspace to manage your resilience tasks and monitor resilience metrics from a single dashboard.

GRC Risk Management

Use Risk Management with the ServiceNow® Advanced Risk application to identify and monitor high-impact risks, improve your risk-based decision-making, and reduce your reaction time from days to minutes.

GRC Risk Workspace

The Risk Workspace in the ServiceNow® Advanced Risk application provides a simplified user experience with a single-pane view for risk-related activities.

Third-party Risk Management upgrade information

ServiceNow® Third-party Risk Management application upgrade information for the Yokohama release.

Important information for upgrading Vendor Risk Management to Yokohama

Starting with the Vancouver release, if you're a VRM user upgrading to TPRM, from an earlier release, you must run each upgrade sequentially to ensure that fix scripts run correctly. This means upgrading from one release to the next rather than skipping to the latest release. Not running scripts in the correct order can result in data inconsistencies, broken functionalities, and conflicts.

Plugin requirements

TPRM

- Activate the Third-party Risk Management application [com.sn_vdr_risk_asmt].
- Activate the Third-party Risk Due Diligence application [com.sn_tprm_dd].
- Activate the Vendor Risk Management Workspace application [sn_vrm_ws] if you want to use the Vendor Risk Management workspace.

VRM

- Activate the Vendor Risk Management application [com.sn_vdr_risk_asmt].
- Activate the Vendor Risk Management Workspace application [sn_vrm_ws] if you want to use the Vendor Risk Management workspace.

For more information on licensing or metering, see Tracking a managed activity, Third-party Risk Management (TPRM) Licensing and Vendor Risk Management (VRM) Licensing.

VRM to TPRM changes

- The name of the application changed from Vendor Risk Management to Third-party Risk Management as part of the Vancouver release.
- The internal assessment [sn_vdr_asmt_internal_assessment] table is introduced, extending the tiering assessment [sn_vdr_risk_asmt_vdr_tiering_assessment] table.
- The Due Diligence Review (DDR) workflow is introduced, which uses both the internal assessment and the external (VRA) assessment.

Note:
If you have customizations on the Tiering assessment [sn_vdr_risk_asmt_vdr_tiering_assessment] and VRA [sn_vdr_risk_asmt_assessment] tables, they might need modifications to work with the DDR workflow.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- The Third-party Scores [sn_vdr_risk_asmt_security_score] table has been relabeled to Risk Intelligence Scores [sn_vdr_risk_asmt_security_score] to reduce confusion.
- All instances of “vendor” are changed to “third party” in the user interface, though some global instances might remain unchanged.

Note:
If you don’t want to use the due diligence workflow, your original workflow (Tiering assessment and External assessments (VRAs) should be the same).

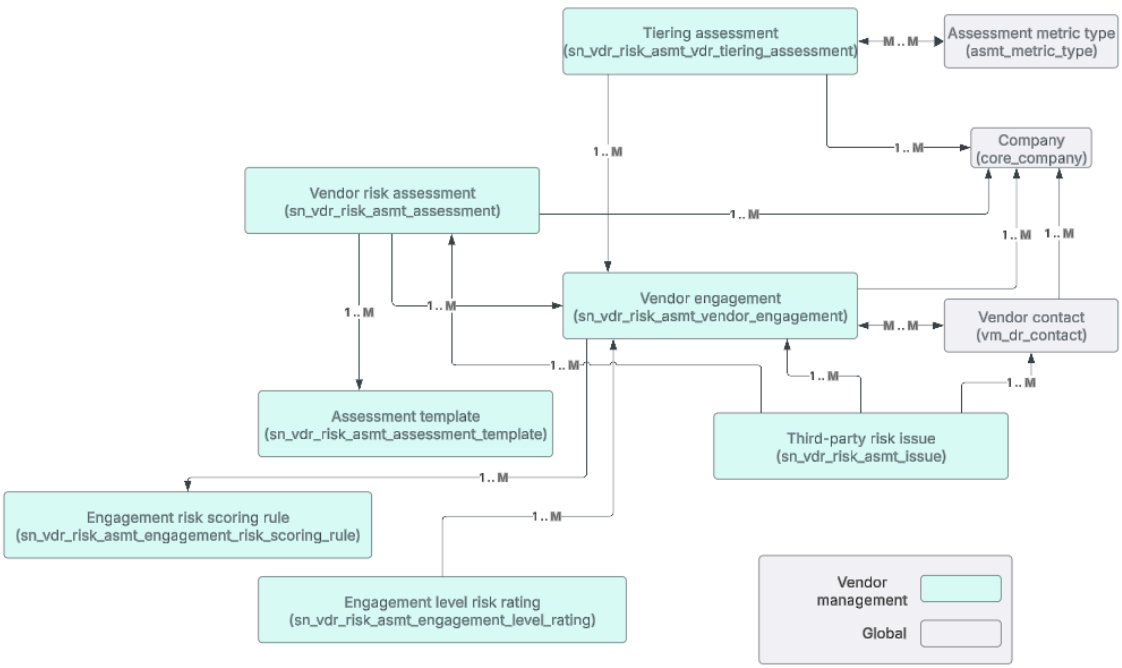
VRM and TPRM data model

The Vendor Risk Management data model primarily uses the term “vendor” and includes the Tiering assessment [sn_vdr_risk_asmt_vdr_tiering_assessment] and VRA [sn_vdr_risk_asmt_assessment] tables.

The Third-party Risk Management data model uses the term “third-party” in most user interface elements and introduces the DDR workflow, which uses both internal [sn_vdr_asmt_internal_assessment] and [sn_vdr_risk_asmt_assessment] external assessments.

The following models show VRM's and TPRM's capabilities.

VRM data model



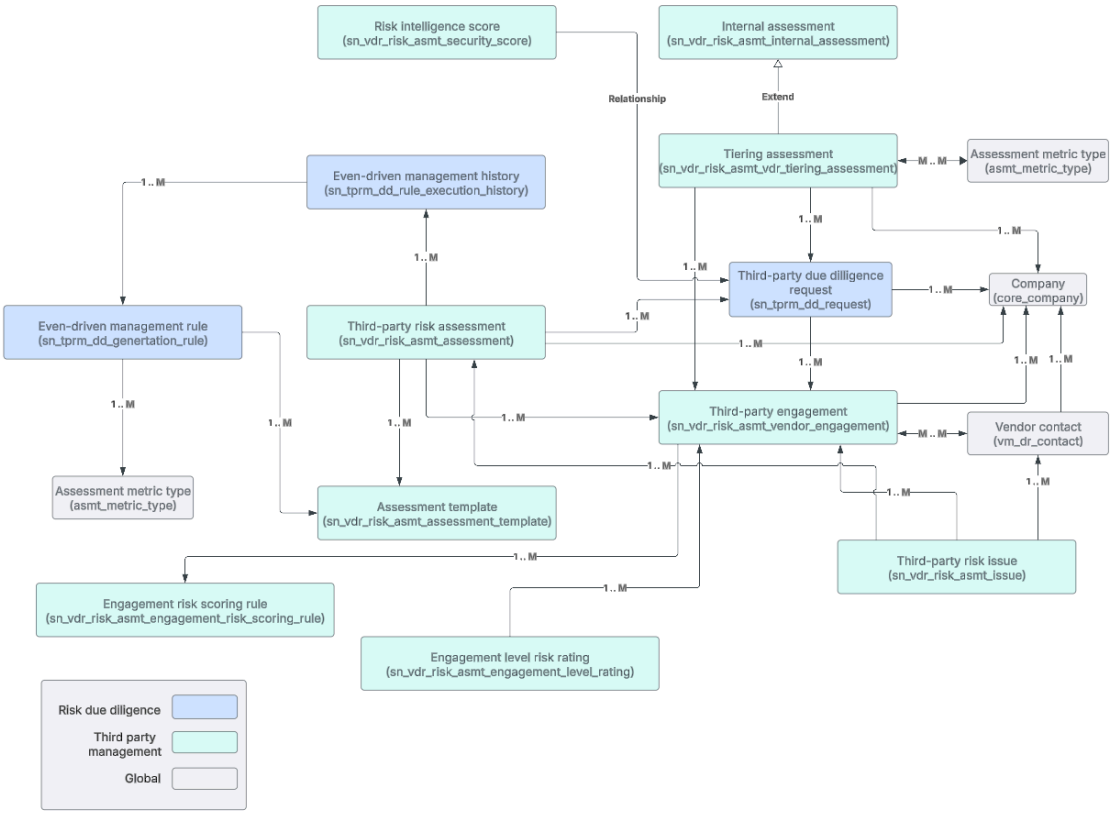
The components included in the Vendor Risk Management data model are as follows:

- Tiering assessment [sn_vdr_risk_asmt_vdr_tiering_assessment]
- Company [core_company]
- Vendor risk assessment [sn_vdr_risk_asmt_assessment]
- Vendor engagement [sn_vdr_risk_asmt_vendor_engagement]
- Vendor contact [vm_dr_contact]
- Assessment metric type [asmt_metric_type]

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Assessment template [sn_vdr_risk_asmt_assessment_template]
- Engagement risk scoring rule [sn_vdr_risk_asmt_engagement_risk_scoring_rule]
- Engagement level risk rating [sn_vdr_risk_asmt_engagement_level_rating]

TPRM data model



The components included in the Third-party Risk Management data model are as follows:

- Risk intelligence score [sn_vdr_risk_asmt_security _score]
- Internal assessment [sn_vdr_asmt_internal_assessment]
- Tiering assessment [sn_vdr_risk_asmt_vdr_tiering_assessment]
- Event-driven management history [sn_tprm_dd_rule_execution_history]
- Third-party due diligence request [sn_tprm_dd_request]
- Company [core_company]
- Event-driven management rule [sn_tprm_dd_generation_rule]
- Third-party risk assessment [sn_vdr_risk_asmt_assessment]
- Third-party engagement [sn_vdr_risk_asmt_vendor_engagement]
- Vendor contact [vm_dr_contact]
- Assessment metric type [asmt_metric_type]
- Assessment template [sn_vdr_risk_asmt_assessment_template]
- Third-party risk issue [sn_vdr_risk_asmt_issue]
- Engagement risk scoring rule [sn_vdr_risk_asmt_engagement_risk_scoring_rule]
- Engagement level risk rating [sn_vdr_risk_asmt_engagement_level_rating]

Healthcare and Life Sciences release notes

Healthcare and Life Sciences has new and updated features in the Yokohama release.

Care Team Operations for Biomed release notes

The ServiceNow® Care Team Operations for Biomed application contains case types to report and fulfill biomed issues as part of Healthcare Operations. Care Team Operations for Biomed is a new application in the Yokohama release.

Care Team Operations for Biomed highlights for the Yokohama release

- Automate healthcare operations by enabling biomed support request creation and fulfillment.
- Create biomed support requests from directly within the Care Team Portal.
- Gain full visibility into reported biomed cases while enabling biomed teams to manage and fulfill them as work orders or work orders tasks when Clinical Device Management is installed.

See Care Team Operations for Biomed for more information.

Important:
Care Team Operations for Biomed is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Care Team Operations for Biomed features

Healthcare Biomed case overview

Expand biomed cases to support custom support requests for your organization's biomed department.

Care Team Portal biomed requests

Request support from your organization's biomed department with preconfigured record producers.

Healthcare biomed case and work order synchronization

Care Team Operations for Biomed links biomed cases and work orders. For customers with Clinical Device Management, care teams will gain visibility into all biomed cases reported by their team while also providing biomed support teams with the ability to fulfill cases as work orders and work order tasks.

Activation information

Install Care Team Operations for Biomed by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Related ServiceNow applications and features

Healthcare Operations Core

ServiceNow® Healthcare Operations Core provides the foundation to enable hospitals to streamline and automate their operations by integrating with supporting service departments. It provides the Care Team Portal functionality for use with Care Team Operations for Biomed.

Care Team Operations for Healthcare IT release notes

The ServiceNow® Care Team Operations for Healthcare IT application contains case types to report and fulfill healthcare IT issues as part of Healthcare Operations. Care Team Operations for Healthcare IT is a new application in the Yokohama release.

Care Team Operations for Healthcare IT highlights for the Yokohama release

- Automate healthcare operations by enabling IT support request creation and fulfillment.
- Create IT support requests from directly within the Care Team Portal.
- Gain full visibility into reported IT cases while enabling IT teams to manage and fulfill them as incidents efficiently.

See Care Team Operations for Healthcare IT for more information.

Important:
Care Team Operations for Healthcare IT is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Care Team Operations for Healthcare IT features

Healthcare IT case overview

Expand healthcare cases to support custom support requests for your organization's IT department.

Care Team Portal IT requests

Request support from your organization's IT department with pre-configured record producers.

Healthcare IT cases and incident synchronization

Care Team Operations for Healthcare IT links Healthcare IT cases and incidents, enabling care teams to get visibility into all IT cases reported by their team while also providing IT support teams with the ability to fulfill cases as incidents

Activation information

Install Care Team Operations for Healthcare IT by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Healthcare Operations Core highlights for the Yokohama release

- Gain visibility into operational cases that are related to your care team and create support requests using the Care Team Portal.
- Expand operational cases to supporting services departments by leveraging the Healthcare Operations case type.
- Utilize the streamlined admin experience for creating healthcare organizations and hierarchies.

See Healthcare Operations Core for more information.

Important:
Healthcare Operations Core is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Healthcare Operations Core features

Care Team Portal

Create requests for supporting service departments and maintain visibility into all requests created by you or your team. This experience can be used on a standalone portal or embedded in EMR systems.

Healthcare Operations Case overview

Create and customize cases for supporting service departments that can be used within the Care Team Portal.

Healthcare organization admin experience

Create healthcare organizations and hierarchies, add or edit members, and automatically create associated Service Model Foundation records (internal business locations).

Activation information

Install Healthcare Operations Core by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. Patient Support Services release notes

The ServiceNow® Patient Support Services application streamlines the patient onboarding, education, and engagement for various patient support services. This application is currently supported for the Yokohama release, but it will be deprecated in a future release.

Deprecations

Starting with the Yokohama release, Patient Support Services is being prepared for future deprecation. It will be hidden and no longer installed on new instances but will continue to be supported. For details on this process, see the Deprecation Process [KB0867184] article in the Now Support Knowledge Base.

Pre-Visit Management release notes

The ServiceNow® Pre-Visit Management application streamlines the scheduling process of procedure requests for patients and increases visibility to pre-authorization approvals prior to scheduled procedures. This application is currently supported for the Yokohama release, but it will be deprecated in a future release.

Deprecations

Starting with the Yokohama release, Pre-Visit Management is being prepared for future deprecation. It will be hidden and no longer installed on new instances but will continue to be supported. For details on this process, see the Deprecation Process [KB0867184] article in the Now Support Knowledge Base.

Redox Inbound Integration release notes

The ServiceNow® Redox Inbound Integration application provides real-time bidirectional data exchange with external healthcare systems via the Redox platform. The Redox Inbound Integration application is being prepared for deprecation, starting with the Yokohama release.

Deprecations

Starting with the Yokohama release, Redox Inbound Integration is being prepared for future deprecation. It will be hidden and no longer installed on new instances but will continue to be supported. For details on this process, see the Deprecation Process [KB0867184] article in the Now Support Knowledge Base.

Impact release notes

ServiceNow® Impact is a customer success product that helps you use the power of the AI Platform for your business transformation. Impact was enhanced and updated in the Yokohama release.

Impact highlights for the Yokohama release

- Adopt ServiceNow products and measure their value, gain access to expert guidance and personalized recommendations, maintain a high-performing platform, and enhance business continuity with 24 x 7 technical support.
- Access the Impact Store Application integrated within your ServiceNow instance and connected to the Impact Delivery Instance (IDI) portal.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Use Proactive Code Check to track compliance against leading practices for coding and organizational standards.
- Jumpstart your understanding and assessment of ServiceNow platform capabilities with new Accelerators that provide a demonstration of the possibilities and capabilities with instance features and maximize value exactly where you need it.

See Impact Store Application for more information.

Important:
Impact is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Important information for upgrading Impact to Yokohama

The Impact Store Application configuration requires a sequence of tasks. See Configuring the Impact Store Application for details.

New in the Yokohama release

Impact Store Application

- Impact Home page Use the Impact home page, an organized collaborative portal, which guides you to your relevant content and helps focus and accomplish your tasks with seamless interaction with Impact application features.
- Use Guided Setup to synchronize and migrate data to the Impact Store Application: Use the simplified interface to synchronize and configure your Impact Store App with the Impact Delivery Instance.
- Grant temporary instance access to your Impact Squad to facilitate effective support and rapid issue resolution.
- Convert an Impact entity to SPM entity as a work item: Create an Impact entity and associate the SPM record details to it, which helps you to avoid manual intervention in converting the entities from Impact to SPM portals to avoid duplication of entities in the process.
- Using recommendations list in Impact home page:
  - Sort the recommendations list using the search and filter options by entering a keyword or phrase to narrow down the list and find the recommendations that you're looking for.
  - Convert Impact recommendations and free-form initiatives into actionable, trackable Strategic Portfolio Management (SPM) or Collaborative Work Management (CWM) work items. Creating work items using recommendations and initiatives.
- Impact Store Application product adoption
  - Use the Product Adoption Roadmap (PAR) to view a recommended implementation sequence for your capabilities:
    - Create and publish a product adoption roadmap: Use pre-defined ServiceNow templates or build from your own.
    - Use Product Adoption Roadmap Templates with pre-defined sequence of capabilities for ITSM ((IT Service Management)), ITOM ((IT Operations Management)), and Security Operations.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

    - View and edit phase-specific notes for a capability to understand prerequisites, plan training, and additional implementation considerations.
    - Customize your roadmap by adding or removing capabilities as needed.
    - Request Related Accelerators (if available) to improve adoption of the capabilities

- Manage Capabilities Map :
    - Explore, track, and manage the descriptions, notes, and related resources for your entitled capabilities.
    - Use the updated Data Collection Content Packs to automatically transfer Impact Value Metrics to the centralized Impact instance to manage the Value Journey, including Setting Value Baselines and Targets, Outcome Performance Reviews, and the Value Report.
    - Use the Capability Details page to view and manage comprehensive information related to a capability in your product adoption journey. The full-page layout replaces the previous pop-up view, making it easier to access, navigate and manage important details, such as usage status and notes in one centralized location.
    - View and add adoption guidance for different phases, such as prerequisites and implementation instructions in notes specific to a phase.
    - Measure a selected business objective under the same product across multiple ServiceNow instances. Use the Instance option on the Objectives and Outcomes, and Outcomes Insights to filter business objectives and outcomes by the ServiceNow instance. Add and edit the business objectives connected to the capability.
- Impact Platform Health :
    - Use Proactive Code Check to track compliance against coding leading practices and organizational standards.
    - Activate Proactive Code Check in the Health Store Application to scan update sets and check compliance standards and adherence to leading practices.
    - Scan update sets for leading practice violations in a non-production environment with Proactive Code Check and improve code quality, reduce errors, and enhance system stability.

Impact Delivery Instance (formerly Impact Digital Experience)

- Connect to the provider instance : The administrator or a named contact log in to your instance to facilitate the connection of data with the Impact Store Application.
- Product Adoption : Start an initiative from an individual capability to log and track your activities toward the implementation. The reference of the created initiative is available in the capability details and initiatives roadmap. The reference of the created initiative is available in the capability details and initiatives roadmap.
- Healthscan definitions updates: May 2025 store : Some HealthScan definitions have been updated or deprecated for the May store release.

- Release and Deployment Advisory for Pro-code Development: Provides guidance to assist pro-code developers in the tools and techniques to release and deploy ServiceNow application configurations and customizations.
- UX: The basics to unlock your ServiceNow success
- UX: Why It Matters and How to Apply It: Takes examples directly from your instance to demonstrate how improving UX can directly influence the success of your ServiceNow investment.
- LSD Maturity Assessment: Provides guidance on fine-tuning your Legal Service Delivery (LSD) on the ServiceNow platform.
- Introduction to CMDB: Ingestion: Demonstrates the possibilities and capabilities of automating and standardizing the data entry from the input sources for their Configuration Management Database (CMDB).
- Extend Your AI Search: Provides prescriptive guidance on extending your AI Search beyond foundational levels.
- Jumpstart Your Subscription Management: Provides a demonstration of the possibilities and capabilities available with the Subscription Management Application in your instance.
- Jumpstart Your AI Agent Studio: Provides Impact customers with an overview and applied demonstration of AI agents within the platform.

Impact Instance Observer

- Use Root Cause Correlation to resolve issues that are identified by configured alerts and drill directly into the records causing the issues.
- Instance Observer user configurable dashboard: Create your own dashboard according to your preferences of metrics to help analyze the health of your system in a snapshot or use the default home page to see a snapshot of instance overall health with key insights, such as performance, reliability, and availability at a glance with the available widgets.
- Use the Instance Observer Seats Add-on to obtain additional seats to your eligible Impact package.

UI changes

Impact Store Application

Impact is accessible in both the Impact Delivery Instance, formerly the Impact Digital Experience, and as the ServiceNow Impact Store Application.

Changed in this release

New Impact Store Application experience

The new Impact Store Application provides a more efficient, streamlined way for you to work. For information about how to upgrade, see Configuring the Impact Store Application. Note that Impact Delivery Instance (formerly Impact Digital Experience) is still supported in this release.

Value Management name changes:

- Impact Value Journey is renamed to Impact Value
- Value Blueprint is renamed to Objectives and Outcomes.
- Outcomes Performance is renamed to Outcomes Insights.
- Business Objectives is renamed to Objectives.
- Operational Outcomes is renamed to Outcomes.
- Business Value Report is renamed to Value Report.

Impact Workspace name change

Impact Workspace has been renamed as Impact.

Impact Store App user experience

Impact users who have migrated from the Impact Delivery Instance may access Quicklinks to access features that haven't been migrated to Impact Store Application yet.

Custom payload in Instance Observer alerts integration

Define and manage a custom JSON request payload for ServiceNow and third-party integrations with the Instance Observer enhancements.

Accelerator catalog

Minor updates have been incorporated into the following accelerators:

- Jumpstart Your GenAI
- Jumpstart Your Now Assist Skill Kit
- Jumpstart Your Document Intelligence
- On-Demand Value Report
- LSD Maturity Assessment

The following Accelerators are renamed:

- Jumpstart Your Now Assist for ITSM is now Jumpstart Your AI Agents for ITSM
- Jumpstart Your Now Assist for CSM is now Jumpstart Your AI Agents for CSM

Impact packages

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Add-on SKUs have been updated to provide additional flexibility for Impact customers and are available in all environments where Impact is available.
- Updates to the Impact Advanced package, offered pursuant to the applicable Impact Accelerator Description available at#https://www.servicenow.com/legal/servicenow-impact.html.

Data Collection Toolkit

- Download the content packs for both regulated (GCC/NSC) and non-regulated customers.
- Automatically transfer Impact Value Metrics to the centralized Impact instance to manage the value journey, including setting value baselines and targets, outcome performance reviews, and the value report with the enhanced toolkit.

Impact Delivery Instance (formerly Impact Digital Experience)

With the Yokohama release, Impact Digital Experience (IDE) has been renamed as Impact Delivery Instance (IDI).

Removed in this release

The Expert Connect Accelerator is no longer supported as of Yokohama.

Activation information

Impact is available for activation with a separate subscription. Your Customer Success Manager sets entitlement information for access.

- Impact Delivery Instance is accessed using your unique portal URL. Your Impact Squad sends you login information to access your IDI portal.
- For the Impact Store Application, see Install the Impact Store Application from the ServiceNow Store for activation details.
- Proactive Code Check can be activated in your production and non-production instances. See Configuring Proactive Code Check for details.

IT Asset Management release notes

IT Asset Management has new and updated features in the Yokohama release

Enterprise Asset Management release notes

The ServiceNow® Enterprise Asset Management application manages the entire life cycle of your enterprise's connected and non-connected assets, which enables you to maintain and maximize the life of your assets while minimizing any costly downtimes. Enterprise Asset Management was enhanced and updated in the Yokohama release.

Enterprise Asset Management highlights for the Yokohama release

- Streamline firmware management with the new Firmware model class.
- Get normalization coverage for firmware that is embedded into your industrial and IT hardware-based Operational Technology (OT) assets.
- Achieve synchronization between physical assets and configuration items (CIs) for Operational Technology (OT) assets through MAC addresses.
- Streamline OT Asset Management (OTAM) licensing to include hardware resource categories for OT hardware assets to access OT Asset Management features and workflows.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Get support for hardware models and OT hardware assets in the OT Asset Management workspace.
- Benefit from accessibility improvements to create a configurable workspace that supports Web Content Accessibility Guidelines (WCAG) 2.1 Level AA conformance.

See Enterprise Asset Management for more information.

Important:
Enterprise Asset Management, Enterprise Asset Management for Healthcare, Operational Technology (OT) Asset Management, and Expanded Model and Asset Classes are available in ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Gain normalization coverage for firmware in your Operational Technology (OT) assets

Achieve enhanced normalization across your OT deployments by normalizing the firmware that is embedded into your OT assets. Use the normalized data to track and manage the life cycles of your firmware separately from your OT assets so that you can directly detect and mitigate firmware vulnerabilities. You can view the firmware model details in the OT model management view of the OT Asset Workspace.

Note:
Firmware normalization is applicable only to OT Asset Management.

Manage hardware models and assets in the Operational Technology (OT) Asset Management application

Enable your OT managers to create hardware models and assets in the OT Workspace. You can integrate hardware models and OT assets into such Enterprise Asset Management flows as asset request, asset refresh, stock order, multi-asset onboarding, Return Merchandise Authorization (RMA), repair, and disposal. You can also generate maintenance plans and work orders for your OT hardware assets.

Synchronize asset and CIs for Operational Technology (OT) assets

Synchronize the MAC addresses between the asset and network adapter CI for OT assets.

License your OT hardware assets using the new resource categories available in OTAM licensing

Access OT Asset Management features and workflows for OT hardware assets through the following hardware resource categories:

- OT Servers
- OT Network Gear
- OT Storage
- OT End User Computers
- OT Mobile Devices
- OT Monitors
- OT Printers
- OT Unclassified Hardware

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The hardware resource categories are opted in by default. The OT hardware assets are counted only under OTAM licensing. They are excluded from the HAM licensing that is based on the OT entity flag.

Note:
The OTAM licensing changes apply only to OT Asset Management.

Manage mission-critical enterprise assets and linear assets for telecommunications networks

Use the Enterprise Asset Management for Data Center and Network Asset Management (DCNAM) application to track and manage mission-critical facility-based enterprise assets and linear assets for telecommunications networks. Get a comprehensive view of these assets throughout their life cycles so that you can help optimize their performance and improve their longevity.

Fulfill Return Merchandise Authorization (RMA) requests as a Device as a Service (DaaS) provider, vendor, or manufacturer

Use the Enterprise Asset Management for Providers application to fulfill the RMA requests that you receive from customers as a DaaS provider, vendor, or manufacturer. The application adds support for RMA response orders, which enable you to track and manage the process of repairing or replacing defective assets for your RMA requests. The application also adds support for inbound asset orders, which enable you to track and manage the process of providing assets for your RMA requests. By managing these orders from a consolidated location, you can streamline your operations and improve efficiency.

UI changes

MAC address field on the asset form

The asset form shows the **MAC address** field for the following asset classes:

- Construction
- Facility
- Industrial
- Medical
- Retail
- Tactical equipment
- Transportation
- Wearable
- Hardware

Note:
The **MAC address** field is shown on the asset form in Enterprise Asset Workspace and OT Asset Workspace.

Child assets activity and MAC address field in the asset onboarding playbook

The child assets activity was added to the asset onboarding playbook for preassembled industrial assets. The Asset details activity in the playbook shows the **MAC address** field.

Note:
These UI changes apply to Enterprise Asset Workspace and OT Asset Workspace.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

MAC address field in multi-asset onboarding

The **MAC address** field was added to the Add assets dialog box in multi-asset onboarding through catalog requests and onboarding orders. The Asset details activity in the Multi-asset onboarding playbook shows the MAC address that you provided.

Note:
This UI change applies to Enterprise Asset Workspace and OT Asset Workspace.

MAC address field in an Advanced Shipment Notification

The **MAC address** field was added to the Download template for an Advanced Shipment Notification. After a successful import, the MAC address that you provided in the template is added to the Asset [alm_asset] table. The **MAC address** field is also shown on the asset form for all assets except consumables and pallets.

Note:
This UI change applies to Enterprise Asset Workspace and OT Asset Workspace.

MAC address field in Bulk import

The **MAC address** field was added to the Download template for the following Bulk import modes:

- Create assets
- Update assets
- Create models and assets

After a successful import, the MAC address that you provided in the template is added to the Asset [alm_asset] table. The **MAC address** field is also shown on the asset form for all assets except consumables and pallets.

Note:
This UI change applies to Enterprise Asset Workspace and OT Asset Workspace.

MAC address field in Receive Purchase Order

The Capture asset tags dialog box in the Receive Purchase Order shows the **MAC address** field in addition to the Serial number and Asset tag.

Note:
This UI change applies to Enterprise Asset Workspace and OT Asset Workspace.

OT entity flag

The asset form shows that the OT entity flag set to true for hardware and industrial assets that were created in the OT Asset Workspace.

Changed in this release

Refresh flow in OT workspace

For single and multi-model refresh orders, the OT manager can edit the replacement model even after the refresh order has been created in the OTAM workspace. Additionally, the sourcing location is also editable.

Reflow for Configurable Workspace

The configurable Enterprise Asset Workspace supports reflow, which enables pages and content to be zoomed up to 400% through your browser settings without loss of content or functionality.

Activation information

Install the following applications by requesting them from ServiceNow Store:

- Enterprise Asset Management
- Enterprise Asset Management for Healthcare
- OT Asset Management
- Expanded Model and Asset Classes

Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Accessibility information

Accessibility improvements

Accessibility improvements were completed to create a configurable workspace that supports WCAG 2.1 Level AA conformance.

Reflow

The configurable workspace supports reflow, which enables pages and content to be zoomed up to 400% through your browser settings without loss of content or functionality. Additionally, content can be enlarged without scrolling in two dimensions at a width equivalent to 320 CSS pixels or a height equivalent to 256 CSS pixels. Page layouts are transformed into a vertical, stacked view automatically when users increase browser zoom to 400%. This enhancement helps users with low vision or who have trouble seeing web content in a browser due to monitor size, device type, poor lighting, or other situations. Reflow can be turned off with a system property for instances, experiences, and pages. See Reflow for Configurable Workspace for details.

Related ServiceNow applications and features

Hardware Asset Management highlights for the Yokohama release

- Achieve asset data accuracy, improve asset utilization, and reduce risk through Asset Attestation.
- Streamline Hardware Asset Management (HAM) licensing for only non-OT hardware assets to access Hardware Asset Management features and workflows.
- Benefit from accessibility improvements to create a configurable workspace that supports Web Content Accessibility Guidelines (WCAG) 2.1 Level AA conformance.

See Hardware Asset Management for more information.

Important:
Hardware Asset Management is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Maintain accurate asset details by creating Asset Attestations

Validate whether assets are in use and confirm asset assignment by performing audits through Asset Attestation to verify through confirmation by employees whether they are still using assigned serialized hardware assets.

Hardware Model Normalization for Operational Technology (OT) assets

When the OT Asset Management application is installed, standardize your hardware and consumable models with a minimum of one OT asset in addition to the model categories that belong to the opted-in HAM resource categories through the Hardware Model Normalization process. The OT entity flag on the asset indicates whether it's an OT asset.

UI changes

My Assets menu and Assets tab on the Employee Center portal

The My Assets menu appears on the global header navigation bar of the Employee Center home page. This menu provides employees with quick access to the details of assets assigned to them.

The Employee profile widget now includes an Assets tab, which shows the details of the assets assigned to the employee.

Changed in this release

Reflow for Configurable Workspace

The configurable Hardware Asset Workspace supports reflow, which enables pages and content to be zoomed up to 400% through your browser settings without loss of content or functionality.

Deprecations

The MAC address [mac_address] field in the Hardware [alm_hardware] table is deprecated. The data in this field is available in the new MAC address (mac_addr) field in the Asset [alm_asset] table.

Related ServiceNow applications and features

Software Asset Management

The Software Asset Management application enables you to track, evaluate, and manage the software licenses, software compliance, and software optimization. You can reclaim unused software rights, purchase new software rights, and manage allocations for entitlements.

Enterprise Asset Management

The Enterprise Asset Management application enables you to manage the entire life cycle of your connected and non-connected enterprise assets. It provides a comprehensive end-to-end solution for maintaining enterprise assets, minimizing costly downtime, and maximizing enterprise asset usability.

Contract Management

The Contract Management application enables you to track and manage your contracts.

Procurement

The Procurement application helps you to create purchase orders and to obtain items for fulfilling service catalog requests.

Software Asset Management release notes

The ServiceNow® Software Asset Management application systematically tracks, evaluates, and manages the cost, utilization, compliance, and optimization for software and SaaS applications. The Software Asset Management application was enhanced and updated in the Yokohama release.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Software Asset Management highlights for the Yokohama release

- Leverage generative AI by using the Now Assist for Software Asset Management (SAM) application to create publisher summaries on software deployment, license compliance, configuration health, and optimization.
- Manage the licenses for your Oracle Databases and WebLogic deployments on the Nutanix virtualization technology.
- Integrate SAP Ariba and SAP S/4HANA Cloud with the Software Asset Management application to monitor and track software usage and subscriptions effectively.
- Simplify the onboarding of your Software Asset Management (SAM) application by following the prescriptive guidance provided in the SAM Guided Setup and Microsoft 365 Guided Setup.
- Track and optimize your IBM Cloud Pak licenses by using the Software Asset Management application.
- Benefit from accessibility improvements to create a configurable workspace that supports Web Content Accessibility Guidelines (WCAG) 2.1 Level AA conformance.

See Software Asset Management for more information.

Important:
SaaS License Management, Data Collection for Oracle Global Licensing and Advisory Services, IBM License Compliance for Software Asset Management, ITAM Health Check, and Software Asset Management Guided Experiences are available in ServiceNow Store. For details, see the "Activation information" section of these release notes.

Important information for upgrading Software Asset Management to Yokohama

Starting from the Yokohama release, all the reconciliation script includes are being moved from the family release to the Software Asset Management store application (com.sn_itam_samp). When upgrading to Yokohama, if you have made customizations to reconciliation script includes, you must move your customizations to the new script includes. The old script includes will be deprecated.

When upgrading to Yokohama Patch 1 with the Software Asset Management (sn_itam_samp) 2.1.0 store application installed, you must delete the entitlements for the existing CrowdStrike integration profiles. Then, create new entitlements for various CrowdStrike products, such as CrowdStrike Falcon Endpoint Protection and CrowdStrike Falcon Discover, based on their license metrics. These metrics include the Reserved Hourly Average Sensor and Sensor Subscription, which are found under the CrowdStrike License Metric Group.

- If any existing CrowdStrike profiles are in the Draft state, create new integration profiles and delete the existing ones.
- If any existing CrowdStrike profiles are in the Published state, their state changes to Draft.

New in the Yokohama release

Gain insights into your publisher license compliance by using Now Assist for Software Asset Management

Use generative AI to gain a comprehensive summary of publisher license compliance. The detailed publisher summaries enable you to understand the publisher license compliance details.

Manage Microsoft 365 license compliance and optimization through Microsoft 365 Guided Setup

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Get a prescriptive guidance for the tasks that you must perform in the Software Asset Management application, Microsoft 365 admin center, and other applications to configure Microsoft 365. This Guided Setup organizes the configuration activities into various categories so that you can see the list of tasks that need to be performed.

Optimize Microsoft 365 subscriptions

Optimize how to manage Microsoft 365 licensing with these enhancements:

- Auto removal of licenses from the Microsoft 365 admin center by detecting low usage and overlapping subscriptions.
- Expanded support for usage-based optimization such as Microsoft 365 E3 Teams and Microsoft 365 government plans.

Optimize Microsoft Dynamics 365 subscriptions

- Receive recommendations to save costs by removing low-usage subscriptions for MRS applications.
- Receive guidance on cost-saving strategies while purchasing multiple base subscription licenses for various Microsoft Dynamics 365 applications. Using a combination of base and attach licenses can provide a more cost-effective solution.

Simplify the activation process for SaaS License Management

Simplify your activation process by optimizing your SaaS subscriptions. You can activate just the SaaS applications that you want to manage.

SaaS security permissions

While integrating your SaaS applications, you can now grant the minimum permissions required to enable key use cases, such as downloading subscriptions, calculating activity, and reclaiming subscriptions.

Optimize subscriptions for SAP Ariba

Gain visibility to the subscriptions and reclaim stale licenses by integrating your ServiceNow instance with the SAP Ariba application.

Configure and map users from SaaS portals to ServiceNow AI Platform with ease

Determine your licensed users by mapping user subscriptions from SaaS applications to users in ServiceNow AI Platform.

Optimize CrowdStrike subscriptions

Software Asset Management now includes support for CrowdStrike products with license metrics such as Sensor Subscription and Reserved Hourly Average Sensor. The introduction of a new license metric group, CrowdStrike, improves data coverage and reconciliation. By managing the entitlements for various CrowdStrike products, including CrowdStrike Falcon Endpoint Protection, CrowdStrike Falcon Discover, and others, you can get better tracking and compliance.

Manage onboarding of products to support the Software Asset Management (SAM) application through SAM Guided setup

Get step-by-step guidance on the activities that you must perform to onboard SaaS and on-premises products. The guided setup helps you to create or associate success goals, configure product integrations, create software entitlements, or run reconciliation to get the most out of the Software Asset Management application.

Manage license compliance for Oracle Database and WebLogic Server deployed on Solaris Logical Domain (LDOM)

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Support Oracle Database and WebLogic Server licensing for Per Processor and Named User Plus (NUP) license metrics that are deployed on the hard-partitioned Solaris LDOM infrastructure, also known as Oracle VM Server for SPARC.

Manage compliance for SAP S/4HANA Cloud Public Edition

Gain visibility to software usage information and subscriptions by integrating your Software Asset Management application with the SAP S/4HANA Cloud Public Edition. This integration supports the Full User Equivalent (FUE) license metric that is used to grant licenses for SAP cloud applications.

Determine license compliance for Oracle products deployed on Nutanix virtualization technology

License Oracle Database Server, Options, and WebLogic Server with deployments on the Nutanix virtualization technology.

Support for revenue-based license metrics for SAP engines

Gain the ability to maintain licenses for higher value, revenue-based SAP engine products.

Leverage machine learning normalization for software recognition in protected government environments

Extend machine learning normalization capabilities to Government Community Cloud (GCC) and National Security Cloud (NSC) environments.

Leverage machine learning spend detection in protected government environments

Extend Software Spend Detection capabilities to Government Community Cloud (GCC) and National Security Cloud (NSC) environments.

Optimize licensing for IBM Cloud Paks

Use the IBM License Compliance for Software Asset Management application to track and manage licenses for your IBM Cloud Paks.

Expand end of life (EOL) reporting by creating parent-child relationships between software products

View, define, or update the parent-child relationships between your software products. Use these relationships to enable your child products to inherit life-cycle dates from their associated parent products.

View the Export Classification Control Numbers (ECCNs) for your software products

View the ECCNs that are mapped to your software products. Use this information to identify the products that are subject to U.S. export control regulations so that you can maintain export compliance across your products.

Create and manage entitlements for your Microsoft 365 From SA and Add-on user subscription licenses (USLs)

Create entitlements to track and manage the From SA and Add-on licensing terms for your Microsoft 365 subscriptions. Specify the details of each license, including the license type, license cost, and number of purchased rights. Use this information to determine your license compliance so that you can optimize your licensing costs.

Improve your compliance position with insights on how your software installations get licensed

Evaluate the installation to license consumption percentages and devise strategies for improving your license usage. Track your installation to license journey by connecting software installations to the licenses consumed and identifying the statuses such as licensed or unlicensed.

Gain an understanding of how licenses get calculated for your software assets

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Learn how the Software Asset Management application calculates the number of licenses that are required for your software assets with the factors that impact this process.

Increase the coverage of product life cycles

Expand the life-cycle date calculations to include the custom general availability (GA) dates. Additionally, support is also available for the End of Extended Support phase and the End of Support and End of Life phases.

Changed in this release

Reflow for Configurable Workspace

The Software Asset configurable workspace supports reflow, which enables pages and content to be zoomed up to 400% through your browser settings without loss of content or functionality.

Publisher optimizations dashboard for Microsoft

The Publisher Optimizations dashboard for Microsoft has been updated to support additional subscriptions.

Activation information

Software Asset Management is available with activation of the Activate all Software Asset Management Professional plugins, including the Software Asset Workspace plugin (com.sn_samp_master_ws). Activating this plugin automatically activates the Activate all Software Asset Management Professional plugin (com.sn_samp_master) and the Software Asset Workspace plugin (com.sn_sam_workspace). After the new plugin is activated, you can't access the classic user interface.

In the ServiceNow AI Platform® Yokohama release, there's limited support for the Software Asset Management classic user interface. While it remains active in your instance, including when you upgrade to a new ServiceNow AI Platform® release, you can move to the new workspace for an intuitive and personalized experience.

For releases prior to Utah, if you activated the older Software Asset Management Professional plugin (com.sn_samp_master), the Software Asset Workspace is available with activation of the Software Asset Workspace plugin (com.sn_sam_workspace). After the Workspace plugin is activated, you can't revert to the classic user interface. For details about the plugins and how to request them, see Request Software Asset Management.

To activate Next Experience, make sure that the *glide.ui.polaris.experience* system property in your instance is set to true.

Install the following Software Asset Management applications by requesting them from ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

- Software Asset Management - SaaS License Management
- Data Collection for Oracle Global Licensing and Advisory Services
- IBM License Compliance for Software Asset Management
- ITAM Health Check
- Software Asset Management Guided Experiences

Now Assist for Hardware Asset Management (HAM) release notes

The ServiceNow® Now Assist for Hardware Asset Management (HAM) application brings agentic AI to Hardware Asset Management. Now Assist for Hardware Asset Management (HAM) is a new application in the Yokohama release.

Now Assist for Hardware Asset Management (HAM) highlights for the Yokohama release

Yokohama Patch 13- Gain real-time visibility into critical asset data through generative AI-driven asset analysis summaries.

Yokohama Patch 11

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Review changes to Now Assist usage measurement.
- Some Now Assist skills, agents, and agentic workflows are on by default.
- Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications.

Yokohama Patch 6 - Automate the hardware asset repair process by using an agentic workflow and configure Access Control Lists (ACLs) for both AI agents and agentic workflows.

Yokohama Patch 4 - Automate and streamline your hardware asset request process by using an agentic workflow.

See Now Assist for Hardware Asset Management (HAM) for more information.

Important:
Now Assist for Hardware Asset Management (HAM) is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Important information for upgrading Now Assist for Hardware Asset Management (HAM) to Yokohama

Only users with the procurement_user role can access the Help manage hardware asset requests agentic workflow including the following AI agents:

- Hardware asset management sourcing AI agent
- Transfer order creation AI agent
- Purchase order creation AI agent

Now Assist for Hardware Asset Management (HAM) features

Manage your assets with comprehensive and real-time data

View consolidated asset information through AI-generated analysis summary on the asset record. The AI-generated summary dynamically updates based on the asset state and includes context from any active incidents or tasks. The summary displays the asset life cycle, current assignment and location, audit status, financial metrics, and identifies missing data to support asset management activities.

Yokohama Patch 6

Optimize hardware asset repair process with the suite of AI agents

Automate the repair of defective and out-of-warranty hardware assets by using AI agents in the Help repair hardware assets agentic workflow. These AI agents validate the repair tasks, provide detailed troubleshooting and repair instructions, and complete the tasks on receiving user confirmation.

Configure ACLs for AI agents and agentic workflows

Configure the Access Control Lists for who can discover and trigger AI agents and agentic workflows in their guided setups in AI Agent Studio. You can determine whether an AI agent or agentic workflow behaves as a dynamic user or as an AI user. You can also specify if an AI agent or agentic workflow can be available to all authenticated users or publicly available.

Yokohama Patch 4

Optimize hardware asset sourcing with the suite of AI agents

Automate your hardware asset sourcing by using AI agents in the Help manage hardware asset requests agentic workflow. These AI agents can efficiently handle

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

tasks such as automatically consuming assets from local stock, creating transfer orders, and generating purchase orders. By automating complex and repetitive tasks in the hardware asset request process, AI agents help to reduce manual intervention significantly, speed up request resolution, enhance the productivity of asset managers, and improve operational efficiency.

Changed in this release

Yokohama Patch 11

Changes to Now Assist usage measurement

Starting with Yokohama Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Some Now Assist skills are turned on by default

The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.

Configure ACLs for AI agents and agentic workflows

Configure the access control lists for who can discover and trigger AI agents and agentic workflows in their guided setups in AI Agent Studio. You can determine whether an AI agent or agentic workflow behaves as a dynamic user or as an AI user. You can also specify if an AI agent or agentic workflow can be available to all authenticated users or publicly available.

Activation information

Install Now Assist for Hardware Asset Management (HAM) by requesting it from the ServiceNow Store.

Note:
To take full advantage of the Now Assist for HAM features, you should upgrade to Yokohama Patch 6 and install the Now Assist for Hardware Asset Management (HAM) store application.

Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Additional requirements

The Now Assist for Hardware Asset Management (HAM) application requires the Hardware Asset Management Pro plus license.

Related ServiceNow applications and features

Now Assist

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Help improve the productivity and efficiency in your organization, deliver better self-service, recommend actions, provide answers, and empower your users to search more effectively.

Now Assist Admin console

Use the Now Assist Admin console for quick and effortless access to the important information that you need to set up, configure, and monitor Now Assist applications and features.

Now Assist panel

Use this conversational interface in ServiceNow® Service Operations Workspace to summarize a chat, an incident, or resolution notes so that you can get the context of this information more quickly.

Now Assist skills

Use the ServiceNow® Now Assist products to provide generative AI skills to meet the needs of users in different workflows, including case or incident summarization, chat summarization, resolution notes generation, and code generation.

Now Assist for Software Asset Management (SAM) release notes

The ServiceNow® Now Assist for Software Asset Management (SAM) application brings generative AI to IT Asset Management. Now Assist for SAM is a new application in the Yokohama release.

Now Assist for Software Asset Management (SAM) highlights for the Yokohama release

Yokohama Patch 13

- Enhance your SaaS integration troubleshooting experience with user-friendly error explanations and resolution guidance for runtime job failures.
- Streamline your Software Asset Management application implementation by automating entitlement extraction from contracts using AI, ensuring faster deployment.

Yokohama Patch 11

- Review changes to Now Assist usage measurement.
- Some Now Assist skills, agents, and agentic workflows are on by default.
- Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications.
- Automate user resolution with AI for SaaS license management to support efficiency and accuracy in subscription management.

Yokohama Patch 6

- Automate and streamline the software asset request process by using an agentic workflow.
- Automate the process of creating reclamation rules by identifying software products suitable for reclamation using an agentic workflow.
- Automate evaluation of unused and underutilized software installations for potential reclamation by using an agentic workflow.

Yokohama Patch 3

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Obtain crucial information on products to mitigate license compliance risks through product summaries on software deployment, license compliance, configuration health, and optimization.
- Manage product license compliance via recommendations that guide you to take steps to ensure the necessary compliance requirements.

Yokohama Early Availability: Leverage generative AI by using the Now Assist for SAM application to create publisher summaries on software deployment, license compliance, configuration health, and optimization.

See Now Assist for Software Asset Management (SAM) for more information.

Important:
Now Assist for SAM is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Yokohama Patch 13

Benefit with an integrated troubleshooting experience for SaaS applications by resolving common issues using automated guidance

Use generative AI to troubleshoot SaaS integrations with automated guidance and recommendations. By following the resolution guidance, you can significantly reduce downtime, lower the mean time to resolution (MTTR), and resolve complex SaaS issues without deep technical intervention.

Improve accuracy and productivity by extracting licensing data from contracts and generating software entitlements

Leverage generative AI to upload contract documents and automatically extract licensing data, generating software entitlements. You can review and refine the entitlements prior to finalization. The entitlements are created and linked to the contract records, ensuring a streamlined and accurate process.

Yokohama Patch 11

Automate the creation of user resolution rules to accelerate reconciliation and ensure consistent user mappings

Use generative AI to resolve user subscriptions by creating user resolution rules without manual intervention. AI automatically creates the user resolution rules, and these rules analyze and map incoming subscription data to corresponding user records in the Software Asset Management application.

Yokohama Patch 6

New third-party AI model provider options available for all Now Assist applications

Google Gemini and AWS Claude are available for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI.

Use an agentic workflow to automate software asset sourcing to improve operational efficiency

Use AI agents in the Help manage software request agentic workflow to automate sourcing of software assets either through automatic license allocation or by creating purchase orders.

Use an agentic workflow to create reclamation rules for enhancing software license utilization tracking and reducing waste

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Use AI agents to automatically create reclamation rules for installed or subscription-based software, reducing the need for manual analysis of product usage and expenditure. The AI agent analyzes factors such as spend and utilization to suggest reclamation rules.

Use an agentic workflow to reclaim unused software to minimize compliance risk and optimize savings

Use AI agents to automate reclamation of removal candidate for an installed or subscription-based software. The AI agent evaluates software removal candidates and provides suggestions for reclamation, based on intelligent checks that help ensure safe removal.

Yokohama Patch 3

Gain insights into product compliance and optimization with AI-powered product summaries

Get comprehensive product summaries to better understand your product compliance position across software deployment, license compliance, optimization, and configuration health. The AI-based product summaries simplify the complexity of license management and ensure adherence to publisher contracts.

Use AI-powered recommended actions to mitigate your license compliance risk

Use recommended actions to guide you through the appropriate steps to achieve compliance. Take actionable steps to address any configuration, maintenance, or optimization issues and gain faster compliance.

Yokohama Early Availability

Gain insights into your publisher license compliance by using Now Assist for SAM

Use generative AI to gain a comprehensive summary of publisher license compliance. The detailed publisher summaries that cover software deployment, license compliance, optimization, and configuration health enable you to understand the publisher license compliance details.

Changed in this release

Yokohama Patch 11

Changes to Now Assist usage measurement

Starting with Yokohama Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Some Now Assist skills, agents, and agentic workflows are turned on by default

The skills are automatically available to appropriate role users for the application, such as ITIL roles on incident forms or change forms. This change simply activates the skill and does not touch the roles that may be needed to use the skill. The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills and agentic workflows are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill, agent, or agentic workflow is turned on automatically (the AI asset was never configured and turned on, then turned off again). Previously configured skills and agentic workflows that were turned on, then off, remain inactive.

Role configuration required for agentic workflows and AI agents

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Agentic workflows and AI agents included with Now Assist applications require additional security configuration. If you select *Users with selected roles* for your user access security controls for an agentic workflow or AI agent, you must add the installed roles, or they will not execute. Data access settings must also include these roles. See the documentation for the agentic workflow or AI agent for the specific roles you must add.

Activation information

Install Now Assist for SAM by requesting it from the ServiceNow Store.

Note:
To take full advantage of the Now Assist for SAM features, you need to install the Now Assist for SAM store application as well as upgrade to Yokohama Patch 3.

Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Additional requirements

The Now Assist for SAM application requires the Software Asset Management Pro plus or the Enterprise plus license.

Related ServiceNow applications and features

Now Assist

Help improve the productivity and efficiency in your organization, deliver better self-service, recommend actions, provide answers, and empower your users to search more effectively.

Now Assist Admin console

Use the Now Assist Admin console for quick and effortless access to the important information that you need to set up, configure, and monitor Now Assist applications and features.

AI Agent Studio

Use AI Agent Studio to create, manage, or test AI agents and agentic workflows so that you can create self-executing workflows to help you achieve your business goals.

Now Assist panel

Use this conversational interface in ServiceNow® Software Asset Workspace to interact with and get assistance from generative AI.

Now Assist skills

Use the ServiceNow® Now Assist products to provide generative AI skills to meet the needs of users in different workflows, including case or incident summarization, chat summarization, resolution notes generation, and code generation.

IT Operations Management release notes

IT Operations Management has new and updated features in the Yokohama release.

ITOM Cloud Accelerate release notes

The ServiceNow® ITOM Cloud Accelerate application provides workflows to govern the provisioning and management of your cloud and on-premises virtual infrastructure. It leverages ServiceNow Orchestration and integrations with automation tools such as Ansible, Azure

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

DevOps, and Terraform. ITOM Cloud Accelerate was enhanced and updated in the Yokohama release.

ITOM Cloud Accelerate highlights for the Yokohama release

Cloud Workspace highlights:

- The new Cloud Workspace application has includes a new feature called Cloud Account Management, which automates account creation, improves transparency, and integrates policy-based governance and certification processes, enhancing efficiency and control across multiple cloud platforms.
- Support for AWS account and Azure subscription requests via direct API integrations or Terraform and GitHub integrations.

Cloud Services Catalog highlight:

Performance enhancements for the predefined catalog items in CSC Content Pack.

See Cloud Governance for more information.

Important:
ITOM Cloud Accelerate is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Cloud Account Management

Cloud Account Management is the first feature from ITOM Cloud Accelerate in the Cloud Workspace application that brings together ServiceNow cloud solutions in a unified experience as part of the Cloud Governance Suite.

Changed in this release

Cloud Services Catalog Terraform Connector

Cloud Provisioning and Governance: Terraform Connector has been renamed Cloud Services Catalog Terraform Connector

Deprecations

- Support for Cloud Provisioning and Governance: Google Cloud Connector has been removed. If you are on a legacy release, you cannot continue to use the Google Cloud Connector but you can use the Cloud Services Catalog Terraform Connector.
- Support for Cloud Migration Assessment has been removed.

Activation information

The ITOM Cloud Accelerate features are available as an application at Cloud Accelerate, which is available on the ServiceNow Store. Contact your ServiceNow sales representative to procure the ITOM Cloud Accelerate entitlement. For details, see Request the Cloud Provisioning and Governance application.

Related ServiceNow applications and features

Cloud Configuration Governance

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The Cloud Configuration Governance application provides a set of ready-to-use policies that enable you to check the configuration settings of cloud resources in your organization identify configuration violations.

Cloud Action Library

The Cloud Action Library provides ready-to-use actions and subflows that enable you to interact with the cloud resources of the organization.

Third-party products that integrate with the Cloud Service Catalog Cloud Services Catalog application

Extend the capabilities of ITOM Cloud Accelerate and its connectors by integrating the following third-party products with it:

- Cloud Services
  - Amazon Web Services
  - Microsoft Azure
  - VMware
  - Google Cloud Platform
- Ansible configuration management to automate the deployment of catalog items, across platforms and cloud service providers, with job templates.

Cloud Account Management release notes

The ServiceNow® Cloud Account Management (CAM) application automates account creation, improves transparency, and integrates policy-based governance and certification processes, enhancing efficiency and control across multiple cloud platforms. Cloud Account Management is a new application in the Yokohama release.

Cloud Account Management highlights for the Yokohama release

- Create and manage cloud accounts efficiently either by manual or automated processes.
- Manage and track cloud account requests using the requester dashboard.
- Visualize data tailored for the admin persona with deeper insights into cloud accounts.
- Scan accounts for configuration violations and take appropriate actions for weak passwords, pending certifications, undefined account ownership, discovery schedules, and so on.
- Provision both Terraform Cloud/Terraform Enterprise and cloud native interface accounts.

See Cloud Account Management for more information.

Important:
Cloud Account Management is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Cloud Account Management features

About data visualization in Cloud Account Management

Identify account violations and their severity using prebuilt policies in the Cloud Configuration Governance component. These scans support AWS, Azure, and GCP accounts. Confirm compliance and strengthen security by automatically detecting violations and categorizing them by severity across multiple cloud platforms.

Support for AWS account and Azure subscription requests via direct API integrations or Terraform and GitHub integrations.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Track cloud account spending details through integration with the Cloud Cost Management Workspace component. Provides real-time visibility into cloud expenditures, helping organizations stay within budget and optimize cost management.

Note:
Tracking of cloud account spending only works when you've a Cloud Cost Management Workspace subscription.

About provision modes in Cloud Account Management

Take advantage of flexible infrastructure management through provision mode, which also supports both Terraform Cloud/Terraform Enterprise (supported in AWS) and cloud native interface (supported in AWS and Azure).

Set up suspension of an AWS account using service control policy

Set up suspension of a subscription using Azure policy

Suspend and reactivate accounts quickly in response to security or operational issues by leveraging a predefined AWS or Azure policy.

Add an unmanaged cloud account

Confirm consistent governance across all accounts with the ability to onboard accounts (AWS and Azure) created outside the CAM workflow, even for accounts that weren't initially created through CAM.

Set up Terraform API key in ServiceNow

Automate account provisioning and management using popular tools through integration with Terraform Cloud/Terraform Enterprise and AWS APIs.

Update cloud account details

Manage account ownership for an account and optionally propagate the change to all CIs associated with that account.

Certify an account

Promote compliance with organizational standards by certifying cloud accounts using defined data certification processes.

Review request policies

Set guardrails for processes like account approval, budget approval, and configuration assignments through customizable default automated policies. Manage these policies using the existing Policy as Code Engine component.

Customize the sequence of your approval process by using the standard playbook designer, also known as the Playbooks.

Activation information

Install Cloud Workspace (sn_itom_cam) by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Accessibility information

Implemented zoom functionality in all screens offering zoom levels of 110%, 125%, 150%, 175%, 200%, 250%, 300%, and 400%.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Localization information

Localization is applicable to CAM in all languages supported by the ServiceNow AI Platform.

Related ServiceNow applications and features

Cloud Configuration Governance

The CCG Content Pack application provides a set of ready-to-use policies that enable you to check the configuration settings of cloud resources in your organization to identify configuration violations.

Cloud Insights

The ServiceNow® Cloud Cost Management application enables you to analyze all costs that are associated with your cloud assets. You can use this information to optimize operations and reduce your cloud spend.

Manage PaCE policies

Cloud Account Management confirms compliance through account certification and offers customizable policies for general and budget approvals and for configuration assignment, supported by the Policy as Code Engine component.

Process Automation Designer

ServiceNow® Playbooks enables process owners to author cross-enterprise workflows and create a single, unified process. You can also use Playbooks to provide end users with a simplified, task-oriented view of your process.

ITOM AIOps release notes

The ServiceNow® ITOM AIOps product helps you to keep track and maintain the health of the services in your organization. ITOM AIOps was enhanced and updated in the Yokohama release.

ITOM AIOps highlights for the Yokohama release

Health Log Analytics highlights:

- Pull data from Splunk consistently over time using the Splunk Polling data input, which sends recurring queries (polls) to Splunk.
- Use your Splunk data input to ingest data from Splunk in a pre-processed, structured format.
- Integrate with log data connectors from the Integrations Launchpad
- Use dedicated Cribl, Edge Delta and Vector Agent data inputs to streamline HLA data ingestion with tools handling large log volumes.
- Generate a description of Health Log Analytics alerts using Now Assist.

Event Management highlights:

- Focus on critical connections and dependencies by reviewing network traffic-based alert grouping, which uses discovered TCP connections together with ML Service Mapping to correlate alerts on host CIs that have network traffic connections between them. This approach reduces noise, enhances visibility, and accelerates response times.

Service Operations Workspace for ITOM

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Starting with version 26.3.1, benefit from the new alert grouping based on network traffic correlation:
  - Use Express List® to investigate network traffic-based alert groups
  - View connections between network traffic-based alerts in Link View.
  - Starting with version 2.5.3, review alert group analysis by Now Assist
- Review relevant information in the Now Assist panel based on records selected in Express List®.
- Enable team-level operators to create and manage new alert automations by assigning the new team_operator role.
- Map current alert field values to new specified values through the new **Change alert values** option in the Enrich automation section.
- Track and optimize grouping efficiency by viewing key details such as total alerts, alert groups, ungrouped alerts, and compression in Group Automation. Simulate other group types, such as CMDB, ML, and text-based grouping.

Agent Client Collector highlights:

- Create tasks to address Agent Client Collector errors.
- Discover java installation information using file-based discovery.
- Upgrade many agents at once using high-volume upgrade of Agent Client Collector.
- Conserve the MID Server resources for more persistent features by using MID-less installation.

See ITOM AIOps for more information.

Important:
Agent Client Collector, Health Log Analytics, and Install ServiceNow Operations Workspace (ITOM) are available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Pull data from Splunk regularly using the Splunk Polling data input

Fetch data consistently over time by using the Splunk Polling data input, which sends recurring queries (polls) to Splunk. Handling most configurations on the HLA side, you need minimal additional stakeholder involvement, enabling swift integration with your existing Splunk setup. This enhancement accelerates proofs of concept (POCs) and enables faster iterations using real data.

Use your Splunk data input to ingest pre-processed data from Splunk

Ingest data from Splunk in a preprocessed, structured format using your existing Splunk data input for streaming log messages to Health Log Analytics with a heavy forwarder.

Create Group automation

View key details from the Test Automation section, including total alerts, alert groups, ungrouped alerts, and compression, to help track and optimize alert grouping efficiency. Simulate other group types, such as CMDB, ML, and text-based grouping. The simulation processes only alerts that match the condition filter.

Integrate with log data connectors from the Integrations Launchpad

Set up your log data connectors for HLA from the Event Management Integrations Launchpad in Service Operations Workspace for ITOM. The Integrations Launchpad

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

provides a unified interface for convenient integration with log data connectors that feed raw log data from external sources into your instance. In this release, the Integrations Launchpad enables integration with the following connectors: Elasticsearch, ServiceNow System Logs, UDP, and TCP.

Starting in version 36.0.19, benefit from additional log data integrations for Splunk TCP/UDP, Splunk Poller, MID Server, Apache Kafka, Microsoft Azure Log Analytics, and REST API that can be easily set up through the Integrations Launchpad.

Set up an Amazon Data Firehose integration for real-time log data streaming from multiple sources

Starting in version 36.0.19, leverage an integration for streaming log data from Amazon Data Firehose directly to the collector service in ITOM Gateway, where it is queued and then processed by Health Log Analytics. This integration doesn't run on a MID Server and can be configured from the Integrations Launchpad.

View links between alerts in Network Traffic-based alert groups

Once network traffic correlation is enabled, investigate network traffic alert group details and visualize connections through Link View in Express List®.

UI changes

Enrich automation

The **Compose** action has been renamed **Copy or compose fields**.

Integrations Launchpad enhancements

The **Related events** tab has been renamed **Events**.

The **Health state** tab has been renamed **Integration Stats**.

The **Alert compression rate** section has been renamed **Grouping ratio**.

Respond automation

The **Active** toggle switch has been replaced with a check box.

ServiceNow System Logs data input

The Glide Syslog data input has been renamed ServiceNow System Logs data input.

Changed in this release

Enrich automation

Introduced a new section **And finally** that contains two radio buttons that replace the previous **Continue running automations of this type** toggle switch.

- **Run other enrich alert automations** continues running automations with the same filter conditions.
- **Don't run other enrich alert automations** halts additional automations after execution, except those owned by other assignment groups.

Investigate alerts using Now Assist

Investigate alerts using Now Assist, which now uses the Retrieval-Augmented Generation (RAG) process to enhance alert investigation. This enhancement enables the retrieval of highly relevant past incidents, providing accurate context and actionable insights. Now Assist also notifies users of those involved in past or present efforts to resolve similar issues, promoting collaboration and reducing duplicated efforts.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Component-based alert grouping is deprecated

Starting in version 36.0.19, component-based alert groups are removed as Health Log Analytics adopts a streamlined, two-tier alert model: Log Analytics Group to Single Alert. It aligns alert representation with the service-level anomalies identified by Health Log Analytics, rather than individual host CIs. The update improves alert visibility, simplifies correlation, and enhances overall alert management efficiency.

Activation information

- ITOM AIOps is available with activation of the Event Management plugin (com.glideapp.itom.snac). You must purchase a more comprehensive ITOM AIOps package, ITOM Predictive AIOps, to enable working with Health Log Analytics. For details, see Event Management setup.
- Install Service Operations Workspace (ITOM) by installing the AIOps Experience [sn_sow_aiops] application from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.
- Install Health Log Analytics by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Accessibility information

Support for reflow

The Service Dashboard and Log Viewer component was updated to support reflow, which enables pages and content to be zoomed up to 400% through your browser settings without loss of content or functionality. Additionally, content can be enlarged without scrolling in two dimensions at a width equivalent to 320 CSS pixels or a height equivalent to 256 CSS pixels.

This enhancement helps users with low vision or who have trouble seeing web content in a browser due to monitor size, device type, poor lighting, or other situations. Reflow can be turned off with a system property for instances, experiences, and pages. See Reflow for Configurable Workspace for details.

Localization information

The current available languages for Health Log Analytics are US English, UK English, French, German, Italian, Japanese, and Spanish. The default language is US English.

Related ServiceNow applications and features

ITOM Visibility

The ITOM Visibility application consists of Discovery, Service Mapping, Certificate Inventory and Management, Service Graph Connectors, CMDB 360, and Firewall Audits and Reporting . Discovery and Service Mapping provide a unified, connected view of your entire IT network and the services that it supports.

ITOM Optimization

ITOM Optimization contains the Cloud Provisioning and Governance feature. By using this feature, you can provision a private and public cloud infrastructure and services to achieve consistent management and cost visibility.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Service Operations Workspace for ITSM

Service Operations Workspace ITSM and ITOM are integrated to streamline incident and operations management. ITSM focuses on managing service incidents, requests, and changes, while ITOM is responsible for operational tasks like monitoring infrastructure, handling alerts, and maintaining system health. Together, they provide a unified workspace that enables seamless collaboration between service management and operations teams, improving efficiency in resolving issues and maintaining service performance.

Agent Client Collector release notes

The ServiceNow® Agent Client Collector application enables you to monitor the service availability, performance, and infrastructure of your system. Agent Client Collector was enhanced and updated in the Yokohama release.

Agent Client Collector highlights for the Yokohama release

- Agent Client Collector for Visibility: Starting in version 1.1.0, ACC for Visibility has been renamed Agent Client Collector for Visibility - Content. CNO for Visibility has been extracted from Agent Client Collector for Visibility - Content and is now a separate application.
- Store instance credentials in the Google Cloud Secret Manager when the Kubernetes Visibility Agent Informer uses Google Kubernetes Engine (GKE).
- Use a custom CA to enable Kubernetes Visibility Agent Informer to communicate with the instance when using a custom root Certificate Authority (CA).
- Configure Agent Client Collector without a MID Server by ßusing MID-less configuration.

See Agent Client Collector for more information.

Important:
Agent Client Collector is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Scan your resource directories for file attributes

Starting in version 3.13.0, run a check to receive information on the directory file's integrity, size, space, response time, and age.

Conserve MID Server resources by using MID-less installation for Agent Client Collector

Starting in version 3.6.5, conserve MID Server resources for more persistent features by using the MID-less installation when installing Agent Client Collector. With this installation, you don't need a MID Server in your system architecture.

Create tasks to address Agent Client Collector errors

Starting in version 4.3.0, create tasks to resolve errors relating to the Agent Client Collector. Tasks are assigned to personnel who investigate the underlying issues and work to resolve the errors.

Use a proxy server with MID-less installation

Starting in version 4.3.0, enable using a proxy server when installing Agent Client Collector without a MID Server.

Discovery MSSQL server components

Starting in version 1.3.0, enable discovery of MSSQL components by running Discovery as a local system user.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Java certification Discovery through file-based discovery

Starting in version 1.3.0, discover java file information using Agent Client Collector for Visibility - Content (ACC-VC) file based discovery. File based discovery locates java files that are installed on the system but not running, enabling retrieval of data used for licensing and auditing.

Enable high volume upgrade of agents

Starting in version 4.3.0, enhance efficiency by performing high-volume upgrade of large numbers of Agent Client Collector installations at once.

Block event creation for non-existent entities

Starting in version 3.13.0, block the creation of events and alerts if the process monitoring and log files don't exist in their indicated location.

Control how check results are sent

Starting in version 3.6.5, configure the circumstances when check results are sent.

Configure and receive notifications of agent key expiration

Starting in version 3.6.5, receive notifications that indicate when an agent registration key is expiring.

Monitor network host availability

Starting in version 4.1.0, use a new check to verify network host availability.

Identify software running on Linux and Windows devices

Starting in version 4.1.0, identify the software that is running on your Linux and Windows servers and devices by using file-based Discovery. File-based Discovery enables you to maintain the records of your software licenses and helps you to evaluate any threats from unwanted files.

Store ServiceNow instance credentials in the Google Cloud Secret Manager when the Informer uses Google Kubernetes Engine (GKE)

If your organization uses Google Kubernetes Engine (GKE) you can store the secret in Google Cloud Secret Manager. The Kubernetes Visibility Agent Informer can then pull the ServiceNow credentials for accessing your instance from the Google Cloud Secret Manager.

Use a custom CA to enable the Informer to communicate with the ServiceNow instance when using a custom root CA

Mount a custom certificate authority into the Kubernetes Visibility Agent Informer pod to enable the Informer to communicate with the instance when a custom root CA is used.

Changed in this release

Explore metrics with Metric Explorer independent of Agent Client Collector Monitoring

Starting in version 4.1.0, view and monitor metric data with Metric Explorer, even if you have not installed Agent Client Collector Monitoring.

Starting in version 1.1.0, ACC for Visibility has been renamed as Kubernetes Visibility Agent and consists only of what is currently CNO for Visibility. The term CNO for Visibility has been deprecated and replaced with Kubernetes Visibility Agent. All other ACC for Visibility functions are now part of Agent Client Collector for Visibility - Content.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Activation information

Agent Client Collector is available with activation of the Agent Client Collector Framework plugin (sn_agent) and the Agent Client Collector Monitoring plugin (sn_itmon) in an instance on which Event Management is installed.

Event Management release notes

The ServiceNow® Event Management application helps you to identify health issues across the datacenter on a single management console. Event Management provides alert aggregation for discovered services, application services, and automated alert groups. Event Management was enhanced and updated in the Yokohama release.

Event Management highlights for the Yokohama release

- Review network traffic-based alert grouping, which uses discovered TCP connections together with ML Service Mapping to correlate alerts on host CIs that have network traffic connections between them. This approach reduces noise, enhances visibility, and accelerates response times by focusing on critical connections and dependencies.
- Starting in version 26.3.4, benefit from the new alert grouping based on network traffic correlations:
  - Investigate network traffic-based alert groups by using Express List®.
  - Review alert group analysis by Now Assist
  - View connections between network traffic-based alerts in **Link View**.
- Enable team-level operators to create and manage their own integrations, set up their own alert automations, and enhancing control over alert management for their teams by assigning the new team_operator role.
- Review relevant information in the Now Assist panel based on records selected in the Express List®.
- Starting in version 2.15.1, you can configure metric connector instances for the Nagios, SolarWinds, and Zabbix monitoring tools to receive metrics directly from these monitoring tools. This enhancement provides the following benefits:
  - Seamlessly integrate monitoring data from multiple sources into Metric Intelligence.
  - Improve anomaly detection and alerting with real-time metric ingestion.

See Event Management for more information.

New in the Yokohama release

Group alerts using network traffic-based grouping

Group alerts efficiently with network traffic-based alert grouping, which uses discovered TCP connections with ML Service Mapping to correlate alerts on host CIs that have network traffic connections between them.

View links between alerts in network traffic-based alert groups

Once a network traffic correlation is enabled, investigate network traffic alert group details and visualize connections through Link View in Express List®.

New role for team level operators

Enhance team-level control over alert management with the evt_team_operator role. This role enables operators to manage Event Management operations within their assigned team, including reading and writing alerts, making configuration

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

changes,updating Alert Automation, and setting up new integrations in the Integrations Launchpad.

Starting in version 26.7.0, execute response subflows automatically, manually, or both for alerts that match specific conditions through the Run Other Response Actions option of Respond Automatic. This enhancement offers better control over automated responses with configurable execution limits and multiple response actions.

Starting in version 26.7.0, link a CI to an alert for more accurate IT component mapping though the Improve Configuration Item (CI identification option of Enrich Automation. This enhancement improves alert visibility, speeds up issue resolution, and ensures better correlation between alerts and infrastructure components.

Changed in this release

Property name changes

Enable CMDB Correlation for Alert Aggregation (CMDB groups) (*sa_analytics.agg.query_cmdb_correlation_enabled*) has been renamed **Enable CMDB correlation**.

Enable alert aggregation for CI-based Automated groups (*sa_analytics.specific_patterns_enabled*) has been renamed **Enable ML based Automation correlation**.

Enable alert aggregation for Text-based groups (*sa_analytics.text_based_group_enabled*) has been renamed **Enable Text based correlation**.

Use all CMDB relations for CMDB group correlation. This property impacts both CMDB group correlation and Alert Similarity on the Alert form (*evt_mgmt.related_cis_get_all_relation_types*) has been renamed **Use all CMDB relations for CMDB group correlation**.

Pull connectors

Simplifying the setup for Out-of-the-Box (OOTB) event rules that come with the pull connectors that have not yet been activated, deactivated, or modified, the Apply additional matching rules option is now enabled by default. If a rule has been previously applied, you must set this option manually.

Activation information

Event Management is available with activation of the Event Management plugin (com.glideapp.itom.snac). For details, see Request Event Management.

Related ServiceNow applications and features

Metric Explorer

ServiceNow® Agent Workspace for Metric Intelligence provides a central interface that enables you to view the health of a CI associated with an alert. Health details for a CI include various metric charts with control bounds and aggregations for single score charts.

Health Log Analytics release notes

The ServiceNow® Health Log Analytics application helps you predict IT issues before they impact users by ingesting, analyzing, and correlating machine-generated log data in real time.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

When Health Log Analytics detects a deviation from a normal pattern, it alerts you of a possible issue. Health Log Analytics was enhanced and updated in the Yokohama release.

Health Log Analytics highlights for the Yokohama release

- Use the enhanced Splunk data input to ingest data from Splunk in a preprocessed structured format. You can also pull data from Splunk regularly using the new Splunk Polling data input.
- Take advantage of a unified interface for convenient data input integration by setting up integrations from the Integrations Launchpad.
- Streamline HLA data ingestion with tools for handling large log volumes by using dedicated Cribl and Edge Delta data inputs.
- Configure log data integrations for Splunk TCP/UDP, Splunk Poller, MID Server, Apache Kafka, Microsoft Azure Log Analytics, REST API, and Amazon Data Firehose conveniently from the Integrations Launchpad.
- Generate a description of Health Log Analytics alerts using Now Assist.

See Health Log Analytics for more information.

Important:
Health Log Analytics is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Pull data from Splunk regularly using the Splunk Polling data input

Make your data workflows more consistent and productive by fetching data consistently over time using the Splunk Polling data input, which sends recurring queries (polls) to Splunk. Handling most configurations on the HLA side means you need minimal additional stakeholder involvement, which enables swift integration with your existing Splunk setup. This enhancement accelerates proofs of concept (POCs) and enables faster iterations using real data.

Use your Splunk data input to ingest preprocessed data from Splunk

Ingest data from Splunk in a preprocessed, structured format using your existing Splunk data input.

Integrate with log data connectors from the Integrations Launchpad

Take advantage of the Integrations Launchpad's unified interface for convenient integration with log data connectors that feed raw log data from external sources into your instance. You set up log data connectors for HLA from the Event Management Integrations Launchpad in Service Operations Workspace for ITOM. In this release, the Integrations Launchpad enables integration with the following connectors: Elasticsearch, ServiceNow System Logs, UDP, and TCP.

Use Cribl and Edge Delta data inputs to streamline HLA data ingestion with tools handling large log volumes

Use dedicated data inputs to facilitate data ingestion from Cribl or Edge Delta when using these tools to handle large volumes of log data from multiple sources before sending it to HLA.

Configure log data integrations from the Integrations Launchpad

Starting in version 36.0.19, benefit from additional log data integrations for Splunk TCP/UDP, Splunk Poller, MID Server, Apache Kafka, Microsoft Azure Log Analytics, and REST API that can be easily set up through the Integrations Launchpad.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Set up an Amazon Data Firehose integration for real-time log data streaming from multiple sources

Starting in version 36.0.19, leverage an integration for streaming log data from Amazon Data Firehose directly to the collector service in ITOM Gateway, where it is queued and then processed by Health Log Analytics. This integration doesn't run on a MID Server and can be configured from the Integrations Launchpad.

Changed in this release

Component-based alert grouping is deprecated

Starting in version 36.0.19, the adoption of a streamlined two-tier alert model, Log Analytics Group to Single Alert, has replaced component-based alert groups, which have been removed. This model aligns alert representation with the service-level anomalies identified by Health Log Analytics, rather than individual host CIs. The update improves alert visibility, simplifies correlation, and enhances overall alert management efficiency.

UI changes

ServiceNow System Logs data input

The Glide Syslog data input has been renamed ServiceNow System Logs data input.

Activation information

Install Health Log Analytics by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Localization information

The current available languages for Health Log Analytics are US English, UK English, French, German, Italian, Japanese, and Spanish. The default language is US English.

Related ServiceNow applications and features

Event Management

The Event Management application uses events generated by Health Log Analytics. When Health Log Analytics detects an anomaly in your log data, it sends an event to Event Management. Event Management receives the event and generates an alert based on event and alert management rules.

Agent Client Collector

Agent data inputs beginning in Health Log Analytics Version 21.0.1 - September 2021 use Agent Client Collector to stream logs to your ServiceNow instance.

MID Server

Health Log Analytics uses the ServiceNow® MID Server product to stream logs to your ServiceNow instance.

Service Operations Workspace

Health Log Analytics generates alerts in the ServiceNow Service Operations Workspace, a configurable workspace that provides a unified experience for multiple IT Operations Management workflows.

© 2026 ServiceNow, Inc. All rights reserved.

Service Observability release notes

The ServiceNow® Service Observability application helps operations teams triage and manage incidents in a complex and distributed production system. Service Observability combines telemetry and platform insights from multiple observability tools into a single workflow in the Service Operations Workspace (SOW). Service Observability is a new application in the Yokohama release.

Service Observability highlights for the Yokohama release

- Connect operators with subject matter experts (SMEs) using critical signals from existing monitoring tools and the ServiceNow platform.
- Centralize critical signals and bridge workflows to help increase agility and reliability.
- Calculate the blast radius and help reduce mean time to resolution (MTTR) by viewing changes to your application and the underlying infrastructure.

See Service Observability for more information.

Important:
Service Observability is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Service Observability features

Create and manage data mappings

Map services in the CMDB Workspace to the data from a connected application performance monitoring (APM) data source. Service Observability supports Dynatrace and New Relic. This mapping lets you view metrics from entities deep within your system, like a database or host, that might be affecting the health of a service.

Starting in version 1.7.3, metrics from Datadog are supported.

Starting in version 1.7.3, you can map Business Services and Service Offerings to APM data. Service Offerings are not available in Xanadu.

View overall service health

Use the Overview tab to view rate, error, and duration (RED) metrics from the APM related to a service. You can also view related open alerts, incidents, and change requests from the Configuration Management Database (CMDB) to help identify possible causes and blast radius.

View service health metrics

View the extended health metrics for a service on the new **Observability** tab when issues are found on the **Overview** tab. In addition to the extended health metrics, you can view host and database metrics related to the service based on the configured data mappings.

Customize dashboard templates

Starting in version 1.6.4, customize the templates used to display dashboards in the **Overview** and **Observability** tabs.

Domain separation

Starting in version 1.6.4, Service Observability can be run in separate domains.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

UI changes

New Overview tab in the SOW

After services are activated for the **Overview** tab in Service Observability, the Service Details page in SOW now shows reliability metrics from Service Reliability Management (SRM) as well as metrics from Service Observability.

New Observability tab in the SOW

The **Observability** tab on the Service Details page in SOW shows related metrics from connected APM vendors.

Admin Center support for activating services and data sources

You can activate services to use in Service Observability and then connect and map APM data sources to those services.

Starting in version 1.6.4, you no longer need to activate services. Any of the supported service types in the CMDB can be used

Starting in version 1.6.4, the Service Observability admin role can configure Service Observability in the Admin Center without involving an administrator.

Activation information

Install Service Observability by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Additional requirements

For the best experience, an APM instance should be installed and an API Key Credential for that instance should be configured on the ServiceNow® platform. Service Observability supports Datadog, Dynatrace, or New Relic.

Related ServiceNow applications and features

Service Operations Workspace for ITOM

You can access Service Observability from the Service Details page of the SOW.

Service Reliability Management

You can view the reliability metrics of SRM in the same view as Service Observability, giving you a holistic view of service health. Services that are activated for Service Observability are also activated for SRM. Starting in version 1.6.4, services no longer need to be registered with SRM to use them in Service Observability.

Service Reliability Management release notes

The ServiceNow® Service Reliability Management (SRM) application helps your organization respond, collaborate, track, and self-remediate when working on alerts and incidents. SRM was enhanced and updated in the Yokohama release.

SRM highlights for the Yokohama release

- View and assess alerts in one place with Express List.
- Starting in version 6.3, access SRM features on the go with ITOM Mobile Agent.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Starting in version 6.4, inform teams by setting up notification destinations and attaching them to error budget policies.
- Starting in version 6.4, track, manage, and visualize service performance with the Service reliability dashboard.
- Starting in version 6.4, get timely error budget updates that reflect the impact of ongoing, open alerts.

See Service Reliability Management for more information.

Important:
SRM is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Enhance monitoring for distributed teams with Express List

Improve monitoring with Express List. Express List replaces the **Alerts** tab and helps distributed SRM teams focus on the services, priorities, or alerts that matter to them.

Track SLO update history

View and track SLO update history with new naming conventions. Edited SLOs now receive unique names, such as Uptime (1) or Uptime (2), instead of keeping their original names. This update improves clarity and helps you distinguish between versions.

Add SLOs to change approval policies

Define change approval policies to approve updates or modifications in your system. You can now add the following policy inputs, helping you integrate critical information into the approval process:

- SLO with the lowest percentage of error budget remaining
- SLO with the highest burn rate

Assign teams to TSOs

Manage your services effectively by assigning teams to TSOs. TSOs, which are specific components within a parent technical service, can now be used in the SRM service list. Assigning SRM teams to TSOs helps decentralized teams focus on the services they're responsible for.

Stay connected and keep services reliable with ITOM Mobile Agent

Starting in version 6.3, use ITOM Mobile Agent to access SRM features on iOS and Android devices. With ITOM Mobile Agent, you can track alerts, manage incidents, and work on tasks on the go. You can also manage on-call schedules by checking shifts, requesting time off, and filling gaps.

Create SLIs on configuration items

Starting in version 6.3, filter an SLI to a specific configuration item within the parent service hierarchy. This feature lets you monitor the individual components of a service, helping you accurately track service health and identify root causes faster.

Keep teams informed with notification destinations

Starting in version 6.4, send notifications about error budget policy violations to notification destinations. The first supported destination is Microsoft Teams, which lets you post details in specific channels and link back to SRM for further investigation.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Monitor service reliability in a dashboard

Starting in version 6.4, use the Service reliability dashboard to monitor and manage service performance. The dashboard offers multiple visualizations to help you track error budgets, monitor SLOs, and identify issues across your services. Starting in version 6.4.1, you can select charts to access further details and use the new SLO table to monitor reliability.

Customize team approval settings with more flexibility

Starting in version 6.4, customize team governance with more flexibility and less manual effort. You can assign different approval teams for new and existing team requests. The customization options are also fully available in the Service Operations Workspace Admin Center and no longer require manual setup in the Catalog Builder.

UI changes

Express List

The Express List icon ( ) is now in the navigation pane.

Integrations Launchpad

The Integrations Launchpad icon ( ) is now in the navigation pane.

> **Note:**
> Starting in version 6.3, the custom Integrations Launchpad in SRM was replaced with the official Service Operations Workspace version. This change promotes consistency across applications and gives you immediate access to the latest SOW updates.

New banner for configuring SLIs

Starting in version 6.3, when you set up an SLI, a new information banner shows how many configuration items are associated with your service. To set up an effective SLI for your system, select **View CIs in service map** to see how the service and configuration items relate.

Service import improvements

Starting in version 6.3, the service import flow includes the following updates:

- Services owned by others are selectable options in the UI.
- Service suggestions appear in the search box, reducing the need to remember exact service names.

Removed in this release

The **Alerts** tab has been removed from the Reliability tasks page.

Activation information

Install SRM or ITOM Mobile Agent by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Related ServiceNow applications and features

Service Operations Workspace

Use SRM in Service Operations Workspace to manage SLOs alongside other IT Operations Management workflows.

Alert automation in Service Operations Workspace

Work with alert automation to respond to alerts, improve service reliability, and scale staff resources.

Synthetic monitoring release notes

The ServiceNow® synthetic monitoring application in the Service Operations Workspace (SOW) empowers organizations to proactively manage and enhance the performance and availability of critical service endpoints. By simulating user transactions on HTTP endpoints, this solution identifies performance bottlenecks, helps ensure up-time, and optimizes user experiences. Synthetic monitoring is a new application in the Yokohama release.

Synthetic monitoring highlights for the Yokohama release

- View real-world performance data from your services without needing actual users, catching issues before they're released to production.
- Get real-time notifications for performance degradations or outages before they impact users.
- Visualize synthetic test results and share insights with stakeholders.

See Synthetic monitoring for more information.

Important:
Synthetic monitoring is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Synthetic monitoring features

Create and edit a synthetic monitor

Create and manage synthetic tests to replicate end-user transactions for critical service endpoints. Configure an alert to activate when a test fails, enabling you to address issues before they impact users.

As of version 1.2, you can:

- Test for response code: Confirm that your endpoints are returning success codes and know when they aren’t.
- Test for response time: Confirm that your services are meeting performance expectations by setting thresholds for response times.
- Test for response text: Validate whether specific content exists in the response body, enabling accurate end-to-end checks.
- Run tests from your local Glide instance: Enable closer integration with your instance and reduce the need for external test runners.
- Run tests from multiple locations.

Identifying system issues with synthetic monitoring

View the Overview page for a monitor where you can:

- View the status of the monitor.
- View charts that display test failures and response times.
- Visit related configuration items (CIs) that might be the start to investigating failed tests.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- View a historical log of synthetic test runs, including details and the response body text.
- Share results by exporting a list of tests for a monitor.

UI changes

Overview and detail pages in SOW.

Create view and manage your synthetic monitors on the overview and detail pages.

As of version 1.2, the following UI enhancements are available:

- Improved filtering for finding your endpoints.
- Bulk editing of monitors.
- Charts on the Overview page now display failures instead of successes.

Activation information

Install synthetic monitoring by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Additional requirements

You must do the following before you can use synthetic monitoring:

- If you have version 1.0, configure at least one proxy agent on the Agent Client Collector. These agents should be the ones you use to monitor the health and performance of the services to be monitored. For more information about proxy agents, see Using proxy agents in Agent Client Collector.

  Starting with version 1.2, you can run tests from your local Glide instance instead of a proxy agent.

- Add CIs in the CMDB for the endpoints that you want to monitor.
- If your endpoints require authentication, configure credentials in the Credentials [discovery_credentials] table.

Related ServiceNow applications and features

Agent Client Collector

Synthetic monitoring can use a proxy agent on the Agent Client Collector to monitor the health of service endpoints.

Service Operations Workspace

Access and use synthetic monitoring in Service Operations Workspace, a configurable workspace that provides a unified experience for multiple IT Operations Management workflows.

ITOM Optimization release notes

The ServiceNow® ITOM Optimization application automates the cloud workflows that you use to manage the cloud resources throughout their life cycles. You can also deploy certified and enterprise-compliant clouds, get visibility into your costs, and manage other cloud management processes. Cloud Provisioning and Governance was enhanced and updated in the Yokohama release.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

ITOM Optimization highlights for the Yokohama release

Legacy workflows have been upgraded and seamlessly migrated to the advanced Workflow Studio to align with the latest standards and ensure modern compliance. Additionally, all default (Out of Box) workflows have been redesigned to provide enhanced performance, improved usability, and a more streamlined experience.

See ITOM Optimization for more information.

UI changes

The following UI changes are applicable for workflow migration:

- In the **Resource Block** > **Operations** > **Steps**, within the **Add Operations Steps** dialog box, the **Invoke Workflow** option has been removed from the Operation Type field.
- In the **Resource Block** > **Operations** > **Steps**, within the **Add Operations Steps** dialog box, the **Workflow** check box has been removed from the Add Operations Steps field.
- In the **Cloud Catalog Items**, under the **Operation Implementation** drop-down list, the **Workflow** option has been removed.

Changed in this release

- Migration of legacy workflows to Workflow Studio flows or subflows.
- Policy Rule Actions now supports Workflow Studio subflows instead of legacy workflows.

Removed in this release

- In the **Resource Block** > **Operations** > **Steps**, within the **Add Operations Steps** dialog box, the **Invoke Workflow** option has been removed from the Operation Type field.
- In the **Resource Block** > **Operations** > **Steps**, within the **Add Operations Steps** dialog box, the **Workflow** check box has been removed from the Add Operations Steps field.
- In the **Cloud Catalog Items**, under the **Operation Implementation** drop-down list, the **Workflow** option has been removed.

Deprecations

These workflows have been deprecated:

- Retrieve cloud billing data
- Retrieve cloud billing month
- Cloud operation step workflow launcher

Note:
See to learn more about the workflow migration.

For details, see the Application/Plugin Deprecation Process [KB0867184] article in the Now Support Knowledge Base.

The ServiceNow® ITOM Cloud Accelerate provides the workflows to evaluate the cloud readiness of your organization and enforce the cloud accelerate guidelines.

Cloud Services Catalog is now a part of ITOM Cloud Accelerate to access and manage cloud resources, and publish cloud offerings to a catalog, in a simplified way.

Cloud Configuration Governance application provides a set of ready-to-use policies that enable you to check the configuration settings of the cloud resources in your organization identify configuration violations.

Cloud Action Library provides ready-to-use actions and subflows that enable you to interact with the cloud resources of the organization.

Cloud Migration Assessment enables you to plan, organize, and track the process of relocating your enterprise IT resources and workloads to cloud platforms.

Cloud Discovery Workspace

Cloud Operations Workspace offers a comprehensive solution to manage the cloud operations of your organization.

ITOM Visibility

The ITOM Visibility product consists of Discovery, Service Mapping and Tag Governance. For more information, see Discovery, Service Mapping, Tag Governance, Certificate Inventory and Management, Service Graph Connectors, CMDB 360, and Firewall Audits and Reporting. Discovery and Service Mapping give you a unified, connected view of your entire IT network and the services that it supports.

ITOM/OT SU Licensing and subscriptions

ITOM/OT SU Licensing enables you to view the total number of licenses assigned to your applications.

Third-party products that integrate with the Cloud Service Catalog:

Extend the capabilities of ITOM Cloud Accelerate and its connectors by integrating the following third-party products with it:

- Cloud Services
  - Amazon Web Services
  - Microsoft Azure
  - Google Cloud Platform
  - Terraform Opensource
- Ansible configuration management to radically automate the deployment of catalog items, across platforms and cloud service providers, with job templates.

ITOM Visibility release notes

The ServiceNow® ITOM Visibility application provides a unified, connected view of your entire IT infrastructure and the services that it supports. ITOM Visibility was enhanced and updated in the Yokohama release.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

ITOM Visibility highlights for the Yokohama release

- Discovery and Service Mapping Patterns: Gain enhanced visibility into your AWS cloud services with 27 additional patterns starting with store version 1.25.0.
- Starting with store version 1.1.0, ACC for Visibility has been renamed Agent Client Collector for Visibility - Content. The CNO for Visibility feature has been extracted from Agent Client Collector for Visibility - Content and is now a separate application.
- Starting with Service Graph Connector for GCP store release 1.8, Service Graph Connector for AWS store release 2.9, and Service Graph Connector for Microsoft Azure store release 1.11, you can use Service Graph Connectors to ingest data into the Configuration Management Database (CMDB) from third-party sources.
- Starting with store version 1.8.0, Discovery admins gain improved visibility into discovery issues and can address root causes using anomaly detection in the Discovery Admin Workspace.

See ITOM Visibility for more information.

Important:
Discovery and Service Mapping Patterns is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Important information for upgrading ITOM Visibility to Yokohama

3DES support is planned for permanent removal from the MID Server for MID Servers with SSH-based Discovery or SSH-based integrations. For more information, see 3DES deprecation in SSH from Xanadu [KB1644950].

After upgrading to Yokohama, a Fix Script named "Add Explicit Public SNMP Credential" might create a public SNMP credential in Production instances. This could lead to unnecessary records via Discovery. The Fix Script is present in Yokohama instances, including OOB. Before applying the upgrade of Discovery core, Yokohama version, verify the fix script behavior in a sandbox environment. Remove the public SNMP credentials if not required.

New in the Yokohama release

Discover additional AWS Services using Patterns

- Starting with store version 1.25.0, Discovery and Service Mapping Patterns discovers 27 additional AWS cloud services.
- Starting with store version 1.27.0, Discovery and Service Mapping Patterns discovers 7 additional AWS cloud services.

Discover products with Discovery and Service Mapping Patterns

Discover the following products using Discovery and Service Mapping Patterns version 1.27.0:

- NVIDIA GPUs
- Microsoft SQL Always On availability groups
- Azure tenants and management groups
- AWS Application Load Balancer targets
- AWS web ACL

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- AWS Systems Manager (SSM) agents
- Tag collection for Azure VM instance - Uniform scale set

Automatically generate a Certificate Signing Request

Generate a Certificate Signing Request and a private key with the Employee Center experience, starting with version 3.6.0 of Certificate Inventory and Management.

Use Service Graph Connectors for extended discovery

Service Graph Connectors are a collection of predefined integrations that ingest data into the Configuration Management Database (CMDB) from third-party sources.

- Discover device details from Chromebook and ingest them into the CMDB by using Service Graph Connector for Google Console store version 1.8.
- Discover data from public cloud instances and resources in AWS, Azure, and GCP environments and ingest them into the CMDB by using Service Graph Connector for Wiz.

Detect anomalies in Discovery schedules

Starting with Discovery Admin Workspace version 1.8.0, machine learning (ML) or statistical methods can detect anomalies in Discovery schedules and display this data in dashboards for admins. It identifies unusual behaviors like failed runs, significant deviations from user-defined thresholds for high error counts, longer discovery status duration, and fewer discovered Configuration Items (CIs) or Cloud resources. The ML-based approach to this feature is enabled by default. Thresholds are configurable via the new Settings page, and the results will be shown throughout the workspace.

Cloud-based Discovery schedules

Starting with version 1.8.0, Cloud-based discovery scheduling and reporting is available in Discovery Admin Workspace.

Configure Discovery to use Event Framework

Starting with version 1.9.0, Discovery jobs can be configured to use an event-based system, reducing database activity by queuing and processing events at regular intervals with priority and memory monitoring.

Changed in this release

Name suggestions for application service candidates

Experience more accurate name suggestions for application service candidates based on Service Fingerprints in Service Mapping Plus store version 1.15.0.

Limits in Service Mapping

Limits in Service Mapping prevent the disabling or deletion of jobs scheduled for the Checkpoint Reaper or the Service Model's Blob Reaper.

Limits in tag-based Service Mapping

Starting with version 1.15.2, experience improved performance in Service Mapping. A new property limits the creation of tag-based service candidates to 200 per service family.

Name update in Service Mapping

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Application Services in the navigation menu has been renamed Service Instances.
- The label for the [cmdb_ci_service_auto] table has been changed from Application Service to Service Instance.

Discovery status monitoring

Discovery schedules that have no status updates for over a defined number of minutes are analyzed automatically by the Discovery Status Monitor job. By default, this job applies to Discovery schedules that discover configuration items.

Deprecations

Application/Plugin Deprecation Process [KB0867184]Discovery CLI

Starting with version 3.5.0, Discovery CLI is no longer available in the Pattern Designer Enhancements Store App.

Activation information

ITOM Visibility is available with activation of the Discovery (com.snc.discovery) plugin and the Service Mapping (com.snc.service-mapping) plugin, which require an ITOM Visibility subscription. For details, see Request Discovery and Request Service Mapping. For full ITOM Visibility functionality, install the latest ITOM Visibility out-of-band applications from the ServiceNow Store. For cumulative release note information for all released apps, see the ServiceNow Store version history release notes.

Related ITOM applications and features

ITOM Health

The ServiceNow® ITOM AIOps product includes the ServiceNow® Event Management and ServiceNow® Metric Intelligence applications, which help you track and maintain the health of services in your organization.

Event Management gathers alerts from infrastructure events that both third-party monitoring tools and the ServiceNow® internal agent capture. Event Management uses IT-related information that ServiceNow® Discovery gathers so it can map alerts to configuration items. Based on the collected information, Event Management then provides dashboards that show a consolidated view of all service-impact events.

The Agent Client Collector application enables you to do the following:

- Monitor your service availability.
- Examine the health and performance of your environment.
- Ensure that your infrastructure and its applications are running properly.

Agent Client Collector collects events and metrics. It runs in either a Windows or Linux environment.

ITOM Optimization

ITOM Optimization provides automation for the cloud workflows used to manage the cloud resources throughout their life cycle. It enables certified and enterprise-compliant cloud deployment, cost visibility, and other cloud management processes.

ITOM Licensing

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

ITOM SU Licensing has been rebranded as ITOM/OT SU Licensing. ITOM/OT SU Licensing calculates and displays the usage of ITOM subscriptions based on subscription units. It enables you to access a comprehensive overview of the total number of licenses allocated to applications and configuration items (CIs), while offering an advanced feature set that provides visibility into the specific CIs covered by your licenses. You can view the subscription breakdown for ITOM AIOps, ITOM Visibility, ITOM Optimization, and ITOM Cloud Accelerate. For more details, see View which CIs have an ITOM license.

Now Assist for IT Operations Management (ITOM) release notes

The ServiceNow® Now Assist for ITOM application brings generative AI to ITOM. Now Assist for ITOM was enhanced and updated in the Yokohama release.

Now Assist for ITOM highlights for the Yokohama release

Yokohama Patch 11

- Review changes to Now Assist usage measurement.
- Now Assist skills used in the analyze potential impact agentic workflow are turned on by default.
- Use the new manage alerts autonomously workflow to efficiently manage alerts and minimize resolution times, including an AI agent for triage, impact analysis, and root cause investigation.
- Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications.

Yokohama Patch 6

- Get deeper impact analysis in the Analyze alert impact agentic workflow with five new AI agents.
- Review Alert analysis, and relevant information for new mixed alert groups in the Now Assist panel to help investigate alerts more effectively.
- Use the Triage and analyze alert agentic workflow to perform initial triage and analysis in the context of an incident.
- Enhance security for Now Assist AI agents with Access Control Lists (ACLs).
- Use Google Gemini and Anthropic Claude on AWS as AI model providers for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI.

Yokohama Patch 3

- Investigate alerts and get the context that you need to respond efficiently using the Analyze alert impact agentic workflow.
- Automatically perform initial alert triage and analysis tasks such as assigning alerts, analyzing alert history, and summarizing past incidents, with the Triage and analyze alert agentic workflow.

See Now Assist for IT Operations Management (ITOM) for more information.

Important:
Now Assist for ITOM is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

New in the Yokohama release

Yokohama Patch 11

Enhance IT operations with AI-driven, autonomous alert management using the manage alerts autonomously workflow

Automate alert triage, impact analysis, and root cause investigation with an AI-driven workflow that replaces manual operator steps with autonomous decision-making. The workflow processes incoming alerts end-to-end and surfaces consolidated insights through Express List, giving operators immediate visibility into what happened, what's affected, and why.

Configure the Datadog and Gemini Cloud Assistant observability skills

Set up the new Datadog and Gemini Cloud Assistant observability skills to get insights from those tools in the manage alerts autonomously agentic workflow. With Datadog and Google Gemini, the workflow now supports five observability tools, including Dynatrace, Kentik, and New Relic, helping you investigate and respond to a wider range of alerts.

Yokohama Patch 6

Configure the Dynatrace analysis AI agent

Set up the Dynatrace analysis AI agent in the Analyze alert impact agentic workflow to investigate Dynatrace alerts. With Dynatrace, the agentic workflow now supports three observability tools, including Kentik and New Relic, helping you investigate and respond to a wider range of alerts.

Expand the Analyze alert impact agentic workflow with four new AIOps agents

Get a fuller view of alert impact with four new AIOps agents in the Analyze alert impact agentic workflow. Along with observability data, the agentic workflow now includes information from within ServiceNow to help surface business impact and related issues. Activate the AIOps agents to include them in the agentic workflow.

Enhance your decision-making process with the Analyze Potential Impact agentic workflow

Assess the potential impact of a change using the Analyze Potential Impact agentic workflow. This workflow provides an analysis of the relevant servers and suggested services that might be impacted by your change request, ensuring you have all the insights needed to make informed decision before a change.

Add access control lists for security in AI agents

Enable security settings to run AI agents and agentic workflows using ACLs and user identities. You can configure and manage the ACLs in AI Agent Studio.

Utilize the Triage and analyze alerts agentic workflow in the context of an incident

Initiate the Triage and analyze alerts agentic workflow from the Now Assist panel in the context of the incident form to perform all the functions of the workflow. This workflow automatically assigns, acknowledges, and summarizes origin alerts, determines their significance through historical analysis, and analyzes related incidents.

New third-party AI model provider options available for all Now Assist applications

Google Gemini and AWS Claude are available for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI.

Yokohama Patch 3

Analyze alert impact agentic workflow

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Analyze the impact of alerts and identify the possible causes with the Analyze alert impact agentic workflow. The workflow interacts with observability tools, such as Kentik and New Relic, to surface alert details and provide insights.

Now Assist for IT Operations Management (ITOM) Triage and analyze alert agentic workflow

Automatically assign, acknowledge, and summarize the alerts, determine their significance through history analysis, and analyze the related incidents. Initiate multiple parallel processes to triage and analyze the different alerts.

Removed in this release

- Starting with version 2.0.1 of AI Agents for Observability, the sn_obs_aia.admin role, previously required to configure AI agents in the Analyze alert impact agentic workflow, has been removed. Users must now have the credential_admin and connection_admin roles instead.
- Starting with version 2.0.1 of AI Agents for Observability, the prompt `How severe is this alert?` no longer appears in the Analyze alert impact agentic workflow.

Changed in this release

Yokohama Patch 11

Changes to Now Assist usage measurement

Starting with Yokohama Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Some Now Assist skills are turned on by default

The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.

Configure ACLs for AI agents and agentic workflows

Configure the access control lists for who can discover and trigger AI agents and agentic workflows in their guided setups in AI Agent Studio. You can determine whether an AI agent or agentic workflow behaves as a dynamic user or as an AI user. You can also specify if an AI agent or agentic workflow can be available to all authenticated users or publicly available.

AIOps AI agents removed from the analyze alert impact agentic workflow

Four AIOps AI agents have been removed from the analyze alert impact agentic workflow as they're now available in the manage alerts autonomously agentic workflow. AI agents for Dynatrace, Kentik, and New Relic remain in the analyze alert impact agentic workflow to help you learn about and respond to alerts.

Activation information

- Install the AIOps Experience [sn_sow_aiops] application from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.
- Install Now Assist for ITOM by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Additional requirements

The Now Assist for ITOM application requires an ITOM Pro Plus or Enterprise Plus license.

Related ServiceNow applications and features

Now Assist

Help improve organizational efficiency, deliver better self-service, and empower your users to search more effectively.

Now Assist Admin console

Use the Now Assist Admin console to learn how to set up, configure, and monitor Now Assist applications and features.

Now Assist panel

Use this conversational interface in the ServiceNow® Service Operations Workspace to summarize a chat, incident, or resolution notes, and get the context that you need.

Now Assist skills

Work with ServiceNow® Now Assist products to use generative AI skills in different workflows. Workflows include summarizing cases or incidents, summarizing chats, generating resolution notes, and generating code.

AIOps LEAP release notes

The ServiceNow® AIOps LEAP application uses AI driven insights to create standard and dynamic playbooks for quick incident resolution management. AIOps LEAP is a new application in the Yokohama release.

AIOps LEAP highlights for the Yokohama release

- Automation feedback and tracking for automation opportunities
- Pin Automation Opportunities for ease of analysis
- Customize filters for Automation Opportunities and published playbooks.
- Customize columns on the Automation Opportunities and published playbooks pages.
- Use published LEAP in SOW to resolve a new incident quickly.
- Use a value dashboard for performance analysis and enhancement.

See AIOps Learning Enhanced Automation Playbook (LEAP) for more information.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Important:
AIOps LEAP is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

AIOps LEAP features

Incident clustering and comprehensive summaries

AIOps LEAP smartly categorizes IT incidents based on short descriptions and assignment groups. It uses historical data to get a deeper understanding of issues and summarizes them into actionable resolutions. AIOps LEAP consolidates information from different incidents to help with decision making and serves as a repository of knowledge.

Group incidents to create automation opportunities

AIOps LEAP uses the ServiceNow® GAF (Group Action Framework) plugin to organize and group incidents based on specific parameters. These groups are clusters or automation opportunities. They are created by analyzing incident data such as work notes and resolution notes. AIOps LEAP uses these automation opportunities to generate resolution steps to help solve similar future incidents.

Automation recommendations and playbook generation

AIOps LEAP identifies frequent issues and offers automation recommendations to address them. It streamlines and optimizes operational processes by creating actionable playbooks based on historical data and resolution workflows. Additionally, it builds a knowledge base by documenting workflows and solutions through detailed resolution steps, enabling further analysis, learning, and continuous improvement. These resolution steps can be shared across teams to facilitate collaboration and enhance operational efficiency, even without formal playbook creation. Thus, automated playbook generation is a valuable output of the AIOps LEAP platform.

New in the Yokohama release

Enhanced opportunities page

Enhancements & Design changes to load all opportunities and enable to select all cards.

UI changes

Pin automation opportunities

You can pin the automation opportunities required for ease of access and research.

Automation feedback and tracking

You can provide your feedback on the available resolution steps and playbooks. Each activity on the automation activity is tracked and recorded.

Filters for automation opportunities and playbooks

You can customize filters on the automation opportunity dashboard to filter them according your requirement for analysis. These filters are retained even when the page is refreshed.

AIOps LEAP Activation information

Install AIOps LEAP by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Use one of the following steps to activate *AIOps LEAP*.

Activate AIOps LEAP

Activate from	Steps
Workspaces	1. Select **Workspaces** on top, select *AIOps LEAP*. 2. Select **Now Assist Admin Workspace**, select **Activate**.
Now Assist Admin	1. Select **Admin** > **Now Assist Admin** > **Now Assist Skills** 2. In the navigation pane, select **ITOM**. 3. Select **Activate** *AIOps LEAP*.

Additional requirements

You should have the following dependencies installed:

- Now Assist for Platform
- Now Assist for Creator (optional)

Related ServiceNow applications and features

Now Assist for IT Operations Management (ITOM)

The ServiceNow® Now Assist for IT Operations Management (ITOM) application uses generative AI to provide alert analyses in Event Management. Alert analysis include a human-readable brief of the alert and technical information to help you investigate the alert more effectively.

IT Service Management release notes

IT Service Management has new and updated features in the Yokohama release.

Benchmarks release notes

The ServiceNow® Benchmarks application gives you instant visibility into your key performance indicators (KPIs) and trends. Benchmarks was enhanced and updated in the Yokohama release.

Benchmarks highlights for the Yokohama release

1. Experience the new Key Performance Indicator (KPI) for Now Assist under Productivity moments per user of ITSM Benchmarks to understand the benefits of Now Assist features like Knowledge Article generation.
2. Benchmark the all new HRSM indicator to help evaluate the performance in comparison to your peers.

See Benchmarks for more information.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Important:
Benchmarks is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

- The new KPI **Knowledge Articles created using Now Assist** is added to Productivity moments. This primary indicator shows how many knowledge base articles are created using Now Assist in a given period of time.
- Leverage benchmarking for HRSM indicators to evaluate your performance in comparison to your peers.
- New KPIs are added to the Call deflection - percentage. These new KPIs help you understand the number of Incidents that are created using Proactive Engagement and Digital End-User Experience self service.
- New KPI is added to the self-solved percentage. This new KPI shares the number of times the issue is resolved using the Digital End-User Experience self service channels like Desktop Assistant, Now Assist panel, and Employee portal.

Activation information

Benchmarks is a ServiceNow AI Platform feature that is active by default. The new Benchmarks dashboard is automatically installed with Yokohama and is available from the ServiceNow Store.

Related ServiceNow applications and features

Performance Analytics (Indicator data sources)

The ServiceNow® Performance Analytics application is an in-platform solution that enables organizations to create management dashboards, report on KPIs and metrics, and answer key business questions to help increase quality and reduce the costs of service delivery.

Success Dashboard

The ServiceNow® Success Dashboard enables the leadership team and process owners to gain insights into the performance of their ServiceNow® IT Service Management (ITSM) implementation using the KPIs defined by the ServiceNow AI Platform®.

Continual Improvement Management

Use the ServiceNow® Continual Improvement Management application to request improvement opportunities and implement phases and tasks to meet performance goals, track progress, and measure success.

Strategic Portfolio Management

The ServiceNow® Strategic Portfolio Management application enables you to align work with business goals to deliver products and services in a way that supports your strategic priorities.

Change Management release notes

The ServiceNow® Change Management application provides a tool for managing the life cycle of all changes in your organization, enabling rapid changes without compromising stability and governance. Change Management was enhanced and updated in the Yokohama release.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Change Management highlights for the Yokohama release

- Increase operational efficiency of tier 1 service desk agents with the dedicated sn_service_desk_agent role.
- Require specified field details to be updated before transitioning the state of a change request by converting existing optional fields to mandatory fields.
- Restrict unauthorized access to Change Management tables using deny ACLs.

See Change Management for more information.

New in the Yokohama release

User role for service desk agents

With the sn_service_desk_agent user role, increase operational efficiency by streamlining the process of asking about, gathering, and verifying information, as well as delivering quick resolutions. This role is designed for tier 1 service desk agents and is accessible when the ITSM Roles plugin (com.snc.itsm.roles) installed.

The sn_service_desk_agent role includes the following roles:

- sn_incident_write
- sn_problem_write
- sn_change_write
- sn_request_write
- tracked_file_reader

Additionally, with the installation of the **ITSM Gen AI** (*com.sn.itsm.gen.ai*) plugin, the knowledge_user and now_assist_panel_user roles are integrated within the sn_service_desk_agent role.
The sn_service_desk_agent user role can be used starting with Service Operations Workspace version 6.1.

Change model Type field

A new **Model** option has been added to the change model Type field to help users identify a change that is controlled by a change model. **Model** is the default if a Type has not been set for the change request of a certain change model.

No default Risk value for change requests

There is no longer a default value for the Risk field on the Change Request table. The Risk value is set to **-- None --** until the risk is evaluated for the change request. This change ensures that no risk value is pre-assigned, allowing for a more accurate assessment before advancing the change

Mandatory field transition condition

Ensure mandatory fields are completed before advancing through states for a change request, as defined by the Change Model. This feature enables change managers to mandate the completion of required fields before states can progress according to the Change Model.

Deny-unless ACLs on core tables

Prevent unauthorized access to change_request and change_task tables using deny-unless ACLs. The deny-unless ACLs restrict access on these tables for a non-authenticated user to perform actions such as read, write, delete, or create.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

This feature is available for new or zBoot customers with the installation of the ITSM Enhanced Security Features (com.snc.itsm.enhanced_security) plugin. Existing or upgrade customers must test and evaluate in their sub production instance before installing the plugin and implementing the security change in their production instance.

Removed in this release

Change Management workflows have been removed and replaced by flows for new customers. Existing customers that use these workflows are unaffected. The flows are available to both new and existing customers. You can use ServiceNow® Workflow Studio to customize or extend these flows. For more information, see Flow Designer.

Activation information

Change Management is a ServiceNow AI Platform feature that is active by default.

DevOps Change Velocity release notes

The ServiceNow® DevOps Change Velocity application improves visibility into your DevOps data in a single system, automates and accelerates change processes, and helps you gain insights to measure the performance of your DevOps environment. DevOps Change Velocity was enhanced and updated in the Yokohama release.

DevOps Change Velocity highlights for the Yokohama release

- Integrate with the Harness orchestration tool to discover Harness pipelines and enable change automation.
- Detect anomalies and issues in your DevOps Change Velocity instance using health scans.

See DevOps Change Velocity for more information.

Important:
DevOps Change Velocity is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Important information for upgrading DevOps Change Velocity to Yokohama

If you are a new customer or are using a zBoot instance and you want to create type-based workflow change requests in DevOps Change Velocity, you must add the *com.snc.change_management.change_model.type_compatibility* property and set it to True. For more information, see Add a system property.

If you are an upgrading customer, you must run the **ReConfigure Bitbucket Server Repositories for PullRequest** job to re-configure your existing Bitbucket Server or Bitbucket Data Center repositories so that pull request records can be imported. You can navigate to **All > System Definition > Scheduled Jobs** to search for this job and run it.

New in the Yokohama release

Harness integration

Discover Harness pipelines and configure real-time notifications to enable change traceability and automation by integrating the Harness orchestration tool with DevOps Change Velocity.

DevOps Health instance scan

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Detect anomalies and issues in the instance by running or scheduling health scans on your DevOps Change Velocity instance.

Bitbucket Cloud tool integration with ServiceNow

Integrate the Bitbucket Cloud coding tool with DevOps Change Velocity to connect, discover, import, and process real-time repository events in DevOps Change Velocity.

DevOps Change Workspace UI for simplified creation of custom tool integration with planning, coding and orchestration capabilities

Integrate a new custom tool across planning, coding and orchestration capabilities with basic know-how of ServiceNow using an intuitive DevOps Change Workspace UI. It offers easy navigation to the ServiceNow Platform for defining transformer or adapter rules, or integrate the ability to do so within the Workspace wherever applicable, and embeds necessary documentation links and tooltips to support self-service.

Import based evidence collection

Improve instance efficiency by skipping step-level pipeline processing for accelerated change management and evidence collection for GitHub Actions, Azure DevOps (ADO), GitLab and#Jenkins orchestration tools.

Changed in this release

Simplified onboarding of orchestration tools not supported in the base system

Integrate orchestration tools that aren't supported in the base system by leveraging a generic framework.

Custom fields for planning tool integration

Add custom fields into your planning tool integration to improve configurability and access business-specific information, which facilitates more informed decision-making.

Additional scans for DevOps Health Scan Content pack

Additional set of proactive checks focused on problems that tend to occur before or after an upgrade along with identifying configuration issues like plugin and version incompatibilities, or pipelines that chronically fail, have been added.

Import pull-request records for Bitbucket Server or Bitbucket Data Center

Import pull-request records for Bitbucket Server or Data Center for improved insights and efficiency.

Change request creation with errors in DevOps data retrieval for Harness pipelines

Enable change request creation even if there is an error in retrieving the DevOps data for a Harness pipeline.

Branch name filter

Search for build numbers by the branch name while associating DevOps data to a change request in the Service Operations Workspace (SOW) or Classic UI.

Test summary name in GitHub Actions

The servicenow-devops-test-report custom action in GitHub now includes an optional test-summary-name parameter to specify the test summary results name.

Token based authentication for Rally

Configure webhooks for Rally using token based authentication instead of using the integration username and password.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Renamed variables for Docker

The environmental variables in the Generic Docker actions for DevOps Change Velocity have been renamed by removing the CI prefix for better clarity.

Security scan results

Security scan results on the change record associated to a pipeline execution with a linked package are now displayed in the **Security Summaries** tab.

Source of commits in SOW

View the source of commits like pipeline execution, branch, repository, and so on for a change request in the DevOps data section of the Service Operations Workspace.

Track file changes

The **Track file changes** option is now disabled by default when a repository is configured to prevent any potential security risks.

Close code value for a change request

Two new properties have been added in DevOps Change Velocity, so that you can specify a close code value for a change request based on the change request completion state when the autoCloseChange parameter is enabled.

Support for MID Server cluster

Improve load balancing and failover protection by selecting a MID Server cluster when connecting to a tool instance associated with a MID Server cluster. This configuration enables multiple MID Servers with relevant capabilities to be grouped.

Improved UX for DevOps Change health scans

Run health scans and analyze findings efficiently in the DevOps Change workspace with an intuitive and user-friendly interface.

Pipeline association for GitHub Actions

When onboarding GitHub Actions pipelines through the App onboarding catalog or the onboarding APIs, now only the selected pipelines are associated with the DevOps app. If no pipeline is selected, all pipelines within the specified repository are associated.

Tool connection check status

If a tool is marked as Disconnected because of a system-generated failure during an unsuccessful connection check, any subsequent successful check automatically updates the connection status to Connected. If you manually disconnect the tool, the tool status remains Disconnected even if there's a subsequent successful connection check.

New roles for vulnerability integration

- The sn_vul.app_sec_manager role is added to the DevOps Tool Owner [sn_devops.tool_owner] role when the DevOps Vulnerability Integrations plugin (sn_devops_vul_ints) is installed.
- The sn_vul_veracode.configure_integration role is added to the DevOps Tool Owner [sn_devops.tool_owner] role when the Vulnerability Response Integration with Veracode plugin (sn_vul_veracode) is installed.

Prod deploy commit logic for other step types

Update the *sn_devops.commit_rel_change_step_type* property to have other step types, like Test or Deploy, use the same commit logic as Prod Deploy.

Override start and end time of a change request

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Set the **sn_devops.change_request.auto_close_allow_override_start_time** and **sn_devops.change_request.auto_close_allow_override_end_time** properties as false to consider the change request start and end time instead of the pipeline's when the autoCloseChange parameter is enabled in a pipeline.

Node version of DevOps extension

The node version of the ServiceNow DevOps extension has been upgraded to version 20.x in Azure DevOps.

Enhanced pipeline governance in GitLab

View change request details like status, sys_id, priority in the GitLab console when a change request is created in GitLab using Docker image.

Health scan enhancements

- Identify outdated or prolonged discover and import requests using the DevOps -Stale or Long-Running Discover and Import Requests health check.
- Verify whether webhooks have been configured correctly for any tracked repository, pipeline, or plan in GitHub, GitLab, Azure DevOps, and Jenkins using the DevOps webhook configuration analysis health check.
- Identify OAuth app configuration issues for GitHub tools in the connected state using the DevOps webhook configuration analysis health check.
- Verify if any scheduled job has been configured to run as an invalid or non-admin user.
- Navigate to the Findings list from the DevOps Change Workspace home page by selecting **View all findings** in the Health scan findings widget.

Enhanced JFrog integration with DevOps Change Velocity

Gather JFrog evidence seamlessly and create change records automatically using the improved JFrog integration with DevOps Change Velocity.

Bearer authentication in JFrog

Connect to JFrog using the secure bearer token authentication to comply with JFrog's updated security policies.

HTTP proxy for Docker

Connect to DevOps Change Velocity through HTTP proxy settings using environment variables in your Docker deployment for instances that run a proxy server.

Health scan enhancements

- Identify any callback processing issues in your instance.
- Identify any access control rule (ACL) that is incorrectly associated with a role in your instance.
- Verify whether all DevOps tables are present in your instance and confirm whether all metadata in sys_* tables is present.
- Verify whether all DevOps roles in your instance contain all expected roles, including inherited roles.

Auto close without Change Management - State Model [Legacy] plugin

Change requests can now be auto-closed without requiring you to install the Change Management - State Model [Legacy] plugin.

Activate DevOps Change Velocity by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Related ServiceNow applications and features

Performance Analytics

ServiceNow® Performance Analytics is an in-platform process optimization solution to create management dashboards, report on KPIs and metrics, and answer key business questions. The application helps improve quality and reduces the costs of service delivery.

Change Management

The ServiceNow® Change Management application provides a systematic approach to control the life cycle of all changes, facilitating beneficial changes to be made with minimum disruption to IT services.

Agile Development

The ServiceNow® Agile Development application helps you deliver software projects more efficiently by managing and tracking software development life cycles using an iterative, incremental, and flexible approach.

Risk Management

The ServiceNow® Governance, Risk, and Compliance Risk Management application helps you continuously monitor and identify high-impact risks, improve your risk-based decision-making, and reduce reaction time effectively. The application also provides structured workflows for the management of risk assessments, risk indicators, and risk issues.

Digital End-User Experience release notes

The ServiceNow® Digital End-User Experience (DEX) solution is a cloud-based tool providing IT with comprehensive visibility and monitoring for user applications, networks, and devices. The DEX suite includes Application and Device Health, which helps IT resolve device and application issues proactively, and Desktop Assistant, which provides easy access to self-service options. Digital End-User Experience was enhanced and updated in the Yokohama release.

Digital End-User Experience highlights for the Yokohama release

- Monitor whether the devices across your organization are adhering to the established application and policy metric compliance rules using the System compliance report.
- Identify high-performance devices and learn the correlation between your device performance and overall system health by monitoring critical metrics, such as CPU usage, in the System performance report.
- Monitor the multiple facets of the end-user network performance, including connection details, connection stability and path metrics, and application network hops.
- Manage what DEX metrics are collected for a DEX agent policy, turn off collection of a metric, or change the frequency for a metric collection.
- Set up file management to track and manage executable files on your organization devices.
- Track and manage the Windows registry keys configured for monitoring on your organization devices.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- View client health metrics with the Microsoft Configuration Manager (MCM) application.
- Track the impacted device details from the Service Operations Workspace landing page. You can also track the details of all the impacted users and impacted devices from the active alerts.
- Determine the device location based on the pre-defined custom logic.
- Diagnose and resolve device issues using the Device health check capability provided by Digital End-user Experience Self-service.
- Track the digital experience scores of the applications and devices that your employees use with the Digital Experience Score dashboard.
- The Proactive Engagement application is integrated as part of the DEX suite of applications and is installed along with DEX.

See Digital End-User Experience for more information.

Important:

- Digital Experience Score is supported from the Yokohama release onward. If you see the Digital Experience Score dashboard in Xanadu, you must disable the DEX Score feature. For more information, see the Disable DEX Score Feature in Xanadu article [KB2224330] in the Now Support Knowledge Base.
- Digital End-User Experience is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Important information for upgrading Digital End-User Experience to Yokohama

To upgrade your DEX Desktop Assistant, do the following:

1. Install the latest version of the Desktop Assistant in your instance.
2. With admin rights, reinstall the Desktop Assistant on your local machine even if you have the latest version.

New in the Yokohama release

Manage your system compliance report

Identify vulnerabilities and keep end-user devices secure and efficient by confirming that they meet security policies and regulatory standards. The Compliance report provides a comprehensive view of how well the end-user devices are adhering to the security measures of your organization.

Monitor system performance

Identify high-performance devices by monitoring critical metrics, such as CPU usage, memory consumption, disk activity, and input/output (IO) reading and writing speeds. Monitoring system performance provides information about how device performance impacts overall system health.

Check your device's health

Digital End-user Experience Self-service (DEX Self-service) enables you to check the performance of your device using a Device health check. You can check the device health on demand and resolve the issues detected by DEX by leveraging the recommended resolutions for the issues. The resolutions can either be remedial actions (that you can trigger via a button), self-help instructions, or URL. You can also use Device actions which can be triggered even when no issues are detected on the device.##These actions enable you to maintain good performance of the devices and applications

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Monitor your user apps network

Monitor the advanced metrics like jitter, latency, and packet loss with a visual representation of network hops. These metrics provide real-time insights into network performance, helping to identify bottlenecks and areas for optimization quickly.

Additional device metrics

Get insights into device health and performance using the newly added device-level and application metrics. These metrics include memory usage, system time, energy consumption, and page file size. They're available in the following pages under Device health or Advanced app metrics:

- Operating system
- System compliance metrics
- Windows power plan
- File management
- Windows registry
- Microsoft Configuration Manager (MCM) application
- Application freeze

Digital Experience Score

Measure and consolidate both quantitative and qualitative data to gain a holistic view of the digital employee experience. The Digital Experience Score dashboard (DEX Score) provides data-driven insights to improve your employees' digital experience.

DEX Score compiles health metrics scores, user sentiment scores, and service experience scores for applications and devices to calculate the overall digital experience score.

Access device lists based on individual device or application health metric scores. Review the list to identify devices with scores below the average for each metric.

Proactive Engagement

Inform employees by providing any self-help instructions or notifications by Desktop Assistant and email as the two new notification channels along with the existing Virtual Agent option.

Explore what Proactive Engagement has to offer with new use cases as part of the base system. The new use cases include poor Wi-Fi connectivity, device crash, app crash, app freeze, Jamf execution, and disconnected Zscaler.

User criteria help in grouping the users based on certain conditions. You can set the user criteria settings through Proactive Engagement.

Depending on the remedial action chosen from the list while creating a new metric rule, specific input parameters can be configured with advanced settings that will fetch a static input.

UI changes

DEX UI enhancements

Several user interface improvements have been made to help enhance usability and make navigation more intuitive, leading to a better overall user experience.

Activation information

Install Digital End-User Experience by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Browser requirements

Enable the DEX browser extension for monitoring Web applications to collect various operational or performance-based metrics on your system. For more information, see Enable DEX browser extension for monitoring web/SaaS applications.

Localization information

Localization is applicable to DEX in all languages supported by the ServiceNow AI Platform.

Related ServiceNow applications and features

DEX for Service Desk Agents

As a Service Desk agent, view device metrics from within the platform by navigating to the DEX Device health page. You can access the page from the Core UI incident experience or from the **Investigate** tab Service Operations Workspace (SOW).

Now Assist for IT Service Management (ITSM)

From Desktop Assistant, use generative AI to enhance your productivity and efficiency through conversation and proactive experiences.

ITSM Virtual Agent

The ServiceNow Virtual Agent application enables you to scale your IT organization, where technicians can address more challenging IT-related user requests and incidents.

ITSM Success Dashboard

The ServiceNow ITSM Success Dashboard enables the leadership team and process owners to gain insights into the performance of their ServiceNow IT Service Management (ITSM) implementation using the KPIs defined by the ServiceNow AI Platform®.

Digital Experience Score

Using the DEX Score dashboard, monitor the digital experience scores of the applications and devices that your employees are using. By exploring the individual device and application experience scores, you can identify what is working well for employees and what needs improvement.

Digital End-user Experience Self-service

Using DEX Self-service, you check your device heath, diagnose the issues, and use the resolutions to improve the device health.

Digital Portfolio Management release notes

The ServiceNow® Digital Portfolio Management Workspace enables you to view and manage the full life cycle of your services and applications. Digital Portfolio Management was enhanced and updated in the Yokohama release.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Digital Portfolio Management highlights for the Yokohama release

- Updated the Digital Portfolio Management (DPM) Admin Center.
  - Added a Troubleshoot tab to the DPM Admin Center landing page to help you recalculate availability results and indicators for service offerings.
  - Added the ability to configure the personal portfolio solution cards and to view relationships of business applications and application services.
- Updated the key performance indicator (KPI) behavior so that you can drill down on time series KPI information and use an Active flag to hide KPIs in a KPI group.
- Updated the DPM data model to improve visibility and reporting when an incident, problem, or change is in the application service's Impacted services or Affected CIs related list. The updated model rolls up the incidents, problems, and changes so that you can see the impacts in related business applications (in the KPIs and Needs attention panels).

See Digital Portfolio Management for more information.

Important:
Digital Portfolio Management is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Use the Admin Center in Digital Portfolio Management

Use the added Troubleshoot tab on the DPM Admin Center landing page to help you recalculate availability results and indicators for service offerings. You select a specific time period for the recalculation and then you can check the progress in the event log.

Configure personal portfolio solution cards in the DPM Admin Center

Configure the fields that are displayed on the personal portfolio solution cards in the DPM Workspace. Solution cards display information about the four main types of solutions (service, service offering, business application, and application service). This configuration determines the fields that are displayed on each solution card.

View relationships of business applications and application services in the DPM Admin Center

See all incidents, problems, and changes that are related to your business applications and application services. You can view the data in these areas:

- The DPM Admin Center
- In the DPM Workspace, in the Needs attention panels and in the life-cycle tabs that present key performance indicator (KPI) data.

KPI groups in Digital Portfolio Management

Added the ability to select the spark lines (time series chart) for a KPI indicator to open its details.

Update KPIs in Digital Portfolio Management

Added an Active flag so that you can hide KPIs in a KPI group from the DPM Workspace. The Active flag is available for all KPIs so that you can hide an individual KPI even when it's part of a larger KPI group.

View application service details

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Expanded the DPM data model so that when an incident, problem, or change is in the application service's Impacted services or Affected CIs related list, the updates roll up to the related business application. You can see the impacts in the related business application's KPIs and Needs attention panels). For more information, see Work with Needs attention panels in Digital Portfolio Management.

Work with lists in Digital Portfolio Management

Use the updated logic in the list address bar to copy the link of any list item to share that list with others. The list address includes a unique list ID for every list item. This updated logic applies wherever lists are used in the DPM Workspace:

- In the list module (for both provided lists and created lists).
- In the DPM Admin Center.

Activation information

Install Digital Portfolio Management by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Related ServiceNow applications and features

Service Portfolio Management

Use the ServiceNow® Service Portfolio Management application to set up and manage your services and offerings, and then organize them in portfolios. In the Digital Portfolio Management application, you can view the health and status of those portfolios and track them in one centralized location.

Performance Analytics

Use ServiceNow® Performance Analytics to create reports on key performance indicators (KPIs) to monitor and analyze metrics.

Digital Portfolio Management related applications and data sources

Other related ServiceNow applications bring in data from your services, service offerings, business applications, and application services for you to view all of them in your unified workspace view. All the related applications are optional and aren't required to use Digital Portfolio Management. This topic also offers links to Knowledge Base articles with more data source information.

Service Builder

As you view service information in Digital Portfolio Management, you can create and edit services and service offerings with quick access to the ServiceNow® Service Builder application.

> **Important:**
> If you use Service Builder and plan to upgrade to the current version of DPM, you must also upgrade to the current version of Service Builder at the same time.

Incident Management release notes

The ServiceNow® Incident Management application restores normal service operations while minimizing the impact to business operations and maintaining quality. Incident Management was enhanced and updated in the Yokohama release.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Incident Management highlights for the Yokohama release

- Increase the operational efficiency of the tier 1 service desk agents with the dedicated sn_service_desk_agent role.
- Control whether an incident or major incident record link in an email notification redirects you to the record in the classic UI16 interface or Service Operations Workspace (SOW).
- Enable agents with incident write access, callers, requesters, and **Opened by** end users to reopen a resolved incident from the Incident Management classic UI16 form, SOW, or Portal UIs.
- Restrict unauthorized access to incident-related tables using deny ACLs.
- Search for a configuration item (CI) in a list alphabetized by the CI name with an improved search performance.

See Incident Management for more information.

New in the Yokohama release

User role for service desk agents

With the sn_service_desk_agent user role, increase the operational efficiency by streamlining the process of asking about, gathering, and verifying information, as well as delivering quick resolutions. This role is designed for tier 1 service desk agents and is accessible when the ITSM Roles plugin (com.snc.itsm.roles) installed.

The sn_service_desk_agent role includes the following user roles:

- sn_incident_write
- sn_problem_write
- sn_change_write
- sn_request_write
- tracked_file_reader

Additionally, with the installation of the ITSM Gen AI (com.sn.itsm.gen.ai) plugin, the knowledge_user, and now_assist_panel_user roles are integrated within the sn_service_desk_agent role.

The sn_service_desk_agent role can be used starting with SOW version 6.1.

Enhanced security model adoption for incident tables

Help prevent unauthorized access to incident-related tables using Deny-Unless ACLs. A Deny-Unless authentication ACL restricts access for a non-authenticated user, such as a public role user. Without access, the user can't perform any actions on incident-related tables, including reading, writing, deleting, creating, or accessing the report view.

This feature is activated automatically and applicable on the following incident-related tables:

- kb_template_incident_kcs_articl
- kb_template_incident_kcs_template

Additionally, this feature is available on the following incident-related tables of new or zBoot instances after installing the ITSM Enhanced Security Features (com.snc.itsm.enhanced_security) plugin:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- incident
- incident_task
- task_ci
- task outage

The ITSM Enhanced Security Features (com.snc.itsm.enhanced_security) plugin can be installed and activated by an admin via a support request. Existing or upgrade users must test and evaluate the results in their non-production instance, and then install the plugin and implement the security change in their production instance.

For more information, see Deny-Unless ACL.

Changed in this release

Email redirection behavior for major incident email notification links

In major incident email notifications, you can now decide where the links to a major incident record are redirected. Instead of a major incident record automatically opening in the classic UI16 interface in Major Incident Management, the record can be opened in SOW. The major incident record link in an email notification opens in SOW only if the following conditions are met:

- The **Redirect SOW Email notification** (*sow_email_notification_redirect*) property is set to `true`. Setting this property to true enables the email redirection behavior for all tables including major incident.
- The **Redirect SOW Email notification for Major Incident Management** (*sn_major_inc_mgmt.sow_email_notification_redirect.mim*) property is set to `true`.
- You have the sn_sow_user role.

The ITSM Notifications Redirection (com.snc.itsm.notifications_redirection) plugin is installed and activated automatically to support this behavior.

Email redirection behavior for incident email notification links

In incident email notifications, you can now decide where the links to an incident record are redirected. Instead of an incident record automatically opening in the classic UI16 interface in Incident Management, the record can be opened in SOW. The incident record link in an email notification opens in SOW only if you have the sn_sow_user role and any of the following conditions are met:

- The **Redirect SOW Email notification** (*sow_email_notification_redirect*) property is set to `true`. Setting this property to true enables the email redirection behavior for all tables including incident.
- The **Redirect SOW Email notification for Incident Management** (*sow_email_notification_redirect.incident*) property is set to `true`. You can create this property if you want to enable or restrict the email redirection behavior specifically for the incident table. This property, if created and set, overrides the **Redirect SOW Email notification** (*sow_email_notification_redirect*) base system property.

The ITSM Notifications Redirection (com.snc.itsm.notifications_redirection) plugin is installed and activated automatically to support this behavior.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

To ensure consistency, the email notification templates for incident tasks are also updated to send the notification from Service Operations Workspace (SOW) in the same format as sent from classic UI16 interface similar to incident. Also, the template theme is updated to match the Next Experience theme.

Incident and problem workflow changes

When a problem is fixed and the **Share fix** option is triggered, the event is added to the **Work notes (Private)** field instead of the **Additional comments (Customer visible)** field for the incident associated with the problem record.

This feature is available in the base system for the new customers. For existing or upgrade customers, admin must set the **Communicate problem workaround to incident worknotes** (*com.snc.incident.communicate_prb_workaround_to_inc_worknotes*) system property to `true` to enable the feature.

Changes in the reopening incident behavior

Enable the agents with incident write access, callers, requesters, or **Opened by** end users to reopen a resolved incident. Both the caller and the requester can view and use the **Reopen** option on the incident classic UI16 form and the Portal UIs, such as Service Portal and Employee Service Center (ESC) portal.

An agent can view and use the **Reopen** option on the incident classic UI16 form to reopen any incident that is assigned to them or to other agents. However, on the Portal UI, an agent can only view and use the **Reopen** option to reopen an incident if it's assigned to them.

Sorting CIs in incident forms

The search performance of the available CIs for the **Configuration item** field on an incident form is enhanced to promote a clean UI and quick loading and sorting of the CIs. The search results that list the CIs are sorted alphabetically by CI name instead of by CI class and then CI name. The **ref_ac_order_by=sys_class_name** attribute is removed from the default attributes on the **cmdb_ci** field of the Task [task] table, which increases the performance of the field.

This change is applicable to new and existing users using the default attributes. You can use the **Override attributes** option to restrict this change for any required child tables that extend to the **cmdb_ci** field of the Task [task] table.

Activation information

Incident Management is a ServiceNow AI Platform feature that is active by default.

ITSM Mobile Agent release notes

The ServiceNow® ITSM Mobile Agent app delivers base system, mobile-first experiences designed for IT agents to triage, act on, and resolve incidents on the go. ITSM Mobile Agent was enhanced and updated in the Yokohama release.

ITSM Mobile Agent highlights for the Yokohama release

Starting in the 9.1 release, you can do the following:

- Summarize the incident record and activity information when adding work notes to an incident record or while reassigning an incident.
- Set different alert tones for incidents with different priority levels.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Set the incident impact and urgency levels to set the incident priority level automatically.
- Redirect from the mobile web browser to the ITSM Mobile Agent app seamlessly when opening and viewing different task records.

See ITSM Mobile Agent for more information.

Important:
ITSM Mobile Agent is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Summarize the incident record and activity information

When adding work notes to an incident record, use the GenAI task summarization capabilities to summarize an incident record and activity information, such as the issue details or actions taken.

You can also summarize the incident information when adding work notes when reassigning the incident record. After an information summary is generated, you can edit and add the information as work notes. This feature helps reduce the effort required to draft work notes. The feature is available in the following applets:

- My team applet
- Major incidents
- My work

To enable this feature in ITSM Mobile Agent, you must configure the Incident summarization skill in Now Assist for ITSM.

Set alert tones for incident with different priority levels

Set alert tones for incident with different priority levels. The alert tone can notify you of important actions so you can respond to them quickly.

Email notification redirection behavior

Redirect from the mobile web browser to the ITSM Mobile Agent app seamlessly when opening and viewing different task records. This feature is applicable on the following type of records:

- Incident
- Incident task
- Catalog task
- Change request
- Change task

When you select the record link from an email notification on a mobile device, the link opens in the mobile web browser. A pop-up banner then prompts you to view the record in the ITSM Mobile Agent app, which provides a fast and intuitive way to access the records. This feature is applicable only if the following conditions are met:

- The ITSM Mobile Agent application is installed on the mobile device.
- The **Enable universal links** (*glide.sg.universal_links.enabled*) system property is set to `true`.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Set the incident impact, urgency, and priority levels

Automatically set the incident priority level by defining the impact and urgency levels. This feature determines an incident priority level by maintaining uniform synchronization and consistency between the priority, impact, and urgency levels. When you edit the **Impact** and **Urgency** fields, you must add to the **Work notes** field.

Activation information

Install ITSM Mobile Agent by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

ITSM Predictive Intelligence Workbench release notes

The ServiceNow® ITSM Predictive Intelligence Workbench application provides prebuilt use case templates and guides you through your machine learning implementation to create intelligent IT Service Management (ITSM) business processes. ITSM Predictive Intelligence Workbench is deprecated starting with the Yokohama release.

Deprecations

Starting with the Yokohama release, ITSM Predictive Intelligence Workbench is deprecated and is no longer deployed, enhanced, or supported. To get the latest experience for this functionality, you must install the Task Intelligence for ITSM application plugin (com.snc.itsm_ml_task). For details, see the Deprecation Process [KB0867184] article in the Now Support Knowledge Base.

ITSM Success Dashboard release notes

The ServiceNow® ITSM Success Dashboard application provides insights into the IT leadership team and process owners that they can use to measure the performance of their ServiceNow® IT Service Management ITSM implementation. ITSM Success Dashboard was enhanced and updated in the Yokohama release.

ITSM Success Dashboard highlights for the Yokohama release

Experience the all new KPIs introduced for the Now Assist under Productivity moments per user in ITSM Success Dashboard to understand the benefits of using Now Assist features like Change Summarization, Change Risk Explanation, and Knowledge Article generation.

See ITSM Success Dashboard indicators for more information.

Important:
ITSM Success Dashboard is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

- The all new KPIs **Successful Change Summarization - Now Assist** and **Successful Change Risk Explanation - Now Assist** are added to the Productivity moments. These new contributing indicators help you understand the benefits of using change summarization and change risk explanation through Now Assist.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- The Key Performance Indicator (KPI) **Knowledge Articles created using Now Assist** is added to Productivity moments. This primary indicator shows how many knowledge base articles are created using Now Assist in a given period.
- New KPI is added to the self solved - percentage. This new KPI shares the number of times the issue is resolved using the Digital End-User Experience self service channels like Desktop Assistant, Now Assist panel, and Employee portal.

Activation information

Install ITSM Success Dashboard by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Related ServiceNow applications and features

The ServiceNow® Benchmarks application provides instant visibility into your key performance indicators (KPIs) and trends, as well as comparative insight relative to industry averages of your peers and to the industry top performers.

Performance Analytics (Indicator data sources)

The ServiceNow® Performance Analytics application is an in-platform solution that enables organizations to

- Create management dashboards
- Report on KPIs and metrics
- Answer key business questions
- Help increase quality
- Reduce the costs of service delivery

HR Success Dashboard indicators

HR Success Dashboard indicators provide performance insights to the HR leadership team and process owners. You can measure the performance of the HR implementation using the different KPIs.

Now Assist for IT Service Management (ITSM) release notes

The ServiceNow® Now Assist for IT Service Management (ITSM) application brings agentic AI to IT Service Management. Now Assist for IT Service Management (ITSM) was enhanced and updated in the Yokohama release.

Now Assist for IT Service Management (ITSM) highlights for the Yokohama release

Yokohama Patch 11

- Review changes to Now Assist usage measurement.
- Some Now Assist skills, agents, and agentic workflows are on by default.
- Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications.
- Some Now Assist skills are now turned on by default.
- Add self-service and deflection to your phone channel with Voice AI agents.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Edit the incident summarization skill prompts and inputs within the Now Assist Skill Kit.
- Use the Now Assist context menu (NACM) to create AI-powered generative text.
- Use agentic workflows in Change Management to quickly link configuration items (CIs) to a change request, intuitively create change requests, and easily associate outages with a change request.
- Empower service desk agents to diagnose and resolve incidents on DEX monitored devices quickly and efficiently by using the#DEX issue diagnosis and resolution agentic workflow.

Yokohama Patch 3

- Identify the category, subcategory, and configuration item for a given incident automatically using a team of AI agents in the Triage and categorize ITSM incidents agentic workflow.
- Get recommendations to resolve incidents by using a team of AI agents for catalog, knowledge, and past incidents in the Investigate and resolve ITSM incidents agentic workflow.
- Manage Microsoft 365 group members using AI agents in the Manage Microsoft 365 group members agentic workflow.
- Generate the **Risk and impact analysis** and the **Justification** fields using the AI agents in the Generate change request plans agentic workflow.

Yokohama Patch 1: Scale your workflows, enhance productivity, and complete work autonomously using the IT Service Management AI agent collection.

Yokohama Early Availability

- Manage change risk explanations effectively by copying an existing change risk explanation skill and configuring it for your business needs.
- Deflect IT issues in the ServiceNow portal with AI-powered solutions.
- Automatically generate an email as a recommendation to help agents save time and learn efficient ways to respond to requesters.
- View a summary of incidents and change requests in an intuitive summarization interface.
- Track the status of common IT-related tasks by using the Now Assist application.

See Now Assist for IT Service Management (ITSM) for more information.

Important:
Now Assist for IT Service Management (ITSM) is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Important information for upgrading Now Assist for IT Service Management (ITSM) to Yokohama

When you upgrade to the Zurich Patch 4 release, any customizations you may have made to the Now Assist context menu (NACM) won't be preserved. For more information, see the Community article Upgrade information for the NACM support in Now Assist for ITSM.

New in the Yokohama release

Yokohama Patch 11

Adding self-service and deflection to phone channels using Voice AI agents

Enhance employee productivity with Voice AI agents by adding self-service and deflection to their phone channel.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Getting password reset instructions using an AI agent

The **DEMO Password reset agent** is a demo AI agent that provides requesters with password reset instructions for the account that they need help with.

Editing the incident summarization skill prompts and inputs using the Now Assist Skill Kit

You can edit the prompts and inputs for the incident summarization skill within the Now Assist Skill Kit (NASK) and test the updates you've made.

Expanding attachment summarization capabilities to include additional document formats and language

You can now summarize, analyze, and extract data from attachments in additional formats and languages.

Enhancing the efficiency of the Investigate and resolve ITSM incidents agentic workflow

For better efficiency, the ITSM incident resolution investigation AI agent and Find catalog item AI agent have been combined into one agent. This agent is called the ITSM incident resolution plan investigation AI agent.

Enhancing the efficiency of the Triage and categorize ITSM incidents agentic workflow

For better efficiency, the Link major incident AI agent and the Link incident to problem AI agent have been combined into one agent. This agent is called the Link major incident or problem AI agent.

Enhancing the efficiency of the Generate change request plans agentic workflow

For better efficiency, the existing six agents in the change request plans agentic workflow have been combined into one agent. This agent is called the Change request plans AI agent.

Display the risk factors sources that contribute to the calculation of a change risk explanation

When a change risk is calculated, Now Assist for ITSM provides the list of the change requests that were used to identify the potential risks for the change risk explanation so that you can understand which risk factors contributed to the calculated risk.

Generating resolution notes using the Now Assist context menu

As an admin, you can view and configure the Now Assist context menu (NACM) to generate resolution notes using the **Resolution notes generation** skill.

Generating an activity response using the Now Assist context menu

As an admin, you can view and configure the Now Assist context menu (NACM) for an activity response using the **Incident activity response generation** skill.

Masking roles for controlled access to agentic workflows, AI agents, and skills

Mask roles to restrict access to agentic workflows, AI Agents, and skills, ensuring that users receive only the necessary permissions.

Suggest configuration items for a change request agentic workflow

Find and link applicable configuration items (CIs) to a change request from the Now Assist panel in a conversational and intuitive way using the Suggest configuration items for a change request agentic workflow.

Create outages for a change request agentic workflow

Associate outages with a change request in a conversational and intuitive way from the Now Assist panel using the Create outages for a change request agentic workflow.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Create standard change request agentic workflow

Create a standard, normal, or emergency change request in a conversational and intuitive way from the Now Assist panel using the Create standard change request agentic workflow.

Create standard change template proposal agentic workflow

Create a change template proposal record based on similar change requests in a conversational and intuitive way from the Now Assist panel using the Create standard change template proposal agentic workflow.

DEX issue diagnosis and resolution agentic workflow

Diagnose and resolve issues on DEX monitored devices through a structured process that includes diagnosis of the cause, a resolution plan with actionable steps, and documenting the resolution in the incident record.

Generate comprehensive release notes for a release in Digital Product Release

Automatically generate structured release notes for a release using the Generate Release Notes skill. This AI-driven capability compiles enhancements, features, incidents, and change records into structured notes with an executive summary and scope of work sections, reducing manual effort and ensuring consistency. You can edit the AI-generated draft as needed, then publish and share via link or PDF download.

Yokohama Patch 6

Classify service and CI AI agent

Automatically assign the related service, service offering, and configuration item (CI) to an incident using the Classify service and CI AI agent in the Triage and categorize ITSM incidents agentic workflow.

Setting the AI user as the Run as user in the Triage and categorize incidents agentic workflow

Create AI users for the identity type **AI agent** and assign roles to the AI user based on your needs. Run the agentic workflow as the AI user that determines the data access defined by the role.

Matching flow action access control roles with the agent roles for the Notify users with Twilio agentic workflow

When you update the agent role for the Notify users with Twilio agentic workflow, you must also update the corresponding access controls with those roles.

Matching flow action access control roles with the agent roles for the Manage Microsoft 365 group members agentic workflow

When you update the agent role for the Manage Microsoft 365 group members agentic workflow, you must also update the corresponding access controls with those roles.

Using the itil role to add or update work notes in the Now Assist panel

To add or update work notes in the Now Assist panel, the logged-in user must have the itil role.

New third-party AI model provider options available for all Now Assist applications

Google Gemini and AWS Claude are available for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI.

Editing prompts using the Now Assist skill kit

As an admin, you can clone the following skills, then access the skill in the Now Assist skill kit, and update the prompts:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Resolution notes generation skill
- Knowledge article generation skill
- Incident summarization skill

Prompt inputs for Major incident email content recommendation

Use related tables and fields as prompt inputs to generate a Major incident email content recommendation.

Yokohama Patch 3

Using IT Service Management AI agent collection

Use the IT Service Management AI agent collection to boost productivity, and autonomously resolve business tasks.

Available agentic workflows

Agentic workflows	Description
Triage and categorize ITSM incidents	Identify the category, subcategory, and configuration item for an incident automatically, and link associated major incidents or known problems.
Investigate and resolve ITSM incidents	Get recommendations to resolve an incident based on the incident number. Check for related catalog items, Knowledge articles, and similar resolved incidents to generate resolution steps for the incident.
Manage Microsoft 365 group members	Add or remove groups and email distribution lists from the Microsoft 365 group.

IT Service Management AI agent collection Generate change request plans agentic workflow

Use the following additional AI agents to handle change requests.

AI agent	Description
Change risk and impact analysis AI agent	Analyzes the potential risk and impact of a change request.
Change justification proposal AI agent	Proposes justification for a change request.

Generate a Major Incident email content recommendation by using Now Assist for IT Service Management (ITSM)

Draft a communication for a major incident using an email template. You can fill in the template field values with an AI-generated response.

Generate comments and work notes using the Now Assist context menu

Enable your agents to generate comments and work notes quickly and add them to incidents using the Now Assist panel.

Incident sentiment and sentiment trend

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Make informed decisions on incidents by considering the requester's sentiments and the reasoning behind them.

Suggested steps generation in Now Assist for IT Service Management (ITSM)

Automatically generate suggested steps to resolve an incident by analyzing the solutions from clusters of similar resolved incidents.

Summarizing attachments in the Incident summarization skill

Summarize, analyze, and extract data from attachments that are of type PNG or JPEG using Document Intelligence in the Incident summarization skill.

Yokohama Patch 1

Using IT Service Management AI agent collection

Use the IT Service Management AI agent collection to boost productivity, and autonomously resolve business tasks.

Available AI agent use cases

AI agent use case	Description
Generate post incident reviews	Enhance IT productivity during major incidents by minimizing the time required to generate post-incident reviews using AI agents. This process helps improve communication and avoid outages. **Important:** To enable the display of the Generate post incident reviews use case, you must activate the Incident Management - Major Incident Management plugin (com.snc.incident.mim). For more information, see Activate Incident Management - Major Incident Management.
Generate change request plans	Enhance IT productivity and help decrease the time to schedule change and manage change risk using AI agents. These AI agents can look up similar changes, generate implementation, back out, and test plans to manage change effectively.
Categorize incidents	Autonomously recommend incident categorization using AI agents. The AI agent assigns a category, subcategory, and a configuration item (CI) to incidents based on the incident description. The assigned CI is also based on callers associated with that item.
Notify users with Twilio	Send text messages via SMS to recipients manually using AI agents

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Available AI agent use cases (continued)

AI agent use case	Description
	to help improve the time required for subject matter expert response. **Important:** To enable the display of the Notify users with Twilio use case, you must activate the Twilio Spoke plugin (sn_twilio_spoke). For more information, see Twilio Spoke.

Yokohama Early Availability

Using self service to deflect incidents in a ServiceNow portal by using Now Assist for IT Service Management (ITSM)

Designed to reduce the number of incidents to be resolved by deflecting issues with self-service.

Customizing a Now Assist for IT Service Management (ITSM) change risk skill

Efficiently explain the risk of a change request by adding custom input fields to the following input tables:

- Change request
- Past similar change request
- Incident caused by change

Refining a change risk explanation response

Refine the explanation to a change risk by shortening or lengthening a response by using Now Assist for IT Service Management (ITSM).

Risk Assessment as input to calculate a change risk

Use risk assessment values as an input to explain the risk of a change request.

Generating an email response by using Now Assist for IT Service Management (ITSM)

Get recommendations for email responses that agents can review and send to users. Agents can also get email template and content edit recommendations from Now Assist for IT Service Management (ITSM).

Monitoring task status using pre-built LLM topics with Now Assist in ITSM Virtual Agent

Copy and customize a ITSM Virtual Agent core ITSM topic template to track the status of a task by using Now Assist in ITSM Virtual Agent.

UI changes

Yokohama Patch 11Changing the password reset topic to an AI agent

The Virtual Agent **Password reset** topic has been changed to a Virtual Agent AI agent. The agent guides the users with instructions to reset passwords using KB articles in their self-service portal.

Yokohama Patch 3Terminology change

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- The term use case is replaced with the term agentic workflow. For example, the Notify users with Twilio use case is now referred to as the Notify users with Twilio agentic workflow.
- The naming of the AI agents has changed. For example, Twilio SMS texter has been renamed to Twilio SMS texter AI agent.

Yokohama Early Availability **New look and feel for the display of incident and change request summarizations**

Get the summary of an incident or a change request by using the new and more intuitive summarization user interface. The new interface is available in Service Operations Workspace and in the Core UI.

Changed in this release

Yokohama Patch 11

Changes to Now Assist usage measurement

Starting with Yokohama Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Role configuration required for agentic workflows and AI agents

Agentic workflows and AI agents included with Now Assist applications require additional security configuration. If you select *`Users with selected roles`* for your user access security controls for an agentic workflow or AI agent, you must add the installed roles, or they will not execute. Data access settings must also include these roles. See the documentation for the agentic workflow or AI agent for the specific roles you must add.

Some Now Assist skills are turned on by default

The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.

Skills activated by default in Now Assist for ITSM

For new Now Assist for IT Service Management (ITSM) users, the following skills are activated by default:

- Incident summarization
- Change request summarization
- Chat summarization

Yokohama Patch 6 **Removing the prompt headers from the Customize prompt screen**

The prompt headers have been removed from the Customize prompt screen in the Incident summarization and Change summarization skill to support third-party Large Language Models (LLMs).

Yokohama Early Availability **System property to display knowledge article templates**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Display Knowledge article templates that you can use to create articles by using a system property. In earlier releases, the templates were displayed by default.

Yokohama Patch 3 IT Service Management AI agent collection Triage and categorize ITSM incidents agentic workflow

The Categorize incidents use case has been renamed to the Triage and categorize ITSM incidents agentic workflow.

The following AI agents have been added to the workflow:

- Link major incident AI agent
- Link incident to problem AI agent

The Incident categorize AI agent has been renamed to Categorize incident AI agent.

Deprecations

The Escalate IT Ticket core ITSM Virtual Agent topic is being deprecated in this release. The topic is renamed to **(Deprecated) Escalate IT Ticket**. This capability will be available in the Platform Request Status AI agent in a future release.

Activation information

Install Now Assist for ITSM by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

- **Important:**
  To enable the display of the Generate post incident reviews use case, you must activate the Incident Management - Major Incident Management plugin (com.snc.incident.mim). For more information, see Activate Incident Management - Major Incident Management.

- **Important:**
  To enable the display of the Notify users with Twilio use case, you must activate the Twilio Spoke plugin (sn_twilio_spoke). For more information, see Twilio Spoke.

Additional requirements

The Now Assist for ITSM application requires an IT Service Management Pro Plus or Enterprise Plus license.

Related ServiceNow applications and features

Now Assist

Help improve the productivity and efficiency in your organization, deliver better self-service, recommend actions, provide answers, and empower your users to search more effectively.

Now Assist Admin console

Use the Now Assist Admin console for quick and effortless access to the important information that you need to set up, configure, and monitor Now Assist applications and features.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Now Assist panel

Use this conversational interface in ServiceNow® Service Operations Workspace to summarize a chat, an incident, or resolution notes so that you can get the context of this information more quickly.

Now Assist skills

Use the ServiceNow® Now Assist products to provide agentic AI skills to meet the needs of users in different workflows, including case or incident summarization, chat summarization, resolution notes generation, and code generation.

On-Call Scheduling release notes

The ServiceNow® On-Call Scheduling application helps you verify that dedicated support team members are available to resolve issues when they occur. On-Call Scheduling was enhanced and updated in the Yokohama release.

On-Call Scheduling highlights for the Yokohama release

Control whether an on-call schedule or shift record link in all major on-call email notifications redirects you to Service Operations Workspace (SOW) or to the classic UI16 interface in On-Call Scheduling.

See On-Call Scheduling for more information.

Changed in this release

Email redirection behavior for links in major on-call schedule email notification

In all major on-call schedule or shift email notifications, you can now decide where the links to an on-call schedule or shift record are redirected. Instead of an on-call schedule or shift record automatically opening in the classic UI16 interface in On-Call Scheduling, the record can be opened in SOW. The on-call schedule or shift record link in an email notification opens in SOW only if the following conditions are met:

- The **Redirect SOW Email notification** (*sow_email_notification_redirect*) property is set to `true`.
- The **Redirect SOW Email notification for On-call scheduling** (*sow_email_notification_redirect.on_call*) property is set to `true`.
- You have the sn_sow_user role.

The ITSM Notifications Redirection (com.snc.itsm.notifications_redirection) plugin is installed and activated automatically to support this behavior.

Activation information

On-Call Scheduling is available with activation of the ServiceNow AI Platform On-Call Scheduling plugin (com.snc.on_call_rotation). For details, see Activate On-Call Scheduling. Activating this plugin activates the following third-party libraries:

- FullCalendar library
- DHTMLX scheduler

Note:
The On-Call Scheduling (com.snc.on_call_rotation) plugin is active by default for zBoot customers.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Related ServiceNow applications and features

Notify

In addition to emails, you can send on-call escalation notifications as SMS alerts and voice calls. Engage on-call escalation in ServiceNow® Notify conference calls.

ITSM Mobile Agent

Access the upcoming shifts and time-off requests of team members in the ServiceNow® ITSM Mobile Agent app. Send On-Call Scheduling escalation notifications as mobile push notifications.

Service Operations Workspace for ITSM

Identify available On-Call Scheduling members of a support group who can be contacted to resolve an issue in ServiceNow® Service Operations Workspace.

Problem Management release notes

The ServiceNow® Problem Management application helps you identify the cause of errors in the IT infrastructure that are reported as occurrences of related incidents. Problem Management was enhanced and updated in the Yokohama release.

Problem Management highlights for the Yokohama release

- Increase operational efficiency of tier 1 service desk agents with the dedicated sn_service_desk_agent role.
- Simplify the management of problems and problem tasks using Problem Management models.

See Problem Management for more information.

New in the Yokohama release

User role for service desk agents

With the sn_service_desk_agent user role, increase operational efficiency by streamlining the process of asking about, gathering, and verifying information, as well as delivering quick resolutions. This role is designed for tier 1 service desk agents and is accessible when the ITSM Roles plugin (com.snc.itsm.roles) installed.

The sn_service_desk_agent role includes the following roles:

- sn_incident_write
- sn_problem_write
- sn_change_write
- sn_request_write
- tracked_file_reader

Additionally, with the installation of the **ITSM Gen AI** (*com.sn.itsm.gen.ai*) plugin, the knowledge_user and now_assist_panel_user roles are integrated within the sn_service_desk_agent role.
The sn_service_desk_agent user role can be used starting with Service Operations Workspace version 6.1.

Problem Models for Streamlined Problem Management

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Problem Management models are used to simplify management of problems and problem tasks. These models provide an efficient way to configure state transitions and define conditions to move from one state to another.

This functionality is enabled out of the base system for new or zBoot customers.

Activation information

Problem Management is a ServiceNow AI Platform feature that is active by default.

Request Management release notes

The ServiceNow® Request Management application enables catalog items to be requested and fulfilled based on defined flows. Request Management was enhanced and updated in the Yokohama release.

Request Management highlights for the Yokohama release

- Improve customer satisfaction and operational efficiency with the sn_service_desk_agent role, which is dedicated to the tier 1 service desk agents.
- Restrict unauthorized access to the Request Management tables using deny ACLs.
- Quickly determine whether a configuration item (CI) is available to be added to the **Configuration item** field in the Requested item form by searching the an alphabetized list of available CIs rather than having to first find the CI class list.

See Request Management for more information.

New in the Yokohama release

User role for service desk agents

Improve operational efficiency by providing level 1 or tier 1 service desk agents with access to change, incident, problem, and request records by assigning the sn_service_desk_agent user role.

Note:

The sn_service_desk_agent user role is available starting with Service Operations Workspace version 6.1.

Enhanced security model adoption for Request Management

Prevent unauthorized access to request-related tables using deny ACLs. Non-authenticated user cannot perform any actions such as read, write, delete, create, or report view.

This feature is available for new or zBoot customers with the installation of the ITSM Enhanced Security Features (com.snc.itsm.enhanced_security) plugin. Existing or upgrade customers must test and evaluate in their sub-production instance before installing the plugin and implementing the security change in their production instance.

Changed in this release

Sorting configuration items in requested item forms

The list of configuration items (CIs) displayed for the **Configuration item** field in the Requested item form is now displayed and sorted based on the CI names in alphabetical order instead of sorting by CI class and then presenting the CI names

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

in alphabetical order within a class. This change means you can determine whether a particular CI is available more quickly.

Activation information

Request Management is a ServiceNow AI Platform feature that is active by default.

Service Level Management release notes

The ServiceNow® Service Level Management application helps to gather service requirements, monitor, and report the quality and speed of the services provided. Service Level Management was enhanced and updated in the Yokohama release.

Service Level Management highlights for the Yokohama release

Use Workflow Studio to build and automate the workflows for Service Level Management.

See Service Level Management for more information.

Removed in this release

Service Level Management workflows have been removed and replaced by flows for new customers. Existing customers that use these workflows are unaffected. The flows are available to both new and existing customers. You can use ServiceNow® Workflow Studio to customize or extend these flows. For more information, see Flow Designer.

Activation information

Service Level Management is a ServiceNow AI Platform feature that is active by default.

Service Operations Workspace for ITSM release notes

The ServiceNow® Service Operations Workspace application is a configurable workspace that provides a unified agent experience for multiple IT Service Management and IT Operations Management capabilities. Service Operations Workspace for IT Service Management was enhanced and updated in the Yokohama release.

Service Operations Workspace highlights for the Yokohama release

- Streamline task management and reduce response times by approving the request, request item, catalog task, change request, and standard change proposal records directly from Service Operations Workspace (SOW).
- Quickly find details helpful in resolving issues by using Recommended Actions and AI Search for request items and catalog items.
- Enable agents with incident write access, callers, and end users who opened the incident to reopen a resolved incident from the incident record page in Service Operations Workspace.
- Configure response templates and incident management properties from the Service Operations Workspace Admin Center.
- Configure and use DEX Desktop Assistant as a channel in all incident and major incident-related communications.
- Starting in version 7.1, you can do the following:
  - Restrict unauthorized access to Incident Management in Service Operations Workspace using deny ACLs.
  - Compose email using GenAI email templates for all major incident communications.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Close a resolved incident with itil_admin user role.
- Share the workaround for a problem and deflect additional incidents.
- Configure the On-Call Scheduling features from Service Operations Workspace Admin Center.
- Use visual indicators like colors and icons on chat session tabs to notify agents about unread messages to maintain the SLA for the chats in Service Operations Workspace.
- Configure the provider for Notify in SOW.
- Agents can see a transcript of voice calls while interacting with customers in Service Operations Workspace.
- Create Change Advisory Board (CAB) meetings and run them through CAB Workbench in Service Operations Workspace.

See Service Operations Workspace for ITSM for more information.

Important:
Service Operations Workspace is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Important information for upgrading Service Operations Workspace to Yokohama

Ensure that the following applications have compatible upgraded versions:

- Service Operations Workspace ITSM Applications application (sn_sow_itsm_cont)
- Service Operations Workspace ITOM Applications application (sn_sow_itom_cont)

For more information on compatible versions, see Version compatibility between Service Operations Workspace for ITSM and Service Operations Workspace ITOM.

New in the Yokohama release

User role for service desk agents

Enable tier 1 service desk agents to quickly gather and verify information by granting the sn_service_desk_agent role, which is accessible when the ITSM Roles plugin (com.snc.itsm.roles) is installed.

The sn_service_desk_agent role can be used starting with Service Operations Workspace version 6.1 with the Yokohama release.

Incident management configuration changes in the Service Operations Workspace Admin Center

The Incident record of the Incident Management section in the Service Operations Workspace Admin Center has the following enhancements:

- Configure and use response templates to quickly respond to incidents.
- Configure additional properties to control incident features such as auto-closing incidents and copying or creating child incidents.

Reopen an incident in Service Operations Workspace

Enable agents with incident write access, callers, or end user who opened the incident to reopen a resolved incident.

List page enhancements

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The Service Operations Workspace list page has the following enhancements:

- Ability to assign the incident record to yourself if you're the logged-in user or to reassign it to another user or assignment group.
- An animated dot symbol that indicates whether a list has been customized.

Major incident management record page enhancements

Enhance incident and major incident-related communications including ad hoc communications and major incident playbooks in SOW by adding DEX Desktop Assistant as a channel.

Direct approvals in Service Operations Workspace

Service desk agent can approve records directly within the SOW without having to navigate to the Core UI. By approving records from the SOW, you can reduce response times, and ensure quick resolution of the tasks.

Automatically close an interaction in Service Operations Workspace

Interactions are now automatically closed when the associated incident is resolved, streamlining the workflow and ensuring consistent status updates.

Enhanced side panel features

- Access the Recommended Actions and AI Search features from the contextual side panel for request items and catalog tasks.
- Determine the order of the items in the contextual side panel.

The Recommended Actions and AI Search features are now available in the contextual side panel for both request Items and catalog tasks.

Enable email redirection to SOW from SOW Admin Center

Stay within the SOW and work on your tasks more efficiently by enabling email redirection. By enabling email redirection within the SOW Admin Center, you can simplify communication management, enabling the users to stay within the SOW and focus on their tasks without interruption.

Initiate a chat from Sidebar in Service Operations Workspace

Use Slack as a primary mode of communication from the Sidebar so you can send direct messages to users without having to leave the SOW.

View the device health of user assets

DEX is integrated with SOW to monitor CIs or assets associated with SOW records such as incidents and interactions to determine the health of devices. You can view the device health information of the user's assets on the Record information side panel of the incident and interactions record page. This feature is available only if the DEX plugin [sn_dex] is installed and DEX monitoring is enabled for the asset.

Using MRA Async for adding child incident, affected CIs, impacted services and assets

When adding a list containing more than 50 child incidents, affected CIs, impacted services or assets from the **Overview** tab or **Related records** tab of an incident or problem record, the Multiple Record Associator (MRA) component batch processes in async and helps adding them in background thereby increasing the overall performance of the system. This feature works only if the number of items to be added is more than 50 as the **async Threshold** configuration property is set to 50.

Viewing the device health of the user assets

View the device health information of the user's assets from the Assigned assets section on the Record information side panel of the incident and interactions record

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

page. This helps in providing a quick resolution to the user. This feature is available only if the DEX plugin [sn_dex] is installed and DEX monitoring is enabled for the asset.

Guided tours for SOW

Learn about Service Operations Workspace for ITSM through a sequence of interactive steps that guide you through a specific concept or process.

The following guided tours are available:

- Create an incident task
- Overview of the Interaction record in SOW

Enhanced security model adoption in Service Operations Workspace

Help prevent unauthorized access to the tables of the following applications with Deny-Unless ACLs:

- Metrics and CI actions framework
- Remedial actions framework
- Agent client collector for investigation
- Microsoft Endpoint Configuration Manager for Investigation

A Deny-Unless authentication ACL restricts access for a non-authenticated user, such as a public role user. Without access, the user can't perform any actions on the tables related to the above mentioned applications, including reading, writing, deleting, creating, or accessing the report view. This feature is available to both new (zboot) and upgrade instances.

Known error article for a problem

Starting in version 7.1, share the workaround for a problem and deflect additional incidents by creating a known error article for the problem.

On-Call Scheduling configurations in Admin Center

Starting in version 7.1, use the simplified navigation from Admin Center to manage configurations for On-Call Scheduling in Service Operations Workspace for ITSM. It improves the administrator's experience.

Configure Notify in SOW

Configure the provider preferences for Notify to manage the conference calls in Service Operations Workspace.

Create CAB meetings in Service Operations Workspace

Define and create Change Advisory Board (CAB) meetings, invite attendees and dynamically populate agenda items for each meeting in Service Operations Workspace.

Run CAB meetings through CAB Workbench, available within Service Operations Workspace to review and authorize change requests. For more information, see Conduct a CAB meeting in the CAB workbench.

Changed in this release

Incident record page changes

The Incident record page has the following changes:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- The caller card is placed first on the Record information side panel for tier 1 agents.
- The origin card itself is no longer clickable to reduce usability issues with the card and its clickable elements.

Reference field behavior changes in SOW

Selecting any reference field in SOW now displays only the recent selection values instead of automatic searching and displaying the results of the field values available in the system. This change increases the overall performance of the reference fields. By default, this change is enabled. To revert this change, set the **Reference search on click** (*ref_search_on_click*) UX page property to set to `true`.

Viewing Assign to me option

Users with the incident_read role can no longer view the **Assign to me** option for an incident record.

Email component issues on SOW Incident

Email components are now accurately displayed for SOW Incident when the email is selected from the activity stream, stacked view, or email template is applied.

Resetting filter conditions

Filter conditions are now reset when switched from one related list to another related list.

Saving interaction record loads recent tasks

When a new interaction record is created and saved, the sidebar now loads record Information instead of recent Tasks.

Problem Management state transitions

Sections that are configured to be expanded now automatically expand when you transition to a new state, without requiring a page reload.

GenAI email templates for communication

Use the GenAI capabilities for composing email with GenAI email templates in all major incident communications. The GenAI email templates are visible in a separate section when the email templates field is selected and the following conditions are met:

- Any GenAI variable is available in the email templates.
- Now Assist for ITSM is installed and activated.
- GenAI skills are enabled.
- User have the required roles to execute the GenAI skills.

Close resolved incident

Close an incident in **Resolved** state using the itil_admin user role.

Resize modals on the SRP and list pages

Ensure flexibility and efficiency by enabling users to resize the modals on the SOW SRP and list pages. This helps in adjusting screen space allocation, enabling multi-tasking, and optimizing content visibility for different tasks and screen sizes.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Activation information

Service Operations Workspace for ITSM is active by default and its default version is 7.0 in Yokohama. When you upgrade from any previous release to Yokohama from the ServiceNow Store, Service Operations Workspace for ITSM 7.0 is automatically installed.

Related ServiceNow applications and features

Change Management

Control the life cycle of a change and implement the change with minimum disruption to IT services.

Incident Management

Enable users to identify IT issues and log incidents through the Incident Management system. Efficiently track, classify, and prioritize incidents to work effectively toward their resolution.

Interaction Management

Respond to an incoming chat, phone, walk-up, or messaging interaction quickly by using an interaction that provides a centralized location for all communication channels.

Notify

Provide support for SMS and voice channels on the platform to communicate with your team and customers.

On-Call Scheduling

Identify available on-call members of a support group who can be contacted to resolve an issue.

Password Reset

The ServiceNow® Password Reset application enforces strong and secure passwords by enabling end users to reset or change their passwords either by using the self-service process or by requesting the assistance of a service desk agent.

Predictive Intelligence

Use machine-learning algorithms to provide dynamic and contextual recommendations for resolving an incident.

Problem Management

Identify the root cause of recurring incidents or a major incident to help prevent them from happening again.

Recommended Actions for ITSM in Service Operations Workspace

Get field recommendations and guidance in the side panel for the incident form in Service Operations Workspace.

Request Management

Initiate a catalog request flow from a different IT Service Management flow, such as an incident flow, by using catalog requests.

Service Level Management

Access incident service level agreement (SLA) information on the Service Operations Workspace for ITSM landing page and incident record page.

Service Operations Workspace for ITOM

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Configure your operator experience through a unified interface for multiple ServiceNow® IT Operations Management workflows.

Walk-up Experience

Manage walk-up interactions and queues effortlessly by using Service Operations Workspace for ITSM.

Service Portfolio Management release notes

The ServiceNow® Service Portfolio Management application enables you to plan, design, build, and implement your services, service offerings, and service portfolios. Service Portfolio Management was enhanced and updated in the Yokohama release.

Service Portfolio Management highlights for the Yokohama release

- Use the added options to edit and manage your service portfolios.
  - Add life cycle fields to the taxonomy node records of your portfolios to align with the Common Service Data Model (CSDM).
  - Added more flexibility to remap taxonomy nodes. You can move an entire branch of a taxonomy from one portfolio to another, including the automatic move of its child nodes.
  - Reparent taxonomy nodes when you move them to a new location in a portfolio. You can also add a new taxonomy node in the middle of an existing portfolio, either between two nodes or between a node and a service.
- Recognize the updated label for technical services.

See Service Portfolio Management for more information.

New in the Yokohama release

Edit and manage service portfolios in Service Portfolio Management

Use the updated options to edit and manage your service portfolios:

- Manage the CSDM life cycle fields in Service Portfolio Management
- Remap service portfolio taxonomy nodes in Service Portfolio Management

Use Service Portfolio Management services

Recognize the updated label for technical services. The updated label aligns with the CSDM, version 5.0. Even though the table name hasn't changed, the services label is updated in the Service Portfolio Management application and in all ServiceNow applications or workspace environments that display services. The label for service offerings remains the same for all releases: Service offering in the [service_offering] table.

Updated label for technical services

Table name	Label in Xanadu and prior releases	Label in Yokohama and later releases
[cmdb_ci_service_technical]	Technical Service	Technology Management Service

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Activation information

The Service Portfolio Management Core plugin [com.snc.service_portfolio_core] is available by default for IT Service Management licensed customers. For more information, see Activate Service Portfolio Management.

Related ServiceNow applications and features

Configuration Management

Service Portfolio Management — Core adds the Service Offering table [service_offering] to the CSDM.

Service Catalog

Service Portfolio Management integrates with the ServiceNow® Service Catalog at the service offering level of the application. You can choose services from an existing catalog as well as initiating service catalog additions.

Service Level Management

Service Level Agreement (SLA) commitment support functionality is added to Service Portfolio Management by integrating with ServiceNow® Service Level Management.

Service Builder

ServiceNow® Service Builder provides a guided walk-through to help service and portfolio owners create and edit services and service offerings.

Digital Portfolio Management

Add ServiceNow® Digital Portfolio Management (DPM) from the ServiceNow Store to view all your Service Portfolio Management data in one centralized place. If you transition to the standard service portfolio structure as described in Service Portfolio Management portfolios, then you can use key performance indicator (KPI) groups in DPM to report on services, nodes, and portfolio performance.

Vendor Management Workspace release notes

The ServiceNow® Vendor Management Workspace application enables you to monitor the performance of your company's vendors and manage all vendor-related information from one location. This application is currently supported for the Yokohama release but some of the applications within Vendor Management Workspace will be deprecated in a future release.

Deprecations

Starting with Yokohama release, the following applications within Vendor Management Workspace are being prepared for future deprecation. They will be hidden and no longer available for activation but will continue to be supported. For details, see the Deprecation Process [KB0867184] article in the Now Support Knowledge Base.

- Performance Analytics Content Pack - Vendor Management Workspace
- Vendor Management Workspace UI Components
- Vendor Manager Workspace Demo Data
- Service Credits
- Vendor Management Mobile

Workforce Optimization for ITSM release notes

The ServiceNow® Workforce Optimization for ITSM application enables you to manage and maintain the productivity of your workforce from a single location. Workforce Optimization for ITSM was enhanced and updated in the Yokohama release.

Workforce Optimization for ITSM highlights for the Yokohama release

When you upgrade to the Yokohama release, get the enhanced security features by installing the new plugin.

See Workforce Optimization for ITSM for more information.

Important:
Workforce Optimization for ITSM is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Important information for upgrading Workforce Optimization for ITSM to Yokohama

Enhanced security to access Workforce Optimization for ITSM

When you upgrade to the Yokohama release, you have the option to turn on enhanced security for the Workforce Optimization for ITSM application. To get the enhanced security, you must contact Now Support to install the ITSM Enhanced Security Features plugin (com.snc.itsm.enhanced_security). After you install the plugin, you need the roles listed here to access the respective features.

Features in Workforce Optimization for ITSM	Role required for each user
Skill review	• Skill review manager (sn_wfo_skillreview.manager) • Skill review user (sn_wfo_skillreview.user)
Work scheduler	• Work scheduler admin (sn_wfo_work_sched.admin) • Work scheduler manager (sn_wfo_work_sched.manager)

Activation information

Install the Workforce Optimization for ITSM plugin (sn_wfo_cfg_itsm) by requesting it from the ServiceNow Store. For details, see Activate Workforce Optimization for ITSM Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Use ServiceNow® Advanced Work Assignment to assign work items automatically to your agents by their availability, capacity, and skills.

Coaching

Use ServiceNow® Coaching to monitor and improve the performance of your employees. You can evaluate their skills and get them the training that they need for skill growth.

Learning Posts

Empower your employees by providing them with learning when they need it by using an omni-channel learning experience.

Performance Analytics (Indicator data sources)

Use ServiceNow® Performance Analytics to create reports on Key Performance Indicators (KPIs) to monitor and analyze metrics.

Predictive Intelligence

Use ServiceNow® Predictive Intelligence to recommend the skills for agents that are based on the work that they've completed.

Process Mining

Analyze business processes and optimize them quickly.

Service Operations Workspace for ITSM

Improve your ITSM agent experience and manage your IT fulfillment volume more efficiently by using Service Operations Workspace. Manage your schedule and complete training by using Workforce Optimization for ITSM in the Service Operations Workspace.

Skills Management

Assess the skills that your organization needs, identify gaps, and plan for the hiring and training of your teams.

Surveys

Create, send, and collect responses for basic surveys. If installed, you can also use the Survey widget to set up a survey within the ServiceNow® Service Portal.

Site Reliability Operations release notes

The ServiceNow® Site Reliability Operations application enables the enterprises to rely on digital services to deliver modern customer experiences. These digital services run on applications that need rapid development, testing, and production to deliver business outcomes. Site Reliability Operations was enhanced and updated in the Yokohama release.

Site Reliability Operations highlights for the Yokohama release

Site Reliability Operations and Site Reliability Metrics (extends SRO) store applications are replaced with Service Reliability Management application.

See Service Reliability Management for more information.

Deprecations

Starting with the Yokohama release, Release Management v2 is being prepared for future deprecation. It will be hidden and no longer activated on new instances but will continue to be supported. Digital Product Release provides the latest experience for this functionality. For details, see the Deprecation Process [KB0867184] article in the Now Support Knowledge Base.

Related ServiceNow applications and features

Service Reliability Management

Service Reliability Management (SRM) helps your organization respond, collaborate, track, and self-remediate when working on alerts and incidents. SRM is available when you have both ITSM Standard and ITOM Operator Professional subscriptions.

Manufacturing Commercial Operations release notes

The ServiceNow® Manufacturing Commercial Operations application enables you to manage the end-to-end life cycle of your products, subscriptions, and services. Manufacturing Commercial Operations was enhanced and updated in the Yokohama release.

Manufacturing Commercial Operations highlights for the Yokohama release

- Enable manufacturers, customers, suppliers, channels, and partners to connect and track services directly between instances without configuring and maintaining custom integrations.
- Enable B2B customers to configure products and place orders via an uptake of the Sales Customer Relationship Management self-service order placement feature.
- Transform emails into interactions rather than cases with email interactions.
- Enable the dealer and sales promotion framework and its user role and responsibilities.
- Configure the Manufacturing Commercial Operations plugins.

See Exploring Manufacturing Commercial Operations for more information.

Important:
Manufacturing Commercial Operations is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Manufacturing Commercial Operations users

User roles provide the information on the users and their responsibilities.

Dealer

The dealer framework helps you manage the day-to-day business activities and monitor the real-time data insight.

Note:
Q2 release includes only the data model and not the playbook.

Sales Promotion data model

The sales promotion framework helps the OEM to publish the promotions and the dealers to raise the claims against these promotions after the product sales transaction is completed.

Note:
Q2 release includes only the data model and not the playbook.

The sales promotion supports bulk import functionality. To enable bulk import, you must customize it on existing CSM or Business Location Service Portal (BLSP) portals.

Install Manufacturing Commercial Operations plugin

List of all the plugins that are installed with Manufacturing Commercial Operations plugin.

Support multiple line items on a case to track requests on the Business Portal

Capture and track requests for multiple items on the Business Portal. Case line items, case tasks, and case line tasks all appear on the case page.

Enable copy of catalog items from Service Catalog to Remote Catalog in Service Exchange

Eliminate duplication effort in Remote Catalog creation and maintenance, by enabling the copying of standard portal catalog items. This process eliminates the need to manually recreate Service Catalog items in the Service Exchange Remote Catalog.

View products from the catalog and place orders directly through the Sales CRM self-service portal

Enable B2B customers to configure products and place orders via an uptake of the Sales Customer Relationship Management self-service order placement portal.

Activation information

Install Manufacturing applications by requesting them from the ServiceNow Store. For details on installing the applications, see Configuring Manufacturing Commercial Operations. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Related ServiceNow applications and features

Sales Customer Relationship Management

The Sales Customer Relationship Management applications enable you to manage the product sales life cycle in your organization.

The following applications support the sales life cycle for Manufacturing Commercial Operations:

- Product Catalog Management enables you to create and manage product catalogs for commercial and technical product offerings.
- Order Management enables you to capture and fulfill product and service orders to create a seamless ordering experience for your customers.
- Pricing Management enables you to set the pricing for your products.

Customer Service Management

The Customer Service Management enables you to provide the service and support that your external customers need.

Field Service Management

The ServiceNow Field Service Management application enables you to manage work orders and related tasks, resources, skills, assets, and locations.

Service Exchange

ServiceNow® Service Exchange connects multiple ServiceNow instances to provide seamless support and service experiences across the ecosystem, from enterprise customers to suppliers and system integrators. Service Exchange provides a

frictionless experience that makes it easy to collaborate and process requests while giving users the convenience of working in their own ServiceNow instance

Strategic Portfolio Management

Align work with strategy to deliver products and services in a way that supports your business goals and priorities. The ServiceNow Strategic Portfolio Management (SPM) application enables you to use digital transformation to drive customer value.

Mobile Platform release notes

The ServiceNow® Mobile Platform application enables you to access your ServiceNow instance from anywhere. Mobile Platform was enhanced and updated in the Yokohama release.

Mobile Platform highlights for the Yokohama release

- Write and refine text with the Now Assist Context Menu.
- Use enhanced capabilities within the input form screen.

See Mobile Platform for more information.

New in the Yokohama release

Now Assist Context Menu

Write and edit text natively from within your mobile app using the Now Assist Context Menu. Refine your selected text by asking Now Assist to shorten it, make it more elaborate, or change the tone, and so on. Now Assist Context Menu is supported for the Task Summarization skill for input form screens.

Single instance login

Customers with a single instance can bypass the instance selection page and navigate users directly to the login screen. This process shortens the login process.

Display a customized page before user login

Configure your own branded landing page to appear before users log in to their ServiceNow mobile apps. The branded landing page can contain a login button or deep link that redirects users to an area of a ServiceNow mobile app. For example, a municipality can add a button to open a ticket, which navigates the user to complete a record in the Now Mobile® app.

This feature is available to customers using a single instance, and is supported for both Mobile Publishing apps.

Define attachment sources available to users

Control the types of attachments used from a phone's gallery, camera, or file system. This capability confirms that images can’t be reused or are AI-generated images. This feature is supported for all attachment locations, including: activity stream, functions with type “attachment”, input form screen with field type “attachment”, Mobile App Bridge, and Cabrillo JS uploads.

Add annotations to uploaded images

Edit and annotate uploaded images within ServiceNow mobile apps. Markup options include adding text, drawing, and highlighting areas. This feature is supported for all attachment locations, including: activity stream, functions with type “attachments”, input form screen with field type “attachment”, Mobile App Bridge, and Cabrillo JS uploads.

Mobile App Builder live mobile previews

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

See your mobile content change in real-time with live previews for most mobile components. The mobile interface changes according to what component you have selected, and updates when you add, change, or remove UI-based elements.

Web to mobile AI card creation

Use Now Assist to create a new mobile card for use on a record screen created using the Web to Mobile functionality. Now Assist will automatically choose the optimal card template and map the most relevant table fields from the selected web form view.

Agentic AI in Mobile Virtual Agent

Use AI agents in your mobile app to boost live agent productivity. AI agents handle tasks from automated responses to complex problem-solving with human-like intelligence.

Now Assist in the Virtual Agent mobile client **Mobile Virtual Agent>**

Use the following enhancement added to Virtual Agent:

- Enhanced chat offers a more robust conversational experience. Check the status of previous and on-going chats with the chat history button and view Now Assist's responses with streamlined in-line citations. Enhanced chat also allows you to use your custom mobile search configuration to launch the standard search results page from within enhanced chat.
- Use Now Assist's people match function to search for information about a specific employee.
- Now Assist can now suggest follow-up actions for your queries using the next best action feature.
- Updated UI for choice list pickers and other actions for improved usability.
- Added multi-language support.

UI changes

Mobile App Builder

Use the following enhancements added to Mobile App Builder:

- Live component preview enables admins to view their mobile app changes in real-time.
- Use Mobile App Builder to transform your web forms into native mobile experiences with the guided flow when you create a new mobile record screen.
- The right-hand panel is now visible when a record is opened in a preview browser tab.
- Component recommendations available for additional record types.
- The card selection and preview screens in the Web to Mobile flow have been consolidated to create a more streamlined user experience. This allows for the ability to generate previews using the different card options and jump back and forth between them to review.

Changed in this release

Input form screen enhancement and changes

Use the following enhancements added to the input form screen:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Selecting input values directly within the input form screen, either from a list or from a group of chips. Now users don't need to navigate to a separate dedicated screen for value selection, when using the inline choice chips layout. You can also define the number of input values to display on an input form screen section.
- Ability to add images, plain text, and rich text within specific inputs. These added descriptive elements provide more context to your users and give a clearer idea of what is required for certain inputs. For example, an image can accompany a checklist to ensure that a piece of hardware is wired correctly.
- Provide users with the ability to perform actions in relation to the displayed input parameter, while working directly on an input form screen. The available actions are: navigate to another screen, add an attachment from the gallery or camera, and add a comment to a field. Users submit these added actions either when saving their progress or completing the input form screen.
- Save input form screen data before it's submitted. Users with access to the same record can see each other's changes either when saving their progress or completing the input form screen.
- Interact and switch between other navigation tabs while also working on the input form screen.
- Sections are no longer displayed if they don't contain any input fields.

Additional number attributes for input form screens

Use the following number attributes in your input form screens:

- Use the *CustomErrorMessage* attribute to specify an error message when a UI rule condition is met.
- Use the *SkipValidationWhenHidden* attribute to skip validation on hidden inputs.

Enable barcode scanning with an external scanner

Configure barcode scanning with an external scanner without denying access to the camera for the entire mobile app.

Mobile Publishing enhancements and changes

- Enabled Android deep links for multiple instances.
- Enhanced validation for transparent images used in branded apps.
- Support for public-facing screens in branded mobile apps. Admins can configure URLs that link to public-facing web pages. These web pages are displayed to end users without needing to log in to the mobile app.

Turn off Zero Trust Access banners in mobile app screens

In mobile client versions 19.4 and later, you can turn off Zero Trust Access banners on mobile screens. Turning off these banners can enhance usability of your mobile apps because the banner does not display each time the connection state changes so end users are not interrupted by the banner display. You can configure this behavior by setting the *disableZTABanner* mobile property on your ServiceNow instance.

Activation information

ServiceNow mobile Mobile Platform is a ServiceNow AI Platform® feature that is active by default.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Accessibility information

The following accessibility updates are available in Mobile Card Builder:

- Updated alternative text on key images to better support users who rely on screen readers.
- Enhanced the focus indicator on the Mobile Card Builder home page to improve navigation for users relying on keyboards or Assistive Technology (AT).
- Improved accessible names to provide clear and descriptive labels for interactive elements to support screen readers and other AT.

Now Assist and agentic AI release notes

Now Assist and agentic AI product enhancements and updates in the Yokohama release.

Now Assist brings generative AI capabilities to the ServiceNow AI Platform. With Now Assist, you can improve the productivity and efficiency in your organization, deliver better self-service, recommend actions and provide answers, and empower your users to search more effectively.

AI Control Tower release notes

The ServiceNow® AI Control Tower application provides a centralized workspace for AI stewards to manage and monitor AI within the enterprise. The AI Inventory, based on a unified AI asset data model on the ServiceNow AI Platform® along with associated governance business processes are available in this workspace.

Important:
AI Control Tower is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

AI Control Tower highlights for the Yokohama release

Yokohama Patch 11

- Review changes to Now Assist usage measurement.
- Some Now Assist skills, agents, and agentic workflows are on by default.
- Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications.
- AI connections are introduced in AI Control Tower using Service Graph Connectors. AI connections are combination of hyperscalars, AI apps, and agentic AI frameworks. The AI Service Graph Connectors available from March 2026:
  - AWS
  - Microsoft - Azure Foundry and Copilot
  - n8n
  - GCP Vertex AI
  - LangGraph
  - Salesforce

Yokohama Patch 6

- Monitor the performance of guardrails enabled through Now Assist Guardian using the Health tab.
- Measure and improve the quality of interactions with virtual agents using the Evaluation tab.

Yokohama Patch 3

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- AI Control Tower helps customers manage and oversee performance, risk profile & workforce transformation while also helping to seamlessly embed AI into enterprise strategy.

- ○ Create an AI steward role.
  - ○ Use the AI Asset inventory to catalog AI-related artifacts.
  - ○ Use the AI skills Approvals to review and approval flows.
  - ○ Create a AI Control Tower Workspace.

Important information for Upgrading AI Control Tower to Yokohama

General availability release, no upgrade.

AI Control Tower Features

Yokohama Patch 6

Health tab in AI Control Tower

Monitor and evaluate the effectiveness of offensive content and prompt injection guardrails active on your AI assets.

Evaluation tab in AI Control Tower

Measure and improve the quality of interactions with virtual agents using the Evaluation tab.

AI model providers

Explore AI model providers

Enable choice for third party model providers powering ServiceNow® skills and agents.

Yokohama Patch 3

AI Control Tower

- A single pane view of the AI inventory, its state, and its risk and compliance posture.
- Lifecycle to manage AI asset onboarding and deployment.
- Helps user oversee and manage AI Asset inventory's risk profile with regard to enterprise policies and global regulations, as defined by the user, with a focus on privacy, data governance, and ethical AI.
- AI Case management to oversee AI asset-related inquiries and cases, enabling faster response and improved tracking.
- Multi-instance management to synchronize AI asset inventory from sub-prod to prod instances to initiate governance early in the build process.
- Control settings to block only "other" skills in Now Assist AI deployment pending approvals.

AI Control Tower

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- AI Steward role- Facilitate and coordinate governance activities between innovation, legal, security, risk and compliance teams.
- AI Asset inventory- Unified data model on the ServiceNow AI Platform to catalog AI Model, datasets, prompts, and other related artifacts including Now Assist and AI leveraging Generative AI Controller.
- AI skills Approvals- Review and approval flows for Now Assist skills and other related assets like AI Models and AI datasets deployed through Now Assist or generative AI Controller.
- AI Control Tower Workspace- Intuitive workspace to surface governance tasks, reports, inventory, and insights.

UI changes

Yokohama Patch 3

Enhancements to landing page dashboards for AI steward.

Changed in this release

Yokohama Patch 11

Changes to Now Assist usage measurement

Starting with Yokohama Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Some Now Assist skills are turned on by default

The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.

Configure ACLs for AI agents and agentic workflows

Configure the access control lists for who can discover and trigger AI agents and agentic workflows in their guided setups in AI Agent Studio. You can determine whether an AI agent or agentic workflow behaves as a dynamic user or as an AI user. You can also specify if an AI agent or agentic workflow can be available to all authenticated users or publicly available.

Activation information

The AI Control Tower application is installed as part of the generative AI Controller.

Browser requirements

The AI Control Tower application supports all the browsers.

Accessibility information

The AI Control Tower application supports all the platform accessibility features.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Localization information

Yokohama Patch 3

The AI Control Tower application isn't localized

Related ServiceNow applications and features

Yokohama Patch 3

AI Risk and Compliance

Generative AI Controller release notes

The ServiceNow® Generative AI Controller application enables you to use generative AI capabilities with third-party large language model (LLM) providers on the ServiceNow AI Platform. You can reduce complexity and enhance the user experience in your organization by generating and summarizing content, analyzing user sentiment, and writing unique prompts. Generative AI Controller was enhanced and updated in the Yokohama release.

Generative AI Controller highlights for the Yokohama release

Yokohama Patch 11

- Review changes to Now Assist usage measurement.
- Some Now Assist skills, agents, and agentic workflows are on by default.
- Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications.

Previous Patch releases

- Protect your users by configuring settings for anonymization of personally identifiable information (PII) with the Data Privacy application.

See Generative AI Controller for more information.

Important:
Generative AI Controller is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Important information for upgrading Generative AI Controller to Yokohama

Generative AI Controller is installed and updated when you install or update any Now Assist application. If you have issues installing or updating applications, see this knowledge article for steps that may address your issue. Otherwise, you can make a Support case.

New in the Yokohama release

yokohama-patch-13

Connect Generative AI Controller to your Azure OpenAI deployment by configuring a custom resource path in your bring your own key (BYOK) model configuration. Use this when your Azure OpenAI endpoint includes a path segment that Generative AI Controller does not add by default.

Yokohama Patch 10

Administrator access to Gen AI log

Access the Gen AI log [sys_generative_ai_log] table to gain insights for debugging purposes. Records related to HR remain restricted to HR admins.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Enhanced AI asset inventory

Track the enhanced AI asset inventory through AI Control Tower using new metadata fields in the Model [sys_generative_ai_model_config] and Prompt [sys_generative_ai_config] tables. Gain better visibility into AI asset status and life-cycle details, such as retirement dates.

Yokohama Patch 8

AI Model Version Mappings

Review the mappings between AI model versions, their providers in the Gen AI Model Version Mapping [sys_gen_ai_model_version_mapping] table. It shows mapping between source and target models, along with associated metadata, such as skill type, model type, resource associations, and provider information.

Yokohama Patch 6

Identify third-party LLM information

Access the Gen AI Log Metadata [sys_gen_ai_log_metadata] table to identify which LLM model, version, and requested language was used to generate the AI content.

Restrict LLM usage based on the domain

Enable or disable Now Assist for each domain so that you can restrict the use of LLMs and avoid using AI for data processing, if needed.

Yokohama Patch 1

Global Model selection for conversational skills

Enable Now Assist Admins to choose between GPT4.o and Now Assist LLM model for data routing at a global level. This ensures compliance with any regional restrictions and helpful for APAC users who may face limitations with US-based models, such as GPT-4.0.

Changed in this release

Yokohama Patch 11

Changes to Now Assist usage measurement

Starting with Yokohama Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Some Now Assist skills are turned on by default

The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.

Configure ACLs for AI agents and agentic workflows

Configure the access control lists for who can discover and trigger AI agents and agentic workflows in their guided setups in AI Agent Studio. You can determine whether an AI agent or agentic workflow behaves as a dynamic user or as an AI user. You can also specify if an AI agent or agentic workflow can be available to all authenticated users or publicly available.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Yokohama Patch 1

Configure Data Privacy and Data Discovery to protect the personally identifying information (PII) of your users.

Generative AI Controller has changed to use the Data Privacy application instead of the Sensitive Data Handler to help anonymize PII. The process for choosing what gets anonymized and how has shifted to different tables and forms that your administrator must configure for your organization.

Deprecations

The dependency on Sensitive Data Handler has been removed. Regular expressions that are configured with Sensitive Data Handler are applied to the Data Privacy application with a fix script when you upgrade to Yokohama.

Activation information

Generative AI Controller is a ServiceNow AI Platform feature that is available with activation of a Now Assist application. For details, see Installing Generative AI Controller and Install Now Assist plugins.

manage their work needs while shielding them from back-end complexity, you can deliver a great experience to meet the demands of a current-day workforce.

Knowledge Management

The ServiceNow® Knowledge Management (KM) application enables the sharing of information in the Knowledge Base. A Knowledge Base contains articles that provide users with information such as self-help, troubleshooting, and task resolution.

ITOM AIOps

The ServiceNow® ITOM AIOps product includes the ServiceNow® Event Management and ServiceNow® Metric Intelligence applications, which help you track and maintain the health of services in your organization.

IT Service Management

The ServiceNow® IT Service Management (ITSM) solution provides scalable workflows to manage and deliver IT services to your users all through a single cloud-based platform. The ITSM solution can help increase your agents' productivity, resolve issues quickly, and improve user satisfaction.

Security Operations

The Now Assist for Security Operations application permits security analysts to resolve security incidents faster with generative AI skills. Analysts and managers can condense long activity streams on security incidents into concise, easy-to-read summaries and automatically generate closure notes. Now Assist for Security Operations is a new application in the Xanadu release.

Workflow Studio

ServiceNow® Workflow Studio enables you to integrate workflow authoring, configuring, and monitoring into a single page experience.

Configurable Workspace UI

ServiceNow® Workspace is a graphical user interface that puts multiple tools on one page, including the tools that agents use to find, research, and resolve issues.

Knowledge Graph release notes

The ServiceNow® Knowledge Graph enables you to create and manage knowledge graph schema for the out of the box (OOTB) integrations for Virtual Agent. Knowledge Graph is a new Now Assist platform capability in the Yokohama release.

Knowledge Graph highlights for the Yokohama release

Yokohama Patch 11

- Review changes to Now Assist usage measurement.
- Some Now Assist skills, agents, and agentic workflows are on by default.
- Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications.
- Knowledge Graph now supports aggregate queries.
- Improved accuracy for Now LLM Service.

Yokohama Patch 8

- Admins can create Knowledge Graph schema with Workflow Data Fabric tables that enables users to retrieve data from different systems without moving them. This ensures efficiency and security when working with external tables.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Yokohama Patch 6

- Use Google Gemini and Anthropic Claude on AWS as AI model providers for Knowledge Graph in addition to Now LLM Service and Azure OpenAI
- Select your preferred large language model (LLM) provider for Now Assist platform. Apart from Now LLM Service, the platform supports Azure OpenAI GPT-4.1 and GPT-4.1 mini, Google Gemini 2.0 Flash and 2.5 Pro, and AWS Anthropic Claude 3.7 Sonnet LLM providers with ServiceNow® third-party model strategy.
- Supports nodes from parent and grandparent nodes from the hierarchy.
- Supports CMDB queries in Now Assist panel.

Yokohama Patch 3

- Seamlessly integrated with Now Assist in Virtual Agent, AI Agents and AI Search enabling personalized search results and context driven skills execution.
- Seamless Integration with Now Assist in Virtual Agent for Natural Language Query.
- Use Knowledge Graph as a tool to complete custom tasks for AI Agents.

Yokohama Patch 1

- Knowledge Graph helps you in transforming large amount of data into a semantic representation, fostering more connected and customized user experiences.
- Knowledge Graph boosts Virtual Agent by enabling large language models (LLMs) to provide contextually relevant responses tailored to each user.
- Knowledge Graph creates a complex data model called Knowledge Graph schema with numerous entities and their relation within a few steps.
- Knowledge Graph admins can use Knowledge Graph to create and manage the Knowledge Graph schemas. These Knowledge Graph schemas are the customized Knowledge Graph that consist of nodes, node properties, and edges.

See Knowledge Graph for more information.

Important:
Knowledge Graph is enabled automatically in your BU Generative AI Application. For details, see the "Activation information" section of these release notes.

Knowledge Graph features

Test a Knowledge Graph schema

Enter a query and test the Knowledge Graph schema using different LLM options. You can also add previous conversations before you run the query.

Access Knowledge Graph Schema

Knowledge Graph now has a new NLQ graph schema available prebuilt along with user profile schema. See KB article for schema attributes.

Leverage Knowledge Graph prebuilt integration with Virtual Agent

Knowledge Graph provides the following new prebuilt integrations:

- Integration with Now Assist Virtual Agent: Helps requesters with personalized responses on people queries and Natural Language queries. Also supports people citation card.

Leverage Knowledge Graph prebuild integration with AI agents

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Knowledge Graph provides the following prebuilt integrations:

- Integration with Now Assist AI agents for User Context: Helps users with personalized responses.
- Integration with AI agents as a tool: Used to perform specific tasks that are assigned to the AI agents.

Exploring Knowledge Graph

Knowledge Graph helps requesters with personalized responses using its Integration with Now Assist Virtual Agent for User Context.

Use Knowledge Graph integration with Now Assist Virtual Agent for Slot filling to helps pre-fill the slots for Virtual Agent topics using Natural Language Querying feature of Knowledge Graph.

Leverage Knowledge Graph prebuilt integration with Virtual Agent

Use the Knowledge Graph integrations with Now Assist Virtual Agent to utilize Knowledge Graph APIs built with LLM models, for personalized responses and slot-filling fields to execute LLM topics and skills in Virtual Agent.

Using Knowledge Graph Designer

Use Knowledge Graph designer to manage Knowledge Graph schemas, their nodes, node properties and edges. You can also use the interface to create, edit, duplicate, or delete a Knowledge Graph schema.

Changed in this release

Yokohama Patch 11

Changes to Now Assist usage measurement

Starting with Yokohama Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Some Now Assist skills are turned on by default

The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.

Configure ACLs for AI agents and agentic workflows

Configure the access control lists for who can discover and trigger AI agents and agentic workflows in their guided setups in AI Agent Studio. You can determine whether an AI agent or agentic workflow behaves as a dynamic user or as an AI user. You can also specify if an AI agent or agentic workflow can be available to all authenticated users or publicly available.

Activation information

Knowledge Graph is a ServiceNow AI Platform feature that is active by default if you have downloaded the Generative AI for BU.

Additional requirements

Ensure that your instance is upgraded to XP7.

Related ServiceNow applications and features

Now Assist

ServiceNow® Now Assist uses generative AI that is designed to enhance user productivity and efficiency through conversation and proactive experiences.

Now Assist in AI Search

The Now Assist in AI Search ServiceNow® Store application combines the power of search with the Now LLM Service generative AI model to answer questions in user searches with actionable AI-generated summaries of relevant Knowledge articles.

Virtual Agent

Unlock your enterprise productivity with ServiceNow® Virtual Agent. Increase deflections by empowering your employees and customers to serve themselves using a friendly messaging interface, featuring prebuilt conversations powered by artificial intelligence.

Now Assist release notes

The ServiceNow® Now Assist experience brings generative AI to your organization. You can improve productivity and efficiency by delivering better self-service, recommending actions, delivering answers, and providing your users with AI Search. Now Assist was enhanced and updated in the Yokohama release.

Now Assist highlights for the Yokohama release

Yokohama Patch 11

- Review changes to Now Assist usage measurement.
- Some Now Assist skills, agents, and agentic workflows are on by default.
- Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications.
- Use the Now Assist context menu open prompt feature to create and edit knowledge articles.
- Use Advanced settings to add conditions to hide or show the Now Assist Context Menu quick actions.
- Create multiple Now Assist context menu configurations for the same field.
- Use the Enable for extended tables option in parent table configuration, to enable or disable the inheritance model for the child table configurations.

Yokohama Patch 8

- Use the Now Assist Readiness Evaluation app to automate the implementation assessment process before implementing Now Assist agentic and generative AI.

Yokohama Patch 6

- Enable administrators to set up a security access control list (ACL) that checks user authentication for Now Assist context menu skills and new setup options. This gives them control over who can use Now Assist context menu skills and actions, as well as the built-in options like shorten, elaborate, and change tone.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Use Google Gemini and Anthropic Claude on AWS as AI model providers for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI.
- Select your preferred large language model (LLM) provider for Now Assist out-of-box skills. Apart from Now LLM Service, the platform supports Azure OpenAI GPT-4.1 and GPT-4.1 mini, Google Gemini 2.0 Flash and 2.5 Pro, and AWS Anthropic Claude 3.7 Sonnet LLM providers with ServiceNow® third-party model strategy.
- Select a display option for custom Now Assist context menu event with an option to suppress the modeless window.
- View the numbered citation and links to the source of information when you use Now Assist context menu for Email reply recommendation.

Yokohama Patch 3

- Access and monitor your Now Assist skills in the skill list or grid view. By toggling between the layouts, you can navigate from the Now Assist skills to specific products and then back to the skills page.
- Identify and mark duplicate articles in the list view by using Now Assist in Knowledge Management and take action as required.
- Apply the Now Assist Sentiment Analysis application to each record so that you can assess how satisfied your customers are. With this feature, you can make better decisions to improve customer experience.
- Use the Now Assist context menu guided setup to create a Now Assist context menu configuration.
- Use the Now Assist context menu to deploy the custom skills created using Now Assist skill kit.
- Monitor how the Now Assist context menu is being used across the different applications with the new Now Assist context menu usage dashboard.
- Customize the ServiceNow skills with new prompts or providers in the Now Assist Skill Kit for your specific business needs.
- Enable your users to use voice to interact with the Now Assist panel by enabling the Voice Input setting.
- Use the new Conversational Q&A option in the Now Assist panel to achieve an enhanced and accurate query resolution.
- Generate a record summary, share or copy the summary, and provide feedback by using the Summarize option in the Now Assist context menu.
- Customize and choose between the casual, formal, or sympathetic tone by using the Now Assist context menu.

See Now Assist for more information.

For more Platform Now Assist feature release notes, see the following topics:

- AI Search release notes
- Document Intelligence release notes
- Now Assist Skill Kit release notes
- Now Assist in Virtual Agent release notes

Important:
After purchasing a generative AI product, you can install it from ServiceNow Store. For details, see the "Activation information" section of these release notes.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Important information for upgrading Now Assist to Yokohama

If you customized UI actions or other items that are associated with Now Assist skills, ensure that your customized code is updated with the new skill releases. Otherwise, certain functions may not work as expected.

If you run into issues when you're upgrading a Now Assist product, see KB1637452: Issues and mitigation for Now Assist (Generative AI) Applications and Plugin updates. You may need to log in to view the article.

New in the Yokohama release

Yokohama Patch 10

Monitor sensitive topic invocations

Access the Gen AI Metrics [sys_generative_ai_metric] table to review the logged invocations of sensitive topics and gain insights into how these topics are being triggered and monitored.

Yokohama Patch 8

Now Assist Readiness Evaluation

Use the Now Assist Readiness Evaluation app to help you evaluate your organization's readiness to implement agentic and generative AI Now Assist capabilities.

Assessments for agentic AI include:

- IT Service Management (ITSM)
- Customer Service Management (CSM)

Assessments for generative AI include:

- AI Search
- Virtual Agent (VA)
- IT Service Management (ITSM)
- Customer Service Management (CSM)
- HR Service Delivery (HRSD)

Results shown are estimates. You should evaluate results provided by Now Assist Readiness Evaluation for accuracy and appropriateness for your use case.

Yokohama Patch 6

Manage large language models

Choose and update your preferred large language model (LLM) provider at the instance, skill or skill group level for Now Assist out-of-box skills with ServiceNow® third-party model strategy.

Deactivate skills that are not compliant with any of the LLM providers and access the audit history to view updates by the AI steward.

Configure multilingual service for Now Assist applications

Manage the default and supported languages by the different LLM providers under Multilingual service for translation.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Access the citations to the articles referenced from the knowledge base. Explore references and insert the suggested reply to your email.

Now Assist Guardian supports third-party LLMs

Extend guardrail support to third-party LLMs, such as Amazon Bedrock, Google Cloud (AI Studio and Vertex), and OpenAI to ensure any inappropriate content is logged and blocked during content generation.

Increase the maximum response token limit for custom skills

Increase the maximum response token limit for Now Assist custom skill beyond default value 1000 to support dynamic pricing based on output tokens and calculate the price for each skill executed per assist.

Yokohama Patch 3

Exploring Now Assist

Access the Now Assist skills through an identifier tab on the Now Assist Admin console, and find the associated workflows.

Navigate to your skills by using the intuitive list or grid view. The skill details are displayed, which means that you don't have to make additional selections.

Access the Data privacy section under Now Assist Admin settings. View and edit the data privacy policies that apply to your Now Assist skills.

Accessing the external content in Now Assist panel Q&A capability

Get relevant answers to your questions from external content sources, such as Microsoft SharePoint, Google Drive, and Confluence Cloud, within the Now Assist panel, without manual indexing. Each response shows the source of information to reference later.

Enhanced log visibility

- Access the Generative AI Metric table [sys_generative_ai_metric] to gain insights into the guardian logs and determine if they are for monitoring only or for both logging and blocking. Each guardrail shows its status value as Monitor, Block, or Off, to help administrators to manage their security policies.
- View the logs of masking that involve personal identifiable information (PII) in the Generative AI Metric table [sys_generative_ai_metric]. You can identify which data is masked, the type of request, system response, processing time, errors, or error codes.

Define the output field destination so that you can select any multi-line text field from the base table You can customize incident forms and improve the usability of the resolution notes generation skill.

Enable requesters to extract information from emails and email attachments to generate tasks. This email-to-task agentic workflow effectively addresses the challenge of task creation from emails.

Identify and review duplicate Knowledge articles

Identify duplicate Knowledge articles by using Now Assist capabilities. You can review the list and deselect articles that you don’t consider to be duplicates.

Streaming responses

Enable streaming responses on the Now Assist panel. Only synthesized responses are streamed.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Multiple Now Assist panels

Create separate, independent Now Assist panels that work across Next Experience and ServiceNow® Studio app shells.

Create Now Assist context Menu configuration

Create a Now Assist context menu configuration for a streamlined custom skill deployment process with the help of a guided setup.

Yokohama Patch 1

Now Assist Guardian analytics

Monitor the performance of offensive content and prompt injections guardrails with the help of the Now Assist Guardian analytics dashboard.

Configuring Now Assist settings and features

For custom skills, explore an additional display option in the form of **Conversational experiences**. You can select Now Assist Virtual Agent to assist you with the display.

Create and activate a Now Assist skill copy, and have both the original skill and its copy to remain active simultaneously.

Now Assist Context Menu usage dashboard

View and monitor the use of the Now Assist context menu across the different applications. Gain insights into the usage patterns, frequency, and effectiveness of the context menu actions with the Now Assist context menu usage dashboard.

Customizing ServiceNow skills in the Now Assist Skill Kit to tailor skills to meet your specific business requirements.

Clone the skills provided by ServiceNow in Now Assist applications by using the Now Assist Skill Kit so that you can edit the prompt or change the AI service provider. By editing the prompt, you can choose the additional inputs to be considered by the large language model (LLM) and arrange the formatting and content of the LLM response. After the skill is edited, you can activate the edited skill in the Now Assist Admin console to enable it.

Enabling the voice input for the Now Assist panel

Enable the Voice Input setting for the Now Assist panel in the Now Assist Admin console. This setting gives users a voice-to-text input option to access the skills in the Now Assist panel in any supported language. After it's enabled, the option is available in individual user accessibility preferences.

Setting your data overflow processing preferences to control your data

Set your data overflow processing preferences to control your data. By default, all Now Assist network traffic is managed within ServiceNow datacenters, but during periods of high traffic, the traffic is burst to Microsoft Azure datacenters. You can choose whether you want to opt out of cloud bursting from the Now Assist Admin console data overflow processing settings.

Using multi-turn Q&A in the Now Assist panel

Ask questions and get relevant answers directly in the Now Assist panel. The system remembers your previous questions for effortless follow-ups and pulls answers from multiple sources to give you the best results. You can select the source name in the response to access the full Knowledge article for more details.

Using dashboard and visualization export in the Now Assist panel

Export Platform Analytics dashboards and data visualizations through conversations. You can select from several output formats, and download or email the files.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Summarize records with the Now Assist context menu

Generate summaries by using the Now Assist context menu for the Core UI and Workspace. You can also expand or collapse the summary card, regenerate the summary, copy and share the summary, or provide feedback.

Email recommendations using the Now Assist context menu

Select and choose the tone of your content with the change tone feature. You can select from the elaborate, shorten, casual, formal, or sympathetic tone.

UI changes

Edit a Now Assist skill

You can now view the Helpful resources and Frequently asked questions (FAQ) tabs on the list view of the Now Assist skills page.

Email reply recommendation

The email response creation skill offers guidance in choosing the most appropriate template based on the user's specific context. Additionally, it identifies the potential errors when a response isn't generated as intended.

Now Assist data sharing opt-out moved to Data sharing and processing tab.

The opt-out button in the data sharing card from the Now Assist Admin Account page has moved to the Settings page on the **Data sharing and processing** tab.

Now Assist context menu

You can now open the Now Assist context menu by selecting the Now Assist context menu icon ( ) for effortless access.

The Now Assist context menu enables users to automatically select a sentence, paragraph, or the entire content even if they initially make a partial selection. Administrators can configure the selection to be a sentence, paragraph, or the entire content.

The dynamic header label next to the Now Assist context menu icon can be customized to display the query status.

The new Now Assist context menu icon ( ) was updated with an enhanced animation.

Changed in this release

Yokohama Patch 11

Changes to Now Assist usage measurement

Starting with Yokohama Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Some Now Assist skills are turned on by default

The new default behavior works as follows:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- New customers: When you install a Now Assist product, designated skills are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.

Configure ACLs for AI agents and agentic workflows

Configure the access control lists for who can discover and trigger AI agents and agentic workflows in their guided setups in AI Agent Studio. You can determine whether an AI agent or agentic workflow behaves as a dynamic user or as an AI user. You can also specify if an AI agent or agentic workflow can be available to all authenticated users or publicly available.

Previous Patch releases

Configure multilingual service for Now Assist applications

Enable translation settings is now Multilingual service in Now Assist admin console.

Default email client for email recommendation skill

The Seismic email client is enabled by default on Core UI with the activation of email recommendation. This client provides the Generative AI application features for creating email responses, draft management, and template management.

Now Assist panel response **Now Assist panel response**

With the carousel experience removed, the Now Assist panel now generates a synthesized response for any user inquiry. This response includes content from Knowledge articles, flows & actions, skills, and links to those articles, instead of only the Now Assist panel skills.

Activation information

Now Assist features are available with activation of any Now Assist plugin from ServiceNow Store. The following plugins are available:

- Now Assist for Accounts Payable Operations (APO)
- Now Assist for App Engine
- Now Assist for Configuration Management Database (CMDB)
- Now Assist for Collaborative Work Management (CWM)
- Now Assist for Creator
- Now Assist for Customer Service Management (CSM)
- Now Assist for Employee Experience
- Now Assist for Enterprise Architecture (EA)
- Now Assist for Operational Sustainability (formerly ESG)
- Now Assist for Field Service Management (FSM)
- Now Assist for Financial Services Operations (FSO)
- Now Assist for Hardware Asset Management (HAM)
- Now Assist for Health and Safety
- Now Assist for HR Service Delivery (HRSD)
- Now Assist for Integrated Risk Management (IRM)

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Now Assist for IT Operations Management (ITOM)
- Now Assist for IT Service Management (ITSM)
- Now Assist for Legal Service Delivery (LSD)
- Now Assist for Operational Technology Manager (OTM)
- Now Assist for Order Management
- Now Assist for PSDS
- Now Assist for Security Incident Response
- Now Assist for Software Asset Management (SAM)
- Now Assist for Supplier Lifecycle Operations (SLO)
- Now Assist for Sourcing and Procurement Operations (SPO)
- Now Assist for Strategic Portfolio Management (SPM)
- Now Assist for Telecommunications, Media and Technology (TMT)
- Now Assist for Third-party Risk Management (TPRM)
- Now Assist for Workplace Service Delivery (WSD)
- Now Assist for Vulnerability Response

Additional requirements

The Next Experience UI Framework must be enabled before you can use the Now Assist panel.

Browser requirements

Now Assist supports various browsers, including Google Chrome and Microsoft Edge. Now Assist isn't supported in Microsoft Internet Explorer.

Accessibility information

Voice Input for Now Assist

Administrators can enable an optional voice input setting for the Now Assist panel in the Now Assist Admin console. This feature gives users a voice-to-text input option to access the Now Assist skills in the panel in any supported language. For more information, see Enable voice input for Now Assist panel.

Once enabled, the Enable voice input for the Now Assist panel option are available in individual user accessibility preferences. See Configure Next Experience accessibility preferences for more information.

Voice-to-text input can help users with mobility impairments access generative AI skills without using a keyboard. This feature can also be useful to blind or low-vision users, neurodivergent users, non-native language speakers, or mobile users on the go, such as field service agents.

Localization information

Now Assist supports Dynamic Translation for Yokohama.

Related ServiceNow applications and features

Agent Chat

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

ServiceNow® Agent Chat provides various features that agents and requesters can use to streamline the agent and end-user chat experience. Agent Chat also provides features that managers can use to monitor and assist agents.

AI Search

The ServiceNow® AI Search application provides a consumer-grade search engine for Service Portal, Now Mobile, and Virtual Agent. Intelligent query features help you quickly find the answers that you need.

Document Intelligence

The ServiceNow®Document Intelligence (DocIntel) application is an artificial intelligence (AI) solution that enables any organization to automate and accelerate the process of extracting data from documents. That data can easily be integrated into larger automation workflows to save time and resources.

Dynamic Translation

The ServiceNow® Dynamic Translation application enables you to dynamically translate text entered in an application or in a chat window for a seamless localization experience.

Generative AI Controller

The ServiceNow® Generative AI Controller lets you integrate third-party large language models (LLMs) with your workflows.

Knowledge Management

The ServiceNow® Knowledge Management application enables the sharing of information in Knowledge Base. These Knowledge Base contain articles that provide users with information such as self-help, troubleshooting, and task resolution.

Configurable Workspace UI

ServiceNow® Workspace is a graphical user interface that puts multiple tools on one page, including the tools that agents use to find, research, and resolve issues.

Now Assist AI agents release notes

The ServiceNow® Now Assist AI agents application provides solutions that can perceive the environment, decide, and proactively act to achieve specific goals without the need for constant human oversight. Now Assist AI agents is a new application in the Yokohama release.

Now Assist AI agents highlights for the Yokohama release

Yokohama Patch 11

- Review changes to Now Assist usage measurement.
- Execute agentic workflows, AI agents, and tools in AI Agent Studio with role masking.
- Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications.
- Run and review agentic workflow executions on forms in the Core UI and workspaces.
- Framework extensibility with a new condition builder.
- Support multilingual conversations.

Yokohama Patch 6

- Create and maintain versions of LLM instructions for AI agents and agentic workflows to help organize and iterate on prompts and test their effectiveness.
- Follow updated guided setup steps for agentic workflows and AI agents with additional guidance for successful instructions sent to the LLM.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Duplicate existing script, record operations, and search retrieval tools to reduce the work needed to create unique AI agents.
- Monitor new analytics in the AI Agents Analytics dashboard to track valuable insights in customer satisfaction with AI interactions.
- Use Google Gemini and Anthropic Claude on AWS as AI model providers for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI.
- View the agentic workflow and AI agent activity on your AI Agent Studio.
- Map the right agents for agentic workflow execution with Dynamic orchestrator in Virtual Agent for better performance and accuracy.
- Create different types of AI agents.
- Custom output transformation strategies for an AI agent.
- Execute AI agents and agentic workflows from workspace or Core UI.
- Run AI agents and agentic workflows in a non-interactive execution mode.

Yokohama Patch 3

- Use cases in Now Assist AI agents are now called agentic workflows.
- Choose either Azure OpenAI or Now LLM Service as your preferred large language model (LLM) for AI agents and agentic workflows in the AI Agent Studio settings.
- Use Virtual Agent for AI agent interactions.
- Execute agentic evaluation runs to evaluate agentic workflows based on execution log data to compare against benchmarks and monitor performance.
- Improve the quality of LLM responses by passing information between tools.
- Hide citations for an agentic workflow or AI agent.
- Transactions done by an AI agent for an agentic workflow are recorded in the name of the AI agent.
- Enable AI agents to store and retrieve memories with categories.
- Use Knowledge graph and File retrieval as tools in creating an AI agent.

Yokohama Patch 1

- Define agentic workflows with an execution plan for automatically resolving the incoming cases and incidents.
- Use the Now Assist panel to communicate with the agent during issue resolution.
- Clone existing AI agents and agentic workflows to save time and avoid manual configuration.
- Enable Now Assist Guardian to automatically identify and block offensive messages.
- View the usage and performance of your AI agents with the AI agent analytics dashboard.
- Enable multiple conversations for AI agents on the Now Assist panel.

See Now Assist AI agents for more information.

For the Platform Now Assist release notes, see Now Assist release notes.

Important:
Now Assist AI agents are available in ServiceNow Store. For details, see the "Activation information" section of these release notes.

© 2026 ServiceNow, Inc. All rights reserved.

Now Assist AI agents features

Yokohama Patch 11

Configure role masking for AI agents and agentic workflows

Role masking restricts access to specific roles based on configuration to verify that agentic workflows, AI agents, and tools run within the boundaries of the roles configured to meet their business needs while reducing the risk of unauthorized access to the agents and the agentic data.

Add AI agent learning

Enhance AI agent learning through episodic memory, enabling AI agents to improve by learning from past successful interactions.

Select channels and access for an agentic workflow

Create and update UI actions for workflow executions and display handling. You can specify conditions for the display of the UI actions.

Add a desktop action to an AI agent

Add Desktop action as a tool to an AI agent to perform desktop automation for repetitive tasks.

Configuring Now Assist AI agents

Support multilingual conversations for AI agents across languages.

Manually test the execution of an AI agent and Manually test the execution of an agentic workflow

The testing page on AI Agent Studio has two testing options:

- Manual test
- Automated evaluation

Observe the different versions of an AI agent behavior in manual tests and in automated evaluations using the **Manual tests** and **Automated tests** tabs.

Test user access to an AI agent and Test user access to an agentic workflow

Test how an AI agent or agentic workflow completes a task and if it enables users permission to access it.

Model Context Protocol Client

- Authorization upgrades to support segregation of Resource Server and Authentication Server through Protected Resource Metadata (PRM).
- Use the *mcp_guardian_check* property to enable guardian checks for MCP Client when there's an MCP tool call.
- Supervise the pagination with mouse device support to show large number of services from an MCP server through the *sn_mcp_client.cursor.max_iterations* system property.
- Add a title field for human-friendly display names that can be used as a programmatic identifier.

Use in-product experiences for agentic workflows on forms

In the Core UI and workspaces, you can use UI and declarative actions to run agentic workflows. You can also see the presence, progress, and output of agentic workflows performed on a record. The execution details for each agentic workflow

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

include who is supervising the workflow, estimated and total time taken, processing messages, and step history.

Review and approve requests and tickets with the Approval Assistance AI agent

You can use the new approval assistance AI agent to view all pending approval requests and access detailed information about them. You can then approve requests and tickets and make updates to them from Now Assist in Virtual Agent.

Configure email notification alerts for AI agent and agentic workflow executions

Configure alert email notifications for unexpected or undesired behavior from AI agents and agentic workflows. You can configure the thresholds for triggering the alerts on the Agent Properties table, and you can add or update the recipients of the email notifications from the Notifications table.

Create an external AI agent

Create new external AI agents that connect to third-party agentic AI systems. Use Agent2Agent protocol or integrate agents manually to configure them in AI Agent Studio to use in the ServiceNow agentic AI system.

Add a Knowledge Graph to an AI agent

Use Enterprise Graph (Small) as a resource to create a Knowledge Graph tool for an AI agent in the AI Agent Studio.

Yokohama Patch 6

AI Agent Studio

View and troubleshoot the agentic workflow and AI agent executions on AI Agent Studio.

Configuring Now Assist AI agents - Dynamic Orchestrator

Maps the right agents for an agentic workflow with Dynamic Orchestrator for better performance and accuracy of the agentic workflow execution.

View analytics for customer satisfaction with AI interactions

Multiple new metrics have been added to the AI Agent Analytics dashboard, accessible from the AI Agent Studio to provide insight into average customer satisfaction and customer satisfaction with the best and worst performing agentic workflows and agents.

New third-party AI model provider options available for all Now Assist applications

Google Gemini and AWS Claude are available for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI.

Add tools and information to an AI agent

The output transformation strategy for an AI agent output now contains a new option called **Custom**.

With Custom output transformation strategy, a **Transformation Instructions** field with a text area is enabled for the user to provide their specific instructions for refining the output as per the agentic workflow. The instructions will also ensure that the transformation is done as per the user's need.

Configuring Now Assist AI agents - AI Agent Background Channel

Invoke the agentic conversations from the Workspace or Core UI via the AI Agent Background channel, that is associated with the AI Agent Background Provider, to execute the AI agents and agentic workflows.

Configuring Now Assist AI agents - Interactive and non interactive AI agents

Run AI agents and agentic workflows execution in one of the following ways:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- **Interactive Mode**: AI agents reach out to the user for information during fallback.
- **Non interactive Mode**: AI agents do not reach out to the user during fallback but send the execution output to the user.

Yokohama Patch 3

Select Virtual Agent as a display option for AI agents

Choose to display AI agent output in Virtual Agent. You can also discover AI agents in Virtual Agent conversations.

Disable citations in AI Agent Studio

Disable citations for specific agentic workflows or AI agents in AI Agent Studio where citations are not required or involve confidential information.

Create an AI agent

- **Long term memory**: Add or delete categories for AI agents to store and retrieve memories.
- Additional tools available while creating an AI agent.
  - Knowledge graph
  - File retrieval

Evaluate agentic workflows and AI agents

In Now Assist Skill Kit, you can execute evaluation runs for your agentic workflows. You can select evaluation plans and the execution log datasets to judge whether your agentic workflows are consistently completing tasks and using the correct tools.

Yokohama Patch 1

Create an AI agent

Create an AI agent to assist your live agents while resolving cases, incidents, or tasks:

- Create AI agents to gather data, make decisions, and complete tasks that would otherwise need to be done by a human.
- Add one of the following tools or information sources for the AI agent to execute:
  - Catalog item
  - Conversational topic
  - Flow action
  - Now Assist skill
  - Record operation
  - Script
  - Search retrieval
  - Subflow
  - Web search

Create an agentic workflow

Create an agentic workflow with an execution plan to solve complex tasks with Now Assist. You can also do the following tasks:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Clone an existing agentic workflow to avoid manual configuration.
- Create triggers when creating an agentic workflow that calls the AI agent when a condition or objective is observed.
- Test an agentic workflow before execution.
- Resolve record-based cases with AI agents.

Enable Now Assist Guardian in AI agents

Enable Now Assist Guardian in AI agents to automatically identify and block offensive messages that are sent by human agents.

Multiple conversations in Now Assist AI agents

Enable live agents to interact with multiple AI agent conversations through the Now Assist panel.

AI Agent Analytics dashboard

Analyze the performance, efficiency gain, and usage of AI agents through preconfigured dashboards.

UI changes

Yokohama Patch 11

Create an AI agent

The guided setups for creating an AI agent and agentic workflow have been updated.

Define security controls for an agentic workflow and Define security controls for an AI agent

New security configuration UI pages have been added in the AI Agent Studio application to configure security controls for agentic workflows and AI agents for role masking.

Yokohama Patch 6

Follow new guided setups for agentic workflows and AI agents

The new steps for the guided setups for AI voice agents and agentic workflows includes additional help text and guidance for writing LLM instructions to help improve outcome and task completion.

Manually test the execution of an AI agent

The tab names on the AI Agent Studio testing page have been renamed. The **Test scenario** tab is renamed to **Test AI reasoning** tab and the **Output** tab to **Chat responses** tab.

Yokohama Patch 3

Now Assist AI agents - The phrase "use case" has been updated to "agentic workflow".

In AI Agent Studio, the phrase "use case" in the UI has been replaced with the phrase "agentic workflow" on all screens.

Tools visible when testing AI agents

When testing an AI agent, individual tool processes are now visible in the testing window, enabling you to track tool use, successes, or failures when trying out new AI agents.

Use data picker for value overrides in AI agent tools

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

When creating or modifying tools for AI agents, you can now use a data picker in value override fields. This helps ensure that information in records fields is transferred between tools.

Changed in this release

Yokohama Patch 11

Changes to Now Assist usage measurement

Starting with Yokohama Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Some Now Assist skills are turned on by default

The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.

Configure ACLs for AI agents and agentic workflows

Configure the access control lists for who can discover and trigger AI agents and agentic workflows in their guided setups in AI Agent Studio. You can determine whether an AI agent or agentic workflow behaves as a dynamic user or as an AI user. You can also specify if an AI agent or agentic workflow can be available to all authenticated users or publicly available.

Platform Request status AI agent

The request status AI agent provides an AI-generated summary of the most recent comments from the AI agent or other people working on a ticket. You can add attachments to an open ticket or incident to support a request action. To find more information about an open ticket, you can ask the request status AI agent follow-up questions based on previous answers from the agent.

Configuring Now Assist AI agents

Run AI agents and agentic workflows concurrently in AI Agent Background Channel and in Non-interactive mode.

Add a Knowledge Graph to an AI agent

The Global Graph resource for creating a Knowledge Graph tool has been renamed to Enterprise Graph.

Yokohama Patch 8

Confirm your web search tool provider data policies

If you select Google as your web search provider for web search AI agent tools, Google will use Grounding with Google Search, offered under a Global Standard deployment, and data may be routed to places outside of regions specified on your ServiceNow instance as a result. Consult your organization's data policies before enabling AI agents with web search tools that use Google as the provider.

Yokohama Patch 6

Add version control to instructions sent to the LLM

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

You can review multiple versions of instructions sent to the LLM when designing your AI agents or agentic workflows. You can choose which version is active to help with testing or evaluating the success of an AI agent or agentic workflow to compare against other versions. Versions are named and ordered by time created for organizational purposes.

Duplicate and edit existing tools when creating new AI agents

When adding a tool to an AI agent, you can select an existing tool instead of creating a new tool from scratch. After an existing tool is added, you can make changes to suit the specific AI agent's needs.

Now Assist AI agents reference

The *sn_aia.enable_agent_tool_input_value_overrides* system property is migrated to the [sn_aia_property] agent system property.

Yokohama Patch 3

Monitor more AI agent analytics in the AI Agent Analytics dashboard

Two new pages have been added to the AI Agent Analytics dashboard, giving administrators more indicators, visualizations, and breakdowns to track AI agent performance and usage.

Exploring Now Assist AI agents

Impersonation in Now Assist records transactions done by an AI agent in the name of the AI agent who executes the agentic workflow.

Activation information

Now Assist in AI agents is available with activation of any Now Assist plugin from the ServiceNow Store. For more information about the prerequisites for using Now Assist, see Install Now Assist AI agents.

Additional requirements

You must first install the supported Now Assist version of ServiceNow to be able to use the Now Assist AI agents. For more information, see Install Now Assist AI agents.

Enable the Next Experience UI Framework before you can use the Now Assist panel.

Browser requirements

Now Assist AI agents supports various browsers, including Google Chrome and Microsoft Edge. Now Assist AI agents isn't supported in Internet Explorer.

Accessibility information

Voice Input for Now Assist AI agents

Administrators can enable an optional voice input setting for the Now Assist panel in the Now Assist Admin console. This feature gives users a voice-to-text input option to access the Now Assist skills in the panel in any supported language. For more information, see Enable voice input for Now Assist panel.

Once enabled, the Enable voice input for the Now Assist panel option is available in individual user accessibility preferences. See Configure Next Experience accessibility preferences for more information.

Voice-to-text input can help users with mobility impairments access generative AI skills without using a keyboard. This feature can also be useful to blind or low-vision

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

users, neurodivergent users, non-native language speakers, or mobile users on the go, such as field service agents.

Localization information

Now Assist AI agents is built on the GPT-4o-based framework and supports localization according to the GPT-4o model.

Related ServiceNow applications and features

Now Assist panel

With the ServiceNow® Now Assist panel, you can get assistance from generative AI experiences to solve customer issues faster. Use this conversational interface to summarize a chat, case, or incident, get help, or generate resolution notes so that you can get the context of this information more quickly.

Generative AI Controller

The ServiceNow® Generative AI Controller lets you integrate third-party large language models (LLMs) with your workflows.

AI Search

The ServiceNow® AI Search application provides a consumer-grade search engine for Service Portal, Now Mobile, and Virtual Agent. Intelligent query features help you quickly find the answers you need.

Now Assist Skill Kit

Use the ServiceNow® Now Assist Skill Kit to create and publish custom prompts and skills for Now Assist. Creating custom skills and prompts enables you to have greater flexibility with Now Assist's generative AI capabilities.

Now Assist for App Engine release notes

The ServiceNow® Now Assist for App Engine application enables creators to enhance custom applications with AI agents and skills that application users can leverage at runtime. Now Assist for App Engine is a new application in the Yokohama Patch 3 release.

Now Assist for App Engine highlights for the Yokohama release

Yokohama Patch 11

- Review changes to Now Assist usage measurement.
- Some Now Assist skills, agents, and agentic workflows are on by default.
- Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications.

Yokohama Patch 3

- Create and deploy AI agents within custom applications, helping to empower creators and accelerate time-to-value.
- Build custom AI agents and skills for the unique workflow of an application using Now Assist Skill Kit and AI Agent Studio.
- Leverage AI agents and skills created with Now Assist for App Engine in custom applications at runtime, helping improve efficiency.

See Now Assist for App Engine for more information.

Important:
Now Assist for App Engine is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Now Assist for App Engine features

Yokohama Patch 3

Create an AI agent

Create a custom AI agent in AI Agent Studio to assist your application users with their tasks.

Create a skill

Create a custom skill for Now Assist, enabling you to have greater flexibility with the generative AI capabilities available on the ServiceNow AI Platform.

Changed in this release

Yokohama Patch 11

Changes to Now Assist usage measurement

Starting with Yokohama Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Some Now Assist skills are turned on by default

The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.

Configure ACLs for AI agents and agentic workflows

Configure the access control lists for who can discover and trigger AI agents and agentic workflows in their guided setups in AI Agent Studio. You can determine whether an AI agent or agentic workflow behaves as a dynamic user or as an AI user. You can also specify if an AI agent or agentic workflow can be available to all authenticated users or publicly available.

Activation information

Install Now Assist for App Engine by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Additional requirements

Check your entitlements to determine whether you have access to the Now Assist for App Engine application.

Related ServiceNow applications and features

AI Agent Studio

With the ServiceNow® AI Agent Studio application, you can create, manage, or test AI agents and agentic workflows all in one place.

Now Assist

ServiceNow® Now Assist uses generative AI that is designed to enhance user productivity and efficiency through conversation and proactive experiences.

Now Assist Admin console

The Now Assist Admin console provides you with quick and effortless access to the important information that you need to set up, configure, and monitor Now Assist applications and features.

Now Assist AI agents

The ServiceNow® Now Assist AI agents are entities that mimic human-like intelligence by using large language models (LLMs).

Now Assist Skill Kit

ServiceNow® Now Assist Skill Kit enables you to create and publish custom prompts and skills for Now Assist.

Now Assist for Collaborative Work Management release notes

The ServiceNow® Now Assist for Collaborative Work Management (CWM) application uses generative AI skills to improve time to value for the tasks you perform in the CWM workspace. Now Assist for CWM is a new application in the Yokohama release.

Now Assist for Collaborative Work Management highlights for the Yokohama release

Yokohama Patch 11

- Review changes to Now Assist usage measurement.
- Some Now Assist skills, agents, and agentic workflows are on by default.
- Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications.

Yokohama Patch 3

- Help increase efficiency by automatically creating tasks from the context of your CWM Docs and adding them to the required Board.
- Enable saving time by summarizing and paraphrasing blocks of content or a whole page in CWM Docs using generative AI capabilities.

See Now Assist for Collaborative Work Management (CWM) for more information.

Important:
Now Assist for Collaborative Work Management is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Now Assist for Collaborative Work Management features

Generate tasks from Docs in Collaborative Work Management (CWM)

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Help increase efficiency and save time by using Now Assist to automatically generate CWM Tasks for your Board. Using the information in your doc, Now Assist provides task recommendations. You can choose to refine or modify these recommendations. You can iterate multiple times to tweak the task recommendations according to your requirements.

After you're satisfied with the recommendations, Now Assist can help you add these tasks to a board of your choice.

Summarize and paraphrase Docs content

Use Now Assist capabilities to refine selected content in docs, or to get a summary of the whole document.

- Summarize, elaborate, or shorten selected text.
- Summarize the entire content on the page.

Changed in this release

Yokohama Patch 11

Changes to Now Assist usage measurement

Starting with Yokohama Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Some Now Assist skills are turned on by default

The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.

Configure ACLs for AI agents and agentic workflows

Configure the access control lists for who can discover and trigger AI agents and agentic workflows in their guided setups in AI Agent Studio. You can determine whether an AI agent or agentic workflow behaves as a dynamic user or as an AI user. You can also specify if an AI agent or agentic workflow can be available to all authenticated users or publicly available.

Activation information

Install Now Assist for Collaborative Work Management by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Related ServiceNow applications and features

Collaborative Work Management

Collaborative Work Management (CWM) provides a central hub to plan, visualize, manage, and collaborate on work with your teams.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The Now Assist for CWM application uses generative AI skills to save time and improve efficiency for the actions that you perform within the CWM workspace.

Now Assist for Configuration Management Database (CMDB) release notes

The ServiceNow® Now Assist for CMDB application displays comprehensive summaries for configuration items (CIs) and accelerates the process of remediating duplicate CIs. Now Assist for CMDB was enhanced and updated in the Yokohama release.

Now Assist for CMDB highlights for the Yokohama release

Yokohama Patch 11

- Review changes to Now Assist usage measurement.
- Some Now Assist skills, agents, and agentic workflows are on by default.
- Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications.

Previous Patch releases

- Select **Summarize** on a CI form, in the workspace, or from any list to view a concise summary of key CI data directly on the form: discovery and class details, associated business services, security vulnerabilities, and related records like incidents, alerts, problems, and change requests.
- The 'Manage duplicate CIs' skill identifies duplicate CIs, populates remediation tasks, and then assigns the tasks to the appropriate group. You follow step-by-step guidance and can preview remediation results before selecting a template. The updated CI correctness scores enable the CMDB Health Dashboard to display accurate information.

See Now Assist for Configuration Management Database (CMDB) for more information.

Important:
Now Assist for CMDB is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Now Assist for CMDB release

Some Now Assist skills, agents, and agentic workflows are turned on by default

The skills are automatically available to appropriate role users for the application, such as ITIL roles on incident forms or change forms. This change simply activates the skill and does not touch the roles that may be needed to use the skill. The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills and agentic workflows are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill, agent, or agentic workflow is turned on automatically (the AI asset was never configured and turned on, then turned off again). Previously configured skills and agentic workflows that were turned on, then off, remain inactive.

Preview deduplication template results

While you're working in the manage duplicate CIs skill, select **Review existing templates** to help you to decide which deduplication template to apply. Now Assist generates a summary of the results of applying a template without actually running the remediation process. You can preview the results for any existing template.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

When you see the desired result in a preview, you can specify that template and proceed with the deduplication process.

Changed in this release

Yokohama Patch 11

Changes to Now Assist usage measurement

Starting with Yokohama Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Some Now Assist skills are turned on by default

The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.

Configure ACLs for AI agents and agentic workflows

Configure the access control lists for who can discover and trigger AI agents and agentic workflows in their guided setups in AI Agent Studio. You can determine whether an AI agent or agentic workflow behaves as a dynamic user or as an AI user. You can also specify if an AI agent or agentic workflow can be available to all authenticated users or publicly available.

Related ServiceNow applications and features

Service Graph Connectors

Use a Service Graph Connector to import and integrate third-party data into CMDB and non-CMDB tables.

Now Assist

Help improve the productivity and efficiency in your organization, deliver better self-service, recommend actions, provide answers, and empower your users to search more effectively.

Now Assist Admin console

Use the Now Assist Admin console to provide you with quick and easy access to the important information that you need to set up, configure, and monitor Now Assist applications and features.

Now Assist panel

Use this conversational interface in Service Operations Workspace to summarize a chat, an incident, or resolution notes so that you can get the context of this information more quickly.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Now Assist skills

Use the Now Assist products to provide generative AI skills to meet the needs of users in different workflows, including case or incident summarization, chat summarization, resolution notes generation, and code generation.

Now Assist for Creator release notes

The ServiceNow® Now Assist for Creator application includes generative AI skills that can make developing on the ServiceNow AI Platform more efficient. Now Assist for Creator was enhanced and updated in the Yokohama release.

Now Assist for Creator highlights for the Yokohama release

Yokohama Patch 11

- Review changes to Now Assist usage measurement.
- Create, edit, and deploy fully functional ServiceNow applications using the Build Agent in the ServiceNow IDE.
- Generate catalog items conversationally and preview them during the creation process with Now Assist in Catalog Builder.
- Choose an AI model provider for all Now Assist for Code skills in the script editor.

Yokohama Patch 8

- Removed the now.assist.creator role as a requirement for test generation.

Yokohama Patch 6

- Use Google Gemini and Anthropic Claude on AWS as AI model providers for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI.

Note:
Additional AI model providers are supported for the following Now Assist for Creator skills:

  - App generation
  - App summarization
  - Catalog item generation
  - Code generation
  - Flow generation
  - Flow summarization
  - Playbook generation
  - Process Mining
  - RPA bot generation
  - Spoke generation
  - Test generation

Yokohama Patch 3

- Summarize what a flow or subflow does by using generative AI.
- Generate playbooks from inputs that refer to active actions, flows, subflows, content from installed spokes, or activity definitions.
- Create automation and UI components in Now Assist for app generation.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Use the code explain and summarize feature of Now Assist for Code to explain and summarize the code. This feature is supported by both Now LLM Service and the Azure OpenAI model providers.
- Use the Client Script Summarization skill to generate a high-level summary and a detailed explanation of a client script.

Yokohama Patch 1

- Enable your users to create applications by using the Now Assist for app generation skill even if they don't have the admin role.
- Use the improved application preview before generating an application by using the Now Assist for app generation skill.
- Enable your RPA Desktop Design Studio users to create and edit automations and activities, and extend automation logic flow with Now Assist for RPA Hub.
- Enable your ServiceNow Studio users to generate a summary of an app.
- Use the **Quick Actions** button in the Now Assist for Code enabled script editor to edit code and add comments.
- Use the prompt modal in inline or floating mode with Now Assist for Code.
- Now Assist for Code now supports both Now LLM Service and Azure OpenAI model providers. When you select the Azure OpenAI model provider, all requests for the Now Assist for Code model are redirected to Azure OpenAI for evaluation and response. Additionally, you get access to the Code Explain and Code Summarize features.
- Use the auto-complete feature of Now Assist for Code to get contextually relevant code suggestions while typing.

See Now Assist for Creator for more information.

Important:
Now Assist for Creator is available in ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Yokohama Patch 11

Build Agent, an autonomous AI agent for ServiceNow application development

Build Agent, located in a chat panel within the ServiceNow IDE, functions as an autonomous AI agent capable of independently generating a complete ServiceNow application. It can handle various code-related tasks, such as rewriting tables, explaining code, validating and improving existing applications, fixing application errors, and more.

Generate catalog items conversationally with Now Assist in Catalog Builder

Create catalog items and record producers efficiently using the conversational interface within Catalog Builder. Communicate your requirements and specifications for your desired catalog items through guided conversation. Now Assist for catalog generation helps to simplify and streamline the catalog item creation process.

Yokohama Patch 6

New third-party AI model provider options available for Now Assist

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Google Gemini 2.0 Flash, Google Gemini 2.5 Pro, and AWS Claude 3.7 Sonnet are available for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI GPT-4.1 and GPT-4.1 mini.

Note:
Additional AI model providers are supported for the following Now Assist for Creator skills:

- App generation
- App summarization
- Catalog item generation
- Code generation
- Flow generation
- Flow summarization
- Playbook generation
- Process Mining
- RPA bot generation
- Spoke generation
- Test generation

Yokohama Patch 3

Add columns to existing tables with Now Assist for app generation

Add columns to existing tables in Now Assist for app generation.

Add flows in Now Assist for app generation

Create a flow when creating an application in Now Assist for app generation. Enhance an existing application by adding a flow.

Add workspaces in Now Assist for app generation

Create a workspace when creating an application in Now Assist for app generation. Enhance an existing application by adding a workspace.

Configure an event handler with Now Assist

Use Now Assist in UI Builder to configure event handlers. At present, you can configure links to a destination, open or close modals, and view load requested event handlers using Now Assist in UI Builder.

Create a flow or subflow from an image

Create a flow or a subflow from an image by using Now Assist. Capture the detailed process in an image and attach the image to Workflow Studio. Now Assist generates a preview of the flow that you can modify and regenerate.

Enable Code Explain and Summarize

Support Code Explain and Code Summarize features with the Now LLM Service. Ensure compliance with any regional restrictions and help APAC users who may face limitations with US-based models.

Summarize client scripts

Use client script summary generation to get both a high-level summary and a detailed explanation of the client scripts.

Summarize a flow or subflow

Summarize what a flow or subflow does by using generative AI.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Support additional components in the RPA Bot generation skill

Support 97 additional components with Now Assist for RPA Hub.

Support Retrieval Augmented Generation (RAG) with playbook generation

Generate playbooks from inputs that refer to custom actions, flows, subflows, content from installed spokes, or activity definitions. Include the names of commonly used and recently published actions, subflows, flows, and activity definitions that are available on your instance in your playbook generation requests.

Time out long running app summaries

Time out app summary generation after two minutes.

Use the Now LLM Service with Now Assist for app generation

Choose Now LLM Service or OpenAI GPT-4o to ensure compliance with any regional restrictions. This feature is helpful for APAC users who may face limitations with US-based models, such as GPT-4.0.

Yokohama Patch 1

Create applications in ServiceNow Studio by using Now Assist with the guided app creator role

Enable your users with the guided app creator role (in addition to users with the admin role) to create applications with the Now Assist for app generation skill.

Create and edit automations and activities and extend automation logic flow in RPA Desktop Design Studio by using Now Assist

Use the Robotic Process Automation (RPA) bot generation skill in RPA Desktop Design Studio to create and edit automations and activities through short text instructions and preview options. This feature helps you to accelerate automation development because new and existing users can develop and build faster automations.

Enhance the automation logic by using the **Build automation** option, starting from components or from an empty design surface that is based on text instructions.

Summarize an app in ServiceNow Studio

Use the new Now Assist for app summary generation skill to quickly generate a summary of an app. You can then copy the summary to the app description, and then use the summaries to find duplicate or redundant apps.

Generate and edit automated tests faster by using the Test generation skill

Use the new Test generation skill to generate automated tests faster by simply describing your test requirements. Review the generated test, make edits directly, or refine your original prompt to generate a revised version of the test.

UI changes

Yokohama Patch 1

Find files faster when previewing an application in the Now Assist for app generation skill

Filter the app files list and narrow the search when previewing an application that is created with the Now Assist for app generation skill.

Enhanced visibility of apps created by the Now Assist for app generation skill

On the ServiceNow Studio home page, apps that are generated by AI display the AI indicator.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Changed in this release

Yokohama Patch 11

Changes to Now Assist usage measurement

Starting with Yokohama Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Some Now Assist skills, agents, and agentic workflows are turned on by default

The skills are automatically available to appropriate role users for the application, such as ITIL roles on incident forms or change forms. This change simply activates the skill and does not touch the roles that may be needed to use the skill. The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills and agentic workflows are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill, agent, or agentic workflow is turned on automatically (the AI asset was never configured and turned on, then turned off again). Previously configured skills and agentic workflows that were turned on, then off, remain inactive.

Configure ACLs for AI agents and agentic workflows

Configure the access control lists for who can discover and trigger AI agents and agentic workflows in their guided setups in AI Agent Studio. You can determine whether an AI agent or agentic workflow behaves as a dynamic user or as an AI user. You can also specify if an AI agent or agentic workflow can be available to all authenticated users or publicly available.

Previous Patch releases

More easily identify changes when previewing and updating applications

When previewing an application, any requested changes made by the Now Assist for app generation skill are listed when the preview pane loads.

Edit applications without having to change the scope manually

When editing applications, the Now Assist for app generation skill now changes the scope that you're working in to the scope of the application automatically.

More easily query Analytics Generation

Analytics Generation now uses a semantic filter instead of Natural Language Query (NLQ), resulting in less rigid requirements for queries.

Yokohama Patch 1

Improved query engine for Analytics Generation

Starting in Yokohama Patch 1, analytics generation supports GPT-4o for generating queries, to provide better accuracy in responses. These improvements include support for up to two levels of dot-walking based on user utterances.

Removed in this release

Yokohama Patch 12

- Spoke generation has been removed from Now Assist for Creator. See the ServiceNow Store website for additional information.

Activation information

Install Now Assist for Creator by requesting it from ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Related ServiceNow applications and features

App Engine Studio

ServiceNow® App Engine Studio (AES) is a development tool for creators of varying skill levels to build applications that meet the immediate needs of your organization.

Integration Hub

Automate integration tasks using ServiceNow components for ServiceNow® Workflow Studio, or develop custom integrations. A separate subscription is required.

Integration Hub available spokes

Activate spokes to enhance your Workflow Studio experience with integration-specific content. Use prebuilt flows and actions to automate your integrations or create your own integration automation.

MID Server

The Management, Instrumentation, and Discovery (MID) Server is a Java application that runs as a Windows service or UNIX daemon on a server in your local network. The ServiceNow® MID Server enables communication and the movement of data between a ServiceNow instance and external applications, data sources, and services.

Now Assist

Use AI recommendations to select the next component in your flow. The system generates recommendations based on the current position in the flow and the flow component names listed before.

Process Automation Designer

ServiceNow® Playbooks enables process owners to author cross-enterprise workflows and create a single, unified process. You can also use Playbooks to provide end users with a simplified, task-oriented view of your process.

Robotic Process Automation (RPA) Hub

Use the ServiceNow® Robotic Process Automation (RPA) Hub to enable end-to-end automation for your organization. With a combination of UI interactions, element-based automations, and APIs that interact between the various business applications, you can emulate user actions and eliminate mundane and repetitive human activities.

Now Assist for Customer Service Management (CSM) release notes

The ServiceNow® Now Assist for CSM application brings generative AI to Customer Service Management (CSM). You can improve productivity and efficiency by delivering better self-service, recommending actions, and delivering answers. Now Assist for CSM was enhanced and updated in the Yokohama release.

Now Assist for CSM highlights for the Yokohama release

Yokohama Patch 11

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Review changes to Now Assist usage measurement.
- Enabled is_template for all Now Assist skills and added support to clone and customize any base system GenAI skill in the Now Assist Skill Kit.
- Defined the navigation path for Sentiment Analysis dashboard in Core UI to make accessing sentiment analysis data easier.
- Track trending case topics with insights, visualizations, and customizable filters for deeper analysis with the Trending topics dashboard.
- Monitor customer sentiment across cases with LLM-powered insights and track the sentiment trends in the dashboard.
- Enable agents to access customer, case, and product details instantly through natural language queries with the Provide customer 360 insight agentic workflow.
- Auto-generate work notes and comment recommendations to help improve agent efficiency with the activity response generation skill.
- Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications.

Yokohama Patch 6

- Enable security in Now Assist for CSM and AI agents and agentic workflows by enforcing access control lists (ACLs) and user identity-based permissions.

Yokohama Patch 3

- Analyze your customers' sentiment and sentiment trends in your cases and the reasoning behind it.
- Use case resolution steps to generate recommended actions based on the data clusters from previously closed cases.
- Integrate the support for public web content in search queries for both standard and conversational search.
- Use enhanced AI agents and new standalone AI agents for more specific tasks. For example, the Duplicate identifier AI agent identifies the duplicate interactions and cases from the customers and then consolidates the information.

Yokohama Patch 1

- Improve agent productivity by managing long-running cases with the Triage cases AI agent.

Yokohama Early Availability

- Use the Now LLM Service scheduling assistance when booking an appointment through Virtual Agent. You can use this scheduling assistance to schedule, reschedule, or cancel an appointment.
- Help requesters find solutions by using Genius Results to reduce the number of cases created and decrease the effort needed by agents to close them.
- Use the Now Assist panel global skill search to ask questions and fetch answers from knowledge articles.

See Now Assist for Customer Service Management (CSM) for more information.

Important:
Now Assist for CSM is available in ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Yokohama Patch 11

Enabled the is_template property

Enabled the is_template property for all Now Assist skills to ensure consistent cloning. Added the ability to clone any base system GenAI skill and customize it in the Now Assist Skill Kit (NASK) to reduce setup time and simplify skill modification. Applies to all Now Assist for CSM skills.

Access Sentiment analysis dashboard in Core UI

Defined the navigation path in Sentiment Analysis dashboard in the Core UI interface to make it easier for users to locate and access sentiment analysis data without searching through multiple menus.

Sentiment trends analysis dashboard

Get a comprehensive view of customer sentiment across case. The dashboard uses LLM-powered insights to explain sentiment changes and lets you drill down to find root causes and real time insights—helping managers take targeted actions.

Trending topics dashboard

Get a comprehensive view of trending topics across cases along with insights and visualizations to facilitate deeper analysis. This feature helps support teams track trend progression, regional impact, and drill down into specific trends using customizable filters.

Provide customer 360 insights agentic workflow

Use the provide customer 360 insights agentic workflow to provide synthesized and relevant customer insights to live agents via conversations. This agentic workflow is designed to support human agents by responding to natural language queries regarding cases, customer history, products, and interactions. This feature expedites access to vital information and case resolution, identifies patterns, and leverages past similar cases for guidance as well as triggers actions from the Now Assist panel.

Activity response generation skill

Use the activity response generation skill to automatically generate recommendations for resolution notes, work notes, and comments. This feature helps agents add meaningful updates to case records, improving efficiency, and interaction.

Now Assist context menu configuration for extended tables within resolution notes

Configure output fields for resolution notes through the Now Assist context menu configuration page so skills apply to extended tables without any additional setup.

Yokohama Patch 6

Triage cases agentic workflow security directives

Implement security on AI agents and agentic workflows through ACLs and user identities.

Now Assist for CSM Gen AI security directives

Implement security in Now Assist for CSM skills through ACLs and user identities.

Yokohama Patch 3

Sentiment analysis on a case

Make informed decisions on cases that are based on your requester's sentiment and the reasoning behind it. You can update the sentiment when new comments

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

or emails from your customers come in to ensure that the sentiment is always up to date.

Sentiment analysis on an account

Track the sentiment of a business-to-business account and analyze it by using various filters and sorting dashboards. You can get the right insights and reduce the number of escalated cases.

Suggested steps in Recommended Actions

Use Recommended Actions to generate suggested resolution steps for cases. You can increase agent productivity by outlining the next best actions for unfamiliar cases and automatically providing logical next steps.

Support for conversational subflows and actions in the Now Assist panel

Use natural language to describe your intent to trigger a subflow or action. This feature helps to improve your agent productivity and enables them to accomplish everything in one place within the Now Assist panel.

External web content in Q&A Genius Results

Provide the support for your public web content so that your requesters can use search queries in both standard search and conversational search. You can also see whether the content is internal or external, with direct links to the source.

Troubleshooting steps identification AI agent

Gather context from cases, identify missed fixes, and troubleshoot potential solutions by using the Troubleshooting steps identification AI agent.

Yokohama Patch 1

Triage cases AI agents use case

Use the Triage cases AI agents use case to improve agent productivity through faster assessment.

Available AI agents use case

AI agent use case	Description
Triage cases	Use AI agents to handle all routine cases coming in through email and other offline channels, so that it improves customer satisfaction and reduces resolution times.

Yokohama Early Availability

Conversational search in the Now Assist panel with results from knowledge articles

Ask questions directly within the Now Assist panel. If the answer is found in the knowledge bases (KBs), the answer is shown with the source information. If the answer isn't available in the KB search, you're redirected to the global search experience for further assistance.

Now Assist in Virtual Agent-Scheduling Assistant via GenAI

Use the enhanced scheduling assistant with Now LLM Service capabilities to make it more conversational, enabling users to easily schedule, reschedule, and cancel appointments.

Now Assist in portal case form

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Guide requesters through a self-service flow to find solutions to their problems by using Genius Results. You can reduce the number of cases created and decrease the effort required by your agents to close open cases.

Changed in this release

Yokohama Patch 11

Enhancement in case summarization skill flow

The **Define trigger** step has been added to the case summarization flow. This step enables admins to choose between the User Trigger option, where users select a button to generate a summary, and the Automatic Trigger option, where summaries are automatically generated based on specified conditions.

Enhancement in email reply recommendation skill

Generate reply suggestions in the compose area using preset templates that include headers, footers, and signatures.

Unified admin experience for Now Assist skills

Skills cloned in Now Assist Admin console can now be edited in Now Assist Skill Kit. This update unifies the admin experience across Now Assist Admin and Now Assist Skill Kit, enabling users to add headers, configure prompts, and manage Now Assist skills in one location. The migration supports case summarization and resolution notes generation.

Role configuration required for agentic workflows and AI agents

Agentic workflows and AI agents included with Now Assist applications require additional security configuration. If you select *`Users with selected roles`* for your user access security controls for an agentic workflow or AI agent, you must add the installed roles, or they will not execute. Data access settings must also include these roles. See the documentation for the agentic workflow or AI agent for the specific roles you must add.

Display sentiment scale in case list view

Added sentiment scoring to both the case record page and list view across cases, giving agents immediate visibility into the emotional tone of customer interactions. The sentiment scale ranges from very positive, positive, neutral, negative to very negative.

Yokohama Patch 8

Multilingual Support

Enhanced multilingual support in chat summarization, resolution notes, and knowledge generation. Leveraged native multilingual LLMs for improved fluency and domain specificity, addressing translation inconsistencies across Tier 1 and Tier 2 languages.

Yokohama Patch 3

Triage cases agentic workflows enhancements

Added new standalone AI agents to check duplicate cases and split some existing standalone AI agents to focus on more specific tasks. The AI agents available are the Triage cases planner AI agent, Context validator and analyzer agent, Duplicate identifier AI agent, Informational queries AI agent, Transactional queries AI agent, Case creation AI agent, Entity extraction AI agent, Document verification AI agent, and Email response AI agent.

Now Assist in Portal case form enhancement

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Added the new **Ask** *Now Assist* button that opens a contextual chat window so that a requester can carry the conversation forward. If no results are found or if the requester isn't satisfied with the result, they can get further assistance by selecting the button to chat and get an answer, which helps to avoid case creation.

Yokohama Early Availability

Email reply recommendations enhancements

Refined the AI-generated reply recommendation to create the best response for users by applying tone changes in the Now Assist context menu. Additional tone options, including casual, formal, and sympathetic, are available.

Chat reply recommendation enhancements

Added the chat reply recommendation enhancements to respond in a conversational tone and get feature parity in the Now Assist Admin console:

- Refined the AI-generated reply recommendation to create the best answer for your users by applying tone changes in the Now Assist context menu. Additional tone options, including casual, formal, and sympathetic, are available.
- Added parity with the chat summarization Now Assist Admin console capabilities. The Now Assist Admin console can specify the portal and channels for chat reply recommendations and assign additional support roles.

Case summarization enhancement

Detailed feedback option is now available for negative feedback in the generated case summary.

Xanadu Patch 7: Extended the capabilities of the case summarization feature so it can now be used on custom tables.

Activation information

Now Assist features are available with activation of the Now Assist for CSM plugin. For more information, see Install Now Assist plugins.

Starting with Vancouver Patch 4, Now Assist for CSM is supported.

Starting with Xanadu Patch 7, Customer Service Management AI agent collection is supported.

Additional requirements

The Now Assist for CSM application requires a Customer Service Management Pro Plus or Enterprise Plus license.

Related ServiceNow applications and features

Now Assist

Help improve the productivity and efficiency in your organization, deliver better self-service, recommend actions, provide answers, and empower your users to search more effectively.

Now Assist Admin console

Use the Now Assist Admin console to provide you with quick and easy access to the important information that you need to set up, configure, and monitor Now Assist applications and features.

Use this conversational interface in CSM Configurable Workspace to summarize a chat, a case, or resolution notes so that you can get the context of this information more quickly.

Now Assist skills

Use the Now Assist products to provide generative AI skills to meet the needs of users in different workflows, including case or incident summarization, chat summarization, resolution notes generation, and code generation.

Now Assist for Enterprise Architecture (EA) release notes

The ServiceNow® Now Assist for Enterprise Architecture (EA) application introduces generative AI skills into the Enterprise Architecture Workspace. You can summarize Architectural Decision Records (ADR) in the Enterprise Architecture Workspace. Now Assist for Enterprise Architecture (EA) is a new application in the Yokohama release.

Now Assist for Enterprise Architecture (EA) highlights for the Yokohama release

Yokohama Patch 11

- Review changes to Now Assist usage measurement.
- Some Now Assist skills, agents, and agentic workflows are on by default.
- Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications.

Yokohama Patch 1: Generate and summarize Enterprise Modeling and Visualization diagrams for business applications hierarchy, using the Enterprise architecture diagrams AI agent.

Yokohama Early Availability

- Generate a summary of Architectural Decision Records (ADR) in the Enterprise Architecture Workspace.
- Request a business application or a digital integration using Now Assist in ServiceNow® Virtual Agent.

See Now Assist for Enterprise Architecture (EA) for more information.

Important:
Now Assist for Enterprise Architecture (EA) is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Now Assist for Enterprise Architecture (EA) features

Yokohama Patch 1 **Using Enterprise Architecture Diagramming AI agent**

Use the Enterprise architecture diagrams AI agent to create Enterprise Modeling and Visualization diagrams for business applications hierarchy and summarize them.

Yokohama Early Availability **Now Assist for Enterprise Architecture (EA)**

- Use the ServiceNow® Now Assist for Enterprise Architecture (EA) application to summarize Architectural Decision Records (ADR) in the Enterprise Architecture Workspace. Use the Architectural Decision Records (ADR) to explain your

infrastructure. ADR is a type of artifact that helps you to understand the background of a specific architectural decision.

- Register a business application and a digital integration with an interactive generative AI experience using Now Assist in Virtual Agent. For more information, see Now Assist for Enterprise Architecture (EA).

UI changes

Yokohama Patch 3 **Agentic workflow name update**

Renamed the Enterprise Architecture Diagrammer AI agent to Enterprise architecture diagrams AI agent.

UI name updates

- In the All menu, renamed the **Features** option under **Now Assist Admin** to **Skills**.
- On the Now Assist Admin page, renamed the **Now Assist Features** tab to **Now Assist Skills**.

Changed in this release

Yokohama Patch 11

Changes to Now Assist usage measurement

Starting with Yokohama Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Some Now Assist skills are turned on by default

The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.

Configure ACLs for AI agents and agentic workflows

Configure the access control lists for who can discover and trigger AI agents and agentic workflows in their guided setups in AI Agent Studio. You can determine whether an AI agent or agentic workflow behaves as a dynamic user or as an AI user. You can also specify if an AI agent or agentic workflow can be available to all authenticated users or publicly available.

Activation information

Now Assist features are available with activation of the Now Assist for Enterprise Architecture (EA) plugin. The Now Assist for Enterprise Architecture (EA) application requires an Enterprise Architecture Pro plus license. For more information, see Install Now Assist plugins.

Now Assist skills

Now Assist products provide generative AI skills that are tailored to meet the needs of users in different workflows, including content summarization in docs.

Now Assist for Field Service Management (FSM) release notes

The ServiceNow® Now Assist for FSM application brings generative AI to Field Service Management. Now Assist for FSM was enhanced and updated in the Yokohama release.

Now Assist for FSM highlights for the Yokohama release

Yokohama Patch 11

- Review changes to Now Assist usage measurement.
- Some Now Assist skills, agents, and agentic workflows are on by default.
- Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications.

Yokohama Patch 6

- Use Google Gemini and Anthropic Claude on AWS as AI model providers for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI.
- Clone and customize skills.
- Edit prompts using the Now Assist skill kit.

Yokohama Patch 3

- Enable Field Service technicians to access a virtual assistant from the mobile application with Now Assist in Virtual Agent.
- Use Now Assist in Virtual Agent for mobile to summarize work order tasks.
- Explore conversational search in the Now Assist panel with results from Knowledge Base articles.

See Now Assist for Field Service Management (FSM) for more information.

Important:
Now Assist for Field Service Management (FSM) is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Yokohama Patch 6

New third-party AI model provider options available for all Now Assist applications

Google Gemini and AWS Claude are available for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI.

Custom template and custom prompt support

As an admin, you can clone the KB generation skill and customize the input fields. You can also clone the Work order task summarization skill, then access the skill in the Now Assist skill kit, and update the prompts.

Yokohama Patch 3

Create an Assistant for Field Service Management to do the following:

- Initiate the Now Assist panel from a work order task record or the **My tasks** tab.
- Provide technicians with a consistent and intuitive interface for quick and effortless interaction.
- Display a summary of work order tasks.

Use conversational search for technician support to do the following:

- Enable technicians to ask questions in natural language for quick and clear answers.
- Enable technicians to receive accurate and reliable responses sourced exclusively from the Knowledge Base.
- Provide technicians with context-aware follow-ups, including related parts or steps, for better support.

Changed in this release

Yokohama Patch 11

Changes to Now Assist usage measurement

Starting with Yokohama Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Now Assist for Financial Services Operations (FSO) release notes

The ServiceNow® Now Assist for Financial Services Operations (FSO) application brings generative and agentic AI to Financial Services Operations. Features include AI agents, case summarization, disputes intake via Virtual Agent, and support for third-party language models. Now Assist for FSO was enhanced and updated in the Yokohama release.

Now Assist for FSO highlights for the Yokohama release

Yokohama Patch 11

- Now Assist for FSO skills and AI agents support model updates in Now LLM Service.
- Some Now Assist skills, agents, and agentic workflows are on by default.
- Review changes to Now Assist usage measurement.
- Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications.

Yokohama Patch 6

- Use Google Gemini and Anthropic Claude on AWS as AI model providers for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI.
- Implement security in Now Assist AI agents and Now Assist for FSO skills with Access Control Lists (ACLs).

Yokohama Patch 3

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Streamline the friendly fraud dispute resolution process for human agents and make informed decisions by using the Now Assist friendly fraud AI agent.
- Maintain positive customer relationships by using the AI agent to craft responses with the right tone and language.
- Enable agents to evaluate and review the amount being disputed, the customer relationship, and the outcome of the detection logic.

Yokohama Patch 1

- Streamline the card dispute submission process for cardholders with a dispute intake workflow by using Now Assist in Virtual Agent.
- Use a conversational, natural language interface that makes data collection more engaging and less tedious compared to a traditional form.
- Increase efficiency by inferring information from the customer's responses in the conversation.

See Now Assist for Financial Services Operations (FSO) for more information.

Important:
Now Assist for FSO is available in ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Yokohama Patch 11

Long term stable models

Long term stable (LTS) models are part of Now LLM Service and provide longer model stability windows for regulated industries. These models can integrate with tools to provide governance, monitoring, and compliance controls.

Yokohama Patch 6

New third-party AI model provider options available for all Now Assist applications

Google Gemini and AWS Claude are available for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI.

ACL security implementation

Enable security implementation to execute AI agents, agentic workflows, and generative AI skills through ACLs and user identities in Now Assist for FSO.

Predefined ACLs are provided for case summarization, Disputes intake via Virtual Agent, and the Help resolve friendly fraud AI agent and agentic workflow.

Yokohama Patch 3

Using agentic workflows in Now Assist for Financial Services Operations (FSO)

Resolve disputes that are flagged as friendly fraud with comprehensive guidance from the friendly fraud AI agent. Leverage the AI agent's step-by-step recommendations and detailed responses to explain the decisions made regarding disputes. Based on the AI agent recommendations, issue credit to customers, decline disputes, or initiate an exception process.

Yokohama Patch 1

Disputes intake via Virtual Agent

Provide an intuitive dialog-based channel experience for your customers to submit details on a dispute case. The dispute intake via Virtual Agent leverages

questions that are required by the card processing networks. Now LLM Service rephrases these questions in a conversational format and infers the answers for the unanswered questions from customer responses.

Changed in this release

Yokohama Patch 11

Role configuration required for agentic workflows and AI agents

Agentic workflows and AI agents included with Now Assist applications require additional security configuration. If you select *Users with selected roles* for your user access security controls for an agentic workflow or AI agent, you must add the installed roles, or they will not execute. Data access settings must also include these roles. See the documentation for the agentic workflow or AI agent for the specific roles you must add.

Some Now Assist skills are turned on by default

The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.

Changes to Now Assist usage measurement

Starting with Yokohama Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Activation information

Install Now Assist for FSO by requesting it from ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Additional requirements

The Now Assist for FSO application requires a Financial Services Operations Professional Plus or Enterprise Plus license.

Related ServiceNow applications and features

The ServiceNow® Now Assist for Hardware Asset Management (HAM) application brings agentic AI to Hardware Asset Management. Now Assist for Hardware Asset Management (HAM) is a new application in the Yokohama release.

Now Assist for Hardware Asset Management (HAM) highlights for the Yokohama release

Yokohama Patch 13- Gain real-time visibility into critical asset data through generative AI-driven asset analysis summaries.

Yokohama Patch 11

- Review changes to Now Assist usage measurement.
- Some Now Assist skills, agents, and agentic workflows are on by default.
- Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications.

Yokohama Patch 6 - Automate the hardware asset repair process by using an agentic workflow and configure Access Control Lists (ACLs) for both AI agents and agentic workflows.

Yokohama Patch 4 - Automate and streamline your hardware asset request process by using an agentic workflow.

See Now Assist for Hardware Asset Management (HAM) for more information.

Important:
Now Assist for Hardware Asset Management (HAM) is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Important information for upgrading Now Assist for Hardware Asset Management (HAM) to Yokohama

Only users with the procurement_user role can access the Help manage hardware asset requests agentic workflow including the following AI agents:

- Hardware asset management sourcing AI agent
- Transfer order creation AI agent
- Purchase order creation AI agent

Now Assist for Hardware Asset Management (HAM) features

Manage your assets with comprehensive and real-time data

View consolidated asset information through AI-generated analysis summary on the asset record. The AI-generated summary dynamically updates based on the asset state and includes context from any active incidents or tasks. The summary displays the asset life cycle, current assignment and location, audit status, financial metrics, and identifies missing data to support asset management activities.

Yokohama Patch 6

Optimize hardware asset repair process with the suite of AI agents

Automate the repair of defective and out-of-warranty hardware assets by using AI agents in the Help repair hardware assets agentic workflow. These AI agents validate the repair tasks, provide detailed troubleshooting and repair instructions, and complete the tasks on receiving user confirmation.

Configure ACLs for AI agents and agentic workflows

Configure the Access Control Lists for who can discover and trigger AI agents and agentic workflows in their guided setups in AI Agent Studio. You can determine whether an AI agent or agentic workflow behaves as a dynamic user or as an AI user. You can also specify if an AI agent or agentic workflow can be available to all authenticated users or publicly available.

Yokohama Patch 4

Optimize hardware asset sourcing with the suite of AI agents

Automate your hardware asset sourcing by using AI agents in the Help manage hardware asset requests agentic workflow. These AI agents can efficiently handle tasks such as automatically consuming assets from local stock, creating transfer orders, and generating purchase orders. By automating complex and repetitive tasks in the hardware asset request process, AI agents help to reduce manual intervention significantly, speed up request resolution, enhance the productivity of asset managers, and improve operational efficiency.

Changed in this release

Yokohama Patch 11

Changes to Now Assist usage measurement

Starting with Yokohama Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Some Now Assist skills are turned on by default

The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.

Configure ACLs for AI agents and agentic workflows

Configure the access control lists for who can discover and trigger AI agents and agentic workflows in their guided setups in AI Agent Studio. You can determine whether an AI agent or agentic workflow behaves as a dynamic user or as an AI user. You can also specify if an AI agent or agentic workflow can be available to all authenticated users or publicly available.

Activation information

Install Now Assist for Hardware Asset Management (HAM) by requesting it from the ServiceNow Store.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
To take full advantage of the Now Assist for HAM features, you should upgrade to Yokohama Patch 6 and install the Now Assist for Hardware Asset Management (HAM) store application.

Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Additional requirements

The Now Assist for Hardware Asset Management (HAM) application requires the Hardware Asset Management Pro plus license.

Related ServiceNow applications and features

Now Assist

Help improve the productivity and efficiency in your organization, deliver better self-service, recommend actions, provide answers, and empower your users to search more effectively.

Now Assist Admin console

Use the Now Assist Admin console for quick and effortless access to the important information that you need to set up, configure, and monitor Now Assist applications and features.

Now Assist panel

Use this conversational interface in ServiceNow® Service Operations Workspace to summarize a chat, an incident, or resolution notes so that you can get the context of this information more quickly.

Now Assist skills

Use the ServiceNow® Now Assist products to provide generative AI skills to meet the needs of users in different workflows, including case or incident summarization, chat summarization, resolution notes generation, and code generation.

Now Assist for HR Service Delivery (HRSD) release notes

The ServiceNow® Now Assist for HR Service Delivery (HRSD) application enables agents to summarize case information, generate resolution notes, and summarize the chat information for an interaction. Your agents can understand the chat and case context and propose quicker resolutions to your customers. Now Assist for HR Service Delivery (HRSD) was enhanced and updated in the Yokohama release.

Now Assist for HR Service Delivery (HRSD) highlights for the Yokohama release

Yokohama Patch 11

- Review changes to Now Assist usage measurement.
- Some Now Assist skills, agents, and agentic workflows are on by default.
- Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications.

Yokohama Patch 6

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Use Google Gemini and Anthropic Claude on AWS as AI model providers for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI.
- Create a copy of the KB generation skill to create custom templates.
- View the list of sources that are used to generate an email reply recommendation.
- Select citations to view the source articles and industry research from Galileo AI Assistant for HR.
- Leverage an AI agent to generate a step-wise fulfillment plan for an HR case from both Core UI and Agent Workspace for HR Case Management.
- Make career conversations easy to create and track using the growth conversations agentic workflow.

Yokohama Patch 3

- Automate the resolution of routine employee inquiries by using the Resolve noncritical HR cases agentic workflow.
- Receive research-backed responses to HR management queries that are sourced from both internal knowledge bases and The Josh Bersin content library.
- Use the new Growth & Performance AI agents to streamline your employee growth discussions in Career Conversations.

Yokohama Patch 1: Improve agent productivity by managing long-running cases with the Triage cases AI agent.

Yokohama Early Availability

- Use the new Virtual Agent topics to place employee requests in the Human Capital Management (HCM) system.
- Use Knowledge Graph to create personalized knowledge models in the form of Knowledge Graph schemas.
- Create Journey Accelerator plans by using Now Assist for HRSD in Journey designer.

See Now Assist for HR Service Delivery (HRSD) for more information.

Important:
Now Assist for HRSD is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Yokohama Patch 6

Resolve HR cases agentic workflow

Generate a step-wise fulfillment plan for an HR case by selecting the **Generate Plan** button on the HR Case. HR agents can add prompts to further refine the AI generated fulfillment plan before the plan is published to the work notes of the case.

Growth Conversations agentic workflow

Use the new growth conversations workflow to streamline your employee growth discussions in Career Conversations.

New third-party AI model provider options available for all Now Assist applications

Google Gemini and AWS Claude are available for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Generate a knowledge article from HR Agent Workspace with Now Assist

Create a copy of the KB generation skill to create custom templates that are based on your organization's requirements. When a skill copy is activated, the main skill is automatically deactivated.

Generate an email reply recommendation by using Now Assist for HR Service Delivery (HRSD)

View the list of KB articles, related records, and current records that are used to generate email reply recommendations.

Generate onboarding ramp-up plan agentic workflow

Simplify employee onboarding with AI agents that gather inputs, structure tasks, enable manager review, and deliver personalized onboarding plans.

Yokohama Patch 3

Resolve HR cases agentic workflow

Use the Resolve noncritical HR cases agentic workflow for faster mean time to repair (MTTR) cases, automate the resolution of routine employee inquiries, and reduce the costs for HR operations organizers.

Available agentic workflows

Agentic workflow	Description
Resolve noncritical HR cases	AI agents detect criticality and retrieve relevant knowledge-based responses to automate the resolution of employee queries.

Access knowledge from internal and external content sources

Find reliable answers to HR management queries from multiple data sources, including the research and articles from The Josh Bersin Company, with attribution to each source.

Override sensitivity detection false positives

Proceed with the interaction when the virtual agent incorrectly identifies a phrase as containing sensitive information.

Create a growth conversation with the help of an agent in Now Assist

As a manager, use the growth conversations preparation AI agent to schedule and prepare for employee growth discussions. The agent provides a clear summary of employee activity and career journey, with data-driven talking points to make conversations more focused and impactful.

Note:
This feature is available when you have both Now Assist for HR Service Delivery (HRSD), which will install Now Assist for Talent and HR Talent AI Agent Collection

Yokohama Patch 1

Help resolve tuition requests agentic workflow for Now Assist for HRSD

Use the Resolve policy use case for faster mean time to repair (MTTR) cases that require validation that is based on the policies that are built for tuition reimbursement.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Available AI agents use case

AI agent use case	Description
Resolve policy for tuition reimbursement	AI agents resolve tuition reimbursement requests by connecting to various parties (for example, the manager for approval) and resolving the case, while keeping the human agent in the loop.

Yokohama Early Availability

Now Assist for HRSD Virtual Agent topics

Use the Now Assist for HR Service Delivery (HRSD) Virtual Agent topics to place employee requests in the HCM system. Examples of requests are when an employee requests time off or updates their personal details.

Use Knowledge Graph in Now Assist for HRSD

Create and manage personalized knowledge models as Knowledge Graph schemas that are represented as nodes, edges, and their properties. Virtual Agent uses the assigned Knowledge Graph schema to resolve employee requests and queries.

Create a journey using Now Assist

Create Journey Accelerator plans by entering prompts to Virtual Agent without having to manually create lists and forms.

Changed in this release

Yokohama Patch 11

Changes to Now Assist usage measurement

Starting with Yokohama Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Some Now Assist skills are turned on by default

The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.

Configure ACLs for AI agents and agentic workflows

Configure the access control lists for who can discover and trigger AI agents and agentic workflows in their guided setups in AI Agent Studio. You can determine whether an AI agent or agentic workflow behaves as a dynamic user or as an AI user. You can also specify if an AI agent or agentic workflow can be available to all authenticated users or publicly available.

Yokohama Patch 6

Flow name

The Resolve noncritical HR cases flow has been renamed to Resolve HR cases flow.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Activation information

Install Now Assist for HRSD by requesting it from ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Related ServiceNow applications and features

Now Assist

Help improve the productivity and efficiency in your organization, deliver better self-service, recommend actions, provide answers, and empower your users to search more effectively.

Now Assist Admin console

Use the Now Assist Admin console to provide you with quick and easy access to the important information that you need to set up, configure, and monitor Now Assist applications and features.

Now Assist panel

Use this conversational interface in CSM Configurable Workspace to summarize a chat, a case, or resolution notes so that you can get the context of this information more quickly.

Now Assist skills

Use the Now Assist products to provide generative AI skills to meet the needs of users in different workflows, including case or incident summarization, chat summarization, resolution notes generation, and code generation.

Agent Workspace for HR Case Management (Configurable)

The Agent Workspace for HR Case Management application enables you to interact with employees, respond to inquiries, and resolve issues quickly.

Journey designer

The Journey designer application enables managers and employees to create and track journeys. Journeys include transition plans, such as promotions, offboarding, onboarding, and role changes for employees.

Now Assist for IT Operations Management (ITOM) release notes

The ServiceNow® Now Assist for ITOM application brings generative AI to ITOM. Now Assist for ITOM was enhanced and updated in the Yokohama release.

Now Assist for ITOM highlights for the Yokohama release

Yokohama Patch 11

- Review changes to Now Assist usage measurement.
- Now Assist skills used in the analyze potential impact agentic workflow are turned on by default.
- Use the new manage alerts autonomously workflow to efficiently manage alerts and minimize resolution times, including an AI agent for triage, impact analysis, and root cause investigation.
- Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications.

Yokohama Patch 6

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Get deeper impact analysis in the Analyze alert impact agentic workflow with five new AI agents.
- Review Alert analysis, and relevant information for new mixed alert groups in the Now Assist panel to help investigate alerts more effectively.
- Use the Triage and analyze alert agentic workflow to perform initial triage and analysis in the context of an incident.
- Enhance security for Now Assist AI agents with Access Control Lists (ACLs).
- Use Google Gemini and Anthropic Claude on AWS as AI model providers for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI.

Yokohama Patch 3

- Investigate alerts and get the context that you need to respond efficiently using the Analyze alert impact agentic workflow.
- Automatically perform initial alert triage and analysis tasks such as assigning alerts, analyzing alert history, and summarizing past incidents, with the Triage and analyze alert agentic workflow.

See Now Assist for IT Operations Management (ITOM) for more information.

Important:
Now Assist for ITOM is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Yokohama Patch 11

Enhance IT operations with AI-driven, autonomous alert management using the manage alerts autonomously workflow

Automate alert triage, impact analysis, and root cause investigation with an AI-driven workflow that replaces manual operator steps with autonomous decision-making. The workflow processes incoming alerts end-to-end and surfaces consolidated insights through Express List, giving operators immediate visibility into what happened, what's affected, and why.

Configure the Datadog and Gemini Cloud Assistant observability skills

Set up the new Datadog and Gemini Cloud Assistant observability skills to get insights from those tools in the manage alerts autonomously agentic workflow. With Datadog and Google Gemini, the workflow now supports five observability tools, including Dynatrace, Kentik, and New Relic, helping you investigate and respond to a wider range of alerts.

Yokohama Patch 6

Configure the Dynatrace analysis AI agent

Set up the Dynatrace analysis AI agent in the Analyze alert impact agentic workflow to investigate Dynatrace alerts. With Dynatrace, the agentic workflow now supports three observability tools, including Kentik and New Relic, helping you investigate and respond to a wider range of alerts.

Expand the Analyze alert impact agentic workflow with four new AIOps agents

Get a fuller view of alert impact with four new AIOps agents in the Analyze alert impact agentic workflow. Along with observability data, the agentic workflow now

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

includes information from within ServiceNow to help surface business impact and related issues. Activate the AIOps agents to include them in the agentic workflow.

Enhance your decision-making process with the Analyze Potential Impact agentic workflow

Assess the potential impact of a change using the Analyze Potential Impact agentic workflow. This workflow provides an analysis of the relevant servers and suggested services that might be impacted by your change request, ensuring you have all the insights needed to make informed decision before a change.

Add access control lists for security in AI agents

Enable security settings to run AI agents and agentic workflows using ACLs and user identities. You can configure and manage the ACLs in AI Agent Studio.

Utilize the Triage and analyze alerts agentic workflow in the context of an incident

Initiate the Triage and analyze alerts agentic workflow from the Now Assist panel in the context of the incident form to perform all the functions of the workflow. This workflow automatically assigns, acknowledges, and summarizes origin alerts, determines their significance through historical analysis, and analyzes related incidents.

New third-party AI model provider options available for all Now Assist applications

Google Gemini and AWS Claude are available for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI.

Yokohama Patch 3

Analyze alert impact agentic workflow

Analyze the impact of alerts and identify the possible causes with the Analyze alert impact agentic workflow. The workflow interacts with observability tools, such as Kentik and New Relic, to surface alert details and provide insights.

Now Assist for IT Operations Management (ITOM) Triage and analyze alert agentic workflow

Automatically assign, acknowledge, and summarize the alerts, determine their significance through history analysis, and analyze the related incidents. Initiate multiple parallel processes to triage and analyze the different alerts.

Removed in this release

- Starting with version 2.0.1 of AI Agents for Observability, the sn_obs_aia.admin role, previously required to configure AI agents in the Analyze alert impact agentic workflow, has been removed. Users must now have the credential_admin and connection_admin roles instead.
- Starting with version 2.0.1 of AI Agents for Observability, the prompt `How severe is this alert?` no longer appears in the Analyze alert impact agentic workflow.

Changed in this release

Yokohama Patch 11

Changes to Now Assist usage measurement

Starting with Yokohama Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Some Now Assist skills are turned on by default

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.

Configure ACLs for AI agents and agentic workflows

Configure the access control lists for who can discover and trigger AI agents and agentic workflows in their guided setups in AI Agent Studio. You can determine whether an AI agent or agentic workflow behaves as a dynamic user or as an AI user. You can also specify if an AI agent or agentic workflow can be available to all authenticated users or publicly available.

AIOps AI agents removed from the analyze alert impact agentic workflow

Four AIOps AI agents have been removed from the analyze alert impact agentic workflow as they're now available in the manage alerts autonomously agentic workflow. AI agents for Dynatrace, Kentik, and New Relic remain in the analyze alert impact agentic workflow to help you learn about and respond to alerts.

Activation information

- Install the AIOps Experience [sn_sow_aiops] application from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.
- Install Now Assist for ITOM by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Additional requirements

The Now Assist for ITOM application requires an ITOM Pro Plus or Enterprise Plus license.

Related ServiceNow applications and features

Now Assist

Help improve organizational efficiency, deliver better self-service, and empower your users to search more effectively.

Now Assist Admin console

Use the Now Assist Admin console to learn how to set up, configure, and monitor Now Assist applications and features.

Now Assist panel

Use this conversational interface in the ServiceNow® Service Operations Workspace to summarize a chat, incident, or resolution notes, and get the context that you need.

Now Assist skills

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Work with ServiceNow® Now Assist products to use generative AI skills in different workflows. Workflows include summarizing cases or incidents, summarizing chats, generating resolution notes, and generating code.

Now Assist for IT Service Management (ITSM) release notes

The ServiceNow® Now Assist for IT Service Management (ITSM) application brings agentic AI to IT Service Management. Now Assist for IT Service Management (ITSM) was enhanced and updated in the Yokohama release.

Now Assist for IT Service Management (ITSM) highlights for the Yokohama release

Yokohama Patch 11

- Review changes to Now Assist usage measurement.
- Some Now Assist skills, agents, and agentic workflows are on by default.
- Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications.
- Some Now Assist skills are now turned on by default.
- Add self-service and deflection to your phone channel with Voice AI agents.
- Edit the incident summarization skill prompts and inputs within the Now Assist Skill Kit.
- Use the Now Assist context menu (NACM) to create AI-powered generative text.
- Use agentic workflows in Change Management to quickly link configuration items (CIs) to a change request, intuitively create change requests, and easily associate outages with a change request.
- Empower service desk agents to diagnose and resolve incidents on DEX monitored devices quickly and efficiently by using the#DEX issue diagnosis and resolution agentic workflow.

Yokohama Patch 3

- Identify the category, subcategory, and configuration item for a given incident automatically using a team of AI agents in the Triage and categorize ITSM incidents agentic workflow.
- Get recommendations to resolve incidents by using a team of AI agents for catalog, knowledge, and past incidents in the Investigate and resolve ITSM incidents agentic workflow.
- Manage Microsoft 365 group members using AI agents in the Manage Microsoft 365 group members agentic workflow.
- Generate the **Risk and impact analysis** and the **Justification** fields using the AI agents in the Generate change request plans agentic workflow.

Yokohama Patch 1: Scale your workflows, enhance productivity, and complete work autonomously using the IT Service Management AI agent collection.

Yokohama Early Availability

- Manage change risk explanations effectively by copying an existing change risk explanation skill and configuring it for your business needs.
- Deflect IT issues in the ServiceNow portal with AI-powered solutions.
- Automatically generate an email as a recommendation to help agents save time and learn efficient ways to respond to requesters.
- View a summary of incidents and change requests in an intuitive summarization interface.
- Track the status of common IT-related tasks by using the Now Assist application.

See Now Assist for IT Service Management (ITSM) for more information.

Important:
Now Assist for IT Service Management (ITSM) is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Important information for upgrading Now Assist for IT Service Management (ITSM) to Yokohama

When you upgrade to the Zurich Patch 4 release, any customizations you may have made to the Now Assist context menu (NACM) won't be preserved. For more information, see the Community article Upgrade information for the NACM support in Now Assist for ITSM.

New in the Yokohama release

Yokohama Patch 11

Adding self-service and deflection to phone channels using Voice AI agents

Enhance employee productivity with Voice AI agents by adding self-service and deflection to their phone channel.

Getting password reset instructions using an AI agent

The **DEMO Password reset agent** is a demo AI agent that provides requesters with password reset instructions for the account that they need help with.

Editing the incident summarization skill prompts and inputs using the Now Assist Skill Kit

You can edit the prompts and inputs for the incident summarization skill within the Now Assist Skill Kit (NASK) and test the updates you've made.

Expanding attachment summarization capabilities to include additional document formats and language

You can now summarize, analyze, and extract data from attachments in additional formats and languages.

Enhancing the efficiency of the Investigate and resolve ITSM incidents agentic workflow

For better efficiency, the ITSM incident resolution investigation AI agent and Find catalog item AI agent have been combined into one agent. This agent is called the ITSM incident resolution plan investigation AI agent.

Enhancing the efficiency of the Triage and categorize ITSM incidents agentic workflow

For better efficiency, the Link major incident AI agent and the Link incident to problem AI agent have been combined into one agent. This agent is called the Link major incident or problem AI agent.

Enhancing the efficiency of the Generate change request plans agentic workflow

For better efficiency, the existing six agents in the change request plans agentic workflow have been combined into one agent. This agent is called the Change request plans AI agent.

Display the risk factors sources that contribute to the calculation of a change risk explanation

When a change risk is calculated, Now Assist for ITSM provides the list of the change requests that were used to identify the potential risks for the change risk explanation so that you can understand which risk factors contributed to the calculated risk.

Generating resolution notes using the Now Assist context menu

As an admin, you can view and configure the Now Assist context menu (NACM) to generate resolution notes using the **Resolution notes generation** skill.

Generating an activity response using the Now Assist context menu

As an admin, you can view and configure the Now Assist context menu (NACM) for an activity response using the **Incident activity response generation** skill.

Masking roles for controlled access to agentic workflows, AI agents, and skills

Mask roles to restrict access to agentic workflows, AI Agents, and skills, ensuring that users receive only the necessary permissions.

Suggest configuration items for a change request agentic workflow

Find and link applicable configuration items (CIs) to a change request from the Now Assist panel in a conversational and intuitive way using the Suggest configuration items for a change request agentic workflow.

Create outages for a change request agentic workflow

Associate outages with a change request in a conversational and intuitive way from the Now Assist panel using the Create outages for a change request agentic workflow.

Create standard change request agentic workflow

Create a standard, normal, or emergency change request in a conversational and intuitive way from the Now Assist panel using the Create standard change request agentic workflow.

Create standard change template proposal agentic workflow

Create a change template proposal record based on similar change requests in a conversational and intuitive way from the Now Assist panel using the Create standard change template proposal agentic workflow.

DEX issue diagnosis and resolution agentic workflow

Diagnose and resolve issues on DEX monitored devices through a structured process that includes diagnosis of the cause, a resolution plan with actionable steps, and documenting the resolution in the incident record.

Generate comprehensive release notes for a release in Digital Product Release

Automatically generate structured release notes for a release using the Generate Release Notes skill. This AI-driven capability compiles enhancements, features, incidents, and change records into structured notes with an executive summary and scope of work sections, reducing manual effort and ensuring consistency. You can edit the AI-generated draft as needed, then publish and share via link or PDF download.

Yokohama Patch 6

Classify service and CI AI agent

Automatically assign the related service, service offering, and configuration item (CI) to an incident using the Classify service and CI AI agent in the Triage and categorize ITSM incidents agentic workflow.

Setting the AI user as the Run as user in the Triage and categorize incidents agentic workflow

Create AI users for the identity type **AI agent** and assign roles to the AI user based on your needs. Run the agentic workflow as the AI user that determines the data access defined by the role.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Matching flow action access control roles with the agent roles for the Notify users with Twilio agentic workflow

When you update the agent role for the Notify users with Twilio agentic workflow, you must also update the corresponding access controls with those roles.

Matching flow action access control roles with the agent roles for the Manage Microsoft 365 group members agentic workflow

When you update the agent role for the Manage Microsoft 365 group members agentic workflow, you must also update the corresponding access controls with those roles.

Using the itil role to add or update work notes in the Now Assist panel

To add or update work notes in the Now Assist panel, the logged-in user must have the itil role.

New third-party AI model provider options available for all Now Assist applications

Google Gemini and AWS Claude are available for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI.

Editing prompts using the Now Assist skill kit

As an admin, you can clone the following skills, then access the skill in the Now Assist skill kit, and update the prompts:

- Resolution notes generation skill
- Knowledge article generation skill
- Incident summarization skill

Prompt inputs for Major incident email content recommendation

Use related tables and fields as prompt inputs to generate a Major incident email content recommendation.

Yokohama Patch 3

Using IT Service Management AI agent collection

Use the IT Service Management AI agent collection to boost productivity, and autonomously resolve business tasks.

Available agentic workflows

Agentic workflows	Description
Triage and categorize ITSM incidents	Identify the category, subcategory, and configuration item for an incident automatically, and link associated major incidents or known problems.
Investigate and resolve ITSM incidents	Get recommendations to resolve an incident based on the incident number. Check for related catalog items, Knowledge articles, and similar resolved incidents to generate resolution steps for the incident.
Manage Microsoft 365 group members	Add or remove groups and email distribution lists from the Microsoft 365 group.

© 2026 ServiceNow, Inc. All rights reserved.

IT Service Management AI agent collection Generate change request plans agentic workflow

Use the following additional AI agents to handle change requests.

AI agent	Description
Change risk and impact analysis AI agent	Analyzes the potential risk and impact of a change request.
Change justification proposal AI agent	Proposes justification for a change request.

Generate a Major Incident email content recommendation by using Now Assist for IT Service Management (ITSM)

Draft a communication for a major incident using an email template. You can fill in the template field values with an AI-generated response.

Generate comments and work notes using the Now Assist context menu

Enable your agents to generate comments and work notes quickly and add them to incidents using the Now Assist panel.

Incident sentiment and sentiment trend

Make informed decisions on incidents by considering the requester's sentiments and the reasoning behind them.

Suggested steps generation in Now Assist for IT Service Management (ITSM)

Automatically generate suggested steps to resolve an incident by analyzing the solutions from clusters of similar resolved incidents.

Summarizing attachments in the Incident summarization skill

Summarize, analyze, and extract data from attachments that are of type PNG or JPEG using Document Intelligence in the Incident summarization skill.

Yokohama Patch 1

Using IT Service Management AI agent collection

Use the IT Service Management AI agent collection to boost productivity, and autonomously resolve business tasks.

Available AI agent use cases

AI agent use case	Description
Generate post incident reviews	Enhance IT productivity during major incidents by minimizing the time required to generate post-incident reviews using AI agents. This process helps improve communication and avoid outages.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Available AI agent use cases (continued)

AI agent use case	Description
	Important: To enable the display of the Generate post incident reviews use case, you must activate the Incident Management - Major Incident Management plugin (com.snc.incident.mim). For more information, see Activate Incident Management - Major Incident Management.
Generate change request plans	Enhance IT productivity and help decrease the time to schedule change and manage change risk using AI agents. These AI agents can look up similar changes, generate implementation, back out, and test plans to manage change effectively.
Categorize incidents	Autonomously recommend incident categorization using AI agents. The AI agent assigns a category, subcategory, and a configuration item (CI) to incidents based on the incident description. The assigned CI is also based on callers associated with that item.
Notify users with Twilio	Send text messages via SMS to recipients manually using AI agents to help improve the time required for subject matter expert response. **Important:** To enable the display of the Notify users with Twilio use case, you must activate the Twilio Spoke plugin (sn_twilio_spoke). For more information, see Twilio Spoke.

Yokohama Early Availability

Using self service to deflect incidents in a ServiceNow portal by using Now Assist for IT Service Management (ITSM)

Designed to reduce the number of incidents to be resolved by deflecting issues with self-service.

Customizing a Now Assist for IT Service Management (ITSM) change risk skill

Efficiently explain the risk of a change request by adding custom input fields to the following input tables:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Change request
- Past similar change request
- Incident caused by change

Refining a change risk explanation response

Refine the explanation to a change risk by shortening or lengthening a response by using Now Assist for IT Service Management (ITSM).

Risk Assessment as input to calculate a change risk

Use risk assessment values as an input to explain the risk of a change request.

Generating an email response by using Now Assist for IT Service Management (ITSM)

Get recommendations for email responses that agents can review and send to users. Agents can also get email template and content edit recommendations from Now Assist for IT Service Management (ITSM).

Monitoring task status using pre-built LLM topics with Now Assist in ITSM Virtual Agent

Copy and customize a ITSM Virtual Agent core ITSM topic template to track the status of a task by using Now Assist in ITSM Virtual Agent.

UI changes

Yokohama Patch 11Changing the password reset topic to an AI agent

The Virtual Agent **Password reset** topic has been changed to a Virtual Agent AI agent. The agent guides the users with instructions to reset passwords using KB articles in their self-service portal.

Yokohama Patch 3Terminology change

- The term use case is replaced with the term agentic workflow. For example, the Notify users with Twilio use case is now referred to as the Notify users with Twilio agentic workflow.
- The naming of the AI agents has changed. For example, Twilio SMS texter has been renamed to Twilio SMS texter AI agent.

Yokohama Early Availability New look and feel for the display of incident and change request summarizations

Get the summary of an incident or a change request by using the new and more intuitive summarization user interface. The new interface is available in Service Operations Workspace and in the Core UI.

Changed in this release

Yokohama Patch 11

Changes to Now Assist usage measurement

Starting with Yokohama Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Role configuration required for agentic workflows and AI agents

Agentic workflows and AI agents included with Now Assist applications require additional security configuration. If you select *`Users with selected roles`* for your user access security controls for an agentic workflow or AI agent, you must

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

add the installed roles, or they will not execute. Data access settings must also include these roles. See the documentation for the agentic workflow or AI agent for the specific roles you must add.

Some Now Assist skills are turned on by default

The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.

Skills activated by default in Now Assist for ITSM

For new Now Assist for IT Service Management (ITSM) users, the following skills are activated by default:

- Incident summarization
- Change request summarization
- Chat summarization

Yokohama Patch 6 Removing the prompt headers from the Customize prompt screen

The prompt headers have been removed from the Customize prompt screen in the Incident summarization and Change summarization skill to support third-party Large Language Models (LLMs).

Yokohama Early AvailabilitySystem property to display knowledge article templates

Display Knowledge article templates that you can use to create articles by using a system property. In earlier releases, the templates were displayed by default.

Yokohama Patch 3 IT Service Management AI agent collection Triage and categorize ITSM incidents agentic workflow

The Categorize incidents use case has been renamed to the Triage and categorize ITSM incidents agentic workflow.

The following AI agents have been added to the workflow:

- Link major incident AI agent
- Link incident to problem AI agent

The Incident categorize AI agent has been renamed to Categorize incident AI agent.

Deprecations

The Escalate IT Ticket core ITSM Virtual Agent topic is being deprecated in this release. The topic is renamed to **(Deprecated) Escalate IT Ticket**. This capability will be available in the Platform Request Status AI agent in a future release.

Activation information

Install Now Assist for ITSM by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- **Important:**
  To enable the display of the Generate post incident reviews use case, you must activate the Incident Management - Major Incident Management plugin (com.snc.incident.mim). For more information, see Activate Incident Management - Major Incident Management.

- **Important:**
  To enable the display of the Notify users with Twilio use case, you must activate the Twilio Spoke plugin (sn_twilio_spoke). For more information, see Twilio Spoke.

Additional requirements

The Now Assist for ITSM application requires an IT Service Management Pro Plus or Enterprise Plus license.

Related ServiceNow applications and features

Now Assist

Help improve the productivity and efficiency in your organization, deliver better self-service, recommend actions, provide answers, and empower your users to search more effectively.

Now Assist Admin console

Use the Now Assist Admin console for quick and effortless access to the important information that you need to set up, configure, and monitor Now Assist applications and features.

Now Assist panel

Use this conversational interface in ServiceNow® Service Operations Workspace to summarize a chat, an incident, or resolution notes so that you can get the context of this information more quickly.

Now Assist skills

Use the ServiceNow® Now Assist products to provide agentic AI skills to meet the needs of users in different workflows, including case or incident summarization, chat summarization, resolution notes generation, and code generation.

Now Assist for Operational Technology Manager (OTM) release notes

The ServiceNow® Now Assist for Operational Technology Manager (OTM) application helps streamline processes in the Industrial Workspace related to your Operational Technology (OT) device data. Now Assist for Operational Technology Manager (OTM) is a new application in the Yokohama release.

Now Assist for Operational Technology Manager (OTM) highlights for the Yokohama release

Yokohama Patch 11

- Review changes to Now Assist usage measurement.
- Some Now Assist skills, agents, and agentic workflows are on by default.
- Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications.

Yokohama Patch 10

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Find OT Configuration Management Database (CMDB) records more quickly by using the OT CMDB search function.
- Simplify the upload, validation, and import of your OT device data by using the Import OT device spreadsheet into OT CMDB agentic workflow.

See Now Assist for Operational Technology Manager (OTM) for more information.

Important:
Now Assist for Operational Technology Manager (OTM) is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Now Assist for Operational Technology Manager (OTM) features

Yokohama Patch 10

Search for related records in an OT CMDB table

Use the OT CMDB search function to find an OT configuration item (CI) and OT device information in an OT CMDB table.

Upload, validate, and import your OT device inventory spreadsheet using the Import OT device spreadsheet into OT CMDB agentic workflow

Use the Import OT device spreadsheet into OT CMDB agentic workflow to begin the process for uploading, validating, and importing your OT device inventory into ServiceNow.

Changed in this release

Yokohama Patch 11

Changes to Now Assist usage measurement

Starting with Yokohama Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Some Now Assist skills, agents, and agentic workflows are turned on by default

The skills are automatically available to appropriate role users for the application, such as ITIL roles on incident forms or change forms. This change simply activates the skill and does not touch the roles that may be needed to use the skill. The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills and agentic workflows are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill, agent, or agentic workflow is turned on automatically (the AI asset was never configured and turned on, then turned off again). Previously configured skills and agentic workflows that were turned on, then off, remain inactive.

Role masking

Role masking enables users to limit the roles and privileges of agentic workflows during tool execution. Agentic workflows and their AI agents that get installed with Now Assist applications are assigned pre-defined roles. If you select *`Users with specific roles`* for user access, you must configure the security controls to include these roles. Data access settings must also include these roles. For the

instructions to change the security controls, see Define security controls for an agentic workflow.

Activation information

Now Assist for Operational Technology Manager (OTM) is a ServiceNow AI Platform feature that is available with activation of the Operational Technology Manager (com.sn_ot_foundation). For details, see Install Operational Technology Manager.

Related ServiceNow applications and features

Operational Technology Manager

Using Now Assist for OTM with the Operational Technology Manager, you can efficiently manage your OT device data.

Now Assist for Order Management release notes

The ServiceNow® Now Assist for Order Management application brings platform AI capabilities to Sales Customer Relationship Management. Now Assist for Order Management is a new application in the Yokohama release.

Now Assist for Order Management highlights for the Yokohama release

Yokohama Patch 11

- Review changes to Now Assist usage measurement.

- Enable business-to-business (B2B) customers to submit order cases autonomously from the Business Portal by simply describing their needs in natural language using the manage order operations agent.
- Summarize complex orders across products, services, and fulfillment tasks, enabling agents to quickly understand status, take the right actions, and avoid navigating fragmented views to make next steps easier and improving productivity.

See Now Assist for Order Management for more information.

Important:
Now Assist for Order Management is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Now Assist for Order Management features

Enable the manage order operations agent in the Business Portal

Activate the manage order operations agent so that you can make it available to your customers on the Business Portal.

Request order changes using Now Assist

Use the manage order operations agent to provide a seamless experience to your customers on the Business Portal, enabling them to create order cases using a virtual assistant effortlessly. The AI agent can intelligently categorize requests for expedited delivery by creating order-related cases linked directly to the specific order, significantly reducing manual case creation and speeding up resolution times. Interaction channels include chat and voice options.

Summarize an order using Summarization for Order Management

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Generate a summary of a complex order for a unified view of the order's current state to:

- Respond confidently to customer queries with accurate, real-time order status.
- Track changes and validate details to maintain consistency and transparency.
- Minimize errors and improve communication across suppliers and partners.
- Monitor tasks that are at risk of missing deadlines.
- Assign tasks to appropriate resources based on priority and skill.
- Make rapid prioritization decisions to prevent delays and help ensure timely fulfilment.

Changed in this release

Yokohama Patch 11

Changes to Now Assist usage measurement

Starting with Yokohama Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Some Now Assist skills are turned on by default

The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.

Configure ACLs for AI agents and agentic workflows

Configure the access control lists for who can discover and trigger AI agents and agentic workflows in their guided setups in AI Agent Studio. You can determine whether an AI agent or agentic workflow behaves as a dynamic user or as an AI user. You can also specify if an AI agent or agentic workflow can be available to all authenticated users or publicly available.

Activation information

Request the Now Assist for Order Management application from the ServiceNow Store and install it using the Application Manager. For more information, see Install a ServiceNow Store application.

Now Assist for Security Incident Response release notes

The ServiceNow® Now Assist for Security Incident Response application can help your security analysts resolve security incidents autonomously with intelligent workflows and generative AI skills. Now Assist for Security Incident Response was enhanced and updated in the Yokohama release.

Now Assist for Security Incident Response highlights for the Yokohama release

Yokohama Patch 11

- Review changes to Now Assist usage measurement.
- Some Now Assist skills, agents, and agentic workflows are on by default.
- Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications.
- Use generative AI to create a quality assessment report of a security incident.

- Yokohama Patch 6

  Help analysts to add security incidents details to the Shift Handover report by chatting with AI agents in the Now Assist panel.

  - Use Google Gemini and Anthropic Claude on AWS as AI model providers for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI.

- Yokohama Patch 3

  Help your analysts to gain insight into security incident record metrics with an agentic workflow. Chat with AI agents in natural language from the Now Assist panel.

  Help your analysts to resolve security incidents by chatting with AI agents in the Now Assist panel where the AI agent provides a resolution plan.

- Yokohama Patch 1

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Help your analysts to close security incidents more efficiently by chatting with AI agents in natural language from the Now Assist panel.

- Yokohama early availability
  - Triage security incidents with long activity streams by reviewing work notes and contextual information quickly in a concise, easy-to-read format.
  - Automatically generate resolution notes for security incidents by using generative AI.
  - Generate recommended actions to resolve security incidents.
  - Generate a post-incident analysis.
  - Generate correlation insights to help you connect current incidents to past events. By identifying the affected users, configuration items (CIs), or observables (IP addresses and file hashes) from existing incidents, you can help to triage new security incidents.

For more information, see Now Assist for Security Incident Response.

Important:
Now Assist for Security Incident Response is available in ServiceNow Store. For details, see the "Activation information" section of these release notes.

Important information for upgrading Now Assist for Security Incident Response to Yokohama

For more information about required applications for Now Assist for Security Incident Response, see Supporting information for Now Assist for Security Incident Response.

Note:

Upgrading the Now Assist plugins activate any designated skills that were previously untouched by the customer.

- If you have the plugins installed but never touched the configuration (never activated the skill nor adjusted associated roles) of a skill, any Default On skill will be activated on a per skill basis upon upgrading.
- If you have previously toggled a skill from active and then back to inactive or have updated any roles for that skill, that skill remains inactive upon upgrading.
- You maintain full control over deactivating individual skills at any time after activation.

Starting with version 2.0.1, the name of the Now Assist for Security Operations application in ServiceNow® Store and in your ServiceNow AI Platform® instance has changed to Now Assist for Security Incident Response. You must upgrade to version 2.0.1 to access the following features:

- Generate resolution notes in the Now Assist context menu.
- Generate correlation insights for a security incident investigation from the Now Assist panel.

The AI Search application must be enabled so that the recommended actions skill works for security incidents. To verify that AI Search is enabled on your instance, navigate to **All** > **AI Search** > **AI Search Status**. Contact support if the page indicates that AI Search is not enabled.

New in the Yokohama release

Yokohama Patch 11

Role configuration required for agentic workflows and AI agents

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Agentic workflows and AI agents included with Now Assist applications require additional security configuration. If you select *Users with selected roles* for your user access security controls for an agentic workflow or AI agent, you must add the installed roles, or they will not execute. Data access settings must also include these roles. See the documentation for the agentic workflow or AI agent for the specific roles you must add.

Some Now Assist skills are turned on by default

The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.

Generate a quality assessment report

Use generative AI to create a quality assessment report of a security incident. The reports are generated using a predefined, natural language rule set. The report provides an overall assessment summary followed by the detailed assessment for all the rules.

Yokohama Patch 6

Generate SIR Shift Handover Report

The AI Agent helps add security incident details to a shift handover report. The agent populates the different sections of the shift handover with appropriate content by identifying the relevant details from the security incident. The AI agent can fetch details of the security incident and identify if the analyst has access to the shift handover record. The AI agent can generate content for each section of the shift handover record and asks for analysts feedback on the content. The AI agent refines the content based on the feedback and saves the content to the records on approval.

New third-party AI model provider options available for all Now Assist applications

Google Gemini and AWS Claude are available for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI.

Yokohama Patch 3

Using AI agentic workflows in Now Assist for Security Incident Response

The Analyze security operations metrics agentic workflow enables security managers to analyze their teams' performance.

- Generate metrics for Security Incident Response (SIR) records for case volume, mean time to assign (MTTA), and mean time to resolve (MTTR) for a date range of your choosing.
- Request suggestions for how to improve MTTR, MTTA, and volume based on your metrics.

Enhancements to correlation insights in Now Assist for Security Incident Response

You can generate and view results for correlation insights in the Security Incident Response Workspace.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Correlation insights are not limited to the primary configuration item (CI) or affected users associated with a security incident. You can base your correlation insights on any CI or affected user for a security incident.
- You can generate correlation insights from the **Investigation** tab for a security incident in any state in the Security Incident Response Workspace.
- You can generate insights for multiple items simultaneously for Associated Observables, Configuration items, and Affected Users.
- Results are displayed in a modeless dialog that you can size and move.

Using Security incident resolution agentic workflow

Use the Security incident resolution agentic workflow to close your security incidents. Analysts can chat with the AI agents in natural language to resolve the security incidents. The AI agent analyzes the incident details, existing runbooks, knowledge articles, and past similar security incidents as inputs, and provides a resolution plan. The AI agent also assists the analysts to resolve the security incident.

Yokohama Patch 1

Using Security Incident Response AI agents

Yokohama Patch 1: Use the Close security incident use case to close your security incidents:

- Analysts can chat with the AI agents in natural language to close the security incidents. The AI agent can cancel the associated response tasks, generate resolution notes, close code, or close notes and post incident analysis (PIA) during incident closure. Analysts can provide feedback on the content and the AI agent can refine the content based on the feedback.
- Analysts can also close false positive security incidents with minimal user intervention.

Yokohama Early Availability

- Generate correlation insights

  Generate correlation insights to connect current security incidents to past events. You can identify the affected users, configuration items (CI)s, or observables (IP addresses and file hashes) from existing incidents and records to help you more quickly triage your new security incidents. Correlation insights are supported in Workspace, the Core UI, and from the Now Assist panel.

- Enhancements to closure (resolution) notes and post incident analysis generation

  Generate resolution notes from the Close the security incident modal or the Now Assist context menu on a security incident record (SIR). You can also generate resolution notes from the Now Assist panel. If you choose the Now Assist context menu, you have the following options to help you refine the generated text:

  - **Shorten**: Select the text to remove details.
  - **Elaborate**: Generate more details about the context of a security incident.

  Note:
  Generating resolution notes is supported in Workspace and Core UI. Generating a post incident analysis is supported from the Close the security incident modal in Workspace.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

UI changes

Yokohama Patch 3

Generate recommended actions for a security incident with Now Assist for Security Incident Response

Introduced a new UI card **Show More** to enhance the visibility of recommended actions. As a security analyst, you can now access additional context along with further recommended steps to assist in the analysis and investigation of security incidents.

Now Assist for Security Incident Response application name change

Starting with version 2.0.1, the Now Assist for Security Operations application in the ServiceNow® Store and in your ServiceNow AI Platform® instance has changed to the Now Assist for Security Incident Response application.

Changed in this release

Yokohama Patch 11

Changes to Now Assist usage measurement

Starting with Yokohama Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Some Now Assist skills are now turned on by default

The following Now Assist skills for Now Assist for Security Incident Response and Now Assist for Vulnerability Response are activated by default.

- Security incident summarization (SIR)
- Resolution notes generation (SIR)
- Post incident analysis (SIR)
- Security incident recommended actions (SIR)
- Correlation insights generation (SIR)
- Security incident quality assessment (SIR)

The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.

Configure ACLs for AI agents and agentic workflows

Configure the access control lists for who can discover and trigger AI agents and agentic workflows in their guided setups in AI Agent Studio. You can determine whether an AI agent or agentic workflow behaves as a dynamic user or as an AI user. You can also specify if an AI agent or agentic workflow can be available to all authenticated users or publicly available.

Activation information

Install Now Assist for Security Incident Response by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Now Assist for Software Asset Management (SAM) release notes

The ServiceNow® Now Assist for Software Asset Management (SAM) application brings generative AI to IT Asset Management. Now Assist for SAM is a new application in the Yokohama release.

Now Assist for Software Asset Management (SAM) highlights for the Yokohama release

Yokohama Patch 13

- Enhance your SaaS integration troubleshooting experience with user-friendly error explanations and resolution guidance for runtime job failures.
- Streamline your Software Asset Management application implementation by automating entitlement extraction from contracts using AI, ensuring faster deployment.

Yokohama Patch 11

- Review changes to Now Assist usage measurement.
- Some Now Assist skills, agents, and agentic workflows are on by default.
- Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications.
- Automate user resolution with AI for SaaS license management to support efficiency and accuracy in subscription management.

Yokohama Patch 6

- Automate and streamline the software asset request process by using an agentic workflow.
- Automate the process of creating reclamation rules by identifying software products suitable for reclamation using an agentic workflow.
- Automate evaluation of unused and underutilized software installations for potential reclamation by using an agentic workflow.

Yokohama Patch 3

- Obtain crucial information on products to mitigate license compliance risks through product summaries on software deployment, license compliance, configuration health, and optimization.
- Manage product license compliance via recommendations that guide you to take steps to ensure the necessary compliance requirements.

Yokohama Early Availability: Leverage generative AI by using the Now Assist for SAM application to create publisher summaries on software deployment, license compliance, configuration health, and optimization.

See Now Assist for Software Asset Management (SAM) for more information.

Important:
Now Assist for SAM is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Yokohama Patch 13

Benefit with an integrated troubleshooting experience for SaaS applications by resolving common issues using automated guidance

Use generative AI to troubleshoot SaaS integrations with automated guidance and recommendations. By following the resolution guidance, you can significantly reduce downtime, lower the mean time to resolution (MTTR), and resolve complex SaaS issues without deep technical intervention.

Improve accuracy and productivity by extracting licensing data from contracts and generating software entitlements

Leverage generative AI to upload contract documents and automatically extract licensing data, generating software entitlements. You can review and refine the entitlements prior to finalization. The entitlements are created and linked to the contract records, ensuring a streamlined and accurate process.

Yokohama Patch 11

Automate the creation of user resolution rules to accelerate reconciliation and ensure consistent user mappings

Use generative AI to resolve user subscriptions by creating user resolution rules without manual intervention. AI automatically creates the user resolution rules, and these rules analyze and map incoming subscription data to corresponding user records in the Software Asset Management application.

Yokohama Patch 6

New third-party AI model provider options available for all Now Assist applications

Google Gemini and AWS Claude are available for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI.

Use an agentic workflow to automate software asset sourcing to improve operational efficiency

Use AI agents in the Help manage software request agentic workflow to automate sourcing of software assets either through automatic license allocation or by creating purchase orders.

Use an agentic workflow to create reclamation rules for enhancing software license utilization tracking and reducing waste

Use AI agents to automatically create reclamation rules for installed or subscription-based software, reducing the need for manual analysis of product usage and expenditure. The AI agent analyzes factors such as spend and utilization to suggest reclamation rules.

Use an agentic workflow to reclaim unused software to minimize compliance risk and optimize savings

Use AI agents to automate reclamation of removal candidate for an installed or subscription-based software. The AI agent evaluates software removal candidates and provides suggestions for reclamation, based on intelligent checks that help ensure safe removal.

Yokohama Patch 3

Gain insights into product compliance and optimization with AI-powered product summaries

Get comprehensive product summaries to better understand your product compliance position across software deployment, license compliance, optimization, and configuration health. The AI-based product summaries simplify the complexity of license management and ensure adherence to publisher contracts.

Use AI-powered recommended actions to mitigate your license compliance risk

Use recommended actions to guide you through the appropriate steps to achieve compliance. Take actionable steps to address any configuration, maintenance, or optimization issues and gain faster compliance.

Yokohama Early Availability

Gain insights into your publisher license compliance by using Now Assist for SAM

Use generative AI to gain a comprehensive summary of publisher license compliance. The detailed publisher summaries that cover software deployment, license compliance, optimization, and configuration health enable you to understand the publisher license compliance details.

Changed in this release

Yokohama Patch 11

Changes to Now Assist usage measurement

Starting with Yokohama Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Some Now Assist skills, agents, and agentic workflows are turned on by default

The skills are automatically available to appropriate role users for the application, such as ITIL roles on incident forms or change forms. This change simply activates the skill and does not touch the roles that may be needed to use the skill. The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills and agentic workflows are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill, agent, or agentic workflow is turned on automatically (the AI asset was never configured and turned on, then turned off again). Previously configured skills and agentic workflows that were turned on, then off, remain inactive.

Role configuration required for agentic workflows and AI agents

Agentic workflows and AI agents included with Now Assist applications require additional security configuration. If you select *`Users with selected roles`* for your user access security controls for an agentic workflow or AI agent, you must add the installed roles, or they will not execute. Data access settings must also include these roles. See the documentation for the agentic workflow or AI agent for the specific roles you must add.

Activation information

Install Now Assist for SAM by requesting it from the ServiceNow Store.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
To take full advantage of the Now Assist for SAM features, you need to install the Now Assist for SAM store application as well as upgrade to Yokohama Patch 3.

Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Additional requirements

The Now Assist for SAM application requires the Software Asset Management Pro plus or the Enterprise plus license.

Related ServiceNow applications and features

Now Assist

Help improve the productivity and efficiency in your organization, deliver better self-service, recommend actions, provide answers, and empower your users to search more effectively.

Now Assist Admin console

Use the Now Assist Admin console for quick and effortless access to the important information that you need to set up, configure, and monitor Now Assist applications and features.

AI Agent Studio

Use AI Agent Studio to create, manage, or test AI agents and agentic workflows so that you can create self-executing workflows to help you achieve your business goals.

Now Assist panel

Use this conversational interface in ServiceNow® Software Asset Workspace to interact with and get assistance from generative AI.

Now Assist skills

Use the ServiceNow® Now Assist products to provide generative AI skills to meet the needs of users in different workflows, including case or incident summarization, chat summarization, resolution notes generation, and code generation.

Now Assist Skill Kit release notes

The ServiceNow® Now Assist Skill Kit application enables AI developers to create custom skills and to have greater flexibility with Now Assist's generative AI capabilities. Now Assist Skill Kit was enhanced and updated in the Yokohama release.

Now Assist Skill Kit highlights for the Yokohama release

Yokohama Patch 11

- Review changes to Now Assist usage measurement.
- Some Now Assist skills, agents, and agentic workflows are on by default.
- Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications.

Yokohama Patch 6

© 2026 ServiceNow, Inc. All rights reserved.

- Use UI Builder to deploy custom skills.
- Import data into Now Assist Skill Kit with a CSV file.
- Use AI to create ground truth for your data.
- Use a custom data generator to create synthetic datasets.

- Users can create synthetic data in Now Assist Data Kit.
- Generated synthetic data can be saved as a dataset.
- Add and manage tools of a custom skill, visually in the new Tools editor, including conditional execution of tools.
- Customize ServiceNow skills with new prompts or providers in Now Assist Skill Kit to suit your specific business needs.

See Now Assist Skill Kit for more information.

Important:
Now Assist Skill Kit is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Important information for upgrading Now Assist Skill Kit to Yokohama

If you customized UI actions or other items that are associated with Now Assist skills, ensure that your customized code is updated with the new skill releases. Otherwise, certain functions may not work as expected.

If you run into issues when you're upgrading a Now Assist product, see KB1637452: Issues and mitigation for Now Assist (Generative AI) Applications and Plugin updates. You may need to log in to view the article.

New in the Yokohama release

Yokohama Patch 6

New skill deployment option

Deploy skills using UI Builder.

Choose a language for data generation

When you create synthetic data, you can select what language you want to receive the data in.

AI-assisted ground truth

Use AI to assist creating ground truth for your data.

Import data with a CSV file

Import data from a CSV file to create a dataset.

Create a custom data generator

Create and use a custom data generator to create synthetic data.

Customize ServiceNow skills in Now Assist Skill Kit to tailor skills to meet your specific business requirements.

Eligible skills provided in ServiceNow Now Assist applications can be cloned in Now Assist Skill Kit so that you can edit the prompt or change the AI service provider. Editing the prompt enables you to arrange the formatting and content of the large

language model (LLM) response. After the skill is edited, activate the edited skill in the Now Assist Admin console to enable it.

Add and manage tools visually in the new Tools editor, including decision branching, to execute different tools for your skill.

Adding decision branches between tools enables you to define the conditions that must be met for a tool to run. If no conditions are met, the default branch's step is executed.

UI changes

Now Assist Skill Kit add tools function moved to Tool editor tab.

The ability to add and edit tools for Now Assist Skill Kit previously appeared on the **Prompt editor** tab. It now appears on the **Tool editor** tab.

Changed in this release

Yokohama Patch 11

Changes to Now Assist usage measurement

Starting with Yokohama Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Some Now Assist skills are turned on by default

The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.

Configure ACLs for AI agents and agentic workflows

Configure the access control lists for who can discover and trigger AI agents and agentic workflows in their guided setups in AI Agent Studio. You can determine whether an AI agent or agentic workflow behaves as a dynamic user or as an AI user. You can also specify if an AI agent or agentic workflow can be available to all authenticated users or publicly available.

Activation information

Now Assist features are available with activation of any Now Assist plugin from the ServiceNow Store. The following plugins are available:

- Now Assist for Accounts Payable Operations (APO)
- Now Assist for App Engine
- Now Assist for Configuration Management Database (CMDB)
- Now Assist for Collaborative Work Management (CWM)
- Now Assist for Creator
- Now Assist for Customer Service Management (CSM)
- Now Assist for Employee Experience

- Now Assist for Field Service Management (FSM)
- Now Assist for Financial Services Operations (FSO)
- Now Assist for Hardware Asset Management (HAM)
- Now Assist for Health and Safety
- Now Assist for HR Service Delivery (HRSD)
- Now Assist for Integrated Risk Management (IRM)
- Now Assist for IT Operations Management (ITOM)
- Now Assist for IT Service Management (ITSM)
- Now Assist for Legal Service Delivery (LSD)
- Now Assist for Operational Technology Manager (OTM)
- Now Assist for Order Management
- Now Assist for PSDS
- Now Assist for Security Incident Response
- Now Assist for Software Asset Management (SAM)
- Now Assist for Supplier Lifecycle Operations (SLO)
- Now Assist for Sourcing and Procurement Operations (SPO)
- Now Assist for Strategic Portfolio Management (SPM)
- Now Assist for Telecommunications, Media and Technology (TMT)
- Now Assist for Third-party Risk Management (TPRM)
- Now Assist for Workplace Service Delivery (WSD)
- Now Assist for Vulnerability Response

Additional requirements

The Next Experience UI Framework must be enabled to use the Now Assist panel.

Browser requirements

Now Assist supports various browsers, including Google Chrome and Microsoft Edge. Now Assist isn't supported in Microsoft Internet Explorer.

Accessibility information

Admins can enable an optional Voice Input setting for the Now Assist panel that enables users to interact with the panel using their voice or in voice assist mode.

Localization information

Now Assist supports Dynamic Translation for Yokohama.

Now Assist for Source-to-Pay Operations release notes

The ServiceNow® Now Assist for Source-to-Pay Operations application includes generative AI skills that can make developing on the ServiceNow AI Platform more efficient. Now Assist for Source-to-Pay Operations was enhanced and updated in the Yokohama release.

Now Assist for Source-to-Pay Operations highlights for the Yokohama release

Yokohama Patch 11

- Review changes to Now Assist usage measurement.
- Some Now Assist skills, agents, and agentic workflows are on by default.
- Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications.

Previous Patch releases

- Now Assist for Sourcing and Procurement Operations (SPO) supports enhanced AI search and the Retrieval-augmented generation (RAG) framework to recommend suppliers and products through semantic search and contextual filters, enhancing recommendations with criteria like preferred suppliers and previous purchases.
- Now Assist for Supplier Lifecycle Operations (SLO) supports a conversational intake that helps suppliers to view and update supply information through a conversational flow.
- Now Assist for Accounts Payable Operations (APO) supports a conversational intake to complete self-service tasks, such as submit a request or track a request status.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

New in the Yokohama release

Now Assist for Sourcing and Procurement Operations (SPO)

Now Assist for SPO includes an agentic workflow that enhances conversational intake capabilities. This AI-powered agent team streamlines user inquiries to sourcing and procurement teams by gathering knowledge, clarifying requests, deflecting common questions, providing product information, and recommending the appropriate purchase plan. For more information, see Using agentic workflows in Now Assist for Sourcing and Procurement Operations.

The following new skills are available in Now Assist for SPO:

- Negotiation summarization for fulfillers: Summarize negotiations to keep fulfillers informed on their current status, progress, and action items.
- Negotiation event summarization for fulfillers: Summarize negotiation events to keep fulfillers informed on their current status, progress, and action items.
- Purchase order summarization for requesters: Summarize purchase orders to keep requesters informed about their current status, progress, and action items.
- Purchase requisition summarization for requesters: Summarize purchase requisitions to keep requesters informed about their current status, progress, and action items.
- Sourcing request summarization for requesters: Summarize sourcing requests to keep requesters informed about their current status, progress, and action items.

Now Assist for Supplier Lifecycle Operations (SLO)

Now Assist for SLO includes an agentic workflow to streamline the supplier onboarding process by automating supplier registration. AI agents automate the supplier onboarding process, including data validation, duplicate checking, task generation, and communication with suppliers, streamlining the entire process for faster time-to-activation. For more information, see .

The following new skills are available in Now Assist for SLO:

- Conversational intake for suppliers: Suppliers can request profile updates, submit cases, and track inquiry statuses through a conversational interface powered by AI.
- Now Assist summarization panel: Case summaries are generated directly within the Now Assist Panel with no need to open individual case records.
- Multilingual support for summarization: Case details are summarized in the user's preferred language, improving accessibility for global teams.

Now Assist for Accounts Payable Operations (APO)

With the Now Assist for APO application, AP fulfillers can leverage generative AI capabilities to chat with live agents, submit a request, and track its status.

The ServiceNow®Now Assist experience brings generative AI powered purchase order line mapping feature designed to enhance matching accuracy and reducing manual intervention.

Generate purchase order summarization using Now Assist skills powered by generative AI.

Use agentic workflows in Accounts Payable Operations to resolve invoice inquiry cases raised by employees and suppliers. These workflows also help track

Now Assist for SPM highlights for the Yokohama release

Yokohama Patch 11

- Review changes to Now Assist usage measurement.
- Some Now Assist skills, agents, and agentic workflows are on by default.
- Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications.
- Generate measurable targets from goals information and optional context with the target generation skill.
- Use the identify similar records skill to find similar demands based on contextual similarity.
- Enable the project task monitor AI agent to autonomously monitor project tasks on the critical path of a project.
- Use the **Send preview** button to share a project insights email instantly.

Yokohama Patch 6

- Use Google Gemini and Anthropic Claude on AWS as AI model providers for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI.
- Use a decorative loader to elevate visual interest during content loading in Strategic Planning.
- Refine the planning item text descriptions by enabling AI assistance.
- Use Now Assist for SPM AI agents to help optimize workflows, improve productivity, and automate your tasks.

See Now Assist for Strategic Portfolio Management (SPM) for more information.

Yokohama Patch 11

Identify similar records using Now Assist

Detect similar existing demand records when creating or editing a demand using the identify similar records skill. The skill compares the **Name**, **Description**, and **Business Case** fields for contextual similarity.

Accelerate target creation with the target generation skill

Generate measurable targets from goals information and optional context with the target generation skill. The skill automatically populates key fields in the target creation form, helping teams define clear, measurable outcomes and create targets quickly.

Schedule project insights email

- Schedule project insights email in the Configure project insights modal. The project email is emailed to the project managers and users and continues on the selected schedule that you select until the project is inactive or paused.
- Schedule and instantly send the project insights email to your project managers by selecting the **Send preview** button.
- Track important updates such as the delayed end dates, the status turning red, or the state updates of your projects and receive project insights email on the schedule that you select.
- Select the email frequency that works for you: weekly, bi-weekly or monthly.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Monitor critical elements such as milestones, resources, projects, and project tasks.
- Receive proactive, AI-based notifications when project milestones or critical tasks could lead to delays using Monitor project task agent. Use the Enable critical task alerts option from planning page to enable the project task monitor AI agent.
- Choose the recipients to whom you want to send the project insights email.

Yokohama Patch 6

New third-party AI model provider options available for Now Assist

Google Gemini 2.0 Flash, Google Gemini 2.5 Pro, and AWS Claude 3.7 Sonnet are available for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI GPT-4.1 and GPT-4.1 mini.

Write planning item skill

- Use this skill to improve record quality and user satisfaction by enabling AI assistance in the Description field across all Strategic Planning Workspace forms, including product idea, demand, epic, project, capability, feature, and story.
- Enable text refinement with the **Elaborate** and **Shorten** options on planning items to support product managers and agile team members in creating and editing content more effectively.

UI changes

More actions context menu UI enhancements

- Email project summary option has been renamed to Configure project insights.
- Enable critical task alerts option has been added.
- Disable critical task alerts option has been added.

Configure project insights modal UI enhancements

- Email project summary modal has been renamed to Configure project insights modal.
- **Disable email summary** check box has been renamed to **Pause cadence** check box.
- Choose topics, personalize content, and set frequency setup have been added.
- **Project tasks**, **Milestones**, and **Resources** check boxes have been added.
- **Include critical path task changes** check box has been removed.
- **Schedule and send** button has been renamed to **Schedule** button.
- **Send preview** button has been added to send an email instantly.

Skill name updates

The email project summary skill has been renamed to the project insights generation skill.

Demand Management UI changes

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- The **Identify similar demands** button has been added to the demand form to identify and view any similar demands with the identify similar demands skill.
- The Similar Demands related list has been added, which displays the list of similar demand records identified by Now Assist.

UI enhancements

The following UI enhancements were made:

- Added hover animation for the Now Assist ( ) icon.
- Added a loader for the Now Assist side panel for a more engaging loading experience.

Skill name updates

- Renamed the Project Gen AI Docs skill to the Project doc summarization (Project Workspace) skill.
- Renamed the Planning item Gen AI Docs skill to the Planning item doc summarization (Strategic Planning) skill.
- Renamed the EAP Teams Gen AI Docs skill to the EAP doc summarization (Enterprise Agile Planning) skill.
- Renamed the Story generation skill to Agile story generation (Enterprise Agile Planning).
- Added the Write planning items skill in Strategic Planning.

Animation support for Now assist buttons and icons

- Added hover animation in the Now Assist (

) icon for the **Summarize** button on the feedback list and Docs.
- Added the Now Assist (

) icon in the Email project summary button.
- Added hover animation in the Now Assist (

) icon for the Now Assist button in the Docs page.

Changed in this release

Yokohama Patch 11

Changes to Now Assist usage measurement

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Starting with Yokohama Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Some Now Assist skills are turned on by default

The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.

Configure ACLs for AI agents and agentic workflows

Configure the access control lists for who can discover and trigger AI agents and agentic workflows in their guided setups in AI Agent Studio. You can determine whether an AI agent or agentic workflow behaves as a dynamic user or as an AI user. You can also specify if an AI agent or agentic workflow can be available to all authenticated users or publicly available.

Activation information

Now Assist features are available with activation of the Now Assist for Strategic Portfolio Management (SPM) plugin. The Now Assist for SPM application requires a Strategic Portfolio Management (SPM) Pro plus license. For more information, see Install Now Assist plugins.

Related ServiceNow applications and features

Now Assist

ServiceNow® Now Assist uses generative AI to help improve the productivity and efficiency in your organization, deliver better self-service, recommend actions, provide answers, and empower your users to search more effectively.

Now Assist Admin console

The Now Assist Admin console provides you with quick and easy access to the important information that you need to set up, configure, and monitor Now Assist applications and features.

Now Assist panel

Use this conversational interface in the EAP workspace to get story recommendations, split or combine stories, and create stories for your epics with the help of generative AI.

Now Assist skills

Now Assist products provide generative AI skills that are tailored to meet the needs of users in different workflows, including feedback summarization, content summarization in Docs, demand creation, and epic to story generation.

Now Assist for Telecommunications, Media and Technology (TMT) release notes

The ServiceNow® Now Assist for TMT application enriches purpose-built industry workflows with generative AI to supercharge insights, actions, and self-service experiences. Now Assist for TMT was enhanced and updated in the Yokohama release.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Now Assist for TMT highlights for the Yokohama release

Yokohama Patch 11

- Review changes to Now Assist usage measurement.
- Some Now Assist skills, agents, and agentic workflows are on by default.
- Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications.
- Address voice quality issues and validate tickets with RADCOM.
- Summarize the risk signal and issues records along with respective risk solution and occurrence records.

Yokohama Patch 6

- Manage and resolve billing inquiry case requests using a team of AI agents.
- Analyze network incidents, correlate associated cases, and provide resolutions.
- Summarize Knowledge Graph service details, success initiatives, internal plays, customer plays, and Zoom meeting details.
- Analyze account health, trigger renewal flows, schedule, and manage touchpoint meetings.
- Use agentic AI to quickly create consumer registrations.

Yokohama Patch 3

- Monitor engagement health score and provide a trend analysis.
- Monitor risks on a predefined schedule and provide common resolutions.

Yokohama Patch 1

- Proactively identify service problems, diagnose, test, and resolve customer issues autonomously using the Now Assist for TMT AI agent collection.

Yokohama Early Availability

- Summarize onboarding cases, engagements, and touchpoints by using agentic AI.
- Enhance test summarization with metric descriptions and contextual notes.
- Consolidate the information from multiple similar cases into a Knowledge article.
- Dynamically configure prompts for case summarization.
- Automate transformation mapping between provider and consumer instances in Service Exchange.

See Now Assist for Telecommunications, Media and Technology (TMT) for more information.

Important:
Now Assist for Telecommunications, Media and Technology (TMT) is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Yokohama Patch 11

Address voice quality issues

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Collect customer details about the voice quality issue, open a service ticket with RADCOM (https://radcom.com/), and generate a resolution plan.

Risk signals and issues summarization

Generate summary details including the record and associated risk solutions and risk occurrences for risk signal and issues records.

Yokohama Patch 6

Help remediate bill issues

Handle billing inquiry case requests, analyze customer invoices, and recommend better plans based on customer usage patterns.

Analyze network incidents

Identify historic incidents and determine resolution plans. The AI agent also has the capabilities to identify field values, estimate resolution time, and create actionable tasks.

Support renewals and expansion

Streamline customer success management by automatically assessing account health, value realization, and adoption trends. Deliver timely, data-driven insights that guide renewal planning and play recommendations.

Trigger risk mitigation touchpoint

Enable customer success agents to optimize meeting schedules within the customer success workflow by creating and managing meetings. Create and manage meetings based on key details such as invitees, agenda, meeting type, and scheduling preferences.

Success summarization

Generate summary details including overview, current status, and open tasks for success initiatives, internal plays, and customer plays. Enhance Zoom meeting summaries by updating key notes, and enabling sentiment tracking.

Analyze metric data trend

Collect and analyze metric data for engagements, identify patterns, and generate a trend chart.

Service summary generation

Generate a service summary for a product inventory.

Knowledge graph schema generation

Use the Knowledge Graph (KG) to create Knowledge Graph schema.

Customize a summary card for service summary

Customize the summary card of the service summary and UI actions according to your needs.

Register consumers using Agentic AI

Initiate the consumer registration process using agentic AI to receive step-by-step guidance, including error checks during registration and support for resolving those errors.

Configure ACLs for AI agents and agentic workflows

Configure the access control lists for who can discover and trigger AI agents and agentic workflows in their guided setups in AI Agent Studio. You can determine whether an AI agent or agentic workflow behaves as a dynamic user or as an AI user. You can also specify if an AI agent or agentic workflow can be available to all authenticated users or publicly available.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Yokohama Patch 3

Monitor engagement health

Monitor the health score of all engagements, create trend charts, and generate risk signals when a decline is detected.

Analyze risk signals and recommend solutions

Retrieve unaddressed risk signals and identify appropriate success plays based on a back-end decision table.

Yokohama Patch 1

Using Telecommunications, Media, and Technology AI agent collection

Use Now Assist for TMT AI agents to troubleshoot and autonomously resolve customer issues.

Available AI agents agentic workflow

AI agent agentic workflow	Description
Test and repair telecom service issues	Use AI agents to handle task requests that require troubleshooting, diagnosis, and resolution of a case task.

Yokohama Early Availability

Dynamic prompt configuration

Use the Now Assist for Telecommunications, Media and Technology (TMT) application to provide concise, context-driven summaries that are specific to each case. Your agents can ensure that critical case details are captured and can provide personalized and informed resolutions.

Enhanced test summarization

Use AI-generated test summaries that include the metric descriptions and contextual notes from cases. Your agents can focus on high-priority issues and make better informed decisions that enhance the product quality and performance.

Resolution notes generation

Generate resolution notes and then shorten or elaborate the content by using the Now Assist context menu in the resolution notes field of the case form in both the Core UI and Workspace.

Knowledge article generation

Select and gather insights and data from multiple similar cases to create an article by using Now Assist for TMT. Use the Now Assist icon (✦), which is accessible as an inline capability to create and refine Knowledge articles.

Account onboarding case summarization

Generate a concise account onboarding case summary that enables your agents to get a quick overview of the case details.

Engagement summarization

Generate a high-level summary with a list of the key items about an engagement.

Touchpoint summarization

Generate a quick summary of the various touchpoints in the engagement life cycle. Your agents can get a quick summary of all meetings and emails exchanged between the different stakeholders and any follow-up activities.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Transform mapping assist

While using the Service Exchange for a provider's application, use the Transform Mapping Assist feature to generate transform mappings between provider and consumer tables automatically. This skill enables you to streamline the transformation mapping process by reducing errors and improving overall efficiency.

Changed in this release

Yokohama Patch 11

Changes to Now Assist usage measurement

Starting with Yokohama Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Some Now Assist skills are turned on by default

The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.

Configure ACLs for AI agents and agentic workflows

Configure the access control lists for who can discover and trigger AI agents and agentic workflows in their guided setups in AI Agent Studio. You can determine whether an AI agent or agentic workflow behaves as a dynamic user or as an AI user. You can also specify if an AI agent or agentic workflow can be available to all authenticated users or publicly available.

Activation information

Now Assist features are available with activation of the Now Assist for TMT plugin. For more information, see Install Now Assist plugins.

Related ServiceNow applications and features

Now Assist

Help improve the productivity and efficiency in your organization, deliver better self-service, recommend actions, provide answers, and empower your users to search more effectively.

Now Assist Admin console

Use the Now Assist Admin console to provide you with quick and effortless access to the important information that you need to set up, configure, and monitor Now Assist applications and features.

Now Assist panel

Use this conversational interface in CSM Configurable Workspace to summarize a chat, a case, or resolution notes so that you can get the context of this information more quickly.

Now Assist skills

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Use the Now Assist products to provide agentic AI skills to meet the needs of users in different workflows, including case or incident summarization, chat summarization, resolution notes generation, and code generation.

Now Assist for Workplace Service Delivery (WSD) release notes

The ServiceNow® Now Assist for Workplace Service Delivery (WSD) application enables agents to summarize case information, generate resolution notes, and summarize the chat information for an interaction. Your agents can understand the chat and case context and propose quicker resolutions to your customers. Now Assist for WSD was enhanced and updated in the Yokohama release.

Now Assist for Workplace Service Delivery (WSD) highlights for the Yokohama release

Yokohama Patch 11

- Review changes to Now Assist usage measurement.
- Some Now Assist skills, agents, and agentic workflows are on by default.
- Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications.

Yokohama Patch 6

- Help map admins configure the map during bulk updates to Indoor Mapping using the Automate map updates AI agentic workflow.
- Optimize a maintenance case based on the space utilization rate of the location where a maintenance case is created using the Optimize cleaning activities AI agentic workflow.

Yokohama Patch 3

- Manage temporary space closures AI agentic workflow for emergency meeting room maintenance. This team of AI agents block a space for maintenance and move any existing reservations from the blocked room to a new location.
- Help manage workplace reservations for updating existing event planning reservations. This team of AI agents retrieve the reservation from workplace case details, analyze the reservation, and update the workplace case notes.

See Now Assist for Workplace Service Delivery (WSD) for more information.

Important:
Now Assist for WSD is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Yokohama Patch 6

Optimize cleaning activities agentic workflow

Use the Optimize cleaning activities agentic workflow to manage cleaning and maintenance schedules of a maintenance case based on the space utilization rate of the location where a maintenance case is created.

Automate map updates agentic workflow

Use the Automate map updates AI agentic workflow to configure the map during bulk updates to Indoor Mapping.

Now Assist in AI Search release notes

The ServiceNow® Now Assist in AI Search application combines the power of search with the Now LLM Service agentic AI model to provide actionable AI-generated or AI-selected answers in user searches. Now Assist in AI Search was enhanced and updated in the Yokohama release.

Now Assist in AI Search highlights for the Yokohama release

Yokohama Patch 11

- Review changes to Now Assist usage measurement.
- Some Now Assist skills, agents, and agentic workflows are on by default.
- Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications.
- Simplify setup with automatic activation of Now Assist Multi-Content Response Genius Results for search profiles when you use Guided Setup to activate the Now Assist panel.
- Increase search precision and contextual relevance for knowledge article, Catalog Item, external content, and topic retrieval searches with hybrid search.
- Improve the enhanced chat experience by configuring the system to use AI Search as the source for Ask Now Assist suggestions.
- Provide more focused auto-complete suggestions for enhanced chat that honor the search user's domain restriction and the exclusion list for unwanted suggestions.

Yokohama Patch 6

- Use Google Gemini and Anthropic Claude on AWS as AI model providers for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI.
- Increase search recall with semantic indexing of Catalog Item short descriptions.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Yokohama Patch 3

- Prompt users to log in to Microsoft SharePoint Online as needed to see files shared with them when viewing Knowledge Graph user citations in Now Assist Multi-Content Response Genius Result answers.

Yokohama Early Availability

- Improve incident deflection for portal users by configuring record producers to display actionable and relevant Genius Results suggestions during submission of cases, incidents, problems, and similar tasks.

See Now Assist in AI Search for more information.

Important:
Now Assist in AI Search is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Yokohama Patch 11

Automatic activation for Now Assist Multi-Content Response Genius Results

When you use Guided Setup to activate the Now Assist panel, Now Assist Multi-Content Response Genius Results are automatically activated for relevant search profiles.

Hybrid search

Hybrid search blends keyword search and semantic vector search to offer a blend of superior search recall and contextual relevance for knowledge article, Catalog Item, external content, and topic retrieval searches.

Configure AI Search as the source for Ask Now Assist suggestions

Admins can configure the system to use AI Search as the source for Ask Now Assist suggestions, enabling suggestion term highlighting and more flexible search operators in enhanced chat.

Yokohama Patch 6

New third-party AI model provider options available for all Now Assist applications

Google Gemini and AWS Claude are available for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI.

Yokohama Early Availability

AI Search Genius Results widget for record producers

Administrators can configure the AI Search Genius Results widget on record producers to enhance the user experience when creating an incident. The widget displays actionable Genius Result suggestions relevant to the user's incident description. Users can select from these Genius Result suggestions to address their own issues, or can continue with their incident submission if none of the suggestions resolve their problem.

Changed in this release

Yokohama Patch 11

Now Assist in Virtual Agent conversational prompt auto-complete suggestions

Auto-complete suggestions for Now Assist in Virtual Agent conversational prompts are only returned from the search user's domain. Suggestions are disabled if

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

they match any exclusion rule entry from the Search Suggestion Exclusion List [sys_search_suggestion_blacklist] table. The system scores suggestions based on how search users interact with and rate their Genius Result responses, and preferentially displays higher-scored suggestions.

Changes to Now Assist usage measurement

Starting with Yokohama Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Some Now Assist skills are turned on by default

The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.

Configure ACLs for AI agents and agentic workflows

Configure the access control lists for who can discover and trigger AI agents and agentic workflows in their guided setups in AI Agent Studio. You can determine whether an AI agent or agentic workflow behaves as a dynamic user or as an AI user. You can also specify if an AI agent or agentic workflow can be available to all authenticated users or publicly available.

Yokohama Patch 6

Semantic vector search indexing includes Catalog Item short descriptions

Semantic indexing now indexes short descriptions from Catalog Item source records to improve search recall and make field indexing more consistent between legacy (keyword) and semantic indexing.

Yokohama Patch 3

Microsoft SharePoint Online login prompts in Knowledge Graph user citations

If you're not logged in to Microsoft SharePoint Online, Knowledge Graph user citations in Now Assist Multi-Content Response Genius Result answers now prompt you to log in. When logged in, you can check any user citation in a Genius Result answer to see the list of files the cited user has shared with you in Microsoft SharePoint Online.

Now Assist Q&A Genius Results

The Now Assist Q&A Genius Results feature is in maintenance mode. This feature will have no new enhancements but will have continued support. Similar and improved functionality is available in the newer Now Assist Multi-Content Response Genius Results feature. For more details on this feature, see Now Assist Multi-Content Response Genius Results.

Now Assist Actions Genius Results

The Now Assist Actions Genius Results feature is in maintenance mode. This feature will have no new enhancements but will have continued support. Similar and improved functionality is available in the newer Now Assist Multi-Content Response Genius Results feature. For more details on this feature, see Now Assist Multi-Content Response Genius Results.

Related ServiceNow applications and features

Now Assist

ServiceNow Now Assist uses agentic AI that is designed to enhance user productivity and efficiency through conversation and proactive experiences.

AI Search

The ServiceNow AI Search application provides a consumer-grade search engine for ServiceNow Service Portal, ServiceNow Now Mobile®, and ServiceNow Virtual Agent. Intelligent query features help you quickly find the answers you need.

Now Assist in Contract Management release notes

The ServiceNow® Now Assist in Contract Management uses generative AI capabilities to analyze a contract for missing or non-standard clauses and conversational search to query documents using natural language. It also includes agentic AI capabilities that automatically extract metadata and obligations from signed contracts and calculate reminder dates for contract renewals or terminations. Now Assist in Contract Management was enhanced and updated in the Yokohama release.

Now Assist in Contract Management highlights for the Yokohama release

Yokohama Patch 11

- Review changes to Now Assist usage measurement.
- Some Now Assist skills are now turned on by default.
- Use AI-powered obligation extraction to automatically identify and capture key obligations from signed contracts, and then review, edit, approve, or reject them within the contract playbook to create obligation records automatically.
- Activate the Contract obligation extraction skill in the Now Assist Admin console to enable automatic obligation extraction.
- Use Now Assist powered conversational search to query contract documents using natural language and dialogue-driven queries, making it easier to find relevant information.
- Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications.

Yokohama Patch 6

- Use the contract playbook to review and update the AI extracted metadata and reminder date for contract renewal or termination.
- Use Google Gemini and Anthropic Claude on AWS as AI model providers for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI.

Yokohama Patch 3

- Activate and configure the contract metadata extraction skill for Contract Management Pro in the Now Assist Admin console.
- Activate and configure the contract analysis skill for Contract Management Pro in the Now Assist Admin console.
- Use the Manage contract repository agentic workflow to autonomously set milestone reminders for the notice period of contract renewals or the notice period for termination of contract renewals.

See Now Assist in Contract Management for more information.

Now Assist in Contract Management is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Important information for upgrading Now Assist in Contract Management to Yokohama

If you're upgrading to Now Assist in Contract Management starting with Yokohama Patch 3 from a previous version and you have customized use cases, run a fix script to migrate the existing data to the Now Assist Admin console.

1. Navigate to **All** > **System Definition** > **Fix Scripts**.
2. In the **Name** field, search for `Upsert DI skill config`.
3. In the script, add the use case ids that you want to migrate to the Now Assist Admin console.
4. Select **Run Fix Script**.

For more information, see Post-upgrade steps for Now Assist in Contract Management.

New in the Yokohama release

Yokohama Patch 11

Changes to Now Assist usage measurement

Starting with Yokohama Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Automated obligation extraction

Use the manage contract repository agentic workflow to automatically identify and capture key contractual obligations from signed contracts and create obligation records in the contract repository. The AI agent in the manage contract repository agentic workflow uses the Now Assist Contract obligation extraction skill to extract key contractual obligations from contracts.

Using contract playbook to review AI-extracted obligations

Review extracted obligations in the contract playbook, with options to edit, approve, or reject each obligation. Approved obligations are added as obligation records in the contract repository while rejected obligations are deactivated.

Contract obligation extraction skill in Now Assist in Contract Management

Configure and map use cases for obligation extraction skill in the Now Assist Admin console to automatically extract key contractual obligations from signed contracts. The AI agent in the manage contract repository agentic workflow uses the Now Assist Contract obligation extraction skill to extract key contractual obligations from contracts.

Conversational contract search and insights Workflow

Contract documents are often complex and stored across multiple formats and repositories, making keyword-based search inefficient and error-prone. The new Now Assist powered conversational search feature enables you to search contract documents using natural language and dialogue-driven queries.

The conversational search feature does not support searching within contract documents that are scanned PDFs.

Some Now Assist skills are turned on by default

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.

Now LLM LTS support for Contract Management Pro

Long term stable (LTS) models are part of Now LLM Service and provide longer model stability windows for regulated industries. These models can integrate with tools to provide governance, monitoring, and compliance controls.

Yokohama Patch 6

Reviewing AI-extracted results in the playbook

Use the playbook within a contract repository record to review the metadata extracted by the AI agents in the Manage contract repository agentic workflow. You can make necessary changes to the extracted information, and submit it to update the contract repository. If the contract end date is available, the **Review contract reminders** tab appears in the playbook, enabling you to review and update the AI-calculated contract reminder date and specify recipients for contract renewal or terminations.

New third-party AI model provider options available for all Now Assist applications

Google Gemini and AWS Claude are available for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI.

Select large language models for use cases in Now Assist in Contract Management

Select a large language models (LLM) provider at for a contract analysis or metadata extraction use case. The selected LLM is applicable only for the specific use case and overrides the LLM selected for Now Assist in Contract Management skills.

Yokohama Patch 3

Manage contract repository agentic workflow

Use the Manage contract repository agentic workflow to improve productivity by autonomously creating milestone reminders for the notice period of contract renewals or the notice period for termination of contract renewals.

Agentic workflows

Agentic workflows	Description
Manage contract repository	Uses AI agents to retrieve contract details such as renewal notice period, termination notice period, or auto-renewal clause information, and determine the average lead time for similar contracts to create contract milestone reminders for the notice period of contract renewals or the notice period for termination of contract renewals.

Contract documents are often complex and stored across multiple formats and repositories, making keyword-based search inefficient and error-prone. The new Now Assist powered conversational search feature enables you to search contract documents using natural language and dialogue-driven queries.

The conversational search feature does not support searching within contract documents that are scanned PDFs.

Some Now Assist skills are turned on by default

The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.

Now LLM LTS support for Contract Management Pro

Long term stable (LTS) models are part of Now LLM Service and provide longer model stability windows for regulated industries. These models can integrate with tools to provide governance, monitoring, and compliance controls.

Yokohama Patch 6

Extract metadata from signed contracts automatically

Use the AI agents in the Manage contract repository agentic workflow to automatically extract metadata from signed contracts and calculate the contract reminder dates for contract renewal or termination. You can review the AI results in the contract playbook and update it if necessary before saving it.

Contract metadata extraction use cases

Support for 14 additional metadata fields in the CM Pro - Contract Metadata Extraction use case available in the base system.

© 2026 ServiceNow, Inc. All rights reserved.

Yokohama Patch 3

Configuring contract metadata extraction

Create a use case and its associated fields for contract metadata extraction in the Now Assist Admin console to define the information that you want Now Assist to detect in a signed contract.

Create a use case mapping in the Now Assist Admin console to map a use case to specific tables and define conditions to apply the use case for metadata extraction.

Configuring contract analysis

Create a use case and its associated question groups for contract analysis in the Now Assist Admin console to identify the non-standard and missing clauses in a contract.

Create a clause mapping Now Assist Admin console to map question groups of a use case to active clauses in the clause library to display suggestions for non-standard clauses in a contract.

Create an expected response mapping in the Now Assist Admin console to map questions of a use case to an expected response to identify the non-standard clause in a contract.

Create a use case mapping in the Now Assist Admin console to map a use case to specific tables and define conditions to apply the use case for contract analysis.

Activation information

Now Assist in Contract Management is a ServiceNow AI Platform feature that is available with activation of the Now Assist in Contract Management (sn_cm_gen_ai). For details, see Configure Now Assist in Contract Management.

Browser requirements

Now Assist supports various browsers, including Google Chrome and Microsoft Edge. Now Assist isn't supported in Microsoft Internet Explorer.

Related ServiceNow applications and features

Contract Management Pro

Use Contract Management Pro to set up contract document templates, clauses, clause variations, and to initiate contract requests. It also supports Now Assist - driven contract analysis and metadata extraction, e-signatures, wet signatures, and external storage systems.

Now Assist

Improve the productivity and efficiency in your organization, deliver better self-service, recommend actions, provide answers, and empower your users to search more effectively.

Now Assist Admin console

Use the Now Assist Admin console to provide you with quick and effortless access to the important information that you need to set up, configure, and monitor Now Assist applications and features.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Use the Now Assist products to provide agentic AI skills to meet the needs of users in different workflows, including case or incident summarization, chat summarization, resolution notes generation, and code generation.

Now Assist in Document Intelligence release notes

The ServiceNow® Now Assist in Document Intelligence application uses generative AI to extract information from documents, summarize document content, and provide answers to predefined questions. Now Assist in Document Intelligence was enhanced and updated in the Yokohama release.

Now Assist in Document Intelligence highlights for the Yokohama release

Yokohama Patch 13

- Now Assist in Document Intelligence skills are on by default.

Yokohama Patch 11

- Review changes to Now Assist usage measurement.
- Some Now Assist skills, agents, and agentic workflows are on by default.
- Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications.

Yokohama Patch 6

- Summarize the content in document and image attachments with the document and visual insights AI agent.
- Choose a large language model (LLM) to generate predictions for extraction and Q&A (question & answer) use cases.
- Use Google Gemini and Anthropic Claude on AWS as AI model providers for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI.

Yokohama Patch 3

- Boost productivity by using the document and visual insights AI agent to autonomously analyze and extract data from documents and images.
- Streamline document data extraction by automating document tasks.
- Use Virtual Agent to ask questions about the document content.
- Extract the data from invoices with Now Assist for Accounts Payable Operations (APO).

Early Availability

- Speed up your document processing workflows and quickly extract the text and tables from your documents.
- Save time looking for the information that you need in a document, and quickly find the answers to predefined questions.

See Now Assist in Document Intelligence for more information.

Important:
Now Assist in Document Intelligence is available in ServiceNow Store. For details, see the "Activation information" section of these release notes.

© 2026 ServiceNow, Inc. All rights reserved.

New in the Now Assist in Document Intelligence release

Yokohama Patch 13

Document and visual insights AI agent enhancements

The document and visual insights AI agent can recognize and provide citations for multiple attachments.

Yokohama Patch 6

LLM selection for use cases

Configure a different LLM to generate predictions for extraction and Q&A use cases.

New third-party AI model provider options available for all Now Assist applications

Google Gemini and AWS Claude are available for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI.

Yokohama Patch 3

Document and visual insights AI agent

Use an AI agent to help process the tasks that analyze and extract data from documents and images.

Full automation for document data extraction

Automatically extract the document data and process the document task without agent review.

Data extraction from accounts payable (AP) invoices

Extract data from invoices with Now Assist for APO.

Document chat in Virtual Agent

Integrate Now Assist for Virtual Agent with Now Assist in Document Intelligence to enable the chat responses that are based on the document content.

Attachment summarization in ITSM

View the summaries of attachments with the record summary in ITSM.

Early Availability

Document extraction

Extract the data from documents by using LLMs to provide the recommended field values.

Document Q&A

Use generative AI to find the answers to the predefined questions in a document.

Setting up use cases for Now Assist in Document Intelligence

Set up Document Intelligence use cases to enable agents to use the document extraction and document Q&A skills.

UI changes

Yokohama Patch 3

Usability enhancements to use case setup features

Various features for the use case setup are updated to create a more effective user experience:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- **Field** is changed to **question** in the field form for Q&A use case setup.
- **Single field** is changed to **Field** in the field form for the document extraction use case setup.
- An **Additional Details** field is added to the table form for the document extraction use case setup as a way to help the large language model (LLM) extract the relevant information from the document.

Changed in this release

Yokohama Patch 13

Document and visual insights AI agent enhancements

Tools used by the document and visual insights AI agent are consolidated to improve performance.

Now Assist in Document Intelligence skills are now turned on by default

The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills are turned on automatically.
- Existing customers who are upgrading: Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.

Yokohama Patch 11

Changes to Now Assist usage measurement

Starting with Yokohama Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Some Now Assist skills are turned on by default

The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.

Configure ACLs for AI agents and agentic workflows

Configure the access control lists for who can discover and trigger AI agents and agentic workflows in their guided setups in AI Agent Studio. You can determine whether an AI agent or agentic workflow behaves as a dynamic user or as an AI user. You can also specify if an AI agent or agentic workflow can be available to all authenticated users or publicly available.

Yokohama Patch 6

Document and visual insights AI agent enhancements

Generate a summary of document and image attachments with the document and visual insights AI agent.

Activation information

Now Assist features are available with activation of any Now Assist plugin from ServiceNow Store. The following plugins are available:

- Now Assist for Accounts Payable Operations (APO)
- Now Assist for App Engine
- Now Assist for Configuration Management Database (CMDB)
- Now Assist for Collaborative Work Management (CWM)
- Now Assist for Creator
- Now Assist for Customer Service Management (CSM)
- Now Assist for Employee Experience
- Now Assist for Enterprise Architecture (EA)
- Now Assist for Operational Sustainability (formerly ESG)
- Now Assist for Field Service Management (FSM)
- Now Assist for Financial Services Operations (FSO)
- Now Assist for Hardware Asset Management (HAM)
- Now Assist for Health and Safety
- Now Assist for HR Service Delivery (HRSD)
- Now Assist for Integrated Risk Management (IRM)
- Now Assist for IT Operations Management (ITOM)
- Now Assist for IT Service Management (ITSM)
- Now Assist for Legal Service Delivery (LSD)
- Now Assist for Operational Technology Manager (OTM)
- Now Assist for Order Management
- Now Assist for PSDS
- Now Assist for Security Incident Response
- Now Assist for Software Asset Management (SAM)
- Now Assist for Supplier Lifecycle Operations (SLO)
- Now Assist for Sourcing and Procurement Operations (SPO)
- Now Assist for Strategic Portfolio Management (SPM)
- Now Assist for Telecommunications, Media and Technology (TMT)
- Now Assist for Third-party Risk Management (TPRM)
- Now Assist for Workplace Service Delivery (WSD)
- Now Assist for Vulnerability Response

For more information, see Configuring Now Assist in Document Intelligence.

Additional requirements

Now Assist in Document Intelligence requires the installation of the Document Intelligence application (sn_docintel) and at least one Now Assist product.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Related ServiceNow applications and features

Document Intelligence

Use Document Intelligence to streamline the extraction and classification of data from a variety of documents. Document Intelligence is designed to work with existing automated systems, making operations more efficient and saving effort.

Now Assist

Improve the productivity and efficiency in your organization, deliver better self-service, recommend actions, provide answers, and empower your users to search more effectively.

Now Assist Skill Kit

Use the generative AI skills in Now Assist products to meet the needs of users in different workflows, including case or incident summarization, chat summarization, resolution notes generation, and code generation.

Now Assist in Contract Management

Use Now Assist in Contract Management to analyze contracts for non-standard and missing clauses, and extract information from signed contracts to automatically add in the contract repository.

Now Assist in Platform Analytics release notes

Now Assist for Platform Analytics consists of several skills and applications that let you generate and work with Platform Analytics objects through Generative AI. These skills let you analyze your business data through conversational interactions, without a technical knowledge of Platform Analytics.

Now Assist in Platform Analytics highlights

Yokohama Patch 11

- Review changes to Now Assist usage measurement.
- Some Now Assist skills, agents, and agentic workflows are on by default.
- Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications.
- Create "explorations"—editable documents where you analyze data with the help of AI. Refine responses, add your own input, and collaborate with others to make data-informed decisions faster.

Previous Patch releases

- Generate and export Platform Analytics artifacts from conversational interactions in the Now Assist panel.
- Benefit from a single, smooth experience in asking questions across all Now Assist for Platform Analytics skills, as well as other applications that incorporate Platform Analytics and AI, through a shared backend.

See Now Assist in Platform Analytics for more information.

Important:
Now Assist for Platform Analytics applications are available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

© 2026 ServiceNow, Inc. All rights reserved.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

New features, applications, and skills

Yokohama Patch 11

Gather insights, plan, and collaborate in the AI Data Explorer (January 2026)

Ask quick questions, receive tailored recommendations, and collaborate with AI and your colleagues to build long-term analysis. Enable teams to discuss and act on findings instantly. Centralize insights and narratives for better decision making. Guide users with contextual insights and suggestions.

Main features include:

- Optional deeper level of analysis
- Add a data visualization from an exploration to a dashboard
- Share explorations with tagged users
- Duplicate an exploration
- Duplicate an answer in an exploration
- Summarize an exploration

AI Data Explorer leverages Query Generation to translate natural language questions into actionable insights. Query Generation enables users of AI Data Explorer to analyze their data and access a broader range of data sets. Key capabilities include:

- Ability to add tables to the semantic data layer
- Multi-table source support
- Workflow Data Fabric table support
- Database view support

Changed features

Yokohama Patch 13

View recommended actions

AI Data Explorer can suggest actions based on the insights that it generates in an exploration.

Ask questions about FX currency data

Query Generation now supports the FXCurrency (Currency 2) data type. This means that you can use AI Data Explorer to explore financial operations data, including those within Source-to-Pay Operations.

Benefit from improvements to segments

Segments are reusable definitions in Query Generation that provide non-obvious context to assist the semantic layer or LLM to select the correct dimension and values. Users can create manual segments via a new form. A scheduled job synchronizes manual and autogenerated segments. This job also cleans up segments to help surface the correct segments and reduce noise.

Domain separation is also now supported, with a Domain field on the Segments table. Segments based on reports and filters inherit the source domain. Manual segments have domains that are passed up to the Segments table on synchronization. Segments are not supported for indicator sources or modules on domain-separated instances.

Yokohama Patch 11

Changes to Now Assist usage measurement

Starting with Yokohama Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Some Now Assist skills are turned on by default

The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.

Configure ACLs for AI agents and agentic workflows

Configure the access control lists for who can discover and trigger AI agents and agentic workflows in their guided setups in AI Agent Studio. You can determine whether an AI agent or agentic workflow behaves as a dynamic user or as an AI user. You can also specify if an AI agent or agentic workflow can be available to all authenticated users or publicly available.

Query Generation skills are active by default

If the Generative AI Controller plugin is activated, the skills for Query Generation are activated by default.

Greater visibility into the Query Generation process

When you call Query Generation from AI Data Explorer or another application, you see each state that the query and response goes through before completing.

Multi-table source support

Query Generation supports related table conditions and dot-walking in queries.

Get insights and visualizations for Workflow Data Fabric tables

Ask AI Data Explorer information about Workflow Data Fabric data and get insightful responses. You must first add the Workflow Data Fabric tables to the Query Generation Semantic Table Configuration table.

Use database views in queries

Generate visualizations or ask AI Data Explorer about data kept in database views, like SLA data. You have to add the database views to the Semantic Table Configuration table.

Yokohama Patch 7

Add tables to the semantic data layer

Choose which tables your users can query with generative AI for data analysis.

Monitor the health of the Query Generation back end

View the state of Now Assist for Platform Analytics LLM, plugins, system properties, components, and dependent products.

Activation information

AI Data Explorer is available from the ServiceNow Store.

Platform Analytics experience

Details of the data visualizations, filters, and dashboards that Now Assist for Platform Analytics skills generate.

Now Assist in Virtual Agent release notes

The ServiceNow® Now Assist in Virtual Agent application uses generative AI skills in your conversational experiences. Now Assist in Virtual Agent uses large language models (LLMs) to create a natural-language conversational experience that can improve the success of your self-service workflows. Now Assist in Virtual Agent was enhanced and updated in the Yokohama release.

Now Assist in Virtual Agent highlights for the Yokohama release

Yokohama Patch 11

- Review changes to Now Assist usage measurement.
- Some Now Assist skills, agents, and agentic workflows are on by default.
- Create and manage LLM-based chat and voice assistants within Assistant Designer, a centralized assistant administrator experience.
- View a people citation's org chart in the interactive view. The interactive view opens to the right of the chat conversation area.
- Notice several UI improvements to enhanced chat and enhanced chat's full-page experience, including an updated input bar, gradient borders, copy message icon for received messages, and more.
- Enable voice input to allow users to use a microphone to type the input. Voice input is only available for Now Assist panel Platform assistant.

Yokohama Patch 6

- Use Google Gemini and Anthropic Claude on AWS as AI model providers for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI.
- Use agentic conversations and view agentic conversational processing flow steps.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- View extended entities and records in standard and enhanced chat conversations if they're associated with the Knowledge Graph natural language query (NLQ) schema.
- View suggested search queries previously performed in the portal's search bar within enhanced chat conversations.
- Work with the simplified subheader of enhanced chat.
- Delete closed enhanced chat conversations.
- Expand the fallback options.
- Enter into web search mode manually via the input bar.

Yokohama Patch 3

- Use enhanced chat to provide users with a conversational experience within a resizable and movable chat window that includes the ability to have multiple active conversations. Enhanced chat enables users to choose their way of engaging with Now Assist on their ServiceNow portals from a variety of entry points. Enhanced chat includes synthesized responses after entering a search query into a portal's search bar. If Now Assist in AI Search is turned on, enhanced chat also offers an optional full-page experience where your users can enter into a full-page chat experience after entering a search query into a portal's search bar. Enhanced chat also offers an updated, modern look and feel along with chat controls to resize and move the chat window.
- View an expanded list of inline citations for both standard and enhanced chat. New inline citations for external content and people searches are available.
- View and work with suggested actions after completing an action in Now Assist in Virtual Agent.
- Stream responses for Now Assist LLM - enhanced chat conversations.
- Upload or drag documents and images into a standard or enhanced chat.
- Automatically switch to the user's detected language in enhanced chat conversations when language detection is turned on.
- Use the Web Search custom skill to search for an answer on the internet.

Yokohama Patch 1

- Stream responses for Now Assist LLM chat conversations.

See Now Assist in Virtual Agent for more information.

New in the Yokohama release

Yokohama Patch 11

Assistant Designer

Create and manage LLM-based chat and voice assistants within Assistant Designer, a centralized assistant administrator experience. Assistant Designer is comprised of three main areas: Assistants, Asset library, and Analytics.

Configuring assistants overview

- Access the **Assistants** tab within Assistant Designer by navigating to **All** > **Assistant Designer**. The **Assistants** tab is only available for customers who have the Now Assist license. NLU-only customers don't have access to Assistant Designer.

View assistants

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- View chat and voice assistants within the **Assistants** tab of Assistant Designer.
  - The card view is the default view for the assistants.
  - An inactive (gray) or active (green) label is shown for each assistant.
  - Activate, deactivate, test, edit, or delete an assistant.
  - A display experience label is shown on each chat assistant card.
  - A domain label is shown on assistant cards if an assistant is created outside of the global domain. If assistants are only created within the global domain, the label isn't shown.
  - The ability to view or edit an assistant depends on the domain that the admin has access to.
  - The name and date are shown for when the assistant was last updated.
  - Voice assistants show a voice icon and label on the card. Voice assistants can't be tested within Assistant Designer.
  - The map view shows the assistant hierarchy where you can open, turn on or off, or delete an assistant.
- View the side panel for quick access to **Pick up where you left off**, **Recent activity**, and **Resources**.

Create a voice assistant

- Start creating an AI voice assistant by providing a name and description. Tag to a business unit to analyze your voice assistant.
- Power your voice assistant with agentic experience by adding AI agents.
- Personalize your voice assistant by choosing a language, adding a welcome message, and an AI voice persona.

  Note:
  The supported languages are:
  - English
  - German
  - Spanish

- Secure the voice interactions by setting up caller authentication methods and safeguards.

Create a chat assistant

- Add basic details such as a name and description for your chat assistant, and set your assistant as a primary assistant. The Basic details page within the UI has replaced the Overview page.
- Now Assist panel – Platform (default) assistant can be set as a primary assistant and linked to secondary assistants. Now Assist panel – Developer assistant doesn't have this option.
- The name and description of the Now Assist panel assistants can't be changed.

Use agentic support for a chat assistant

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Let the assistant use AI agent skills and agentic orchestration. Admins can choose between agentic or standard (Q&A) modes depending on business needs and user experience goals. Turn on or off the **Prioritize AI agents during skills discovery** feature.

Assign search sources to a chat assistant

- Restore search sources back to the default (Now Assist Multi-Turn Catalog Ordering and Now Assist Q&A).
- Now Assist panel - Platform (default) assistant now has the option to copy an existing search configuration.
- Dynamic global search configuration has been added to the list of search application configurations.
- Create or configure additional search sources by selecting the **External Content Connectors** link. This replaces a card view.
- Manage knowledge articles by selecting the **Knowledge Center** link.
- In edit mode, search sources are found within the Information Sources sub-tab.

Add a Knowledge Graph schema to a chat assistant

- Adding a Knowledge Graph schema has moved from the Information sources page to its own page.
- Add a Knowledge Graph schema is now available for the Now Assist panel - Platform (default) assistant. For the NLQ schema, if Global Graph or Global Graph Mini is selected, you have the option to select tags for specific workspaces that are active on the instance.
- Define the mapping relationship between individual workspaces on the instance and predefined Knowledge Graph tags when Global Schema is selected for NLQ.
- In edit mode, Knowledge Graph is found within the Information Sources sub-tab.

Add assets to a chat assistant

- By default, all Now Assist skills (Now Assist Q&A, Now Assist multi-turn catalog ordering, Now Assist topics, subflows and actions, custom skills, and AI agents) are turned on. Therefore, the Now Assist skills page has been removed.
- Map an asset to an assistant. Assets are the building blocks of each assistant, providing them with instructions and functionality for helping users. Assets include topics, subflows and actions, custom skills, and AI agents. For Now Assist panel - Developer assistant, only topics (asset type) is available.
- In edit mode, assets are found within the Information Sources sub-tab.

Display your chat assistant on a portal, channel, or mobile app

- Leverage Now Assist capabilities in Google chat.
- Use **Prominent action button override** to allow a different chat assistant other than the default assistant to be launched on a mobile app.
- In edit mode, display experiences are found within the Settings sub-tab.

Display your assistant on Platform or ServiceNow Studio

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- The **Add ServiceNow Platform** drop-down menu has replaced the **Add agent experience** drop-down menu. A Now Assist panel assistant can't be added to other display experiences.
- In edit mode, display experiences are found within the Settings sub-tab.

Brand an assistant

- Minor enhancements to the look-and-feel of the standard chat preview pane.
- In edit mode, branding is found within the Settings sub-tab.

Manage an assistant chat experience

- A standard chat preview pane is shown for the default greeting topic (Now Assist – Greeting) and the default closing topic (Now Assist – Closing). Selecting custom topics won't show a preview pane.
- Fallbacks have a standard chat preview pane and each fallback is shown if toggled on.
- For the Now Assist panel - Platform (default) assistant, web search, record producer, and custom fallback are available options. End this chat and survey are available for the standard chat experience.
- In edit mode, chat experience is found within the Settings sub-tab.

Enable additional chat features

- Web search, response streaming, document uploads, and closed chat were moved from the Manage chat experience page to its own page. By default all chat features except web search are turned on.
- Response streaming can be turned on at the assistant level regardless of whether Dynamic Translation is turned on or off. However, response streaming doesn't work when Dynamic Translation is being used.
- In addition to web search, response streaming, document uploads, and closed chat, Now Assist panel Platform assistant has voice input. Voice input allows users to use a microphone to enter the input.
- In edit mode, additional chat features are found within the Settings sub-tab.

Review chat assistant settings

- New sections that have been added include: Agentic support, Knowledge Graphs, Assets, and Chat features.
- Testing an assistant has been removed from the Review page.

Test a chat assistant

- Test a chat assistant from **Assistant Designer** > **Assistants** tab or from within each page while in edit mode.

Edit a chat assistant

- Edit a chat assistant from **Assistant Designer** > **Assistants** tab. You will be directed through an edit flow with a slightly different UI from the create flow.

Analyzing assistants

- Monitor, evaluate, and optimize the performance of your AI-powered assistants within the **Analytics** tab of Assistant Designer.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Copy received messages

Use the copy message icon in the feedback panel to copy received Virtual Agent responses.

New system properties

- Set the *com.glide.cs.nass.synthesized_response.disabled_popover.hide* to `true` to hide the popover for disabled catalog items for Now Assist in Virtual Agent and Now Assist panel's enhanced chat.
- Set the *sn_ais_assist.enable_pi_in_nba* property to `true` to allow conversational history-based suggested actions and fill multiple suggested action slot options.
- View the *sn_nowassist_va.enable_nass_show_all_options* property to decide whether to allow the **View all options** link in an enhanced chat conversation's greeting topic.
- The *com.glide.interactive_view.enabled* property opens an interactive side panel view next to the chat window. The default value is `true` to activate AI Engagement Experience on your instance.

View org chart in the interactive view

Select **View org chart** from the people citation's popover in Now Assist panel's enhanced chat or Now Assist in Virtual Agent enhanced chat/enhanced chat's full-page experience. The person's organizational chart appears to the right of the chat conversation in an area known as the interactive view. You can switch between multiple organizational charts via a drop-down in the interactive view if you open multiple people citations' org charts in the same conversation.

Yokohama Patch 8

Select continue or move to next task button

The **Continue to next task** button appears in the new **Ready to move on to your next task** card whenever multiple questions are found in a single standard chat user's message. The **Move on to the next task** citation appears at the end of an enhanced chat's synthesized response whenever multiple questions or requests are found along with an action in the user's single message. Whenever either **Continue to next task** (standard chat) or **Move on to the next task** (enhanced chat) is selected, the second question or request is reviewed and a synthesized response is sent back regarding the user's second question or request.

Multiple questions in a single user message are answered consecutively

Virtual Agent can answer multiple questions that were submitted in a single message query. Now Assist panel or Now Assist in Virtual Agent answers the multiple questions consecutively in a response.

Now Assist in Virtual Agent system properties

Use *sn_aia.use_agents_in_planner* to configure AI agent discovery behavior. The default value is `true`, preferring AI agents over assets including catalogs, topics, Q&A knowledge base articles, workflows, and sub-workflows. When set to `false`, there's no preference for AI agents. AI agents and assets are treated the same.

Yokohama Patch 6

Configure additional user interface and experience options for enhanced chat

Customize and configure the Search Toggle Button Label for enhanced chat's full-page experience. Additionally, you can configure the Enable Unread Conversation

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Count Display and Left Panel Header Label for enhanced chat and enhanced chat's full-page experience.

New third-party AI model provider options available for all Now Assist applications

Google Gemini and AWS Claude are available for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI.

View agentic conversations processing steps

View agentic conversational processing steps and stop the flow, if needed.

View extended entities and records

View extended entities and records in standard and enhanced chat conversations that come from the additional custom tables associated with the Knowledge Graph natural language query (NLQ) schema such as:

- Assets
- Incidents
- Recently viewed knowledge base articles
- Requests
- Tasks

View suggested queries in the portal's search bar and chat window

View the most frequently asked queries in the portal's search bar and enhanced chat's Virtual Agent. Any search query entered into the portal's search bar or Virtual Agent is incorporated into the greeting topic for future conversations as a suggested query. Suggested queries are only included in the Virtual Agent greeting topic whenever no promoted assets are designated.

Work with suggested queries

Two system properties were added to enable the suggested queries feature: *sn_nowassist_va.enable_suggested_queries* and *sn_nowassist_va.max_suggested_queries*.

Configure AI search answers OneExtend capability for web search

Configure the AI Search answers capability via `sys_one_extend_capability.list` to establish the web search AI provider and work with API keys, if needed.

Expanding AI provider support for web search

OpenAI, Perplexity, and Google Gemini support web search.

Configuring assistants overview

Enhancements to Now Assist in Virtual Agent assistants and Now Assist panel Platform and Developer assistants. Options vary for Now Assist panel assistants.

Create a chat assistant

- Configure assistants by domain.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Now Assist in Virtual Agent assistants: By default, all global skill types are turned on in Now Assist Admin console.
- Now Assist panel Platform assistant: By default, all global skill types, except for Catalog skill, are turned on in Now Assist Admin console.
- Now Assist panel Developer assistant: By default, Now Assist Topic skill is turned on in Now Assist Admin console. No other skills are available for the Now Assist panel Developer assistant.

Display your chat assistant on a portal, channel, or mobile app

- Now Assist in Virtual Agent: For mobile search widgets, allow the search bar to open into a full-page experience.

Display your assistant on Platform or ServiceNow Studio

- Now Assist panel Platform assistant: Enable enhanced chat for a conversational experience that includes a dynamic, movable, and resizable chat window, plus access to multiple active conversations.
- Now Assist panel Developer assistant: Not applicable.

Assign search sources to a chat assistant

- Now Assist in Virtual Agent:
  - Add internal and external search sources, such as catalog items and Microsoft Sharepoint, from a drop-down list.
  - Add a slot filling schema to input user information from your organization's Knowledge Graph. Add a Natural language query schema to allow users to perform a data query during a conversation.
- Now Assist panel Platform assistant:
  - Add internal and external search sources, such as catalog items and Microsoft Sharepoint, from a drop-down list.
  - Add a slot filling schema to input user information from your organization's Knowledge Graph. Add a Natural language query schema to allow users to perform a data query during a conversation.
- Now Assist panel Developer assistant: Not applicable.

Manage an assistant chat experience

- Now Assist in Virtual Agent:
  - Select a custom greeting topic, closing topic, error topic, and survey for your assistant.
  - Select one or more fallback options: live agent, web search, record producer, end this chat, and custom fallback.
  - Enable web search fallback option and web search mode to allow users to search the web from within a chat window.
- Now Assist panel Platform assistant:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Select a custom greeting topic or error topic for your assistant.
- Fallback options don't apply to Now Assist panel Platform assistant.
- Enable web search mode to allow users to search the web from within a chat window.

- Now Assist panel Developer assistant: Not applicable.

Now Assist panel

Use the enhanced Now Assist panel for a more intuitive and personalized experience. The updated Now Assist panel is re-sizable and can be moved anywhere on the ServiceNow AI platform.

Yokohama Patch 4

Now Assist in Virtual Agent system properties

Enable pinning a chat window on a portal by using the *sn_nowassist_va.enhanced_chat_pin_enabled.<portal-url>* system property.

Yokohama Patch 3

Use enhanced chat

Enhanced chat is a conversational support experience within a resizable and moveable window that also includes the ability to have multiple active conversations and superior search capabilities. Using enhanced chat's full-page experience further intertwines chat and search capabilities by redirecting users into a full-page chat after entering a query into a portal's search bar.

View inline citations

View the expanded list of inline citations for standard and enhanced chat:

- Catalog
- Topic, subflows, or actions
- Q&A Knowledge Base articles
- External content connections

Note:
External content connections now include the following connection types:

- Microsoft SharePoint
- Confluence
- Atlassian Jira Cloud
- Google Drive
- Microsoft Teams
- Predefined web sources
- ServiceNow® documentation
- Slack

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- People

> **Note:**
> If Knowledge Graph is turned on, you can view information about a person. The people information in the Virtual Agent response typically includes their title, department, location, and email address. The people popover shows additional information.

Use suggested actions

View suggested actions that were related to your prior conversation and that you consider doing next. After completing a conversational catalog request, conversational subflow, or Virtual Agent topic, two suggested actions appear after a `Here's what you can do next` header.

Stream enhanced chat responses

Stream LLM response messages as they're generated instead of the response text appearing all at once to end users. Responses stream in either one letter or one word at a time.

Use language detection to automatically switch the conversational language for enhanced chat conversations

Automatically switch the conversational language to the user's detected language during LLM enhanced chat conversations when language detection is turned on. This automatic switch can occur when a user enters an utterance at the start of a new conversation or within the portal home page's search field.

Recognize the Boolean user input control during dynamic translation

Recognize the Boolean user input control in chat conversations during dynamic translation.

Adjust Shorten responses toggle to impact Show more option in chat

For bot text responses, adjust the **Shorten responses** toggle in Virtual Agent Designer to turn off the **Show more** option on the user side. When **Shorten responses** is turned off, the **Show more** option does not appear in the chat to the user and the full answer is displayed rather than a truncated response.

Configuring assistants overview

In addition to configuring Now Assist in Virtual Agent assistants, admins can configure the default Now Assist panel assistants. Options may vary for Now Assist panel assistants.

Create a chat assistant

- If multiple assistants are created, users can chat simultaneously with multiple assistants. Conversations are independent from each other.
- Turn on or off Now Assist panel (agent or creator) assistant. Contact support to configure Now Assist panel assistants.

- Now Assist Topic skill must be turned on at the assistant level for document uploads to be activated when managing the chat experience. For more information, see Manage an assistant chat experience.
- Create and manage agentic workflows in Now Assist AI Agents Studio and assign the workflows to the assistant.

Display your chat assistant on a portal, channel, or mobile app

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Display Now Assist in Virtual Agent enhanced chat, with or without the full-page experience, on your portal or mobile app. This dynamic window includes the ability to have multiple active conversations and search capabilities. To use enhanced chat, portals and mobile apps require AI Search to be enabled. For more information on the prerequisites, see Portal prerequisites for enhanced chat and Mobile app prerequisites for enhanced chat.

Manage an assistant chat experience

- Upload documents to Now Assist in Virtual Agent standard chat or enhanced chat experience. The Now Assist topics skill must be enabled in Now Assist skills. For more information on file formats, see Upload documents in a chat.

Review chat assistant settings

- Document uploads appear as active if it's turned on when managing the chat experience.

Upload documents in a chat

Upload or drag and drop files to Now Assist in Virtual Agent (standard chat or enhanced chat). The assistant analyzes and understands the content of the files, and a user can ask questions about the content of the files or get a summary.

Now Assist in Virtual Agent system properties

Enable suggested actions in Now Assist in Virtual Agent so that users are offered options for what they can do after completing a prior action. Suggested actions is applicable to standard and enhanced chat, mobile, and Microsoft Teams.

Web Search custom skill

Use the Web Search custom skill to query the internet for information using a third-party AI. The skill triggers when the LLM and AI Search cannot provide an answer. Both values are shown in the System Properties [sys_properties] table item *sn_nowassist_va.websearch_fallback_enabled*. Set a chosen definition (such as Perplexity) to `true` in the AI Search answers OneExtend capability along with its matching API in the Credentials list. You can set one definition and credential to true at any one time.

Yokohama Patch 1

Stream chat responses

Stream LLM response messages as they're generated instead of the response text appearing all at once to end users. Responses stream in either one letter or one word at a time.

Benefit from Knowledge Graph integration

Receive fewer Virtual Agent slot-fill questions during conversations whenever Knowledge Graph is activated.

Receive personalized synthesized response answers with Knowledge Graph integration

Discover more personalized conversational catalog, topic, subflows, or action responses and receive more personalized answers for Q&A Knowledge Base synthesized responses. Personalized responses may appear depending on whether the questions or requests sent to Virtual Agent trigger the Knowledge Graph user profile schema. These personalized responses are slot-filled based on the following table and column attributes:

© 2026 ServiceNow, Inc. All rights reserved.

Configuring assistants overview '

Now Assist skills:

- An alert appears, at the assistant level, if a global level skill is turned off.
- By default, all global level skills are turned on in the Now Assist Admin console, except for subflows and actions.
- Custom skill is a new skill that has been added to the list of Now Assist skills.

Display experience:

- Select the chat launcher function to open an assistant.
- Select a custom mobile app, integrated with the mobile SDK, to open an assistant.
- Custom apps section appears if the mobile SDK plugin is installed.

Information sources:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Add an external search source to your assistant's search profile.
- Create custom skills in the Now Assist Skill Kit and assign the skills to the assistant.
- Associate Knowledge Graph with an assistant if Knowledge Graph is enabled.

Chat experience:

- Promoted topics has been renamed to promoted assets.
- Tags appear in promoted assets indicating whether it's a topic, subflow, or action.
- Streaming responses can be activated if Dynamic Translation is deactivated.
- Activate or deactivate pre-chat surveys as an admin with the sys_properties.list item *com.glide.cs.nass.prechat.enabled*.

Review:

- Shows whether stream responses is turned on or off.

Using Now Assist in Virtual Agent

Search through external content connections such as Microsoft SharePoint or Confluence if external search sources are added to information sources when Configuring assistants overview.

Select an inline citation to show a popover containing a link to an article or source, or a description and action to start a request.

Citations with an action are shown after a second clarifying question from Virtual Agent.

Change the order of the fallback and revisit options in the **View more options** results list that appears in the synthesized response. Use the *sn_nowassist_va.synth_response_revisit_position* system property with either the *BEFORE_FALLBACK* or *AFTER_FALLBACK* values.

Show or hide the **Need more help** button in the synthesized response by using the *show_view_more_for_synthesized* system property.

Turn on or off regular results in Virtual Agent from the following Now Assist Search Results Output Types table using the parameter *now_assist_va_search_results_output_type.list* parameter.

Use prechat and postchat surveys with GPT4o and LLAMA. Users can select data pills or enter strings for responses.

Use new prebuilt topics for prechat and postchat surveys in LLM conversations.

UI changes

Yokohama Patch 11

UI Virtual Agent Designer updates

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Use a new option in the Actions on row icon to remove an LLM assistant from a given asset.
- View a tooltip if you try to promote more than six topics for a given LLM assistant.
- View a list of available asset types and their descriptions when you select **Create asset** in the Asset library tab.

UI chat assistant updates

- Configuring a chat or voice assistant is done in **All** > **Assistant Designer** > **Assistants** tab. **All** > **Conversational Interfaces** > **Assistants** contains a **Manage assistants** button that directs you to Assistant Designer.
- Chat and voice assistants are shown in both card and map views.
- Pages within the chat assistant setup have been removed, added, or moved to a different spot within the create or edit flow.
  - The Overview page has been replaced by the Basic details page.
  - Assign Now Assist skills page has been removed. Admins no longer need to turn on/off Now Assist skill types at the assistant level in Now Assist Admin console and no longer need to assign Now Assist skill types at the assistant level.
  - When adding search sources, an **External Content Connectors** link directs you to create or configure external sources. (This replaces the External Content Connectors card.) The following sections have been removed from the search sources page: Now Assist topics, Custom skills, AI agents, and Conversational subflows and actions. They are now within the Assets page.
  - Knowledge Graph was moved from the Information sources page to its own page.
  - Assets such as topics, subflows and actions, custom skills, and AI agents are added on the Assets page. In the display experience for Now Assist panel assistants, a **ServiceNow platforms** header is shown.
  - Minor enhancements to the standard chat preview pane when branding an assistant.
  - Promoted assets tab within the Chat experience page has been moved to the **Information sources (sub-tab)** > **Asset visibility** > **Promoted** while in edit mode.
  - Web search mode, response streaming, document uploads, and closed chats have been moved to its own Chat features page.
  - Testing a chat assistant is no longer part of the Review page. Access it from the **Assistant Designer** > **Assistants** tab, or on each page while in edit mode.
  - Editing a chat assistant is done from the **Assistant Designer** > **Assistants** tab.

UI enhanced chat updates

- Dynamic processing messages for agentic conversations are now consolidated under one View AI Steps header rather than under several View AI Steps headers.
- The **View all options** link shows below the suggested or promoted topics cards on the greeting topic in Now Assist in Virtual Agent and Now Assist panel's enhanced chat. At least one suggested or promoted asset has to be enabled for this link to show.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- The auto-complete suggestion type in the Ask Now Assist header appears at the top of the portal search bar's drop-down list. The results in the Ask Now Assist header can now show more targeted search results from AI Search rather than the GlideRecord. The entered search term can appear highlighted in bold after you have configured AI Search as the source for Ask Now Assist suggestions. For more information about this configuration, see Configure AI Search as the source for Ask Now Assist suggestions.
- The static and dynamic choice nodes now appear differently in standard and enhanced chat depending on the number of choices for single-select options. For example:
  - 2-5 choices appear as pills
  - 6 or more choices appear as a choice list with a scroll bar
- The input bar for enhanced chat has moved all icons below any inputted text. Uploaded documents appear above any inputted text.
- The float, pinned, and 90% screen views of enhanced chat now have a gradient border around them.
- The enhanced chat full-page experience was updated so that the Now Assist and Search button tabs that were originally center-aligned buttons are now left-aligned tabs that no longer look like buttons.

Yokohama Patch 8

Agentic conversation processing messages for Now Assist panel and Now Assist in Virtual Agent

Before receiving a response, you receive acknowledgment messages from the Virtual Agent and on-screen processing messages to let you know where the agent is at in the agentic processing flow. The on-screen processing messages appear in present tense until the processing flow is complete. After the processing flow is complete, then the on-screen messages change to past tense and a View AI Steps section header appears above the processed messages. You can expand the collapsed View AI Steps section header to view the processed messages.

Yokohama Patch 6

UI chat updates

- The enhanced chat navigation area was updated. The New Chat, Chats, Support, and Settings icons were reworked into a simplified subheader. Additionally, each chat title now appears in the simplified subheader.
- The enhanced chat's subheader reflects conversational modes in a banner whenever you enter into a specific mode, such as web search, live agent, or document upload.
- In the enhanced chat's **Chats** > **Closed chats** section, hover over a chat to view the delete option and complete the delete confirmation prompts.
- Minor animations occur in the following five enhanced chat transitions:
  - Hovering over the chat icon.
  - Minimizing and opening the chat icon.
  - Transitioning from a floating chat window to a pinned chat window and vice versa.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Transitioning from a floating chat window to a 90% modal and vice versa.
- Transitioning from a pinned chat window to a 90% modal and vice versa.

Note:
Transition animation doesn't apply to custom icons.

UI admin guided setup updates

- **Manage search profile** button replaces the search profile text link.
- **Add external search sources** drop-down list has been replaced with **Add search sources** drop-down list to include internal and external search sources.
- The simple and advanced views within the Chat experience page are consolidated into a single view.
- **Copy existing configuration** button is featured more prominently, and it's shown with information about its use.

Yokohama Patch 3

UI chat updates

- The summary card in a Now Assist in Virtual Agent conversation was updated to a more modern look and feel.
- The default chat widget button for enhanced chat and standard chat now differs on the portal.
- An Ask Now Assist header now appears with suggested searches in a drop-down on the portal's search bar.
- The Boolean choice, static choice, and dynamic choice controls were updated to a more modern look and feel for requesters.

Yokohama Patch 1

UI chat updates

- The **New messages below** button in Virtual Agent was replaced with a simplified down-arrow indicator.
- The **New messages above** button was deprecated because Virtual Agent now auto-scrolls to the top of the oldest new message.
- The Input text bar was updated to a more modern look and feel.
- The start a new conversation icon was updated.

Changed in this release

Yokohama Patch 11

Changes to Now Assist usage measurement

Starting with Yokohama Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Conversational Platform Now Assist skills are active by default

The following Platform Now Assist skills are active by default and no longer visible in Now Assist Admin console:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Now Assist Multi-Turn Catalog Ordering
- Now Assist Q&A Genius Results
- Now Assist Topics
- Subflows and actions
- Custom skills
- AI agents

Yokohama Patch 6

Additional fallback options

There are up to five fallback options that can be presented to end users:

- **Search the web**: Triggers web search mode and uses the internet to search for the results.

  Note:
  Only the last query entered into the conversation is considered when entering web search mode via the fallback option.

- **Request a live chat**: Triggers live agent mode and routes you to a human support representative.
- **Create a generic ticket**: Creates a record.
- **End this chat**: Ends the chat.

  Note:
  This option is only available to standard chat conversations.

- **Custom fallback option**: Presents a fallback Virtual Agent topic.

Web search mode enhancements

Manually enter into web search mode via the input bar for standard and enhanced chat conversations. Web search mode includes in-line citations and the associated sources. A web search mode banner appears in enhanced chat conversations that end users can use to end the mode.

Profanity recognition response

If Now Assist Guardian is enabled and the end user's request contains profane content, the Virtual Agent responds with a message prompt to re-enter an appropriate request without profanity or offensive content.

Yokohama Patch 3

Standard chat

The existing Now Assist in Virtual Agent LLM conversational behavior received a terminology update and is now referred to as standard chat.

Yokohama Early Availability

Dynamic Translation calls

If native translation is enabled, a Dynamic Translation call is only made if an unsupported language for native translation is used.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Deprecations

- In Patch 11, *sn_aia.use_agents_in_planner* system property has been removed. The system property was used for configuring AI agent discovery behavior.
- In Patch 11, Now Assist skills page in the assistant admin guided setup has been removed due to the skills being turned on by default.
- In Patch 6, Bing support for the searching and scraping search result type is no longer supported when adding a web search tool in Now Assist Skill Kit.
- In Patch 4, support for Now Assist in Conversational IVR was removed.

Activation information

Note:
When you upgrade to Yokohama Patch 8 or later, agentic AI is the primary orchestration in Virtual Agent. For more information about agentic AI, see Agentic conversations in Virtual Agent.

Now Assist features are available with activation of any Now Assist plugin from the ServiceNow Store. The following products are available:

- Now Assist for Accounts Payable Operations (APO)
- Now Assist for App Engine

Additional requirements

Now Assist in Virtual Agent requires a license for Virtual Agent and at least one Now Assist product.

Browser requirements

Now Assist in Virtual Agent supports various browsers, including Google Chrome and Microsoft Edge. For more information, see Browser support.

Localization information

Dynamic Translation is supported for non-streaming Now Assist Virtual Agent conversations. For details, see Configure multilingual service for Now Assist applications and .

Related ServiceNow applications and features

Now Assist

ServiceNow® Now Assist uses agentic AI that is designed to enhance user productivity and efficiency through conversation and proactive experiences.

Now Assist in AI Search

The Now Assist in AI Search ServiceNow® Store application combines the power of search with the Now LLM Service agentic AI model to answer questions in user searches with actionable AI-generated summaries of relevant Knowledge articles.

Virtual Agent

Unlock your enterprise productivity with ServiceNow® Virtual Agent. Increase deflections by empowering your employees and customers to serve themselves using a friendly messaging interface, featuring prebuilt conversations powered by artificial intelligence.

Now Assist for Vulnerability Response release notes

The Now Assist for Vulnerability Response application can help your vulnerability analysts and remediation owners resolve vulnerable items autonomously with intelligent workflows and generative AI skills. Now Assist for Vulnerability Response was enhanced and updated in the Yokohama release.

Now Assist for Vulnerability Response highlights for the Yokohama release

Yokohama Patch 11

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Review changes to Now Assist usage measurement. See the "Changed in this release" section below.
- Some Now Assist skills, agents, and agentic workflows are on by default.
- Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications.
- Use Now Assist for Vulnerability Response with Security Posture Control to help you with Creating an API connector in the Security Posture Control workspace.

- Yokohama Patch 6

  Help your analysts identify duplicate host vulnerable items and analyze available remediation options with generative AI skills with Now Assist for Vulnerability Response.

  - Use Google Gemini and Anthropic Claude on AWS as AI model providers for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI.

  See Now Assist for Vulnerability Response for more information.

Important:
Now Assist for Vulnerability Response is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Important information for upgrading Now Assist for Vulnerability Response to Yokohama

For more information about required applications for Now Assist for Vulnerability Response, see Supporting information for Now Assist for Vulnerability Response.

Note:

Upgrading the Now Assist plugins activate any designated skills that were previously untouched by the customer.

- If you have the plugins installed but never touched the configuration (never activated the skill nor adjusted associated roles) of a skill, any Default On skill will be activated on a per skill basis upon upgrading.
- If you have previously toggled a skill from active and then back to inactive or have updated any roles for that skill, that skill remains inactive upon upgrading.
- You maintain full control over deactivating individual skills at any time after activation.

New in the Yokohama release

Yokohama Patch 11

Role configuration required for agentic workflows and AI agents

Agentic workflows and AI agents included with Now Assist applications require additional security configuration. If you select *`Users with selected roles`* for your user access security controls for an agentic workflow or AI agent, you must add the installed roles, or they will not execute. Data access settings must also include these roles. See the documentation for the agentic workflow or AI agent for the specific roles you must add.

Some Now Assist skills are turned on by default

The new default behavior works as follows:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- New customers: When you install a Now Assist product, designated skills are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.

Use Now Assist for Vulnerability Response in Security Posture Control

You have the option to use Now Assist to help you automatically complete some of the steps in the Connector builder in the Security Posture Control workspace. Use the Connector builder to create your own service graph connectors for Security Posture Control.

Generate insights to prioritize risks

Use generative AI to provide contextual summaries, actionable recommendations, and quick links in the Security Exposure Management Workspace, helping you prioritize critical risks and accelerate remediation.

Generate recommendation for approval impact analysis

Use generative AI to provide on-demand recommendations to approve or reject a request directly from the Exception Change Approval record, enabling approvers to make fast, consistent decisions while reducing manual analysis effort.

Yokohama Patch 8

Granular roles

The sn_vul_ai.write_rem_insights and sn_vul_ai.read_rem_insights granular roles have been added and are inherited by the sn_vul.vulnerability_admin and sn_vul.vulnerability_analyst roles automatically. These roles provide you with more control over read and write access for the records on the Remediation Compliance Insights [sn_vul_ai_remediation_insights] caching table. The VR.System role also inherits these granular roles so background job execution for the workflow can occur.

Yokohama Patch 6

Identify duplicate vulnerable items with Now Assist for Vulnerability Response

Use generative AI to identify duplicates for your active host vulnerable items that are imported by your vulnerability scanners. Use generative AI reasoning with Now Assist to help your analysts differentiate between primary vulnerability items (VITs) and those VITs that are duplicates. Close duplicate VITs and move their associated detections automatically to the primary VIT records.

Suggest preferred vulnerability solutions with Now Assist for Vulnerability Response

Use generative AI to analyze available remediation options pulled from integrated third-party products like Red Hat, Tenable for Vulnerability Response, or internal solution management systems. Evaluate each option against the specific configuration item context, for example, the OS version or software version, and get recommendations for the most viable fix for implementation.

New third-party AI model provider options available for all Now Assist applications

Google Gemini and AWS Claude are available for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI.

Yokohama Patch 3

Using agentic workflows in Now Assist for Vulnerability Response

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The Assess vulnerability exposure agentic workflow enables vulnerability managers to determine your exposure to vulnerabilities.

- Determine your exposure to the most current Cybersecurity and Infrastructure Security Agency (CISA) known vulnerabilities in your environment and assess their potential impact to your configuration items (CIs) and business services.
- Identify assets with Common Vulnerabilities and Exposures (CVEs).
- Determine the number of active vulnerability items (VITs) that correspond to CVEs. Create watch topics for VIT remediation.

The Analyze vulnerability remediation status agentic workflow enables vulnerability managers to monitor and assess remediation target compliance.

- Track Service Level Agreement (SLA) compliance - Understand how effectively your organization is meeting remediation goals for vulnerabilities based on your SLAs.
- Analyze missed SLAs by severity, assignment group, and configuration item (CI) class - Pinpoint gaps in remediation by categorizing overdue VITs based on severity, assignment groups, and CI classes to enable targeted interventions and smarter resource allocation.

Changed in this release

Yokohama Patch 11

Changes to Now Assist usage measurement

Starting with Yokohama Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Some Now Assist skills are now turned on by default

The following Now Assist skills for Now Assist for Vulnerability Response are activated by default.

- Recommend preferred solution for VIT (VR)
- Vulnerable item de-duplication (VR)
- Approval Recommendation (VR)(USEM)
- Security Exposure Management (SEM) Insights (VR)(USEM)
- SPC Setup Connector (Security Posture Control)

The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.

Configure ACLs for AI agents and agentic workflows

Configure the access control lists for who can discover and trigger AI agents and agentic workflows in their guided setups in AI Agent Studio. You can determine whether an AI agent or agentic workflow behaves as a dynamic user or as an AI

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

user. You can also specify if an AI agent or agentic workflow can be available to all authenticated users or publicly available.

Activation information

Install Now Assist for Vulnerability Response by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

ServiceNow AI Lens release notes

With ServiceNow AI Lens, which is a ServiceNow® Now Assist application, you can use generative AI to scan, extract, comprehend, and synthesize data to optimize your workflows. ServiceNow AI Lens is a new application in the Yokohama release.

ServiceNow AI Lens highlights for the Yokohama release

Yokohama Patch 11

- Trigger ServiceNow AI Lens from the Now Mobile® application to extract data from artifacts and auto-fill fields in a form.
- Fill the Catalog Item form fields by triggering ServiceNow AI Lens from Service Portal.

Yokohama Patch 6

- Use the Lens actions to define default instructions, trigger options, custom context, transform response logic, and post processing instructions for ServiceNow AI Lens execution.
- Configure Lens actions to launch ServiceNow AI Lens from any part of the ServiceNow AI Platform, such as a workspace form or a portal.
- Trigger ServiceNow AI Lens from a Virtual Agent conversation on a mobile device or in a portal.
- View captured images that are now attached to the record that is auto-filled using ServiceNow AI Lens.
- Use Google Gemini and Anthropic Claude on AWS as AI model providers for ServiceNow AI Lens in addition to Azure OpenAI.

Yokohama Patch 3

- Boost productivity by scanning artifacts and auto-filling information into forms instead of manually entering the information into forms.
- Provide specific instructions to ServiceNow AI Lens on what to do with the data that it captures.
- Get insights from multiple images so that you know what actions to do next.

See ServiceNow AI Lens for more information.

Important:
ServiceNow AI Lens is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Yokohama Patch 11

Auto-fill the Catalog Item form in the Service Portal

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Fill the Catalog Item form fields by triggering ServiceNow AI Lens from Service Portal. ServiceNow AI Lens extracts data from one or more artifacts and auto-fills the relevant fields in the form.

Handle post-processing in the standalone mode

The following fields have been added to handle post-processing timeout for previewing data in the standalone mode:

- **Wait for processed response**: Option to wait for ServiceNow AI Lens to display the output of post-processing on the Preview window. If turned on, it waits for the post-processing output. If turned off, it doesn't wait for post-processing output, but post-processing continues in the background.
- **Max wait time**: Maximum time ServiceNow AI Lens waits to display the output of post-processing. If the output doesn't appear within this duration, the session times out while the post-processing continues in the background until complete.

Use ServiceNow AI Lens in Now Mobile®

Trigger ServiceNow AI Lens from the Now Mobile® application to extract data from artifacts and auto-fill forms on your mobile device.

Yokohama Patch 6

ServiceNow AI Lens UI enhancement

Use ServiceNow AI Lens to launch the scanner window by using the context defined in Lens actions or as a standalone application. You can preview the gathered insights or extracted data. You can also see the logged-in user and instance details.

Use Lens actions to customize Lens behavior

- Define Lens behavior depending on how ServiceNow AI Lens is triggered and what context is set. With Lens actions, you can customize how a classic form is auto-filled. You can define default instructions, trigger options, custom context, transform response logic, and post processing instructions for the ServiceNow AI Lens execution.

  For example, you can define a Lens action that is used when Lens is triggered from an instance to populate a form of a table. You can also define form fields that must be used as context.

- As part of your integration logic, configure a Lens action as one of the steps to invoke a ServiceNow AI Lens service from any part of the ServiceNow AI Platform, such as a workspace form or portal.

Use ServiceNow AI Lens in Virtual Agent

Trigger ServiceNow AI Lens from a Virtual Agent conversation by using ServiceNow AI Lens topic in Virtual Agent.

Auto-attach images to a record

View captured images that are automatically attached to the record that is auto-filled using ServiceNow AI Lens. You can view the images to understand the source of the auto-filled information.

New third-party AI model provider options available for all Now Assist applications

Use Google Gemini and Anthropic Claude on AWS as AI model providers for ServiceNow AI Lens in addition to Azure OpenAI.

Yokohama Patch 3

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Capture data

Get actionable insights from such visual data as images, handwritten notes and forms, emails, websites, and applications. For example, ServiceNow AI Lens can scan an email to gather data for auto-filling the fields on the Incident form.

Act on visual data

Provide instructions to Now Assist on what to do with the captured data. For example, you can convert the extracted data into a JSON format.

Launch from ServiceNow forms

Launch ServiceNow AI Lens from a form to fill the extracted data automatically into the form fields.

Use as a standalone application

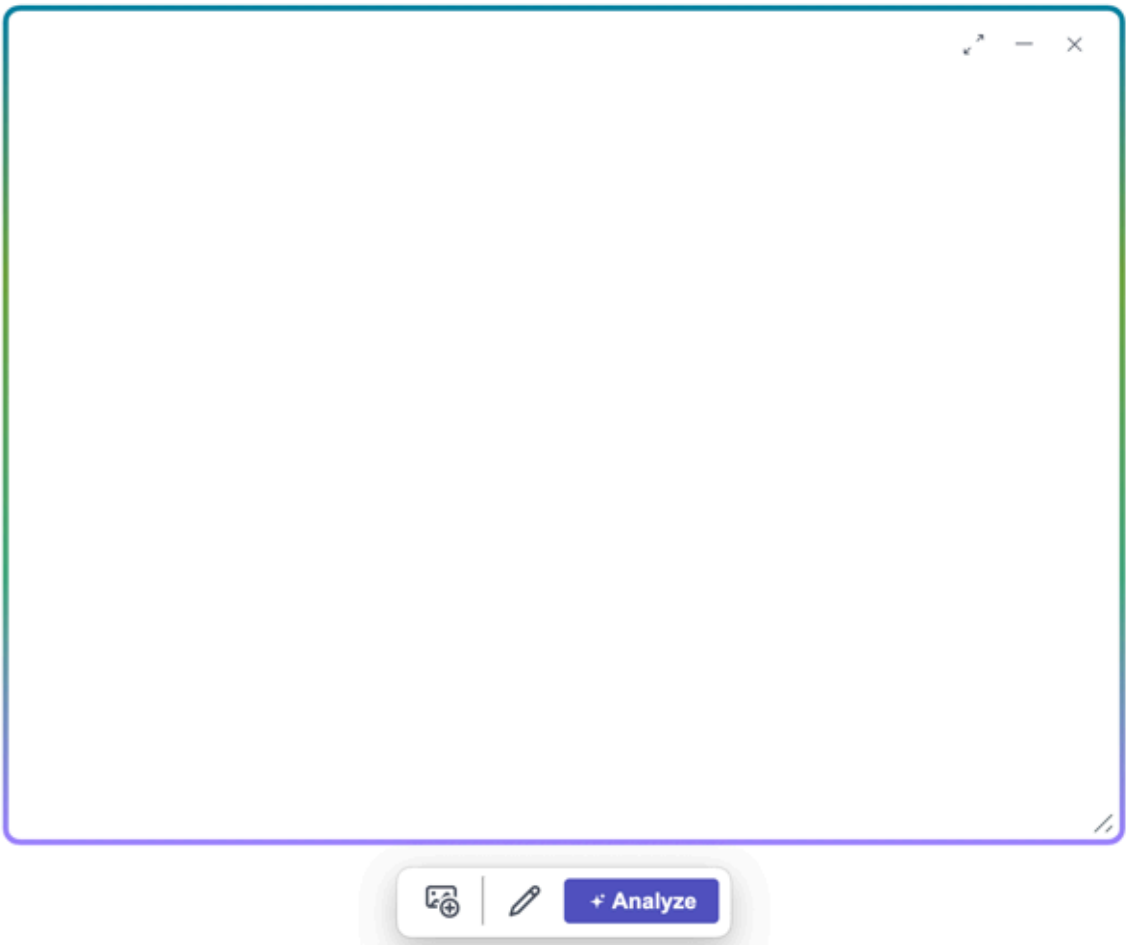
Use ServiceNow AI Lens as a standalone application for previewing extracted data when you're connected to a ServiceNow instance.

UI changes

Yokohama Patch 11

Changes in the scanner window UI

The UI of the scanner window has been changed. See the following image.



When you open the scanner window, the toolbar is displayed outside of it. However, when you maximize the window, the toolbar moves inside.

- New customers: When you install a Now Assist product, designated skills are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.

Activation information

ServiceNow AI Lens is available with activation of any Now Assist plugin from the ServiceNow Store. For more information about the prerequisites for using ServiceNow AI Lens, see Configure ServiceNow AI Lens.

Related ServiceNow applications and features

Now Assist

Help improve productivity and efficiency in your organization, deliver better self-service, recommend actions, provide answers, and empower your users to search more effectively.

Now Assist Admin console

The Now Assist Admin console provides you with quick and easy access to the important information that you must set up, configure, and monitor in Now Assist applications and features.

Now Assist skills

Now Assist products provide generative AI skills that are tailored to meet the needs of users in different workflows, including content summarization in Docs.

Now Assist Skill Kit release notes

The ServiceNow® Now Assist Skill Kit application enables AI developers to create custom skills and to have greater flexibility with Now Assist's generative AI capabilities. Now Assist Skill Kit was enhanced and updated in the Yokohama release.

Now Assist Skill Kit highlights for the Yokohama release

Yokohama Patch 11

- Review changes to Now Assist usage measurement.
- Some Now Assist skills, agents, and agentic workflows are on by default.
- Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Yokohama Patch 6

- Use UI Builder to deploy custom skills.
- Import data into Now Assist Skill Kit with a CSV file.
- Use AI to create ground truth for your data.
- Use a custom data generator to create synthetic datasets.

- Users can create synthetic data in Now Assist Data Kit.
- Generated synthetic data can be saved as a dataset.
- Add and manage tools of a custom skill, visually in the new Tools editor, including conditional execution of tools.
- Customize ServiceNow skills with new prompts or providers in Now Assist Skill Kit to suit your specific business needs.

See Now Assist Skill Kit for more information.

Important:
Now Assist Skill Kit is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Important information for upgrading Now Assist Skill Kit to Yokohama

If you customized UI actions or other items that are associated with Now Assist skills, ensure that your customized code is updated with the new skill releases. Otherwise, certain functions may not work as expected.

If you run into issues when you're upgrading a Now Assist product, see KB1637452: Issues and mitigation for Now Assist (Generative AI) Applications and Plugin updates. You may need to log in to view the article.

New in the Yokohama release

Yokohama Patch 6

New skill deployment option

Deploy skills using UI Builder.

Choose a language for data generation

When you create synthetic data, you can select what language you want to receive the data in.

AI-assisted ground truth

Use AI to assist creating ground truth for your data.

Import data with a CSV file

Import data from a CSV file to create a dataset.

Create a custom data generator

Create and use a custom data generator to create synthetic data.

Customize ServiceNow skills in Now Assist Skill Kit to tailor skills to meet your specific business requirements.

Eligible skills provided in ServiceNow Now Assist applications can be cloned in Now Assist Skill Kit so that you can edit the prompt or change the AI service provider. Editing the prompt enables you to arrange the formatting and content of the large

Industrial Process Manager release notes

The ServiceNow® Industrial Process Manager application enables your teams to map and visualize the industrial equipment models and associated production processes at individual facilities. Industrial Process Manager was enhanced and updated in the Yokohama release.

Industrial Process Manager highlights for the Yokohama release

- Identify sites on your equipment model entity that aren't in use with a new **Operational Status** field value in the Industrial Workspace.
- Filter out **Not in use** or **Retired** equipment model entities in the Industrial Workspace using the **Operational Status** field value.
- Sort equipment model entities for a Site using the new value **Processing Order**.
- View the **Daily Activity** tab for a summarized version of the previous day's activities on Operational Technology (OT) devices.
- Organize your OT device data by capturing the mapped equipment model entity for an OT device.
- View the relationships between devices and other configuration items (CIs) with the Unified Map experience in the Industrial Workspace.

See Industrial Process Manager for more information.

Important:
Industrial Process Manager is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Set the operational status for equipment model entity sites

Set equipment model entity sites to not in use in the Industrial Workspace by selecting the **Not in use** value for the **Operational Status** field.

Filter out Not in use and Retired equipment model entities from view

Filter out **Not in use** and **Retired** equipment model entities in the Industrial Workspace using the **Operational Status** field value for a site.

Add child equipment model entities to a Favorites view in the Industrial Workspace

Use the Favorite icon (☆) to add a child equipment model entity as a favorite in the Equipment Model Manager on the Industrial Workspace. You can then use the **Show Favorites** toggle to display them.

Assign Processing Order to sort equipment model entities in a site

Use the **Processing Order** field to assign values to an equipment model entity that determines their functional importance in a site.

The Daily Activity tab in the Equipment Model view in the Industrial Workspace

View the list of previous day's activities on the **Daily Activity** tab of an OT device. The activities include adding an OT device and changing the field-level attributes for existing OT devices. For example, IP address, Device Criticality, and more.

Capture the mapped equipment model entity for your OT devices

Organize your OT device data efficiently by adding the primary equipment model entity for your OT devices. You can also automatically update the primary equipment model entity for your existing devices.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Use the Unified Map experience in the Industrial Workspace

View the relationships between OT devices and other CIs with the Unified Map experience. You can also view related items, such as OT incidents and change requests.

Map Discovery detected devices using the Automated Mapping Across Zone-based IP Network Groups (AMAZING) feature

Map Discovery detected devices that have an IP address on their Network Adapter record using the AMAZING feature.

UI changes

Not in use value for the Operational Status field

The **Not in use** value was added as an **Operational Status** field option in an equipment model entity site record in the Industrial Workspace.

All OT Devices by Managed Network list

The All OT Devices by Managed Network list was added to the Industrial Process Manager module on the ServiceNow AI Platform.

Favorite icon in the Equipment Model Manager of the Industrial Workspace

In the Equipment Model Manager on the Industrial Workspace, the Favorite icon (☆) was added to add child equipment model entities as a favorite in your system.

Show Favorites toggle in the in the Equipment Model Manager of the Industrial Workspace

In the Equipment Model Manager on the Industrial Workspace, you can switch on the **Show Favorites** toggle to view only your favorite equipment model entities. The **Show Favorites** toggle focuses your UI view on specific equipment model entities to help you stay on track while making changes in the Equipment Model Manager.

List expansion during equipment model entity search in the Equipment Model Manager of the Industrial Workspace

When you use the search function to find an equipment model entity, the list expands to show and highlight the search entity.

Mapped equipment model entity column

The Mapped equipment model entity column was added to the Industrial Workspace list views for OT devices.

Mapped OT Devices list

The Mapped OT Devices list is now available in the Industrial Workspace list view so you can view the mapping between an equipment model entity and an OT device.

ISA Hierarchy search bar

A search bar was added to the ISA Hierarchy in the Industrial Workspace so you can search for equipment model entity names.

View OT Unified Map button

The **View OT Unified Map** button was added to the equipment model entity record in the Industrial Workspace to access the Unified Map.

View OT Unified Map button

The **View OT Unified Map** button was added to OT incident records, OT change request records, and remediation task records to access the Unified Map associated with the opened record.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Industrial Process Health icon

The Industrial Process Health icon ( ) was added to OT incident records, OT change request records, and remediation task records to access the Unified Map in the record side panel.

Changed in this release

Viewing multiple records at once in the Equipment Model Manager

In the Equipment Model Manager of the Industrial Workspace, view multiple records and keep the record context available instead of only viewing one record at a time. When creating or opening multiple records, the records open in single row of tabs at the same level so you can navigate back to other opened records.

Activation information

Install Industrial Process Manager by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Related ServiceNow applications and features

Operational Technology Manager

The ServiceNow Operational Technology Manager enables you to aggregate OT device data from multiple sources so that you can build the foundational data relationships used in the Industrial solution.

Now Assist for Operational Technology Manager (OTM) release notes

The ServiceNow® Now Assist for Operational Technology Manager (OTM) application helps streamline processes in the Industrial Workspace related to your Operational Technology (OT) device data. Now Assist for Operational Technology Manager (OTM) is a new application in the Yokohama release.

Now Assist for Operational Technology Manager (OTM) highlights for the Yokohama release

Yokohama Patch 11

- Review changes to Now Assist usage measurement.
- Some Now Assist skills, agents, and agentic workflows are on by default.
- Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications.

Yokohama Patch 10

- Find OT Configuration Management Database (CMDB) records more quickly by using the OT CMDB search function.
- Simplify the upload, validation, and import of your OT device data by using the Import OT device spreadsheet into OT CMDB agentic workflow.

See Now Assist for Operational Technology Manager (OTM) for more information.

Important:
Now Assist for Operational Technology Manager (OTM) is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Now Assist for Operational Technology Manager (OTM) features

Yokohama Patch 10

Search for related records in an OT CMDB table

Use the OT CMDB search function to find an OT configuration item (CI) and OT device information in an OT CMDB table.

Upload, validate, and import your OT device inventory spreadsheet using the Import OT device spreadsheet into OT CMDB agentic workflow

Use the Import OT device spreadsheet into OT CMDB agentic workflow to begin the process for uploading, validating, and importing your OT device inventory into ServiceNow.

Changed in this release

Yokohama Patch 11

Changes to Now Assist usage measurement

Starting with Yokohama Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Some Now Assist skills, agents, and agentic workflows are turned on by default

The skills are automatically available to appropriate role users for the application, such as ITIL roles on incident forms or change forms. This change simply activates the skill and does not touch the roles that may be needed to use the skill. The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills and agentic workflows are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill, agent, or agentic workflow is turned on automatically (the AI asset was never configured and turned on, then turned off again). Previously configured skills and agentic workflows that were turned on, then off, remain inactive.

Role masking

Role masking enables users to limit the roles and privileges of agentic workflows during tool execution. Agentic workflows and their AI agents that get installed with Now Assist applications are assigned pre-defined roles. If you select *`Users with specific roles`* for user access, you must configure the security controls to include these roles. Data access settings must also include these roles. For the instructions to change the security controls, see Define security controls for an agentic workflow.

Activation information

Now Assist for Operational Technology Manager (OTM) is a ServiceNow AI Platform feature that is available with activation of the Operational Technology Manager (com.sn_ot_foundation). For details, see Install Operational Technology Manager.

Related ServiceNow applications and features

Operational Technology Manager

Using Now Assist for OTM with the Operational Technology Manager, you can efficiently manage your OT device data.

Operational Technology Change Management release notes

The ServiceNow® Operational Technology Change Management application enables engineers to implement changes to Operational Technology (OT) devices and production processes. Operational Technology Change Management was enhanced and updated in the Yokohama release.

Operational Technology Change Management highlights for the Yokohama release

In an OT change request record in the Industrial Workspace, use new related lists to create an OT incident record related to the OT change request, or link an existing OT incident record to the OT change request.

See Operational Technology Change Management for more information.

Important:
Operational Technology Change Management is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

UI changes

Incidents Fixed by Change related list

The Incidents Fixed by Change related list was added to the OT change request record in the Industrial Workspace. You can use this related list to create an OT incident or link an existing OT incident that has been fixed by the OT change request.

Incidents Caused by Change related list

The Incidents Caused by Change related list was added to the OT change request record in the Industrial Workspace. You can use this related list to create an OT incident or link an existing OT incident that is needed because of the OT change request.

Activation information

Install Operational Technology Change Management by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Related ServiceNow applications and features

IT Service Management

When integrated with Operational Technology Change Management, the ServiceNow IT Service Management application enables engineers to resolve OT device and production process issues.

Industrial Process Manager

Use the ServiceNow Industrial Process Manager application to create the ISA-95 Equipment Model data foundation that is required for the ServiceNow Industrial solution, enabling you to create your own version of the equipment models in each of your industrial solution sites.

Operational Technology Incident Management release notes

The ServiceNow® Operational Technology Incident Management application enables engineers to resolve Operational Technology (OT) device and production process issues. Operational Technology Incident Management was enhanced and updated in the Yokohama release.

Operational Technology Incident Management highlights for the Yokohama release

Relate an OT incident to an OT change request by creating the incident from the change record in the Industrial Workspace.

See Operational Technology Incident Management for more information.

Important:
Operational Technology Incident Management is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Create an OT incident from an OT change request

Create an OT incident related to an OT change request directly from the OT change record in the Industrial Workspace.

Activation information

Install Operational Technology Incident Management by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Related ServiceNow applications and features

IT Service Management

When integrated with Operational Technology Incident Management, the ServiceNow IT Service Management application enables engineers to resolve OT device and production process issues.

Industrial Process Manager

Use the ServiceNow Industrial Process Manager application to create the ISA-95 Equipment Model data foundation that is required for the ServiceNow Industrial solution, enabling you to create your own version of the equipment models in each of your industrial solution sites.

Operational Technology Manager release notes

The ServiceNow® Operational Technology Manager application enables you to aggregate Operational Technology (OT) device data from multiple sources so that you can build the foundational data relationships in the Industrial solution. Operational Technology Manager was enhanced and updated in the Yokohama release.

Operational Technology Manager highlights for the Yokohama release

- View the Operational Technology Manager (OT) device-to-device connections with additional information such as port and protocol values.
- Review the OT applications and versions that you have installed on the About Industrial Workspace page.
- Keep your OT device data updated by using the Configuration Management Database (CMDB) OT class model updates and UI enhancements.
- Track your OT device data with the new Operational Technology Visibility dashboard.
- Group OT devices using CMDB groups to support non-CMDB tables that must be converted from IT to OT.
- Keep your OT device data updated by using the Configuration Management Database (CMDB) OT class model updates and UI enhancements.
- Improve the processes for importing and classifying your OT device data with updates and UI enhancements for the Pre-import OT Worksheet Entry Review (POWER) tool.

See Operational Technology Manager for more information.

Important:
Operational Technology Manager is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

About the Industrial Workspace page

Use the About Industrial Workspace page on the ServiceNow AI Platform to view the OT applications and the versions that you have installed on your instance.

Search for a record in the Industrial Workspace

Search for CMDB tables in the Industrial Workspace to find CMDB related records. The search function was previously limited only to other Operational Technology records.

Check whether an OT device is virtual

Check whether an OT device is virtual using the **Is Virtual** field for OT devices in the following categories:

- OT Supervisory System
- OT Control System
- OT Field Devices
- Unclassed OT Devices

Create remediation tasks for invalid staging records from an import task

After validating the imported staging records, create remediation tasks for invalid staging records directly in the import task record.

Operational Technology Visibility dashboard

Track your OT data across different sites with the Operational Technology Visibility dashboard available in the Industrial Workspace.

Automatic conversion of IT to OT devices using CMDB groups

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Use CMDB groups to group IT configuration items (CIs) based on additional information, such as software installed, so that you can convert the CIs to OT devices.

Mapped equipment model entity for your OT devices

Identify the equipment model entity that your OT devices are mapped to in the Industrial Workspace and help group your device data by equipment model entity.

Important actions configuration on the OT Action-Oriented Landing Page

Configure the OT Action-Oriented Landing Page by using the **Sort items** field for your important actions.

CMDB OT class model updates

Leverage an enhanced OT user experience and make additional configurations for your OT devices with the following CMDB OT class model updates:

- The OT Device Network Connection [sn_ot_device_network_connection] table references the CMDB CI relationships [cmdb_rel_ci] table to support device-to-device connections on the OT network.
- The Key Value [cmdb_key_value], Software Instance [cmdb_software_instance] and Firmware Install [cmdb_firmware_install] table references were added to the OT view on IT and OT classes.
- The Backup Storage Information [cmdb_backup_storage_information] and Backup Job Execution History [cmdb_backup_job_execution_history] tables reference the CMDB CI relationships [cmdb_rel_ci] table to support backup management use cases.
- Product Instance Identifier was added as an identifier for the OT Identification Rule.
- The OT backup management model was added to help you store multiple backups against a configuration item.
- Firmware Installation [cmdb_firmware_install], Key Value [cmdb_key_value], and Software Instance [cmdb_software_instance] tables were added as a related entry for OT classes.
- The **ire_criterion_attribute** attribute was added to the OT Entity [cmdb_ot_entity] table to act as a criterion attribute for an OT entity-related entry.
- Optional conditions to filter the records during identification and reconciliation were added to the OT identification rules.
- The OT Class Mapping Template [ot_class_mapping_template] table was introduced to capture class mappings used for Service Graph Connectors.
- Required conditions were added under **Advanced Configuration** that must be met for lookup identification rules.
- Industrial printer (industrial_printer) was added as an OT device type.

Pre-import OT Worksheet Entry Review (POWER) tool updates

Import OT devices with distributed Microsoft Excel spreadsheets to help manage your OT system and its devices. The Pre-Import OT Worksheet Entry Review (POWER) tool includes the following new functionality:

- Improve validations with access to ISA sites using the cmdb_ot_isa_viewer role that has been added to the ot_staging_user role needed for running validations.
- Upload, validate, and import Microsoft Excel spreadsheet data for the Service Graph Connector for Microsoft Excel by creating an import task and attaching the spreadsheet to the import task record.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Firmware Installation records can be created when a firmware version is available.
- OT entity update issues can be resolved through the Service Graph Connector for Microsoft Excel.
- The new Industrial Core plugin (com.sn_ot_core) is required for class mapping when using the Service Graph Connector for Microsoft Excel.

UI changes

OT device related items and related lists

The Key Value [cmdb_key_value], Software Instance [cmdb_software_instance], and Firmware Install [cmdb_firmware_install] related lists were added to the OT view on IT and OT classes to view the following information:

- Information related to the OT device populated through the integrations and captured as Key Value pairs.
- Software installed on the OT device if Software Asset Management isn't available.
- Firmware associated with the OT device.

You can view these related lists on the ServiceNow AI Platform® and in the Industrial Workspace Admin.

OT Excel SGC - Import Task list module in the Industrial Workspace

The OT Excel SGC - Import Task list module has been added to the Industrial Workspace list view. From the available lists, you can access the import task functionality for the Service Graph Connector for Microsoft Excel.

OT Excel SGC - Remediation Task list module in the Industrial Workspace

The OT Excel SGC - Remediation Task list module has been added to the Industrial Workspace list view. From the available lists, you can access the remediation task records created from an import task.

View and edit device to device connections

The Device to Device Connections list has been added to the OT Network menu available in the Industrial Workspace List view. You can view the device connections in detail using this list. Also, the Device to Device Connections related list was added to the **Related Records** tab on the OT device record in the ServiceNow AI Platform.

Is Virtual field for OT devices

Identify whether an OT device is virtual through the **Is Virtual** field added to the OT device form in the Industrial Workspace.

OT Subnet Mappings related list

The OT Subnets related list has been renamed OT Subnet Mappings in both the Industrial Workspace and the ServiceNow AI Platform when viewing an OT device record.

Manufacturer and Model Number fields

The **Manufacturer** and **Model Number** fields have been removed from the OT device list and form views on both the ServiceNow AI Platform® and in the Industrial Workspace.

Request chart in the OT Action-Oriented Landing Page

A chart for OT requests was added to the OT Action-Oriented Landing Page so you can track your requests in the Industrial Workspace.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Sort items field in the OT Action-Oriented Landing Page

The **Sort items** field was added to the OT Action-Oriented Landing Page under the **Important Actions** section.

Mapped Equipment Model Entity column

The Mapped Equipment Model Entity column was added to the Industrial Workspace and ServiceNow AI Platform list views for OT devices. Use this column to identify the equipment model entity an OT device is mapped to.

Dashboard Library icon

The Dashboard Library icon ( ) was added to the Industrial Workspace and contains the available dashboards for Operational Technology, including the Operational Technology Visibility dashboard.

Site filter on the Operational Technology Visibility dashboard

A site filter was added to the Operational Technology Visibility in the Industrial Workspace so you can filter the displayed data by a chosen site.

Changed in this release

OT device related items and related lists

The Key Value [cmdb_key_value], Software Instance [cmdb_software_instance], and Firmware Install [cmdb_firmware_install] related lists were added to the OT view on IT and OT classes to view the following information:

- Information related to the OT device populated through the integrations and captured as Key Value pairs.
- Software installed on the OT device if Software Asset Management isn't available.
- Firmware associated with the OT device.

You can view these related lists on the ServiceNow AI Platform® and in the Industrial Workspace Admin.

OT Excel SGC - Import Task list module in the Industrial Workspace

The OT Excel SGC - Import Task list module has been added to the Industrial Workspace list view. From the available lists, you can access the import task functionality for the Service Graph Connector for Microsoft Excel.

OT Excel SGC - Remediation Task list module in the Industrial Workspace

The OT Excel SGC - Remediation Task list module has been added to the Industrial Workspace list view. From the available lists, you can access the remediation task records created from an import task.

View and edit device to device connections

The Device to Device Connections list has been added to the OT Network menu available in the Industrial Workspace List view. You can view the device connections in detail using this list. Also, the Device to Device Connections related list was added to the **Related Records** tab on the OT device record in the ServiceNow AI Platform.

Is Virtual field for OT devices

Identify whether an OT device is virtual through the **Is Virtual** field added to the OT device form in the Industrial Workspace.

OT Subnet Mappings related list

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The OT Subnets related list has been renamed OT Subnet Mappings in both the Industrial Workspace and the ServiceNow AI Platform when viewing an OT device record.

Manufacturer and Model Number fields

The **Manufacturer** and **Model Number** fields have been removed from the OT device list and form views on both the ServiceNow AI Platform® and in the Industrial Workspace.

OT Devices tab data

The following data available in the **OT Devices** tab of the OT Manager dashboard has been moved to the Operational Technology Visibility dashboard.

- New OT devices discovered
- Inactive OT devices
- OT Devices overview
  - Total CMDB OT devices
  - Unclassed OT devices
  - Unassigned OT devices
  - Unmapped OT devices
- OT devices by category
  - Supervisory systems
  - Control systems
  - Field devices
  - Computers and servers
  - Network Gear
  - Industrial IoT
- OT devices by Purdue level
- OT devices by type (Top Level)
- OT devices by manufacturer (Top Level)
- OT devices by criticality

Deprecations

- For the Service Graph Connector for Microsoft Excel, the following items were deprecated on the ServiceNow AI Platform:
  - The SG OT Excel Staging Task table
  - The Staging task reference on the SG OT Excel Staging table
- The OT Manager dashboard is no longer available in the Industrial Workspace.
- Starting with the Yokohama release, Service Graph Connector for Microsoft Defender for IoT (On-premises Management Console) is being prepared for future deprecation. It will be hidden and no longer activated on new instances but will continue to be supported.

Activation information

Install Operational Technology Manager by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting

requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Related ServiceNow applications and features

CMDB CI Class Models

The CMDB CI Class Models store application enables Operational Technology Manager to import and classify device data in ServiceNow. The Operational Technology Manager application automatically installs the latest version of the Operational Technology (OT) extension classes, available in the CMDB CI Class Models application in the ServiceNow Store.

Operational Technology Vulnerability Response release notes

The ServiceNow® Operational Technology Vulnerability Response application enables you to prioritize Operational Technology (OT) vulnerabilities at a site level. Operational Technology Vulnerability Response was enhanced and updated in the Yokohama release.

Operational Technology Vulnerability Response highlights for the Yokohama release

- Configure Operational Technology Vulnerability Response from the Security Exposure Management Workspace (SEM Workspace).
- Access the Operational Technology Vulnerability Response Risk Calculator plugin directly without loading the demo data.
- View all vulnerable items that have been created from the OT Vulnerable Items list in the Industrial Workspace.
- View all remediation tasks that have been created from the OT Remediation Tasks list in the Industrial Workspace.
- View all vulnerability exceptions that have been created from the OT Vulnerability Exception Approvals list in the Industrial Workspace.
- Hardware Vulnerability Assessment is available for firmware discovery models without normalized data.
- Assess the vulnerabilities for the firmware of the OT assets with Hardware Vulnerability Assessment.
- View solutions or details of a vulnerable item (VIT) with enhanced UI options.
- Manage your vulnerable items and Operational Technology Vulnerability Response data with the enhanced OTVR (PA) dashboard in the Industrial Workspace.
- View the risk score of your OT devices at each level of the equipment model with the OT Vulnerability Risk Rollup dashboard.

See Operational Technology Vulnerability Response for more information.

Important:
Operational Technology Vulnerability Response is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Configuring Operational Technology Vulnerability Response from the SEM Workspace

Starting from Operational Technology Vulnerability Response version 30.0.x, users may be redirected to the Unified Security Exposure Management (USEM)

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Workspace to perform some configuration tasks. The Vulnerability Response plugin is consolidated under USEM from version 30.0.x.

Demo data not required for Operational Technology Risk Calculator plugin

You can directly access and use the Operational Technology Vulnerability Response Risk Calculator without loading the demo data while installing the plugin. In previous releases, the risk calculation was included as part of the demo data.

Enhanced features for Hardware Vulnerability Assessment for OT devices

The following enhancements are available in Hardware Vulnerability Assessment:

- Assessments without Normalization: Ability to assess discovery models without content available for normalization.
- Confidence Scores: New scoring mechanism for all types of assessments.
- Version Range Support: The range information provided by the National Vulnerability Database (NVD) is used to create assessments without explicitly creating Common Platform Enumeration (CPEs) in the NVD.
- Partial assessment for partially normalized discovery model: Creates partial assessments for discovery models without firmware version. The partial assessments are done if the other versions of the discovery model have the same publisher and model.
- Expiring of assessments: If you update the firmware version of a CI, the corresponding normalized discovery model also updates. The assessment records based on the older firmware version expires while new assessments are generated for new firmware version.

Hardware Vulnerability Assessment menu in the Industrial Workspace

Automatically and periodically assess the OT device firmware vulnerabilities that are in your inventory and create vulnerable items against the impacted assets (CI).

Vulnerability risk scores on the OT Risk Management dashboard

View a table of vulnerability risk scores for your OT devices at each level of the equipment model with the OT Risk Management dashboard.

Enhanced OTVR (PA) dashboard experience

View and manage all of your OT vulnerability data and data visualizations in a centralized location with the enhanced OTVR (PA) dashboard, which is accessible on the Dashboard Library page.

UI changes

OT Vulnerable items list in the Industrial Workspace

The All list was added in the OT Vulnerable Items list available in the Industrial Workspace list menu. You can use this section to view all the vulnerable items (VITs) that have been created for your OT environment. You must be assigned the user_role to view all VITs.

OT Remediation Tasks list in the Industrial Workspace

The All list was added in the OT Remediation Tasks list available in the Industrial Workspace list menu. You can use this section to view all the remediation tasks that have been created for the respective VITs in your OT environment. You must be assigned the user_role to view the remediation tasks.

OT Vulnerability Exception Approvals list in the Industrial Workspace

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Use this menu to view all vulnerability exceptions that have been approved by you or assigned to you. This menu enables you to view any change of state for approvals and details of requested approvals for a given exception triggered from the Industrial Workspace.

Dashboard Library icon

The Dashboard Library icon ( ) was added to the Industrial Workspace and contains the available dashboards for Operational Technology, including the OTVR (PA) dashboard.

Site filter on the OTVR (PA) dashboard and the Risk Management dashboard

A site filter was added to both the OTVR (PA) dashboard and the OT Risk Management dashboard in the Industrial Workspace so you can filter the displayed data by a chosen site.

Vulnerability Solutions section in the List menu of Industrial Workspace

A new Vulnerability Solutions section was added in the List menu ( ) of the Industrial Workspace. In the Solutions section, you can view the solutions for the enlisted VITs.

Overview tab for a vulnerable item

The **Overview** tab in a VIT provides important information about the VIT, such as State, Risk Rating, Risk Score, Associated Vulnerability, and more.

Changed in this release

OT Vulnerabilities tab data

The following data that was available in the **OT Vulnerabilities** tab of the OT Manager dashboard has been moved to the OTVR (PA) dashboard:

- Total OT Vulnerable Items
- New OT Vulnerable Items
- OT Unassigned Vulnerable Items
- OT Vulnerable Items by State
- OT Vulnerable Items by Risk Rating

Deprecations

- The **OT Vulnerabilities** tab is no longer available on the OT Manager dashboard in the Industrial Workspace.
- Starting with the Yokohama release, **Vulnerability Response Integration with Microsoft Defender for IoT (On-premises Management Console)** integration is being prepared for future deprecation. It will be hidden and no longer activated on new instances but will continue to be supported.

Activation information

Install Operational Technology Vulnerability Response by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Related ServiceNow applications and features

CMDB CI Class Models

The CMDB CI Class Models application adds class models that extend the CMDB class hierarchy, including class descriptions, identification rules, identifier entries, and dependent relationships.

Vulnerability Response

When integrated with Operational Technology Vulnerability Response, the ServiceNow Vulnerability Response application aids you with prioritizing and resolving OT vulnerabilities based on process criticality.

Operational Technology Manager

The ServiceNow Operational Technology Manager application enables you to aggregate OT device data from multiple sources so that you can build the foundational data relationships used in the Industrial solution.

Industrial Process Manager

Use the ServiceNow® Industrial Process Manager application to create the ISA-95 Equipment Model data foundation that is required for the Industrial solution, enabling you to create your own version of the equipment models in each of your industrial solution sites.

Recommended Actions for Operational Technology Service Management (OTSM) release notes

The ServiceNow® Recommended Actions for Operational Technology Service Management (OTSM) allows you to set up and apply real-time actionable recommendations for speeding up the triage process and resolving issues quickly across various records in the Industrial Workspace, including Operational Technology (OT) incidents Recommended Actions for OTSM is a new feature in the Yokohama release.

Recommended Actions for OTSM highlights for the Yokohama release

Display relevant actions to users based on the context of an OT incident record.

See Recommended Actions for Operational Technology Service Management (OTSM) for more information.

Important:
Recommended Actions for OTSM is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Recommended Actions for OTSM features

Apply Recommended Actions to your Operational Technology incidents

Use Recommended Actions to see relevant actions that can help resolve your OT incidents.

UI changes

Recommended actions button

The **Recommended actions** button was added to the Industrial Workspace to access the Recommended Actions panel for an OT incident.

Activation information

Install Recommended Actions for OTSM by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Related ServiceNow applications and features

IT Service Management

When integrated with Operational Technology Incident Management, the ServiceNow IT Service Management application enables engineers to resolve OT device and production process issues.

Service Graph Connector Integration for Claroty CTD release notes

The ServiceNow® Service Graph Connector Integration for Claroty CTD application automates the import of detected devices and Claroty CTD sites. Service Graph Connector Integration for Claroty CTD was enhanced and updated in the Yokohama release.

Service Graph Connector Integration for Claroty CTD highlights for the Yokohama release

- View the class mappings available for the Service Graph Connector using the new Class Mappings menu
- Filter out empty rack slots to help avoid importing blank rack slots into the ServiceNow. Configuration Management Database (CMDB).
- Use the Firmware Installation [cmdb_firmware_install] table to capture the firmware version.
- Avoid OT entity update issues by using the new ire_criterion_attribute attribute on the OT Entity [cmdb_ot_entity] table.
- Clean the serial record entries from the Source [sys_object_source] table using a fix script.

See Service Graph Connector Integration for Claroty CTD for more information.

Important:
Service Graph Connector Integration for Claroty CTD is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

View the class mappings available for the Service Graph Connector

Use the **Claroty CTD SGC Class Mappings** table to view the available class mappings and targeted CMDB classes.

Avoid importing empty rack slots

During import, empty rack slots are removed to avoid importing them into the CMDB.

Capture firmware version of devices

Use the Firmware Installation [cmdb_firmware_install] table to capture the firmware version of your Service Graph Connector Integration for Claroty CTD devices.

Use the ire_criterion_attribute in the OT Entity [cmdb_ot_entity] table

The ire_criterion_attribute acts as a criterion attribute for an OT entity-related entry and helps avoid entity update issues.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Clean up serial number data

Clean up the serial number [cmdb_serial_number] records imported into the Source [sys_object_source] table from the Service Graph Connector Integration for Claroty CTD with a fixed script. This script establishes that a null pointer exception doesn't occur when the serial number and MAC address are the same. The script runs automatically when the plugin is upgraded.

Activation information

Install Service Graph Connector Integration for Claroty CTD by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Note:
Claroty CTD v5.1 is also supported for the Service Graph Connector Integration for Claroty CTD application.

Related ServiceNow applications and features

CMDB CI Class Models store app

Operational Technology classes are imported with the Configuration Management Database (CMDB) configuration item (CI) classes.

Operational Technology Manager

Integrate Claroty CTD with the ServiceNow® Operational Technology Manager application to import detected devices and Claroty CTD sites, including sensors and NIDS appliances.

Service Graph Connector for Microsoft Defender for IoT (Azure) release notes

The ServiceNow® Service Graph Connector for Microsoft Defender for IoT (Azure) application automates the import of devices and sensor appliances. Service Graph Connector for Microsoft Defender for IoT (Azure) was enhanced and updated in the Yokohama release.

Service Graph Connector for Microsoft Defender for IoT (Azure) highlights for the Yokohama release

- View the class mappings available for the Service Graph Connector using the new Class Mappings menu
- Use the Firmware Installation [cmdb_firmware_install] table to capture the firmware version.
- Avoid OT entity update issues by using the new *ire_criterion_attribute* attribute on the OT Entity [cmdb_ot_entity] table.
- Extend capabilities of the Service Graph Connector to import devices actively scanned by Microsoft Defender for IoT.
- Ingest actively scanned devices from Microsoft Defender for IoT and assign them to a site in your ServiceNow instance automatically using the **Site Map** table.

See Service Graph Connector for Microsoft Defender for IoT (Azure) for more information.

Important:
Service Graph Connector for Microsoft Defender for IoT (Azure) is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

View the class mappings available for the Service Graph Connector

View the available class mappings and targeted CMDB classes on the MSFT D4IoT Azure SGC Class Mappings page.

Capture firmware version of devices

Firmware versions of your Service Graph Connector for Microsoft Defender for IoT (Azure) devices are captured in the Firmware Installation [cmdb_firmware_install] table.

Use the ire_criterion_attribute in the OT Entity [cmdb_ot_entity] table

The ire_criterion_attribute identifies configuration items (CIs) for an OT entity-related entry and helps avoid entity update issues.

Actively scan device data from Microsoft Defender for IoT with the Site Mappings table

Access the Site Mappings table to actively scan devices from Microsoft Defender for IoT and assign them to a site in your ServiceNow instance.

Activation information

Install Service Graph Connector for Microsoft Defender for IoT (Azure) by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Related ServiceNow applications and features

CMDB CI Class Models store app

Operational Technology classes are imported with the Configuration Management Database (CMDB) configuration item (CI) classes.

Operational Technology Manager

The ServiceNow Operational Technology Manager enables you to aggregate OT device data from multiple sources so you can build the foundational data relationships used in the Industrial solution.

Industrial Core

Use the Industrial Core application to package prerequisite tables for integrations and OT licensing. The Industrial Core application serves as a centralized solution for OT-specific utilities and data model changes.

Vulnerability Response Integration with Claroty CTD release notes

The ServiceNow® Vulnerability Response Integration with Claroty CTD application uses data that was imported from Claroty CTD to enable a risk-based action with the production process context. Vulnerability Response Integration with Claroty CTD was enhanced and updated in the Yokohama release.

Vulnerability Response Integration with Claroty CTD highlights for the Yokohama release

Identify and import vulnerabilities by using additional filter properties.

See Vulnerability Response Integration with Claroty CTD for more information.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Important:
Vulnerability Response Integration with Claroty CTD is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Important information for upgrading Vulnerability Response Integration with Claroty CTD to Yokohama

Claroty CTD v5.1 is also supported for the Vulnerability Response Integration with Claroty CTD application.

New in the Yokohama release

Enhanced filters for the Vulnerability Response Integration with Claroty CTD to support Claroty CTD v5.1

Identify and import vulnerabilities according to your requirements by using the additional filter properties that have been added in Claroty CTD. The filter properties are based on a Common Vulnerability Scoring System (CVSS) V3 score and Exploit Prediction Scoring System (EPSS) score that is available in Claroty CTD v5.1.

Changed in this release

Updates made for Claroty CTD v5.1

The following updates were made to support Claroty CTD v5.1:

- There's no limit now on the number of Common Vulnerabilities and Exposures (CVEs) that you can import.
- The **Minimum CVSS Score** field was replaced with the **CVSS V3 Score** field.

Activation information

Install Vulnerability Response Integration with Claroty CTD by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Related ServiceNow applications and features

CMDB CI Class Models

The ServiceNow® CMDB CI Class Models store application adds class models that extend the CMDB class hierarchy, including the class descriptions, identification rules, identifier entries, and dependent relationships.

Vulnerability Response

When integrated with the Operational Technology Vulnerability Response application, the Vulnerability Response application aids you in prioritizing and resolving OT vulnerabilities that are based on process criticality.

Industrial Process Manager

Use the ServiceNow® Industrial Process Manager application to create the ISA-95 Equipment Model data foundation that is required for the ServiceNow® Industrial solution, enabling you to create your own version of the equipment models in each of your industrial sites.

Service Graph Connector Integration for Claroty CTD

Use the ServiceNow® Service Graph Connector Integration for Claroty CTD with the ServiceNow® Operational Technology Manager application to import sites, detected devices by each site, connections (or baselines), and installed programs to the Configuration Management Database (CMDB).

Platform Analytics release notes

Platform Analytics has new and updated features in the Yokohama release.

Now Assist in Platform Analytics release notes

Now Assist for Platform Analytics consists of several skills and applications that let you generate and work with Platform Analytics objects through Generative AI. These skills let you analyze your business data through conversational interactions, without a technical knowledge of Platform Analytics.

Now Assist in Platform Analytics highlights

Yokohama Patch 11

- Review changes to Now Assist usage measurement.
- Some Now Assist skills, agents, and agentic workflows are on by default.
- Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications.
- Create "explorations"—editable documents where you analyze data with the help of AI. Refine responses, add your own input, and collaborate with others to make data-informed decisions faster.

Previous Patch releases

- Generate and export Platform Analytics artifacts from conversational interactions in the Now Assist panel.
- Benefit from a single, smooth experience in asking questions across all Now Assist for Platform Analytics skills, as well as other applications that incorporate Platform Analytics and AI, through a shared backend.

See Now Assist in Platform Analytics for more information.

Important:
Now Assist for Platform Analytics applications are available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New features, applications, and skills

Yokohama Patch 11

Gather insights, plan, and collaborate in the AI Data Explorer (January 2026)

Ask quick questions, receive tailored recommendations, and collaborate with AI and your colleagues to build long-term analysis. Enable teams to discuss and act on findings instantly. Centralize insights and narratives for better decision making. Guide users with contextual insights and suggestions.

Main features include:

- Optional deeper level of analysis
- Add a data visualization from an exploration to a dashboard
- Share explorations with tagged users

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Duplicate an exploration
- Duplicate an answer in an exploration
- Summarize an exploration

AI Data Explorer leverages Query Generation to translate natural language questions into actionable insights. Query Generation enables users of AI Data Explorer to analyze their data and access a broader range of data sets. Key capabilities include:

- Ability to add tables to the semantic data layer
- Multi-table source support
- Workflow Data Fabric table support
- Database view support

Changed features

Yokohama Patch 13

View recommended actions

AI Data Explorer can suggest actions based on the insights that it generates in an exploration.

Ask questions about FX currency data

Query Generation now supports the FXCurrency (Currency 2) data type. This means that you can use AI Data Explorer to explore financial operations data, including those within Source-to-Pay Operations.

Benefit from improvements to segments

Segments are reusable definitions in Query Generation that provide non-obvious context to assist the semantic layer or LLM to select the correct dimension and values. Users can create manual segments via a new form. A scheduled job synchronizes manual and autogenerated segments. This job also cleans up segments to help surface the correct segments and reduce noise.

Domain separation is also now supported, with a Domain field on the Segments table. Segments based on reports and filters inherit the source domain. Manual segments have domains that are passed up to the Segments table on synchronization. Segments are not supported for indicator sources or modules on domain-separated instances.

Yokohama Patch 11

Changes to Now Assist usage measurement

Starting with Yokohama Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Some Now Assist skills are turned on by default

The new default behavior works as follows:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- New customers: When you install a Now Assist product, designated skills are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.

Configure ACLs for AI agents and agentic workflows

Configure the access control lists for who can discover and trigger AI agents and agentic workflows in their guided setups in AI Agent Studio. You can determine whether an AI agent or agentic workflow behaves as a dynamic user or as an AI user. You can also specify if an AI agent or agentic workflow can be available to all authenticated users or publicly available.

Query Generation skills are active by default

If the Generative AI Controller plugin is activated, the skills for Query Generation are activated by default.

Greater visibility into the Query Generation process

When you call Query Generation from AI Data Explorer or another application, you see each state that the query and response goes through before completing.

Multi-table source support

Query Generation supports related table conditions and dot-walking in queries.

Get insights and visualizations for Workflow Data Fabric tables

Ask AI Data Explorer information about Workflow Data Fabric data and get insightful responses. You must first add the Workflow Data Fabric tables to the Query Generation Semantic Table Configuration table.

Use database views in queries

Generate visualizations or ask AI Data Explorer about data kept in database views, like SLA data. You have to add the database views to the Semantic Table Configuration table.

Yokohama Patch 7

Add tables to the semantic data layer

Choose which tables your users can query with generative AI for data analysis.

Monitor the health of the Query Generation back end

View the state of Now Assist for Platform Analytics LLM, plugins, system properties, components, and dependent products.

Activation information

AI Data Explorer is available from the ServiceNow Store.

Query Generation, Analytics Generation, and the dashboard and data visualization export skill are installed with Generative AI Controller, which is included as a dependency of all Now Assist applications.

Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

After installation, activate the relevant skills. For more information, see the relevant Configure topics under Now Assist in Platform Analytics.

Plugin information

New plugins

The following plugins are new in Yokohama:

AI Data Explorer (sn_pa_ai_canvas): The AI Data Explorer application allows users to explore data with help of AI, gather and organize findings, and collaborate with other users.

Related ServiceNow applications and features

Platform Analytics experience

Details of the data visualizations, filters, and dashboards that Now Assist for Platform Analytics skills generate.

Performance Analytics release notes

The ServiceNow®
Performance Analytics application is an in-platform process optimization solution. It enables organizations to set, track, and analyze progress toward goals. Performance Analytics was enhanced
and updated in the Yokohama release.

Performance Analytics highlights for the Yokohama release

- Track critical process metrics and trends.
- Measure process health and behavior against organizational targets.
- Identify process patterns and potential bottlenecks before they occur.
- Continually visualize historical and real-time process statistics in role-based dashboards. The dashboards enable individual stakeholders to make informed decisions.

See Performance Analytics (Indicator data sources) for more information.

New in the Yokohama release

Apply multiple levels of breakdown to an indicator

Migrate indicators from traditional Performance Analytics architecture to change data capture (CDC)-based data snapshots. This new architecture allows for more than two levels of breakdown to apply to an indicator. RaptorDB Professional is required, and not all indicators qualify for migration.

Activation information

Complimentary Performance Analytics for Incident Management is active by default. You cannot create indicators or breakdowns with this complimentary application.

The full features of Performance Analytics are available with a subscription. Activate the Premium plugin that matches
your subscription. For details, see Activate your Performance Analytics subscription.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Additional requirements

To use the new data snapshots feature, your instance must be on the RaptorDB Professional database.

Related ServiceNow applications and features

Platform Analytics experience

The ServiceNow® Platform Analytics experience provides a single center for consuming the data from all Platform Analytics products, including Performance Analytics.

Process Mining

Process Mining helps analysts and process owners quickly analyze and optimize their business processes. Use Process Mining with Platform Analytics insights to optimize your indicator data sources.

Platform Analytics experience release notes

The ServiceNow® Platform Analytics experience provides a single center for consuming the data from all Platform Analytics products. Platform Analytics experience was enhanced and updated in the Yokohama release.

Platform Analytics experience highlights for the Yokohama release

- Effortlessly create bold, meaningful data graphics by and refining the results in an AI-powered conversational interface.
- Speed up the process of turning insights into actions with dynamic new features like suggested performance targets and more powerful data filtering.
- Share data insights more broadly with enhanced Microsoft PowerPoint support.

See Platform Analytics experience for more information.

Important information for upgrading the Platform Analytics experience to Yokohama

If you had previously migrated your analytics assets to Platform Analytics, assets that were in compatibility mode but are newly supported in Yokohama are migrated automatically.

New in the Yokohama release

Generate data visualizations conversationally

Generate Platform Analytics artifacts from conversational interactions using Analytics Generation. Analytics Generation is part of the Now Assist for Creator application.

Implement filters in groups

Create filter groups with shared apply, clear, and reset buttons. Filters in a group appear in their own container. Grouping filters reduces the number of calls and improves performance compared to cascading filters for big data use cases.

Apply multiple levels of breakdown to an indicator

Migrate indicators from traditional Performance Analytics architecture to change data capture (CDC)-based data snapshots. This new architecture allows for more

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

than two levels of breakdown to apply to an indicator. RaptorDB Professional is required, and not all indicators qualify for migration.

Show the distribution of data in box plot data visualizations

Show the median and lower and upper quartiles of numeric data along with outliers by using box plots. You can also compare the distribution of different groups of this data.

Target suggestion cards

Be notified of missing target values and review dates for indicators. If you have target Insights active for your dashboard, Target suggestion cards alert you to the missing values and provide an easy way to fix them.

UI changes

Migration center flow UX improved

- A confirmation modal is displayed when **Start moving** or **Activate** is selected.
- Bulk migration can be retriggered after source artifacts are changed.
- The creation of new analytics artifacts can be blocked when bulk migration starts.

Percent information added to tooltips

Tooltips in geomap, vertical and horizontal bar, heatmap, and bubble visualizations now include percentages when applicable.

Changed in this release

Migrate more features to Platform Analytics from the Core UI

Migration scripts are improved to support more features. All migration script improvements are applied automatically on upgrade to content that was previously migrated in compatibility mode.

- Data table configurations are migrated from the Core UI to Platform Analytics data visualizations.
- Dashboard groups are migrated to dashboard categories.
- Pareto charts are migrated.
- List component border changes are migrated.
- Follow/unfollow filter settings are migrated for Lists.

Use more Core UI features in Platform Analytics

Several data visualizations have been enhanced to match the capacities in Core UI reports and widgets. The migration script supports these enhancements. Each of these enhancements has an entry in the release notes with links to the product documentation.

- Use the new Box plot data visualization.
- Configure **Follow filters** per metric on bar or time series visualizations with multiple metrics.
- Sort values by name, report range, and element order on time series visualizations of table data.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Choose an aggregate or separate view of breakdown elements on time series visualizations of indicator data.
- Select dates from business calendars on time series visualizations.

Trend by Business calendars in time series data visualizations

Business calendars are a **Trend by** option for table data sources on time series visualizations. (Core UI feature gap)

Use a Fiscal calendar in date filters

If your instance has Fiscal calendars installed, you can choose relative data ranges from that calendar.

Export dashboards and data visualizations to PDF and PPT

Export dashboards and data visualizations to PDF or Microsoft PowerPoint files at will or in scheduled emails.

Show breakdown elements separately on time series visualizations of indicators

Show multiple elements in the chart separately rather than as an aggregate value by turning on the **Show filter as separate series** option. (Core UI feature gap)

Lock editing on dashboards

Ensure that only one person can have a dashboard open for editing at one time through the edit lock on dashboards. If you are locked out of editing a dashboard, you see who the current editor is.

Access indicator record or scoresheet from KPI Details

Navigate either to the record of the indicator you are exploring or its scoresheet through KPI Details. Appropriate roles are required.

Export records that underlie an indicator from KPI Details

With **Show records** activated in KPI Details, you can export the list of records in one of several formats, either as a local download or as an email attachment.

Hide axes for bar visualizations

Control the display of axes on bar charts. On horizontal bar charts, you can hide the y-axis. On vertical bar charts, you can hide the x-axis.

Cache indicator scorecard data

Indicator scorecards now support data caching.

Group by elements more efficiently in data visualizations

Specify the maximum number of elements in a Group By you want to retrieve through the **Max number of groups** option. Previously, all elements from the database were retrieved and then sorted.

Prefetch dashboard layout

If you have a dashboard component on a page in your own workspace, improve performance by using a preset to configure a data broker that pre-fetches static JavaScript, such as layout.

Call multiple visualizations together

For a technical dashboard, if you have multiple data visualizations of the same type calling the same data source, configure a data resource to make a single call for all of them.

Improvements to time-series visualizations

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Simplify identifying specific values on line, spline, area, or step charts through the **Show markers** option, which displays a symbol at each data point.
- Sort by name, report range, group bucket, and element order. (Core UI feature gap)

Improvements for visualizations that show multiple metrics

- In time series visualizations, provide viewers an alternative group by, where the viewer chooses the group-by value at runtime, for up to 3 data sources. (Core UI feature gap)
- Set whether individual metrics follow filter components on the page or dashboard in both bar and time series visualizations. (Core UI feature gap)

Activation information

The Platform Analytics experience is active by default. However, some additional steps might be required.

- To use indicator data sources, you might need to activate Performance Analytics.
- To use Process Mining with the Platform Analytics experience, you might need to activate Process Mining.

Accessibility information

Dashboard overview and Filter components now support Reflow at 400% zoom.

Related ServiceNow applications and features

Now Assist in Platform Analytics

Several Now Assist Generative AI tools are available for generating and working with Platform Analytics objects through iterative questions and answers.

Performance Analytics (Indicator data sources)

Performance Analytics is an in-platform process optimization solution, providing the indicator data sources that the Platform Analytics experience exposes graphically. It enables
organizations to set, track, and analyze progress toward goals. Performance Analytics was enhanced
and updated in the Yokohama release.

User Experience Analytics

This application provides dashboard views for monitoring usage analytics of your Next Experience web applications as well as Virtual Agent, ServiceNow mobile, and Service Portal applications. User Experience Analytics provides a data source which data visualizations can display.

Process Mining

Process Mining helps analysts and process owners quickly analyze and optimize their business processes. Use Process Mining with Platform Analytics insights to optimize your indicator data sources.

Process Mining release notes

The ServiceNow® Process Mining application enables analysts and process owners to view their business processes, analyze them, and make decisions that improve their processes. Process Mining was enhanced and updated in the Yokohama release.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Process Mining highlights for the Yokohama release

- Now Assist based work notes analysis
- Process configuration builder introduced
- Content pack importer introduced for process configurations
- Process Mining evaluation project available for HR and CSM
- Access control (ACL) rules updated

See Process Mining for more information.

Important:
Process Mining is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Now Assist based work notes analysis

Work notes analysis is now enhanced using Now Assist to understand the operational reasons behind activity transitions by examining the work notes and comments recorded around the time of these transitions.

Process configuration builder introduced

Configure and view the process configurations efficiently by using the new comprehensive Process configuration builder. It is a guided setup to configure and view the process configurations.

Content pack importer introduced for process configurations

Import and customize the content pack process configuration templates to activate new features. Content pack process configuration templates are now read-only.

Process Mining evaluation project available for HR and CSM

Ability to try out the sample mining and limited features available for HR and CSM without an entitlement. For the advanced features, you can purchase a license.

Access control (ACL) rules updated

The ACL rules have been updated for broader visibility on the try-out version while also increasing the security.

- No Process Mining role is required to access a shared project and to generate Platform Analytics insights for some tables.
- Some breakdown filters or activity definitions are blocked for certain users based on the column access.

Process Mining performance improved

The following improvements boost Process Mining performance and lead to quicker insights:

- Introduced lazy loading of improvement opportunities and variants for faster workspace loading.
- Introduced applying a transition filter before mining to reduce scope of data and speed up the mining process.
- Improved Process Mining workbench load time.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Transition filters enhanced

The enhanced transition filters now provide more flexibility and precision in filtering the process map by providing the following:

- Ability to use OR clause on steps to create a more complex and nuanced criteria for process transitions.
- Include predicates like "is empty" and "is not empty" allowing for more refined control over the conditions under which transitions occur, ensuring that workflows are both comprehensive and adaptable to a variety of scenarios.
- Ability to select more than one value with a single click that contains a specific text.

Enhanced the Process Mining engine

Key updates include:

- Defining integer fields as activity definitions.
- Grouping journal fields to identify how quickly an agent reacted to an assigned case.
- Defining the order of simultaneous activities on the graph.

Additional breakdown capacity for Process Mining on external data

Ability to import a maximum of 10 breakdown fields enabling to segment and analyze specific subsets of the external process data using Process Mining.

API for accessing Process Mining data

Create, mine, and access Process Mining data via an API (*ProcessMiningIntegrationAPI*). For more information, see the API documentation.

UI changes

Usability improvements introduced

A few improvements are introduced for ease of usability.

- View the improvement opportunities on the Summary and Insights page as a card view or list view.
- Rename the scheduled tasks that help to identify and view a specific result.

Activation information

Process Mining is available with activation of the sn_po plugin. For details, see Activating Process Mining.

Related ServiceNow applications and features

Platform Analytics experience

Platform Analytics experience provides a single center for consuming the data from all Platform Analytics products. Use Process Mining with Platform Analytics insights to optimize your indicator data sources.

User Experience Analytics release notes

The ServiceNow® User Experience Analytics application enables you to monitor usage analytics of Next Experience web applications as well as Virtual Agent, ServiceNow mobile, and Service

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Portal applications. User Experience Analytics was enhanced and updated in the Yokohama release.

User Experience Analytics highlights for the Yokohama release

- Access analytics more quickly across tracked ServiceNow applications in the redesigned UI.
- Add and use new custom user properties more easily in the application. This requires older custom properties to be reconfigured under the new setup.
- Advanced querying capabilities including user segmentation across all usage data and filtering of events by event property.

See User Experience Analytics for more information.

Important information for upgrading the User Experience Analytics to Yokohama

- The User Experience Analytics module is moved under Platform Analytics.
- Custom user properties must be reconfigured.
- Default country and user consent policies are updated to No Consent Required.
- The User Experience Analytics UI and navigation structure are reworked.

New in the Yokohama release

Added filtering capability to all analytics pages

Analytics pages have various filter options to help segment data including Date range, User type, and Country. Other filters appropriate to each page are available.

Configurable user properties

Filter usage data by custom user groups across all User Experience Analytics pages. Custom user properties can also be added to User details pages. User roles and department are available by default. Other user-related fields can be added to User Experience Analytics.

Granular event filtering

Filter event data using event properties to provide more specific and actionable insights into your data.

User information added to events

The number of unique users who performed an action visible next to the total occurrences of the event.

UI changes

Primary User Experience Analytics navigation has moved under the All menu.

- User Experience Analytics experience moved under **Platform Analytics** module.
- User Experience Analytics administrative functions moved under the **Platform Analytics Administration** > **UX Analytics settings** module.

Updated navigation within User Experience Analytics

Navigation to Analytics pages simplified to **Analytics** and **Data Foundation** sections for each application.

New layout

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The previous navigation has been replaced with a more unified, cleaner look and feel which enables you to understand the usage, user experience, and user satisfaction with your application.

Improved Funnels UI

The UI has improved readability and navigation.

Changed in this release

New custom user property configuration

An easy way to configure which user-related fields are available to use as filters and in user details. Configured user properties are available for all applications. Previously created custom user properties are no longer supported and must be recreated in the new UI.

Country consent policies are set by default to No Consent Required

Default country consent policies are now set to No Consent Required. If you have previously updated your country consent policies, they will retain the custom setting. Existing users who have set their tracking preferences will retain their settings. New users will not require consent for tracking unless you update your country consent policies.

Longer user history

Detailed data for users and sessions extended to two years.

Optimized the way metrics are calculated

Percent time on app and Average duration per page calculations changed compared to the application view in Xanadu or prior releases. Percentage time on app was **Percentage time on site** in Xanadu or prior releases.

Client page load and Full page load aggregated in the same visualization

All performance metrics associated with Client, Network, Page Load, and Server time are aggregated together.

Removed in this release

- Automatic actions in the mobile app, including tap and swap.
- Filtering by crashed/offline sessions in mobile applications.
- Option to tag/favorite for users/sessions.
- Geographic map view of sessions.
- Users flow
- Insights

Activation information

User Experience Analytics is a ServiceNow AI Platform feature that is activated by default.

Additional requirements

Customer must use ADC v3 to access the new User Experience Analytics experience. Customers on ADC v2 will have access to the Xanadu version of User Experience Analytics.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Accessibility information

User Experience Analytics supports the Web Content Accessibility Guidelines (WCAG) 2.1 AA accessibility standard except for these aspects:

- Voiceover for navigation paths
- Color patterns for time series and pie visualizations
- Data table for time series and pie visualizations

Related ServiceNow applications and features

Platform Analytics experience

Distribute and consume Platform Analytics through data visualizations and dashboards with optional filters. Explore KPIs and receive insights into significant events in the data.

Public Sector Digital Services release notes

The ServiceNow® Public Sector Digital Services application enables government agencies to provide citizens, businesses, and other agencies with important services such as public records, licenses, permits, and social services. Public Sector Digital Services was enhanced and updated in the Yokohama release.

Public Sector Digital Services highlights for the Yokohama release

- Review requests for grants, and create new grant programs using Grants Management.
- Connect multiple ServiceNow instances to provide seamless support and service experiences across the Public Sector using for Service Bridge for Public Sector Digital Services.
- Utilize the Chat summarization skill, powered by Now LLM Service, to auto-generate chat summaries for customer-agent interactions in the Now Assist for Public Sector Digital Services (PSDS) application.

See Public Sector Digital Services for more information.

Important:
Public Sector Digital Services is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Important information for upgrading Public Sector Digital Services to Yokohama

After the upgrade, certain public sector menus and menu items in the CSM Configurable Workspace revert to their original CSM label names. You can relabel these items for public sector use by updating the labels for the **Customer**, **Accounts**, and **Service Organizations** UX list category records. For more details on relabeling, navigate to **All** > **Constituent Service** > **Administration** > **Guided Setup**, and select **Configurable Workspace for Public Sector Digital Services** > **Customize Workspace Labels Manually**.

New in the Yokohama release

Grants Management

Simplify and streamline Grant application intake and screening with Grants Management: Intake and Screening, a part of Grants Management. Improve self-service with a Grants Portal that streamlines finding, applying for, and tracking grants, with added features such as guided intake, and a save, resume, and export functionality. Set up and manage grant programs easily with guided steps using

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Grants Management: Program Set Up, which guides grant program managers through the process of creating, publishing, and managing grant programs.

Communicate and share citizen and agent data securely between agencies using Service Exchange for Public Sector Digital Services

Connect multiple ServiceNow instances to provide seamless support and service experiences across the Public Sector using Service Bridge for Public Sector Digital Services. Service Bridge enables unified case collaboration across agencies, streamlined approval workflows for funding distribution, and real-time crisis coordination with dynamic task management. Agencies can share citizen & agency data securely through compliance-driven access.

Post-chat summarization in Now Assist for Public Sector Digital Services (PSDS)

Condense chat records into short summaries using the chat summarization skill in the Now Assist for PSDS application. Agents can use the chat summarization skill to generate chat records for a case, auto-populate the chat summary into the Interaction section of the case record, and obtain a summary of the main points discussed during the chat, helping them propose a case resolution. The Now Assist for PSDS application brings generative AI chat summarization to Public Sector Digital Services.

Changed in this release

Constituent Service Dashboard Migration to Platform Analytics

The Constituent Service Dashboard has been migrated to Next Experience Platform Analytics. Next Experience is a ServiceNow AI Platform® feature that is active by default when the user loads or upgrades to the Yokohama release. The dashboard migration to Next Experience enables you to visualize historical and real-time process statistics in role-based dashboards, which enable individual stakeholders to make informed decisions. The new dashboard can be accessed by navigating to **All** > **Platform Analytics** > **Library** > **Dashboards**.

Activation information

Install Public Sector Digital Services applications by requesting them from the ServiceNow Store. For details on installing the applications, see Configuring Public Sector Digital Services. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Related ServiceNow applications and features

Customer Service Management

The Customer Service Management application enables customer service organizations and service operations to collaborate and resolve customer problems.

CSM Configurable Workspace

The CSM Configurable Workspace application provides government agents with the tools to research information, respond to questions from the public, and resolve cases.

Now Assist

The Now Assist application uses generative AI that is designed to enhance user productivity and efficiency through conversation and proactive experiences.

Retail release notes

Retail has new and updated features in the Yokohama release.

Note:
The Retail mobile application and the case types added in Zurich are now available in Yokohama also. For more information on the Retail mobile application and the case types, see https://www.servicenow.com/docs/bundle/zurich-release-notes/page/release-notes/retail/retail-rn.html.

Retail Core release notes

The ServiceNow® Retail Core application empowers frontline managers and associates to seamlessly manage day-to-day store operations by automating tasks, resolving issues quickly with self-service, and freeing up time to better serve customers. Retail Core was enhanced and updated in the Yokohama release.

Retail Core highlights for the Yokohama release

Use the Retail Portal for an optimized and streamlined portal experience within your retail organization.

See Retail for more information.

Important:
Retail Core is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Retail portal

Use the new Retail Portal experience to use self-service tools, view cases, and gain visibility into metrics for your retail organizations.

Activation information

Install Retail Core by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Related ServiceNow applications and features

Customer Service Management

The ServiceNow® Customer Service Management (CSM) application provides the foundation for the Retail Core application. You can leverage the functionality of the ServiceNow® Customer Service Management (CSM) application to provide support to customers as well as retail sites, and customize it to benefit your retail organization most effectively.

Field Service Management

The ServiceNow® Field Service Management application aligns with Retail Core by providing some capabilities, such as work orders, for use within each specific retail location that uses the Retail Core application, enabling greater flexibility with how to leverage the support request use cases of your retail organization. For field service use cases that involve dispatching and technicians, leverage Field Service Management.

Retail Task Management

The ServiceNow® Retail Task Management Core application optimizes the planning, organizing, and assigning of tasks to staff in your retail environment.

Retail Task Management Core release notes

The ServiceNow® Retail Task Management Core application optimizes the planning, organizing, and assigning of tasks to staff in retail environments. Retail Task Management Core is a new application in the Yokohama release.

Retail Task Management Core highlights for the Yokohama release

- Assign work from HQ to multiple retail locations at once with the multi-store case generator.
- View assigned tasks in the retail portal alongside other requests.
- Track completion status across multiple locations assigned the same item.

See Retail Task Management for more information.

Important:
Retail Task Management Core is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Retail Task Management Core features

Retail multi-store case

Use the multi-store case generator to assign work from HQ to multiple retail locations simultaneously. View and track these cases in the retail portal alongside other requests, monitoring completion status across all assigned locations.

Activation information

Install Retail Task Management Core by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Related ServiceNow applications and features

Retail Core

The ServiceNow® Retail Core application empowers managers and associates to manage daily retail operations by automating tasks and resolving issues quickly with self-service, freeing up time to serve customers. It enables seamless two-way communication and visibility between stores and HQ, delivering a great customer experience while enhancing staff productivity and reducing costs. Retail Core provides the Retail Portal functionality used in Retail Task Management Core.

Sales Customer Relationship Management release notes

ServiceNow®Sales Customer Relationship Management Sales Customer Relationship Management is a set of new and updated applications and features in the Yokohama release. These applications enable you to manage the product sales life cycle in your organization, including leads, pre-sales opportunities, sales forecasting, sales quote generation, order capture, order fulfillment, and post-sales order changes and renewals.

Yokohama Patch 13

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Sales and Order Management (SOM) is now known as Sales Customer Relationship Management (Sales CRM) to align with the updated product taxonomy. There is no change to functionality or existing customer configurations.

Note:
Sales Customer Relationship Management includes workflows for Customer Lifecycle Operations (Customer Life Cycle Management) and Customer Contracts and Entitlements. For details on these features in the Yokohama release, see the following Customer Service Management (CSM) release notes.

- Data Management release notes (Customer Life Cycle Management)
- Customer Contracts and Entitlements release notes

Also, agents can use the Case Management for Order Operations application to display order cases and order case line items in CSM Configurable Workspace. The Case lines and workflows application provides the ability to reference multiple order line items on a case record.

Lead Management release notes

The ServiceNow® Lead Management application enables your sales development representatives to create and manage leads. Lead Management was enhanced and updated in the Yokohama release.

Lead Management highlights for the Yokohama release

- REST APIs enable seamless integration of lead management with external applications and provide other capabilities.
- REST APIs enable customers to create, update, and retrieve leads and lead line items from the ServiceNow instance.

See Lead Management for more information.

Important:
Lead Management is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in Yokohama release

REST APIs for Lead Management

REST APIs provide the following capabilities:

- Integrate lead management with external applications and websites.
- Create and modify leads and lead line items from applications like marketing automation systems.
- Retrieve leads and lead line items from your ServiceNow instance.

Activation information

Install Lead Management by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Related ServiceNow applications and features

Customer Service Management

The Opportunity Management application uses the ServiceNow® Customer Service Management account, consumer, and product inventory data model. Customer service agents have full visibility into opportunities that have been created using Opportunity Management.

Opportunity Management

The ServiceNow® Opportunity Management application provides your sales agents and account executives with product recommendations for customers based on a needs analysis. You can seamlessly convert sales opportunities to quotes when the customer is ready.

Product Catalog Management

The Product Catalog Management feature in Sales Customer Relationship Management enables catalog administrators to create product catalogs with categories that enable agents to easily find products and services to add to opportunities.

Now Assist for Order Management release notes

The ServiceNow® Now Assist for Order Management application brings platform AI capabilities to Sales Customer Relationship Management. Now Assist for Order Management is a new application in the Yokohama release.

Now Assist for Order Management highlights for the Yokohama release

Yokohama Patch 11

- Review changes to Now Assist usage measurement.

- Enable business-to-business (B2B) customers to submit order cases autonomously from the Business Portal by simply describing their needs in natural language using the manage order operations agent.
- Summarize complex orders across products, services, and fulfillment tasks, enabling agents to quickly understand status, take the right actions, and avoid navigating fragmented views to make next steps easier and improving productivity.

See Now Assist for Order Management for more information.

Important:
Now Assist for Order Management is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Now Assist for Order Management features

Enable the manage order operations agent in the Business Portal

Activate the manage order operations agent so that you can make it available to your customers on the Business Portal.

Request order changes using Now Assist

Use the manage order operations agent to provide a seamless experience to your customers on the Business Portal, enabling them to create order cases using a virtual assistant effortlessly. The AI agent can intelligently categorize requests for expedited delivery by creating order-related cases linked directly to the specific

order, significantly reducing manual case creation and speeding up resolution times. Interaction channels include chat and voice options.

Summarize an order using Summarization for Order Management

Generate a summary of a complex order for a unified view of the order's current state to:

- Respond confidently to customer queries with accurate, real-time order status.
- Track changes and validate details to maintain consistency and transparency.
- Minimize errors and improve communication across suppliers and partners.
- Monitor tasks that are at risk of missing deadlines.
- Assign tasks to appropriate resources based on priority and skill.
- Make rapid prioritization decisions to prevent delays and help ensure timely fulfilment.

Changed in this release

Yokohama Patch 11

Changes to Now Assist usage measurement

Starting with Yokohama Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Some Now Assist skills are turned on by default

The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.

Configure ACLs for AI agents and agentic workflows

Configure the access control lists for who can discover and trigger AI agents and agentic workflows in their guided setups in AI Agent Studio. You can determine whether an AI agent or agentic workflow behaves as a dynamic user or as an AI user. You can also specify if an AI agent or agentic workflow can be available to all authenticated users or publicly available.

Activation information

Request the Now Assist for Order Management application from the ServiceNow Store and install it using the Application Manager. For more information, see Install a ServiceNow Store application.

Opportunity Management release notes

The ServiceNow® Opportunity Management application enables your sales agents and account executives to create and manage opportunities that identify and track the potential sales for your customers. Opportunity Management was enhanced and updated in the Yokohama release.

Opportunity Management highlights for the Yokohama release

1. Enable customers to view the roll-up amount in the Kanban View.
2. Enable sales representatives to customize bundled products and products with complex characteristics in the product catalog.

See Opportunity Management for more information.

Important:
Opportunity Management is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

View the roll-up amount in the Opportunity Kanban View

Enables customers to view the roll-up amount that is automatically calculated in the base currency for all opportunity stages in the Kanban View.

Enables the sales representatives to customize the complex product offerings by using the product configurator. This ensures that the sales representatives identify and share the detailed requirements and price to the customer much earlier in the cycle.

Revise existing opportunities after an upgrade

Enable the sales representatives to use the scheduled job to modify older opportunities to incorporate the functionality of supporting parent-child opportunity line items.

Install Opportunity Management by requesting it from ServiceNow Store.

Related ServiceNow applications and features

Customer Service Management

The Opportunity Management application uses the ServiceNow® Customer Service Management account, consumer, and product inventory data model. Customer service agents have full visibility into opportunities that have been created using Opportunity Management.

Quote Management

The ServiceNow® Quote Management application enables your sales agents to generate and manage sales quotes for your customers. You can seamlessly convert sales opportunities to quotes when the customer is ready.

Product Catalog Management

The Product Catalog Management feature in Sales Customer Relationship Management enables your catalog administrators to create products catalogs with categories that enable agents to navigate and find products and services to add to opportunities.

Pricing Management

The Pricing Management feature in Sales Customer Relationship Management enables your pricing administrators to set the pricing for products and services that are used in the various Sales Customer Relationship Management applications.

Order Management release notes

The ServiceNow® Order Management application enables you to capture, manage, and fulfill product and service orders from enterprise customers. Order Management was enhanced and updated in the Yokohama release.

Order Management highlights for the Yokohama release

- Enable order agents to view price adjustment details while processing orders.
- Enable customers to view the product catalog, add products to a shopping cart, and create orders by using the Business Portal.
- Create cases for multiple orders or for specific order lines using the Business Portal.
- Create cases for multiple invoices or for specific invoice lines.
- Provide metrics that help sales agents and sales managers track and analyze the revenue impact of subscriptions.

See Order Management for more information.

Important:
Order Management is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Business Portal for order case management

Enable your customers to create cases for common order-related issues such as delivery delays, quantity disputes, and other routine inquiries directly using

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

the Business Portal, ensuring faster issue resolution and improved customer satisfaction. This application is a feature of Customer Service Management and the Order to Cash Operations functionality for Order Management.

Hierarchical view of order line items

Enable order agents and order managers to use the hierarchical list view to view parent and child relationships within order lines.

Price adjustment details for order lines

Provides order agents and order managers the visibility into the price adjustments applied at each step of the pricing plan, including a detailed breakdown of all adjustments applied to the unit base price and unit list price to see how the unit net price is derived.

Multi-instance product offering configurations

Create multiple instances of a child product offering in orders to generate a custom configuration for each product offering instance. When a child product offering has a quantity greater than 1, agents can clone or split a child product offering to create multiple product offering instances so that each quantity has its own configuration.

Transient products

Add transient products, which are defined as one-time-use products or services, to new orders. Sold product and product inventory records are created but not maintained for transient products. Move, Add, Change and Disconnect (MACD) actions are not supported for transient products.

Business Portal for Order Management

Use the Business Portal to view product catalogs, select product options, and place orders. Customers can also view their order status using the Business Portal.

Cases for multiple invoices

Create cases for multiple invoices or for specific invoice lines. Agents can reference multiple invoices or invoice lines as case line items on an invoice case record. By using case line items, agents can track multiple issues for the same invoice case and resolve the issues in each case line item independently before resolving and closing the order case. This application is a feature of Customer Service Management and the Order to Cash Operations functionality for Order Management.

Add subscription pricing to an order

Enable order agents and order managers to access and view key calculated metrics such as monthly recurring price and annual recurring price. The subscription pricing fields are automatically calculated based on contract start date and contract end date. These metrics enhance revenue reporting and help you to better understand recurring revenue dynamics.

Deprecations

- The Subscription start and end dates have been deprecated starting with the Q2 2025 release. Use the Contract start date and Contract end date to calculate Terms for setting subscriptions for recurring products.
- The fields listed for the following tables are no longer supported.

Table name	Fields
Order (sn_ind_tmt_orm_order)	Total monthly recurring price, Total annual recurring price

Product Catalog Management and Pricing Management release notes

The ServiceNow® Sales Customer Relationship Management applications include the ServiceNow® Product Catalog Management and ServiceNow® Pricing Management features, which enable you to create and manage the product offerings, catalogs, pricing, and discounting strategies used in your organization. These foundational features were enhanced and updated in the Yokohama release.

Product Catalog Management and Pricing Management highlights for the Yokohama release

- Enable agents to create multiple configurations of child product offerings in configurable products and customize the options and characteristics for each child product instance.
- Identify single-use product offerings, such as installation services, with a transient flag to differentiate them from products that are maintained as active sold products or product inventory.
- Provide the options to choose a drop-down or radio control to display characteristics of type choice in the product configurator UI.
- Give sales agents a list of recommended product offerings that can be added to complement or supplement products in quotes.
- Enable pricing admins to set pricing adjustments based on the quantity of product offerings in a quote or order.

See Product Catalog Management and Pricing Management for more information.

Important information for upgrading to Yokohama

After upgrading to the May 2025 release of Sales Customer Relationship Management applications, you must run a scheduled job that automatically enables the **Allow multiple configurations** option when your catalog admin creates product offerings with an associated product specification. This job is called **Scheduled job with an upgrade script to set 'allow_multiple_configurations' to true on an Offering**. When multiple product offering configurations are allowed in configurable opportunities, quotes, or orders, agents can create multiple instances of a child product offering and define custom configurations for each offering instance.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
The **Allow multiple configurations** option is always enabled (set to true) for all product offerings that have an associated product specification. However, if the product specification has a child hierarchy, this option is honored only for orders placed through the TMF APIs. For specifications without a hierarchy, the flag is honored across all ordering channels.

The May 2025 release provides a default pricing plan that includes a new step, Apply Renewal Adjustment. If you've been using a custom pricing plan from an earlier release, review the default pricing plan, which is in a Retired state after upgrading to the May 2025 release. Determine whether you want to publish the default plan or customize the default pricing plan for your needs and then publish the custom plan to be used.

New in the Yokohama release

Product Catalog Management features

Product offering recommendations

Provide sales agents with offer recommendations for upselling or cross-selling additional products in quotes. Product catalog admins create the offer recommendations for sellable products. Sales agents can view the recommendations when adding products to quotes from the product catalog or when reviewing the lines items for a quote.

Product catalog and product configurator in the Business Portal for Order Management

Enable customers to view the product catalog and order products using the product configurator in the Business Portal for Order Management.

UI changes

Needs analysis in CSM Configurable Workspace

Starting with the Yokohama release, the options for configuring a needs analysis are available in the List view of the CSM Configurable Workspace and can be found by navigating to **Needs**.

Changed in this release

Product Catalog Management changes

Multiple configurations

Define child product offerings that can have multiple configurations in configurable opportunities, quotes, and orders. Agents can clone or split a child product offering to create multiple product offering instances. Each quantity for an offering instance can then have its own unique configuration.

Transient product offerings

Define single-use product offerings, such as installation services or consulting services, as transient products that are fulfilled in ServiceNow Order Management. After orders for transient products are fulfilled, sold product or product inventory records are created but have an Inactive status. Move, Add, Change, Delete (MACD) actions aren't supported for the sold product or product inventory records of transient products.

Pricing Management changes

Configurable pricing plan enhancements

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Apply Renewal Adjustment step: This new step determines whether a contract renewal adjustment, either a markup or markdown amount or percentage, is to be calculated and applied. For example, as a pricing admin, you might want to apply a pricing uplift of a fixed amount at contract renewal. This renewal adjustment step is enabled by default, but you can change or remove it in a custom configurable pricing plan.
- Extension point updates: The ListPriceExtensionPoint, which gathers the data needed to make required adjustments, now includes the adjustment data for contract renewals.

Volume-based pricing

Set volume discounts for product offerings based on the product quantity.

Activation information

The Product Catalog Management and Pricing Management features are included with each store application and don't need activation. Depending on your entitlements, you can install the Product and Pricing Rules application for pricing and product eligibility matrices and the product configurator feature from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Quote Management release notes

The ServiceNow® Quote Management application enables your sales agents to generate and manage sales quotes for your customers. Quote Management was enhanced and updated in the Yokohama release.

Quote Management highlights for the Yokohama release

- Enable agents to manage sales agreements in quotes.
- Enable agents to view the price adjustments that are applied to the base and list price of a product in a quote.
- Enable agents to create PDF documents from a quote using the ServiceNow PDF generator.
- Use the hierarchical list view to view parent and child relationships within quote lines.
- Provide agents with offer recommendations to upsell or cross-sell products that complement products in quotes.

See Quote Management for more information.

New in the Yokohama release

Apply a sales agreement to a quote in Quote Management

Create a new sales agreement or apply an existing sales agreements to a quote. When a sales agreement is enabled in a quote, the products and services added to the quote are also added to a sales agreement. When an existing sales agreement is added to a new quote, the catalog is filtered to show the products and options from the sales agreement, the price list is set to the agreement price list, and the sales agreement line is referenced on quote line.

View price adjustment details for a quote line item

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Agents gain visibility into the price adjustments that were applied to the base and list price of the product ordered. This provides sales agent the visibility of how the net price is determined.

Quote PDF documents generation

Generate a quote PDF document. Quote PDF documents can have designated signers and be emailed to customers for signatures through Docusign. Customers can also create PDF templates that reflect customer branding and logos.

Hierarchical quote line list view

View quote lines as a hierarchical list. Agents can then view parent and child relationships for quote line items.

Product offer recommendations for quotes

Enable your agents to get product offer recommendations that complement or supplement existing products within a quote.

Deprecations

The Subscription start date and Subscription end date have been deprecated starting with the Q2 2024 release. Use the Contract start date and Contract end date to calculate Terms for setting subscriptions for recurring products.

Activation information

Install Quote Management by requesting it from the ServiceNow Store.

To add Docusign plugin to the Quote Management PDF document function, use the Docusign eSignature Spoke plugin (sn_docusign_spoke).

Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Related ServiceNow applications and features

Customer Service Management

The Sales Agreement Management application uses the Customer Service Management account, consumer, and product inventory data model. Customer service agents have full visibility into quotes created using Quote Management.

Opportunity Management

The Opportunity Management application provides your sales agents and account executives with product recommendations for customers based on a needs analysis. You can seamlessly convert sales opportunities to quotes when the customer is ready.

Product Catalog Management

The Product Catalog Management feature in Sales Customer Relationship Management enables your catalog administrators to create product catalogs with pricing that enable agents to find and add products and services to sales quotes.

Pricing Management

The Pricing Management feature in Sales Customer Relationship Management enables your pricing administrators to set pricing for products and services that are used in quotes. Pricing administrators also set the controls that enable your sales agents to adjust pricing for complex product offers in quotes.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Order Management

Order and fulfillment agents can use Order Management to fulfill customer orders created from the Sales Agreement Management application.

Sales Agreement Management release notes

The ServiceNow® Sales Agreement Management application enables you to capture the scope and conditions from a quote for future sales transactions over a specified period between a buyer and a seller. Sales Agreement Management was enhanced and updated in the Yokohama release.

Sales Agreement Management highlights for the Yokohama release

- REST APIs enable customers to synchronize sales agreements with external systems.
- Monitor the progress of sales agreement creation from quotes.

See Sales Agreement Management for more information.

Important:
Sales Agreement Management is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in Yokohama release

REST APIs for Sales Agreement Management

Import, export, and synchronize sales agreements with external systems through REST APIs.

Request Tracker on Sales Agreement Management

Enable agents to monitor the progress of sales agreement creation from quotes by using the Request Tracker.

Related ServiceNow applications and features

Customer Service Management

The Sales Agreement Management application uses the ServiceNow® Customer Service Management account, consumer, and product inventory data model. Customer service agents have full visibility into quotes created using Quote Management.

Opportunity Management

The ServiceNow® Opportunity Management application provides your sales agents and account executives with product recommendations for customers based on a needs analysis. You can seamlessly convert sales opportunities to quotes when the customer is ready.

Product Catalog Management

The Product Catalog Management feature in Sales Customer Relationship Management enables your catalog administrators to create product catalogs with pricing that enable agents to find and add products and services to sales quotes.

Pricing Management

The Pricing Management feature in Sales Customer Relationship Management enables your pricing administrators to set pricing for products and services that are used in quotes. Pricing administrators also set the controls that enable your sales agents to adjust pricing for complex product offers in quotes.

Order Management

Order and fulfillment agents can use ServiceNow® Order Management to fulfill customer orders created from the Sales Agreement Management application.

Sales Forecasting release notes

The ServiceNow® Sales Forecasting application enables you to project your future sales and revenue based on data from an opportunity pipeline. Sales Forecasting is a new application in the Yokohama release.

Sales Forecasting highlights for the Yokohama release

- Project future sales and revenue with intuitive forecasting by sales representatives.
- Access the Sales Forecast dashboard at all levels of the sales hierarchy.
- Set and manage sales quotas for individual representatives and sales teams.
- Track sales quota targets and their progress for individuals and sales teams across the hierarchy.

See Sales Forecasting for more information.

Important:
Sales Forecasting is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Sales Forecasting features

View the Sales Forecasting dashboard

Sales Forecasting uses data from the opinions and insights of your sales representatives reflecting how they feel about the deals in their pipeline. View the dashboard to see the sales forecast for your teams in various stages. You can see the total amount of opportunity in each stage for selected time periods or teams.

Categorizing the sales opportunities

Categorize the opportunities in the system based on the probability of closing the sales deal.

Set up sales team hierarchy

Set up the sales teams and assign managers to each team. Once the users, team, and opportunity data is added, and a selection of categories, you can calculate the forecast for any group or specific sales team and view the dashboard.

Set up Sales Quota Management

Assign quota targets to sales representatives and managers for specific periods. A **Quota** column displays the sales target for the managers and their team. The **Gap** column displays the remaining target amount to achieve the required quota target.

Set up forecast schedule

Create a forecast scheduled job to update or create the forecast data at a specific time or on a recurring schedule. The forecast scheduled job automatically fetches all the opportunities in the system and generates forecast data.

Activation information

Install Sales Forecasting by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store.

For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Related ServiceNow applications and features

Customer Service Management

Customer Service Management (CSM) application can help your organization resolve customer issues and requests for your customers. By adopting a proactive customer service approach, you can help increase your customer satisfaction and retention.

Opportunity Management

The Opportunity Management application provides your sales agents and account executives with product recommendations for customers based on a needs analysis. You can seamlessly convert sales opportunities to quotes when the customer is ready.

Security Operations release notes

Security Operations has new and updated features in the Yokohama release.

Application Vulnerability Response release notes

The ServiceNow® Application Vulnerability Response application brings security and IT together to enable you to remediate your most critical vulnerabilities more quickly and efficiently. Application Vulnerability Response is included as part of the ServiceNow® Vulnerability Response application. Application Vulnerability Response was enhanced and updated in the Yokohama release.

Application Vulnerability Response highlights for the Yokohama release

- Monitor your penetration test requests and findings, as well as your team's overall progress in the Penetration Test Workspace.
- Reevaluate the risk score, assignments, remediation target date, exceptions, and remediation task for a specific set of application vulnerable items in the Vulnerability Manager Workspace.
- Integrate with supported third-party scanners to import vulnerability data.
- Compare application vulnerability-related data and determine if application vulnerabilities are found in an application.
- Prioritize, remediate, and manage application vulnerable items (AVIT)s. Each application vulnerability represents a vulnerability entry in the Common Weakness Enumeration (CWE) or third-party libraries.
- With the sn_vul.app_sec_manager role, create application remediation tasks manually in the Vulnerability Manager Workspace.
- With the sn_vul.app_security_champion role, create application remediation tasks manually in the IT Remediation Workspace.

See Application Vulnerability Response for more information.

Important:
Application Vulnerability Response is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Important information for upgrading Application Vulnerability Response to Yokohama

- For information about the new features of Vulnerability Response, see Vulnerability Response release notes.
- For more information about the released versions of the Application Vulnerability Response application as well as the third-party and ServiceNow applications that are compatible with the Xanadu release, see the Vulnerability Response Compatibility Matrix and Release Schema Changes [KB0856498] article in the Now Support Knowledge Base.

New in the Yokohama release

Enhancements to Application Vulnerability Response

The Unassign workflow is supported for application vulnerable items (AVITs) and remediation tasks (AVULs).

- Streamline application vulnerability assignments with the **Unassign** UI action from the more actions menu on an AVIT.
- Reassign incorrectly assigned AVITs, clarify ownership for reassessment, and maintain accurate triage records in workspace views.
- You have the option to send unassign requests for approval prior to clearing the Assigned to and Assignment group fields on records.

SBOM document upload via Github Action

Upload valid Software Bill of Material (SBOM) documents to ServiceNow platform with the help of GitHub Action.

Create application remediation tasks manually in the Vulnerability Manager Workspace

With the sn_vul.app_sec_manager role, you can create application remediation tasks manually by selecting some or all the records in the Application vulnerable items' lists in the Vulnerability Manager Workspace. These records are grouped into one or more remediation tasks according to the grouping criteria selected while creating application remediation tasks.

Create application remediation tasks manually in the IT Remediation Workspace

With the sn_vul.app_security_champion role, you can create application remediation tasks manually by selecting desired records in the Application vulnerable items' lists in the IT Remediation Workspace. These records are grouped into one or more remediation tasks according to the grouping criteria selected while creating application remediation tasks.

Manual Ingestion of vulnerabilities for application vulnerability response

Import AVITs from external sources via a standardised template (e.g., CSV, Excel) and manage Penetration test findings lifecycle. Now, you can ingest vulnerability data, including details such as affected application, vulnerability description, severity, remediation recommendations, including other necessary details. This enhancement allows you to simplifies the process of consolidating vulnerability data from diverse sources into a centralised Penetration test workspace.

Penetration Test Workspace

Monitor your penetration test requests and findings as well as your team's overall progress in the Penetration Test Workspace. Prioritize tests that need your attention, track findings, and view assignments with the following data visualizations on the dashboard:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Important items.
- Penetration test requests that are critical and by state.
- Reported findings.
- Overall remediation progress based on assignment.

Enhancements to Penetration Test Assessment Requests

Along with Full Penetration, Focused, and Re-test, the following assessment types are included for Penetration Test Assessment Requests forms in the Penetration Test Workspace:

- Emergency Release - Supports emergency releases that are required for rapid software updates to address critical issues like security vulnerabilities.
- Bug Bounty Program - Rewards ethical hackers to find and report security vulnerabilities.
- Release Approvals - Ensure that all necessary checks are completed before deploying new software.
- One-off reviews - Assess specific projects outside regular development and release cycles to evaluate performance and implement improvements.
- Executive Interest - Report on senior management's engagement and support for critical projects within the organization.

Enhancements to the Release Approval and Release Notes fields help you ensure quality and security for your pen test findings.

The following states have been added to the Release approval field:

- **Not Applicable** (Default).
- **Approved**.
- **Denied**.

You can add details to justify your release approvals in the Release notes field.

Associate CWEs for manual AVIT creation from Penetration Test Assessment Requests

On the Penetration test findings tab on Penetration Test Assessment Requests, you have the option to associate Common Weakness Enumerations (CWE)s or Common Vulnerabilities and Exposures (CVE)s in the **Vulnerability** field for manually created AVITs.

Create change requests in Application Vulnerability Response

Users with the sn_vul.app_sec_manager and sn_vul.app_sec_champion roles as well as users with the sn_vul.app_developer role who have the ITIL role can create change requests from remediation tasks in the Application Vulnerability Response application. Create change requests to expedite your investigation for application vulnerabilities (AVIT)s that require manual intervention.

- Create change requests with prepopulated information for scanned applications that are classified as configuration items (CI)s.
- The change request workflow in Application Vulnerability Response is similar to the workflow supported in Vulnerability Response. For more information about the Vulnerability Response change request workflow, see Change management for Vulnerability Response.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
Change requests are supported for Application Vulnerability Response only if the discovered application is associated with a configuration item (CI). You must set `Product model` to **False** in the Use Product Model [sn_vul.use_product_model] system property to associate a discovered application with a CI.

Enhancements to the Software Bill of Materials Workspace

- You can delete multiple BOM entity records and their related components with bulk edit from the Software Bill of Materials SBOM SBOM Workspace.
- Any Application Vulnerable Items (AVIT)s that are associated with deleted BOM entities automatically transition to **Closed**.

View risk score details of a vulnerable items in the Work notes section

Starting with v25.0.3 of Application Vulnerability Response, the system property *sn_sec_cmn.risk_score_changes_add_worknotes* is inactive by default. If you enable it, only then you can see all the changes related to the risk score of an application vulnerable item in the Work notes section. Additionally, the work notes are updated only if there's a change in the risk score.

Activation information

Install Application Vulnerability Response by requesting it from the ServiceNow Store. Application Vulnerability Response is included as a part of the Vulnerability Response application. The Software Bill of Materials applications require a separate subscription. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Configuration Compliance release notes

The ServiceNow® Configuration Compliance application enables you to prioritize and remediate the most critical configuration-related vulnerabilities in your environment quickly and efficiently. Configuration Compliance was enhanced and updated in the Yokohama release.

Configuration Compliance highlights for the Yokohama release

- With the sn_vulc.admin role, create remediation tasks manually in the Vulnerability Manager Workspace.
- With the sn_vulc.remediation_owner role, create remediation tasks manually in the IT Remediation Workspace.

See Configuration Compliance for more information.

Important:
Configuration Compliance is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Identify Wiz Resource Types for import

Identify the Resource Types (assets) reported by Wiz in your environment on the Wiz Integration Resource Type configuration page in your ServiceNow AI Platform instance that you want to import.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The Resource Types that you select apply to all the primary Wiz vulnerability and compliance integrations except the Wiz Container Vulnerability Integration.

Wiz Backfill Integrations

Retrieve and process data stored on the Wiz Missing Assets [sn_vul_wiz_missing_asset] table for missing assets that were not processed by the primary compliance integrations with specialized Wiz Backfill Integrations.

- Test Results Backfill Integration
- Host Test Results Backfill Integration
- Issues Backfill Integration

The Wiz Backfill Integrations are activated by default.

Wiz Host Test Result Vulnerability Integration

Import test results associated with the resource type, `VIRTUAL MACHINE` with the Wiz Host Test Result Vulnerability Integration. This integration is activated by default.

Create remediation tasks manually in the Vulnerability Manager Workspace

With the sn_vulc.admin role, you can create remediation tasks manually by selecting some or all the records in the Configuration Test Results lists in the Vulnerability Manager Workspace. These records are grouped into one or more remediation tasks according to the grouping criteria selected while creating remediation tasks.

Create remediation tasks manually in the IT Remediation Workspace

With the sn_vulc.remediation_owner role, you can create remediation tasks manually by selecting desired records in the Configuration Test Results lists in the IT Remediation Workspace. These records are grouped into one or more remediation tasks according to the grouping criteria selected while creating remediation tasks.

View risk score details of a test result in the Work notes section

Starting with v15.2.1 of Configuration Compliance, the system property *`sn_sec_cmn.risk_score_changes_add_worknotes`* is inactive by default. If you enable it, only then you can see all the changes related to the risk score of a test result in the Work notes section. Additionally, the work notes are updated only if there's a change in the risk score.

Quick Start Tests for Configuration Compliance

After upgrades and deployments of new applications or integrations, run quick start tests to verify that Configuration Compliance works as expected. If you customized Configuration Compliance, copy the quick start tests and configure them for your customizations.

Activation information

Install Configuration Compliance by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Container Vulnerability Response release notes

The ServiceNow® Container Vulnerability Response application brings security and IT together to enable you to remediate your most critical vulnerabilities more quickly and efficiently. Container Vulnerability Response was enhanced and updated in the Yokohama release.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Container Vulnerability Response highlights for the Yokohama release

- With the sn_vul_container.vulnerability_analyst or sn_vul_container.vulnerability_admin role, create container remediation tasks manually in the Vulnerability Manager Workspace.
- With the role sn_vul_container.remediation_owner, create container remediation tasks manually in the IT Remediation Workspace.

See Container Vulnerability Response for more information.

Important:
Container Vulnerability Response is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Enhancements to the Vulnerability Manager and IT Remediation workspaces starting with version 2.13

The Unassign workflow is supported for container vulnerable items (CVITs) and remediation tasks (CVULs).

- Streamline vulnerability assignments in the workspaces with the **Unassign** UI action from the more actions menu on a CVIT.
- Reassign incorrectly assigned CVITs, clarify ownership for reassessment, and maintain accurate triage records in workspace views.
- You have the option to send unassign requests for approval prior to clearing the Assigned to and Assignment group fields on records.

. You can use the following values imported from the Prisma Cloud Compute integration as conditions when you create or update your assignment rules to help you track ownership across your container environments.

- Cloud account IDs
- Image namespaces
- Registry
- Hosts
- Labels
- Status - Vendor status for a resolved (`Fixed`) vulnerability

Create container remediation tasks manually in the Vulnerability Manager Workspace

With the sn_vul_container.vulnerability_analyst or sn_vul_container.vulnerability_admin role, you can create container remediation tasks manually by selecting some or all the records in the Container vulnerable items lists in the Vulnerability Manager Workspace. These records are grouped into one or more remediation tasks according to the grouping criteria selected while creating container remediation tasks.

Create container remediation tasks manually in the IT Remediation Workspace

With the role sn_vul_container.remediation_owner, you can create container remediation tasks manually by selecting some or all the records in the Container vulnerable items' lists in the IT Remediation Workspace. These records are grouped into one or more remediation tasks according to the grouping criteria selected while creating container remediation tasks.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Configure container vulnerable items (CVITs) granularity using Registry and data source

Starting with v2.12.2 of Container Vulnerability Response, you can configure the granularity of container vulnerable items (CVITs) using Registry information and data sources. Depending on the chosen data source, you can view either image or kubernetes information related to a CVIT record.

Additional columns in the container vulnerable items (CVITs) table

Starting with v2.12.2 of Container Vulnerability Response, you can see the precise date and time when a CVIT was first discovered, last opened, resolved, and last found, ensuring clarity and accounting for different time zones.

View risk score details of a container vulnerable item in the Work Notes section

Starting with v2.12.2 of Container Vulnerability Response, the system property `sn_sec_cmn.risk_score_changes_add_worknotes` is inactive by default. If you enable it, only then you can see all the changes related to the risk score of a container vulnerable item in the Work notes section. Additionally, the work notes are updated only if there's a change in the risk score.

Activation information

Install Container Vulnerability Response by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Data Loss Prevention Incident Response release notes

The ServiceNow® Data Loss Prevention Incident Response application helps you to manage sensitive information for your customers such as financial and proprietary data, health records, or Social Security numbers. Data Loss Prevention Incident Response was enhanced and updated in the Yokohama release.

Data Loss Prevention Incident Response highlights for the Yokohama release

- Enhanced the ability to securely store, manage, and track evidence files within the platform for all Data Loss Prevention Incident Response integrations.
- Preview the evidence file of an incident from either the DLP IR analyst workspace or end user workspace.
- Enhanced the DLP incident closure process by adding support for closure codes.
- Introduced the Playbook feature in the DLP IR workspace to enhance operational efficiency.
- Improved response to Data Loss Prevention (DLP) incidents through the initiation of SLA triggers.

See Data Loss Prevention Incident Response for more information.

Important:
Data Loss Prevention Incident Response is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Create a Data Loss Prevention Incident Response SLA trigger

Enable prompt and efficient responses to incidents by creating SLA triggers.

Create a Data Loss Prevention Incident Response SLA definition

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Outline the conditions and duration for responding to data breaches by creating Data Loss Prevention Incident Response SLA definitions.

Create an Application in Proofpoint and Obtain Client Credentials

Create an application in Proofpoint and configure the required settings to obtain client credentials. These credentials enable secure access to the Proofpoint API for seamless integration and automation.

Internet Content Adaption Protocol (ICAP) integration for DLP IR

Integration supports the ingestion of Data Loss Prevention Incident Response alerts, allows the fetching of match content, and evidence files from Amazon S3 created on the ICAP supported Data Loss Prevention Incident Response deployment.

Configure evidence file storage

Store evidence files directly in your ServiceNow instance with Proofpoint integration, by enhancing the ability to manage and track evidence files within the platform.

Configure evidence file storage

Symantec DLP supports evidence file storage to securely store the evidence files for the DLP Incidents.

Preview Evidence files for DLP incidents of type Exchange Online, OneDrive, and SharePoint.

With the DLP Microsoft integration, preview evidence files in the DLP Workspace in the Microsoft OneDrive, Microsoft Exchange Online, and Microsoft SharePoint formats. You can preview and download evidence files directly from the preview interface, simplifying evidence review and retrieval.

Netskope integration: Preview evidence files and Download evidence files

With Netskope integration you can preview and download evidence files directly from the preview interface, simplifying evidence review and retrieval.

Preview evidence files

Preview evidence files and download them directly from the preview interface, simplifying evidence review and retrieval.

Playbook for Data Loss Prevention Incident Response

Introduced playbooks in the DLP Workspace to enhance operational efficiency.

Create incident consolidation rules

Parent incident is always assigned the highest priority among consolidated incidents, enhancing incident management accuracy.

UI changes

Data Loss Prevention Incident Response Analyst Workspace

Introduced a new action in the DLP incident form view that requires users to specify a closure code prior to incident closure.

Changed in this release

Create Additional Incident Data Fields

In the DLP incident table, the **Custom Fields** column has been renamed **Additional Incident Data Fields**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Activation information

Install Data Loss Prevention Incident Response by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Security Operations common functionality

The Security Support Common plugin is activated when any of the plugins for the main Security Operations applications (Security Incident Response, Vulnerability Response, Threat Intelligence, or Configuration Compliance) are activated.

Related ServiceNow applications and features

Security Incident Response

The ServiceNow® Security Incident Response application tracks the progress of security incidents from discovery and initial analysis, through containment, eradication, and recovery, and into the final post incident review, knowledge base article creation, and closure.

Now Assist for Security Incident Response release notes

The ServiceNow® Now Assist for Security Incident Response application can help your security analysts resolve security incidents autonomously with intelligent workflows and generative AI skills. Now Assist for Security Incident Response was enhanced and updated in the Yokohama release.

Now Assist for Security Incident Response highlights for the Yokohama release

Yokohama Patch 11

- Review changes to Now Assist usage measurement.
- Some Now Assist skills, agents, and agentic workflows are on by default.
- Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications.
- Use generative AI to create a quality assessment report of a security incident.

- Yokohama Patch 6

  Help analysts to add security incidents details to the Shift Handover report by chatting with AI agents in the Now Assist panel.

  - Use Google Gemini and Anthropic Claude on AWS as AI model providers for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI.

- Yokohama Patch 3

  Help your analysts to gain insight into security incident record metrics with an agentic workflow. Chat with AI agents in natural language from the Now Assist panel.

  Help your analysts to resolve security incidents by chatting with AI agents in the Now Assist panel where the AI agent provides a resolution plan.

- Yokohama Patch 1

  Help your analysts to close security incidents more efficiently by chatting with AI agents in natural language from the Now Assist panel.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Yokohama early availability
  - Triage security incidents with long activity streams by reviewing work notes and contextual information quickly in a concise, easy-to-read format.
  - Automatically generate resolution notes for security incidents by using generative AI.
  - Generate recommended actions to resolve security incidents.
  - Generate a post-incident analysis.
  - Generate correlation insights to help you connect current incidents to past events. By identifying the affected users, configuration items (CIs), or observables (IP addresses and file hashes) from existing incidents, you can help to triage new security incidents.

For more information, see Now Assist for Security Incident Response.

Important:
Now Assist for Security Incident Response is available in ServiceNow Store. For details, see the "Activation information" section of these release notes.

Important information for upgrading Now Assist for Security Incident Response to Yokohama

For more information about required applications for Now Assist for Security Incident Response, see Supporting information for Now Assist for Security Incident Response.

Note:

Upgrading the Now Assist plugins activate any designated skills that were previously untouched by the customer.

- If you have the plugins installed but never touched the configuration (never activated the skill nor adjusted associated roles) of a skill, any Default On skill will be activated on a per skill basis upon upgrading.
- If you have previously toggled a skill from active and then back to inactive or have updated any roles for that skill, that skill remains inactive upon upgrading.
- You maintain full control over deactivating individual skills at any time after activation.

Starting with version 2.0.1, the name of the Now Assist for Security Operations application in ServiceNow® Store and in your ServiceNow AI Platform® instance has changed to Now Assist for Security Incident Response. You must upgrade to version 2.0.1 to access the following features:

- Generate resolution notes in the Now Assist context menu.
- Generate correlation insights for a security incident investigation from the Now Assist panel.

The AI Search application must be enabled so that the recommended actions skill works for security incidents. To verify that AI Search is enabled on your instance, navigate to **All** > **AI Search** > **AI Search Status**. Contact support if the page indicates that AI Search is not enabled.

New in the Yokohama release

Yokohama Patch 11

Role configuration required for agentic workflows and AI agents

Agentic workflows and AI agents included with Now Assist applications require additional security configuration. If you select *Users with selected roles* for your user access security controls for an agentic workflow or AI agent, you must

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

add the installed roles, or they will not execute. Data access settings must also include these roles. See the documentation for the agentic workflow or AI agent for the specific roles you must add.

Some Now Assist skills are turned on by default

The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.

Generate a quality assessment report

Use generative AI to create a quality assessment report of a security incident. The reports are generated using a predefined, natural language rule set. The report provides an overall assessment summary followed by the detailed assessment for all the rules.

Yokohama Patch 6

Generate SIR Shift Handover Report

The AI Agent helps add security incident details to a shift handover report. The agent populates the different sections of the shift handover with appropriate content by identifying the relevant details from the security incident. The AI agent can fetch details of the security incident and identify if the analyst has access to the shift handover record. The AI agent can generate content for each section of the shift handover record and asks for analysts feedback on the content. The AI agent refines the content based on the feedback and saves the content to the records on approval.

New third-party AI model provider options available for all Now Assist applications

Google Gemini and AWS Claude are available for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI.

Yokohama Patch 3

Using AI agentic workflows in Now Assist for Security Incident Response

The Analyze security operations metrics agentic workflow enables security managers to analyze their teams' performance.

- Generate metrics for Security Incident Response (SIR) records for case volume, mean time to assign (MTTA), and mean time to resolve (MTTR) for a date range of your choosing.
- Request suggestions for how to improve MTTR, MTTA, and volume based on your metrics.

Enhancements to correlation insights in Now Assist for Security Incident Response

You can generate and view results for correlation insights in the Security Incident Response Workspace.

- Correlation insights are not limited to the primary configuration item (CI) or affected users associated with a security incident. You can base your correlation insights on any CI or affected user for a security incident.
- You can generate correlation insights from the **Investigation** tab for a security incident in any state in the Security Incident Response Workspace.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- You can generate insights for multiple items simultaneously for Associated Observables, Configuration items, and Affected Users.
- Results are displayed in a modeless dialog that you can size and move.

Using Security incident resolution agentic workflow

Use the Security incident resolution agentic workflow to close your security incidents. Analysts can chat with the AI agents in natural language to resolve the security incidents. The AI agent analyzes the incident details, existing runbooks, knowledge articles, and past similar security incidents as inputs, and provides a resolution plan. The AI agent also assists the analysts to resolve the security incident.

Yokohama Patch 1

Using Security Incident Response AI agents

Yokohama Patch 1: Use the Close security incident use case to close your security incidents:

- Analysts can chat with the AI agents in natural language to close the security incidents. The AI agent can cancel the associated response tasks, generate resolution notes, close code, or close notes and post incident analysis (PIA) during incident closure. Analysts can provide feedback on the content and the AI agent can refine the content based on the feedback.
- Analysts can also close false positive security incidents with minimal user intervention.

Yokohama Early Availability

- Generate correlation insights

  Generate correlation insights to connect current security incidents to past events. You can identify the affected users, configuration items (CI)s, or observables (IP addresses and file hashes) from existing incidents and records to help you more quickly triage your new security incidents. Correlation insights are supported in Workspace, the Core UI, and from the Now Assist panel.

- Enhancements to closure (resolution) notes and post incident analysis generation

  Generate resolution notes from the Close the security incident modal or the Now Assist context menu on a security incident record (SIR). You can also generate resolution notes from the Now Assist panel. If you choose the Now Assist context menu, you have the following options to help you refine the generated text:

  - **Shorten**: Select the text to remove details.
  - **Elaborate**: Generate more details about the context of a security incident.

  Note:
  Generating resolution notes is supported in Workspace and Core UI. Generating a post incident analysis is supported from the Close the security incident modal in Workspace.

UI changes

Yokohama Patch 3

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Generate recommended actions for a security incident with Now Assist for Security Incident Response

Introduced a new UI card **Show More** to enhance the visibility of recommended actions. As a security analyst, you can now access additional context along with further recommended steps to assist in the analysis and investigation of security incidents.

Now Assist for Security Incident Response application name change

Starting with version 2.0.1, the Now Assist for Security Operations application in the ServiceNow® Store and in your ServiceNow AI Platform® instance has changed to the Now Assist for Security Incident Response application.

Changed in this release

Yokohama Patch 11

Changes to Now Assist usage measurement

Starting with Yokohama Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Some Now Assist skills are now turned on by default

The following Now Assist skills for Now Assist for Security Incident Response and Now Assist for Vulnerability Response are activated by default.

- Security incident summarization (SIR)
- Resolution notes generation (SIR)
- Post incident analysis (SIR)
- Security incident recommended actions (SIR)
- Correlation insights generation (SIR)
- Security incident quality assessment (SIR)

The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.

Configure ACLs for AI agents and agentic workflows

Configure the access control lists for who can discover and trigger AI agents and agentic workflows in their guided setups in AI Agent Studio. You can determine whether an AI agent or agentic workflow behaves as a dynamic user or as an AI user. You can also specify if an AI agent or agentic workflow can be available to all authenticated users or publicly available.

Activation information

Install Now Assist for Security Incident Response by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Now Assist for Vulnerability Response release notes

The Now Assist for Vulnerability Response application can help your vulnerability analysts and remediation owners resolve vulnerable items autonomously with intelligent workflows and generative AI skills. Now Assist for Vulnerability Response was enhanced and updated in the Yokohama release.

Now Assist for Vulnerability Response highlights for the Yokohama release

Yokohama Patch 11

- Review changes to Now Assist usage measurement. See the "Changed in this release" section below.
- Some Now Assist skills, agents, and agentic workflows are on by default.
- Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications.
- Use Now Assist for Vulnerability Response with Security Posture Control to help you with Creating an API connector in the Security Posture Control workspace.

- Yokohama Patch 6

  Help your analysts identify duplicate host vulnerable items and analyze available remediation options with generative AI skills with Now Assist for Vulnerability Response.

  - Use Google Gemini and Anthropic Claude on AWS as AI model providers for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI.

  See Now Assist for Vulnerability Response for more information.

Important:
Now Assist for Vulnerability Response is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Important information for upgrading Now Assist for Vulnerability Response to Yokohama

For more information about required applications for Now Assist for Vulnerability Response, see Supporting information for Now Assist for Vulnerability Response.

Note:

Upgrading the Now Assist plugins activate any designated skills that were previously untouched by the customer.

- If you have the plugins installed but never touched the configuration (never activated the skill nor adjusted associated roles) of a skill, any Default On skill will be activated on a per skill basis upon upgrading.
- If you have previously toggled a skill from active and then back to inactive or have updated any roles for that skill, that skill remains inactive upon upgrading.
- You maintain full control over deactivating individual skills at any time after activation.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

New in the Yokohama release

Yokohama Patch 11

Role configuration required for agentic workflows and AI agents

Agentic workflows and AI agents included with Now Assist applications require additional security configuration. If you select *Users with selected roles* for your user access security controls for an agentic workflow or AI agent, you must add the installed roles, or they will not execute. Data access settings must also include these roles. See the documentation for the agentic workflow or AI agent for the specific roles you must add.

Some Now Assist skills are turned on by default

The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.

Use Now Assist for Vulnerability Response in Security Posture Control

You have the option to use Now Assist to help you automatically complete some of the steps in the Connector builder in the Security Posture Control workspace. Use the Connector builder to create your own service graph connectors for Security Posture Control.

Generate insights to prioritize risks

Use generative AI to provide contextual summaries, actionable recommendations, and quick links in the Security Exposure Management Workspace, helping you prioritize critical risks and accelerate remediation.

Generate recommendation for approval impact analysis

Use generative AI to provide on-demand recommendations to approve or reject a request directly from the Exception Change Approval record, enabling approvers to make fast, consistent decisions while reducing manual analysis effort.

Yokohama Patch 8

Granular roles

The sn_vul_ai.write_rem_insights and sn_vul_ai.read_rem_insights granular roles have been added and are inherited by the sn_vul.vulnerability_admin and sn_vul.vulnerability_analyst roles automatically. These roles provide you with more control over read and write access for the records on the Remediation Compliance Insights [sn_vul_ai_remediation_insights] caching table. The VR.System role also inherits these granular roles so background job execution for the workflow can occur.

Yokohama Patch 6

Identify duplicate vulnerable items with Now Assist for Vulnerability Response

Use generative AI to identify duplicates for your active host vulnerable items that are imported by your vulnerability scanners. Use generative AI reasoning with Now Assist to help your analysts differentiate between primary vulnerability items (VITs) and those VITs that are duplicates. Close duplicate VITs and move their associated detections automatically to the primary VIT records.

Suggest preferred vulnerability solutions with Now Assist for Vulnerability Response

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Use generative AI to analyze available remediation options pulled from integrated third-party products like Red Hat, Tenable for Vulnerability Response, or internal solution management systems. Evaluate each option against the specific configuration item context, for example, the OS version or software version, and get recommendations for the most viable fix for implementation.

New third-party AI model provider options available for all Now Assist applications

Google Gemini and AWS Claude are available for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI.

Yokohama Patch 3

Using agentic workflows in Now Assist for Vulnerability Response

The Assess vulnerability exposure agentic workflow enables vulnerability managers to determine your exposure to vulnerabilities.

- Determine your exposure to the most current Cybersecurity and Infrastructure Security Agency (CISA) known vulnerabilities in your environment and assess their potential impact to your configuration items (CIs) and business services.
- Identify assets with Common Vulnerabilities and Exposures (CVEs).
- Determine the number of active vulnerability items (VITs) that correspond to CVEs. Create watch topics for VIT remediation.

The Analyze vulnerability remediation status agentic workflow enables vulnerability managers to monitor and assess remediation target compliance.

- Track Service Level Agreement (SLA) compliance - Understand how effectively your organization is meeting remediation goals for vulnerabilities based on your SLAs.
- Analyze missed SLAs by severity, assignment group, and configuration item (CI) class - Pinpoint gaps in remediation by categorizing overdue VITs based on severity, assignment groups, and CI classes to enable targeted interventions and smarter resource allocation.

Changed in this release

Yokohama Patch 11

Changes to Now Assist usage measurement

Starting with Yokohama Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Some Now Assist skills are now turned on by default

The following Now Assist skills for Now Assist for Vulnerability Response are activated by default.

- Recommend preferred solution for VIT (VR)
- Vulnerable item de-duplication (VR)
- Approval Recommendation (VR)(USEM)
- Security Exposure Management (SEM) Insights (VR)(USEM)
- SPC Setup Connector (Security Posture Control)

The new default behavior works as follows:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- New customers: When you install a Now Assist product, designated skills are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.

Configure ACLs for AI agents and agentic workflows

Configure the access control lists for who can discover and trigger AI agents and agentic workflows in their guided setups in AI Agent Studio. You can determine whether an AI agent or agentic workflow behaves as a dynamic user or as an AI user. You can also specify if an AI agent or agentic workflow can be available to all authenticated users or publicly available.

Activation information

Install Now Assist for Vulnerability Response by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Security Incident Response release notes

The ServiceNow® Security Incident Response (SIR) application helps your organization connect security and IT teams, respond faster and efficiently to threats, and view your organization's security posture. Security Incident Response was enhanced and updated in the Yokohama release.

Security Incident Response highlights for the Yokohama release

- Identify inefficiencies and optimize the resolution process of security incidents for faster closure by using Process MIning.
- Implemented CrowdStrike Next-Gen SIEM integration enabling real-time ingestion of correlated detections, and enrichment data.
- Enhanced Splunk ES integrations to improve incident classification and enable efficient retrieval of historical data and alerts.
- Include the number of VITs indirectly associated with a CVE through TPEs.
- Help managers ensure there are no gaps in coverage and analysts are always available to address security incidents by configuring shifts for analysts.
- Define default child nodes to populate in the relationship graph, and add or remove child nodes at the parent node level.

See Security Incident Response for more information.

Important:
Security Incident Response is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Process Mining for security incidents

Identify factors contributing to delays in processing Security Incident Response (SIR) incidents that take a long time to close or resolve by scanning historical SIR

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

records through Process Mining. Time-consuming factors can include multiple reassignments, prolonged hold times, and periods of inactivity.

CrowdStrike Next-Gen SIEM integration

As a Profile Admin:

- Discover CrowdStrike Next-Gen SIEM detections that are candidates for security incidents and automate the creation of these security incidents.
- Create detection profiles.
- Map CrowdStrike Next-Gen SIEM Detection and Events Fields to SIR security incident fields.
- Filter CrowdStrike Next-Gen SIEM defects.
- Aggregate detections to existing open security incidents so that you don't have to create duplicate security incidents.
- Schedule ongoing detection ingestion.
- Automate CrowdStrike Next-Gen SIEM detection status updates for Security Incident Response.
- Synchronize CrowdStrike Next-Gen SIEM detection comments with SIR Work notes.

Create and name an event profile for the Splunk Enterprise Security event ingestion integration

- Enables bidirectional updates and closure synchronization between Splunk ES and Splunk integrations.
- Enables retrieval of historical, and ongoing data including closed events, with an option to pull the closed events into the ServiceNow Splunk ES instance.
- Receive updates for the mapped fields in SIR.

Components installed with Security Incident Response

A new Profile Admin role (sn_si.ingestion_profile_admin) provides access to configure plugins, and create, edit, delete, and manage profiles for the Splunk, Splunk ES, and Azure Sentinel Integration for Security Operations application.

Add indirectly linked VITs to CVEs

Identify all the Third-Party Entities (TPEs) associated with a Common Vulnerabilities and Exposures (CVE) and then calculate and display the total number of vulnerable items (VITs) indirectly linked to those CVEs through the TPEs by setting the sn_ti.include_cve_vit_indirect_relation property.

Configure on-call schedules

As an admin:

- Create a shift and assign or remove members to/from the shift.
- Create/edit on-call schedules for groups.
- View any group’s on-call schedule, including those to which they belong.

As an analyst:

- Specify your availability and preferred contact methods.
- View your on-call schedule and see other members of your shift.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Configure report templates in Security Incident Response

As an admin, create report templates that can be used to generate an incident summary or an executive summary for analysis and sharing.

As an analyst, use the templates to generate analyst summary or executive summary reports for a SIR incident that can be shared over email.

Security Incident Response conference call integration

Initiate conference calls using communication channels such as Microsoft Teams, Cisco Webex, or Zoom with customers and peer agents to resolve security incidents over a call by using the SIR conference call feature.

Enhancements to relationship graphs

As an admin:

- Define default child nodes to populate in the relationship graph.
- Configure relationship labels.

As an analyst:

- Add or remove child nodes at the parent node level.
- Save the state of the relationship graph.
- Retrieve updated data.

Proofpoint integration for Security Operations

Proofpoint integration for Security Operations supports integration between SOAR (Security Orchestration, Automation, and Response) and Proofpoint Targeted Attack Protection (TAP) software. This integration provides the following benefits:

- Detect and block threats such as business email compromise and tags suspicious emails for tracking, analysis, and audit.
- Import data to automatically create security incidents for email events that are not captured by TAP products.

Data Loss Prevention Incident Response Analyst Workspace

Preview the evidence file of the incident from either the Data Loss Prevention analyst workspace or the DLP end user workspace.

UI changes

Start a Sidebar chat in Security Incident Response

The **Discuss** option has been renamed **Start Chat** and moved under the **Collaborate** option.

Other additional Security Incident Response setup tasks

View security incidents with read access and update security incidents with write access without any defined security role.

Activation information

Install Security Incident Response by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Security Operations common functionality

The Security Support Common plugin is activated when any of the plugins for the main Security Operations applications (Security Incident Response, Vulnerability Response, Threat Intelligence, or Configuration Compliance) are activated.

Related ServiceNow applications and features

Vulnerability Response

Vulnerability Response is part of the Security Operations application suite. Together, these applications connect security to your IT department, increase the speed and efficiency of your response, and give you a definitive view of your security posture.

Threat Intelligence

The ServiceNow® Threat Intelligence application enables you to find indicators of compromise (IoC) and enrich security incidents with threat intelligence data.

Security Posture Control release notes

The ServiceNow® Security Posture Control application provides cybersecurity teams with visibility into security tool coverage gaps and deviations from security tool configuration for their enterprise assets. Security Posture Control was enhanced and updated in the Yokohama release.

Security Posture Control highlights for the Yokohama release

- Create and publish your own API connectors with a step-by-step process in the Connector builder module in the Security Posture Control workspace. You can use generative AI to automate some steps. See the Now Assist for Security Incident Response release notes for more information about the Now Assist skill.
- Get insights into your overall security posture and configuration gaps in your security tools using new policies and asset profiles that are included with the Security Posture Control application.
- Use the policies included with the application or custom policies that you create to monitor your assets for overall security tool coverage, compliance with internal configuration standards, critical combinations of security gaps and vulnerabilities, and possible internet exposure.

See Security Posture Control for more information.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Important:
Security Posture Control is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Important information for upgrading Security Posture Control to Yokohama

For a complete list of the applications that are required to implement Security Posture Control, see Install Security Posture Control.

New in the Yokohama release

Create a custom API service graph connector in the Security Posture Control workspace

Use generative AI to help your developers create SPC API connectors quickly with the Connector builder framework module in the Security Posture Control workspace. With a Now Assist skill that is included with the Now Assist for Vulnerability Response application, your developers have the option to automate steps in the Connector builder framework.

- You have the option to automate the steps for selecting API templates, populating request and header parameters, and response field mapping with generative AI.

  Note:
  You must install Yokohama Patch 11 of the Now Assist for Vulnerability Response application to have access to the generative AI skill for the Connector builder framework. See the Now Assist for Security Incident Response release notes and Supporting information for Now Assist for Vulnerability Response for more information.

- Use your custom API connector to integrate with security tools and import asset data that is based on the unique requirements of your environment.
- Help your cybersecurity teams monitor your overall security posture and identify assets that are missing key security tools with the API connectors that you build.

Enhancements to policies and asset profiles included with the Security Posture Control application

Get insights into your overall security posture and configuration gaps in your security tools using new policies and asset profiles that are included with the Security Posture Control application. Activate these asset profiles and policies in the Security Posture Control workspace so that you can identify gaps in configuration or coverage for the following tools:

- CrowdStrike
- Microsoft Intune, Defender, and SCCM
- HCL Big Fix
- SentinelOne
- Qualys
- Rapid7

SentinelOne integration for mitigation controls monitoring

You can import SentinelOne mitigation controls data with this integration to help you detect which mitigation controls are on your assets. Use this integration with the asset and software data that you import with the SentinelOne Service Graph

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Connector to help you monitor your security tool coverage on your enterprise assets.

Service Graph Connector for Netskope

This product pulls in asset inventory data for hardware and software from the Netskope database into the ServiceNow Configuration Management Database (CMDB) application.

Activation information

Install Security Posture Control by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Threat Intelligence Security Center release notes

The ServiceNow® Threat Intelligence Security Center application empowers your organization to connect security and IT teams so you can respond faster and more efficiently to threats. Threat Intelligence Security Center was enhanced and updated in the Yokohama release.

Threat Intelligence Security Center highlights for the Yokohama release

- Integrate with Microsoft Defender to enable Cyber Threat Intelligence (CTI) analysts to automatically push malicious or suspicious IP addresses, domains, file hashes, and URLs from TISC to Microsoft Defender.
- Added creation of security incident directly from a TISC case with an option to associate observable artifacts to the security incident.
- Enhanced support to export observables, indicators, and cases from the list views in STIX 2.1 JSON, CSV, and Excel formats.
- Added settings to ingest indicators of interest based on associations to threat actors, threat reports, or malware families, including an option to include indicators deleted on CrowdStrike.
- Improved Threat Intelligence Feed configuration functionality to create a duplicate copy of the existing feed.

See Threat Intelligence Security Center for more information.

Important:
Threat Intelligence Security Center is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Microsoft Defender for EDR Integration

Integration with the Microsoft Defender for EDR allows Cyber Threat Intelligence (CTI) analysts to automatically push malicious or suspicious IP addresses, domains, file hashes, and URLs to Microsoft Defender for continuous monitoring and real-time alerting.

Create a security incident from a TISC case

Create security incidents and associate observables to the security incidents from a TISC case.

Duplicate threat intelligence feeds

Duplicate threat intelligence feeds to create an exact copy of the existing feed.

© 2026 ServiceNow, Inc. All rights reserved.

Changed in this release

Courses of Action

Renamed Course of Actions to Courses of Action.

Create Inbound Data Exclusion Rules

Renamed Inbound Filtering Rules to Inbound Data Exclusion Rules.

Activation information

Install Threat Intelligence Security Center by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Security Operations common functionality

The Security Support Common plugin is activated when any of the plugins for the main Security Operations applications (Security Incident Response, Vulnerability Response, Threat Intelligence, or Configuration Compliance) are activated.

Related ServiceNow applications and features

Threat Intelligence

The ServiceNow Threat Intelligence application displays indicators of compromise (IoC) and enables you to enrich security incidents with threat intelligence data.

Vulnerability Response release notes

The ServiceNow® Vulnerability Response application brings security and IT together to enable you to remediate your most critical vulnerabilities more quickly and efficiently. Vulnerability Response was enhanced and updated in the Yokohama release.

Vulnerability Response highlights for the Yokohama release

- With the sn_vul.vulnerability_analyst or sn_vul.vulnerability_admin role, create host remediation tasks manually in the Vulnerability Manager Workspace.
- With the sn_vul.remediation_owner role, create host remediation tasks manually in the IT Remediation Workspace.

See Vulnerability Response for more information about the Vulnerability Response application. See the Vulnerability Response Compatibility Matrix and Release Schema Changes Knowledge Base article for more information about released Security Operations applications and their version compatibility.

Important:
Vulnerability Response is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Identify Wiz Resource Types for import

Identify the Resource Types (assets) that are reported by Wiz that you want to import with the Wiz Integration Resource Type configuration page in your ServiceNow AI Platform instance.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The Resource Types that you select apply to all the primary Wiz vulnerability and compliance integrations except the Wiz Container Vulnerability Integration. See the Wiz Vulnerability Response Integrations for more information about the vulnerability and compliance integrations.

Wiz Backfill Integrations

Retrieve and process data stored on the Wiz Missing Assets [sn_vul_wiz_missing_asset] table for assets that were not processed by the primary Host Vulnerability Integration with a specialized Wiz Backfill Integration.

The Host Vulnerability Backfill Integration is activated by default.

Note:
The Wiz Asset Integration and the Wiz Container Vulnerability Integration do not have backfill integrations. The Wiz Asset Integration can discover assets and create and update discovered item records on the Discovered item [sn_sec_cmn_src_ci] table. The Wiz Container Vulnerability Integration imports and processes discovered container image records.

Create host remediation tasks manually in the Vulnerability Manager Workspace

With the sn_vul.vulnerability_analyst or sn_vul.vulnerability_admin role, you can create host remediation tasks manually by selecting some or all the records in the Host vulnerable items' lists in the Vulnerability Manager Workspace. These records are grouped into one or more remediation tasks according to the grouping criteria selected while creating host remediation tasks.

Create host remediation tasks manually in the IT Remediation Workspace

With the sn_vul.remediation_owner role, you can create host remediation tasks manually by selecting desired records in the Host vulnerable items' lists in the IT Remediation Workspace. These records are grouped into one or more remediation tasks according to the grouping criteria selected while creating host remediation tasks.

Questionnaire Support in Exception Management via Smart Assessment

Configure advanced questionnaires as part of the exception management process using Smart Assessment. This enhancement allows remediation owners to provide detailed context for exception requests and enables approvers to configure conditional questions to gather information for informed decision making.

- Collaboration and streamlined approval: Facilitate collaboration between your vulnerability management and remediation teams by streamlining the approval process with clear and complete exception justifications.
- Mandatory questionnaires: Block the submission of exception requests until mandatory questionnaires are completed. If a questionnaire is marked as mandatory, the test results and its associated remediation tasks remain in the 'Open' state until the questionnaire is completed and submitted.
- If the questionnaire is incomplete, the state change approval record is saved as 'Draft'. Only after completing the questionnaire can the user submit the exception request, which will then move the test results or remediation tasks to the 'In Review' state.

Lookup rules enhancements

When you reapply Lookup rules, Discovered items (DIs) that have been inactive for more than 90 days are ignored. These Discovered items (DIs) are also excluded

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

from licensing considerations. Removing them from the lookup logic can improve performance and reduce processing time.

- Background job enhancements: New fields have been added to help you view successfully evaluate records, the time taken for processing, the time remaining, and an estimated number of records.
- Improved accuracy for non-CSDM Vulnerability Response users: A system property (sn_sec_cmn.ci_lifecycle_status_source) has been introduced to help users who do not follow Common Service Data Model (CSDM) standards. This property ensures that Discovered items (DIs) and associated VITs are properly marked as Decommissioned and are excluded from the CI Lookup. Additionally, the Retired Configuration Items PA indicator has been updated to accurately reflect CIs based on the decommissioning flags.
- The scheduled job to create reconcile unmatched discovered items feature is deprecated. You can "Reapply Look up Rules" for selected or filtered items in the discovered items table view.

Tenable.cs integrations with the Vulnerability Response and Container Vulnerability Response application

The Vulnerability Response Integration with Tenable application now supports data ingestion from Tenable.cs, enabling you to bring in cloud and container vulnerabilities directly into ServiceNow. This integration enhances your ability to prioritize and remediate vulnerabilities identified in Tenable cloud resources and container images. Key capabilities are:

- Importing vulnerabilities discovered by Tenable.cs in cloud hosts and container images into ServiceNow automatically.
- Enabling remediation workflows to triage, assign, and resolve the most critical vulnerabilities across cloud-native and containerized environments.
- Using the Setup Assistant to easily configure credentials and integration parameters—get started with minimal manual setup.
- Scheduling jobs to run periodically to import findings from Tenable.cs, create vulnerable items (for cloud hosts), create container vulnerable items and associate them with the relevant cloud resources and container image records.

Assess vulnerability exposure by publisher

Starting with v5.0 of Vulnerability Exposure Assessment, a publisher-based assessment is introduced that enables you to assess the vulnerability impact by vendor. For example, Microsoft, and Red Hat. By focusing on recently disclosed vulnerabilities from critical vendors, you can prioritize remediation and proactively address threats, improving your overall security posture.

View risk score details of a vulnerable item in the Work notes section

Starting with v25.0.3 of Vulnerability Response, the system property `sn_sec_cmn.risk_score_changes_add_worknotes` is inactive by default. If you enable it, only then you can see all the changes related to the risk score of a vulnerable item in the Work notes section. Additionally, the work notes are updated only if there's a change in the risk score.

Quick Start Tests for Vulnerability Response

After upgrades and deployments of new applications or integrations, run quick start tests to verify that Vulnerability Response works as expected. If you customized Vulnerability Response, copy the quick start tests and configure them for your customizations.

Enhancements to exception rules handling

- Exception rules are reevaluated with nightly scheduled jobs.
- Vulnerable items that no longer match exception rule conditions are unlinked from remediation tasks.
- A deferred vulnerable item (VIT) is reopened if it doesn't match any active exception rules.
- Exception rules don't create remediation tasks. VITs are deferred directly and aren't associated with a remediation task.

Tenable's endpoint scanning integration

Support for Tenable's endpoint scanning integration to retrieve scan metadata. The integration fetches scan details using the last_schedule_id from existing asset data in Tenable.io.

Reopened Count field on vulnerable items

Added the Reopened Count field on vulnerable items to track the number of times their states change from 'Closed' to 'Open' or to 'Active'.

Out-of-the-box vendor advisories via Common Security Advisory Framework (CSAF) integration

The following vendor advisories are configured out-of-the-box and are automatically activated when the Solution Management plugin is enabled: Redhat and Suse.

Activation information

Install Vulnerability Response by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Vulnerability Response integrations release notes

Third-party integrations with the ServiceNow® Vulnerability Response application help enrich your vulnerability data. The ServiceNow applications and third-party integrations that are compatible with the Vulnerability Response application were enhanced and updated in the Yokohama release.

Vulnerability Response highlights for the Yokohama release

The Tenable.io CI lookup rules prioritize and populate the non-empty network interface values (FDQN, IPV4, and MacAddress) for a discovered item.

See Vulnerability Response integrations for more information.

Important:
Vulnerability Response is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Important information for upgrading Vulnerability Response to Yokohama

- For more information about the released versions of the Vulnerability Response application as well as the third-party and ServiceNow applications that are compatible with the Yokohama release, see the Vulnerability Response Compatibility Matrix and Release Schema Changes [KB0856498] article in the Now Support Knowledge Base.
- For information about the new features of Vulnerability Response, see Vulnerability Response release notes.

New in the Yokohama release

Tenable.io CI lookup rules prioritize the non-empty network interface values (FDQN, IPV4, and MacAddress) for a discovered item

The Tenable.io CI lookup rules prioritize and populate the non-empty network interface values (FDQN, IPV4, and MacAddress) over the regular FDQN, IPV4, and MacAddress values for a discovered item.

Activation information

Install Vulnerability Response by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

ServiceNow AI Platform administration release notes

ServiceNow AI Platform® administration product enhancements and updates in the Yokohama release.

Use ServiceNow AI Platform administration features to address the business needs of your organization. Administration features are active by default on all instances.

Advanced AI Search Management Tools release notes

The ServiceNow® Advanced AI Search Management Tools application helps AI Search administrators analyze search query traffic trends, review indexed record and configuration settings, and preview search query results. Advanced AI Search Management Tools was enhanced and updated in the Yokohama release.

Advanced AI Search Management Tools highlights for the Yokohama release

Yokohama Patch 11

- Review performance metrics and trends more easily with an updated and refreshed dashboard UI.
- Analyze performance metrics and trends for search applications used in Recommended Actions.

Yokohama Patch 6

- Analyze search trends from the preceding six months using the AI Search Analytics dashboard's **Date range** interactive filter.
- Understand your mobile search traffic with support for the Mobile Platform search application in the AI Search Analytics dashboard's **Search application** interactive filter.

See Platform Analytics Solution for Advanced AI Search Management Tools for more information.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Important:
Advanced AI Search Management Tools is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Yokohama Patch 11

AI Search analytics dashboard

The **Search application** interactive filter now allows analysts to review performance metrics and trends for search applications used in Recommended Actions.

Yokohama Patch 6

AI Search analytics dashboard

The **Search application** interactive filter now allows analysts to review performance metrics and trends for the Mobile Platform search application.

Changed in this release

Yokohama Patch 11

AI Search analytics dashboard

The performance metrics, trends, and charts for this dashboard have been refreshed to offer a cleaner visual experience.

Yokohama Patch 6

AI Search analytics dashboard

The **Date range** interactive filter now enables you to access data from the last 180 days, rather than the last 90 days.

Activation information

Install Advanced AI Search Management Tools by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Additional requirements

You must have the User Experience Analytics API application installed from the ServiceNow Store to use Advanced AI Search Management Tools.

Related ServiceNow applications and features

AI Search

The ServiceNow AI Search application provides a consumer-grade search engine for ServiceNow Service Portal, ServiceNow Now Mobile®, and ServiceNow Virtual Agent. Intelligent query features help you quickly find the answers you need.

AI Search release notes

The ServiceNow® AI Search application provides a consumer-grade search experience for ServiceNow AI Platform® users. AI Search was enhanced and updated in the Yokohama release.

AI Search highlights for the Yokohama release

Yokohama Patch 11

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Improve search precision and contextual relevance with hybrid search, available for customers with Now Assist in AI Search installed.
- Gain insights into search behavior with a refreshed and updated Search Preview UI.

Yokohama Patch 6

- Search more intuitively with an updated, consumer-grade user experience in search portals, global search, and workspace search.

Yokohama Early Availability

- Restrict index size and increase search performance with guardrails that limit the number of Task and Alert table records indexed for search
- Customize the semantic vector search experience by configuring semantic indexing settings for your indexed sources
- Improve the focus of search results by excluding search sources in a search profile from being used to generate search results or Genius Result answers
- Expand search recall by indexing content from knowledge blocks
- Highlight important search results by boosting relevancy for results that match synonyms in a synonym dictionary

See AI Search for more information.

Important information for upgrading AI Search to Yokohama

When you upgrade to Yokohama from an earlier release, make knowledge block content searchable by reindexing all your indexed sources that include knowledge articles. For details on reindexing, see Perform a full table index or reindex for a single AI Search indexed source or Perform a full table index or reindex for multiple AI Search indexed sources.

New in the Yokohama release

Yokohama Patch 11

Improve search precision and contextual relevance with hybrid search

Beginning with Now Assist in AI Search 15.0, customers with Now Assist in AI Search installed can enable the new hybrid search mode. Hybrid search combines keyword-based search with semantic understanding to deliver more accurate and relevant search results, with fewer zero-result searches.

Yokohama Patch 3

Improve semantic search with third-party embedding models

Use custom and third-party embedding models supported by the AI Search RAG application to generate more accurate and relevant semantic search results.

Yokohama Early Availability

Limit the number of Task and Alert records indexed with indexed source guardrails

Index guardrail settings restrict index size and increase search performance by limiting the number of Task and Alert table records indexed for search.

Exclude search sources in a search profile from search result or Genius Result generation

Tune your search results by configuring search source exclusion settings in your search profiles. You can exclude a search source from being used to generate regular search results, Genius Result answers, or both. When excluding a search

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

source's records from Genius Result answer generation, you can also choose to exclude its attachments.

Knowledge block content indexing

When you index knowledge articles for search, AI Search now includes content from knowledge blocks to improve search recall. Administrators can disable indexing of knowledge block content if desired.

Boost relevancy for search results that match synonyms from a synonym dictionary

Define synonyms in a synonym dictionary and configure a result improvement rule to apply relevancy boosts (positive or negative) to search results that match any of those synonyms.

Customize semantic indexing settings for indexed sources

Customize semantic indexing settings for your indexed sources.

Fuzzy numeric search

Find records by their Number using numeric search terms like 23583, with no need to match alphabetical prefixes or leading zeroes.

Changed in this release

Yokohama Patch 11

Now Assist Multi-Content Response Genius Results

If you have Now Assist in AI Search installed, Now Assist Multi-Content Response Genius Results are supported in global and workspace search. Activating Now Assist Multi-Content Response Genius Results in global or workspace search profiles overrides all other Genius Result configurations, so that global and workspace searches only display Genius Result answers from Now Assist Multi-Content Response Genius Results. Virtual Agent topic citations from Now Assist Multi-Content Response Genius Result answers in global or workspace search open the selected topic in the Now Assist panel so the user can continue their conversation on that topic.

Search Suggestions

Search administrators with the ais_admin granular admin role can access all Search Suggestions tables. Assign search administrators this role to eliminate needless propagation of full admin access.

Gain insights into search behavior with a refreshed and updated Search Preview UI.

Preview search query results using settings from a search application configuration or a search profile. Choose between keyword and hybrid search modes. Display search results as individual EVAM cards or as a JSON-format search query response object, with search and syntax highlighting. Review search query behavior and results and specify search query settings with the new Summary, Genius Results, Details, and Profile admin tools.

Yokohama Patch 6

Consumer-grade search experience for search portals

The search results page for search portals has been revised to offer a more intuitive and consistent experience. Navigation tabs have been replaced with source facet buckets. All search results now open in a new browser tab, preserving your search in the existing browser tab. Facet buckets now show minimum search result counts, reflecting results removed by late binding content security. Search terms are no longer highlighted in search results.

Consumer-grade search experience for global search and workspace search

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The search results page for global search and workspace search has been revised to offer a more intuitive and consistent experience. Navigation tabs have been replaced with source facet buckets. All search results now open in a new browser tab, preserving your search in the existing browser tab. Facet buckets now show minimum search result counts, reflecting results removed by late binding content security. A new *glide.ui.ais.show_all_facets* system property enables you to display facets from all sources when no source is selected. (The default behavior is to hide facets until a source is selected.) Search terms are no longer highlighted in search results.

Sort facet buckets alphabetically

Override the default sorting of facet buckets by their search result counts and display them sorted alphabetically by their labels.

Improved display for grouped attachment search results

When grouped with their parent search results, attachment search results now appear in collapsed form to save space. If a parent search result includes more than three grouped attachments, you can use the new **Show more** and **Show less** links to control how many attachments are visible.

Deprecations

Starting with the Now Assist in AI Search 8.0 release, the External Content Q&A Genius Results feature is being prepared for future deprecation. It will continue to be supported until it is deprecated. For details, see the Deprecation Process [KB0867184] article in the Now Support Knowledge Base.

Activation information

AI Search is a ServiceNow AI Platform feature that is active by default.

Browser requirements

AI Search doesn't support Internet Explorer.

Localization information

AI Search supports international languages. For details of language support by feature, see Internationalization support for AI Search.

Related ServiceNow applications and features

Advanced AI Search Management Tools

The Advanced AI Search Management Tools application adds new functionality to AI Search. Administrators can review dashboards with metrics, trends, and reports relating to AI Search usage and configuration.

Now Assist in AI Search

The Now Assist in AI Search application combines the power of search with the Now LLM Service agentic AI model to answer questions in user searches with actionable AI-generated answers from relevant Knowledge articles.

Knowledge Management

Administrators can activate the ServiceNow® Knowledge Management Advanced plugin to install the FAQ [kb_template_faq] table. AI Search can return records in this table as Q&A Genius Result answers for common user search questions.

AI Search Admin console

The AI Search Admin console is a powerful tool designed to help AI Search administrators manage, monitor, and optimize the search experience of their configured search applications.

Application Manager release notes

The ServiceNow® Application Manager enables you to install, update, and manage licensed applications and plugins for your instance. Application Manager was enhanced and updated in the Yokohama release.

Application Manager highlights for the Yokohama release

Yokohama patch 11

- Reduce potential runtime errors by installing and updating Now Assist applications with suites of interdependent versions.
- View all ServiceNow Store applications that are licensed or available for procurement from the **Available for you** tab.
- Gain insights about application installation requirements and blockers with application state indicators.

See Application Manager for more information.

Important information for upgrading Application Manager to Yokohama

Application Manager is active by default on instances on the Yokohama release. Upgrade your instance to Yokohama patch 11 or later to use the latest features. For information about upgrading your ServiceNow AI Platform instance, see Prepare your upgrade.

New in the Yokohama release

Yokohama patch 11

Now Assist suites for version compatibility

Use the Application Manager to install and update Now Assist applications with suites of compatible application versions. Now Assist suites help verify that new Now Assist applications and versions remain compatible with the ones already installed to your instance.

Application state indicators

Review information about any applicable installation considerations, requirements, and blockers in the header of application details.

Changed in this release

Unlicensed application information

In addition to details about applications that are already licensed, the "Available for you" tab of the Application Manager now includes information about applications that haven't been procured from the ServiceNow Store yet.

Activation information

Application Manager is a ServiceNow AI Platform feature that is active by default.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Related ServiceNow applications and features

ServiceNow Store

Get applications that haven't been licensed yet from the ServiceNow Store, then install and update them through the Application Manager.

Now Assist

The Application Manager helps verify that Now Assist applications that you install or update remain compatible with any other Now Assist applications on your ServiceNow AI Platform instance.

ServiceNow AI Platform core feature release notes

The ServiceNow® ServiceNow AI Platform core features provide functionalities to applications and other parts of the ServiceNow AI Platform. The ServiceNow AI Platform core features were enhanced and updated in the Yokohama release.

ServiceNow AI Platform core feature highlights for the Yokohama release

- Streamline how you access help content on the system events and job scheduling dashboard by accessing the appropriate help content in each tab.
- Insert, update, and delete data in an external data source from a remote table.

See Administer the ServiceNow AI Platform for more information.

New in the Yokohama release

Add dynamic attributes to a dynamic category

Add individual attributes or a group of attributes to a dynamic category.

Reference a dynamic attribute or a list of dynamic attributes

Build a dependency between a dynamic attribute store field and either a dynamic attribute or a list of dynamic attributes.

Edit data in remote tables on an instance

Insert, update, and delete data in an external data source from a remote table on an instance when you enable editing for the table. Customize the script definitions that enable you to insert, update, or delete data from a remote table.

Changed in this release

Updated Access Control Lists (ACLs) for Transaction tables and Session Management tables

The ACLs for a number of Transaction Management tables and Session Management tables have been updated to enhance security using a combination of Deny and Allow ACLs. All new ACLs have a security attribute. You must have the security attribute to add to the role list of an ACL. For more information, see Configure an ACL rule, Deny-Unless ACL, and .

The updated Transaction Management tables include:

- syslog
- syslog_ajax
- syslog_email

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- syslog_transaction
- syslog_script

The updated Session Management tables include:

- sys_audit
- sys_security_acl
- sys_user_auth
- sys_user_session

Configuring plugins for the TinyMCE HTML editor

The Accessibility Checker (a11ychecker) plugin is now available in the TinyMCE HTML editor. The plugin identifies WCAG and Section 508 accessibility violations and provides an auto-repair feature where applicable. To configure the plugin, see Change the TinyMCE HTML editor plugins. Additional configurations to the accessibility rules, like changing the WCAG level and HTML versions can also be done via *TinyMCEconfigscript* script.

Field types supported in a configurable workspace

The following field types are now supported for use in a configurable workspace:

- Documentation_field
- Domain_path
- HTML_Script
- Long
- Longint
- multi_small
- Order index
- Radio

For more information, see Field types reference.

Specify the tables that a REST API access policy restricts

Specify the tables that a Table REST API access policy applies to on the API Access Policy form.

Use ISO currency codes with the FX Currency field type

Use three-digit ISO 4217 currency codes from the **Numeric code** field on the Currency [fx_currency] table with fields of the FX Currency field type.

Sorting according to the session language

Configure whether string values in columns are sorted according to the user's session language or English.

Columnstore index type

Optimize data storage and retrieval by creating a columnstore index. This index type is available with RaptorDB Professional.

Activation information

The ServiceNow AI Platform core features are active by default.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Data Management release notes

The ServiceNow® Data Management capabilities enable you to manage the growth of data in your instance. Data Management capabilities were enhanced and updated in the Yokohama release.

Data Management highlights for the Yokohama release

- View insights into storage consumption on your instance and implement data management policies directly from the Data Management Console.
- Automatically delete older or unwanted records with improved table cleaner scalability.

See Data Management for more information.

Important information for upgrading Data Management to Yokohama

- After upgrading a self-hosted instance to Yokohama, the sys_physical_table_stats table doesn't display the latest data for table size, with the sample_period_start column showing dates prior to the upgrade. To see the correct table size, you can set the com.glide.stats.storage_disk_usage.information_schema system property to true, which allows the statsGatherer job to use the information schema to generate the required database statistics.
- A data management policy record is automatically created for each table that is configured with an archive rule or a table cleaner rule prior to the upgrade.

New in the Yokohama release

Data Management Console

View a summary of storage consumption on your instance and manage the growth of data directly from the Data Management Console.

Table cleaner scalability improvements

Automatically delete older or unwanted records at scale.

Changed in this release

Data Management Console

You can now access data usage on your instance by navigating to **All** > **System Data Management** > **Data Management Console**.

Activation information

Data Management is a ServiceNow AI Platform feature that is active by default.

Dynamic Translation release notes

The ServiceNow® Dynamic Translation application enables translation of user-generated text by using third-party translation service providers. Dynamic Translation was enhanced and updated in the Yokohama release.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Dynamic Translation highlights for the Yokohama release

- Preserve text, such as product names or technical terms, during machine translation with the Exclusion Framework feature.
- The APIs used by default translator configurations are upgraded to v4. If you want to use v4 APIs with customized translator configurations, you must migrate them manually.
- The spoke for IBM Watson Translator Service for IBM Cloud (com.glide.ibm_translation_spoke) is removed.

See Dynamic Translation for more information.

New in the Yokohama release

Exclusion Framework in Dynamic Translation

Preserve text such as product names or technical terms during machine translation. With Exclusion Framework, you can specify words and patterns that shouldn't be translated.

The APIs used by default Translator Configurations are upgraded to v4

The APIs used by default translator configurations are automatically upgraded to v4. If you want to use v4 APIs with customized translator configurations, you must migrate them manually. The previous v3 is still supported.

Removed in this release

The spoke for IBM Watson Translator Service for IBM Cloud (com.glide.ibm_translation_spoke) is no longer available because IBM has withdrawn this translation service. For more information, see IBM Watson Language Translator Service spoke.

Related ServiceNow applications and features

Localization Framework

Using configurable workflows, the Localization Framework application standardizes and enhances the process of translating artifacts across the platform.

Localization Workspace

Localization Workspace is a targeted translation management experience for content owners and translation fulfillers. With Localization Workspace you can manage and deliver multilingual content at scale.

External Content Connectors release notes

The ServiceNow® External Content Connectors application enables AI Search applications to search content and metadata from supported external source systems, such as Atlassian Confluence Cloud and Microsoft SharePoint Online. External Content Connectors was enhanced and updated in the Yokohama release.

External Content Connectors highlights for the Yokohama release

Yokohama Patch 11

- Expand your search experience with external content connectors for Adobe Experience Manager as a Cloud Service, Asana, Docusign, Dropbox, GitHub Enterprise Cloud, HubSpot, Lucidchart, Miro, monday.com, Notion, SAP DMS, Smartsheet, Trello, WordPress, Workday, and Zoom source systems.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Customize user permission settings, choosing the fields you want to compare when mapping source system users to ServiceNow AI Platform® users.
- Make external content connector crawl results searchable by linking connector search sources to search profiles from the connector editor.
- Monitor connector behavior on individual crawl runs and over time with improved crawl statistics and analytics.

Yokohama Patch 6

- Expand your search experience by indexing searchable content from your Amazon S3, Box, GitLab, Microsoft OneDrive, Microsoft Viva Engage, and Zendesk Guide source systems.
- Search KB articles from your ServiceNow instance.
- Make web content locally searchable by indexing pages from predefined or custom public web sites with the Webcrawler external content connector.
- Configure connector settings and schedule crawls as part of connector creation using the revamped UI.

Yokohama Patch 3

- Expand your search by indexing searchable content from your Atlassian Jira Cloud, Google Drive, Microsoft Teams, and Slack source systems.
- Make web content locally searchable by indexing pages from predefined public web sites.
- Find answers about your ServiceNow deployment by indexing searchable content from the ServiceNow product documentation.
- Know when your external content connectors are approaching their crawl limits with new warning messages.
- Expand the range of information available to Virtual Agent users by adding external content search results to Now Assist in Virtual Agent conversations.
- Improve recall for external content searches with support for semantic vector indexing of crawled content.

See External Content Connectors for more information.

Important:
External Content Connectors is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Important information for upgrading External Content Connectors to Yokohama

Beginning with version 2 of the External Content Connectors application, external content connectors implement semantic vector indexing for crawled items. When you upgrade to a version that supports semantic vector indexing, your existing connectors will reindex all previously retrieved items the next time they're visited by a crawl, even if those items' content is unchanged. To force semantic vector indexing of your external content items as soon as possible after upgrading, cancel any running crawls, then restart the canceled crawls manually.

When you upgrade to version 4 of the External Content Connectors application from an earlier version, searches may not show all previously crawled content until you've completed both a content crawl and a user mapping crawl for each upgraded connector. The first content crawl run after the upgrade will reindex all searchable content from the source system, and the user mapping crawl will reindex all security principals from the source system. All crawled content should be shown in searches after both of these crawls are complete.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

New in the Yokohama release

Yokohama Patch 11

Connector admin role

Users with the sn_ext_conn.xcc_admin role can create, configure, and review details for external content connectors and crawls.

Adobe Experience Manager as a Cloud Service external content connector

Retrieve searchable content and metadata from your Adobe Experience Manager as a Cloud Service source system.

Asana external content connector

Retrieve searchable content and metadata from your Asana source system.

Docusign external content connector

Retrieve searchable content and metadata from your Docusign source system.

Dropbox external content connector

Retrieve searchable content and metadata from your Dropbox source system.

GitHub Enterprise Cloud external content connector

Retrieve searchable content and metadata from your GitHub Enterprise Cloud source system.

HubSpot external content connector

Retrieve searchable content and metadata from your HubSpot source system.

Lucidchart external content connector

Retrieve searchable content and metadata from your Lucidchart source system.

Miro external content connector

Retrieve searchable content and metadata from your Miro source system.

monday.com external content connector

Retrieve searchable content and metadata from your monday.com source system.

Notion external content connector

Retrieve searchable content and metadata from your Notion source system.

SAP DMS external content connector

Retrieve searchable content and metadata from your SAP DMS source system.

Smartsheet external content connector

Retrieve searchable content and metadata from your Smartsheet source system.

Trello external content connector

Retrieve searchable content and metadata from your Trello source system.

WordPress external content connector

Retrieve searchable content and metadata from your WordPress source system.

Workday external content connector

Retrieve searchable content and metadata from your Workday source system.

Zoom external content connector

Retrieve searchable content and metadata from your Zoom source system.

Configure user permission settings for an external content connector

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Specify the source system and User [sys_user] table fields to examine for matches when an external content connector maps source system users to your ServiceNow AI Platform users.

Statistics for external content connector content crawls

Review statistics about the documents (items or files with searchable content and metadata) retrieved by a content crawl.

Statistics for external content connector user permission crawls

Review statistics about the permissions (user and group-membership security principals) retrieved by a user permission crawl.

Analytics for external content connectors

Review metrics that show how your external content connector has run over time.

Yokohama Patch 6

Amazon S3 external content connector

Retrieve searchable content and metadata from buckets in your Amazon S3 source system.

Box external content connector

Retrieve searchable content and metadata from user boxes in your Box source system.

GitLab external content connector

Retrieve searchable content and metadata from issues, wikis, merge requests, tags, branches, and commits in your GitLab source system's groups, projects, and repositories.

Microsoft OneDrive external content connector

Retrieve searchable content and metadata from individual drives in your Microsoft OneDrive source system.

Microsoft Viva Engage external content connector

Retrieve searchable content and metadata from conversations in your Microsoft Viva Engage source system's communities.

ServiceNow® instance external content connector

Retrieve searchable content and metadata from KB articles in your ServiceNow AI Platform instance.

Webcrawler external content connector

Retrieve searchable content and metadata from pages and subdomains in public web sources. Select a predefined web source or specify a custom web source.

Zendesk Guide external content connector

Retrieve searchable content and metadata from articles in your Zendesk Guide source system's knowledge bases.

Statistics for external content connector content crawls

Review statistics for searchable items retrieved by a content crawl.

Statistics for external content connector user permission crawls

Review statistics for user and group permissions retrieved by a user permission crawl.

Yokohama Patch 3

Atlassian Jira Cloud external content connector

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Retrieve searchable content and user permissions from projects in your Atlassian Jira Cloud source system.

Google Drive external content connector

Retrieve searchable content and user permissions from shared drives in your Google Drive source system.

Microsoft Teams external content connector

Retrieve searchable content and user permissions from teams in your Microsoft Teams source system.

ServiceNow product documentation external content connectors

Retrieve searchable content from the ServiceNow product documentation site.

Slack external content connector

Retrieve searchable content and user permissions from public channels in your Slack source system.

Warning messages for indexed document counts

When an external content connector's indexed document count exceeds 800,000, a warning message appears in the connector's UI to indicate that it's approaching the indexing limit of 1,000,000 documents.

Add external content search results to Now Assist in Virtual Agent conversations

Expand the range of information available to Virtual Agent users by adding external content search results to Now Assist in Virtual Agent conversations.

Yokohama Patch 1

Semantic vector indexing for crawled content

Improve recall for external content searches with support for semantic vector indexing of crawled content. Semantic vector indexing is supported for all external content connectors.

UI changes

Yokohama Patch 11

Connector creation UI

The connector creation UI now includes optional steps for configuring user permission crawls (for connectors that support them) and for linking connector search sources to your search profiles. If you want to change these settings for an existing connector, you can configure these settings from the connector editor.

Yokohama Patch 6

Connector creation UI

The connector creation UI now includes optional steps for configuring the new connector's crawl settings and creating and scheduling crawls for it. You can still configure these settings from the connector editor, so you can skip these steps during connector creation if you want to configure crawl settings and create crawls later on.

Yokohama Patch 3

New UI for creating external content connectors

On the External Content Admin Home page, you now select **New** instead of **Create** to create a new connector. Next, you select the appropriate source system type on the Choose source page. Finally, you fill in required values on the Connector details page.

Changed in this release

Yokohama Patch 11

Analytics for external content connectors

Analyze connector performance and behavior in a selected time period using the redesigned Analytics page. You can access this page from the connector editor.

Atlassian Jira Cloud connection settings

The Atlassian Jira Cloud external content connector no longer requires your Atlassian Jira Cloud instance ID as a connection setting.

Microsoft OneDrive connection settings

The Microsoft OneDrive external content connector now accepts certificate SHA1 thumbprint hashes in hexadecimal format as well as in base64-encoded format.

Microsoft SharePoint Online connection settings

The Microsoft SharePoint Online external content connector now accepts certificate SHA1 thumbprint hashes in hexadecimal format as well as in base64-encoded format.

Microsoft Teams connection settings

The Microsoft Teams external content connector now accepts certificate SHA1 thumbprint hashes in hexadecimal format as well as in base64-encoded format.

Yokohama Patch 6

Webcrawler external content connector

The predefined web sources external content connector has been subsumed into the new Webcrawler external content connector, which allows you to specify a custom web source or select a predefined one.

Activation information

Install External Content Connectors by requesting the External Content Connectors Application Suite from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Related ServiceNow applications and features

AI Search

Configure search applications to display results indexed by your external content connectors.

Legacy Application Manager release notes

The ServiceNow® Legacy Application Manager application enables administrators to install and manage applications. This application is currently supported for the Yokohama release, but it will be deprecated in a future release.

Deprecated features

Starting with Yokohama patch 11, Legacy Application Manager is being prepared for future deprecation. It will be hidden but will continue to be supported. For details, see the Application/Plugin Deprecation Process [KB0867184] article in the Now Support Knowledge Base.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Localization Workspace

ServiceNow® Localization Workspace is a targeted translation management experience for content owners and translation fulfillers. With Localization Workspace you can manage and deliver multilingual content at scale. Localization Workspace is a new application in the Yokohama release.

Localization Workspace highlights for the Yokohama release

- Submit your translation requests from the workspace without having to open a Translation Management System (TMS) or other software.
- Automatically identify and collect all untranslated or partially translated content in scope.
- Plan and control your localization budget through informational cost estimates.

See Localization Workspace for more information.

Important:
Localization Workspace is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Localization Workspace features

Process translation requests in one interface

The following Localization Workspace workflow is accomplished in a single location:

- Preconfigure languages and translation providers.
- Choose your content type, such as KB articles or notifications, then select specific texts to translate.
- Generate cost estimates, then submit translation requests to third-party providers.
- Track and manage all open requests.

Request translations from English into other languages

In this initial release, only translation requests where the current language of the source document is English and the language of the target is something other than English are supported.

Many types of content can be localized

Many types of text content can be localized, subject to table permissions. Surveys are not a supported content type.

Activation information

Install Localization Workspace by requesting it from the ServiceNow Store. Localization Workspace is available with a Pro or Pro+ subscription. See Localization Workspace on the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Additional requirements

Localization Workspace has the following dependencies:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Language plugins (i18n) have been activated according to your requirements.
- Localization Framework (com.glide.localization_framework.installer) has been installed and configured.
- Dynamic Translation (com.glide.dynamic_translation) has been installed and configured if using machine translation to fulfill translation requests.

These dependencies are activated automatically with the installation of Localization Workspace.

Related ServiceNow applications and features

Dynamic Translation

With Dynamic Translation configured, you can use machine translation on your instance to translate text such as user-entered text on forms.

Localization Framework

Localization Framework standardizes and enhances the translation process of artifacts across the platform through configurable workflows. Localization Workspace leverages and builds upon Localization Framework capabilities.

System Localization

System Localization enables administrators to accommodate users from a variety of different countries using different languages and currencies within the same instance.

Notifications release notes

The ServiceNow® Notifications application enables you to create, manage, and send custom notifications in workflows for important events, actions, and alerts. Notifications was enhanced and updated in the Yokohama release.

Notifications highlights for the Yokohama release

- Use the new email notifications dashboard with key metrics.
- Use filter notifications that are based on categories, delivery channels, subscriptions, and digests for notification preferences.
- Use the enhanced assignment group, advanced condition, and mandatory notifications for a provider framework.
- Use the standard forms for custom notification preferences and delivery channels.

See Notifications for more information.

New in the Yokohama release

Email notifications dashboard

Use the new notifications dashboard with key metrics. This dashboard is available to administrators by default. You can configure this dashboard to enable access to other users.

UI changes

Advanced filters options for notification preferences

Added categories, delivery channels, active or inactive notifications, subscriptions, and digest-enabled filter options for notification preferences.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Standard forms

Enabled standardized forms across custom notification preferences and delivery channels.

Assignment group field

Extended the provider framework to add support for assignment groups.

Advanced condition field

Extended the provider framework to add an advanced condition.

Changed in this release

Advanced filters in notification preferences

Use notifications filters for categories, delivery channels, active or inactive notifications, subscriptions, and digest enabled notifications.

Support for assignment group

Send provider notifications for assignment groups and to users that are part of groups stored in sys_user_group table.

Advanced condition for provider framework

Use an advanced condition to send a notification that is based on the current email record, changing field values, or system properties.

Mandatory notifications for provider framework

Make critical notifications mandatory for the provider framework.

Email bounce

Prevent resending bounced emails to the addresses that are known to generate bounces.

Activation information

Notifications is a ServiceNow AI Platform feature that is active by default.

Subscription Management release notes

The ServiceNow® Subscription Management application enables you to manage your subscriptions proactively and monitor subscription usage on your instances. Subscription Management was enhanced and updated in the Yokohama release.

Subscription Management highlights for the Yokohama release

- View subscription allocations according to the number of active users.
- Select all recommended groups when allocating subscriptions.
- Manage subscriptions in an on-premise installation.
- Manage custom application and table mapping through the platform, and learn why specific subscriptions are recommended when mapping custom tables and applications.
- View subscribers by domain for user-based subscriptions.

See Subscription Management for more information.

Important:
Subscription Management is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Important information for upgrading Subscription Management to Yokohama

Subscription Management version 4.1 is active by default on all instances of the Yokohama release. Update to Subscription Management version 6.0.2 or later to use the latest features. For more information about updating Subscription Management, see Update an application or plugin.

New in the Yokohama release

Subscription allocation counts according to active users

View the total number of active users in a product subscription. Only active users count toward the subscription allocation totals that appear throughout Subscription Management.

Allocate subscriptions to all recommended groups

Select all recommended groups when allocating subscriptions.

Support for on-premises installation

Manage subscription usage using Subscription Management on-premises.

Recommended subscription reasoning

Determine why Subscription Management displays a subscription recommendation when mapping custom tables or custom applications.

Manage custom applications and table mapping through the platform

Map any missing custom applications and tables in Subscription Management to a subscription directly from the Custom Applications list or Custom Table Inventory list.

Support for domain separation

View and filter subscribers by domain for user-based subscriptions.

Changed in this release

Allocation charts reflect only active users

The Allocation summary and Allocation history charts on the subscription details page reflect only the subscriptions allocated to active users for each month following the upgrade.

Auditing App Engine V1 usage

The App Engine Usage dashboard has been restored. For details on auditing App Engine V1 usage, see the Auditing App Engine v1 [KB0999383] article in the Now Support Knowledge Base.

Changes to Now Assist usage measurement

Now Assist usage measurement is evolving. If your instances are below Yokohama Patch 12, update Subscription Management to version 6.0.2 or later on all instances to avoid mixed measurement types. For more information, see Now Assist Usage - Overview & New Measurement Logic [KB2704710].

Hidden user-based subscription allocations

To help prevent inaccuracy when allocations aren't complete, allocation details for user-based subscriptions are now hidden from the Subscription Management overview. Contact your account executive for user-based subscription allocation details.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Removed in this release

The Custom tables chart has been removed from the subscription details page.

Activation information

Subscription Management is a ServiceNow AI Platform feature that is active by default. Updates for Subscription Management are available through the ServiceNow Store. For cumulative release notes information for applications available on the ServiceNow Store, see ServiceNow Store release notes.

System Update Sets release notes

The ServiceNow® System Update Sets application enables administrators to group a series of changes into a named set and then move them as a unit to other systems for testing or deployment. System Update Sets was enhanced and updated in the Yokohama release.

System Update Sets highlights for the Yokohama release

- Add specific apps/versions as an app installation instruction in an update set.
- Actions and subflows are available for update set operations, such as create, complete, retrieve, preview, and commit.

See System update sets for more information.

Changed in this release

Application installations

You can add specific applications or versions as an app installation and configure to track them in an update set.

Activation information

System Update Sets is a ServiceNow AI Platform feature that is active by default.

Upgrade Center release notes

The ServiceNow® Upgrade Center application helps you plan and manage your upgrades. Upgrade Center was enhanced and updated in the Yokohama release.

Upgrade Center highlights for the Yokohama release

- Explore the different release versions available to you in the Upgrade Preview module.
- Use the Upgrade Preview module to gain insights about the upgrade experience without actually upgrading your instance.
- Monitor the status of any ongoing upgrade and view the summary of your latest upgrade in the Upgrade Monitor module.
- View all your past upgrades in the Upgrade History module.
- Accelerate your upgrades using the Upgrade Plan feature.

See Upgrade Center for more information.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

New in the Yokohama release

Upgrade Preview enhancements

Enhance your upgrade preview experience with the new Application Upgrade Preview and Predicted Schema Changes cards. You can also monitor the status of the preview process from the Upgrade Preview page.

Upgrade Management Console experience

Use the new Upgrade Management Console experience to access all the relevant information and tools required for a cohesive upgrade on your instance.

Changed in this release

Upgrade Plan enhancements

Experience a seamless upgrade on your instance with the Upgrade Plan, offering the option to either include or bypass skipped records and customizations during its building.

Activation information

Upgrade Center is a ServiceNow AI Platform feature that is active by default.

ServiceNow AI Platform capabilities release notes

ServiceNow AI Platform® capabilities were enhancements and updates in the Yokohama release.

Expand the services your system of action delivers with ServiceNow AI Platform capabilities. Activate and configure these optional features to create custom business logic, manage and secure data, and build alternate user interfaces.

Advanced Work Assignment release notes

The ServiceNow® Advanced Work Assignment (AWA) application automatically assigns work items to your agents based on their availability, capacity, and optionally, skills. Advanced Work Assignment was enhanced and updated in the Yokohama release.

Advanced Work Assignment highlights for the Yokohama release

- Run assignments on different nodes or cadences for different service channels to improve the AWA application's performance and resilience.
- Provide wrap-up codes or notes for interactions or segments that the agent is involved in at the end of a call.

See Advanced Work Assignment for more information.

New in the Yokohama release

Service channels

Run AWA assignments on different nodes or cadences for different service channels to improve performance and resilience.

Using Advanced Work Assignment

Enable agents with the ability to provide wrap-up codes or notes for interactions or segments that the agent was involved in.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Activation information

Advanced Work Assignment is a ServiceNow AI Platform feature that is available with activation of the Glide Advanced Work Assignment plugin (com.glide.awa). For details, see Activate Advanced Work Assignment.

To use the External routing functionality on your instance, you must activate the External Routing Support plugin (com.glide.awa-external).

Browser requirements

Advanced Work Assignment doesn't support mobile devices, Internet Explorer, or Microsoft Edge. Instead, use Microsoft Edge - Chromium or one of the other supported browsers that are listed in Browser support.

Related ServiceNow applications and features

Now Assist

The ServiceNow® Now Assist application uses generative AI that is designed to enhance user productivity and efficiency through conversation and proactive experiences.

Configurable Workspace UI

The ServiceNow® Workspace application provides agents, case managers, help desk professionals, and managers with tools to help answer customer questions and to resolve customer problems.

Automated Test Framework release notes

The ServiceNow® Automated Test Framework enables you to create and run automated tests to confirm that your modified instance works after an upgrade, during application development, or when deploying instance configurations with update sets. Review failed test results to identify the changes that caused the failure and the changes that you should review. Automated Test Framework was enhanced and updated in the Yokohama release.

Automated Test Framework highlights for the Yokohama release

- Reduce upgrade and development time by replacing manual testing with automated testing.
- Design tests once and reuse them in different contexts and with different test data sets.
- Keep test instances clean by rolling back test data and changes made after each test run.
- Create and schedule test suites to organize and run tests in batches.
- Reduce test design time by copying quick start tests and test suites. You can also create custom test steps to expand test coverage.

See Automated Test Framework (ATF) for more information.

Important:
ATF Test Generator and Cloud Runner is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Important information for upgrading Automated Test Framework to Yokohama

Copy and customize quick start tests provided by the ServiceNow AI Platform® to validate that your instance works after you make any configuration changes. For example, if you apply an upgrade or develop an application.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The tests can produce a pass result only when you run them on a base system without any customizations and with the default demo data that is provided with the application or feature plugin. To apply a quick start test to your instance-specific data, copy the quick start test and add your custom data. For more information, see Available quick start tests by application or feature.

New in the Yokohama release

Reusable tests

Reduce duplication of tests while invoked in several other tests by creating reusable tests, enabling test design to be more modular, reducing the effort and time while duplicating tests to manage a large number of tests across your instance. You can access the reusable tests from the new Reusable Test test step category. Use the Reusable Input Variables and Reusable Output Variables related lists to define data passing from one test step to another.

Reusable Tests category

Reuse the test records created in the Reusable Test table from the new Reusable Test test step category. By default, the test records show up in the Reusable Test test step category, unless you define the record in a custom category in the Category field.

Activation information

Automated Test Framework is a ServiceNow AI Platform feature that is active by default.

Note:
By default, the system property that is used to run automated tests is turned off to help prevent you from accidentally running these tests on a production system. To avoid data corruption or an outage, run tests only on development, test, and other non-production instances. For more information, see Enable or disable executing Automated Test Framework tests.

To use the quick start tests for an application, activate the plugin that is associated with the application. For more information, see Available quick start tests by application or feature.

Set the *sn_atf.runner.enabled* property to **True** to activate the content pack for the ATF Test Generator and Cloud Runner store application.

Browser requirements

Automated Test Framework supports running tests only from desktop browsers. You can't run tests or test suites from tablets, mobile browsers, or the mobile UI. Some desktop browsers require additional configuration. For more information, see Browser recommendations for Automated Test Framework.

Automated Test Framework offers limited support for test design on tablets. You can't add new custom UI test steps from tablets because tablets can't retrieve components. Review any existing custom UI test steps that were added from a desktop browser instead.

Configuration Management Database (CMDB) release notes

The ServiceNow® Configuration Management Database (CMDB) application stores data about the infrastructure of your organization. CMDB was enhanced and updated in the Yokohama release.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

CMDB highlights for the Yokohama release

- Access changes to the CMDB Editor and CMDB Admin user roles:
  - Starting with Yokohama Patch 4, the sn_cmdb_editor and sn_cmdb_admin user roles no longer have create, update, or delete access to records in the Configuration Item [cmdb_ci] class.
  - Starting with Yokohama Patch 6, you can configure the sn_cmdb_admin and the sn_cmdb_editor user roles with the necessary permissions to perform some CMDB Workspace tasks by manually running a scheduled job.
- Manually create a configuration item (CI) in CMDB Workspace that is verified by the Identification and Reconciliation Engine (IRE) and is unique within CMDB. Creating a CI using the IRE identification rules helps to maintain the integrity of CMDB.
- Use the Now Assist for CMDB CI summarization skill to see a comprehensive summary for a CI, with details such as discovery and related incidents, directly on the configuration item (CI) form. Use the manage duplicate CIs skill for step-by-step guidance on how to use de-duplication templates to de-duplicate CIs.
- The Configuration item summarizer AI agent accepts the sys_id of a CI and returns a full summary of Configuration Management Database (CMDB) data for the CI. The agent isn't typically used as a standalone agent and any use case can access it.
- View the various counts, such as the number of CIs and the number of CI types, for the CIs that are connected to the home node in Unified Map.
- Apply filters that were previously available only to the coverage charts in the CMDB 360 dashboard in CMDB Workspace to all charts in the Discovery sources tile.
- Use a condition builder or a custom script to restrict the list of de-duplication tasks that are assigned to a de-duplication template when de-duplicating CIs.

See Configuration Management for more information.

Important information for upgrading CMDB to Yokohama

Three new indexes (parent, type), (child, type), and (child, parent, type, port) are added to the CI Relationship [cmdb_rel_ci] table to improve the performance of Identification and Reconciliation Engine (IRE) querying this table. This change is likely to increase upgrade time. For more information about the impact of this change during upgrade and to learn how to minimize that impact, see Increased Yokohama Upgrade Time due to cmdb_rel_ci index additions [KB1703367].

New in the Yokohama release

CMDB Workspace v8.0:

You can now use the Create CI experience in CMDB Workspace to create a CI with a lookup identifier entry that contains mandatory attributes. When you select a lookup identifier entry on the Required attributes page, those mandatory attributes now appear and you can set their values for proper IRE processing. For more information, see Create a CI manually in CMDB Workspace.

CMDB Workspace v7.6:

- Access a centralized location with a comprehensive view of CI details by using the new CI form in CMDB Workspace. The form shows the attributes (key attributes are highlighted on a Summary page), tags, resources, activities, relationships, related services, health state, performance indicators, and CMDB 360 data that is associated with the CI. While viewing, you can also modify many

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

of those CI details. For information about all the details on a CI form, see Manage CI details in CI Form.

- Access the Data Certification dashboard in CMDB Workspace. The Data Certification dashboard provides the insights about the data certification activities and progress, policies and tasks, reports about certification instances, charts that show the aging certification tasks, and group and individual workloads. For more information, see Data Certification Dashboard.
- Create or manage a shared preset. Save Unified Map filter settings as shared presets that any user on the team can access. This task requires the sn_cmdb_admin, sm_admin, or admin role.
- Access Unified Map from the main navigation panel. Access Unified Map from the main navigation panel by navigating to **All** > **CMDB Workspace** > **Unified Map**.
- Archival and destroy processes of certification policy related records, are now separated from those processes for records of all other policy types. This separation facilitates the extension of the retention period of certification policy records, as follows:

  - The table cleanup rule for table CMDB Data Management Policy Executions [cmdb_data_management_policy_execution], which is stored in the Auto Flushes [sys_auto_flush] table, now excludes certification policy execution records from recurring cleanups.

    Retaining certification policy execution records instead of deleting them after 7 days is useful in situations where those records are needed for audits and are also useful for the Data Certification Dashboard, which is populated by these records.

  - The Archive CMDB Data Management Tasks archive rule, that applied to all CMDB Data Manager policy execution records, now excludes certification policy records. At each archive run, this archive rule is configured to also automatically archive its related records in table CMDB Data Management Certification Task To Document [sn_cmdb_ws_dm_certification_task_to_document] (Archive Related Records).
  - The archive rule, Archive Certification Instances, is added to specifically archive certification policy execution records from the CMDB Data Management Policy Execution [cmdb_data_management_policy_execution] table. This new archive rule is configured to archive certification policy execution records 2 years after creation, and to destroy those records 7 years after they are archived.
  - The archive rule, Archive Certification tasks, is added to specifically archive certification task records from the CMDB Data Management Task [cmdb_data_management_task table].
  - The archival of related records in table CMDB Data Management Certification Task To Document [sn_cmdb_ws_dm_certification_task_to_document] is now moved as an Archive Related Records entry from the Archive CMDB Data Management Tasks archive rule to the new Archive Certification tasks archive rule.

SGC Central

Use the Service Graph Connector Central view, also known as the SGC Central view, in the CMDB Workspace to discover and install connectors, and then effectively manage the full life cycle of creating, editing, monitoring, and debugging connections.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Now Assist for Configuration Management Database (CMDB)

Use the new Now Assist for CMDB agentic workflows, AI agents, and skills. The Now Assist CI summarizer AI agent summarizes the key details for CIs, such as the discovery and incident details, directly on the CI forms. The Manage duplicate CIs skill guides you step by step on how to use the deduplication templates to help maintain the health and integrity of CMDB.

Use Now Assist to search the CMDB for CIs

The CMDB search agentic workflow enables you to search for CI data by specifying any of several attributes of the CI of interest. The workflow accepts your natural language request, verifies your search goal, and then generates a keyword search, a single-table search with dot walks, or a multi-table search, depending on the information you provide. The workflow can infer CI relationship data to generate an appropriate query.

Getting advice from Now Assist on CMDB governance

Data governance can be an overwhelming task. The CMDB Governance agentic workflow supports admins and owners by methodically working through the process of improving CMDB data governance. The objective is to ensure that users trust their data for the evolving outcomes they want to achieve.

Create a CI using Now Assist

Occasionally, you might need to create a CI manually. To help you, the workflow accepts your natural language request and verifies that it understands which class the new CI should belong to. The workflow then checks IRE policies to determine the required attributes for the CI and request that information. After you provide sufficient data, the workflow uses IRE to ensure that the proposed CI is not a duplicate, and then creates the CI.

Configuring Unified Map — Admin settings

Configure general Unified Map settings for the workspace on your instance. Only a user with the sn_cmdb_admin role can configure these settings.

Viewing a summary of Unified Map contents in the Overview panel

Use the new Overview panel to show the summary data for a map that is associated with the home node, including the counts and types of CIs, connections, and discovery sources.

Editing maps in Unified Map

While you work in the map editor, you can add CIs to the map and remove CIs from the map. You can also add, modify, and delete CI relationships in the CMDB.

Quick start tests for CMDB

After upgrades and deployments of new applications or integrations, run quick start tests to verify that CMDB works as expected. If you customized CMDB, copy the quick start tests and configure them for your customizations.

Changed in this release

Access changes for the sn_cmdb_editor and sn_cmdb_admin user roles

- Starting with Yokohama Patch 4 (zbooted or upgraded), access has been reduced for the sn_cmdb_editor (CMDB Editor) and the sn_cmdb_admin (CMDB Admin) user roles which are used in CMDB Workspace. The sn_cmdb_editor and sn_cmdb_admin user roles no longer have create, update, or delete access to records in the Configuration Item [cmdb_ci] class.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Starting with Yokohama Patch 6 (zbooted or upgraded), you must manually run the scheduled job '*Remove CMDB Roles from ITIL roles and Add CUD access to sn_cmdb_admin/sn_cmdb_editor roles* to configure the sn_cmdb_admin and the sn_cmdb_editor user roles with the permissions that are necessary for performing some CMDB Workspace tasks.

  This scheduled job modifies user roles as follows:

  - Updates the itil user role to no longer contain the sn_cmdb_editor user role, and updates the itil_admin user role to no longer contain the sn_cmdb_admin user role.
  - If those permissions don't exist, updates the sn_cmdb_admin and the sn_cmdb_editor user roles with create, update, and delete access to the Configuration Item [cmdb_ci] class. For more information about the 'Remove CMDB Roles from ITIL roles and Add CUD access to sn_cmdb_admin/ sn_cmdb_editor roles' scheduled job, see Remove sn_cmdb_admin from itil_admin and sn_cmdb_editor from itil, and then add create/update/delete access to cmdb_ci table for sn_cmdb_admin / sn_cmdb_editor [KB2290506].

CMDB Workspace v6.3

- Apply the filters that were previously available only to the coverage charts to all charts in the Discovery sources tile in the CMDB 360 dashboard. For example, you can filter out non-CMDB tables or include records only from principal classes. For more information, see CMDB 360 experience in CMDB Workspace.
- Use a condition builder or a custom script to narrow down the list of de-duplication tasks that are assigned to a template. For more information, see Create a de-duplication template.
- Use the new **Allow empty field values** option to allow or disallow certification of empty value fields when creating a certification policy type in CMDB Data Manager. For more information, see Create a CMDB Data Manager policy in CMDB Workspace.

CMDB Workspace v6.4

You can now use dot-walking when setting assignments for the User Field or User Group Field options for CMDB Data Manager policies (such as Certification). Also, when converting legacy certification schedules into Data Manager Certification policies, existing dot-walking settings are preserved. For more information, see Create a CMDB Data Manager policy in CMDB Workspace.

CMDB Workspace v7.4

In the CMDB Workspace version 7.4, you can now do the following tasks:

- Manually create a CI in CMDB Workspace that complies with its class identification rule and other class requirements, and is tested for uniqueness in CMDB, to help ensure that the CI is valid and maintains the integrity of CMDB. For more information, see Create a CI manually in CMDB Workspace.

- Set the CMDB Health dashboard to use the legacy methods to calculate the completeness, correctness, and compliance KPIs. That legacy calculation method relies on settings of proportional weights of metrics within the aggregated score

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

of KPIs and was used up until the Washington DC release. By default, those weights aren't used in the calculations of KPI scores.

Also, the CMDB Health dashboard now shows the overall score, which by default, is a simple average of the aggregated scores of the completeness, correctness, and compliance KPIs.

CMDB Workspace v7.5

In the CMDB Workspace version 7.5, you can now do the following tasks:

- Delete CMDB Data Manager retirement definitions in CMDB Workspace (other than the cmdb_ci retirement definition). For more information, see Delete a CMDB Data Manager retirement definition.
- Configure a CMDB Data Manager certification policy to disallow reviewers, to update fields' value while reviewing CIs in a certification task. Administrators can clear the **Allow updates to field values** option to prevent reviewers from updating non-compliant field values into compliance, resulting in rejecting those CIs. For more information, see Create a CMDB Data Manager policy in CMDB Workspace.
- Schedule a de-duplication template for daily, weekly, monthly, or periodic runs for continuous remediation of duplicate CIs. For more information, see Schedule a de-duplication template.
- Receive notifications from CMDB Data Manager about certification and attestation tasks, that are incomplete or overdue. For more information, see Components related to CMDB Data Manager.
- Review and process tasks of your direct reports and of members of any user group that you manage. For more information about accessing these tasks in CMDB Data Manager, see My Work view in CMDB Workspace.
- Reject a CMDB Data Manager life-cycle task in CMDB Workspace. For more information, see Review CMDB Data Manager tasks in CMDB Workspace.
- Use the Create CI experience with a preset class when drilling down a class in the CI Summary chart on the Home view of CMDB Workspace. For more information about creating CIs manually while applying IRE processes, see Create a CI manually in CMDB Workspace.

Update to the Walk stage reports on the CSDM Data Foundations dashboard

The Technical Service Offerings with Support Group or Change Group report now includes data that meets the *sys_class _name = offering* parameter.

Table label changes

The following table labels have changed:

- The label for the cmdb_ci_service_auto table is now Service Instance instead of Application Service.
- The label for the cmdb_ci_service_technical table is now Technology management service instead of Technical service.

Class descriptions showing in the user interface

The descriptions for the base system classes are now integrated into CI Class Manager and appear in the **Description** field, on the Basic Info page for a class.

Reflow for configurable workspace

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The CMDB configurable workspace supports reflow, which enables pages and content to be zoomed up to 400% through your browser settings without loss of content or functionality.

Deprecations

CMDB Data manager on Core UI is now deprecated and no longer supported or available for new activation. CMDB Workspace provides the latest experience for this functionality. For more information, see CMDB Data Manager experience in CMDB Workspace.

Activation information

CMDB is a ServiceNow AI Platform feature that is active by default.

Accessibility information

Accessibility improvements

Accessibility improvements were completed to create a configurable workspace that supports Web Content Accessibility Guidelines (WCAG) 2.1 Level AA conformance.

Reflow

The Configurable Workspace supports reflow, which enables pages and content to be zoomed up to 400% through your browser settings without loss of content or functionality. Additionally, content can be enlarged without scrolling in two dimensions at a width equivalent to 320 CSS pixels or a height equivalent to 256 CSS pixels. Page layouts are transformed into a vertical, stacked view automatically when users increase browser zoom to 400%.

This enhancement helps users with low vision or who have trouble seeing web content in a browser due to the monitor size, device type, poor lighting, or other situations. Reflow can be turned off with a system property for instances, experiences, and pages. See Reflow for Configurable Workspace for the details.

recent activity related to CMDB, and access various CMDB dashboards and tools to support the tasks in your organization.

Document Services release notes

The ServiceNow® Document Services application provides a broad range of services that are related to document management, such as creating, maintaining, and converting documents, as well as integrating with third parties like Microsoft SharePoint. Document Services was enhanced and updated in the Yokohama release.

Document Services highlights for the Yokohama release

- Improved PDF generation that includes accessibility support.
- Accelerate documents insights with instant summaries for highlights and quick insights, interactive Q&A, and FAQs.

See Document Services for more information.

Important:
Multi Provider Document Services Framework is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

UI changes

Pop-up window

Added a pop-up window for list and form export with a check box that enables you to export an individual record or a list of records into a PDF format. The PDF includes accessibility support.

Changed in this release

PDF generation and accessibility

Export a collection of records or a single record into a PDF format. New system property was added for better accessibility.

Workflow migration for Managed Documents

Improved usability, low code accessibility, and feature parity due to the newly configured workflows.

Subflows for Shared drives for Google Drive.

Added Spoke subflows for Shared drives in Google Drive.

Summarize button.

The **Summarize** button was changed to the **Ask Now Assist** button.

Activation information

Document Services is a ServiceNow AI Platform feature that is active by default.

Document Management is available with activation of the Document Management plugin (com.snc.platform_document_management). For more details, see Activate Document Management.

Multi Provider Document Services Framework Install Multi Provider Document Services Framework by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For

cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Accessibility information

Added accessibility support for PDF document generation. PDF accessibility tags are now available to help users who rely on screen readers to navigate, understand, and interact with these generated PDF documents. For more information, see PDF generation and accessibility.

MID Server release notes

The ServiceNow® MID Server application enables communication and data transfers between a ServiceNow instance and external applications, data sources, and services. MID Server was enhanced and updated in the Yokohama release.

MID Server highlights for the Yokohama release

- MID Server supports and requires a minimum JRE version 17. The MID Server is bundled with version 17.0.12 and the minimum JRE version supported is 17.0.10.
- The MID Server can now be installed on Windows hosts directly as a LocalSystem or non-admin user with Start and Stop permissions.

See MID Server for more information.

Important information for upgrading MID Server to Yokohama

For the latest MID Server system requirements, see MID Server system requirements. The minimum JRE version supported is 17.0.10 and the recommended version is 17.0.12.

If you have installed your own JRE, the upgrade process takes the following actions to verify that the MID Server uses a supported JRE:

- If a MID Server is using an unsupported version of the JRE when it upgrades, the upgrade process displays a warning message with the minimum and recommended JRE version.
- If a supported JRE is running on the MID Server host, the upgraded MID Server uses that version.

All MID Server host machines require access to the download site at `install.service-now.com` to enable auto-upgrades. For additional details, read how the system manages MID Server upgrades.

Only one Windows MID Server service is permitted according to the executable path. Upgraded Windows MID Servers that have multiple services pointing to the same installation folder can't start. See MID Server fails to start for more information.

For more information about MID Server upgrades, see the following topics:

- MID Server pre-upgrade check: Describes how the AutoUpgrade monitor tests the ability of the MID Server to upgrade on your system before the actual upgrade.
- Upgrade the MID Server manually: Describes how to upgrade your MID Servers manually.

New in the Yokohama release

External Credential Storage and Management supports certificate-based authentication for Azure Key Vault

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The External Credential Storage and Management added support for certificate-based authentication when connecting to Azure Key Vault. This provides a more secure and flexible way to authenticate, especially for enterprise environments that prefer certificate credentials over client secrets.

Changed in this release

MID Server supports and requires a minimum JRE version 17

The MID Server is compiled using Java 17 and is incompatible with any Java version below 17 for runtime execution. The MID Server is bundled with version 17.0.12 and the minimum JRE version supported is 17.0.10. See the MID Server JRE Minimum Version Requirement Update to JRE 17 Starting from Yokohama Release [KB1704368] article in the Now Support Knowledge Base for information about required procedures before upgrading the instance.

Improvements when manually installing a MID Server on Windows

The MID Server can now be installed on Windows hosts directly as a LocalSystem or non-admin user with Start and Stop permissions.

Removed in this release

- When upgrading to the Yokohama release, 3DES will be permanently removed from#MID Server to improve security. See 3DES deprecation in SSH from Xanadu [KB1644950] for more information.

Activation information

MID Server is a ServiceNow AI Platform feature that is active by default.

Related ServiceNow applications and features

Discovery

Discovery uses the MID Server to launch probes and patterns that return information to the CMDB about devices and applications running in your environment. Discovery schedules select appropriate MID Servers based on their configured capabilities and assigned IP ranges.

Orchestration

Orchestration uses the MID Server to do work on internal and external systems. Orchestration selects MID Servers based on their capabilities and the applications that they're allowed to use.

Service Mapping

Service Mapping uses the MID Server to launch patterns that return information about business services running in your environment.

Event Management

Event Management uses the MID Server to receive and process events, collect data for root cause analysis (RCA), and collect SNMP traps.

Cloud Management

Cloud Management uses the MID Server to collect and process VMware events.

Operational Intelligence

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Operational Intelligence uses MID Server clusters to capture operational metrics data from external data sources and analyze them for anomalies.

Health Log Analytics

Health Log Analytics uses the MID Server to collect log data streaming into your instance and helps you identify the root cause of issues.

Notify release notes

The ServiceNow® Notify application provides support for SMS and voice channels on the ServiceNow AI Platform® to communicate with customers. Notify was enhanced and updated in the Yokohama release.

Notify highlights for the Yokohama release

- Enhanced security for all client-callable script includes by enabling switching off the sandbox mode.
- Enhanced security access for Notify tables.

See Notify for more information.

New in the Yokohama release

Deny-Unless ACL

Enhance the security of Notify tables by restricting access for non-authenticated users through Deny ACLs.

Enhanced security for client-callable script includes

Enhanced security for all client-callable script includes by introducing the ability to switch off the sandbox mode, providing greater control and protection against unauthorized script execution for Notify tables.

Activation information

Notify is a ServiceNow AI Platform feature that is active by default.

Password Reset release notes

The ServiceNow® Password Reset application enables you to set up your end users to reset and change their passwords either using self-service or with the help of a service desk agent. Password Reset was enhanced and updated in the Yokohama release.

Password Reset highlights for the Yokohama release

- Enhanced security for all client-callable script includes by switching off the sandbox mode.
- Enhanced security access for Password Reset tables.

See Password Reset for more information.

New in the Yokohama release

Deny ACLs for Password Reset Access

Enhance the security of Password Reset related tables by restricting access to non-authenticated users through Deny ACLs.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Removed in this release

Password Reset workflows are deprecated and have been replaced by flows in the base system for most users. zBoot users must still use the Password Reset flows.

Activation information

Password Reset is a ServiceNow AI Platform feature that is active by default.

Hermes Messaging Service release notes

The ServiceNow® Hermes Messaging Service application enables you to integrate your Apache Kafka environment with your ServiceNow® instance. Hermes Messaging Service was enhanced and updated in the Yokohama release.

Hermes Messaging Service highlights for the Yokohama release

- View the audit history for all topic operations.
- Scan and inspect topic messages using keywords or regular expressions.
- Monitor the health of Hermes components over time.

See Hermes Messaging Service for more information.

New in the Yokohama release

Topic audit history

Track changes made to a Hermes topic by viewing the topic's audit information.

Search for messages in a topic

Filter messages in a topic using keywords or regular expressions in the Hermes Messaging Service topic inspector.

Improved diagnostics

Monitor the health of Hermes components over time.

Activation information

Hermes Messaging Service is a ServiceNow AI Platform feature that is available with activation of the ServiceNow Stream Connect Installer (com.glide.hub.stream_connect.installer) plugin or installation of the Log Export Service application. For details, see Hermes Messaging Service activation.

Related ServiceNow applications and features

Using Stream Connect for Apache Kafka

Produce Apache Kafka messages from your ServiceNow instance using Workflow Studio, and then consume the messages in an external application. You can also produce Apache Kafka messages from an external application and then consume the messages in your ServiceNow instance using a variety of consumers with Stream Connect.

Exploring Log Export Service (LES)

Export log data securely to your external data lake for reporting, auditing, or regulatory purposes using Hermes Messaging Service with the Log Export Service.

Instance Data Replication

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Improve the performance and processing efficiency of Instance Data Replication by upgrading the replication sets that you created prior to the Washington DC release to use Hermes Messaging Service.

Knowledge Management release notes

The ServiceNow® Knowledge Management application enables you to share knowledge articles that provide users with information for self-help, troubleshooting, and task resolution. Knowledge Management was enhanced and updated in the Yokohama release.

Knowledge Management highlights for the Yokohama release

Yokohama Patch 6

- Use Google Gemini and Anthropic Claude on AWS as AI model providers for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI.
- Customize prompts for AI model providers to generate Knowledge articles with Now Assist.

- Identify and resolve accessibility-related issues during Knowledge article generation through a new accessibility checker button in the TinyMCE toolbar.
- Enhance the creation and management of knowledge base through features in the Knowledge Management advanced plugin such as article versioning, article subscriptions, article templates, and an article quality index.

See Knowledge Management for more information.

New in the Yokohama release

Configure skills with custom prompts for knowledge article templates

As an admin, you can clone the KB generation skill, and update prompts for AI model providers. This helps the agent to use custom templates and custom prompts to generate Knowledge articles with Now Assist from single and multiple knowledge bases.

UI changes

Editing functions for knowledge articles in the HTML editor

Identify and resolve accessibility related issues during Knowledge article generation through a new accessibility checker button in the TinyMCE toolbar.

Activation information

Knowledge Management is a ServiceNow AI Platform feature that is active by default.

Accessibility information

Accessibility checker in the TinyMCE toolbar enables you to identify and resolve accessibility related issues when creating a Knowledge article. See Accessibility checker in the toolbar for more information.

Related ServiceNow applications and features

CSM Configurable Workspace

ServiceNow® CSM Configurable Workspace and ServiceNow® CSM Agent Workspace enable customer service agents to read knowledge articles attached

© 2026 ServiceNow, Inc. All rights reserved.

to their cases and gain additional information that helps them resolve cases more efficiently.

Field Service Management

Enable field service agents to read knowledge articles that are attached to their work order tasks while they're offline through the Now Mobile Agent app. For more information, see Knowledge articles on Mobile Agent.

Communities

Harvest knowledge information from posts on a Community site. Create structured knowledge articles from unstructured discussions around a question.

Problem Management

Create structured knowledge articles from information generated from a problem form that could be useful to solve similar issues.

Incident Management

Resolve issues by searching for knowledge articles from an incident. Flag issues with articles, edit articles from incidents, and report knowledge gaps while resolving an incident. Formalize tacit knowledge by creating articles from an incident using article templates.

Employee Service Management

Use knowledge blocks with HR Knowledge Management to simplify both HR knowledge authoring for writers and knowledge consumption for readers. Enable an HR agent to identify cases that have insufficient knowledge coverage and to report knowledge gaps using the Demand Insights for HR Cases dashboard. For more information, see Demand Insights for HR Cases dashboard.

Instance Data Replication release notes

The ServiceNow® Instance Data Replication (IDR) application simplifies the data replication process between instances. Instance Data Replication was enhanced and updated in the Yokohama release.

Instance Data Replication highlights for the Yokohama release

- Replicate data that's frequently updated in large tables on your instance by scheduling data replication.
- Queue multiple seeding requests from your producer instance.
- Reseed missing or mismatched records automatically when creating a data comparison request.

See Instance Data Replication for more information.

Important information for upgrading Instance Data Replication to Yokohama

Improve the performance and processing efficiency of Instance Data Replication (IDR) by upgrading your replication sets to V2, which uses Hermes Messaging Service. For details, see Upgrading legacy replication sets to V2 in Instance Data Replication.

Log rotation is automatically enabled for the Replication Payload Error [idr_replication_payload_error] table after the upgrade. By default, the log rotation schedule is comprised of seven shards, with five days for each shard. All log entries in this table created before the upgrade are automatically truncated.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

New in the Yokohama release

Scheduled seeding

Replicate data from a producer to a consumer at scheduled times each day.

Multiple seeding requests

Run concurrent seeding requests across multiple replication sets, with up to one active request per set.

Automatically seed missing or mismatched records

Automatically seed missing or mismatched records when you create a data comparison request.

Changed in this release

Seeding request improvements

In V2 replication sets, the number of records in a seeding request is now unlimited.

Data comparison improvements

In V2 replication sets, the number of records in comparison or reseeding counts is now unlimited.

Reseed missing attachments

Attachments are now included in data comparison requests.

Seeding performance improvements

Seeding throughput and message queue efficiency has been optimized in IDR.

Deprecations

Legacy replication sets are planned for deprecation by the Zurich release. To continue replicating data in Zurich, you must upgrade all legacy replication sets to V2. For details on upgrading legacy replication sets to V2 before the upgrade, see Upgrading legacy replication sets to V2 in Instance Data Replication.

Activation information

Instance Data Replication is a ServiceNow AI Platform feature that is available with activation of the IDR (com.glide.idr) plugin, which requires a separate subscription. For details, see Request an Instance Data Replication subscription.

Related ServiceNow applications and features

Hermes Messaging Service

Hermes Messaging Service is a multi-tenant, multi-cluster data transport and queuing service built on Apache Kafka that enables your instance to reliably produce and consume large volumes of Kafka events.

Now Assist for Configuration Management Database (CMDB) release notes

The ServiceNow® Now Assist for CMDB application displays comprehensive summaries for configuration items (CIs) and accelerates the process of remediating duplicate CIs. Now Assist for CMDB was enhanced and updated in the Yokohama release.

Now Assist for CMDB highlights for the Yokohama release

Yokohama Patch 11

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Review changes to Now Assist usage measurement.
- Some Now Assist skills, agents, and agentic workflows are on by default.
- Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications.

Previous Patch releases

- Select **Summarize** on a CI form, in the workspace, or from any list to view a concise summary of key CI data directly on the form: discovery and class details, associated business services, security vulnerabilities, and related records like incidents, alerts, problems, and change requests.
- The 'Manage duplicate CIs' skill identifies duplicate CIs, populates remediation tasks, and then assigns the tasks to the appropriate group. You follow step-by-step guidance and can preview remediation results before selecting a template. The updated CI correctness scores enable the CMDB Health Dashboard to display accurate information.

See Now Assist for Configuration Management Database (CMDB) for more information.

Important:
Now Assist for CMDB is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Now Assist for CMDB release

Some Now Assist skills, agents, and agentic workflows are turned on by default

The skills are automatically available to appropriate role users for the application, such as ITIL roles on incident forms or change forms. This change simply activates the skill and does not touch the roles that may be needed to use the skill. The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills and agentic workflows are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill, agent, or agentic workflow is turned on automatically (the AI asset was never configured and turned on, then turned off again). Previously configured skills and agentic workflows that were turned on, then off, remain inactive.

Preview deduplication template results

While you're working in the manage duplicate CIs skill, select **Review existing templates** to help you to decide which deduplication template to apply. Now Assist generates a summary of the results of applying a template without actually running the remediation process. You can preview the results for any existing template. When you see the desired result in a preview, you can specify that template and proceed with the deduplication process.

Changed in this release

Yokohama Patch 11

Changes to Now Assist usage measurement

Starting with Yokohama Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Some Now Assist skills are turned on by default

The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.

Configure ACLs for AI agents and agentic workflows

Configure the access control lists for who can discover and trigger AI agents and agentic workflows in their guided setups in AI Agent Studio. You can determine whether an AI agent or agentic workflow behaves as a dynamic user or as an AI user. You can also specify if an AI agent or agentic workflow can be available to all authenticated users or publicly available.

Activation information

Install Now Assist for CMDB by requesting it from ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Related ServiceNow applications and features

Service Graph Connectors

Use a Service Graph Connector to import and integrate third-party data into CMDB and non-CMDB tables.

Now Assist

Help improve the productivity and efficiency in your organization, deliver better self-service, recommend actions, provide answers, and empower your users to search more effectively.

Now Assist Admin console

Use the Now Assist Admin console to provide you with quick and easy access to the important information that you need to set up, configure, and monitor Now Assist applications and features.

Now Assist panel

Use this conversational interface in Service Operations Workspace to summarize a chat, an incident, or resolution notes so that you can get the context of this information more quickly.

Now Assist skills

Use the Now Assist products to provide generative AI skills to meet the needs of users in different workflows, including case or incident summarization, chat summarization, resolution notes generation, and code generation.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Service Catalog release notes

The ServiceNow® Service Catalog application provides a requester view of the available services and products offered by the departments within your organization. Service Catalog was enhanced and updated in the Yokohama release.

Service Catalog highlights for the Yokohama release

- Enable your users to experience the flexibility of using supported languages when creating or editing catalog items in Catalog Builder.
- Identify and resolve accessibility-related issues during catalog item generation through a new accessibility checker button in the TinyMCE toolbar in Service Catalog.

See Service Catalog for more information.

New in the Yokohama release

Use non-English language for creating or editing catalog items

Enable your users to use supported languages when creating or editing catalog items. A non-English language user can create or edit a catalog item in their language that is supported in Catalog Builder. For example, if a Spanish language user logs in to Catalog Builder and creates or edits an item, the Spanish version of the item is created or updated.

UI changes

Accessibility checker in the toolbar

Identify and resolve accessibility related issues during catalog item generation through a new accessibility checker button in the TinyMCE toolbar in Service Catalog.

Activation information

Service Catalog is a ServiceNow AI Platform feature that is active by default.

Accessibility information

Accessibility checker in the TinyMCE toolbar enables you to identify and resolve accessibility related issues when creating a catalog item in Service Catalog. See Accessibility checker in the toolbar for more information.

Related ServiceNow applications and features

Now Assist in Catalog Builder

Use ServiceNow® Now Assist in Catalog Builder to create catalog items of your choice in Catalog Builder by giving text inputs.

Catalog Conversational Coverage

ServiceNow® Catalog Conversational Coverage provides a dashboard to view a high-level overview of the conversational and non-conversational catalog items.

ServiceNow AI Platform security release notes

ServiceNow AI Platform® security product enhancements and updates in the Yokohama release.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Use the ServiceNow AI Platform® security to secure the instance, encrypt your data, authenticate users, and view your current compliance levels based on application security standards.

Authentication release notes

The ServiceNow® Authentication application supports many authentication mechanisms that enable you to validate the identity of users. Authentication was enhanced and updated in the Yokohama release.

Authentication highlights for the Yokohama release

Yokohama Patch 11

Authentication factors for AI voice service

Enable caller access to AI voice agents by configuring the required identification and authentication factors.

OAuth enhancements

Following are the OAuth enhancements:

- Use **Opaque** or **JWT token** option for your inbound integration endpoints.
- Use the **Allow access only to APIs in selected scope** option to enable access to the APIs that are explicitly listed in the selected scopes for your inbound integrations.
- Use the OAuth Entity Resource tab for outbound integrations to configure resource parameters so they flow into the OAuth token request and are reflected in the token from your OAuth provider.

Provider name for Inbound integrations

Use the Provider name field to enter the details of your inbound integrations to distinguish between different inbound integrations on your ServiceNow AI Platform®. Update the Provider name in your API integrations to improve monitoring capabilities:

- For OAuth integrations, update the provider name using the Provider name field. To know more, see OAuth Inbound.
- For Basic authentication integrations, update the Provider name in the integration registration form.

Yokohama Patch 7

OAuth token enhancement

Use Opaque or JWT token option for your inbound integration endpoints.

Yokohama

- Use Continuous Authentication to require step-up authentication or re-authentication to the users before allowing access to sensitive or high-privilege information.
- Multi-factor Authentication (MFA) is enforced by default for all non-SSO login to ServiceNow®.
- Use the Authorization code, resource owner password credential, SAML bearer, and JWT bearer OAuth grant types of OAuth for outbound integration requests through the MID Server.

See Authentication for more information.

New in the Yokohama release

Continuous Authentication

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Use Continuous Authentication to require step-up authentication or re-authentication to the users before allowing access to sensitive or high-privilege information.

OAuth Grant Types for MID Server

Use the Authorization code, resource owner password credential, SAML bearer, and JWT bearer OAuth grant types of OAuth for outbound integration requests through the MID Server. Personal Auth is also supported through the MID server. MID Servers facilitate communication and data movement between a single ServiceNow® instance and external applications, data sources, and services.

Changed in this release

Multi-factor Authentication enforcement

MFA is mandated and is enforced to all the non-SSO login users accessing ServiceNow®.

Activation information

Authentication is a ServiceNow AI Platform product that is active by default.

Related ServiceNow applications and features

Secure your instance

Platform Security is built into all levels of the ServiceNow AI Platform. Implement the security features that are appropriate for your organization. Manage failed logins and encrypted password protection, access control rules, and audit logs.

Encryption Key Management release notes

The ServiceNow® Encryption Key Management application protects your data by using encryption, tightly controlled key access, National Institute of Standards and Technology (NIST) 800-57-based key life-cycle management, and FIPS 140-2-L3 key protection. Encryption Key Management was enhanced and updated in the Yokohama release.

Encryption Key Management highlights for the Yokohama release

- Column Level Encryption has been rebranded and redesigned to now be called Field Encryption.
- Use Access Observer to help plan for and troubleshoot Field Encryption implementations.
- Edge Encryption administrators can use the new process to migrate from Edge Encryption to Field Encryption.

See Key Management Framework for more information.

Important information for upgrading to Yokohama

- The GlideEncrypter API uses the three-key Triple Data Encryption Standard (3DES) encryption standard which NIST 800-131A Rev 2 has recommended against using after 2023. The following changes are taking place in the Yokohama release in preparation for a full deprecation of GlideEncrypter/3DES in the future.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- New Yokohama instances can't use GlideEncrypter. All base system scripts have been changed to use alternative encryption processes.
- if you're upgrading your Yokohama instances, you can still use 3DES, but you can also disable 3DES usage with a system property.
- Learn more about 3DES deprecation in KB1704481.

New in the Yokohama release

Column Level Encryption is now Field Encryption

Column Level Encryption has been rebranded to Field Encryption Starter (FES), while Column Level Encryption Enterprise is now Field Encryption Enterprise (FEE).

Access observer

Use access observer to understand the people and processes that access data on your instance.

Improved migration process from Edge Encryption to Field Encryption

Use the new process for migration from Edge Encryption to Field Encryption (formerly Column Level Encryption). This improved workflow ensures that your data migrates from Edge Encryption to Field encryption without spending time in an unencrypted state.

Activation information

The Platform Encryption subscription bundle is a group commercial entitlement that includes Field Encryption Enterprise and Cloud Encryption.

Field Encryption Enterprise is the unlimited license of Field Encryption. The Enterprise plugin is available with the activation of the com.glide.now.platform.encryption plugin. For details, see Encryption and Key Management subscription bundle.

Related ServiceNow applications and features

Encryption and Key Management

Encryption is a cryptographic procedure that converts plain text into cipher text, which helps prevent anyone but the intended recipient from reading that data.

Key Management Framework

The Key Management Framework lets you fully customize and manage how cryptographic operations are performed on your instance.

Code Signing

Code Signing creates digital signatures for the data, which are later checked to confirm the authenticity and integrity of the data. Code Signing is a module licensed as a component of Vault.

Edge Encryption

Edge Encryption encrypts sensitive data on your company premises before sending it over the internet to your instance (encrypted in flight), where it remains encrypted at rest.

Cloud Encryption with Key Management

Cloud Encryption offers encrypted storage for the database by using block encryption, with enhanced key management. Cloud Encryption is available with the

Platform Encryption subscription bundle and the ServiceNow Vault subscription bundle.

Code Signing release notes

The Code Signing application validates scripts and code that runs on your instance. Code Signing was enhanced and updated in the Yokohama release.

Code Signing highlights for the Yokohama release

Use Code Signing Guardrails to improve checks during the signing process to create more secure workflows.

See Code Signing for more information.

Changed in this release

Enhancements to the guardrails check

The Code Signing Guardrails check has been improved to enhance signature verification, resulting in more secure workflows. In addition, multiple optimizations have been implemented to improve the performance benchmarks of the Guardrails scan, and log files now feature a more intuitive naming convention, which simplifies file identification within your system.

Generate update sets with a maximum size of 10,000 records

Code Signing now enforces limits on large update sets to improve the user experience. The maximum size for an update set is 10,000 records.

Naming updates for trusted and production instances

The trusted non-production instance has been renamed to trusted instance, and the protected production instance has been renamed to protected instance. These naming updates have been made to better align with customer usage.

Activation information

Code Signing is a ServiceNow AI Platform feature that is available with activation of the Code Signing (com.glide.code_signing_enterprise) plugin. For details, see Configuring Code Signing.

Data Privacy release notes

The ServiceNow® Data Privacy application enables you to classify sensitive data, remove personally identifiable information (PII) from user data in a production instance, and anonymize data in production and non-production instances. Data Privacy was enhanced and updated in the Yokohama release.

Data Privacy highlights for the Yokohama release

- Leverage Data Privacy in Now Assist to discover sensitive data in Now Assist prompts and data send to models.
- Sanitize sensitive data from Now Assist prompts without impacting response.
- Discover sensitive data from attachments using enhanced Data Discovery jobs.

See Platform Privacy for more information.

Important:
Data Privacy is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Important information for upgrading Data Privacy to Yokohama

Licensing changes enable you to install Data Discovery, Data Discovery APIs, Data Anonymization, and Data Privacy APIs without an entitlement, but you must have an entitlement to run a job.

New in the Yokohama release

AL/ML Based Data Discovery for Real Time Anonymization

Use AI/ML data discovery using Named Entity Recognition (NER) models to discover sensitive data that does not follow a pattern like name, address, organizations, and more; and run real-time anonymization.

Configuring Data Privacy for Now Assist

Sanitize sensitive data entered in Now Assist prompts to prevent data leakage without impacting the response.

Discover sensitive data from attachments.

Discover and report on sensitive data from attachments.

Activation information

Data Privacy is available with activation of the Data Privacy Plugin (sn_dp_store_app). For details, see Activate data privacy.

Domain Separation release notes

The ServiceNow® Domain Separation application enables you to separate data, processes, and administrative tasks into logically defined domains. Domain Separation was enhanced and updated in the Yokohama release.

Domain Separation highlights for the Yokohama release

Enable domain separation in live environments by using the Post-Production Domain Separation Activation Utility.

See Domain separation for service providers for more information.

Domain Separation is available in ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Post-Production Domain Separation Activation Utility

Begin using domain separation on a live environment with the guided Post-Production Domain Separation Activation Utility.

Activation information

Domain Separation is a ServiceNow AI Platform feature that is available with activation of the com.glide.domain.activation_utility. For details, see Domain separation plugin.

Access Management release notes

The ServiceNow® Access Management provides robust tools to manage security data on the ServiceNow platform. It includes access control lists (ACLs), security attributes, contextual security manager, data filtration, and many more controls. These controls provide granular control and improve security for managing data access. Access Management was enhanced and updated in the Yokohama release.

Access Management highlights for the Yokohama release

- Security Data Filters are a powerful new feature designed to restrict access to sensitive records based on roles or security attributes. This ensures only authorized users can view data, regardless of how the data is accessed.
- Related Record Access allows enforcement of consistent access rules across related tables, ensuring that users only see records associated with the data they are authorized to access.

See Access Control List Rules for more information.

New in the Yokohama release

Security data filters

Security data Filters enable you to control who can access sensitive data by restricting access to authorized users, regardless of how the data is accessed. Security data filters are applied before query execution, ensuring restricted data never leaves the database and prevents data leakage at the query level. Filters integrate into queries for GlideRecordSecure, GlideRecordSandbox, and GlideAggregateSandbox by default.

Related record access

Related record access integrated into the ACL framework enhances access management by enabling administrators to enforce specific ACLs for related tables. This ensures users can only access records in related tables, such as costs, estimations, or tasks, based on their permissions for the parent table, like projects or cases. Combined with broader ACL capabilities, Related record access ensures consistent, granular, and enforceable

Activation information

Access Management is a ServiceNow AI Platform feature that is active by default.

ServiceNow AI Platform user interface release notes

ServiceNow AI Platform® user interface product enhancements and updates in the Yokohama release.

These release notes describe product enhancements for core platform functionality in user interfaces, such as lists and forms.

Adoption Services release notes

The ServiceNow® Adoption Services is a suite of solutions, both products and features, that provide user support and critical information when a user needs it most. Adoption Services was enhanced and updated in the Yokohama release.

Adoption Services highlights for the Yokohama release

- Execute Guided Setup in every domain, with guided setup player roles.
- Experience the Guided Tours in dark and light themes.
- Execute Guided Tours from any scoped application route.
- Explore the What's New feature that's available in Help Center for all experiences.
- Use the new Help Center UI features that provide a more enhanced experience.
- Explore the enhanced Guided Setup that support running it multiple times.

See Adoption services for more information.

Important:
Adoption Services is available in ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Guided Setup

Create additional tasks under Guided Setup using page macroponent as an app owner. You can also access and execute these tasks with an admin role.

Add new steps to guided setups in progress during Playbook Experience.

UI changes

Guided Setup

Choose from the playbook player and Next Experience and explore improved navigation across Guided Setup activities.

Help Center

The Help Center panel is now attachable and detachable from the header. You can also drag and resize it after you detach it. This feature is available with a keyboard, for accessibility support.

Guided Tours

Guided Tours is now accessible in dark and light themes. This capability now inherits any theme-based color and scheme that you select.

Changed in this release

Guided Setup

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Assign and transfer Guided Setup tasks to relevant users, for execution. This capability requires admin roles.

Set Guided Setup steps as mandatory by disabling the skip action.

You can now run the Guided Setup player or builder multiple times.

Select the multi-run feature while you're configuring and executing the tasks multiple times.

Help Center

Navigate to What's New within the Help Center panel across all experiences, including Core UI. Starting in the Yokohama release, configuration support for this new feature is available in classic and custom pages.

This feature isn't supported for non-Polaris users.

Embedded Help

Import non-English content without overriding the last uploaded language content.

Guided Tours

Create, edit, or delete Guided Tours from any scoped application including ServiceNow AI Platform.

Activation information

Adoption Services is a ServiceNow AI Platform feature that is provided with the plugins, by default. You don't need to activate this feature.

Next Experience release notes

The ServiceNow® Next Experience application delivers an intuitive, personalized experience that enables your organization to drive productivity, improve engagement, and inspire learning with the ServiceNow AI Platform®. Next Experience was enhanced and updated in the Yokohama release.

Next Experience highlights for the Yokohama release

- Create personalized keyboard shortcuts to streamline your workflow and boost productivity.
- Track the filters that you apply to your Workspace lists within the History menu. Each time you change your filter, the History menu displays a separate entry.
- Quickly locate and adjust your user preferences by using the new streamlined search function.
- User preference icons now adopt your theme colors.

See Next Experience UI for more information.

New in the Yokohama release

Fuzzy search results returned within the Unified Navigation menus

Find relevant search results even with shortened text by using the fuzzy results filter, which ranks results based on their similarity to your search query. Adjust the minimum accuracy score to help fine-tune filter behavior.

Customizing the Next Experience keyboard shortcuts

Assign specific actions to unique key combinations to quickly execute tasks. See the Accessibility information section for details.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Activity stream user preference available

Enable the activity stream to automatically expand all activities from within the Workspace user preference group.

Next Experience keyboard shortcuts

Use a new keyboard shortcut to open and close the Now Assist panel and another keyboard shortcut to enable Now Assist voice input mode.

UI changes

Enable keyboard focus on truncated text user preference

The "Enable keyboard focus on truncated text" user preference has been updated to "Enable keyboard focus on text that displays a tooltip."

Improved keyboard shortcut modal

The keyboard shortcut menu has improved usability in the following ways:

- The modal now includes two columns that include the keyboard shortcut and a description with a scrollable list of available shortcuts on the viewed page.
- A search field enables you to search for shortcuts that are relevant to the page you're viewing.
- A **Close** button enables you to easily close the modal.

Changed in this release

Next Experience preferences

The new user preference panel provides a more efficient, streamlined way for you to work. Use the new search bar to locate your preferences. A wider modal displays all preference groups and when you select a group, all the individual preferences that are related to it appear in the same window.

Activation information

Next Experience is a ServiceNow AI Platform feature that is active by default when the user loads or upgrades to the Yokohama release. If there are known problems with turning on Next Experience on an instance, an opt-out system property can be created prior to upgrade.

Theme Builder comes with the Next Experience and is active by default.

Browser requirements

The Yokohama release doesn't support Internet Explorer 11. The iOS version of Firefox is also not supported.

Accessibility information

Customize Next Experience keyboard shortcuts

Create your own keyboard shortcuts for frequently used actions.

Next Experience keyboard shortcuts

Keyboard shortcuts categorized: Keyboard shortcuts for each page are now organized into categories: Page Action, Page Navigation, Global Navigation, and General.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

New keyboard shortcuts: Two new Next Experience keyboard shortcuts are available, one shortcut to open and close the Now Assist panel and another to enable voice input for Now Assist.

Accessibility improvements for keyboard interactions: Use the right and left arrow keys to expand and collapse rows.

Configure Next Experience accessibility preferences

Voice input for Now Assist

A new user preference activates voice-to-text input in the Now Assist panel. With this feature, you can use your voice to access Now Assist skills in the Now Assist panel in any supported language.

This preference appears only if your system administrator has enabled the voice input for the Now Assist feature for your instance. For more information, see Enable voice input for the Now Assist panel.

Once your system administrator has enabled voice input for your instance, the "Enable voice input for the Now Assist panel" user preference is displayed.

Service Portal release notes

The ServiceNow® Service Portal application enables you to build mobile-friendly self-service experiences for your customers and employees with an easy-to-use, modular portal framework. Service Portal was enhanced and updated in the Yokohama release.

Service Portal highlights for the Yokohama release

- Analyze the performance of portal pages and their widgets.
- Compare cloned widgets with the base widget from which they were cloned.
- Use ECMAScript 2021 (ES12) JavaScript mode in widget server scripts.
- Enable early single sign-on (SSO) redirection.
- Specify the user roles that apply to a page route map.

See Service Portal for more information.

New in the Yokohama release

Analyze the performance of portal pages and their widgets

Set benchmarks against which to analyze the performance of a portal page. Identify widgets on the page that don't meet the performance benchmarks and view details about their performance.

Compare a cloned widget with its base widget

Compare cloned widgets with the base widget from which they were cloned. View differences between the code of the cloned widget and the base widget highlighted in the code comparator.

Changed in this release

Use ECMAScript 2021 (ES12) JavaScript mode in server scripts for widgets

Use features supported in the ECMAScript 2021 (ES12) JavaScript mode in server-side scripts for widgets by selecting **Turn on ECMAScript 2021 (ES12) mode** from

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

the widget record or Widget Editor. For information about features supported in the ECMAScript 2021 (ES12) JavaScript mode, see JavaScript engine feature support.

Define roles for page route maps

Control which users are redirected to a new page based on a page route map. Specify the user roles to apply in the Page Route Map form.

Improved redirection for single sign-on (SSO) authentication

Improved the experience of logging in to portals that use single sign-on (SSO) authentication by redirecting to the SSO Identify Provider (IdP) login page without trying to load the portal page first.

Enforce providing comments when rejecting requests

Require approvers to provide comments when rejecting a request from the Approvals widget. Administrators can enable requiring comments from the widget instance options.

Check cross-scope privileges to a table with the Form widget

Validate access to tables from which the Form widget fetches data. The Form widget checks for the necessary cross-scope privileges to a table by default.

Activation information

Service Portal is a ServiceNow AI Platform feature that is active by default.

Browser requirements

The Yokohama release doesn't support Internet Explorer 11.

The iOS version of Firefox doesn’t support Service Portal pages.

For more information about Service Portal browser support, see Browser support.

Related ServiceNow applications and features

Sitemap Generator

Define and automatically generate XML sitemaps to improve the search engine optimization (SEO) of your public portal pages.

AI Search

The ServiceNow AI Search application provides search capabilities for Service Portal, Now Mobile, and Virtual Agent.

User Experience Analytics

After you enable User Experience Analytics for Service Portal, you can view detailed key performance indicator (KPI) data on a dashboard and on list views.

Authentication

Validate the identity of users who access an instance and allow them to use features that match their role or job function. You can allow portal users to log in without a password by enabling PIV/CAC card authentication.

Theme Builder release notes

The ServiceNow® Theme Builder application enables you to tailor the visual experience for your users, helping to update the look and feel to match your brand. Theme Builder was enhanced and updated in the Yokohama release.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Theme Builder highlights for the Yokohama release

- Edit and style the Unified Navigation component to better suit your brand.
- Make individual style edits on a component by double-clicking it to quickly access the Component Editor.
- As of Theme Builder version 5.1, customize the colors of empty state illustrations from within Theme Builder.
- As of Theme Builder version 5.1, use your own custom images by overriding the default empty state illustrations.

See Working with themes in Next Experience for more information.

Important:
Theme Builder is available by default starting in the Yokohama release and upgrades are available in ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Align with your brand by using the Unified Navigation component

Customize the Unified Navigation component from within Theme Builder by using the following new features:

- Quickly view how the Unified Navigation component will look in your theme by using the Preview pane.
- Use the Component Configuration menu to view any shared styling between subcomponents.
- View the background color of your subcomponent and see how it renders in relation to the Unified Navigation component by using the updated canvas color feature.

Use the double-click feature to quickly access the Component Editor

Double-click a component tile to access the Component Editor where you can continue to make style adjustments to subcomponents, variants, or interactions.

Adjust the Unified Navigation component to meet accessibility standards

As of Theme Builder version 5.1, the Accessibility Inspector now displays the total number of accessibility errors with contrast issues for the Unified Navigation component and subcomponents. See the Accessibility section for details.

Adapt the theme-able illustrations to seamlessly integrate with your brand

As of Theme Builder version 5.1, use the new Image styles feature to enhance your theme in the following ways:

- Edit the colors of the empty state illustrations from within Theme Builder. When a part of your Next Experience web page doesn't contain data, an empty state illustration appears. Empty state illustrations are theme-able and adapt to your theme colors.
- Override empty state illustrations with your own custom images to uniquely align with your branding style.

UI changes

Navigation updated

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The **Return to component overview** link within the Component Editor is replaced with breadcrumb-style navigation for a more contextual navigation experience.

Component Editor button replaced

The **Go to Component Editor** button is now labeled either **Style variants**, **Style subcomponents**, or **Style interactions** depending on the selected component. The Component Editor behaves in the same way despite this UI change.

Component Editor Interactions States panel updated

The Interaction States panel within the Component Editor now refers to either **Interactions** or **Subcomponents**.

New Image styles tab added to Editor page

As of Theme Builder version 5.1, the Editor page has the following additional options:

- The general styles panel, which includes Global and Component styles, now features Image styles. The Image styles tab displays all illustrations available for editing.
- When you select an empty state illustration for editing from the Image styles tab, the property panel opens with two additional tabs: Images and Colors. The Images tab displays which image files are applied to an empty state illustration. The Colors tab displays which theme colors are applied to an illustration.

Activation information

Starting with the Yokohama release, Theme Builder is included as a core plugin with the Next Experience application and is available by default. You can update to the latest version of Theme Builder from ServiceNow Store.

Accessibility information

Adjust the Unified Navigation component to meet accessibility standards

The Accessibility Inspector, which detects and guides you through fixing contrast issues in your theme, now includes accessibility errors for the Unified Navigation component and subcomponents.

Related ServiceNow applications and features

Build apps using App Engine Studio

Use ServiceNow® App Engine Studio for developing rich web applications to store information, automate business processes, and solve business problems.

UI Builder

Use ServiceNow® UI Builder to build pages for workspaces that are generated with App Engine Studio or custom web experiences by using Next Experience Components and custom web components.

Workspace release notes

The ServiceNow® Workspace application provides agents, case managers, help desk professionals, and managers with tools to answer customer questions and resolve customer problems. Workspace was enhanced and updated in the Yokohama release.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Workspace highlights for the Yokohama release

- Navigate form templates with larger cards, sorting preferences, and favorites.
- Add collapsible content to email templates and attach a display to knowledge base links.
- Leverage the latest workspace features for email composer in the Core UI.
- Use lists that have additional condition builder fields, infinite scroll, live updates, and saved temporary lists.
- Provide role-based access control for viewing and editing tables in the Activity stream.

See Workspace UI for more information.

New in the Yokohama release

Configure keyboard shortcut for response templates

Use a keyboard shortcut to add response templates to journal fields within a form.

Create collapsible content for email templates

Hide email content behind an ellipsis in email templates.

Configure the email composer in Core UI

Access the latest Workspace features for email composer in the Core UI.

UI changes

Favorite form templates

See your favorite form templates that you use most often in the Templates list.

Larger form template cards

Larger form template cards provide you with the entire labels for form templates in the Templates list without selecting them.

Sorting preferences for form templates

Sort form templates in the Templates list by the last used templates or in alphabetical order.

Preview the relevant templates in the email composer

Preview relevant email templates, response templates, and quick messages that are listed in the email composer's Apply templates modal.

View a total count of drafts in the email composer

A badge on the View drafts icon displays the total count of your drafts that are available in the email composer.

Preview all drafts available in the email composer

Preview all drafts that are available in the email composer's View drafts modal instead of your three most recent drafts.

Time elapsed in the Activity stream

Timestamps in the Activity stream provide more clarity on the amount of time that has elapsed by reflecting the format for timestamps in the Core UI.

Compose text area expands with changes

The Compose text area expands dynamically to fit the parent container in the side-by-side view and modeless dialog.

Customize the multi-record associator

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Resize the multi-record associator and adjust the number of rows that are shown per page in the multi-record associator.

Download all attachments

Create a zip file and download all attachments in the Attachments list.

Download multiple attachments at once

Select multiple attachments to download from the Attachments list at once.

Reopen special handling notes

Reopen special handling notes after they have been dismissed without refreshing the page or closing and reopening the record.

Indicator for personalized lists

A dot was added to the Update Personalized List icon as an indicator that the current list shows the personalized columns instead of the column defaults.

Progress bar for Percent complete list field

When you add a **Percent complete** field to a list, a progress bar displays next to the percentage.

Condition builder integrated into list

Condition builder opens above the list as an integrated part of the list experience instead of opening as a modal.

Open column search row with icon

The Show column search row icon enables you to display a row to search columns in a list instead of using the Column options menu.

Changed in this release

Context-based suggestions with @mentions

Receive suggestions for users with access to the record when using @ mentions.

Expand all tiles in the Activity stream

Set a user preference to keep all tiles in the Activity stream expanded across cases and user sessions.

Access control security model for the Activity stream

Data filters and access rules provide role-based access control for viewing and editing tables in the Activity stream.

Multiple records added from the multi-record associator load in the background

Work on a record while the multiple records that were selected from the multi-record associator are added in the background.

Attach display text to knowledge base links in the email composer

Manage your email's appearance by attaching display text to knowledge base links.

Infinite scroll for lists

Use the Record List bundle to scroll through lists infinitely without pagination.

Live updates for lists

Use the Record List bundle to view live updates on lists without refreshing the page.

Temporary lists available in the list menu

Temporarily access personalized lists that are sent to you as links within the My Lists menu.

Filter for hierarchy in condition builder

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The **is within hierarchy** field in the condition builder enables you to filter your list within a hierarchy instead of only direct reports.

AI filter assist

Convert everyday language into an encoded query with AI filter assist.

Activation information

Workspace is a ServiceNow AI Platform feature that is active by default.

Browser requirements

Workspace doesn't support mobile devices, Internet Explorer, or Microsoft Edge. Instead, use Microsoft Edge-Chromium or one of the other supported browsers that are listed in Browser support.

Accessibility information

Screen Summarization

Screen Summarization is a feature that supports visually impaired and low-vision users by providing AI-generated summaries of workspace pages and their sections. The summaries can be read aloud with a screen reader to help reduce navigation and comprehension time.

Install Screen Summarization by requesting it from the ServiceNow® Store. Visit the ServiceNow® Store to view all the available apps and information about submitting requests to the store.

Source-to-Pay Operations release notes

Source-to-Pay Operations has new and updated features in the Yokohama release.

Accounts Payable Operations release notes

The ServiceNow® Accounts Payable Operations application enables Accounts Payable specialists to analyze and process invoice and invoice cases. The generative AI capabilities are leveraged in invoice line mapping with purchase order line mapping. The Accounts Payable Operations was enhanced and updated in the Yokohama release.

Accounts Payable Operations highlights for the Yokohama release

- Leverage Accounts payable document classification skill to classify email attachments into invoice, credit memo, or supporting documents based on the AI recommended confidence score resulting in error free invoice data extraction.
- Validate supplier provided tax against a system-calculated tax by integrating an enterprise-grade tax engine resulting in straight-through processing of invoice while improving accuracy, compliance, and operational efficiency
- Introduced Agentic workflow in Accounts Payable Operations to resolve invoice inquiry cases raised by employees and suppliers thereby significantly reducing the involvement of human agents.
- The ServiceNow® Now Assist offers generative AI purchase order line-mapping to improve accuracy and reduce manual work.
- Experience the new generative AI skill for invoice data extraction, designed to enhance accuracy and reduce manual effort.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Leverage AI-powered GPT-4o-driven invoice data extraction with Document Intelligence for improved accuracy and reduced manual effort.
- Get instant, real-time assistance from generative AI to summarize invoice case details through the Now Assist panel.
- Use the Accounts Payable Operations properties page to control the configuration of APO properties.

Important:
Accounts Payable Operations is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Important information for upgrading Accounts Payable Operations to Yokohama

If you're upgrading from a previous release, you must configure the reference field in the Tax Code [sn_fin_tax_code] table. The exception engine validates the invoice using the tax code and raises exceptions if necessary.

New in the Yokohama release

Tax Engine Integration

The tax engine integration framework validates supplier-provided tax against system tax at invoice line level, maintains compliance with regional and global tax regulations. This integration triggers automatic tax validation, handles exceptions for tax variance and missing data, enables manual revalidation and rolling up of system tax.

Using Supplier Collaboration Portal in APO

In the supplier collaboration portal home page, the supplier contact can choose to view invoice and inquiry cases associated with their account.

Supplier contacts can be assigned with multiple suppliers.

Set APO properties

The one-stop property page provides great flexibility and ease of configuration to users with admin roles. AP admin and integrator use the APO properties page to set the parameters that control the invoice line mapping, invoice ingestion API, and exception management. Depending on the invoice line-mapping properties set, AP admin and integrator can choose to review and confirm the invoice line mapping results generated by rule-based engine and Now Assist.

Using Playbook in Accounts Payable Operations

Playbook activity card displays updated invoice statuses. AP specialist reviews and acts on the mapping recommendations by Now Assist.

Now Assist for Accounts Payable Operations (APO)

Activate the purchase order line-mapping skill in the Now Assist Admin console to enable automatic mapping of invoice lines with purchase order lines using Now Assist.

Activate the invoice data extraction skill in the Now Assist Admin console to leverage GPT-4o capabilities in extracting invoice information using Document Intelligence and reducing the manual effort.

Generate invoice case summarization in multiple languages with the multi-language support in the Now Assist console.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

With the Now Assist panel, you can get assistance from generative AI to solve invoice case-related issues faster.

As a fulfiller, you can learn about the details of a purchase order and its associated cases from record summarization generated by Now Assist.

Take advantage of the translation capabilities available in the Now Assist for user-generated content.

A new requester role is added to access Now Assist Accounts Payable Operations features powered by generative AI. Customers need to explicitly grant these roles to users for access to GenAI features and capabilities.

Use agentic workflows in Accounts Payable Operations to resolve invoice inquiry cases raised by employees and suppliers. These workflows also help track associated invoice records efficiently. With an agentic workflow, you can process a high volume of invoice inquiries that come through email attachments to significantly reduce the workload of human agents.

Changed in this release

Work with invoices

- Invoice line statuses are updated as:
  - PO matching error to Mapping error
  - PO matching completed to Mapping complete
  - Matching error to Mapping error
  - Review mapping

Invoice ingestion process when Document Intelligence is unavailable

Accounts Payable Operations integration with Document Intelligence enables AP admin to create invoice manually when DocIntel is down. The capture invoice details activity card displays the **Create invoice** option.

Activation information

Install Accounts Payable Operations by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Localization information

Accounts Payable Operations supports multiple languages. The current DocIntel model is trained to extract invoices in the English language only. If you want to process an invoice in the multiple languages supported by DocIntel, you must train the DocIntel model.

Sourcing and Procurement Operations release notes

The ServiceNow® Sourcing and Procurement Operations application enables you to search punchout products, track procurement requests, browse punchout and native catalog items, and complete checkout with accurate product category and unit mappings. Sourcing and Procurement Operations was enhanced and updated in the Yokohama release.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Sourcing and Procurement Operations highlights for the Yokohama release

- Enable shoppers to view and select their local currency throughout the Shopping Hub experience, including supplier cards, product detail pages, cart, checkout, my purchases, and request tracker.
- Enable procurement admins to configure and render unique question types for quick and full checkout experiences for each product or service line.
- Use dashboards and tabs in the Source-to-Pay Workspace to view spend, savings, and pipeline projects, identify savings opportunities, and create pipeline projects directly from filtered lists.
- Easily track products and services from ordering to fulfillment using procurement record IDs or keywords.
- Access both punchout and native catalog products from Categories or Suppliers on the Shopping Hub home page.

See Sourcing and Procurement Operations for more information.

Important:
Sourcing and Procurement Operations is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Multi-currency support in Shopping Hub

View and select your local currency while shopping for products in Shopping Hub to provide a seamless multi-currency experience.

Purchase requisition line-level questions in Shopping Hub

Create configurable, line-level questions during checkout in Shopping Hub. These questions are defined in Catalog Builder and are specific to certain products or product categories.

Category management tab

Access a unified, filter-based view of category performance across spend, savings, pipeline projects, contracts, purchase orders, and suppliers.

Category analytics

View savings opportunities across the sourcing pipeline using the Savings dashboard in the Category Analytics module of the Source-to-Pay Workspace.

Pipeline management tab

Gain insights into savings and pipeline projects to enhance visibility, tracking, and collaboration across teams.

Report savings when awarding multiple suppliers

Enter the spend and savings data for the sourcing event associated with the pipeline project when awarding multiple suppliers.

Create a pipeline project from an expiring contract

Create a pipeline project directly from an expiring contract using a guided, decision-based workflow.

Search for punchout products in Employee Center

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

In Employee Center, you can search for punchout products directly using the AI search bar. After you search for a product, matching items from the third-party supplier's catalog are displayed on the **Supplier Site Catalog** tab.

Unified request tracking in Shopping Hub

From My Purchases in Shopping Hub, you can search purchased products or services using the original or associated procurement record IDs, tracking details from order to fulfillment. Additionally, you can use keywords or the first three letters of a procurement record type to search for and view your purchases.

Browse punchout and native catalog items from the Categories and Suppliers lists in Shopping Hub (SH)

In Shopping Hub, you can view both the punchout products and the natively available products from the Categories or the Suppliers list on the Shopping Hub home page.

Mapping Product Categories and Units of Measure for seamless checkout in Shopping Hub

You can map the product categories and units of measure for third-party products to the corresponding model categories. This capability helps to ensure that during checkout, Shopping Hub accurately considers and displays the product category for the purchase order lines (POL) and purchase requisition lines (PRL) based on your predefined mappings.

Submit an edit receipt request from Shopping Hub

Shoppers can submit edit receipt requests from Shopping Hub to correct discrepancies in accepted receipts, ensuring accurate updates to purchase orders, purchase order lines, and received quantities.

Process an edit receipt request in playbook

Fulfillers can review the edit receipt requests and either confirm or reject them. If the request is valid, they can process the request using the Edit a Receipt playbook in the Source-to-Pay Workspace.

Editing purchase requisitions and orders with cost allocation adjustments

Shoppers can modify purchase requisitions (PRs) and purchase orders (POs) while maintaining cost allocation across multiple cost centers.

Spend and Savings Management

Spend and Savings Management (sn_spend_mgmt) enables category managers to import and maintain their organization’s category taxonomy. Integrating this taxonomy into ServiceNow helps streamline procurement processes, monitor spend, and assess savings more efficiently at the category level.

Return a product

Shoppers can now initiate replacements for goods directly from the Shopping Hub/EC. Previously, only returns for refunds were supported. This enhancement allows shoppers to replace faulty or unsatisfactory items, offering greater flexibility and improving the overall shopping experience.

Using Now Assist for Contract Management in Sourcing and Procurement Operations

Extract metadata from a signed contract attached in a contract repository record and analyze a contract document with agentic AI to identify non-standard and missing clauses.

Now Assist for Sourcing and Procurement Operations (SPO)

Activate the following new skills for Now Assist for SPO:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Negotiation summarization for fulfillers: Summarize negotiations to keep fulfillers informed on their current status, progress, and action items.
- Negotiation event summarization for fulfillers: Summarize negotiation events to keep fulfillers informed on their current status, progress, and action items.
- Purchase order summarization for requesters: Summarize purchase orders to keep requesters informed about their current status, progress, and action items.
- Purchase requisition summarization for requesters: Summarize purchase requisitions to keep requesters informed about their current status, progress, and action items.
- Sourcing request summarization for requesters: Summarize sourcing requests to keep requesters informed about their current status, progress, and action items.

Generate summarization in multiple languages for procurement objects with the multi-language support in the Now Assist console.

- For fulfillers, the following procurement objects support multi-language summarization:
  - Sourcing request
  - Purchase requisition
  - Procurement case
  - Purchase order
  - Negotiation
  - Negotiation event
- For requesters, the following procurement objects support multi-language summarization:
  - Sourcing request
  - Purchase requisition
  - Purchase order

With the Now Assist panel, fulfillers can use agentic AI to summarize the following procurement objects quickly:

- Sourcing request
- Purchase requisition
- Procurement case
- Purchase order
- Negotiation
- Negotiation event

Now Assist for Common Finance and Supply Chain features

Use Now Assist for Common Finance and Supply Chain features to summarize purchase orders and keep fulfillers informed of their status, progress, and required actions.

Using agentic workflows in Now Assist for Sourcing and Procurement Operations

Use agentic workflows for Sourcing and Procurement Operations to fulfill your procurement needs through intelligent product recommendations, guided checkout and off-catalog purchasing processes, and detailed product information. These

© 2026 ServiceNow, Inc. All rights reserved.

workflows also help answer procurement-related questions and efficiently track associated records.

Removed in this release

The **All categories** option has been removed from the **Categories** tab in Shopping Hub due to low usage and its impact on system performance.

Activation information

Install Sourcing and Procurement Operations by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Related ServiceNow applications and features

Now Assist for Sourcing and Procurement Operations (SPO)

Use the ServiceNow® Now Assist for SPO application to simplify request creation with conversational intake and summarize records to help fulfillers act promptly.

Source-to-Pay Workspace

Provide experiences and tools to support key activities, such as procuring goods and services, onboarding high-performing suppliers, and processing invoices.

Supplier Lifecycle Operations release notes

The ServiceNow® Supplier Lifecycle Operations application enables you to quickly onboard and collaborate with suppliers, manage supplier relationships, monitor risk, compliance, and performance across the supplier life cycle. Supplier Lifecycle Operations was enhanced and updated in the Yokohama release.

Supplier Lifecycle Operations highlights for the Yokohama release

Important:

- Starting from the Yokohama December 2025 (v 5.2.0) release, the Supplier Lifecycle Operations plugin (com.snc.sn_supplier_mgmt) is renamed to Supplier Case Management. For more information, see Supplier Case Management.
- The new plugin Supplier Operations (com.snc.sn_so) (v 1.2.0) must be installed after upgrading to the Supplier Case Management Yokohama December 2025 (v 5.2.0) release. For more information, see Install Supplier Operations.

- Advanced case management for supplier lifecycle events including onboarding, offboarding, and ongoing operations.
- Identify and prioritize suppliers for credit card payment adoption.
- Estimate card payment benefits using the savings calculator tool.
- Conduct sanction screening and validate banking details and supplier location change requests via Relish integration.
- Map multiple internal stakeholders (legal, business, technical, risk teams) to suppliers to improve visibility and governance of supplier relationships.
- Support for many-to-many (M2M) mapping between supplier contacts and suppliers. A single supplier contact can be the contact for multiple suppliers, if the suppliers share a parent-subsidiary relationship.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Automated KPI templates for automated data collection, KPI template modifications, and calculations.
- KPI Management enhancements enable improved threshold setup, error messaging, and dashboard visualizations for KPI tracking.
- Support for self-registration for supplier contacts. They can register with a supplier company name, enabling multiple domains under a single supplier.

See Supplier Lifecycle Operations for more information.

Note:

You can experience a longer upgrade time if you're upgrading from Vancouver or an older release to Washington DC or any latest release. This delay is due to a mandatory script that runs for restructuring the Supplier Task [sn_slm_task] table and the duration of upgrade depends on the number of records in this table.

Important:
Supplier Lifecycle Operations is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Supplier Operations

Supplier Operations provides support for advanced case management capabilities to handle key supplier lifecycle events such as onboarding, offboarding, and ongoing operations. It includes the ability to resolve cases via Playbooks for a structured and consistent approach.

Supplier Payment Optimization

Supplier managers can identify, prioritize, and track suppliers with high potential for accepting credit card payments.

- Supplier Managers can initiate credit card enablement cases, enabling suppliers to use a credit card as their preferred payment method.
- They can initiate credit card enablement journey for new or existing suppliers after checking their propensity scores (currently requires manual updates).
- They can view the saving estimates associated with the card for a given supplier using the **Savings calculator** tool. They can also view the calculation details of the savings estimator formulas.

Relish Integration for Supplier Lifecycle Operations

Supplier managers can conduct sanction screening, validate banking details change requests, and supplier location change requests via Relish integration.

Mapping multiple internal stakeholders to a supplier

This feature enhances supplier governance in SLO by enabling the mapping of multiple internal stakeholders such as legal, business, technical, and risk teams to suppliers, improving visibility and management of supplier relationships.

Universal Request

Supplier contacts can create generic cases by selecting **Request Help** in the Supplier Collaboration Portal, if they can't find the relevant search results or are unsure of which department to contact for help. These cases are triaged and routed internally to appropriate case types. Universal requests remove ambiguity and improve efficiency for both suppliers and internal operations.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Overall supplier dashboard

The overall supplier performance dashboard provides detailed information about overall supplier scores, count of all active suppliers, their all-time spend, and overall risk ratings. It also includes the Supplier Insights section and the Action plans section showing relevant details.

Supplier Relationship and Performance Management

- **Flexible KPI tracking**: Supplier managers can create KPIs directly without predefined templates, which results in simplified KPI creation, enabling faster and more efficient performance tracking.
- **Enhanced KPI management**: Improved threshold setup, error messaging, and dashboard visualizations for KPI tracking.
- **Multiple dimensions for KPI tracking**: Create supplier-level and contract-level KPIs using KPI templates to measure supplier performance. Contract-level KPIs are created under supplier-level KPIs. The overall KPI value of a supplier is calculated based on the latest aggregated values of all the related contract-level KPIs.
- **Action Plans for under-performing KPIs**: Address performance gaps by creating Action Plans linked to the under-performing KPIs, enabling visual tracking of milestones and tasks. The tasks triggered by the Action Plans are assigned to the suppliers and they can see and complete those tasks in the Supplier Collaboration Portal, streamlining the overall KPI remediation process.
- **Automated KPIs**: Enables automated data collection, KPI template modifications, and calculation at supplier and contract levels. The automated KPI system integrated into action plans can be used for comprehensive performance monitoring.

Many-to-many (M2M) mapping between supplier contact and suppliers

- Supplier contacts can manage multiple supplier records under a single login, with the ability to toggle between records in the Supplier Collaboration Portal. One supplier contact can be the contact for multiple suppliers, provided the suppliers share a parent-subsidiary relationship.
- M2M mapping between supplier contact and suppliers also enables supplier contacts to register using a company name across different email domains, thus simplifying onboarding for distributed supplier teams.
- M2M mapping between supplier contact and suppliers is available from the Xanadu December 2024 release onwards. To enable this feature, see Enable M2M mapping between supplier contact and suppliers.

Now Assist for Supplier Lifecycle Operations (SLO)

- View the summarized details of supply-related cases within the **Now Assist Panel** to keep the supplier managers and fulfillers informed about their progress and action items.
- Case summarization supports multiple languages.

AI driven supplier onboarding using Now Assist for SLO

Use agentic AI in Now Assist for Supplier Lifecycle Operations (SLO) to streamline the supplier onboarding process by automating supplier registration.

Smart Assessments

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Supplier managers can use the segmentation rules and assessment templates to create smart assessments in bulk for users. Smart assessments provide a survey-like experience with enhanced UI capabilities for both internal and external users. This feature utilizes the capabilities of the Smart Assessment Engine application.

Emails view for supplier managers

Supplier managers can access their emails within the Source-to-Pay Workspace from the **Emails** tab in the case, task, and supplier details pages respectively. Email actions are reflected, incomplete email errors are handled, and email-related activities can be summarized from the workspace.

Supplier contacts receive the emails and they can perform the assigned tasks directly via email without logging in to the Supplier Collaboration Portal.

Deprecations

Source-to-Pay Workspace

Supplier Manager Workspace is being prepared for future deprecation. It's hidden and no longer activated on new instances. Source-to-Pay Workspace provides the latest experience for this functionality.

Activation information

Install Supplier Lifecycle Operations by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Now Assist for Source-to-Pay Operations release notes

The ServiceNow® Now Assist for Source-to-Pay Operations application includes generative AI skills that can make developing on the ServiceNow AI Platform more efficient. Now Assist for Source-to-Pay Operations was enhanced and updated in the Yokohama release.

Now Assist for Source-to-Pay Operations highlights for the Yokohama release

Yokohama Patch 11

- Review changes to Now Assist usage measurement.
- Some Now Assist skills, agents, and agentic workflows are on by default.
- Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications.

Previous Patch releases

- Now Assist for Sourcing and Procurement Operations (SPO) supports enhanced AI search and the Retrieval-augmented generation (RAG) framework to recommend suppliers and products through semantic search and contextual filters, enhancing recommendations with criteria like preferred suppliers and previous purchases.
- Now Assist for Supplier Lifecycle Operations (SLO) supports a conversational intake that helps suppliers to view and update supply information through a conversational flow.
- Now Assist for Accounts Payable Operations (APO) supports a conversational intake to complete self-service tasks, such as submit a request or track a request status.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

New in the Yokohama release

Now Assist for Sourcing and Procurement Operations (SPO)

Now Assist for SPO includes an agentic workflow that enhances conversational intake capabilities. This AI-powered agent team streamlines user inquiries to sourcing and procurement teams by gathering knowledge, clarifying requests, deflecting common questions, providing product information, and recommending the appropriate purchase plan. For more information, see Using agentic workflows in Now Assist for Sourcing and Procurement Operations.

The following new skills are available in Now Assist for SPO:

- Negotiation summarization for fulfillers: Summarize negotiations to keep fulfillers informed on their current status, progress, and action items.
- Negotiation event summarization for fulfillers: Summarize negotiation events to keep fulfillers informed on their current status, progress, and action items.
- Purchase order summarization for requesters: Summarize purchase orders to keep requesters informed about their current status, progress, and action items.
- Purchase requisition summarization for requesters: Summarize purchase requisitions to keep requesters informed about their current status, progress, and action items.
- Sourcing request summarization for requesters: Summarize sourcing requests to keep requesters informed about their current status, progress, and action items.

Now Assist for Supplier Lifecycle Operations (SLO)

Now Assist for SLO includes an agentic workflow to streamline the supplier onboarding process by automating supplier registration. AI agents automate the supplier onboarding process, including data validation, duplicate checking, task generation, and communication with suppliers, streamlining the entire process for faster time-to-activation. For more information, see .

The following new skills are available in Now Assist for SLO:

- Conversational intake for suppliers: Suppliers can request profile updates, submit cases, and track inquiry statuses through a conversational interface powered by AI.
- Now Assist summarization panel: Case summaries are generated directly within the Now Assist Panel with no need to open individual case records.
- Multilingual support for summarization: Case details are summarized in the user's preferred language, improving accessibility for global teams.

Now Assist for Accounts Payable Operations (APO)

With the Now Assist for APO application, AP fulfillers can leverage generative AI capabilities to chat with live agents, submit a request, and track its status.

The ServiceNow®Now Assist experience brings generative AI powered purchase order line mapping feature designed to enhance matching accuracy and reducing manual intervention.

Generate purchase order summarization using Now Assist skills powered by generative AI.

Use agentic workflows in Accounts Payable Operations to resolve invoice inquiry cases raised by employees and suppliers. These workflows also help track

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

associated invoice records efficiently. With an agentic workflow, you can process a high volume of invoice inquiries that come through email attachments to significantly reduce the workload of human agents.

New third-party AI model provider options available for all Now Assist applications

Google Gemini and AWS Claude are available for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI.

UI changes

Use the Now Assist for Sourcing and Procurement Operations (SPO) skills in a Virtual Agent chat

Requesters can leverage contextual generative AI by using Now Assist for SPO in a Virtual Agent chat to complete self-service tasks, such as purchasing products.

Changed in this release

Yokohama Patch 11

Changes to Now Assist usage measurement

Starting with Yokohama Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Some Now Assist skills are turned on by default

The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.

Configure ACLs for AI agents and agentic workflows

Configure the access control lists for who can discover and trigger AI agents and agentic workflows in their guided setups in AI Agent Studio. You can determine whether an AI agent or agentic workflow behaves as a dynamic user or as an AI user. You can also specify if an AI agent or agentic workflow can be available to all authenticated users or publicly available.

Activation information

Install Now Assist for Source-to-Pay Operations by requesting it from ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Strategic Portfolio Management release notes

Strategic Portfolio Management (formerly IT Business Management) has new and updated features in the Yokohama release.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Collaborative Work Management release notes

The ServiceNow® Collaborative Work Management (CWM) application provides a central hub to plan, visualize, and collaborate on work with team members across your organization. CWM was enhanced and updated in the Yokohama release.

Collaborative Work Management highlights for the Yokohama release

- Improve focus on your working area through a simplified, distraction-free navigation experience.
- Quickly identify task assignees without access to your Space and manage sharing permissions accordingly.
- Improve collaboration efficiency by sharing the exact view of your Board or specific page of your Doc when sharing a URL with others.
- Collaborate in real-time on Docs with multiple editors.
- Benefit from accessibility improvements to create a configurable workspace that supports Web Content Accessibility Guidelines (WCAG) 2.1 Level AA conformance.

See Collaborative Work Management for more information.

Important:
Collaborative Work Management is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Keyboard shortcuts for workspace actions

Use the keyboard shortcut to quickly search for and go to a Space, Board, or Doc.

- Mac OS: Option + F
- Windows OS: Alt + F

Also, the Search bar displays all the recent Spaces, Boards, and Docs that you've navigated to within the CWM workspace so that you can quickly select from the recent items without having to search for them again.

Real-time collaboration in Docs

Edit a Doc page concurrently with multiple other editors. Colored cursors denote the current location of editors on the page. You can choose to show or hide these indicators.

Note:
To use the full functionality of Docs when using Docs v6.0.0 within CWM workspace, ensure that you upgrade Collaborative Work Management to v5.0.0. For more information, see KB2017926.

Requesting access to a Space or Board from its URL

- CWM users can quickly request access to a Space or Board through the **Request access** button, which sends an actionable email request to Space owners and editors.
- Space owners can approve or reject the request directly from the email without having to open the CWM workspace.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Requesting to elevate user access role to Editor

Easily send a request to Space owners and editors to request elevating your role to Editor by selecting the Viewing mode indicator in the Board header that indicates that you have only the Viewer role.

Managing access in the Share permissions modal

Easily identify users who already have access to your Space and the users who requested access using the following two sections in the Share permissions modal.

- **People with Access** section: Manage the access level of existing collaborators to Editor, Viewer, or Owner, or remove them from the Space.
- **Pending Access** section: Review requests from users and choose to grant or deny them access to your Space.

Managing Space permissions for task assignees and other users

Identify task assignees who don't have access to the workspace through a lock icon next to the user name. This icon is visible in the List view of the Board in the columns of type People such as **Assigned to**, **Additional Assignee**, and **Assignment group**.

You can either use the workspace prompt to grant assignees Viewer access or choose to manage their access level later from the Share permissions modal.

Share task details with Task URLs

Provide direct access to a specific CWM Task record to share with team members and stakeholders by copying its URL. The task opens in the side panel in the context of the Board that it belongs to, eliminating the need to search through multiple items on the Board.

Improved user experience for Board views

Avoid accidentally losing unsaved Board view edits when you try to navigate away from the Board or refresh the browser tab by responding to a displayed workspace prompt.

UI changes

Improved navigation in the workspace

The improved navigation panel provides a simpler and cleaner user interface. At a given time, the navigation panel shows the contents of just one Space to provide a distraction-free experience while you work.

Use the Spaces menu to choose a different Space or use the Search option to quickly find and open any Space, Board or Doc.

Additionally, you can also choose to resize the navigation panel or collapse it altogether to increase the working area for your Boards or Docs.

Verify content through browser spell checks

Identify and manage incorrect spellings in typed or pasted content in a Doc. The incorrect spellings are highlighted automatically, and you can correct them using the right-click menu options on the highlighted word.

Numbering on automation cards

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Instead of record numbers, Board automation cards show a sequential list numbering of 1, 2, 3, and so on. Error messages use these list numbers so you can easily identify an existing automation from the list of available automations for the Board.

Changed in this release

Improved user experience for adding hyperlinks in Docs

Insert hyperlinks in a Doc easily and quickly through the formatting toolbar, inline commands, or by pasting a copied link. The pasted URL can be converted into a hyperlink by pressing the Space or Enter key and edited using the inline edit modal.

Improved user experience for copying links of Boards

Ensure that your team sees the same data as you while sharing links of your Boards through the **Copy link** action, which now accesses the linked workspace showing the view in which the Board is displayed to you regardless of the user's view settings.

Redirection to the CWM task from notification emails

Access task details when you open a task from an assignment email from CWM in a new browser tab in the context of its Board rather than being directed to the workspace home page.

Redirection to the specific doc pages from notification emails

Access the specific Doc page that you are @-mentioned in by selecting **View Doc** in the notification email, eliminating the need to look through multiple pages in the Doc.

Reflow for Configurable Workspace

The CWM workspace supports reflow, which enables pages and content to be zoomed up to 400% through your browser settings without loss of content or functionality.

Activation information

Install Collaborative Work Management by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Accessibility information

Accessibility improvements

Accessibility improvements were completed to create a configurable workspace that supports WCAG 2.1 Level AA conformance.

Reflow

The CWM Configurable Workspace supports reflow, which enables pages and content to be zoomed up to 400% through your browser settings without loss of content or functionality. Additionally, content can be enlarged without scrolling in two dimensions at a width equivalent to 320 CSS pixels or a height equivalent to 256 CSS pixels. Page layouts are transformed into a vertical, stacked view automatically when users increase browser zoom to 400%.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

This enhancement helps users with low vision or who have trouble seeing web content in a browser due to monitor size, device type, poor lighting, or other situations. Reflow can be turned off with a system property for instances, experiences, and pages.

See Reflow for Configurable Workspace for details.

Related ServiceNow applications and features

Now Assist for Collaborative Work Management (CWM)

Now Assist for CWM application uses generative AI skills to save time and improve efficiency for the actions you perform within the CWM workspace.

Strategic Planning

Prioritize, roadmap, and track work when using traditional, Agile, or hybrid methodologies with ServiceNow® Strategic Planning. Align strategy to execution by defining and tracking goals across your organization. Strategic Planning is available with an SPM Professional license.

Data Separation release notes

The ServiceNow® Data Separation application enables organizations to restrict access to sensitive data based on a lens hierarchy and its leaf node.

Deprecations

Starting with the Yokohama release, Data Separation is being prepared for future deprecation and it will be hidden. For details, see the Deprecation Process [KB0867184] article in the Now Support Knowledge Base. Alternatively, you can define data filters along with other configurations to restrict access to sensitive data (enable data separation). For details on how to enable data separation for different use cases using data filters and ACLs, see the Managing data separation using data filters and ACLs [KB1772519] article in the Now SupportKnowledge Base.

Now Assist for Collaborative Work Management release notes

The ServiceNow® Now Assist for Collaborative Work Management (CWM) application uses generative AI skills to improve time to value for the tasks you perform in the CWM workspace. Now Assist for CWM is a new application in the Yokohama release.

Now Assist for Collaborative Work Management highlights for the Yokohama release

Yokohama Patch 11

- Review changes to Now Assist usage measurement.
- Some Now Assist skills, agents, and agentic workflows are on by default.
- Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications.

Yokohama Patch 3

- Help increase efficiency by automatically creating tasks from the context of your CWM Docs and adding them to the required Board.
- Enable saving time by summarizing and paraphrasing blocks of content or a whole page in CWM Docs using generative AI capabilities.

See Now Assist for Collaborative Work Management (CWM) for more information.

Important:
Now Assist for Collaborative Work Management is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Now Assist for Collaborative Work Management features

Generate tasks from Docs in Collaborative Work Management (CWM)

Help increase efficiency and save time by using Now Assist to automatically generate CWM Tasks for your Board. Using the information in your doc, Now Assist provides task recommendations. You can choose to refine or modify these recommendations. You can iterate multiple times to tweak the task recommendations according to your requirements.

After you're satisfied with the recommendations, Now Assist can help you add these tasks to a board of your choice.

Summarize and paraphrase Docs content

Use Now Assist capabilities to refine selected content in docs, or to get a summary of the whole document.

- Summarize, elaborate, or shorten selected text.
- Summarize the entire content on the page.

Changed in this release

Yokohama Patch 11

Changes to Now Assist usage measurement

Starting with Yokohama Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Some Now Assist skills are turned on by default

The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.

Configure ACLs for AI agents and agentic workflows

Configure the access control lists for who can discover and trigger AI agents and agentic workflows in their guided setups in AI Agent Studio. You can determine whether an AI agent or agentic workflow behaves as a dynamic user or as an AI user. You can also specify if an AI agent or agentic workflow can be available to all authenticated users or publicly available.

Related ServiceNow applications and features

Collaborative Work Management

Collaborative Work Management (CWM) provides a central hub to plan, visualize, manage, and collaborate on work with your teams.

The Now Assist for CWM application uses generative AI skills to save time and improve efficiency for the actions that you perform within the CWM workspace.

Now Assist for Strategic Portfolio Management (SPM) release notes

The ServiceNow® Now Assist for Strategic Portfolio Management (SPM) application introduces generative AI skills into Strategic Portfolio Management. You can summarize feedback or content in Docs, create stories from epics, generate concise project summaries, create demands through conversations, quickly gain insights into projects, and refine planning item descriptions to enhance clarity and ensure alignment with project goals. Now Assist for Strategic Portfolio Management (SPM) is updated in the Yokohama release.

Now Assist for SPM highlights for the Yokohama release

Yokohama Patch 11

- Review changes to Now Assist usage measurement.
- Some Now Assist skills, agents, and agentic workflows are on by default.
- Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications.
- Generate measurable targets from goals information and optional context with the target generation skill.
- Use the identify similar records skill to find similar demands based on contextual similarity.
- Enable the project task monitor AI agent to autonomously monitor project tasks on the critical path of a project.
- Use the **Send preview** button to share a project insights email instantly.

Yokohama Patch 6

- Use Google Gemini and Anthropic Claude on AWS as AI model providers for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI.
- Use a decorative loader to elevate visual interest during content loading in Strategic Planning.
- Refine the planning item text descriptions by enabling AI assistance.
- Use Now Assist for SPM AI agents to help optimize workflows, improve productivity, and automate your tasks.

See Now Assist for Strategic Portfolio Management (SPM) for more information.

New in the Yokohama release

Yokohama Patch 11

Identify similar records using Now Assist

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Detect similar existing demand records when creating or editing a demand using the identify similar records skill. The skill compares the **Name**, **Description**, and **Business Case** fields for contextual similarity.

Accelerate target creation with the target generation skill

Generate measurable targets from goals information and optional context with the target generation skill. The skill automatically populates key fields in the target creation form, helping teams define clear, measurable outcomes and create targets quickly.

Schedule project insights email

- Schedule project insights email in the Configure project insights modal. The project email is emailed to the project managers and users and continues on the selected schedule that you select until the project is inactive or paused.
- Schedule and instantly send the project insights email to your project managers by selecting the **Send preview** button.
- Track important updates such as the delayed end dates, the status turning red, or the state updates of your projects and receive project insights email on the schedule that you select.
- Select the email frequency that works for you: weekly, bi-weekly or monthly.
- Monitor critical elements such as milestones, resources, projects, and project tasks.
- Receive proactive, AI-based notifications when project milestones or critical tasks could lead to delays using Monitor project task agent. Use the Enable critical task alerts option from planning page to enable the project task monitor AI agent.
- Choose the recipients to whom you want to send the project insights email.

Yokohama Patch 6

New third-party AI model provider options available for Now Assist

Google Gemini 2.0 Flash, Google Gemini 2.5 Pro, and AWS Claude 3.7 Sonnet are available for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI GPT-4.1 and GPT-4.1 mini.

Write planning item skill

- Use this skill to improve record quality and user satisfaction by enabling AI assistance in the Description field across all Strategic Planning Workspace forms, including product idea, demand, epic, project, capability, feature, and story.
- Enable text refinement with the **Elaborate** and **Shorten** options on planning items to support product managers and agile team members in creating and editing content more effectively.

UI changes

More actions context menu UI enhancements

- Email project summary option has been renamed to Configure project insights.
- Enable critical task alerts option has been added.
- Disable critical task alerts option has been added.

Configure project insights modal UI enhancements

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Email project summary modal has been renamed to Configure project insights modal.
- **Disable email summary** check box has been renamed to **Pause cadence** check box.
- Choose topics, personalize content, and set frequency setup have been added.
- **Project tasks**, **Milestones**, and **Resources** check boxes have been added.
- **Include critical path task changes** check box has been removed.
- **Schedule and send** button has been renamed to **Schedule** button.
- **Send preview** button has been added to send an email instantly.

Skill name updates

The email project summary skill has been renamed to the project insights generation skill.

Demand Management UI changes

- The **Identify similar demands** button has been added to the demand form to identify and view any similar demands with the identify similar demands skill.
- The Similar Demands related list has been added, which displays the list of similar demand records identified by Now Assist.

UI enhancements

The following UI enhancements were made:

- Added hover animation for the Now Assist ( ) icon.
- Added a loader for the Now Assist side panel for a more engaging loading experience.

Skill name updates

- Renamed the Project Gen AI Docs skill to the Project doc summarization (Project Workspace) skill.
- Renamed the Planning item Gen AI Docs skill to the Planning item doc summarization (Strategic Planning) skill.
- Renamed the EAP Teams Gen AI Docs skill to the EAP doc summarization (Enterprise Agile Planning) skill.
- Renamed the Story generation skill to Agile story generation (Enterprise Agile Planning).
- Added the Write planning items skill in Strategic Planning.

Animation support for Now assist buttons and icons

ServiceNow® Now Assist uses generative AI to help improve the productivity and efficiency in your organization, deliver better self-service, recommend actions, provide answers, and empower your users to search more effectively.

Now Assist Admin console

The Now Assist Admin console provides you with quick and easy access to the important information that you need to set up, configure, and monitor Now Assist applications and features.

Now Assist panel

Use this conversational interface in the EAP workspace to get story recommendations, split or combine stories, and create stories for your epics with the help of generative AI.

Now Assist skills

Now Assist products provide generative AI skills that are tailored to meet the needs of users in different workflows, including feedback summarization, content summarization in Docs, demand creation, and epic to story generation.

Portfolio Planning release notes

The ServiceNow® Portfolio Planning application helps you enhance traditional product and portfolio management by visualizing the alignment of work with organizational objectives. Portfolio Planning was enhanced and updated in the Yokohama release.

Portfolio Planning highlights for the Yokohama release

- View the rolled-up financial costs and benefits data of your planning items in the new **Financials** tab in the Planning page.
- View the financial data of planning items while creating multiple prioritization scenarios to promote efficient use of budget and help increase the return on investment (ROI).
- Monitor performance, track progress, and make informed decisions related to planning and execution using dashboards.
- Create, edit, and switch views in portfolio plans and free-form roadmaps with display preferences.

See Portfolio Planning for more information.

Important:
Portfolio Planning is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Important information for upgrading Portfolio Planning to Yokohama

After upgrading to Portfolio Planning v8.8.0, the custom view settings previously saved under user preferences will be cleared. You must reapply these changes and create views as needed. For instructions, see Create a portfolio plan view in Portfolio Planning and Create a free-form roadmap view in Portfolio Planning.

New in the Yokohama release

View financial data of your planning items at the portfolio level

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- View the rolled-up financial costs and benefits data of your planning items Epics, Demands, and Projects at the portfolio level for different time scales and ranges.
- View the financial values such as the Budget, Planned cost, Variance, Actuals, and Remaining Estimates of your planning items by expense type or cost type.
- View the Forecasts, Actuals, and Variance of your planning items for monetary benefits.
- View the financial data of the planning items while creating multiple prioritization scenarios to promote efficient use of budget and to help increase ROI.

Create and manage financial scenarios of planning items

- Optimize your portfolio by creating financial scenarios to validate and arrive at a profitable outcome.
- Plan and manage the budget of the planning items in a simulation mode for efficient financial planning and to help prevent overspending.
- Manage prioritization and budget allocation of the planning items to meet business priorities.
- Compare financial scenarios and automatically allocate the planned budget from approved scenarios to planning items.
- Enable a budget allocation property to analyze finances in scenario planning and take effective decisions using data-driven insights.

Dashboards for data analysis and decision-making

Consolidate key data and metrics from multiple sources onto dashboards, enabling you to monitor performance, track progress, and make informed decisions related to planning and execution.

You can create, edit, and copy a dashboard, customizing as needed. Add widgets to a dashboard to display key data, metrics, and visualizations. You can also share dashboards to collaborate with the business stakeholders who have access to the portfolio plan.

Create and share views for portfolio plans and free-form roadmaps

Create, edit, and switch views in portfolio plans and free-form roadmaps using display preferences. You can create personal views that are private to you or public views that can be shared with stakeholders who have access.

Portfolio plan display preferences include column selection, grouping and filtering. Free-form roadmap preferences include grouping, milestones selection, dependencies selection, and tracking mode. The portfolio plan view saves your display preferences across the Prioritization, Roadmap, Capacity, and Financials tabs.

Note:
Portfolio plan views are available only for the Planning module and are supported in live mode, but not in scenario mode.

Real-time collaboration for Planning item Docs

Edit a doc page concurrently with multiple other editors. Colored cursors denote the current location of editors on the page. You can choose to show or hide these indicators.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
To use the full functionality of Docs v6.6.0 within Portfolio Planning Workspace, upgrade to Portfolio Planning Workspace v8.5.0. For more information, see the Incompatibility After Upgrading Docs to Version 6.0.0 [KB2017926] article in the Now Support Knowledge Base.

UI changes

Financials UI changes

- New **Financials** tab in the Planning page.
- The name of the **ETC** field is changed to **Remaining Estimates**.
- The name of the **EAC** field is changed to **Forecast**.
- The name of the **Actuals to date** field is changed to **Actuals**.
- New Financials view in scenario planning.
- New financial widgets in the compare scenario page.

Capacity Planning tab name change

The name of the **Capacity Planning** tab in the planning view is changed to **Capacity**.

Activation information

Install Portfolio Planning by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Prioritize, roadmap, and track work when using traditional, agile, or hybrid methodologies with ServiceNow® Strategic Planning. Align strategy to execution by defining and tracking goals across your organization.

Project Portfolio Management release notes

The ServiceNow® Project Portfolio Management application enables you to create and manage a wide range of planning items ranging from a few small tasks to large portfolios of projects. Project Portfolio Management was enhanced and updated in the Yokohama release.

Project Portfolio Management highlights for the Yokohama release

- Move your old status reports to a new tool to maintain a consistent reporting process.
- Secure your projects with confidentiality settings to safeguard all confidential data.
- Build a checklist for your project tasks to track the task activities for completion.
- Inline edit one or more cells in child resource assignments.
- Explore the new heatmap modal to monitor resource status, available capacity, and utilization efforts.
- Identify similar demand records based on contextual similarity in the name, description, and business case content using the identify similar records Now Assist skill.

For more information, see the Project Workspace release notes.

New in the Yokohama release

Identify similar records using Now Assist

Detect similar existing demand records when creating or editing a demand using the identify similar records skill. This skill compares the **Name**, **Description**, and **Business Case** fields for contextual similarity.

Migrate old status reports to new reporting tool

Import your old status reports to a new status report tool for a consistent and organized reporting system.

Apply confidentiality settings to your projects

Secure sensitive projects by applying confidentiality settings to your projects and make sure only authorized users can access confidential data and sub-projects.

Use checklist for project tasks

Track the list of activities to be completed for a task by creating a checklist for your project tasks.

Migrate notes of resource plans to resource assignments

Migrate the existing resource plan notes along with the allocation details to resource assignments and get clear insights while working with resource assignments in Resource Management Workspace.

Resource allocation and heatmap enhancements

- Use the allocation heatmap modal to view resource status, remaining capacity, and utilization and enable resource managers to assess task efforts.
- Use inline editing to update one or multiple cells in child resource assignments.
- Added new fields for resource assignment:
  - Name
  - Ready for review
  - Notes
- Extend a resource assignment for a project or project task using the **Extend** row context menu action.

UI changes

Demand Management UI changes

- The **Identify similar demands** button has been added to the demand form to identify and view any similar demands with the identify similar demands skill.
- The Similar Demands related list has been added, which displays the list of similar demand records identified by Now Assist.

Activation information

Project Portfolio Management is available with activation of the PPM Standard (com.snc.financial_planning_pmo) plugin. For more information on activation, see Activate PPM Standard (Project Portfolio Management).

Project Workspace

See the Project Workspace documentation for more details about using ServiceNow® Workspace in Next Experience.

Project Workspace release notes

The ServiceNow® Project Workspace application provides an intuitive user experience that enables project managers to plan and manage their projects. Project Workspace was enhanced and updated in the Yokohama release.

Project Workspace highlights for the Yokohama release

- Import your old status reports to a new status report tool and optimize your reporting process.
- Create a checklist in a project task to track items that must be completed in the task.
- Inline edit one or more cells in child resource assignments.
- Explore the heatmap modal to monitor resource status, available capacity, and utilization efforts.

See Project Workspace for more information.

New in the Yokohama release

Analyze the status report in Project Workspace

- You can't edit the status report, but you can change the system property to enable editing.
- Import your old status reports to a new status report tool for a consistent and organized reporting system.

Duplicate a status report in Project Workspace

Reduce effort by duplicating a status report to transfer all project information without manual copying.

Configuring security for a project in Project Workspace

- Apply confidentiality settings to safeguard sensitive projects and make sure that only authorized users can access confidential data and sub-projects.
- When a project is marked confidential in one workspace, such as Project Management or Strategic Portfolio Workspace, these settings automatically extend across all associated workspaces, maintaining consistent protection.
- To promote security, at least one user must be assigned access to any confidential project.

Project task checklists

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Create a checklist for your project tasks and manage a list of activities or steps to be completed for a task.
- As an Administrator, you can add or remove checklists as needed.

View the roll-up financial values for project tasks at parent project level

View and manage the cost plans and expense lines recorded on a project task level on the parent project.

Resource allocation and heatmap enhancements

- Use the allocation heatmap modal to view resource status, remaining capacity, and utilization and enable resource managers to assess task efforts.
- Use inline editing to update one or multiple cells in child resource assignments.
- Added new fields for resource assignment:
  - Name
  - Ready for review
  - Notes
- Extend a resource assignment for a project or project task using the **Extend** row context menu action.

Note:
To use the full functionality of Docs v6.6.0 within Project Workspace, upgrade Project Workspace to the v6.1.0. For more information, see KB2017926.

UI changes

Financials UI changes

- New **Financials** tab in the planning view.
- The name of the **ETC** field is changed to **Remaining Estimates**.
- The name of the **EAC** field is changed to **Forecast**.
- The name of the **Actuals to date** is changed to **Actuals**.

Skill name updates

Renamed the Project Gen AI Docs skill to the Project doc summarization skill in Project Workspace.

Resource assignment UI enhancements

Added the **Extend** option and the **Extend Assignment** modal to request a resource assignment extension.

- Updated the create resource assignment form to include these fields:
  - The **Name** field to captures a unique or descriptive name for the resource assignment.
  - The **Ready for review** list to confirm if a resource assignment is ready for the allocation review.
  - The **Notes** field to add additional context when creating a resource assignment.
- Time span fields are changed to weekly and monthly.
- Included the following information in the heatmap modal:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- The **Utilization** column to display the total effort across approved or pending tasks.
- The **Resource status** column to display the approved or pending assignments.
- The **Remaining capacity** column to indicate available or exceeded effort limits.

Changed in this release

Heatmap enhancements

The resource allocation heatmap displays the resource status, capacity, and utilization, enabling efficient planning and allocation based on availability and workload.

Activation information

Install Project Workspace by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. Use a simplified, team-oriented approach to Project Management and IT development by combining several individual applications.

Resource Management Workspace release notes

The ServiceNow® Resource Management Workspace application provides resource managers with a more efficient way to work with a dedicated workspace to view and manage resource assignments. Resource Management Workspace was enhanced and updated in the Yokohama release.

Resource Management Workspace highlights for the Yokohama release

- Access the new heatmap modal to view the resource status, remaining capacity, and utilization efforts of resource allocation.
- Use the **Name**, **Notes**, and **Ready for review** fields while creating a New Resource Assignment.
- Access the resource assignments and the parent resource assignment from the resource board.
- Use the interactive dashboard to create and manage widgets to access the required set of resource data in board view.
- Extend, adjust, and approve resource assignments using the row context menu from the side grid.

See Resource Management Workspace for more information.

Important:
Resource Management Workspace is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Using Resource Management Workspace

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- View the Resource status, Remaining capacity, and Utilization columns to the allocation heatmap modal to help resource managers to view detailed insights and the total efforts for Approved and Pending tasks.
- Use the Total row in the heatmap modal to view the aggregate utilization for approved and pending tasks.
- Update the resource status and the efforts for child assignments using the new modal.
- Capture additional details required to the Project manager or Resource manager while creating a New Resource Assignment and New Operational Assignment using the following new fields.
  - **Name**
  - **Ready for review**
  - **Notes**
- Access the assigned resource assignments or the parent resource assignment directly from the resource board view.

Using Resource Management Workspace

View and access the resource assignments from high-level to get an overview of all the resource assignments, based on their states, completion dates, start dates, resources with allocations over their capacity, and resources allocations within their available.

- Filter the resource board using the primary attributes and dates to build a custom view.
- Edit the dashboard further to manage the data representation view of existing widgets or add new elements to build the required widgets.
- Access the custom resource boards from dashboard using the interactive widgets to manage the allocations details.
- Edit the Start and End dates, Task efforts, and Resource status for assigned tasks in the top tray using the inline editing feature.

UI changes

Using Resource Management Workspace

Added the following details in the resource allocation heatmap view.

- The Resource status column to view Approved and Pending assignments.
- The Remaining capacity column to view the remaining or over-allocated efforts.
- The Utilization column to view the total efforts of approved and pending tasks.

Create resource assignments and operation resource assignments in Resource Management Workspace

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Added the following fields to create resource assignment form.
  - The **Name** field provides a custom or identifiable name for resource assignment.
  - The Ready for review list to confirm if a resource assignment is ready for a Resource manager's review for allocation.
  - The **Notes** field to add any additional notes while creating a resource assignment.
- Added the following fields in the row context menu of resource assignments in the top tray.
  - The **Open Resource Assignment** field to view and edit a specific assigned assignment.
  - The **Open Parent Resource Assignment** field to view and edit the parent assignment.
  - The **Extend** menu item and **Extend Assignment** modal to request an extension to a resource assignment.

New navigation menu

- New Reporting dashboard landing page in Resource Management Workspace to view and access the resource allocation details.
- Interactive widgets in Reporting dashboard to access the custom resource boards.

Changed in this release

New resource heatmap view

The resource allocation heatmap view provides more relevant information such as resource status, remaining capacity, and utilization of resources which helps resource managers to plan efficiently and allocate the resources based on their availability, bandwidth, and work requirements.

Activation information

Install Resource Management Workspace by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Related ServiceNow applications and features

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Strategic Planning highlights for the Yokohama release

- Reduce time and effort by using story recommendations from Now Assist to break down your epics and features in Enterprise Agile Planning (EAP).
- Collaborate in real time on docs with multiple editors.
- View the rolled-up financial costs and benefits data of your planning items on the new **Financials** tab in the Planning page.
- View the financial data of planning items while creating multiple prioritization scenarios for efficient use of budget and to get better ROI.
- Use dashboards to monitor performance, track progress, and make informed decisions related to ideas, feedback, planning, and execution.
- Create, edit, and switch between views with display preferences for portfolio plans and free-form roadmaps.
- Enhance the quality of planning item descriptions by enabling AI assistance.

See Strategic Planning for more information.

Important:
Strategic Planning is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Important information for upgrading Strategic Planning to Yokohama

After upgrading to Strategic Planning v4.7.0, the following changes apply to user preferences:

- Custom view settings previously saved under user preferences will be cleared. You must reapply these changes and create views as needed. For instructions, see Create a portfolio plan view in Strategic Planning and Create a free-form roadmap view in Strategic Planning.
- Customizations made to the Timeline and Kanban views in the **Roadmap** tab, and the Kanban view in the **Prioritization** tab at the portfolio plan level, will be copied to the Default view of the portfolio plan. Similarly, any customizations made to the Timeline and Kanban views in the free-form roadmap will also be copied to the Default view of the free-form roadmap.

New in the Yokohama release

Dashboards for data analysis and decision-making

Use dashboards to view key data and metrics, enabling you to monitor performance, track progress, and make informed decisions related to ideas, feedback, planning, and execution. Dashboards consolidate data from multiple sources into a single, easily digestible format. Each widget within a dashboard displays key data and metrics and may include visualizations. The default dashboards include the Product Idea Dashboard, Feedback Dashboard, Strategy Execution Dashboard, and Execution Dashboard.

You can create or edit dashboards, copy an existing dashboard and customize it as needed, and share dashboards to collaborate with business stakeholders who have access to the portfolio plan.

Create and share views for portfolio plans and free-form roadmaps

For portfolio plans - Create, edit, and switch between views with display preferences such as column selection, grouping, and filtering for portfolio plans. You can create personal views that are private to you, or public views that can be shared with stakeholders who have access to the portfolio plan. The portfolio plan view saves

your display preferences across the **Prioritization**, **Roadmap**, **Capacity**, and **Financials** tabs.

> **Note:**
> Views are available only for the Planning module and are supported in live mode, but not in scenario mode.

For free-form roadmaps - Create, edit, and switch between views with display preferences such as grouping, milestones selection, dependencies selection, and tracking mode for free-form roadmaps. You can create personal views that are private to you, or public views that can be shared with stakeholders who have access to the free-form roadmap.

Write planning item skill

- Improve record quality and user satisfaction by enabling AI assistance in the **Description** field across all Strategic Planning Workspace forms, including product idea, demand, epic, project, capability, feature, and story.
- Enable text refinement with the **Elaborate** and **Shorten** options on planning items to support product managers and agile team members in creating and editing content more effectively.

Plan efficiently with additional pre-defined lenses

Using the Digital Product lens, portfolio managers can plan, prioritize, and roadmap the work in the Strategic Planning Workspace based on the digital products by aligning with the business strategy.

The lens is supported with the work items, epic, and product idea. With the Digital Product lens, you can also do high-level planning using the Product Enhancement entity. By default, the Product Enhancement entity is enabled for high-level planning.

Cycle time report for Agile teams in EAP dashboards

Analyze how long the stories take for your Agile team to move from an in-progress state to completion. Each bubble on the chart represents a story and the chart shows stories completed in the past 30 days. You can compare the cycle times of stories that have different story points and review the trend in the time taken by the team to complete them.

Using this data, identify the stories that took longer to complete and analyze the reasons so that you can draft an action plan to optimize the team's cycle time in the future.

Kanban configuration for EAP teams

Use the Kanban configuration for teams that don't prefer to work in an iteration-based schedule. You can activate the predefined Kanban configuration and add teams to your Agile structure or you can modify an existing configuration by setting the **Planning calendar** field to **None**.

Column filters in EAP Backlog

Quickly find the work items that you need by using column-level filters for the data on your EAP Backlog. You can filter on any column that is displayed on the **Backlog** tab.

Generate stories from epics and features using Now Assist for EAP

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Break down epics and features into stories using the Now Assist Agile story generation skill in the EAP workspace. Using the available details such as name, description, docs content, and any existing stories, Now Assist provides story recommendations for your epic or feature. You can let Now Assist generate stories using its initial recommendations or you can choose to split or combine the story recommendations before prompting Now Assist to create the stories.

View financial data of your planning items at portfolio level

- View the rolled-up financial costs and benefits data of your planning items such as Epics, Demands, and Projects at the portfolio level for different time scales and ranges.
- View the Budget, Planned, Variance, Actuals, and Remaining Estimates of the financials costs by expense type or cost type.
- View the Forecasts, Actuals, and Variance of monetary benefits.

Create a manage financial scenarios of planning items

- Optimize your portfolio by creating financial scenarios to validate and arrive at a profitable outcome.
- Plan and manage the budget of planning items in simulation mode for efficient financial planning and to help prevent overspending.
- Manage prioritization and budget allocation of the planning items to meet business priorities.
- Compare scenarios financially and automatically allocate the planned budget to planning items from approved scenarios.
- Enable the **new budget allocation** property (*sn_invst_pln.enable_budget_allocation_v2*) to perform financial analysis in scenario planning and take effective decisions by data-driven insights.

Real-time collaboration for EAP Docs

Edit a doc page concurrently with multiple other editors. Colored cursors denote the current location of editors on the page. You can choose to show or hide these indicators.

The real-time collaboration feature for docs is also available for planning items in the Strategic Planning Workspace. See Docs for planning items in Strategic Planning.

Note:
To use the full functionality of Docs v6.6.0 within Strategic Planning Workspace, ensure that you upgrade Strategic Planning Workspace to v4.5.0. For more information, see KB2017926.

UI changes

Financials UI changes

- New **Financials** tab in the Planning page.
- The name of the **ETC** field is changed to **Remaining Estimates**.
- The name of the **EAC** field is changed to **Forecast**.
- The name of the **Actuals to date** field is changed to **Actuals**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- New Financials view in scenario planning.
- New financial widgets in the compare scenario page.

Skill name updates

- Renamed the Planning item Gen AI Docs to the Planning item doc summarization skill in Strategic Planning.
- Renamed the EAP Teams Gen AI Docs to the EAP doc summarization skill in Enterprise Agile Planning.
- Added the Write planning items skill in Strategic Planning.

Capacity Planning name updates

Change in the name of the **Capacity Planning** tab to **Capacity** in the planning view.

Changed in this release

Changes in planning item forms

The dates in the **Planned start date** and **Planned end date** fields are editable for all planning item types other than Demand and Project planning item types. Also, the **State** field is editable for EAP planning items and its child items.

Activation information

Install Strategic Planning by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Related ServiceNow applications and features

Now Assist for Strategic Portfolio Management (SPM)

Now Assist lets you use generative AI skills in multiple SPM apps. With Now Assist for SPM, summarize product feedback, create stories for epics, generate concise project summaries, rephrase content for docs, create demands through a conversational experience, and quickly gain insights into projects.

Digital Product Release Workspace

ServiceNow Digital Product Release Workspace helps product managers track the planning items associated with the product enhancements that are defined in the Strategic Planning Workspace using the Digital Product lens.

Telecommunications, Media, and Technology release notes

ServiceNow® Telecommunications, Media, and Technology has new and updated applications and features in the Yokohama release.

Telecommunications products and applications

The Telecommunications industry solution includes the following applications:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Telecommunications Service Management connects your entire telecommunications operations, from network to customer, with one platform to deliver proactive care and maximize the availability and quality of service. It includes the following applications:
  - Service Exchange
  - Proactive Service Experience Workflows
  - Customer Success Management
  - Customer Service Problem Management
- Sales CRM for Telecommunications. See Sales Customer Relationship Management release notes.
- Telecommunications Network Inventory
- Telecommunications Service Operations Management
- Strategic Portfolio Management for Telecom
- Field Service Management for Telecommunications
- Now Assist for Telecommunications, Media and Technology (TMT)

Technology products and applications

The Technology industry solution includes the following applications:

- Technology Service Management connects your entire technology operations, from network to customer, with one platform to deliver proactive care and maximize the availability and quality of service. It includes the following applications:
  - Service Exchange
  - Proactive Service Experience Workflows
  - Customer Success Management
  - Technology Product Support Case
- Sales and Order ManagementSales CRM for Technology Providers. See Sales Customer Relationship Management release notes.
- Now Assist for Telecommunications, Media and Technology (TMT)

Customer Success Management release notes

The ServiceNow® Customer Success Management application helps you to streamline your onboarding process, define and track objectives and outcomes, identify and mitigate risks, and increase renewal rates. Customer Success Management was enhanced and updated in the Yokohama release.

Customer Success Management highlights for the Yokohama release

- Define, measure, and track the overall health of an engagement and monitor risk signals and issues.
- Manage all customer interactions in a single place and organize them with the touchpoint calendar.
- Create templates to define common success objectives and outcomes and associate them with a product.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Use Now Assist for Telecommunications, Media and Technology (TMT) to summarize account onboarding cases, engagements, and touchpoints.
- Integrate your ServiceNow instance with external Customer Relationship Management (CRM) platforms during the engagement life cycle.

See Account Lifecycle Events for more information.

Important:
Customer Success Management is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Health framework

Define the key business and operational indicators and their impact on the overall health of an engagement. You can provide insights that help identify the trends and determine if the engagement is stable.

Risk framework

Centralize, track, and monitor the relational risks so that you can reduce customer turnover. You can identify risk signals and create repeatable remediation plans.

Success blueprint builder

Create standardized objectives and outcomes for an engagement. Your customer success managers can prioritize the requirements and identify the outcomes that provide the maximum customer impact.

Success initiative roadmap

Create a timeline view of the success initiatives and view the status, timing, and priority of these activities.

Touchpoints enhancements

Use a touchpoint to track and manage your customer interactions through meetings and emails. With the touchpoint planner, you can help to ensure that all customer interactions and related activities are taking place on time with expected results.

Case summarization for onboarding cases, engagements, and touchpoints

Use generative AI to get a high-level summary of the status of your engagements, onboarding cases, and touchpoints.

UI changes

Success portfolio

The Success portfolio dashboard provides visibility into the overall health of a customer success manager's portfolio. With this dashboard, you can view the health of an engagement, individual indicators, health and risk trends, and touchpoints.

Engagement page enhancements

Use the engagement home page to see a high-level overview of an engagement. You can also view the current health score, identify issues, and monitor objectives and outcomes.

Data import enhancements

Optimize the onboarding process by importing and publishing a large amount of data and resolve any errors or issues quickly.

Related ServiceNow applications and features

Customer Service Management

The Customer Service Management application enables you to automate your onboarding and case monitoring processes and provides service agents with visibility into the customer systems and tools that you need to deliver proactive services to your customers.

Now Assist for Telecommunications, Media and Technology (TMT) release notes

The ServiceNow® Now Assist for TMT application enriches purpose-built industry workflows with generative AI to supercharge insights, actions, and self-service experiences. Now Assist for TMT was enhanced and updated in the Yokohama release.

Now Assist for TMT highlights for the Yokohama release

Yokohama Patch 11

- Review changes to Now Assist usage measurement.
- Some Now Assist skills, agents, and agentic workflows are on by default.
- Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications.
- Address voice quality issues and validate tickets with RADCOM.
- Summarize the risk signal and issues records along with respective risk solution and occurrence records.

Yokohama Patch 6

- Manage and resolve billing inquiry case requests using a team of AI agents.
- Analyze network incidents, correlate associated cases, and provide resolutions.
- Summarize Knowledge Graph service details, success initiatives, internal plays, customer plays, and Zoom meeting details.
- Analyze account health, trigger renewal flows, schedule, and manage touchpoint meetings.
- Use agentic AI to quickly create consumer registrations.

Yokohama Patch 3

- Monitor engagement health score and provide a trend analysis.
- Monitor risks on a predefined schedule and provide common resolutions.

Yokohama Patch 1

- Proactively identify service problems, diagnose, test, and resolve customer issues autonomously using the Now Assist for TMT AI agent collection.

Yokohama Early Availability

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Summarize onboarding cases, engagements, and touchpoints by using agentic AI.
- Enhance test summarization with metric descriptions and contextual notes.
- Consolidate the information from multiple similar cases into a Knowledge article.
- Dynamically configure prompts for case summarization.
- Automate transformation mapping between provider and consumer instances in Service Exchange.

See Now Assist for Telecommunications, Media and Technology (TMT) for more information.

Important:
Now Assist for Telecommunications, Media and Technology (TMT) is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Yokohama release

Yokohama Patch 11

Address voice quality issues

Collect customer details about the voice quality issue, open a service ticket with RADCOM (https://radcom.com/), and generate a resolution plan.

Risk signals and issues summarization

Generate summary details including the record and associated risk solutions and risk occurrences for risk signal and issues records.

Yokohama Patch 6

Help remediate bill issues

Handle billing inquiry case requests, analyze customer invoices, and recommend better plans based on customer usage patterns.

Analyze network incidents

Identify historic incidents and determine resolution plans. The AI agent also has the capabilities to identify field values, estimate resolution time, and create actionable tasks.

Support renewals and expansion

Streamline customer success management by automatically assessing account health, value realization, and adoption trends. Deliver timely, data-driven insights that guide renewal planning and play recommendations.

Trigger risk mitigation touchpoint

Enable customer success agents to optimize meeting schedules within the customer success workflow by creating and managing meetings. Create and manage meetings based on key details such as invitees, agenda, meeting type, and scheduling preferences.

Success summarization

Generate summary details including overview, current status, and open tasks for success initiatives, internal plays, and customer plays. Enhance Zoom meeting summaries by updating key notes, and enabling sentiment tracking.

Analyze metric data trend

Collect and analyze metric data for engagements, identify patterns, and generate a trend chart.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Service summary generation

Generate a service summary for a product inventory.

Knowledge graph schema generation

Use the Knowledge Graph (KG) to create Knowledge Graph schema.

Customize a summary card for service summary

Customize the summary card of the service summary and UI actions according to your needs.

Register consumers using Agentic AI

Initiate the consumer registration process using agentic AI to receive step-by-step guidance, including error checks during registration and support for resolving those errors.

Configure ACLs for AI agents and agentic workflows

Configure the access control lists for who can discover and trigger AI agents and agentic workflows in their guided setups in AI Agent Studio. You can determine whether an AI agent or agentic workflow behaves as a dynamic user or as an AI user. You can also specify if an AI agent or agentic workflow can be available to all authenticated users or publicly available.

Yokohama Patch 3

Monitor engagement health

Monitor the health score of all engagements, create trend charts, and generate risk signals when a decline is detected.

Analyze risk signals and recommend solutions

Retrieve unaddressed risk signals and identify appropriate success plays based on a back-end decision table.

Yokohama Patch 1

Using Telecommunications, Media, and Technology AI agent collection

Use Now Assist for TMT AI agents to troubleshoot and autonomously resolve customer issues.

Available AI agents agentic workflow

AI agent agentic workflow	Description
Test and repair telecom service issues	Use AI agents to handle task requests that require troubleshooting, diagnosis, and resolution of a case task.

Yokohama Early Availability

Dynamic prompt configuration

Use the Now Assist for Telecommunications, Media and Technology (TMT) application to provide concise, context-driven summaries that are specific to each case. Your agents can ensure that critical case details are captured and can provide personalized and informed resolutions.

Enhanced test summarization

Use AI-generated test summaries that include the metric descriptions and contextual notes from cases. Your agents can focus on high-priority issues and make better informed decisions that enhance the product quality and performance.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Resolution notes generation

Generate resolution notes and then shorten or elaborate the content by using the Now Assist context menu in the resolution notes field of the case form in both the Core UI and Workspace.

Knowledge article generation

Select and gather insights and data from multiple similar cases to create an article by using Now Assist for TMT. Use the Now Assist icon (✦), which is accessible as an inline capability to create and refine Knowledge articles.

Account onboarding case summarization

Generate a concise account onboarding case summary that enables your agents to get a quick overview of the case details.

Engagement summarization

Generate a high-level summary with a list of the key items about an engagement.

Touchpoint summarization

Generate a quick summary of the various touchpoints in the engagement life cycle. Your agents can get a quick summary of all meetings and emails exchanged between the different stakeholders and any follow-up activities.

Transform mapping assist

While using the Service Exchange for a provider's application, use the Transform Mapping Assist feature to generate transform mappings between provider and consumer tables automatically. This skill enables you to streamline the transformation mapping process by reducing errors and improving overall efficiency.

Changed in this release

Yokohama Patch 11

Changes to Now Assist usage measurement

Starting with Yokohama Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Some Now Assist skills are turned on by default

The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills are turned on automatically.
- Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.

Configure ACLs for AI agents and agentic workflows

Configure the access control lists for who can discover and trigger AI agents and agentic workflows in their guided setups in AI Agent Studio. You can determine whether an AI agent or agentic workflow behaves as a dynamic user or as an AI user. You can also specify if an AI agent or agentic workflow can be available to all authenticated users or publicly available.

Activation information

Now Assist features are available with activation of the Now Assist for TMT plugin. For more information, see Install Now Assist plugins.

Related ServiceNow applications and features

Now Assist

Help improve the productivity and efficiency in your organization, deliver better self-service, recommend actions, provide answers, and empower your users to search more effectively.

Now Assist Admin console

Use the Now Assist Admin console to provide you with quick and effortless access to the important information that you need to set up, configure, and monitor Now Assist applications and features.

Now Assist panel

Use this conversational interface in CSM Configurable Workspace to summarize a chat, a case, or resolution notes so that you can get the context of this information more quickly.

Now Assist skills

Use the Now Assist products to provide agentic AI skills to meet the needs of users in different workflows, including case or incident summarization, chat summarization, resolution notes generation, and code generation.

Proactive Service Experience Workflows

The ServiceNow® Proactive Service Experience Workflows helps your technical support teams identify your impacted customers, communicate directly with them, escalate a case if needed, and auto-generate cases for faster issue resolution. Proactive Service Experience Workflows was enhanced and updated in the Yokohama release.

Proactive Service Experience Workflows highlights for the Yokohama release

- Identify the right case type from an incident in the Proactive Service Experience Workflows. Consumer information can be seen on the incidents in the Proactive Service Experience Workflows.
- Diagnose the issue in the troubleshoot stage in the Technology Product Support Case playbook. Create the resolution task manually to solve the issue.
- Submit the outbound service test run requests to various external systems by integrating the application with the external southbound systems in the Technology Product Support Case.
- Create a service problem case to report an issue about the service from the Customer Service Portal. Record generation capability through the playbooks for customer service problem management. Modify the service information in the case highlights card through the playbook.
- Create roles for customer service problem management so that agents and customers can create service problem cases.

See Proactive Service Experience Workflows and Now Assist for Telecommunications, Media and Technology (TMT) for more information.

New in the Yokohama release

Redirection to the right case type

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Create a proactive case from an incident in the Proactive Service Experience Workflows.

Technology Product Support Case playbook stages and activities

Diagnose the issue in the troubleshoot stage in the Technology Product Support Case playbook. Create the resolution task to solve the issue.

Integrating Technology Product Support Case with southbound external systems

In the Technology Product Support Case, you can submit outbound service test run requests to various external systems by integrating the application with the external southbound systems.

Create a service problem case from the workspace

Create a service problem case for a customer raised issue so that an agent can work on it and resolve the service-related problem. Record generation capability via playbooks for customer service problem management.

Create a service problem case from the Customer Service Portal

Create a service problem case to report an issue about the service from the Customer Service Portal.

Summarize a service problem case using Now Assist for Telecommunications, Media and Technology (TMT)

Use the Now Assist for Telecommunications, Media and Technology (TMT) to provide concise, context-driven summaries specific to each case. This feature enables agents to confirm that critical case details are captured, and enable them to provide personalized and informed resolutions.

Generate the resolution notes for a service problem case using Now Assist for Telecommunications, Media and Technology (TMT)

Generate resolution notes and then shorten or elaborate the content using the Now Assist context menu in the resolution notes field of the case form, in both the Core UI (UI16) and Workspace.

Generate a knowledge article for a service problem case using Now Assist for Telecommunications, Media and Technology (TMT)

You can now select and gather insights and data from multiple similar cases to draft an article by using Now Assist for TMT. You can revise the content in existing Knowledge articles by using the Now Assist icon (✦), which is accessible as an inline capability, and create and refine Knowledge articles.

Summarize test for a technology product support case using Now Assist for Telecommunications, Media and Technology (TMT)

Generate the test run summary for a technology product support case record to understand the context of test outcomes and the root cause of the problem.

Components installed with Customer Service Problem Management

Create roles for customer service problem management so that agents and customers can create service problem cases.

Activation information

Install Proactive Service Experience Workflows by requesting it from the ServiceNow® Store.

Related ServiceNow applications and features

Field Service Management

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The ServiceNow® Field Service Management application helps organizations manage work tasks performed on location. Match tasks to agents based on skills, geographic territory assignments, and available inventory. Agents can record details on assigned tasks like completion status, travel time to jobs, and time spent.

Incident Management

ServiceNow® Incident Management restores normal service operation while minimizing impact to business operations and maintaining quality. You can record an incident and track it through the entire incident life cycle until service is restored and the issue is resolved.

Change Management

The ServiceNow® Change Management application provides a systematic approach to control the life cycle of all changes, facilitating beneficial changes to be made with minimum disruption to the business operations.

Process Mining

ServiceNow® Process Mining helps analysts and process owners quickly analyze and optimize their business processes. Create automated business process flows from your data that enable you to monitor and more quickly discover inefficiencies in your processes.

Service Exchange release notes

ServiceNow® Service Exchange will be renamed for the 2026 Australia release and will maintain the same functionality. This application enables providers and consumers to connect and track services directly between instances without having to configure and maintain custom integrations. Service Exchange was enhanced and updated in the Yokohama release.

Service Exchange highlights for the Yokohama release

- Providers can now include client and UI policy scripts in remote record producers, which consumers can review and approve.
- Providers can now copy local catalog items to Service Exchange as remote record producers either in bulk or individually.
- Providers can simplify and streamline choice-based transform mapping with ServiceNow Now Assist.
- Consumers can now add variables to remote record producers for use in consumer pre-flows.

See Service Exchange for more information.

Important:
Service Exchange is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Important information for upgrading ServiceNow® to Yokohama

- When using Service Exchange for Providers and Service Exchange for Consumers in a single instance, you must upgrade both applications simultaneously to the same version to maintain compatibility.
- The Service Exchange Global Script Include is automatically installed or updated when you install the Service Exchange application on the following platform versions:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

  - Washington DC Patch 9
  - Xanadu Patch 4
  - Yokohama
- Service Exchange 2.x.x, which was first released with the Xanadu release, does not support migration of Service Exchange (Legacy) versions. If you are using a Service Exchange (Legacy) version, before you upgrade to the Yokohama release, you must follow instructions in the Service Exchange for Providers (Legacy) - Migration Utility [KB1499823] article in the Now Support Knowledge Base to migrate your configuration data.
- If you are upgrading from Service Exchange version 1.x.x, follow the steps in Upgrade Guide - Service Exchange for Providers and Consumers application (v2.x.x release) [KB1700387] to migrate your Service Exchange applications.
- Due to the introduction of mismatched version support, new entitlements cannot be activated until both the consumers and providers upgrade to Service Exchange version 2.x.x. Older active entitlements will continue to work but new ones cannot be activated.
- If you upgrade to Service Exchange version 2.0.55 with Sales Customer Relationship Management plug-in version 1.0.4 before upgrading the platform to the Yokohama release, the new Deny ACLs will not be installed. To ensure the Deny ACLs get installed, after upgrading to Yokohama, you must click Repair to reinstall the Service Exchange application.

New in the Yokohama release

Remote Catalog Item Client Scripts

Provider: Perform more complex tasks and gain better control over the completeness and correctness of catalog requests from the consumer by including catalog client scripts, UI Policy scripts, and other common scripts that consumers can choose to include for Remote Catalog items.

Copy From Service Catalog Item to Remote Catalog Item

Providers: Eliminate the need to re-create catalog items manually in the Service Exchange remote catalog by copying single and multiple catalog items through the UI to remote record producers that can be synchronized to the consumer instance.

Transform Mapping Assist

Providers: Streamline the transformation mapping process and reduce errors by generating transform mappings between provider and consumer tables automatically using the Transform Mapping Assist feature that leverages the NOW large language model (LLM).

Consumer Variable Sets

Consumers: Manage requested content and flow better by adding additional variables to add customization to your remote record producers.

Activation information

Install Service Exchange by requesting it from the ServiceNow Store.

Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

The Sales Customer Relationship Management applications enable you to manage the product sales life cycle in your organization, including pre-sales opportunities, sales quote generation, order capture, order fulfillment, and post-sales engagement.

HR Service Delivery

Improve the employee service experience by automating HR interactions and providing a single platform for all HR services. Replace manual and siloed processes with cross-functional digital workflows for increased efficiency. Align business goals with employee needs, including onboarding, career growth, and other transitions.

Strategic Portfolio Management for Telecom release notes

The ServiceNow® Strategic Portfolio Management for Telecom is a product that inherits all features of Strategic Portfolio Management with the addition of two templates for Fiber Rollout and 5G Projects. Strategic Portfolio Management for Telecommunications is a new application in the Yokohama release.

Strategic Portfolio Management for Telecom highlights for the Yokohama release

- Use templates to customize requirements for your Fiber Rollout and 5G projects.
- Address challenges that manual processes cause by using customized templates.

See Strategic Portfolio Management for Telecom for more information.

Important:
Strategic Portfolio Management for Telecommunications is available in ServiceNow Store. For details, see the "Activation information" section of these release notes.

Strategic Portfolio Management for Telecom features

Fiber rollout project template

Bring scalability and adaptability to network expansion efforts by enabling organizations to customize them for various deployment scenarios. These templates reduce planning and execution costs through standardized, repeatable workflows while ensuring compliance with regulatory and operational standards.

5G project template

Accelerate time-to-market by providing pre-configured workflows that simplify complex network deployment processes. The template enhances operational efficiency by streamlining tasks, reducing redundancies, and minimizing errors. It also improves team collaboration by providing clear visibility into timelines, resource allocation, and milestones, aligning stakeholders around shared goals.

Activation information

Install Strategic Portfolio Management for Telecom by requesting it from ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Strategic Portfolio Management helps you align work to strategy, enabling you to optimize business outcomes and respond rapidly to change so that you deliver more value.

Telecommunications Network Inventory release notes

The ServiceNow® Telecommunications Network Inventory application enables a network planner to model the physical, logical, or virtual network and perform design and assign services based on those network models. Telecommunications Network Inventory was enhanced and updated in the Yokohama release.

Telecommunications Network Inventory highlights for the Yokohama release

- View the geographical location and the details of your network site
- Design and assign a configuration item using a playbook and add custom states to a Change model.
- Define a logical composite to track and manage its CI.
- Import and export your collection of models and templates in JSON format.
- Enable Deny ACL to ensure the compliance with the enhanced security model.

See Telecommunications Network Inventory for more information.

Important:
Telecommunications Network Inventory is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Important information for upgrading Telecommunications Network Inventory to Yokohama

The Yokohama release needs the Xanadu platform version to support the Design and Assign playbook feature.

New in the Yokohama release

Design and assign your network services

Create and configure playbooks for design and assign a configuration item. The Design and Assign playbook provides step-by-step guidance for designing a network service. Use the playbook to complete guided activities to instantiate a network inventory record.

Design and Assign function for logical connections

Use the Design and Assign playbook to instantiate a logical connection and its associated connection elements. Once each activity completes, view the circuit map to visualize the logical connection elements.

Visualization of geo map

Use the Network site map to view the geographical location of your network sites and the information such as site details, connectivity, and capacity.

Creating an inventory template for a logical composite

Instantiate a logical composite record and associated equipment and racks using a logical composite template.

Add an equipment or rack to logical composite

Add equipment or rack to a logical composite using a change model.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Remove an equipment or rack from logical composite

Remove a rack or equipment from a logical composite using a change model.

Create an equipment record by using design and assign

Create a change request for an equipment record from the All Equipment list view using the **Create equipment** UI action.

Import models and templates in JSON format

Create an import request to import your collection of models and templates in JSON format.

Export hierarchy of models and templates

Export the hierarchy and all related records of a model or inventory template in JSON format.

Managing your network functions

The xNF and xNF instances records are added in the Inventory menu and retained the Services menu for application services.

Create a telephone infrastructure

Supports all types of telephone numbers.

Activation information

Install Telecommunications Network Inventory by requesting it from the ServiceNow Store. For details about the installation procedure, see Install Telecommunications Network Inventory.

Related ServiceNow applications and features

Configuration Management Database (CMDB)

With the Configuration Management Database (CMDB) application, build logical representations of assets, services, and the relationships between them that comprises the infrastructure of your organization. Details about these components are stored in the CMDB, which you can use to monitor the following infrastructure, helping promote integrity, stability, and continuous service operation.

Telecommunications Service Operations Management (TSOM) release notes

The ServiceNow® Telecommunications Service Operations Management (TSOM) application enables you to monitor the health of your networks and services so that you can prevent potential downtime. Telecommunications Service Operations Management (TSOM) was enhanced and updated in the Yokohama release by adding a new capability called TSOM Visibility, which includes Telecom Discovery and Reconciliation functionality.

Telecommunications Service Operations Management (TSOM) highlights for the Yokohama release

- Perform deep network discovery of your networks via the Simple Network Management Protocol (SNMP) and command-line interface (CLI) by using Pattern-based Discovery.
- Integrate with the Nokia Altiplano Service Graph Connector to discover the access network.
- Handle Discrepancy Identification and Reconciliation between your discovered and inventoried data.

See Telecommunications Service Operations Management for more information.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Important:
Telecommunications Service Operations Management (TSOM) is available in ServiceNow Store. For details, see the "Activation information" section of these release notes.

Important information for upgrading Telecommunications Service Operations Management (TSOM) to Yokohama

After installing Telecommunications Service Operations Management TSOM, any customized IRE identification rules applied to interface cards, slots, sub-slots and network interfaces may be affected. You must review and validate the rules to ensure proper functionality.

New in the Yokohama release

Pattern-based direct discovery using CLI and SNMP

Use pattern-based direct discovery to do the following tasks:

- Support deep network discovery of your physical network elements by using CLI and SNMP.
- Enable pattern-based discovery for any network elements that support SNMP standard MIBs.
- Provide a framework to enable custom Management Information Base (MIB)-based discovery.
- Enable both scheduled and quick discovery of standalone network elements.
- Support the following Cisco and Juniper routers and switches:
  - Cisco ASR1K
  - Cisco 7613
  - Cisco Nexus 9000
  - Cisco Nexus 3548
  - Juniper Mx80
  - Juniper MX104
  - Juniper MX240
  - Juniper MX480

Nokia Altiplano SGC integration

With Nokia Altiplano SGC integration, you can:

- Support discovery of physical Gigabit Passive Optical Network (GPON) network information by integrating with the Nokia Altiplano Service Graph Connector.
- Enable scheduled and on-demand discovery.
- Support the multi-instance integration of the Nokia Altiplano Service Graph Connector.

Discrepancy identification and reconciliation

Identify the discrepancies between your inventoried and discovered data in the following cases:

- Model mismatch.
- Model relationship mismatch.
- Entities not discovered in the current run but discovered in the previous run.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Slots-occupied discrepancy.
- Most recent discovery not updated.
- Incorrect number of relationships.

- Support a framework to automatically create tasks for reconciling discrepancies.

Activation information

Install Telecommunications Service Operations Management by requesting it from ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Related ServiceNow applications and features

Event Management

The Event Management application helps you to identify health issues across the datacenter on a single management console. It provides alert aggregation and root cause analysis (RCA) for discovered services, application services, and automated alert groups. Event Management is available as a separate subscription from the rest of the ServiceNow AI Platform®.

Release notes summaries for Yokohama features

Consolidated release notes information for new and updated Yokohama features.

Learn about specific themes for multiple Yokohama products

In the Yokohama family, ServiceNow® features and products were introduced or updated. Every new or updated feature and product has its own individual release notes topic, which includes information such as upgrade tasks, new features, changed features, browser requirements, and other specifications. These product-specific release notes are listed in Features and changes by product.

To help users look over different classes of information at a glance, each release notes section has its own summary topic. For example, the aggregates all browser requirements for features that were introduced or updated in Yokohama.

Highlights for all Yokohama features and products

Cumulative release notes summary on highlights of Yokohama features and products.

Review the product highlights to learn what's new in Yokohama.

Application or feature	Details
AI Control Tower	Yokohama Patch 11 • Review changes to Now Assist usage measurement. • Some Now Assist skills, agents, and agentic workflows are on by default. • Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications. • AI connections are introduced in AI Control Tower using Service Graph Connectors. AI connections are combination of hyperscalars,

Application or feature	Details
	AI apps, and agentic AI frameworks. The AI Service Graph Connectors available from March 2026: ○ AWS ○ Microsoft - Azure Foundry and Copilot ○ n8n ○ GCP Vertex AI ○ LangGraph ○ Salesforce Yokohama Patch 6 • Monitor the performance of guardrails enabled through Now Assist Guardian using the Health tab. • Measure and improve the quality of interactions with virtual agents using the Evaluation tab. Yokohama Patch 3 • AI Control Tower helps customers manage and oversee performance, risk profile & workforce transformation while also helping to seamlessly embed AI into enterprise strategy. • ○ Create an AI steward role. ○ Use the AI Asset inventory to catalog AI-related artifacts. ○ Use the AI skills Approvals to review and approval flows. ○ Create a AI Control Tower Workspace.
AI Risk and Compliance	• Manage AI systems, models, and datasets across their entire life-cycle with consistent governance for better visibility, control, and compliance. • Perform impact assessments for AI systems, models, and datasets to identify high-risk AI assets. • Perform risk assessments on individual risks associated with an AI asset based on additional information and testing. • Manage and oversee AI-related cases and incidents through a structured case management process. • Build a compliance-ready AI asset inventory aligned with regulatory requirements using the AI framework content pack. See AI Risk and Compliance for more information.
AI Search	Yokohama Patch 11

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• Improve search precision and contextual relevance with hybrid search, available for customers with Now Assist in AI Search installed. • Gain insights into search behavior with a refreshed and updated Search Preview UI. Yokohama Patch 6 • Search more intuitively with an updated, consumer-grade user experience in search portals, global search, and workspace search. Yokohama Early Availability • Restrict index size and increase search performance with guardrails that limit the number of Task and Alert table records indexed for search • Customize the semantic vector search experience by configuring semantic indexing settings for your indexed sources • Improve the focus of search results by excluding search sources in a search profile from being used to generate search results or Genius Result answers • Expand search recall by indexing content from knowledge blocks • Highlight important search results by boosting relevancy for results that match synonyms in a synonym dictionary See AI Search for more information.
AIOps LEAP	• Automation feedback and tracking for automation opportunities • Pin Automation Opportunities for ease of analysis • Customize filters for Automation Opportunities and published playbooks. • Customize columns on the Automation Opportunities and published playbooks pages. • Use published LEAP in SOW to resolve a new incident quickly. • Use a value dashboard for performance analysis and enhancement. See AIOps Learning Enhanced Automation Playbook (LEAP) for more information.
API	• Use server-side JavaScript APIs in scripts to change the application functionality. • Run client APIs whenever a client-based event occurs, such as when a form loads, a form is submitted, or a field value changes. • Use inbound REST APIs to interact with various ServiceNow functionalities within your application. See API implementation and reference for more information.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
Access Management	• Security Data Filters are a powerful new feature designed to restrict access to sensitive records based on roles or security attributes. This ensures only authorized users can view data, regardless of how the data is accessed. • Related Record Access allows enforcement of consistent access rules across related tables, ensuring that users only see records associated with the data they are authorized to access. See Access Control List Rules for more information.
Accounts Payable Operations	• Leverage Accounts payable document classification skill to classify email attachments into invoice, credit memo, or supporting documents based on the AI recommended confidence score resulting in error free invoice data extraction. • Validate supplier provided tax against a system-calculated tax by integrating an enterprise-grade tax engine resulting in straight-through processing of invoice while improving accuracy, compliance, and operational efficiency • Introduced Agentic workflow in Accounts Payable Operations to resolve invoice inquiry cases raised by employees and suppliers thereby significantly reducing the involvement of human agents. • The ServiceNow® Now Assist offers generative AI purchase order line-mapping to improve accuracy and reduce manual work. • Experience the new generative AI skill for invoice data extraction, designed to enhance accuracy and reduce manual effort. • Leverage AI-powered GPT-4o-driven invoice data extraction with Document Intelligence for improved accuracy and reduced manual effort. • Get instant, real-time assistance from generative AI to summarize invoice case details through the Now Assist panel. • Use the Accounts Payable Operations properties page to control the configuration of APO properties.
Adoption Services	• Execute Guided Setup in every domain, with guided setup player roles. • Experience the Guided Tours in dark and light themes. • Execute Guided Tours from any scoped application route. • Explore the What's New feature that's available in Help Center for all experiences. • Use the new Help Center UI features that provide a more enhanced experience. • Explore the enhanced Guided Setup that support running it multiple times. See Adoption services for more information.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
Advanced AI Search Management Tools	Yokohama Patch 11 • Review performance metrics and trends more easily with an updated and refreshed dashboard UI. • Analyze performance metrics and trends for search applications used in Recommended Actions. Yokohama Patch 6 • Analyze search trends from the preceding six months using the AI Search Analytics dashboard's **Date range** interactive filter. • Understand your mobile search traffic with support for the Mobile Platform search application in the AI Search Analytics dashboard's **Search application** interactive filter. See Platform Analytics Solution for Advanced AI Search Management Tools for more information.
Advanced Risk	**Some Now Assist skills, agents, and agentic workflows are turned on by default** The skills are automatically available to appropriate role users for the application, such as ITIL roles on incident forms or change forms. This change simply activates the skill and does not touch the roles that may be needed to use the skill. The new default behavior works as follows: • New customers: When you install a Now Assist product, designated skills and agentic workflows are turned on automatically. • Existing customers who are upgrading (starting with Yokohama Patch 11): Any previously unconfigured skill, agent, or agentic workflow is turned on automatically (the AI asset was never configured and turned on, then turned off again). Previously configured skills and agentic workflows that were turned on, then off, remain inactive. • Use generative AI to generate risk assessment summaries and highlight key insights for better context. • Reassess completed risk assessment projects to evaluate risks based on new insights or changing conditions. • Copy risk responses from a previous risk assessment during reassessment of a risk assessment project. • Reassign assessors for multiple risk assessment projects to optimize resource allocation. • Remove risks from a risk assessment project during the assessment to streamline focus on relevant risks. • Enable and manage the risk response task workflow from the Risk Assessment Methodology (RAM) form.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	See Advanced Risk Assessment for more information.
Advanced Work Assignment	• Run assignments on different nodes or cadences for different service channels to improve the AWA application's performance and resilience. • Provide wrap-up codes or notes for interactions or segments that the agent is involved in at the end of a call. See Advanced Work Assignment for more information.
Agent Client Collector	• Agent Client Collector for Visibility: Starting in version 1.1.0, ACC for Visibility has been renamed Agent Client Collector for Visibility - Content. CNO for Visibility has been extracted from Agent Client Collector for Visibility - Content and is now a separate application. • Store instance credentials in the Google Cloud Secret Manager when the Kubernetes Visibility Agent Informer uses Google Kubernetes Engine (GKE). • Use a custom CA to enable Kubernetes Visibility Agent Informer to communicate with the instance when using a custom root Certificate Authority (CA). • Configure Agent Client Collector without a MID Server by ßusing MID-less configuration. See Agent Client Collector for more information.
Agent Workspace for HR Case Management	• The HR Triaging Dashboard enables you to review your teams' case assignments through cases displayed as cards. Once you set up a layout for HR services, priorities, or assignment groups, moving of case cards between lanes, auto-updates the HR service, user assignment, or priority of cases. • Provide a convenient and efficient way for deskless workers to seek in-person or remote assistance, report issues, and receive guidance from HR agents through designated walk-up centers. See Agent Workspace for HR Case Management (Configurable) for more information.
Agent experience for CSM	• Alert agents about the status of current chats by using color-coded session tabs to indicate service level agreement (SLA) threshold timers, chat duration, and unread message counts. • Create form templates or modify existing templates with enhancements to the form template feature. • Integrate enhanced knowledge guidance on the Front-line case page and enable agents to attach and add links to knowledge articles in comments, work notes, or emails by using modeless dialogs.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• Display native voice configurations in CSM Configurable Workspace with the Voice interaction record page that agents can use to handle phone calls. • Dedicate time after each call or chat for agents to finalize interaction details. See CSM Configurable Workspace for more information.
App Engine Studio	Use the App Readiness and Compliance report in App Engine Management Center (AEMC) to check if apps are ready to go live. See App Readiness and Compliance Report for more information.
Application Manager	Yokohama patch 11 • Reduce potential runtime errors by installing and updating Now Assist applications with suites of interdependent versions. • View all ServiceNow Store applications that are licensed or available for procurement from the **Available for you** tab. • Gain insights about application installation requirements and blockers with application state indicators. See Application Manager for more information.
Application Vulnerability Response	• Monitor your penetration test requests and findings, as well as your team's overall progress in the Penetration Test Workspace. • Reevaluate the risk score, assignments, remediation target date, exceptions, and remediation task for a specific set of application vulnerable items in the Vulnerability Manager Workspace. • Integrate with supported third-party scanners to import vulnerability data. • Compare application vulnerability-related data and determine if application vulnerabilities are found in an application. • Prioritize, remediate, and manage application vulnerable items (AVIT)s. Each application vulnerability represents a vulnerability entry in the Common Weakness Enumeration (CWE) or third-party libraries. • With the sn_vul.app_sec_manager role, create application remediation tasks manually in the Vulnerability Manager Workspace. • With the sn_vul.app_security_champion role, create application remediation tasks manually in the IT Remediation Workspace. See Application Vulnerability Response for more information.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
Audit Management	• Analyze relationships between different variables, such as assessing risks and controls, by using the Matrix report in Audit Workspace. • Manage your documents and work papers in Audit Management as cloud files. • Upload documents from your local computer as cloud files and link them to any record in your ServiceNow instance. • Share a single cloud file with multiple records by linking it to any GRC record. • Benefit from accessibility improvements to create a configurable workspace that supports Web Content Accessibility Guidelines (WCAG) 2.1 Level AA conformance. See Audit Management for more information.
Authentication	Yokohama Patch 11 **Authentication factors for AI voice service** Enable caller access to AI voice agents by configuring the required identification and authentication factors. **OAuth enhancements** Following are the OAuth enhancements: • Use **Opaque** or **JWT token** option for your inbound integration endpoints. • Use the **Allow access only to APIs in selected scope** option to enable access to the APIs that are explicitly listed in the selected scopes for your inbound integrations. • Use the OAuth Entity Resource tab for outbound integrations to configure resource parameters so they flow into the OAuth token request and are reflected in the token from your OAuth provider. **Provider name for Inbound integrations** Use the Provider name field to enter the details of your inbound integrations to distinguish between different inbound integrations on your ServiceNow AI Platform®. Update the Provider name in your API integrations to improve monitoring capabilities: • For OAuth integrations, update the provider name using the Provider name field. To know more, see OAuth Inbound. • For Basic authentication integrations, update the Provider name in the integration registration form. Yokohama Patch 7 **OAuth token enhancement**

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	Use Opaque or JWT token option for your inbound integration endpoints. Yokohama • Use Continuous Authentication to require step-up authentication or re-authentication to the users before allowing access to sensitive or high-privilege information. • Multi-factor Authentication (MFA) is enforced by default for all non-SSO login to ServiceNow®. • Use the Authorization code, resource owner password credential, SAML bearer, and JWT bearer OAuth grant types of OAuth for outbound integration requests through the MID Server. See Authentication for more information.
Automated Test Framework	• Reduce upgrade and development time by replacing manual testing with automated testing. • Design tests once and reuse them in different contexts and with different test data sets. • Keep test instances clean by rolling back test data and changes made after each test run. • Create and schedule test suites to organize and run tests in batches. • Reduce test design time by copying quick start tests and test suites. You can also create custom test steps to expand test coverage. See Automated Test Framework (ATF) for more information.
Benchmarks	1. Experience the new Key Performance Indicator (KPI) for Now Assist under Productivity moments per user of ITSM Benchmarks to understand the benefits of Now Assist features like Knowledge Article generation. 2. Benchmark the all new HRSM indicator to help evaluate the performance in comparison to your peers. See Benchmarks for more information.
Business Continuity Management	• Use the latest assessment template to perform a Business Impact Analysis. • Create nested plans in an event so that you can activate cross-references to multiple plans. • Use the hierarchical view in the plans to organize nested event tasks according to their dependencies. • Use the Crisis map functionality that includes the latest UIB components.

Application or feature	Details
	See Business Continuity Management for more information.
Care Team Operations for Biomed	• Automate healthcare operations by enabling biomed support request creation and fulfillment. • Create biomed support requests from directly within the Care Team Portal. • Gain full visibility into reported biomed cases while enabling biomed teams to manage and fulfill them as work orders or work orders tasks when Clinical Device Management is installed. See Care Team Operations for Biomed for more information.
Care Team Operations for Healthcare IT	• Automate healthcare operations by enabling IT support request creation and fulfillment. • Create IT support requests from directly within the Care Team Portal. • Gain full visibility into reported IT cases while enabling IT teams to manage and fulfill them as incidents efficiently. See Care Team Operations for Healthcare IT for more information.
Case and Knowledge Management	Use HR Benchmarks to provide instant visibility into your key performance indicators (KPIs) and trends, as well as comparative insight relative to the industry averages of your peers and to the industry top performers. See Case and Knowledge Management for more information.
Case management for CSM	• Create cases for invoice-related services such as invoice disputes or requested corrections with the Case management for Invoice Operations application. • Use process mining to mine the configured base system project to investigate the causes of long resolution times. See Case management for Customer Service Management for more information.
Change Management	• Increase operational efficiency of tier 1 service desk agents with the dedicated sn_service_desk_agent role. • Require specified field details to be updated before transitioning the state of a change request by converting existing optional fields to mandatory fields. • Restrict unauthorized access to Change Management tables using deny ACLs. See Change Management for more information.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
Cloud Account Management	• Create and manage cloud accounts efficiently either by manual or automated processes. • Manage and track cloud account requests using the requester dashboard. • Visualize data tailored for the admin persona with deeper insights into cloud accounts. • Scan accounts for configuration violations and take appropriate actions for weak passwords, pending certifications, undefined account ownership, discovery schedules, and so on. • Provision both Terraform Cloud/Terraform Enterprise and cloud native interface accounts. See Cloud Account Management for more information.
Code Signing	Use Code Signing Guardrails to improve checks during the signing process to create more secure workflows. See Code Signing for more information.
Collaborative Work Management	• Improve focus on your working area through a simplified, distraction-free navigation experience. • Quickly identify task assignees without access to your Space and manage sharing permissions accordingly. • Improve collaboration efficiency by sharing the exact view of your Board or specific page of your Doc when sharing a URL with others. • Collaborate in real-time on Docs with multiple editors. • Benefit from accessibility improvements to create a configurable workspace that supports Web Content Accessibility Guidelines (WCAG) 2.1 Level AA conformance. See Collaborative Work Management for more information.
Common Core	• Generate a GRC issue action plan by using the agentic AI workflow. • Segregate data by entities and granular access management when using entity-based access. • Summarize an issue by using generative AI to provide quicker context gathering and contextual awareness. With this feature, you can improve the efficiency and productivity of your analysts on GRC issues. • Use the enhanced GRC licensing summary dashboard to understand the licensing treatment for users that are added to the group by roles that are mapped or assigned to the group. • Select a user record on the licensing summary dashboard and select the role hierarchy to see all the parent roles that are assigned to the user and their role hierarchies.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• Monitor the email activity from the Overview page for regulatory agencies. • Update and add content by using Microsoft 365 for ServiceNow Reporting, which is now integrated with the Document designer application. • Add up to 20 columns in a table and in a content block by using the Document designer application. • Select and reorder columns by using the Document designer Microsoft Word add-in while creating templates. Yokohama Patch 11 • Some Now Assist skills are now turned on by default. • Review changes to Now Assist usage measurements. For detailed documentation, see Common Governance, Risk, and Compliance features.
Compliance Case Management	• Empower compliance professionals to perform assessments on compliance cases using the Smart Assessment Engine. • Utilize the unified **Tasks** page on Employee Center to complete your assessments. • Benefit from accessibility improvements to create a configurable workspace that supports Web Content Accessibility Guidelines (WCAG) 2.1 Level AA conformance. See Compliance Case Management for more information.
Configuration Compliance	• With the sn_vulc.admin role, create remediation tasks manually in the Vulnerability Manager Workspace. • With the sn_vulc.remediation_owner role, create remediation tasks manually in the IT Remediation Workspace. See Configuration Compliance for more information.

Configuration Management Database (CMDB)	• Access changes to the CMDB Editor and CMDB Admin user roles:
	  ○ Starting with Yokohama Patch 4, the sn_cmdb_editor and sn_cmdb_admin user roles no longer have create, update, or delete access to records in the Configuration Item [cmdb_ci] class.
	  ○ Starting with Yokohama Patch 6, you can configure the sn_cmdb_admin and the sn_cmdb_editor user roles with the necessary permissions to perform some CMDB Workspace tasks by manually running a scheduled job.
	• Manually create a configuration item (CI) in CMDB Workspace that is verified by the Identification and Reconciliation Engine (IRE) and is unique within CMDB. Creating a CI using the IRE identification rules helps to maintain the integrity of CMDB.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• Use the Now Assist for CMDB CI summarization skill to see a comprehensive summary for a CI, with details such as discovery and related incidents, directly on the configuration item (CI) form. Use the manage duplicate CIs skill for step-by-step guidance on how to use de-duplication templates to de-duplicate CIs. • The Configuration item summarizer AI agent accepts the sys_id of a CI and returns a full summary of Configuration Management Database (CMDB) data for the CI. The agent isn't typically used as a standalone agent and any use case can access it. • View the various counts, such as the number of CIs and the number of CI types, for the CIs that are connected to the home node in Unified Map. • Apply filters that were previously available only to the coverage charts in the CMDB 360 dashboard in CMDB Workspace to all charts in the Discovery sources tile. • Use a condition builder or a custom script to restrict the list of de-duplication tasks that are assigned to a de-duplication template when de-duplicating CIs. See Configuration Management for more information.
Container Vulnerability Response	• With the sn_vul_container.vulnerability_analyst or sn_vul_container.vulnerability_admin role, create container remediation tasks manually in the Vulnerability Manager Workspace. • With the role sn_vul_container.remediation_owner, create container remediation tasks manually in the IT Remediation Workspace. See Container Vulnerability Response for more information.
Continuous Authorization and Monitoring	• Import catalog and System Security Plan (SSP) models with the new CAM Open Security Controls Assessment Language (OSCAL) import landing page. • Export and import SSP models and catalog models in the OSCAL format. • Export control objectives as a catalog in the OSCAL format. • Generate additional reports in Microsoft Word format, such as a Security Assessment Plan (SAP), Authorization to Operate (ATO) Letter, and Executive Summary. • Generate reports based on a Microsoft Word template. See Continuous Authorization and Monitoring for more information.
Contract Management Pro	• Link parent contracts during drafting and negotiation phases to inherit parent contract terms. • Pause and resume an in-progress signature process when updates to the signatory list are required.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• Perform wet signature in the electronic signature workflow. The enhanced electronic signature workflow capability provides flexibility to complete the signature process when the signatories want to do a wet signature instead of an electronic signature. • Upload the contract document directly from the Microsoft Word add-in for ServiceNow Contracts instead of selecting it from your system. • Use Logout icon ( ) to log out from Microsoft Word add-in for ServiceNow Contracts. • Change the application scope to edit a contract template in the Microsoft Word add-in for ServiceNow Contracts. This option is only visible to the administrators. See Contract Management Pro for more information.
Contract Management Pro for Legal Service Delivery	• Initiate and manage amendment requests for existing contracts. • Record producer to initiate an amendment request from the Employee Center. See Contract Management Pro for Legal Service Delivery for more information.
Conversation Insights	• Augment conversations with insights based on the Inferred CSAT score. The Inferred CSAT framework provides an estimated score computed using AI in real time by analyzing the entire sequence of the conversation. • Use underlying factors like Resolution, Confusion, Effort, Empathy, Next Steps, Frustration, Transfers, and Escalations to provide explainability to the Inferred CSAT scores. • Leverage the Inferred CSAT framework and Conversation Insights [sn_aci_insights] table linked to the Conversation [sys_cs_conversation] table to create adhoc dashboards and workflows for conversational analytics applications. See Conversation Insights for more information.
Creator Studio	• Create forms quickly by using Now Assist. • As of Creator Studio version 27.2.2, revamped navigation means you can more easily see what's in your app. • Populate any question on the form based on the answer given for a record choice question. • Use answers to form questions to trigger an activity in playbooks. • Switch seamlessly between no-code, mid-skill, and pro-code app development experiences for a more unified development platform with the new experience switcher.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	See Creator Studio for more information.
Customer Contracts and Entitlements	• Enable customers to create contracts from product inventory. • Added a new workspace view for service contracts and entitlements in Customer Service Management workspace for efficiently managing service contracts and entitlements. • Enable initiation of contract renewal automatically based on the configured date and pricing details. • Calculate the price of future renewals of contracts with a markup or mark down percentage of the current contract price. • Validate the contract end date to the product offering end date. See Customer Contracts and Entitlements for more information.
Customer Success Management	• Define, measure, and track the overall health of an engagement and monitor risk signals and issues. • Manage all customer interactions in a single place and organize them with the touchpoint calendar. • Create templates to define common success objectives and outcomes and associate them with a product. • Use Now Assist for Telecommunications, Media and Technology (TMT) to summarize account onboarding cases, engagements, and touchpoints. • Integrate your ServiceNow instance with external Customer Relationship Management (CRM) platforms during the engagement life cycle. See Account Lifecycle Events for more information.
Data Loss Prevention Incident Response	• Enhanced the ability to securely store, manage, and track evidence files within the platform for all Data Loss Prevention Incident Response integrations. • Preview the evidence file of an incident from either the DLP IR analyst workspace or end user workspace. • Enhanced the DLP incident closure process by adding support for closure codes. • Introduced the Playbook feature in the DLP IR workspace to enhance operational efficiency. • Improved response to Data Loss Prevention (DLP) incidents through the initiation of SLA triggers. See Data Loss Prevention Incident Response for more information.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
Data Management	• View insights into storage consumption on your instance and implement data management policies directly from the Data Management Console. • Automatically delete older or unwanted records with improved table cleaner scalability. See Data Management for more information.
Data Privacy	• Leverage Data Privacy in Now Assist to discover sensitive data in Now Assist prompts and data send to models. • Sanitize sensitive data from Now Assist prompts without impacting response. • Discover sensitive data from attachments using enhanced Data Discovery jobs. See Platform Privacy for more information.
Data management for CSM	• Track the status and other information that is related to the Customer Life Cycle workflows by using the Sales and Order Management Request Tracker (sn_tmt_core_inbound_queue) table. • Track pricing and subscription information for products and services on the CSM Configurable Workspace by using the revenue metrics on the sold product form. • Integrate Strategic Portfolio Management (SPM) project management with business locations to create and manage projects across your organization. See Data management for Customer Service Management for more information.
Decision Builder in Workflow Studio	• Filter condition and result columns in decision tables to show only relevant rows, simplifying large table edits. • Use the lookup icon to select a reference record from the default list view and the info icon to preview the record. • Use the pagination feature to switch between pages by selecting the page you'd like to see. • Activate rows or Deactivate rows to include or exclude the logic in that row while executing the decision tables. See Exploring Decision Tables for more information.

Application or feature	Details
DevOps Change Velocity	• Integrate with the Harness orchestration tool to discover Harness pipelines and enable change automation. • Detect anomalies and issues in your DevOps Change Velocity instance using health scans. See DevOps Change Velocity for more information.
Digital End-User Experience	• Monitor whether the devices across your organization are adhering to the established application and policy metric compliance rules using the System compliance report. • Identify high-performance devices and learn the correlation between your device performance and overall system health by monitoring critical metrics, such as CPU usage, in the System performance report. • Monitor the multiple facets of the end-user network performance, including connection details, connection stability and path metrics, and application network hops. • Manage what DEX metrics are collected for a DEX agent policy, turn off collection of a metric, or change the frequency for a metric collection. • Set up file management to track and manage executable files on your organization devices. • Track and manage the Windows registry keys configured for monitoring on your organization devices. • View client health metrics with the Microsoft Configuration Manager (MCM) application. • Track the impacted device details from the Service Operations Workspace landing page. You can also track the details of all the impacted users and impacted devices from the active alerts. • Determine the device location based on the pre-defined custom logic. • Diagnose and resolve device issues using the Device health check capability provided by Digital End-user Experience Self-service. • Track the digital experience scores of the applications and devices that your employees use with the Digital Experience Score dashboard. • The Proactive Engagement application is integrated as part of the DEX suite of applications and is installed along with DEX. See Digital End-User Experience for more information.

Application or feature	Details

Digital Portfolio Management	• Updated the Digital Portfolio Management (DPM) Admin Center.
	  ○ Added a Troubleshoot tab to the DPM Admin Center landing page to help you recalculate availability results and indicators for service offerings.
	  ○ Added the ability to configure the personal portfolio solution cards and to view relationships of business applications and application services.
	• Updated the key performance indicator (KPI) behavior so that you can drill down on time series KPI information and use an Active flag to hide KPIs in a KPI group.
	• Updated the DPM data model to improve visibility and reporting when an incident, problem, or change is in the application service's Impacted services or Affected CIs related list. The updated model rolls up the incidents, problems, and changes so that you can see the impacts in related business applications (in the KPIs and Needs attention panels).
	
	See Digital Portfolio Management for more information.

Dispute Rules Content Pack for Visa	Apply Visa Resolve Online (VROL) release 25.2 revision changes to Dispute Rules Content Pack for Visa questionnaire. See Dispute Rules Content Pack for Visa for more information.
Document Intelligence	Yokohama Patch 6 • Summarize content in document and image attachments with the document and visual insights AI agent. • Use Google Gemini and Anthropic Claude on AWS as AI model providers for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI. Yokohama Patch 3 • Boost productivity by using the document and visual insights AI agent in Now Assist to autonomously analyze and extract data from documents and images. Early Availability • Speed up your document processing workflows and quickly extract the text and tables from your documents by using Now Assist. • Save time looking for the information that you need in a document and quickly find the answers to predefined questions by using Now Assist. See Document Intelligence for more information.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
Document Services	• Improved PDF generation that includes accessibility support. • Accelerate documents insights with instant summaries for highlights and quick insights, interactive Q&A, and FAQs. See Document Services for more information.
Domain Separation	Enable domain separation in live environments by using the Post-Production Domain Separation Activation Utility. See Domain separation for service providers for more information.
Dynamic Translation	• Preserve text, such as product names or technical terms, during machine translation with the Exclusion Framework feature. • The APIs used by default translator configurations are upgraded to v4. If you want to use v4 APIs with customized translator configurations, you must migrate them manually. • The spoke for IBM Watson Translator Service for IBM Cloud (com.glide.ibm_translation_spoke) is removed. See Dynamic Translation for more information.
ERP Semantic Mining	Yokohama Patch 3 • Easily clear a blocked ETL (extract, transform, and load) processing flow when an automatic or manual synchronization of ERP data between the ERP system of record and your ServiceNow instance is not successful by using the **Reset AI/ML analysis** option. Yokohama Patch 1 • View charts and graphs on the new ERP Semantic Mining home page dashboard. • Take guided tours with interactive steps to learn about features and interactively complete tasks in ERP Semantic Mining. See ERP Semantic Mining (ERP-CM) for more information.
Employee Center	• Resolve tasks created from submitted negative feedback with the Integrated experience and service feedback functionality. • Enable employees to seek assistance through virtual or in-person appointments, or by joining walk-up queues for immediate support. • Host live company events seamlessly in the employee portal with streamlined pre-event communications and a drag-and-drop editor for easy content creation. See Employee Center for more information.

Application or feature	Details
Encryption Key Management	• Column Level Encryption has been rebranded and redesigned to now be called Field Encryption. • Use Access Observer to help plan for and troubleshoot Field Encryption implementations. • Edge Encryption administrators can use the new process to migrate from Edge Encryption to Field Encryption. See Key Management Framework for more information.
Enterprise Architecture (formerly Application Portfolio Management)	Yokohama Patch 6 • Select a fiscal period on the Application Rationalization pages using the new fiscal period filter option. The fiscal period filter enables you to view application rationalization data for the selected fiscal period. • Evaluate the technical debt score for business applications using the Technology Reference Model (TRM) technical debt indicator. This helps you to identify high-risk business applications and enables you to prioritize modernization and rationalization. • Generate business process modeling diagrams and model the future state of the business processes using Enterprise Modeling and Visualization. • Associate business capabilities to a business application from the business application related list. • View the past due certification tasks for your business applications from the Application Portfolio tab of the Insights section. • Generate scores for indicators and scoring profiles in the Enterprise Architecture Workspace. • Read-only access to the#Enterprise Architecture Workspace is added to the business stakeholder role (sn_apm.apm_read). Yokohama General Availability • Generate business process modeling diagrams and model the future state of the business processes using Enterprise Modeling and Visualization. • Associate business capabilities to a business application from the business application related list. • View the past due certification tasks for your business applications from the Application Portfolio tab of the Insights section. • Generate scores for indicators and scoring profiles in the Enterprise Architecture Workspace. • Read-only access to the#Enterprise Architecture Workspace is added to the business stakeholder role (sn_apm.apm_read).

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
Enterprise Asset Management	• Streamline firmware management with the new Firmware model class. • Get normalization coverage for firmware that is embedded into your industrial and IT hardware-based Operational Technology (OT) assets. • Achieve synchronization between physical assets and configuration items (CIs) for Operational Technology (OT) assets through MAC addresses. • Streamline OT Asset Management (OTAM) licensing to include hardware resource categories for OT hardware assets to access OT Asset Management features and workflows. • Get support for hardware models and OT hardware assets in the OT Asset Management workspace. • Benefit from accessibility improvements to create a configurable workspace that supports Web Content Accessibility Guidelines (WCAG) 2.1 Level AA conformance. See Enterprise Asset Management for more information.

Event Management	• Review network traffic-based alert grouping, which uses discovered TCP connections together with ML Service Mapping to correlate alerts on host CIs that have network traffic connections between them. This approach reduces noise, enhances visibility, and accelerates response times by focusing on critical connections and dependencies.
	• Starting in version 26.3.4, benefit from the new alert grouping based on network traffic correlations:
	  ○ Investigate network traffic-based alert groups by using Express List®.
	  ○ Review alert group analysis by Now Assist
	  ○ View connections between network traffic-based alerts in **Link View**.
	• Enable team-level operators to create and manage their own integrations, set up their own alert automations, and enhancing control over alert management for their teams by assigning the new team_operator role.
	• Review relevant information in the Now Assist panel based on records selected in the Express List®.
	• Starting in version 2.15.1, you can configure metric connector instances for the Nagios, SolarWinds, and Zabbix monitoring tools to receive metrics directly from these monitoring tools. This enhancement provides the following benefits:
	  ○ Seamlessly integrate monitoring data from multiple sources into Metric Intelligence.
	  ○ Improve anomaly detection and alerting with real-time metric ingestion.

Application or feature	Details
	See Event Management for more information.
External Content Connectors	Yokohama Patch 11 • Expand your search experience with external content connectors for Adobe Experience Manager as a Cloud Service, Asana, Docusign, Dropbox, GitHub Enterprise Cloud, HubSpot, Lucidchart, Miro, monday.com, Notion, SAP DMS, Smartsheet, Trello, WordPress, Workday, and Zoom source systems. • Customize user permission settings, choosing the fields you want to compare when mapping source system users to ServiceNow AI Platform® users. • Make external content connector crawl results searchable by linking connector search sources to search profiles from the connector editor. • Monitor connector behavior on individual crawl runs and over time with improved crawl statistics and analytics. Yokohama Patch 6 • Expand your search experience by indexing searchable content from your Amazon S3, Box, GitLab, Microsoft OneDrive, Microsoft Viva Engage, and Zendesk Guide source systems. • Search KB articles from your ServiceNow instance. • Make web content locally searchable by indexing pages from predefined or custom public web sites with the Webcrawler external content connector. • Configure connector settings and schedule crawls as part of connector creation using the revamped UI. Yokohama Patch 3 • Expand your search by indexing searchable content from your Atlassian Jira Cloud, Google Drive, Microsoft Teams, and Slack source systems. • Make web content locally searchable by indexing pages from predefined public web sites. • Find answers about your ServiceNow deployment by indexing searchable content from the ServiceNow product documentation. • Know when your external content connectors are approaching their crawl limits with new warning messages. • Expand the range of information available to Virtual Agent users by adding external content search results to Now Assist in Virtual Agent conversations. • Improve recall for external content searches with support for semantic vector indexing of crawled content. See External Content Connectors for more information.

Application or feature	Details
Field Service Management	• Define configurable rules that you can use to derive recommendation scores and optimize your appointment booking slots. • Create advanced dependency relationships among tasks to enhance scheduling accuracy. • Optimize your task assignments by using dependencies that align with the overall objectives and constraints of your resource allocation. • Streamline your capacity and resource management by using enhanced visualization in the Capacity Console. • Calculate the work duration for a work order task more accurately by using the Agent Efficiency feature. See Field Service Management for more information.
Financial Services Card Operations	• Resolve friendly fraud disputes by incorporating friendly fraud detection and resolution in the existing dispute flow for Visa transactions. You can take actions such as crediting the customer, denying the dispute, or initiating an exception process. • The Financial Services Card Operations data model is updated in this release with reparented tables to align the data and manage the dispute transactions more effectively. See Financial Services Card Operations for more information. • Enhance the card disputes process with an updated end-to-end Visa disputes playbook that now includes support for reviewing associated transactions and handling pre-arbitration, arbitration, and appeals. • Manage and work on multiple disputed transactions for a case with individual playbooks for each disputed transaction. • Integrate new VROL subflows into the enhanced Visa card disputes playbook.
Financial Services Operations Core	The Claim Base [sn_bom_claim_base] table has been updated in this release with additional fields. These fields were previously available only to specific applications. They're available in the Claim Base table and can be used across all other claim applications in this release. See Financial Services Operations Core for more information.
Financial Services Operations Integration with Visa	• Enables Visa VROL dispute resolution process by providing features such as accept dispute and cardholder purchase enquiry. • Ensures Visa conformance through error handling and timely updates on chargeback status. See Financial Services Operations Integration with Visa for more information.

Application or feature	Details
Flows, subflows, and actions in Workflow Studio	• Create a flow or a subflow from an image by using Now Assist. • Debug flows and subflows from a dedicated debugging tab. • Pause a flow until it receives a specific message from the flow API. • Run a published Now Assist skill from an action. • Save flow triggers for reuse in other flows. See Exploring flows for more information.
Generative AI Controller	Yokohama Patch 11 • Review changes to Now Assist usage measurement. • Some Now Assist skills, agents, and agentic workflows are on by default. • Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications. Previous Patch releases • Protect your users by configuring settings for anonymization of personally identifiable information (PII) with the Data Privacy application. See Generative AI Controller for more information.
Hardware Asset Management	• Achieve asset data accuracy, improve asset utilization, and reduce risk through Asset Attestation. • Streamline Hardware Asset Management (HAM) licensing for only non-OT hardware assets to access Hardware Asset Management features and workflows. • Benefit from accessibility improvements to create a configurable workspace that supports Web Content Accessibility Guidelines (WCAG) 2.1 Level AA conformance. See Hardware Asset Management for more information.
Health Log Analytics	• Use the enhanced Splunk data input to ingest data from Splunk in a preprocessed structured format. You can also pull data from Splunk regularly using the new Splunk Polling data input. • Take advantage of a unified interface for convenient data input integration by setting up integrations from the Integrations Launchpad. • Streamline HLA data ingestion with tools for handling large log volumes by using dedicated Cribl and Edge Delta data inputs. • Configure log data integrations for Splunk TCP/UDP, Splunk Poller, MID Server, Apache Kafka, Microsoft Azure Log Analytics, REST

Application or feature	Details
	API, and Amazon Data Firehose conveniently from the Integrations Launchpad. • Generate a description of Health Log Analytics alerts using Now Assist. See Health Log Analytics for more information.
Healthcare Operations Core	• Gain visibility into operational cases that are related to your care team and create support requests using the Care Team Portal. • Expand operational cases to supporting services departments by leveraging the Healthcare Operations case type. • Utilize the streamlined admin experience for creating healthcare organizations and hierarchies. See Healthcare Operations Core for more information.
Hermes Messaging Service	• View the audit history for all topic operations. • Scan and inspect topic messages using keywords or regular expressions. • Monitor the health of Hermes components over time. See Hermes Messaging Service for more information.

ITOM AIOps	Health Log Analytics highlights:
	• Pull data from Splunk consistently over time using the Splunk Polling data input, which sends recurring queries (polls) to Splunk.
	• Use your Splunk data input to ingest data from Splunk in a pre-processed, structured format.
	• Integrate with log data connectors from the Integrations Launchpad
	• Use dedicated Cribl, Edge Delta and Vector Agent data inputs to streamline HLA data ingestion with tools handling large log volumes.
	• Generate a description of Health Log Analytics alerts using Now Assist.
	
	Event Management highlights:
	
	Service Operations Workspace for ITOM
	• Starting with version 26.3.1, benefit from the new alert grouping based on network traffic correlation:
	  ○ Use Express List® to investigate network traffic-based alert groups
	  ○ View connections between network traffic-based alerts in Link View.
	  ○ Starting with version 2.5.3, review alert group analysis by Now Assist

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• Review relevant information in the Now Assist panel based on records selected in Express List®. • Enable team-level operators to create and manage new alert automations by assigning the new team_operator role. • Map current alert field values to new specified values through the new **Change alert values** option in the Enrich automation section. • Track and optimize grouping efficiency by viewing key details such as total alerts, alert groups, ungrouped alerts, and compression in Group Automation. Simulate other group types, such as CMDB, ML, and text-based grouping. Agent Client Collector highlights: See ITOM AIOps for more information.
ITOM Cloud Accelerate	Cloud Workspace highlights: • The new Cloud Workspace application has includes a new feature called Cloud Account Management, which automates account creation, improves transparency, and integrates policy-based governance and certification processes, enhancing efficiency and control across multiple cloud platforms. • Support for AWS account and Azure subscription requests via direct API integrations or Terraform and GitHub integrations. Performance enhancements for the predefined catalog items in CSC Content Pack. See Cloud Governance for more information.
ITOM Optimization	Legacy workflows have been upgraded and seamlessly migrated to the advanced Workflow Studio to align with the latest standards and ensure modern compliance. Additionally, all default (Out of Box) workflows have been redesigned to provide enhanced performance, improved usability, and a more streamlined experience. See ITOM Optimization for more information.
ITOM Visibility	• Discovery and Service Mapping Patterns: Gain enhanced visibility into your AWS cloud services with 27 additional patterns starting with store version 1.25.0. • Starting with store version 1.1.0, ACC for Visibility has been renamed Agent Client Collector for Visibility - Content. The CNO for Visibility feature has been extracted from Agent Client Collector for Visibility - Content and is now a separate application. • Starting with Service Graph Connector for GCP store release 1.8, Service Graph Connector for AWS store release 2.9, and Service Graph Connector for Microsoft Azure store release 1.11, you can use

Application or feature	Details
	Service Graph Connectors to ingest data into the Configuration Management Database (CMDB) from third-party sources. • Starting with store version 1.8.0, Discovery admins gain improved visibility into discovery issues and can address root causes using anomaly detection in the Discovery Admin Workspace. See ITOM Visibility for more information.
ITSM Mobile Agent	Starting in the 9.1 release, you can do the following: • Summarize the incident record and activity information when adding work notes to an incident record or while reassigning an incident. • Set different alert tones for incidents with different priority levels. • Set the incident impact and urgency levels to set the incident priority level automatically. • Redirect from the mobile web browser to the ITSM Mobile Agent app seamlessly when opening and viewing different task records. See ITSM Mobile Agent for more information.
ITSM Success Dashboard	Experience the all new KPIs introduced for the Now Assist under Productivity moments per user in ITSM Success Dashboard to understand the benefits of using Now Assist features like Change Summarization, Change Risk Explanation, and Knowledge Article generation. See ITSM Success Dashboard indicators for more information.
Identity	
Impact	• Adopt ServiceNow products and measure their value, gain access to expert guidance and personalized recommendations, maintain a high-performing platform, and enhance business continuity with 24 x 7 technical support. • Access the Impact Store Application integrated within your ServiceNow instance and connected to the Impact Delivery Instance (IDI) portal. • Use Proactive Code Check to track compliance against leading practices for coding and organizational standards. • Jumpstart your understanding and assessment of ServiceNow platform capabilities with new Accelerators that provide a demonstration of the possibilities and capabilities with instance features and maximize value exactly where you need it. See Impact Store Application for more information.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
Incident Management	• Increase the operational efficiency of the tier 1 service desk agents with the dedicated sn_service_desk_agent role. • Control whether an incident or major incident record link in an email notification redirects you to the record in the classic UI16 interface or Service Operations Workspace (SOW). • Enable agents with incident write access, callers, requesters, and **Opened by** end users to reopen a resolved incident from the Incident Management classic UI16 form, SOW, or Portal UIs. • Restrict unauthorized access to incident-related tables using deny ACLs. • Search for a configuration item (CI) in a list alphabetized by the CI name with an improved search performance. See Incident Management for more information.
Industrial Process Manager	• Identify sites on your equipment model entity that aren't in use with a new **Operational Status** field value in the Industrial Workspace. • Filter out **Not in use** or **Retired** equipment model entities in the Industrial Workspace using the **Operational Status** field value. • Sort equipment model entities for a Site using the new value **Processing Order**. • View the **Daily Activity** tab for a summarized version of the previous day's activities on Operational Technology (OT) devices. • Organize your OT device data by capturing the mapped equipment model entity for an OT device. • View the relationships between devices and other configuration items (CIs) with the Unified Map experience in the Industrial Workspace. See Industrial Process Manager for more information.
Instance Data Replication	• Replicate data that's frequently updated in large tables on your instance by scheduling data replication. • Queue multiple seeding requests from your producer instance. • Reseed missing or mismatched records automatically when creating a data comparison request. See Instance Data Replication for more information.
Insurance Claims Core	The Claim Incident [sn_ins_claim_property] table has been updated in this release with additional fields. These fields were previously available only to specific applications. They're available in the Claim Incident table and can be used across all other claim applications in this release.

Application or feature	Details
	See Insurance Claims Core for more information.
Integration Hub	• Get alerts and alert notifications for your Stream Connect integrations. • Use error evaluation with Data Stream actions to catch step errors and specify error behavior for each step. • Edit, configure, and create connection aliases in the Action Properties section of actions in Workflow Studio. See Integration Hub for more information.
Intelligence for CSM	• Enabled Recommended Actions for chat interactions so that agents can select relevant actions that are based on the chat context. • Integrated enhanced knowledge guidance on the Front-line case page and enable agents to attach and add links to knowledge articles in comments, work notes, or emails by using modeless dialogs. • Enabled Recommended Actions – AI search for CSM default record page and CSM interaction record pages for the video, chat, walk-up, and email channels. • Automated the mapping configuration for search results along with default guidances. See Intelligence for CSM for more information.
Journey designer	Yokohama Patch 3 • As a journey user, track your journey more effectively—view real-time journey states, follow your progress with an improved progress bar, and easily filter your journeys to find exactly what you need. • As a manager, request the status of an employee's journey to quickly understand progress and take timely, informed action. • Managers can instantly summarize the information that appears on the Journey detail page to acquire an overview of an employee's journey. The summary that is generated also reflects the blockers that are impeding the journey's progress and the steps required to resume the journey's progress. • View banner messages on the Journey detail page when your journey status is marked as 'Overdue' due to others' pending tasks. The messages are tailored based on personas and help you understand the reason of the overdue task. • Use the updated 'All Tasks' filter, which now matches the overall task count shown in the progress bar. Read the revised tooltip on the Progress Bar that states, 'Completed tasks include skipped tasks.' Check the information icon on the 'All Tasks' filter to understand that 'Some of the total tasks may not be visible to you in this Journey,' ensuring clarity on task visibility.

Application or feature	Details

	• As a manager, managing the journey of reportees using Journey designer you can draft a journey with custom plans and tasks with help from Now Assist. Provide an AI prompt so that Now Assist can help you build a journey that matches your career goals and aspirations.
	• The following Lifecycle Events flows have been migrated to flows.
	  ○ HR Activity Set Trigger Check
	  ○ Lifecycle Event Notification
	  ○ Lifecycle Event Case Approval
	  ○ HR Activity Set Launcher
	  ○ HR Activity Launcher
	  ○ Account Notification
	  ○ Add LE activity user to Pulse Survey
	
	See Journey designer for more information.

Knowledge Graph	Yokohama Patch 11 • Review changes to Now Assist usage measurement. • Some Now Assist skills, agents, and agentic workflows are on by default. • Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications. • Knowledge Graph now supports aggregate queries. • Improved accuracy for Now LLM Service. Yokohama Patch 8 • Admins can create Knowledge Graph schema with Workflow Data Fabric tables that enables users to retrieve data from different systems without moving them. This ensures efficiency and security when working with external tables. Yokohama Patch 6 • Use Google Gemini and Anthropic Claude on AWS as AI model providers for Knowledge Graph in addition to Now LLM Service and Azure OpenAI • Select your preferred large language model (LLM) provider for Now Assist platform. Apart from Now LLM Service, the platform supports Azure OpenAI GPT-4.1 and GPT-4.1 mini, Google Gemini 2.0 Flash and 2.5 Pro, and AWS Anthropic Claude 3.7 Sonnet LLM providers with ServiceNow® third-party model strategy. • Supports nodes from parent and grandparent nodes from the hierarchy. • Supports CMDB queries in Now Assist panel. Yokohama Patch 3

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• Seamlessly integrated with Now Assist in Virtual Agent, AI Agents and AI Search enabling personalized search results and context driven skills execution. • Seamless Integration with Now Assist in Virtual Agent for Natural Language Query. • Use Knowledge Graph as a tool to complete custom tasks for AI Agents. Yokohama Patch 1 • Knowledge Graph helps you in transforming large amount of data into a semantic representation, fostering more connected and customized user experiences. • Knowledge Graph boosts Virtual Agent by enabling large language models (LLMs) to provide contextually relevant responses tailored to each user. • Knowledge Graph creates a complex data model called Knowledge Graph schema with numerous entities and their relation within a few steps. • Knowledge Graph admins can use Knowledge Graph to create and manage the Knowledge Graph schemas. These Knowledge Graph schemas are the customized Knowledge Graph that consist of nodes, node properties, and edges. See Knowledge Graph for more information.
Knowledge Management	Yokohama Patch 6 • Use Google Gemini and Anthropic Claude on AWS as AI model providers for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI. • Customize prompts for AI model providers to generate Knowledge articles with Now Assist. • Identify and resolve accessibility-related issues during Knowledge article generation through a new accessibility checker button in the TinyMCE toolbar. • Enhance the creation and management of knowledge base through features in the Knowledge Management advanced plugin such as article versioning, article subscriptions, article templates, and an article quality index. See Knowledge Management for more information.
Lead Management	• REST APIs enable seamless integration of lead management with external applications and provide other capabilities. • REST APIs enable customers to create, update, and retrieve leads and lead line items from the ServiceNow instance.

Application or feature	Details
	See Lead Management for more information.
Legal Hold Notification	• Streamlined legal hold life cycle: Streamline the legal hold workflow by enabling you to create legal hold matters, assign custodians, issue notices, track acknowledgments, and ensure compliance throughout the process. • Enhance custodian engagement by sending them legal hold notifications and reminders to ensure timely acknowledgment and accountability throughout the legal hold process. • Reduce legal risk compliance with a controlled closure process. When the legal hold is officially closed, the Legal Hold Notification application stores detailed information about the preserved data. See Legal Hold Notification for more information.
MID Server	• MID Server supports and requires a minimum JRE version 17. The MID Server is bundled with version 17.0.12 and the minimum JRE version supported is 17.0.10. • The MID Server can now be installed on Windows hosts directly as a LocalSystem or non-admin user with Start and Stop permissions. See MID Server for more information.
Manager Hub	• Enable manager-employee conversation scheduling. • Track skill proficiency and assign targeted learning for effective development by using the Kill score analysis panel. • Enable managers to view all direct and indirect reports by using multi-manager reporting to improve team productivity and engagement. See Manager Hub for more information.
Manufacturing Commercial Operations	• Enable manufacturers, customers, suppliers, channels, and partners to connect and track services directly between instances without configuring and maintaining custom integrations. • Enable B2B customers to configure products and place orders via an uptake of the Sales Customer Relationship Management self-service order placement feature. • Transform emails into interactions rather than cases with email interactions. • Enable the dealer and sales promotion framework and its user role and responsibilities. • Configure the Manufacturing Commercial Operations plugins.

Application or feature	Details
	See Exploring Manufacturing Commercial Operations for more information.
Mastercard Spoke	• Use the Mastercard Spoke to manage card disputes using the Mastercom API Suite and Mastercom Extended APIs. • Leverage Mastercard Spoke actions to manage disputes for cleared Single Message System original transactions with Mastercom Extended. See Mastercard Spoke for more information.
Mentoring	• Auto-close mentoring relationship a certain number of days after the due-date. Configure the number of days followed by a grace period to allow any final interactions before auto-closure. • Store a Mentoring snapshot of all overlapping preferences at the time of the relationship acceptance by the mentor. Derive skills tagged to Mentoring Relationships based on the snapshot. • As a mentee, view Match Insights with a particular Mentor to understand how well they are matched before choosing the Mentor. • As a mentee, share mentoring preferences and timeline information with your manager that help in the validation of your skills. See Mentoring for more information.
Mobile Platform	• Write and refine text with the Now Assist Context Menu. • Use enhanced capabilities within the input form screen. See Mobile Platform for more information.
Next Experience	• Create personalized keyboard shortcuts to streamline your workflow and boost productivity. • Track the filters that you apply to your Workspace lists within the History menu. Each time you change your filter, the History menu displays a separate entry. • Quickly locate and adjust your user preferences by using the new streamlined search function. • User preference icons now adopt your theme colors. See Next Experience UI for more information.
Next Experience Components	• Build rich UI experiences with prebuilt system or custom components. To view the Next Experience Components API reference, usage guidance, and ServiceNow® UI Builder setup documentation, visit the Developer site Next Experience Components doc.
