Process Mining External Data Import PRB1870059	Record data generation isn't working as expected	The data is cleared from the import table and no records are generated after the user selects 'Create record data'.	Import an external dataset in the external process mining guided set-up. Expected behavior: The user is able to create records based on the imported dataset. Actual behavior: After selecting **Create record data**, the page remains stuck at the progress view until refresh. After the refresh, the data in the import table is wiped out and no records are generated.
Process Mining PRB1882225	Unexpected exceptions don't get propagated up in the log		Throw an exception in MdTraceService during log collection. Notice that the exception details or stack trace are missing from the logs.
Process Mining PRB1895034	Verify all analyst workbench statistics having two date units	Stats formatting in multiple areas in the 'Process details' need to be updated.

Problem	Short description	Description	Steps to reproduce
Process Mining PRB1901994	Process Mining GenAI skills are failing for 3P models		**1.** Change default provider to something other than the NowLLM model in sys_one_extend_definition_config. **2.** Initiate the skill. Expected behavior: The skill should return a LLM response. Actual behavior: The skill doesn't display any key reasons.
Process Mining PRB1905387	Addition of Query ACLs in Process Mining	This change adds new Query ACLs on certain table(s) and field(s) to grant query_range access.	
Process Mining PRB1912315	Filter set models are calculated on an incorrect number of cases when filter set conditions match more than 10k results	There's issues with filter sets' data upload: 1. Use the correct page size value for fetching filter set case IDs. 2. Add a header line to a filter set file upload for the second page onwards. 3. Avoid a case count query for filter sets' file names to avoid timeouts while the data file name generates for a full mine.	**1.** Mine a project. **2.** Create a filter set on conditions that matches more than 10k cases and less than 20k cases. **3.** Re-mine the project. **4.** See that the filter set model now displays the incorrect case count. Expected behavior: It should mine all cases that match the filter sets and display the correct case count. Actual behavior: An incorrect case count is displayed for a filter set model.
Process Mining Workspace PRB1861801	The count between tables in MDM is incorrect		Open the project 'Incidents with Bad Change'. Notice that the count of records between the Incident table mine and Change table mine are incorrect.
Process Mining Workspace PRB1862573	When the **Contextual** field is used in a contextual condition and the user edits the transition, 'id' is shown in the value list	The user is unable to select other values from the list when 'Priority' is 'id', and the scheduled task panel shows '2' instead of '2 - High'.	**1.** Create a project with the Activity as 'State' and contextual activity (AOI) as 'Priority'. **2.** Mine and open the Analyst Workbench. **3.** Add a condition with a contextual condition on Advanced Transition. **4.** View the result on the completed state. **5.** Select **Edit** from the 'Applied' filter.

Problem	Short description	Description	Steps to reproduce
			Observe that the value for 'Priority' shows 'id', and the user is not able to select any other values from the value list; and the scheduled task panel also shows '2' instead of '2 - High'.
Process Mining Workspace PRB1879536	Project copied from a Freemium project is accessible to a 'no role' user	The copied mined project is accessible to a 'no role' user, and the permissions itil and snc_internal role are copied over.	1. Impersonate as an Analyst User. 2. Create a copy of the Freemium project. 3. Observe that it also copies the permissions from the Freemium project (itil and snc_internal). 4. Mine the project. 5. Impersonate a 'no role' user. 6. Navigate to Process Mining workspace. Notice that the copied mined project is accessible to a 'no role' user with either an 'itil' or snc_internal role, and a non-analyst is able to do RCA, Clustering, Show records and Work Notes.
Process Mining Workspace PRB1885485	The Overview page of the guided setup isn't loading for a project which is created via PA journey		1. Navigate to the left navigation. 2. Search **Data Collector**. 3. Select **Jobs**. 4. Open the following: a. [PA Incident] Historic Data Collection. b. [PA Incident] Daily Data Collection. 5. Select **Execute now** for both. 6. Wait for 1 minute or until the process is complete. 7. Open the left navigation. 8. Search **KPIs** under Platform Analytics. 9. Open a PA indicator. 10. Choose an indicator on the incident because the incident is a default template. 11. Select **Run Process Analysis**. 12. Notice that this will trigger the PA API and create a project. 13. Search **PA projects** in the left navigation.

Problem	Short description	Description	Steps to reproduce
			14. Open it under 'Process mining'. 15. Notice that the newly created project is displayed. Open it. 16. Select**Edit** in the **Project builder** button. Observe that it goes into a continuous loop.
Process Mining Workspace PRB1891796	Show an alert instead of a modal and update tool tip for 'Get recommendations' in the Guided Process Configuration	This problem was observed in Yokohama.	Scenario 1: 1. Create a process configuration for an entity using 'incident'. 2. Add a **Textual** field in the 'Process perspectives section'. 3. Return to the 'Improvement opportunities' page. 4. Select **Get recommendations** on the 'Automated' tab. Notice that the message, 'No recommendations available' appears in an alert pop-up. Scenario 2: 1. Create a process configuration without filling in 'Process perspectives' section. 2. Create a project. 3. Hovers on **Get recommended fields**. 4. Notice that the tooltip says 'All recommended activity definitions have been added'. 5. Select **Get recommended fields**. Notice that 'No recommendations available' appears in an alert pop-up.
Project Management PRB1883485	A demand state isn't updating to 'Completed' after a project is created from a demand	This problem was observed in Yokohama.	1. Hop into an instance. 2. Create a new demand 3. Select the **Create Project** related link. 4. Notice the 'Demand' state is not changed. 5. Refresh the page, or reopen the same demand.

Problem	Short description	Description	Steps to reproduce
			Notice that the state is changed to 'Completed'.
Project Management PRB1885649	A cost plan roll up isn't happening for programs and portfolio		**1.** Create a Project. **2.** Assign a program to it. **3.** Add a cost plan and a benefit plan. **4.** Select **Save**. **5.** Validate the 'Financials' tab in the program.
Related List Action Model PRB1889099	When creating Attribute Adjustment for Price list line, the Price List Line id is not getting defaulted in the Attribute Adjustment form	This issue is noticed in Yokohama.	**1.** Hop on or log in to a Yokohama instance. **2.** Navigate to CSM/FSM Configurable Workspace. **3.** Create new a Price List. **4.** Create new a Price list line for the Product Offering Home Automation Hub. **5.** Set the Attribute adjustment for the Home Automation Hub price list line. **6.** Check the Attribute adjustment form. Expected behavior: Apply to all Price lists should be unchecked and Price list line should be pre-populated with price list line id. Actual behavior: In the Attribute adjustment form, Price Line line is disabled and not pre-populated with price list line id.
Reporting PRB1892235	When accessing scheduled reports, users are getting an error	When accessing scheduled reports, users get the error: 'Part of the query on par_coreui_migration _bridge_sysauto has been ignored because of insufficient access for 'query_match' operation' for non-admin users.	
Restricted Caller Access (RCA)	A chat attachment doesn't go through to the user's side	.	**1.** Install 'Advanced Work Assignment' (AWA) for HR Service Delivery (HRSD) in any Yokohama instance.

Problem	Short description	Description	Steps to reproduce
PRB1888111	on WM jobs correctly	'ignored' when the ml_solution state is still 'in progress'.	
Schedule Optimization PRB1890329	Handle conflict API for the default intraday configuration		1. Set up intraday configuration as the default. 2. Create event for any qualifier. 3. Open a work order task of the same qualifier when scheduled intraday job is triggered for the event. Expected behavior: The banner message for conflict resolution should be displayed. Actual behavior: The banner message will not appear when there is a default intraday configuration that will run for all the qualifiers active in the instance.
Schedule Optimization PRB1893394	Support the intraday attribute by overriding the configuration for conflict API		Create an Intraday configuration with 'Attribute override'. Notice that the conflict API doesn't consider the attribute override.
Schedule Optimization PRB1893918	When the task limit is exceeded, jobs stay in the 'In Progress' state, and the 'In progress' Prioritized Optimization (PO) job is ignored when the default job runs while it's still in progress	The PO job never comes out of the 'In progress' state.	1. Set up data in a way that a qualifier has more than 100 tasks. 2. Create an intraday configuration with PO set to 'True' for that qualifier. 3. Trigger a prioritized event for that qualifier. Notice that the PO job created stays in the 'In progress' state even after ML solution is complete, and never comes out of the 'In progress' state.
Schedule Optimization PRB1897154	Agent Shift horizon time isn't considered correctly for an Intraday run		1. Create agent shifts for today and tomorrow. 2. With 10+ work order tasks (WOT) qualifying for current intraday run. 3. Run the Intraday job. Expected behavior: The WOTs should be assigned within a current day. No WOTs should be assigned for next day.

Problem	Short description	Description	Steps to reproduce
			Actual behavior: WOTs are assigned to the next day.
Security Attributes PRB1852325	GlideSecurityManager dotWalkQueryCondition ToQueryElement expands dot-walked fields unnecessarily	When executing a query through GRM Table API or GlideRecordSecure, dot-walked conditions are expanded and the data is subsequently thrown out and not used if all ACLs on the target table are role-based.	1. Create a rest table API or GlideRecordSecure directly against cmdb_rel_ci. 2. Dot-walk to parent or child in conditions against cmdb_rel_ci. Expected behavior: GlideSecurityManager doesn't query for data that is not used. Actual behavior: GlideSecurityManager queries for the dot-walked condition fields, and throws them away shortly after.
Security Attributes PRB1916143	'Are You an Agent?' security attributes	This is a product update.	
Security Attributes PRB1916145	Default access posture security attribute	This is a product update.	
Server-side scripts PRB1913500	script_include_names cache flushes are frequent and expensive	This may contribute to semaphore exhaustion during plugin install.	
Service Catalog Builder PRB1876659	An admin user can't edit the catalog item in Catalog Builder	For an admin user, the role named 'catalog_builder_editor' is not mapped . Even if it's mapped manually, the user is still unable to edit the item using Catalog Builder.	1. Log in as an admin user. 2. Pick the latest track/catalogbuilder instance. 3. Navigate to **Maintain items** > **Standard Laptop**. 4. Attempt to select **Edit in Catalog Builder**. Expected behavior: It should launch the catalog item for editing in Catalog Builder. Actual behavior: The error message appears, saying the user is not authorized.

Problem	Short description	Description	Steps to reproduce
Service Catalog Builder PRB1877599	Template is created from scratch; mask and url base instance questions are available in item level for Catalog Builder		1. Create a catalog item template. 2. Don't change any restrictions at the question level. 3. Notice that two question types are selected, 'mask' and 'url'. 4. Create a catalog item with this template. Expected behavior: 'mask' and 'url' shouldn't be available for selection in the question subtype for single lines. Actual behavior: 'mask' and 'url' are available.
Service Catalog Builder PRB1878524	The 'Annotation' tab is missing from all newly supported question types in Catalog Builder	Support new variables in catalog builder.	1. Log in to the instance as catalog_builder_editor. 2. Navigate to question wizard from the item creation flow. 3. Choose a question type such as text, subytype - url, or any new type in builder. Expected behavior: The 'Annotation' tab should appear. Actual behavior: The 'Annotation' tab does not appear.
Service Catalog Builder PRB1879309	**Reference qualifier** field is displayed as a **Single line text** field in Catalog Builder	Additional features for existing variables in Catalog Builder.	1. Log in to the instance with the catalog_builder_developer role. 2. Navigate to Catalog Builder. 3. Select**Choice** as the 'Variable type'. 4. Select **Sub type** as a list with values from the table. 5. Navigate to the 'Additional details' tab. 6. Select **Advanced** as the 'Reference qualifier type'. 7. Validate the **Reference qualifier** field. Expected behavior: The **Reference qualifier** field should be multi-line text field. Actual behavior:The **Reference qualifier** field is single line text field.

Problem	Short description	Description	Steps to reproduce
			Actual behavior: Even before any values are entered or compared, both fields are highlighted in red as if they contain mismatched input.
Service Catalog Builder PRB1891330	In Catalog Builder, when creating a new lookup variable with a **Name** field that already exists, the 'Question preview' automatically displays the values of the existing variable by default	The 'Question preview' displays the values by default even before any tables are selected.	1. Navigate to **Catalog Builder**. 2. Create an item from scratch. 3. Enter the item name and short description. 4. Insert a new question in the 'Questions' tab with the type 'Choice' list (values from table)'. 5. Enter the **Name** field as the same as above the question in the 'Details'. Expected behavior: Since no tables have been selected initially, there should not be any values on the 'Question preview'. Actual behavior: Even before any tables have been selected, the 'Question preview' automatically displays the values of the existing variable by default.
Service Catalog Builder PRB1891381	When the 'Add script' button is selected twice, the submission gets stuck forever for client script in Catalog Builder	The user is able to select the 'Add script' button again because its not disabled after the first time, resulting in the user getting stuck on the submission message.	1. Login in to the instance as catalog_builder_developer. 2. Navigate to **Catalog Builder** > **Create new catalog item flow**. 3. Enter the 'Details' tab into the 'Client script' section. 4. Enter the client script name and type. 5. Select **Add script** twice. Expected behavior: The client script is created. Actual behavior: It is stuck with the submission message forever.
Service Catalog Builder PRB1892257	Previous default value isn't cleared from the list while editing the question with new set of default values in Catalog Builder	Previously set default value should be cleared off from the list.	1. Navigate to **Catalog Builder**. 2. Create a question with a Numeric scale. 3. Mention the default values as 1 to 4. 4. Set default value as 3. 5. **Save** it. 6. Edit the same question to change the default value to 5 to 9.

Problem	Short description	Description	Steps to reproduce
PRB1916122	control prefill behavior (KG, user personalization API, chat history)		
Service Catalog PRB1916139	Lookup selectbox and lookup multiple choice to take values from the sys_choice table as choices	This is a product update.	
Service Catalog Wizard PRB1874235	Scripted UI Policies don't run in the Service Catalog Wizard		1. Create a scripted UI policy on the Catalog Item Builder CRP. 2. Open the Catalog Item wizard. Expected behavior: Scripts of the policy must run in wizard. Actual behavior: Scripts of the policy don't run in wizard.
Service Catalog Wizard PRB1877107	Variable permissions are not honored on the Catalog Wizard framework	Two scenarios occur in this problem where variables aren't being honored. In scenario 1, the value for the **Meta** field is reset. In scenario 2, write permissions aren't honored and the script is executed.	Scenario 1: 1. Create a new field on the 'Create a catalog item' producer to map to the **Meta** field on the catalog item table. 2. Have a default value on the question created previously, for example, 'Testing meta tag'. 3. Navigate to the 'Permission' tab on the question created. 4. Add Catalog Developer as the read role. 5. Impersonate a builder editor. 6. Attempt to create an item. 7. Notice that the question was added to the wizard, when it shouldn't have been added. 8. Navigate to Platform. 9. Modify the value to 'Modified meta tag value' for the **Meta** field. 10. Edit the item again in Builder. 11. Change a field on the form that is visible.

Problem	Short description	Description	Steps to reproduce
			12. **Submit** it. 13. Notice that the item published. Expected behavior: The value for meta should be 'Modified meta tag value'. Actual behavior: The value is reset the default value provided on the question. The same should be the behavior on the variables in the producer set of type one to one. Permissions are not supported if a variable is in the MRVS producer set. The behavior should remain same for MRVS producer set. Scenario 2: 1. Create a custom variable with a save script and post insert script. 2. Navigate to the 'Permissions' tab. 3. Add 'Catalog developer' as the read role. 4. Add the variable to the wizard. 5. Notice that the scripts run irrespective of the permissions when they shouldn't be executed if the read permission is not met on the variable. 6. Give the 'Create' role. 7. Notice that the script gets executed irrespective, when the script shouldn't be executed if the main record is inserted because the mode should consider insert and honor the 'Create' permissions. 8. Give the 'Write' role. Expected behavior: The mode should be considered if the main record is updated, and should honor write permissions. The script shouldn't be executed. Actual behavior: The script gets executed.
Service Model Foundation -	Addition of Query ACLs in Service Model Foundation - Business Location	This change adds new Query ACLs on certain table(s) and field(s) to grant query_range access.

Problem	Short description	Description	Steps to reproduce
Territory Planning PRB1837020	In Dispatcher Workspace, there's an issue with a search territory agent	If the agent belongs to multiple groups, and the last group returned from the glideRecord query doesn't belong to the territory, and triggers the issue.	
Tier 2 Storage Offload PRB1889818	The default retry period for failed offloads is too low	The default retry period should be 6 hours.	**1.** Generate a record whose offload perpetually breaks. **2.** Make it fail on offload with a 60 minute retry period. **3.** Archive other records that would get offloaded by the same rule. Notice that the records never get offloaded.
Tier 2 Storage Offload PRB1890721	Tier 2 offload runs should be visible in the 'Archive rules' page	Users have no visibility of whether the offload is running or not. Progress should be viewed in the 'Archive rules' page.	**1.** Configure Tier 2 offload rule. **2.** Offload some records. Expected behavior: On the Archive Rule form next to Archive Run, there is a tab where the users can review offload runs. Actual behavior: Information is not available on the Archive Run form.
Tier 2 Storage Offload PRB1897660	Change the sys_property glide.db.archive.offload.free_storage_max_gb value from 100GB default to 36T		
Transaction Management PRB1871282	There's an IndexOutOfBounds and StringIndexOutOfBounds exception in transaction prioritization	This issue can occur under heavy load testing. This has been identified as the cause for a memory leak where HTTPTransaction objects are held onto after this exception causes the request to fail.	
UI Actions PRB1879023	A workspace modal with an **HTML** field doesn't render in Yokohama	When using g_modal.showFields() in a UI action to populate the modal from the workspace,

Problem	Short description	Description	Steps to reproduce
			See that the prefix 'Mandatory' is missing.
Upgrade Center PRB1891562	A user is unable to determine the purpose of a link when it has the context 'Here'		**1.** Start JAWS. **2.** Navigate to the 'Home' screen. **3.** Navigate to the **Dashboard page** > **Instance upgrade panel** > **Visit Upgrade Center link**. **4.** The respective page opens in a new tab. Note that the screen reader announces 'here' as the link and not what the link is for.
Upgrade Center PRB1895609	Glide upgrade failed due to node getting restarted	This is an edge case where a certain combination of plugins trigger this behavior.	**1.** Reset to baseline builds for Yokohama for Loadsim. **2.** Trigger an upgrade.
Usage Analytics PRB1898047 KB2306210	On Yokohama, User Analytics data isn't refreshing post-clone, copy, or restore	Cloned/Restored/ Copied instances start tracking usage data and are able to see the data on the UXA Dashboard.	Refer to the listed KB article for details.
Usage Analytics PRB1904448	Some users don't want internal ServiceNow instances such as support, impact, or nowlearning to track their users	ServiceNow instances should be able to turn off the tracking of Usage Analytics data with their custom script and system property.	**1.** Navigate to any instance. **2.** Confirm that the 'Disabled' policy is configured in Policy Script Provider. Actual behavior: Observe that the metric calls are still going with Essential Tracking Level. Expected behavior: There should be no metric calls.
Usage Analytics PRB1905285	An empty or invalid hashUserId column in the sys_user table breaks metric call validation and user event enrichment, leading to inaccurate UXA	Users with incorrect usage data displayed on the UI due to user table settings now have usage data being collected properly and reflected on the UXA dashboard.

Problem	Short description	Description	Steps to reproduce
	dashboard metrics		
UX Framework PRB1889441	Pagination is broken in Multi-Data source broker	Cursors are stored in the format of the map, which is converted to the byte stream and base64 encoded. While decoding, the cursor is expected to be JSON, and throws an exception.	1. Create a state to store the cursor and page number. 2. Create a page with multi-table data with two data sources. 3. Bind the state variables to it. 4. Add a button to fetch more data, which will update the state variable with the cursor from the response. Notice that the response doesn't have updated results.
UX Framework PRB1889452	The name/ sys_id of the data source is not returned in the response of multi-table data	The response of the data broker only returns the table.	1. Create a page with Multi-table data broker. 2. Add two data sources with different names and queries. Notice that the response of the data broker only returns the table, but, not the name/sys_id of the data source.
UX Framework PRB1890019	Using Zing search results in wrong pagination with Multi-Source data broker		1. Create a page with a multi-source data broker. 2. Add a data source with filter condition as 'Keywords' 'are'. 3. Pick the value such that the result count is less than a page size. 4. Execute the databroker. Notice that is_last_page value is true, when it should've been false.
UX Framework PRB1901587	Intent Library changes cause a SEND_INTENT_FEEDBACK error due to no meta.generatorForFeedback	The NAP window eventually displays a message that reads: 'An error occurred while saving your app. Please check with your admin.' The following error can be observed in the browser console: 'IntentTranslatorBehavior: LIBRARY-INTENT-CHANNEL#SEND_INTENT_FEEDBACK action is missing generatorForFeedback from meta'.

Problem	Short description	Description	Steps to reproduce
UX Framework PRB1904903	Results of different data sources have the same source ID	The datasource ID is set as static, hence all the results share the data source of the last result.	1. Configure the multi-table data broker to take different data sources with different sys_ids. 2. Notice that the results belonging to the different data source have the same sys_id.
UX Framework PRB1916142	Intent library updates for Gen AI Canvas	This is a product update.	
Virtual Agent PRB1826252	User inbound messages to a Live agent end up in the picker pagination logic in specific scenarios for channels	The user inbound message to a Live agent somehow ends up in the picker pagination logic in CAF if the last rich control before invoking the live agent was a paginated picker.	1. Create a custom topic for invoking a Live agent. 2. Add a paginated picker nod before invoking the Live agent. For example, choose a preferred language picker with 15 options. 3. Make this the default topic for Live agent.
Virtual Agent PRB1874005	A record in provider_user_map is still inactive, causing Now Virtual Agent to fail approvals	When a sys_user record becomes active after being deactivated, provider_user_map is still inactive and there's no logic to activate the mapping. The user still receives a notification for record approval in Microsoft Teams because the mapping exists, even though provider_user_map is inactive. When the user attempts to approve the record, an error occurs because their record in provider_user_map is still inactive.	
Virtual Agent PRB1892416	Incorrect column usage when updating the One API Service Plan Invocation record	A warning occurs in the logs.	1. Execute any simple Now Assist Virtual Agent use case (for example: small talk, what is spam). 2. Notice the warning in the logs: '2025-05-13 08:59:06 (140) glide.cs.worker.93 SYSTEM txid=c1dfd72c876d SSI_ef76d022b7cf9a109d63827b5e11a913

Problem	Short description	Description	Steps to reproduce
			WARNING *** WARNING *** getGlideElement called for unknown field 'startedAt' in table 'one_api_service_plan_feature_invocation' 2025-05-13 08:59:06 (140) glide.cs.worker.93 SYSTEM txid=c1dfd72c876d SSI_ef76d022b7cf9a109d63827b5e11a913 WARNING *** WARNING *** setValue called for unknown field 'startedAt' in table 'one_api_service_plan_feature_invocation''.
Virtual Agent PRB1892510	Support 'Sync' mode for Java execution path	Currently, the Java execution path for OE system executor capabilities are limited to just the async mode. This is limiting the ability to execute troubleshooting tools via background scripts. The 'Sync' mode execution should be fully supported for the Java path as well.	
Virtual Agent PRB1894471	Virtual Agent push notifications aren't coming through on mobile	Noticed on Android.	**1.** Set up a user with a push token and mobile client with NASS chat. **2.** Start a chat. **3.** Send a sequence of messages synchronously. **4.** Close the mobile client when they are sending. **5.** Wait. Expected behavior: Users should see a push notification. Actual behavior: There's no push notification in NASS.
Virtual Agent PRB1894545	LLM responses are not unmasked if streaming is enabled with java proxy enabled		**1.** Enable NowAssist assistant with streaming. **2.** Use GPT4-0. **3.** Enable masking for email address and/or phone number types for the phrase 'what is my contact information'.

Problem	Short description	Description	Steps to reproduce
			Expected behavior: The unmasked email/phone numbers are displayed. Actual behavior: The email/phone numbers are displayed with masks.
Virtual Agent PRB1895195	When the user enters an invalid/partial utterance, an error appears and the conversation is closed	Dynamic capability executor can trigger multiple capabilities with different payloads. However, dynamic capability executor fails when duplicate capability IDs are passed.	
Virtual Agent PRB1896593	Shouldn't be relying on the 'Greetings' topic for portal's Virtual Agent hand off	Users can have custom 'Greetings' topics. For those users, the hand off is broken.	
Virtual Agent PRB1898661	Non-LLM time has increased from 2544 to 3065 milliseconds (ms), leading to 500-900 ms in some NAVA use cases	In NAVA use cases, users observed 500–900 ms degradation from 2544 to 3065 ms in non-LLM async time. For a synthesized response, the non-LLM has degraded and it's spending additional 1.2 secs on that. Hence, the overall gain on the response stands at 5.3 seconds (6.5-1.2).	
Virtual Agent PRB1903011	The error 'Cannot invoke 'org.apache.commons.httpclient.StatusLine.getStatusCode()' because 'this.statusLine' is null' for LTM capabilities	The error is observed in the Gen AI logs for the conversation.	**1.** Switch to any model. **2.** Try any utterances. Observe that in the Gen AI logs for that conversation, there's an error, 'Error: Cannot invoke 'org.apache.commons.httpclient.StatusLine.getStatusCod because 'this.statusLine' is null Error Code: 200000'.
Virtual Agent PRB1905944	enableDynamicTranslation and enableNativeTranslation should be passed as boolean values

Problem	Short description	Description	Steps to reproduce
Virtual Agent PRB1908511	Now Assist panel (NAP) assistants should read agentic mode from now_assist_va_search_results_output_type	NAP assistants (both legacy client and new dynamic window) should read agentic mode from the Now Assist panel record on now_assist_va_search_results_output_type. The new dynamic window UI for NAP has been reading from the mweb record instead.	
Virtual Agent PRB1912380	Don't log agent skill execution licensing	It shouldn't create a licensing record when an agent skill is executed. The AIA framework does its own calculation/logging for agent execution based on the execution tasks created at runtime.	
Virtual Agent PRB1912588	AiAgentSecurityMigration and AiAgentSecurityHelper script includes needs to be in the global scope		
Virtual Agent PRB1913835	Canvas isn't displaying the Show/Hide options when executing a skill	While Web Agent is executing the goal, the live 'Screenshot' view isn't loaded. After the execution, it's displaying the Show/Hide view, which is displaying all the screenshots.	1. Create an Agent WF. 2. Promote it. 3. Navigate to Now Assist Portal. 4. Switch to the 'Maximize' view. 5. Select the skill and start it. 6. Verify the live 'Screenshot' view isn't loaded.
Virtual Agent PRB1913892	Validation should be added for security attribute ID in global.GenAiSkillSecurityUtils.insertSkillAclBySkillid(...) and global.GenAiSkillSecurityUtils.updateSkillAclByAclId(...)	While calling global.GenAiSkillSecurityUtils().insertSkillAclBySkillid(...) and global.GenAiSkillSecurityUtils().updateSkillAclByAclId(...) with invalid sys id of security attribute, the security attribute is created with empty condition. Since it is expected to used with Background script, the user should be

Problem	Short description	Description	Steps to reproduce
		informed of the invalid value used for the security attribute.	
Virtual Agent PRB1915460	gen_ai_agent and gen_ai_workflow advance is turned off in the ACL form16 UI		1. Navigate to sys_security_acl.do. 2. Select the type as gen_ai_agent or gen_ai_workflow. Observe that there's no option called 'advanced'.
Virtual Agent PRB1915751	Midtopic switch isn't switching to a new topic and runs into an error on the continuing existing topic		1. Navigate to Dynamic Window. 2. Type 'i want to order food'. 3. Answer one of the prompts. 4. Type 'i want to order coffee actually'. Expected behavior: The user should be given an option to switch to the 'Order coffee' topic and have an option to continue the request. Actual behavior: The user gets the order food topic started again and choosing 'continue' runs into an error as well.
Virtual Agent PRB1915793	There's an incorrect name for flows when creating 'invoke_from_ai' ACLs		Execute this API to create ACLs for flows used as tools: 'new global. AiAgentSecurityMigration() .run(true)'. Observe that for the subflow ACLs, the ACL is created with 'name' instead of 'internal_name', which is incorrect and it's missing ACL evaluations at run time. It's defaulting to global * ACL due to the incorrect name of the flow.
Virtual Agent PRB1916762	An ACL restriction on sys_one_extend_resource_edge prevents websearch from being accessible to users		1. Set up a new instance. 2. Enable the search for Virtual Agent (VA). 3. Make /esc available for VA. 4. As Abel Tuter, navigate to /esc. 5. Select **globe**. 6. Type 'who is bill clinton'. Observe a 'sorry' message.
Virtual Agent	Update the ACL name for OE skills	Update the ACL name format to use the '<sys_name.skillConfigId'

Problem	Short description	Description	Steps to reproduce
PRB1917121	to align with changes from the OE team	format instead of the 'skillConfigId:<sys_name' format (where skillConfigId is the sys_id of the record, and sys_name is the name of the record in sn_nowassist_skill_config). This is only applicable when the 'internal_name' column in the sn_nowassist_skill _config table is empty.	
Virtual Agent PRB1917378	Agentic eval metric score standardization	It should incorporate the changes in NASK to display the label in the list view and the drill down view.	
Virtual Agent PRB1918363	Canvas isn't working	The 'Show' button doesn't appear at end of the execution.	**1.** Set up Canvas **2.** Go to Now Assist Panel on the instance. **3.** Select **Canvas Flow**. **4.** Enter **Yes** to answer the question that it's ready to execute Canvas. Expect behavior: At end of the execution, users will see the **Show** button. Actual behavior: Nothing appears.
Virtual Agent PRB1918740	Querying on virtual column for retrieving skill metadata fails		**1.** Navigate to AI Agent Studio. **2.** Choose an existing workflow or agent which has Now Assist Panel or Virtual Agent roles enabled. **3.** Create a new agent or workflow. **4.** Choose a role for those who can access the workflow or agent. **5.** Save and continue. Expected behavior: Previously associated skill applicability records should be deleted. Actual behavior: Previously associated skill applicability records still exists.

Problem	Short description	Description	Steps to reproduce
Virtual Agent PRB1921142	Pass agentic data to the conversational pipeline	This is a product enhancement.	
Virtual Agent Web Client PRB1893104	In Now Assist Multi-Turn Catalog Ordering, the 'Data/Time' type variable isn't showing the current time, but as 00:00AM in Virtual Agent for non-English language mode	The 'Data/Time' type variable should be displayed as the current time across all language modes.	1. Activate the following plugin/store apps to last version: a. UXC Generative AI (sn_uxc_gen_ai) b. Now Assist for IT Service Management (sn_itsm_gen_ai) c. I18N: Japanese Translations (com.snc.i18n.japanese) 2. Navigate to **Conversational Interfaces** > **Assistants**. 3. Enable Now Assist for Virtual Agent with 'Now Assist Multi-Turn Catalog Ordering' skill active in the Service Portal. 4. Create a catalog item with one 'Data/Time' type variable. 5. Navigate to **AI Search Index** > **Indexed Sources**. 6. Open 'Name='Catalog Item Table'. 7. Select **Index All Tables** so that the newly created catalog item will be included in the Virtual Agent search via AI Search. 8. Switch to the Japanese language mode after the reindex is done. 9. Navigate to Service Portal. 10. Open Virtual Agent. 11. Search the newly create catalog item. 12. Start the request. 13. Check the 'Data/Time' type variable display. Expected behavior: The 'Data/Time' type variable should be displayed as the current time, which is the same in the English language mode. Actual behavior: The 'Data/Time' type variable displays as 00:00AM in the Japanese language mode.

Problem	Short description	Description	Steps to reproduce
Virtual Agent Web Client PRB1897932	NAVA isn't picking interaction context variables when enhanced chat is turned on	Account and contact fields aren't populated on an interaction record. Note that the issue isn't reproducible when enhanced chat is turned off in Virutal Agent.	
Virtual Agent Web Client PRB1901424	Chat client lets multiple messages be sent through simple scripting		**1.** Open any chat client. **2.** Enter a message in the text box. **3.** Inspect the browser page and in the 'Elements' tab, highlight the now-button corresponding to the **Send** button. **4.** Move to the 'Console' tab. **5.** Enter a small script to simulate clicks multiple times. **6.** Observe all 15 messages are sent in the chat client. Expected behavior: Chat client shouldn't allow multiple inbound messages. Actual behavior: Chat client allows multiple inbound messages.
Virtual Agent Web Client PRB1904063	Typing too fast in an NLU-based text choice picker for a lot of rows prevents upgrades		**1.** Create a topic with a Dynamic choice picker in NLU. **2.** Ensure that the selected records have a lot of rows (10K+). **3.** Type fast in the text choice picker. Expected behavior: It should update the filtered items in the list. Actual behavior: The results never update due to 423 errors in the backend responses.
Virtual Agent Web Client PRB1910411	A user receives notifications when a notification toggle in the settings is turned off

Problem	Short description	Description	Steps to reproduce
Virtual Agent Web Client PRB1920026	Proactive trigger topics don't launch		1. Set up proactive triggers on the instance so there are topics that launch when selected. 2. Navigate to the portal where proactive trigger is configured. 3. Launch the associated topic when proactive trigger is received. Expected behavior: The topic should launch in Dispatcher Workspace. Actual behavior: The topic doesn't launch, and the user just sees the welcome message.
Visual Task Boards PRB1852813	If the modal window is closed by selecting outside of the modal, VTB cards aren't refreshed automatically when updated	This only occurs if the modal window is closed by selecting outside of the modal. If the modal window is closed by selecting the 'X' in the top right, the record's card updates automatically as expected.	1. Create a visual task board by navigating to **Self-Service** > **Visual Task Boards** > **New** > **Data Driven Board**. 2. Set **Task Table** to 'incident' and the **Vertical Lane** field to 'Incident State'. 3. Select **Next**. 4. For the conditions, set **Assigned to is [current user]** and select **Create**. 5. Select a card on the VTB to open the modal window. 6. Unassign the record from [current user] in the modal window. 7. Close the modal window by selecting outside of the modal. 8. Observe that the card remains on the VTB even though it no longer meets the conditions for the board. 9. Refresh the VTB page. Observe the card is no longer on the board.
Web Content Accessibility Guidelines (WCAG) Conformance PRB1818332	The tool tip for catalog items is not announced by the screen reader for accessibility

Problem	Short description	Description	Steps to reproduce
Window Manager PRB1920314	Upgrade to Yokohama Patch 6 is broken with the Windows Manager (WM) plugin	Adding the Windows Manager plugin to the glide-core-ui-components plugin in a patch creates a new version that uses the next commit SHA. The commit SHA is lower, and in the upgrade process, the lower version is skipped even though it is the 'new' version with the WM plugin added.	1. Open a Yokohama instance. 2. Upgrade the instance to Yokohama Patch 6. 3. Notice that AIEX/WM is broken. 4. Navigate to **v_plugin.list**. 5. Search for 'window-manager' in the name column. Notice that Window Manager is not activated whereas it should be.
Work Order Management PRB1902998	When re-assigning an Agent Work Schedule record from one agent to another in a collapsed group, agent blocks aren't properly reflected	The white markp shows an inaccurate work schedule for the agent with the updated schedule.	1. Assign a Work Schedule to an agent in a collapsed group. 2. Reassign the same Work Schedule to another agent in the collapsed group. 3. Refresh the calendar panel. Expected behavior: White markp should be displayed for the updated user, and the previous user that was assigned the Work Schedule should go back to gray. Actual behavior: White markp now appears for the previous agent that was assigned a work schedule as well as the updated agent, and two markps are present.
Zero Trust Access PRB1830413	Zero Trust Access (ZTA) policy-based authentication is applied for Impersonation		1. Install a ZTA policy-based plugin. 2. Create a configuration with a condition as if role is ITIL. 3. Remove the ITIL role.2. Log in as a user with elevated privileges. 4. Attempt to impersonate the ITIL user. Expected behavior: ZTA shouldn't apply for the impersonated user. Actual behavior: ZTA policies are applied, and the ITIL role is relegated from impersonation.

For more information about the release cycle, see the ServiceNow Release Cycle.

Note:
This ServiceNow AI Platform major family release is now available in ServiceNow's Regulated Market environments. For more information about services available in isolated environments, see KB0743854.

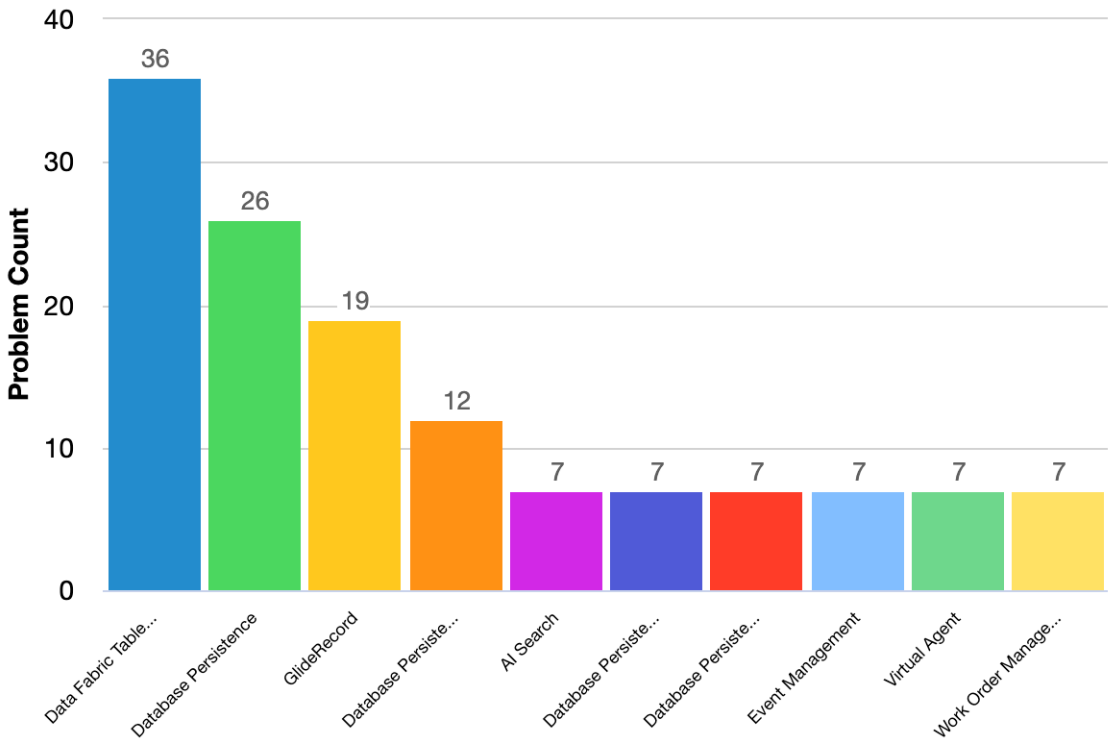
For a downloadable, sortable version of the fixed problems in this release, click here.

Overview

Yokohama Patch 5 includes 329 problem fixes in various categories. The chart below shows the top 10 problem categories included in this patch.

Top 10 problem categories



Security-related fixes

Yokohama Patch 5 includes fixes for security-related problems that affected certain ServiceNow® applications and the ServiceNow AI Platform®. We recommend that customers upgrade to this release for the most secure and up-to-date features. For more details on security problems fixed in Yokohama Patch 5, refer to KB2192702.

Changes in Yokohama Patch 5

QueryRangeACLAuditor

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

This patch includes the May Maintenance update script in the form of a script include (QueryRangeACLAuditor). This script is not triggered automatically and must be run after a patch upgrade. More details on running the QueryRangeACLAuditor and its functionality can be found in KB2046494.

Workflow Data Fabric Hub

Notable fixes

The following problems and their fixes are ordered by potential impact to customers, starting with the most significant fixes.

Problem	Short description	Description	Steps to reproduce
Agent Chat PRB1900981 KB2226265	Inbox audio is delayed when the 'Workspace' tab is inactive or out of focus before receiving the first work item		Refer to the listed KB article for details.
Database Persistence - Data Scale PRB1840823	Temporary files are left by PG-JDBC driver	There must be obsolete .trs files in /glide/nodes/<node port>/tmp directory. Obsolete files are created 1 hour ago or before and not touched.	
History Set PRB1844946 KB1923828	There's intermittent duplicate comments in an Activity Stream due to sys_email records	Some comments are duplicated due to the presence of sys_email records. This duplication occurs when a comment is added in a way that causes the incident's sys_updated_on timestamp to be one second earlier than the corresponding sys_journal_field record. If emails are triggered by the incident update, the loading of sys_email records within the related sys_history_set interferes with the **last_update_recorded** field in sys_history_set. This disruption	Refer to the listed KB article for details.

Problem	Short description	Description	Steps to reproduce
		ultimately results in the duplication of the comment whenever the next update to the incident occurs.	
Internal Platform Security Services PRB1813597 KB1790767	There's a MIME type check error when attaching a txt (sjis code) file after upgrading to Xanadu	MIME Type check error: '[File type not permitted or mime type does not match the file content]'.	Refer to the listed KB article for details.
List Controller PRB1847141	Lists in Service Operations Workspace (SOW) aren't automatically refreshing	When users enable the glide.lists.live_list_enabled property and make any changes in any record of the list, then the list refreshes in SOW version 5.0.1 but not in version 6.1.1.	1. Navigate to an instance. 2. Open Service Operations Workspace version 6.1.1. 3. Navigate to any list in the SOW. 4. Select the record number, and make some change to the record that should be visible on the list. 5. Save and close the record. 6. Observe that the record still displays in the list without the changes that were just made. 7. Open a new browser session in a different browser. 8. Navigate to the same list and make a change. 9. Save. Observe that the list on the first browser session doesn't change. Eventually, a number appears on the **refresh** button at the top of the list. Select the button, and the data refreshes.
UI Form Administration PRB1866407	Activity Stream attachment file actions don't work when a page has been set up to use the multi-controller template	Attachments aren't downloadable from the Activity Stream.

All other fixes

Problem	Short description	Description	Steps to reproduce
Access Control PRB1889272	GlideSearch_Query suggestions user context gathering triggers role creation	When gathering user context, the platform triggers role creation.	
Action Bar Component PRB1840507	An incorrect action bar intermittently displays		1. Navigate to /now/cwf/agent/home. 2. Impersonate a user. 3. In the list, select **My cases** > **New**. 4. Select **Accept** UI action. Expected behavior: The action bar shouldn't change. Actual behavior: The action bar changes in a few seconds after the case is accepted.
Activity Stream Compose Component PRB1897434	The 'Email' tab in the Activity Stream in the CSM Configurable Workspace doesn't resize when the text is larger than the vertical limit	This issue is found in Yokohama, but works as expected in Xanadu.	1. Navigate to a Yokohama instance as an admin user. 2. Navigate to the **Activity Stream** > **More** > **Email**. 3. Select **Return past vertical limit**. Expected behavior: The email text box auto-resizes vertically. Actual behavior: The email text box doesn't auto-resize.
Activity Stream PRB1881272	'Multiple delete' should check the condition list for archive tables	The 'Archive destroy' task uses multiple delete to remove sys_journal_field data. Users have to query the table to find which records specifically are deleted so that it can create a delete message for them. ActivityDBListener. removeMultipleEvents() has to check the dbDeleteQuery. getQueryConditions() for the rule's documentTable and

Problem	Short description	Description	Steps to reproduce
		ignore it if it isn't a table they care about.	
Activity Stream PRB1888279	The **Translation** button isn't turned on in a legacy Agent Workspace when dynamic translations are turned on		1. Apply an update set to install, configure, and turn on dynamic translations, legacy Agent Workspace, and CSM/FSM Workspace. 2. Open an incident in either legacy Agent Workspace (/now/workspace/agent) or CSM/FSM workspace (/now/cwf/agent). 3. Add a comment in another language. Expected behavior: When hovering over the journal tile for the newly added comment, a **Translation** button should be visible and clickable. Actual behavior: When hovering over the journal tile for the newly added comment, there's no **Translation** button.
Activity Stream PRB1888552	Attachments aren't removed from an activity stream when stored on a secondary DBI	In a multiple delete scenario, when the activity stream DB listener creates a DBQuery to select all Activity Stream records to remove, it uses the default DBQuery constructor, which selects the primary DBI by default. The DB listener needs to pass the same DBI that's used by the DB action to ensure that the correct DBI is utilized in a multiple DBI situation.	
Activity Stream PRB1893483	No activity displays in UI16 when a blank journal event is added to the Activity Stream	After upgrading to Yokohama, some records display 'No Activity' on the platform view. A null pointer exception displays.	
Activity Stream PRB1894361	Timeago elements (sn-time-ago) should display a tooltip when		1. Navigate to any instance. 2. Launch the Employee Service Center (ESC) portal by appending '/esc' to the URL.

Problem	Short description	Description	Steps to reproduce
	accessed via the keyboard		**3.** Navigate to the 'My Requests' menu item in the header and select. The 'My Requests' page opens. **4.** Using the keyboard, navigate through the list of requests. Select 'tab' until the time focus goes on a sn-time-ago element. Expected behavior: If the focus should move to the non-interactive elements for sighted users who use the keyboard, then the tooltip should appear without hovering over it. Actual behavior: The tooltip isn't visible when the focus moves to the 'created/ updated' elements using the tab key.
Advanced Risk PRB1896933	Addition of Query ACLs in Access Control List (ACL) Rules in Advanced Risk	This change adds new Query ACLs on certain table(s) and field(s) to grant query_range access.	
Agent Chat PRB1887118	The 'new message' sound and desktop notification aren't working in legacy workspace		**1.** As an agent, navigate to the legacy workspace with the url /workspace/ agent. **2.** As a requestor, start a chat. **3.** After an agent accepts the work item, as a requestor, start sending some messages. Expected behavior: When desktop and sound notifications are turned on, an agent should hear the sound for a new message and receive desktop notifications for the new message. Actual behavior: There's no sound or desktop notification.
AI Search PRB1850255	ScriptableSearchActionHandler throws a NullPointException (NPE)	There are several areas where NPEs in AI Searches should be better handled.	**1.** Create a search profile with no search sources. **2.** Search using that profile. Observe the NPE in the log.

Problem	Short description	Description	Steps to reproduce
AI Search PRB1875255	Glide sends an 'admin' value in the **Date** field	There's an error in the logs.	
AI Search PRB1885792	AI Search only logs sources that match a search in the sys_search_source_event		Search with a query term that returns no results. Observe that no sources are logged in sys_search_source_event. The entry for each source that was searched and has_results=false.
AI Search PRB1892363	Citations in Genius Results, after selecting 'Ask in Chat', don't automatically close the pop-up, causing overlay	The Virtual Agent open page refresh pop-up appears if not permanently dismissed.	1. Search 'Request laptop'. 2. In the synthesized response, select **Citations** > **Ask in chat**. Virtual Agent opens, but the citations pop-up is still open and doesn't close automatically.
AI Search PRB1893376	Need to support filters on KBBs in AI Search sources	Users currently lack the ability to exclude specific KBBs from the search sources. There should be a way to define and apply filters on KBBs within the search configuration—filters that are respected when retrieving results from AI Search.	1. Create a KB containing a KBB. 2. Index the 'Knowledge' table. 3. Create a search profile with a search source containing that KB. 4. Publish the search profile. 5. Execute a query against that search profile, which only matches the content of the KBB (and not the parent KB). See that the corresponding KB displays in the results. 6. Add a KBB filter by adding sys property 'glide.ais.kbb_filters'. Only KBBs that match the encoded query are returned. 7. Execute the same query as step 5. The same KB shouldn't appear on the results if the KBB doesn't pass the filter condition.

Problem	Short description	Description	Steps to reproduce
AI Search PRB1900322	A synthesized response isn't displaying on Portal when Dynamic Window (DW) is turned on	A response is present in the sys_generative_ai_log. It's working fine in the chat.	1. Open a Yokohama instance with recent Store apps. 2. Enable DW on Portal. 3. Perform a search for any query. Notice there's no synthesized response.
Analytics Data API PRB1839577	A chart is rendered with a default group by option when the 'None' group by option is selected		1. Navigate to **All** > **Library** > **Dashboards**. 2. Create a dashboard. 3. Add a data visualization component to the dashboard. 4. Select: ○ Visualization type: Line ○ Data source: Asset table (alm_asset) ○ Add Group by: Assigned to ○ Add several 'Alternative group by' values 5. Save the changes and exit from the editing mode. 6. Check that the line chart is rendered according to the default 'group by - Assigned to'. 7. On the line chart, select the three dots in the right top corner. 8. Select **Show change group by**. 9. Select the **None** option in the 'group by' menu. 10. Check the re-rendered line chart. Expected behavior: When the **None** option is selected, the line chart should be rendered as there's no group by. Actual behavior: The line chart is rendered with the 'Assigned to' group by.
Application Install Engine PRB1869500	The user is unable to upgrade a base app version when a batch install hosts a customized app

Problem	Short description	Description	Steps to reproduce
Application Install Engine PRB1894443	Integrate sn_app_deploy JSON functionality into Glide	This is a product update.	
Application Manager PRB1886735	The 'Switch to Virtual Agent Web Client' link isn't receiving the keyboard tab focus	This impacts keyboard users who navigate documents sequentially and expect the focus order to be consistent with the sequential reading order.	1. Navigate to any instance. 2. Append sys_store_app_list.do to the instance URL. 3. Search for any Store plugin app, such as 'Virtual Agent Web Client'. 4. Change the application scope to 'global'. 5. Open the form. 6. Tab to the 'Switch to Virtual Agent Web Client' link. Expected behavior: The 'Switch to Virtual Agent Web Client' link should be receiving the keyboard tab focus. Actual behavior: The 'Switch to Virtual Agent Web Client' link isn't receiving the keyboard tab focus.
Application Manager PRB1891971	The 'How Search works' info icon tooltip details are not announced by the screen reader	The JAWS screen reader doesn't read the tooltip content.	1. Start JAWS. 2. Navigate to the Home screen. 3. Navigate to **Dashboard** > **Entitled ServiceNow apps** > **View all Applications**. 4. Tab to the 'How Search works' info icon. Notice that JAWS does not read the tooltip content.
Application Manager PRB1891976	The Application Manager pop-up title is incorrectly described as 'Activity Log' by screen readers		1. Start JAWS. 2. Navigate to the home screen. 3. Navigate to **Dashboard** > **Entitled ServiceNow apps panel** > **View all Applications link**. 4. Press **enter** on the **Activity log** button. Note that the screen reader dialog title announced is nothing like the visible modal dialog title.

Problem	Short description	Description	Steps to reproduce
			Expected behavior: It says 'Activity Log'. Actual behavior: It says 'Application Manager'.
Application Manager PRB1892000	There's a focus management issue on selecting **View More**	On selecting **View More**, more content is loaded. When pressing the tab key, the focus is going to the 'Skip to Main Content' link and not to the newly loaded items.	**1.** Launch an instance in a Chrome browser. **2.** Navigate to **Filter** > **All**. **3.** Navigate to **Admin center** > **Application manager** > **View all Applications link.** **4.** Scroll down and press **Enter** on the 'View more' link. **5.** Check where the keyboard focus is placed when the view more link is activated. Once more options are loaded and the user presses the tab key, the keyboard focus should go to the updated content and not to the 'Skip' link. However, when pressing the tab key, the focus is going to the 'Skip to Main Content' link and not to the newly loaded items.
Application Manager PRB1892002	The 'Sync in progress' and 'Sync completed' details aren't announced to screen reader users	On selecting 'Enter' on the **Sync Now** button, the sync starts progressing. That isn't communicated to the screen reader users.	**1.** Launch an instance in a Chrome browser. **2.** Navigate to **Filter** > **All**. **3.** Navigate to **Admin center** > **Application manager**. **4.** Turn the screen reader on. **5.** Press enter on the **Sync** button. **6.** Check whether the screen reader communicates the sync in progress/ complete state. Expected behavior: The 'Sync in progress' and 'Sync completed' details should be announced to screen reader users. Actual behavior: The 'Sync in progress' and 'Sync completed' details aren't announced to screen reader users.
Application Scoping	Apply cross-scope restrictions when querying		**1.** Create a Glide table in scope-A. **2.** Set its RCA property to 'Restricted'.

Problem	Short description	Description	Steps to reproduce
PRB1889050	Locally mapped data fabric (DF) tables		**3.** Create a DF table in another scope (Scope-B). **4.** Map it to the Glide table. **5.** Query the DF table. RCA records should be created from Scope-B to Scope-A, in Scope-A, with source type = Data Fabric Table, with the correct source and target tables.
Appointment Booking PRB1894193	The scope of the Appointment Booking service's configuration was changed in Yokohama, which leads to a scope access issue	After upgrading to Yokohama from Washington, the value of the 'Availability' table changed from wu_appointment to empty in some Appointment Booking service configuration records.	
Audit Management PRB1896927	Addition of Query ACLs in Access Control List (ACL) Rules in Audit Management	This change adds new Query ACLs on certain table(s) and field(s) to grant query_range access.	
Case and Knowledge Management for HR Service Delivery PRB1860702	The Vendor Portal 'Take-questionnaire' page stops working when the HR application is installed	Users observe an error on the page.	
Case Management PRB1892871	Cases RL on PI isn't accessible to a customer contact on the Business Portal due to query match and query range ACLs		
Change Management Collision Detector	The 'Conflict Detection' job, especially the ChangeCheckConflictsSNC script include,	This seems to happen when the Affected CIs [task_ci] table has a large amount of records on it. In one of	Run the 'Conflict Detection' job and notice it loops in the ChangeCheckConflictsSNC script include.

Problem	Short description	Description	Steps to reproduce
PRB1868251	can lead to an OutOfMemoryError and node restarts	the cases, there were 23,685,849 records.	
Change Management PRB1862569	Change CheckConflict can cause stale reads and updates, which causes unexpected other behaviors		
Change Management PRB1895395	A standard change template record producer condition builder filter operator is broken when the variable type 'List Collector' is used in conjunction with a standard change template field	On the 'Sample change requests' filter, after selecting a field, notice that all the operators are empty except for 'is'.	
CMDB Query Builder PRB1791382	CMDB Query Builder results' count isn't consistent	There's a missing result from the CMDB Query Builder query. This causes missing some records in the result with a default batchsize (100) without the user knowing they are missing the records.	
Communities PRB1865845	Some characters are displayed as unicode in blog titles	When a blog article in posted in the Community portal, some characters are encoded in unicode and then are displayed without being decoded.	1. With the Communities plugin installed, set up a forum and put 'blog' in the 'Content type' related list. 2. Navigate the Community portal. 3. Navigate to **Community** > **All forums**. 4. Select the created forum. 5. On the right-hand side menu, select **Post Content** > **Blog**. 6. In the blog title, input something like 'test漢字テストﾃｽﾄ７7'.

Problem	Short description	Description	Steps to reproduce
			7. Input a description. **8.** Select **Save as draft** or **Publish**. Observe that the title is now 'test漢字テストﾃｽﾄ７7'.
Configuration Management Database (CMDB) PRB1893434	A11y bug fixes on CMDB Workspace	Info tooltips are identified by screen readers as 'Search Button' and there's multiple H1 elements on a page.	Issue 1: Info tooltips are identified by screen readers as 'Search Button'. **1.** Start JAWS. **2.** Navigate to **Home** > **All** > **CMDB Workspace** > **Management tab**. **3.** Move the input focus to the info icon in excluded CIs. Note that the info tooltip is described as 'Search button'. Issue 2: Multiple H1 elements on the page. **1.** Navigate to **Home** > **All** > **CMDB Workspace**. **2.** Start NVDA. **3.** Display the speech viewer in NVDA. **4.** Navigate through the page's headings. Note that there are two H1s when there should only be one.
Content Analytics PRB1895477	The **agg_period_in_tz** field causes a zero action_count	Although sn_cd_analytics_stat aggregation records for Content Analytics now populate both agg_period (date-only) and agg_period_in_tz (full timestamp), the _calculateNumEvents method still does an exact match on agg_period_in_tz using a date-only string. Because the query value omits the time portion, no records qualify and every non-impression count is recalculated to zero.	**1.** Follow the Content Analytics KB to activate and set a tracking profile to default. **2.** Using the 'Schedule Content' module, publish content on all tracked widgets. **3.** Using SCA and content templates, publish content on all tracked widgets. **4.** Follow the Content Analytics KB to publish a tracked campaign. **5.** Verify that the new dashboard 'Content Overview' appears as expected. Expected behavior: Audience, views, and clicks are recorded. Actual behavior: Only audience and views are recorded.

Problem	Short description	Description	Steps to reproduce
Content Experiences PRB1895089	Welcome Banner (CD) carousel dots are moving in reverse when pressing previous/next arrows		
Content Experiences PRB1895347	Topic header banner images aren't displaying for users without elevated privileges	This happens when 'Schedule Content' records reference pointers for a widget instance (sp_instance) are broken, such as when the widget instance was deleted on the instance. With these schedules in this state, the topic header widget is somehow matching to the blank **sp_instance** field and triggering the altered UI instead of the banner.	1. Create a 'Schedule Content' [sn_cd_content_visibility] record. 2. Select a widget instance [sp_instance]. 3. Save the 'Schedule Content' record. 4. Delete the widget instance. 5. Open a Employee Center page (topic) with a banner image. Expected behavior: A banner image displays for all users. Actual behavior: A banner image doesn't display for users without elevated privileges.
Content Experiences PRB1897513	New update/ repair of a plugin causes the mass deletion of sys_translated_text records	After repairing and updating the plugin, the records in sys_translated_text table are completely erased.	
Core Platform PRB1775831 KB1818197	When the user accesses a CTI record URL before SSO or a local login, they are redirected to an incident.do record	When the user is logged in to an instance, a CTI link takes them to the correct record. However, when they are logged out, they are directed to the incident.do page.	Refer to the listed KB article for details.
Data Archiving PRB1865429	Infinite recursion is possible in the 'Archive Reparent Retry' job	In the 'Archive Reparent Retry' job (though not in the reparenting code in the archive job itself), a cycle in the sys_archive_related records causes infinite recursion. This can

Problem	Short description	Description	Steps to reproduce
		obstruct reparenting of other rules.	
Database Persistence - Data Access PRB1855719	The cmn_skill table isn't available to select as a node in the Knowledge Graph (KG) UI	In Project Management, there's a 'Resource Assignment' table that specifies which user/ resource is working on which task. Also, a project manager can request for resources either by group or role or skill. Users are able to add a group or role via the KG UI. But currently, users are unable to add Skill (cmn_skill) as a node.	
Database Persistence - Data Access PRB1885744	List view for a Glide table joined with an external table returns SQL syntax error if filtered with conditions based on the external table	An SQL syntax error occurs when the user tries to run the list view of the Glide table with a filter that uses fields from the data fabric table.	
Database Persistence - Data Access PRB1886440	When glide.db.trino.collate_ci.references is turned on, 'lower()' isn't used on 'JOIN' statements	The lower() function is used in the 'WHERE' clause, but not in the 'JOIN' statement.	1. Open an instance. 2. Open the 'List' view. 3. Set glide.db.trino.collate_ci.references to '=TRUE'. 4. Set glide.db.trino.collate_ci to '=TRUE. 5. Turn on SQL Debug. Notice that the lower() function isn't used in 'JOINS', but is used in the 'WHERE' clause.
Database Persistence - Data Access PRB1886577	Because of incorrect datatype mapping, users are unable to map float_type to Glide	Users aren't able to use the 'Float' and 'Long' data types, as they are inconsistent in usage.	
Database Persistence	CMDB list view never loads when grouped by	'Group by' never completes and times out.	1. Navigate to an instance. 2. Impersonate a system administrator user.

Problem	Short description	Description	Steps to reproduce
- Data Access PRB1889900	'Location' after a reference to a data fabric table is added		**3.** Open the sys_db_object record for incident table. **4.** Add a new field that refers to a data fabric table. **5.** Save the sys_db_object record. **6.** Add the field to the list layout. **7.** Open the cmdb_ci list view. Notice that when attempting to group by 'Location' the CMDB list never loads.
Database Persistence - Data Access PRB1890265	Users are unable to build a report due to the inability to run aggregate methods avg/ sum for the **Long Integer String** field brought in by BigQuery and Databricks		
Database Persistence - Data Access PRB1894406	SQL error messages can't be enabled	If glide.db.loguser is set to 'false' by running the background scripts 'gs.setProperty("glide.db.loguser", false)', then only one error message appears. If glide.db.loguser is set to 'true', two error messages appear.	**1.** Run the background script 'gs.setProperty("glide.db.loguser", true)' **2.** Create a table by creating a record in the sys_db_object table. **3.** Navigate to the sys_db_object record in that table. **4.** Create a column with the type 'Auto Increment' in the 'Columns' section. **5.** Create a new record on the table, for example put the value '1' in the new column. **6.** Create a new record with the same value. Expected behavior: Two error messages appear when the user should only receive one; 'Unique Key violation detected by database ((conn=493) Duplicate entry '1' for key 'PRIMARY')' and 'Invalid insert'. Actual behavior: Only one error message is shown, 'Invalid insert'.

Problem	Short description	Description	Steps to reproduce
Database Persistence - Data Management PRB1864182	An unreferenced record cleaner doesn't handle parent tables that are sharded and archived		1. Create a parent table that is sharded or extension. 2. Create an attachment that points to a record in this table. 3. Create an archive rule for that table. 4. Get the record archived. 5. Create a table rotation for sys_email with type 'extension'. 6. Set up an archive rule for incident. 7. Configure an archive related record with sys_email that references the incident table. 8. Run archive. The incident is moved to ar_incident, and related sys_email is moved to ar_sys_email0000. Expected behavior: This record shouldn't be considered unreferenced and eligible for deletion. Actual behavior: This record could be deleted by the unreferenced record cleaner.
Database Persistence - Data Management PRB1865408	An unreferenced record cleaner can potentially cause unintentional deletion when a reference table is an archive table	In case of document ID type references, if a table **name** field has a table which is an archive table (ar_x), currently the unreferenced record cleaner consumer doesn't check the corresponding base table(x) for existence. This can lead to data loss. This is because it is possible that the record is restored from ar_x to x but the document ID reparenting process didn't update the table **name** field back to x.	1. Create a document ID column table doc_id_tab. 2. Create a table test_tab. 3. Archive records from the table test_tab to ar_test_tab. 4. Restore records from ar_test_tab. 5. Insert a record in the table doc_id_tab with the table name as ar_test_tab and table_sys_id as sys_id of one of the restored records. 6. Create and run the unreferenced record cleaner rule for doc_id_tab. See the record from doc_id_tab being deleted equals data loss.

Problem	Short description	Description	Steps to reproduce
Database Persistence - Data Management PRB1866360	An unreferenced record cleaner is incorrectly applying GlideRecord.canDelete() logic		1. Create an unreferenced record cleaner rule for sys_attachment/ sys_attachment_doc. 2. Run the unreferenced 'Record Cleaner' job on the rule. Observe orphans in sys_attachment/ sys_attachment_doc aren't deleted.
Database Persistence - Data Management PRB1869761	An unreferenced record cleaner (URC) doesn't handle parent tables that are sharded and archived	Currently, URC checks for a base reference table and an archive reference table. But if the base reference table is part of a hierarchy, when the reference record gets archived, it doesn't go to ar_base_table, it goes to ar_child_table. Archiving flattens the table hierarchy. The URC can delete such records as unreferenced but they are actually not orphaned.	1. Create a table tab_parent. 2. Create a table tab_child extending tab_parent. 3. Create table ref_test with a 'Reference' type column referencing tab_parent. 4. Add records to the ref_test referencing records in tab_parent and tab_child. 5. Create an archive rule for tab_parent which archives tab_parent and tab_child records to ar_tab_parent and ar_tab_child. 6. Create a URC rule for ref_test. 7. Preview a sample of unreferenced records/run the 'URC' job. Expected behavior: No records are deleted. Actual behavior: Records belonging to ar_tab_child are deleted.
Database Persistence - Data Management PRB1871043	The unreferenced record cleaner (URC) rule using JoinUnreferencedRecordFinder can delete data that it shouldn't	JoinUnreferencedRecordFinder deletes data that shouldn't be deleted, and can return less than the chunk limit even if there is more data to be deleted.	1. Create a test_table with a reference to the test_reference table. 2. Insert data into test_table with null references. 3. Set the glide property glide.db.unreferenced _record_cleaner. verify_before_delete to '=false' when the default is '=true'. 4. Verify that the glide property glide.db.unreferenced _record_cleaner.consider _nulls_unreferenced is set to the default '= false'. 5. Run the unreferenced record cleaner for the rule.

Problem	Short description	Description	Steps to reproduce
			Expected behavior: Records with null references shouldn't be deleted. Actual behavior: Records with null references are deleted.
Database Persistence - Data Management PRB1884643	Unreferenced record cleaner (URC) doesn't handle parent tables which are sharded and archived	The archived record that is orphaned by the sharded parent table can be deleted by the URC, even though it should be considered unreferenced and shouldn't be deleted.	1. Create a parent table that is sharded. 2. Create an attachment which points to a record in this table. 3. Create an archive rule for that table, for example, so that a child table such as ar_sys_email_001 is created. 4. Archive the record, so that it's in the example child table ar_sys_email_001. Expected behavior: This record should not be considered unreferenced and ineligible for deletion. Actual behavior: This record could be deleted by the unreferenced record cleaner.
Database Persistence - Data Management PRB1888624	Archiving on data fabric (DF) tables results in multiple archive runs, but no records were archived	These process all create chunks which the framework later tries to execute on.	1. Create an archive rule on a DF table to archive less than ten records. 2. Wait for the hourly job. It won't produce any runs if users try to execute **Archive now** or manually from sys_trigger. Notice that over 3000 archive runs were created but no records were archived, and DF tables are read-only tables.
Database Persistence - Data Scale PRB1881044	User session context needs to be identified appropriately during a Trino loop back call	When creating a HTTP session using OAuthToken in a loopback case, some context about the original session is lost. A nonce table needs to be set up that can be used to persist the original session ID, transaction ID, and the session type (interactive/non-interactive) along with user sys_id using OAuthToken as nonce.	1. Create a reference field on an incident table to a data fabric table. 2. Log in as an interactive user. 3. Look up an incident list with the reference field in the view. Observe the loopback session created is non-interactive.

Problem	Short description	Description	Steps to reproduce
Database Persistence - Data Scale PRB1881949	Fast lock aren't released if a Tx is cancelled	This is a product update.	
Database Persistence - Data Scale PRB1884709	The user session context needs to be identified appropriately during the data fabric loop back call		1. Create a reference field on an incident table to a data fabric table. 2. Log in as interactive user. 3. Look up an incident list with a reference field in the view. Observe that the loopback session created is non-interactive.
Database Persistence - Data Scale PRB1887442	Don't shut down the Trino connection pool upon an InternalErrorException	Currently, when a Trino query fails execution and the translated exception is of 'InternalErrorException', the Trino connection pool shuts down. With the introduction of the ServiceNow Connector, any authentication error is translated as 'InternalErrorException', which causes the Trino connection pool to be retried and recreated. This is unnecessary and can make things slower as the cluster is really intact and has no issues.	1. Establish a Trino connection. 2. Load a data fabric table list view. 3. Set the 'glide.db.df_engine .sn_connector. loopback. oauth_access_token. enabled' property to false. 4. Load the same data fabric table list view. It should complain in the UI about not having the oauth token in the request. Observe in the log that the trino_primary pool was actually shut down and re-created. It would have 'unpooled: trino_primary' in the log after the oauth token exception.
Database Persistence - Data Scale PRB1888243	Loading the 'List' view for a Glide table that has an element referencing a data fabric table on a reference key is almost impossible	The list loads slowly and the 'Form' view doesn't open.	
Database Persistence	Users are unable to open the 'Incident Form'	This also happens on an 'Incident' table in a SURF clone. It displays

Problem	Short description	Description	Steps to reproduce
Database Persistence PRB1869557	Running any GlideScript errors out when run after around 10 minutes of inactivity	The error executing query: 'Cannot invoke "io.trino. jdbc.$internal. client.QueryResults. getNextUri()" because the return value of "java.util. concurrent.atomic. AtomicReference.get()" is null'.	
Database Persistence PRB1870521	Upsert to reservation tables throws an exception	A unique key violation is detected by a database. Upsert throws an exception for duplicate entries.	
Database Persistence PRB1872092	LOWER() usage in query predicate turns off predicate push down from Trino to an external data source	This means that when the SQL is executed, partial SQL is sent to an external data source: SELECT col1, col2, and col3 from sample_table. This leads to bad query performance as PUSHDOWN of predicate doesn't happen, and that the entire table is downloaded from an external data source leading to (a) excessive data download, (b) bad query performance, and (c) high resource usage at Trino layer. Functionally, this bloats the 'data downloaded from external source' licensing metric.	
Database Persistence PRB1872106	'Show matching' in list view doesn't work for truncated data	In the 'List' view, if the user selects a field that displays a truncated value and selects 'Show matching', no value is returned.	
Database Persistence PRB1872607	Loading data fabric (DF) tables coming out of 'Idle time' for Trino throws a 500 error	A first time query hits an error: 'Error executing query: Error starting query...'	**1.** Let 'Idle time' trigger for Trino. **2.** Stop queries for remote tables. **3.** After 10 minutes, query remote tables.

Problem	Short description	Description	Steps to reproduce
PRB1888349		an error message that doesn't make sense.	
Data Fabric Table Glide Services PRB1888617	Users can't drop a locally mapped data fabric (DF) table without a Workflow DF (WDF) license	There's an error: 'Failed to establish connection. Check your credentials or try again later. If the issue persists, contact your administrator. Additional Details: Instance is not licensed for Zero Copy Connectors cannot execute dropDataFabricRemoteTable.'	1. Navigate to an instance that doesn't have Trino configured, and which doesn't have the WDF license. 2. Create a locally mapped DF table. 3. Try to delete this new table. Notice that dropping a locally mapped DF table should be possible without a WDF license.
Data Fabric Table Glide Services PRB1888676	A data steward can't create a data fabric (DF) table in a scoped app for a local instance connection	When a data steward connects a application table, it can connect it to local tables. During selecting columns, the column that isn't supported should be grayed out and not selectable from the menu. This scenario occurs for developed applications that have a space in the name(" ").	1. Log in as a user having the delegated_developer role and data steward role for any scoped app. 2. Navigate to Workflow Data Fabric Hub. 3. Select **Servicenow Local Instance** connection. 4. Select any table belonging to the sn_admin_center scope from the schema list. 5. Make the column selection for the DF table to be created. 6. Select **Continue**. Expected behavior: The table gets created. Actual behavior: The table doesn't get created and throws the following error: 'Alert level: critical. Failed to create data fabric table with error: Data Fabric Hub: Unable to create a data fabric table. Failed to create data fabric table. You must have delegated development roles in this application scope to create a data fabric table'.
Data Fabric Table Glide Services PRB1889059	An upgrade resets to an 'open' instance status workaround on production test instances	Data fabric tables and zero copy connectors require a product to operate due to their additional Trino infrastructure. The zero copy connector metadata has been moved into a licensed	1. On a production instance, set the instance status to 'Open'. 2. Upgrade the instance to an updated track version. Note that the status is reset to 'Closed'.

Problem	Short description	Description	Steps to reproduce
		store application sn_data_fabric_ connector_metadata. The Trino code is part of a core plugin, and the ability to reserve a Trino cluster should be limited to instances that are entitled to the zero copy connector application.	
Data Fabric Table Glide Services PRB1889097	Users encounter an error when attempting to map a 'char' column from an application table to a data fabric table	Additionally, users are unable to add a new column with the 'char' data type when creating a data fabric table from scratch.	1. Navigate to the 'Data Assets' page. 2. Select an existing schema and table. 3. Select **Create Table**. 4. Provide a name for the new data fabric table. 5. Select **Continue**. 6. In the column definition section, attempt to add a new column with the data type set to 'char'. Alternatively, if editing an existing data fabric table, try to change the data type of a column to 'char'. Observe that the option to select or add a 'char' column is unavailable.
Data Fabric Table Glide Services PRB1889647	'Ship First Party App to a new instance' and 'Edit connection' doesn't handle the TD cache properly		
Data Fabric Table Glide Services PRB1890695	Ensure that empty non-mandatory connection fields passed to the backend are handled correctly for all connectors		
Data Fabric Table Glide Services	Integrate with the 'Persistence' API for to check the referenceable	Today, if users try to create a reference to a Glide table from a DF table, it provides the sys_id as the only

Problem	Short description	Description	Steps to reproduce
PRB1892019	columns from a table during data fabric (DF) table creation	option unless there's a unique key.	
Data Fabric Table Glide Services PRB1892093	Address decryption issues with **password2** fields	Users are getting an error when trying to establish connections: 'Alert level: critical. Failed to establish connection. Check your credentials or try again later. If the issue persists, contact your administrator. Additional Details: data fabric engine connection test failed'.	
Data Fabric Table Glide Services PRB1893391	Users are able to make a reference from-to any type when creating a data fabric table	As part of this, references aren't allowed if the remote column type is integer. Only strings are supported.	
Data Fabric Table Glide Services PRB1893437	Data fabric (DF) table default ACLs aren't consistent with a regular table's	DF tables should have default ACLs and table access policies set correctly.	Create a DF table in a private scope or in the global scope. Expected behavior: Default ACLs match to that of regular platform table's. Actual behavior: All the table access policies are set true except delete. No ACLs are created by default.
Data Fabric Table Glide Services PRB1893502	Deactivated connection tables are missing from the data fabric 'Tables' page		**1.** Navigate to the 'Established Connections' page. **2.** Open an existing connection with associated tables. **3.** Deactivate the connection. **4.** Navigate to the data fabric 'Tables' page. **5.** Observe the displayed tables. Expected behavior: The deactivated tables should be available under the 'other' section within the data fabric 'Tables' page. The user should be able

Problem	Short description	Description	Steps to reproduce
			to change the connection of the tables under the deactivated connection. Actual behavior: Tables associated with a deactivated connection aren't on the data fabric 'Tables' page.
Data Fabric Table Glide Services PRB1894742	Adding a mapping level checks to check if the source table has RCAs	Currently, when a data fabric (DF) table is created from a Glide local table as the source, there are no checks in place to enforce if the source Glide table needs RCAs to access the table.	**1.** Create a DF table using the Glide_internal connection. **2.** Select a Glide local as source, which needs RCAs to access the table. **3.** Select columns to be mapped and complete the mapping.
Data Fabric Table Glide Services PRB1895491	There's an ACL exception as part of the exception translation service	When a user tries to delete a data fabric (DF) table when not authorized, it can throw an ACL exception. This exception must be handled in the exception translation class.	**1.** Log in as an non-admin user. **2.** Try to delete a table created in the global scope. Observe that this throws an ACL exception: 'Failed to establish connection. Check your credentials or try again later. If the issue persists, contact your administrator. Additional Details: You must have the admin role to create or delete a data fabric table in the global scope'. The error message is misleading. The expected message is 'Failed to delete data fabric table. You must be authorized to create or delete a data fabric table in the global scope'.
Data Fabric Table Glide Services PRB1896064	A Snowflake established connection is broken after PEM key expiry and new key replacement	After updating the new key in established connections, in some instances the connection is successful, but the page goes blank.	
Data Fabric Table Glide Services PRB1897712	Query errors from connectors change the connection status to NOT_CONNECTED	When there was a query error from a connector, the connection status was changed to NOT_CONNECTED. The connection status is supposed to change to not connected only when there's a real connection level error.

Problem	Short description	Description	Steps to reproduce
		definitions may not be grouped correctly if they arrive close together in time.	
Event Management PRB1884824 KB2082291	Tag-based groups can include alerts which don't match the tag-based alert clustering definitions tags		Refer to the listed KB article for details.
Event Management PRB1884862	If there's an automatic group filter for automated groups, tag-based groups aren't created	The alerts that are supposed to be grouped aren't grouped.	1. Create a TAG definition or use a base instance definition. 2. Create an automatic group filter for automated groups with something illogical so that the automated groups won't be created. 3. Send at least two events that fit the definition. 4. Wait for grouping job to run. 5. Verify that alert exists in sa_agg_group_alert_staging table. Notice that alerts that should be grouped aren't grouped.
Event Management PRB1886771	Alerts with the same CI metric name aren't grouped together in the CMDB group if automated alert grouping is turned off	When Automated (ML based grouping) is turned off, the CMDB group isn't created for alerts with the same CI metric name.	1. Turn off automated (ML based) alert grouping. 2. Send two events with same CI metric name to create two alerts. Observe that CMDB group isn't created.
Event Management PRB1889397	If there's an alert with its initial event generated time in the future, an alert isn't added to tag-based group or alerts are split into a different group		1. Create a tag definition. 2. Create several events, whose alerts may be grouped by tag according to the definition above. 3. Create another event. 4. Change via script the initial event generated time (initial_remote_time) to the future of the relevant alert. 5. Create one more event and don't change the time. It should be added to the exiting group.

	value table as 'incident' in UI Builder		**5.** Save the page. **6.** Select the preview menu and select 'Open URL path'. Expected behavior: The page loads in runtime without any error. Actual behavior: The page loads fine but the user is alerted about the error.
GlideRecord PRB1894453	Create a scripted definition for usage metrics		
GlideRecord PRB1895699	A cache table creation message is displayed for data fabric (DF) tables		Create a DF table. A message for cache table creation is displayed when the user visits the list page of the newly created DF table.
GlideRecord PRB1897719	Optimizations for data fabric caching	Introduced strict validation and logging for 'IQueryCondition' types. Only allow caching for queries using fully supported conditions. Added support for longer than 74 characters table names by using a new format for the cache table name when the table name length is between 74 and 80 characters. Flushing the data fabric cache every time the TTL attribute gets changed to prevent serving stale data. Changed the log category for the 'Data Fabric Cache' table to 'WDF_CACHE_TABLE' to improve log filtering and analysis. A new scriptable API method 'DataFabricCacheManager.flushCache(df_table_name)' is available and accessible via scoped application scripts.

Problem	Short description	Description	Steps to reproduce
PRB1894767	List (ACL) Rules in GRC: Profiles	to grant query_range access.	
GRC: Regulatory Change Management PRB1890993	Addition of Query ACLs in GRC: Regulatory Change Management	This change adds new Query ACLs on certain table(s) and field(s) to grant query_range access.	
GRC: Risk Shared Common Components PRB1897619	Addition of Query ACLs in Access Control List (ACL) Rules in GRC: Risk Shared Common Components	This change adds new Query ACLs on certain table(s) and field(s) to grant query_range access.	
GRC: Vendor Portal PRB1889689	Addition of Query ACLs in GRC: Vendor Portal	This change adds new Query ACLs on certain table(s) and field(s) to grant query_range access.	
HR Service Delivery PRB1874464	The 'Suspended Reason' is overwritten with its previous value when the case moves from 'Draft' to 'Suspended state'	The issue is only reproducible when: the state moves directly from 'Draft' to 'Suspended', on HR Agent Workspace and not on UI16, and when the **Suspended reason [sla_suspended_reason]** field is on the form.	1. Log into an instance. 2. Impersonate a system administrator. 3. If the **Suspended reason** [sla_suspended_reason] field isn't on the HR Case 'Workspace UIB' view, add it to the form. 4. Open HR Agent Workspace. 5. Create an HR Case with the HR service 'General Inquiry'. Notice how the **Suspended reason** field displays as 'User' but it's empty. 6. Manually set the **State** field from 'Draft' to 'Suspended'. A pop-up window displays. 7. On the modal, set the reason to 'Group', add work notes. 8. Select **ok.** Expected behavior: The 'Suspended Reason' should be 'Group'.

Problem	Short description	Description	Steps to reproduce
	correctly in the case record		5. Select the hamburger icon and configure the form layout. 6. Add the **Description** field. 7. Save the changes. 8. Return to the HR case form. 9. Enter a message in the **Description** field. 10. Save the changes. Observe that the same value is automatically updated in the **rich_description** field. This behavior is due to the 'Sync Description with rich_description' business rule that synchronizes the values of the **Description** and **rich_description** fields. When users go to the list view and add the 'Description' and 'rich_description' columns, notice that the rich_description field doesn't contain any value. The reverse works as expected; when users update the **rich_description** field in the HR case form, the value appears in the **rich_description** field in the list view.
List Administration PRB1887929	A list type field isn't displaying the choice label on a list and instead displays its choice value	If choices are created on a task it works as expected. If choices are created on an incident only, there's a behavior difference between Xanadu and Yokohama. If choices exist for both tasks and incidents, the incident list in Yokohama incorrect displays task choice labels.	1. Navigate to a Yokohama instance. 2. Navigate to a dictionary. 3. Create a list type field on a 'Task' table. 4. In the choices related list on a dictionary, create some choices for an 'Incident' table where the label differs from the value. 5. Navigate to an incident form. 6. Configure the form. 7. Add the created list type field on the form. 8. For the list type field, add some value in the form. 9. Navigate to incident.list. Notice the list type field is displaying the choice value instead of the choice label. Repeat the same step in a Xanadu instance and observe it is working fine.

Problem	Short description	Description	Steps to reproduce
List Controller PRB1872717	When the user creates a new 'My List' and edits the columns, the list doesn't display personalized columns until the page is refreshed		
List Controller PRB1892485	Reference fields in a 'Workspace' list cause slowness, as each reference triggers an additional SQL call	In workspace, every reference in the list is requested separately. In contrast, in UI16, a single query with a JOIN is executed for the whole list representation. While for the primary database it doesn't have a significant impact, for Workflow Data Fabric tables (WDF), where each query takes >1s, even with small tables loading a list with 20 records can cause significant performance degradation.	1. Create a table with a reference to the WDF table. 2. Open /now/sow/list. 3. Create 'My list' using the newly created table. 4. Open the list. All references are requested from the external data source one by one for each record, even if there's duplicates.
Major Incident Management PRB1891876	The **View Workbench** UI action is redirecting to a broken 'Activity' section when opening it for a second time on a major incident form on the classic UI	After upgrading in Yokohama, when managing a major incident (MI) in the classic UI and moving to the 'Workbench' view, it's not loading properly. It's redirecting to a MI management broken activity view.	1. Open any major incident. 2. Select **View workbench**. MI workbench loads. 3. Select **View form**. 4. Once the form is loaded, select **View workbench** again and wait. See that a different form view is loaded instead of workbench. It seems to be that the redirection URL is changing to this form view.
MID Server PRB1864193	Upgrading a Linux MID Server to Xanadu reverts mid.shconf_override	mid.shconf_override has an empty setting. It's reverted to default setting after upgrading.

Problem	Short description	Description	Steps to reproduce
	to the default setting		
Mobile Platform PRB1883251	The 'Block Mobile Attachment Sharing' property for Mobile doesn't support exemption based on user roles	Changing the property glide.sg.block_ mobile_attachment _sharing from 'false' to 'true' should exempt some users based on their roles for the security property.	1. Navigate to **sys_properties.list**. 2. Change the property glide.sg.block _mobile_attachment _sharing from 'false' to 'true'. Notice that this applies to all users, when only some users require the ability to download or view attachments on Mobile based on their role.
Next Experience Notifications Menu PRB1851718	A URL isn't updated when navigating from the migrated dashboard by clicking the notifications	There's an issue on the unified navigation side that is causing this for several releases.	1. Navigate to pa_dashboards.LIST. 2. Select a dashboard. 3. Choose **Migrate Dashboard** from the 'Actions' menu. 4. Open the migrated dashboard from the message displayed on the top of the page. 5. Search for the migrated dashboard and open it. 6. Have a notification in the notification bell at the top-right hand corner of the Next Experience UI. 7. Select the bell. 8. Select the incident record in the notification list. Observe that while the record displays in the main window, the URL bar isn't successfully updated and the tab name is wrong.
On-Call Scheduling PRB1868011	The 'Show Schedule' link doesn't work for a non-admin user	After upgrading to Xanadu, non-admin users aren't able to access the on-call schedule.	1. Impersonate a non-admin user. 2. Open any on-call schedule for the group. 3. Select the 'Schedule' column for any schedule. 4. Select the UI Action **Show Schedule**. Observe that an error is thrown.
On-Call Scheduling PRB1893263	A query range error displays when the Automated Certificate

Problem	Short description	Description	Steps to reproduce
	Management Environment (ACME) rota_admin is accessing cmn_rota_member record filters		
OneExtend PRB1864500 KB2216882	Activating Now Assist skills creates unnecessary [sys_update_xml] records which shouldn't be transferred between instances	Unexpected customer updates are being automatically generated for one_api_* tables extending [sys_metadata]. This causes confusion among users as they are unaware of how the updates are generated and these records aren't intended to be transferred via an update set.	Refer to the listed KB article for details.
Performance Analytics Dashboards PRB1900147	Users are unable to open responsive CoreUI dashboards	An error message appears: 'Sorry! The requested dashboard has not been shared with you.'	
Platform Analytics Component API PRB1783660	A search isn't giving the expected results when the user language is set to non-English	The localization of the title of 'Visualisations' is also not working.	
Platform Analytics Filters PRB1841953	A filter is unexpectedly dispatching the 'reference' type	A filter is used to return 'choice' in the filter configuration type, but it was changed it so that it may return 'reference' when the field isn't 'choice'. This isn't fully correct, and it may also cause issues to other BUs and users. The filter should always return 'choice' for single and multi-select filters.	1. Create a dashboard. 2. Add a filter component to it. 3. Select as it as a 'data source incident' table and the 'field assignment' group. 4. Add a data visualization to the dashboard. 5. Select a 'single score' type and an 'Incident' data source table. 6. Save the changes. 7. Apply any value from the filter.

Problem	Short description	Description	Steps to reproduce
			8. Open the Webinspector to look at the network calls. 9. Refresh the visualization and look at the payload of the network call for the multivis API call. Expected behavior: The existing filterConfigurations has a type 'choice' for single or multi-select filters. Actual behavior: The existing filterConfigurations has the type 'reference'.
Platform Analytics Migration API PRB1882396 KB2072479	**Recipient Users** and **Recipient Groups** fields don't populate on migrated scheduled export records after the Platform Analytics migration	After the Platform Analytics migration on Yokohama, the **Recipient Users** and **Recipient Groups** fields from scheduled reports records don't populate to the **Recipient Users** and **Groups** fields for the migrated scheduled export records.	Refer to the listed KB article for details.
Platform Analytics Migration API PRB1894148 KB2173216	Bulk migration rewrites the scope of all Core UI dashboards		Refer to the listed KB article for details.
Platform Licensing PRB1894922	Apps update to true-up a newer version of LE and SM in Yokohama	'Delete auditing' is on by default for all tables. In one of the tables, there's logic that's deleting all records and re-creating them, which is flooding user audit records. By adding the no_audit_delete flag for the table, it avoids creating these audit records.	1. On an instance with SM 4.1, create a test record in the unconfirmed_user_role table. 2. Navigate to a sys_audit record. 3. Filter the table by unconfirmed_user_role. Observe that there's delete audit records.
Platform Runtime PRB1900474	There's a difference in the number of sys_journal_field records

Problem	Short description	Description	Steps to reproduce
	scheduled tasks are being deleted	Due to a backend issue, the upgrade script execution unintentionally deletes saved filter sets and scheduled tasks of Process Mining Projects. This particularly affects configurations with "transition filters" linked to scheduled tasks. Although no other customer data was affected, this issue may disrupt functionality where the deleted filter sets or scheduled tasks were actively used.	
Project Management PRB1859066	A Resource Assignment (RA) is associated to a new Resource Plan upon migration	The resource plan associated with an RA is in the 'Completed' state. When the effort value is updated, a new resource place is created and attaches the RA to the new resource plan. A new plan shouldn't be created, and the resource assignment should be pointing to the initial completed resource plan.	1. Create a resource plan. 2. Allocate it. 3. Complete the plan. 4. Migrate the plan to resource assignment. Notice that upon migrating the plan, the newly created resource assignment will be linked to the completed resource plan; when attempting to change the effort type on the resource assignment record, a new resource plan with an allocated state is created.
Project Management PRB1889859	Actuals for planning item are not rolled up to the task type breakdown	Enable actual costs from expense lines to rollup to the 'Actual cost' on associated cost plans related to planning items without the core table integration. When user creates a new expense line for a planning item in the 'New financials' page for a planning item, the actual cost value on the cost plan breakdown should add up to the total amount from processed expense lines.	1. Create a planning item without integrations. 2. Add cost plans and expense lines. 3. Validate the actual roll up to task type breakdown. 4. Validate the roll up to investment entity.

Problem	Short description	Description	Steps to reproduce
Resource Management PRB1877603	In Resource Management Workspace, there's a NullPointer exception	In Resource Management Workspace, users get nullpointer exception when changing resource status for an allocation.	1. Open Resource Management Workspace. 2. Open a card. 3. Change the status of the assignments for a user.
Rollback and Recovery PRB1809473	When truncating a logical non-root table in TPH or TPP, all records are stored for ancestors and siblings in a shadow table		1. Create 2 tables using the 'Table Per Hierarchy' extension model (u_table1 and u_table2 extending the former). 2. Seed some test data on each tables. 3. Invoke 'DBI.tableDrop()' for u_table2 with rollback enabled. 4. Confirm that records from u_table1 were recorded in the shadow table 'sh $u_table1'. That shadow table should only have records for u_table2 since those are the ones that were deleted and therefore the only ones that could be restored by rolling back the truncate of the logical table 'u_table2'. This can become a costly, unnecessary operation if the parent table is large.
Schedule Optimization PRB1891169	On Demand Intraday, selecting multiple territories displays an 'Optimizing' icon even when there's no optimization running		1. Create an Intraday configuration for multiple territories, and ensure that those are overlapping territories. 2. In the config, set the 'On Demand' boolean to true. 3. As a dispatcher, navigate to Dispatcher Workspace (DWS). 4. From DWS settings, turn off the 'Territory single select' toggle. 5. From the territory selection on top left, select those same territories that are present in the intradat config. Expected behavior: We shouldn't see the 'Optimizing' icon when there's no optimization running. Actual behavior: Users are seeing the 'Optimizing' icon on the calendar for those territories even if there's no optimization running.

Problem	Short description	Description	Steps to reproduce
PRB1891178	when it is 400+ zoom		Expected behavior: The scroll should happen at 400% zoom. Actual behavior: The scroll doesn't work.
Service Portal PRB1894604	To reduce regressions, query ACLs are only enforced when certain conditions are met for widget-data-table		
Smart Assessment Engine PRB1900594	Addition of Query ACLs in Access Control List (ACL) Rules in Smart Assessment Engine	This change adds new Query ACLs on certain table(s) and field(s) to grant query_range access.	
Software Asset Management PRB1830073 KB2120852	The 'Software Asset Connections' job fails when a cmdb_rel_ci record doesn't have a child	The job fails with the error: 'Script: SAMPDataSource IntegrationUtils: [2024-11-22T23:32:26.885Z]: Unable to match value 'undefined' with field 'sys_id' in table 'cmdb_ci. Expecting type 'GUID''.	Refer to the listed KB article for details.
Software Asset Management PRB1845794 KB2186255	The 'ITAM License Report' module isn't displaying in upgraded instances from Washington DC/Xanadu to Yokohama releases	The module is missing.	1. Install HAMP. 2. Log in to the instance and check for the 'ITAM License Report' module under the 'ITAM Licensing' menu. 3. Note that the module isn't available. Expected behavior: The 'ITAM License Report' module should be visible under the 'ITAM Licensing' menu. Actual behavior: The 'ITAM License Report' module is not visible under the 'ITAM Licensing' menu.
Software Asset Management PRB1878871	The 'Publisher Overview' page doesn't load after a user clicks on the publisher card after	The 'Publisher Overview' page should be loaded completely, but only loads after selecting the **Refresh** button.

Problem	Short description	Description	Steps to reproduce
	recon is completed		
Software Asset Management PRB1883407	The default value for month in the samp_sw_usage table remains in the dictionary after upgrading to Xanadu		1. Provision a Washington DC instance with samp plugins. 2. Upgrade the instance to Xanadu. 3. Observe the default value of **month** in the samp_sw_usage table. Actual behavior: The default value is 'January'. Expected behavior: The default value should be empty.
Software Asset Management PRB1892609	The install date isn't in the expected format when the date format is changed		1. Open the 'Download GLAS' report page. 2. Update the data and time format of the user or system. 3. Download the vCenter VM Report. Observe that the 'Install date' column isn't in the expected format.
Software Asset Management PRB1893997	Install consumption journey nodes aren't displaying the correct number of installs	The issue is the redundant query on the software install model.	1. Create some software installs for SQL Server. 2. Make a few installs inactive (active=false). 3. Run recon and wait until the recon is complete. 4. Navigate to install consumption analysis. 5. Select the SQL Server root node to see the installs modal. Expected behavior: The number of installs on the node should match the number of installs displayed on the modal. Actual behavior: In the modal, the inactive installs are missing.
SSH MID Server Communication Protocol PRB1887914	SSHProtocolEngine thread is overwhelmed when SSH server starts dumping instead of	This is a product update.

Problem	Short description	Description	Steps to reproduce
	sending a protocol version string		
Store IRM GRC Core Case Management PRB1892851	Addition of Query ACLs in Access Control List (ACL) Rules in Store IRM GRC Core Case Management	This change adds new Query ACLs on certain table(s) and field(s) to grant query_range access.	
Store IRM Privacy Case Management PRB1894359	Addition of Query ACLs in Access Control List (ACL) Rules in Store IRM Privacy Case Management	This change adds new Query ACLs on certain table(s) and field(s) to grant query_range access.	
Stream Connect Core PRB1892411	If users get an exception during assignPartitions(), GlideHermesConsumer isn't closed in MessagePollSubscription	The root cause appears to be an instance of GlideHermesConsumer that is created but not closed in the case of exceptions.	1. Create a topic, consumer, and subscription. 2. Shut down the Hermes cluster or do something to cause exceptions when trying to read from the topic in Hermes. This creates a situation where Glide picks up a subscription and tries to read from the underlying topic but can't because it is missing. This produces some stack traces in the logs.
Stream Connect Core PRB1900417	A kafka_admin doesn't have report view access to the sys_sc_alerts table		1. Create a user. 2. Add the kafka_admin role to the user. 3. Impersonate as the user. 4. Navigate to the Store app. In the 'Overview' page, users aren't able to view the alerts in the 'Active alerts' section.
System Update Sets PRB1834468	A sys_db_object record was created when the **Function** field was loaded through update, set, and commit	When creating a database view and **Function** fields on the instance through UI, a sys_db_object isn't created for the database view table. If a commit or update contains certain	1. Import the update set that contains sys_update_xmls for the **Function** field for a database view. 2. Preview it. 3. Commit it.

Problem	Short description	Description	Steps to reproduce
		actions, it will create a sys_db_object for the database view table.	Expected behavior: The sys_db_object record was not created for the database view. Actual behavior: The sys_db_object record was created.
Table Administration and Data Management PRB1771107	Creating a list type field on cmdb_ci from the Configure > Form Layout page breaks the cmdb table due to the field being created with an incorrect storage alias entry	After the field is created with its storage alias mapped to cmdb but the actual column in the backend being created on cmdb $par1, there's the following error when accessing cmdb_ci.list: 'Syntax Error or Access Rule Violation detected by database ((conn=218714) Unknown column 'cmdb0.list_field_name' in 'field list')'. The list displays all empty rows.	1. Confirm that sys_table_partition.is_current_target is true for cmdb$par1 or any of the other partitions other than the base partition. 2. Navigate to sys_db_object.list. 3. Open the 'cmdb_ci' table. 4. From the related links on the form, select the **Show Form** link. 5. Right-click on the form header and select **Configure** > **Form Layout**. 6. Enter any name for the field and select: a. **Type** > **List** b. **Table to Reference** > **cmdb_ci_service_discovered** OR **task.** Notice that the field in the database gets created on the current partition like cmdb$par1 but if users look at sys_storage_alias for the new field it is pointing the storage table name as cmdb. Navigate to cmdb_ci.list to notice the syntax error message.
Table Administration and Data Management PRB1888056	DMTSchedulerUtils.scheduleDM expects a global Genius Results (GR) parameter	DMTSchedulerUtils().scheduleDM results in an error: ''gr' is not defined'. There's a bug in the script that expects 'gr' as a defined global variable.	
Territory Planning PRB1899540	Field Service Management data filters are restricting access for RSO/CSM personas	Both wm_location_agent and wm_location_assignment_manager roles should be able to see all the wm_order and wm_task.	
Third-party Risk Management	Addition of Query ACLs in Third-	This change adds new Query ACLs on certain table(s) and field(s)

Problem	Short description	Description	Steps to reproduce
PRB1889679	party Risk Management	to grant query_range access.	
Transform Maps PRB1847878	Slow loading of related lists for particular transform maps	It takes several minutes to load a related list from a sys_transform_map record.	
UI Field Administration PRB1891838	The TinyMCE editor is missing on the 'Share to work notes' model	An error message is displayed on the console: 'TypeError: Cannot read properties of undefined (reading 'themeOptions')'.	**1.** Open any active incident record. **2.** Select the **Summary** button. **3.** Find if that summary is generated. **4.** Select the **Share** button. **5.** Observe that the TinyMCE editor is missing on the 'Share to work notes' model.
UI Field Administration PRB1892439	When a preset action is selected and autogrow is false, there's infinite loading		**1.** Have a quickAction with autogrow as false. **2.** Have this quickAction configured on a **Form** field as a default or normal preset action. See that when this quick action is selected, the modeless dialogue opens but nothing happens.
UI Form Administration PRB1860501	A form's cache key doesn't account for roles with external and internal users	A generated cache key doesn't contain roles.	**1.** Enable the 'Explicit Roles' plugin. **2.** Modify ACLs to incident to allow read access to the snc_external role. **3.** As an external user, navigate to any given incident. **4.** As an admin, navigate to the sys_db_cache table. Expected behavior: The cache entry created by the external user, should include the users roles in the cache key. Actual behavior: The cache key generated doesn't contain roles.
UI Form Administration PRB1863573	A 'Scope tag not permitted' error is thrown when the UXC Generative AI plugin is active	The scoped UI macros are added to the UI16 form by the 'UXC Generative AI' plugin clash with scoping rules, causing a 'Scope tag not permitted' error	**1.** Navigate to sysapproval_approver.list. **2.** Open any record still in the 'Requested' state. **3.** Right-click on the header and configure the form layout.

Problem	Short description	Description	Steps to reproduce
		to be thrown. Visually, users notice related lists and others macros not loading on the form.	**4.** Add the 'Test Formatter Approval Scoped' formatter to the layout after the 'Approval Summary' formatter. **5.** Configure the form. **6.** Add 1 related list to better see a broken page when reproducing. **7.** Clear the cache using cache.do. **8.** Open the record. Observe that the form is in a broken state. The approval _summary form renders on the page, but everything else is missing. Related lists won't display. Users aren't able to right-click on the header or see the scoped UI macro rendered.
Usage Analytics PRB1879227	Users aren't able to filter UX Analytics Data on 'User Properties' as User Property Sync Service fails due to inbound mTLS not being turned on	Users can't filter their user experience analytics data by user roles, departments, and related user properties.	**1.** Log in to the instance where an inbound mTLS isn't turned on. **2.** Configure the user properties in the sys_analytics_user_property_config table. **3.** Run the scheduled job 'User Property Config Change Sync Job'. Expected behavior: The user properties data should be synced from the instance to ClickHouse. The user shouldn't see the warning message when the sys_analytics_user_property_config table is opened. Actual behavior: The user properties data isn't synced to ClickHouse.
User Presence PRB1767417	Multiple threads can unnecessarily race to build the user presence cache, adding a load to the primary database		
UX Framework PRB1834547	An additional HR case creation form opens when selecting	Occurs on the HR Agent Workspace 'HR Case creation' page.	**1.** Log in as an HR Agent. **2.** Navigate to the HR Agent workspace. **3.** Select the **New HR Case** creation button.

Problem	Short description	Description	Steps to reproduce
	the 'View All' details of 'Cases for Subjected Person', 'Cases for Opened For', or 'Interactions' in a some scenarios		**4.** Search for and select an employee. **5.** Select the **Next** button. **6.** Refresh the page. **7.** Enter the employee name again. **8.** Once the 'Create a New Case' page loads, select **View All** for 'Cases for Subjected Person', 'Cases for Opened For', or 'Interactions'. Observe the issue where an additional HR case creation form appears.
UX Framework PRB1884471	Incorrect page variant is displayed when the variant audience is mapped to user criteria and glide.ux.user_ criteria_enabled=true	There is performance degradation between the two versions when the system property glide.ux.user_ criteria_enabled is to 'true'. The incorrect page variant is displayed when the variant audience is mapped to user criteria.	Scenario 1: **1.** Open a Washington DC instance. **2.** Set glide.ux.user_criteria_enabled to 'true'. **3.** Navigate to a list in the Service Operations Workspace. **4.** Measure the page load times. Notice that the average page load time is less than 5 seconds. Scenario 2: **1.** Open a Xanadu instance. **2.** Set glide.ux.user_ criteria_enabled to 'true'. **3.** Navigate to a list in the Service Operations Workspace. **4.** Measure the page load times. Scenario 3: **1.** Create two page variants which have two respective audience records, which are mapped to two distinct user criteria. **2.** In the user criteria, use two different groups to map two different users. **3.** Open the SOW landing page. Expected behavior: The user should see the variant, 'Variant Landing Page Demo Level 2'. Actual behavior: The user

Problem	Short description	Description	Steps to reproduce
			should see the variant, 'Variant Landing Page Demo Level 1'.
UX Framework PRB1898329	Service Worker fails to cache shell-bundle.jsdbx which causes a blank page on the page load	The page that's loaded is blank, and an error message appears in the console. This issue occurs on Chronium browsers.	Log in to a Xanadu or Yokohama instance. Notice that the page loaded is blank, and in the console an error shows, 'Cannot cache the response UnknownError: Failed to execute 'put' on 'Cache'.
Virtual Agent Designer Legacy PRB1891033	Marking the AI Agent/Agentic Workflows as 'Promoted' from Virtual Agent (VA) designer does not show up as a **Promoted** action in Virtual Agent	The user should be able to mark AI Agents/ Agentic Workflows as 'Promoted' from VA Designer, but this doesn't appear as a **Promoted** action.	**1.** Ensure all Agentic Workflow and Now Assist Virtual Agent plugins are updated on the instance. **2.** Navigate to **Conversational Interfaces** > **Virtual Agent** > **Designer**. **3.** Select the tab 'Agentic Workflow' and select an base instance workflow. **4.** Mark the workflow as 'promoted'. **5.** Ensure the Agentic Workflow is active, visible and discoverable. **6.** Navigate to the esc portal. Notice that no promoted Agentic Workflow/AI Agents appear as a button (promoted action).
Virtual Agent Designer Legacy PRB1891079	Validate NLU discoverable topics retrieved from cache when domain separation is turned on	Provide a scriptable function vaSystem. getNLUDiscoverableTopics (String languageCode) that returns the names of the active and discoverable topics given a language code. If no languageCode is given, it uses the session language. If NLU is turned off on the instance or com.glide.cs.cach e.topic_type.enabled is false, it should return an empty list and log why.	
Virtual Agent	Now Assist Virtual Agent (NAVA) web client unread	Unread messages from the Employee Service Center (ESC) web client appear on the NLU web	**1.** Set up NAVA on an ESC portal. **2.** Keep open NLU AI Search in the Service Portal (SP).

Problem	Short description	Description	Steps to reproduce
	when an agent sends a message to the end-user		on any Washington DC or Xanadu instances. 2. Verify the record has the value 'OneExtend Profanity Filter' in the **Type document** field. 3. Upgrade the instance to Yokohama. 4. Verify that the **Type document** field has an empty value, due to which the dynamic translation is failing with below error: 'com.glide.oneapi.exception. OneApiRequestException: Error calling One API for feature Profanity Filtering : service invocation Id'. Expected behavior: For the profanity filter on the one_api_feature_provider record, the **Type document** field shouldn't be empty. Actual behavior: For the profanity filter the one_api_feature_provider record, the **Type document** field is empty.
Virtual Agent PRB1881393	An Agent Chat new message desktop notification should be clickable and redirect to the 'Calling' tab	When there's an agent in the workspace doing a live chat with a user, if users move the focus to another tab, with desktop notifications turned on, they receive a notification. The need is for the notification to be clickable and redirect to the 'Chat' tab.	1. Navigate to an instance. 2. Impersonate a system admin. 3. Open Service Operations Workspace. 4. Navigate to the inbox and set yourself to 'available'. 5. Ensure that the desktop notifications are set up with the gear icon. 6. Open an incognito window. 7. Impersonate Beth Anglin. 8. Open the Service Portal. 9. Open the chat. 10. Ask for a live agent. 11. Wait for the connection with the agent. 12. From the system admin window, open a new tab and stay on that tab. 13. From the Beth window, send a message. Users should receive a desktop notification, but it's not clickable and doesn't redirect.

Problem	Short description	Description	Steps to reproduce
Virtual Agent PRB1896976	The 'Start a new conversation' pop-up box in Virtual Agent is out of the screen	In the instance, the padding is cut off, and the popover should be contained in the Web Client window.	1. Navigate to Virtual Agent on an instance. 2. Start a new conversation with the Now Assist' pop-up. Observe that when hovering over the **+** button, it's cut off on the right side.
Virtual Agent PRB1901626	'Notification' errors out if users trigger it for a user who has not had any interaction with Virtual Agent for more than 60 days		1. Verify that the user doesn't have any interactions with web-client/channels for more than 60 days. 2. Set up and trigger a non-actionable/ actionable notification. Expected behavior: A new sys_cs_notification record should be created for the user. Actual behavior: There's an error in the notification log on the lines of 'sessionResponseV2Dto is null'.
Virtual Agent Web Client PRB1869054	Adding the ability to customize/ update the default 'FAB' icon	The custom 'FAB' icon is configurable by defining this variable: $now-sp-nass-FAB-icon.	
Virtual Agent Web Client PRB1881938	Boolean choice pickers aren't translated to the user's language in Dynamic Window		1. Install a language. 2. Switch the profile language to that language. 3. Ensure that Dynamic Translation and Native Translation are turned on in Now Assist. 4. Create a topic with the user input using the input selector. 5. Navigate to Dynamic Window. 6. Run the topic from step 4 until completion. Expected behavior: Boolean topic choice pickers are translated to the user's selected language (Yes/No input). Actual behavior: Boolean topic choice pickers are still in English (Yes/No input).

Problem	Short description	Description	Steps to reproduce
Work Order Management PRB1853297	Users are seeing an error message on a work order task whose state is >= Assigned' in the CSM Portal	An error message displays for querying the 'Map integration usage' table when getting a work order task as a user out of the scope of map integration ACLs.	
Work Order Management PRB1882671	Ignore sys_user schedule when assigning tasks in the background	In the case where the 'com.snc.dynamic.scheduling.useWorkScheduleOnly' system property is true, the work schedule for an agent is absent. sys_user.schedule isn't empty. Dynamic scheduling uses sys_user.schedule to identify work blocks.	**1.** Set 'com.snc.dynamic.scheduling.useWorkScheduleOnly' to true. **2.** Add sys_user.schedule. **3.** Don't define any work schedule for an agent. Expected behavior: The task shouldn't assign to the agent. Check the DS log, and there should be no workblock for the agent. Actual behavior: The task could still assign to the agent. Check the DS log, there's a workblock based on sys_user.schecdule for the agent.
Work Order Management PRB1889505	A fix script isn't executed while upgrading	A fix script isn't executed when upgrading from Washington DC to Yokohama.	**1.** Create an instance in Washington DC **2.** Upgrade the instance from Washington DC to Yokohama. **3.** Check for the logs for execution of fix script: sys_script_fix_ 6e154ec7c3d13010 a0cd587c1f40ddd1 Expected behavior: The sys_script_fix_ 6e154ec7c3d13010 a0cd587c1f40ddd1 must be executed. Actual behavior: The sys_script_fix_ 6e154ec7c3d13010 a0cd587c1f40ddd1 isn't executed.
Work Order Management PRB1890343	In the CSM portal, the user is unable to see the Worker Order Task (WOT) details in the fsm_ticket page	The WOT details aren't displayed and an error message on the **wm_task.parent** field appears.	**1.** Create a Work Order (WO) with a user as a contact. **2.** Select **Ready for qualification**. Notice that the WOT gets created for the WO in the RL. **3.** Impersonate the user set as the contact in the WO.

© 2026 ServiceNow, Inc. All rights reserved.

Fixes included

Unless any exceptions are noted, you can safely upgrade to this release version from any of the versions listed below. These prior versions contain PRB fixes that are also included with this release. Be sure to upgrade to the latest listed patch that includes all of the PRB fixes you are interested in.

- Yokohama Patch 4
- Yokohama Patch 3 Hotfix 3
- Yokohama Patch 3
- Yokohama Patch 2 Hotfix 3
- Yokohama Patch 2
- Yokohama Patch 1
- Yokohama security and notable fixes
- All other Yokohama fixes

Yokohama Patch 4 Hotfix 2

The Yokohama Patch 4 Hotfix 2 release contains fixes to these problems.

Build information:

Build date: 07-05-2025_0001

Build tag: glide-yokohama-12-18-2024__patch4-hotfix2-07-03-2025

Important:
For more information about how to upgrade an instance, see ServiceNow upgrades.

For more information about the release cycle, see the ServiceNow Release Cycle.

Note:
This ServiceNow AI Platform major family release is now available in ServiceNow's Regulated Market environments. For more information about services available in isolated environments, see KB0743854.

Fixed problem

Problem	Short description	Description	Steps to reproduce
Virtual Agent Web Client PRB1874847	The **Cancel** icon doesn't close the tooltip, and the citation and feedback options aren't displayed when opened in a new tab	Two issues occur in this problem when using the Enhanced Chat in Customer Service Management (CSM) and interacting with the **Create case for a product** citation link. In the first scenario, selecting the **Cancel** icon after hovering over the**Create case for a product** link doesn't	Scenario 1: **1.** Log in to the instance. **2.** Open Customer Service Management (CSM). **3.** Select the **Enhanced Chat** icon. **4.** Input the query, **Can you help me in raising a ticket for my product issue?** **5.** Notice the options in the response received:

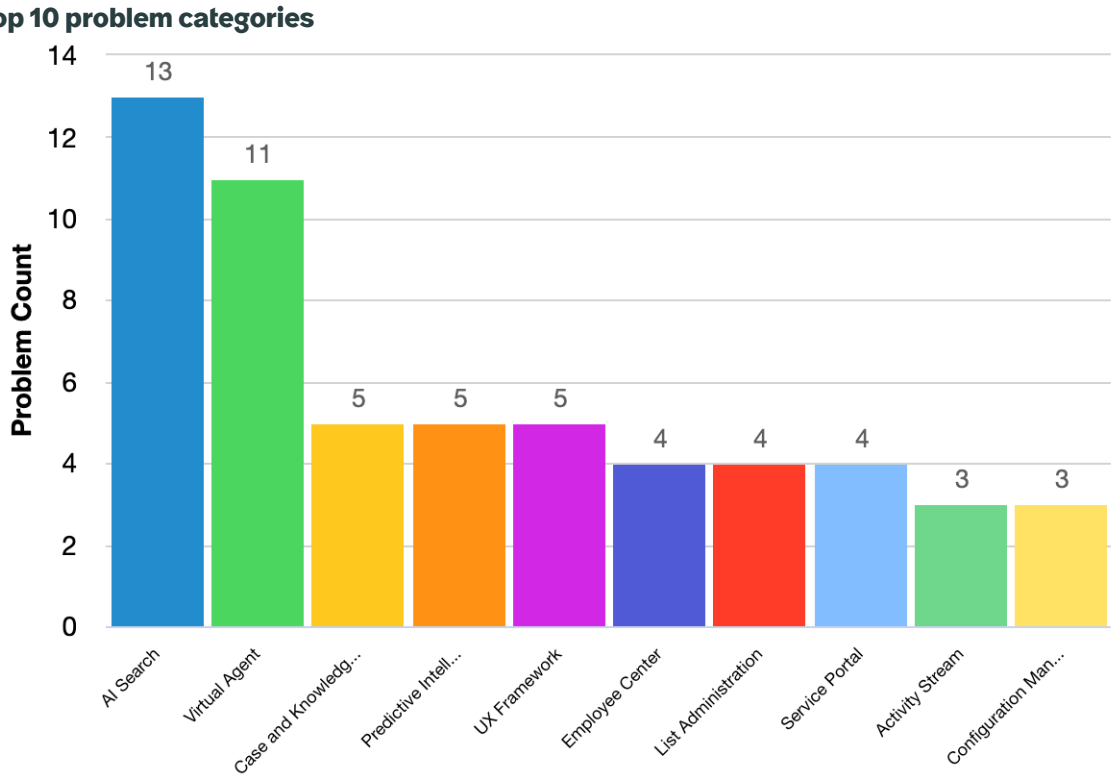
Overview

Yokohama Patch 4 includes 281 problem fixes in various categories. The chart below shows the top 10 problem categories included in this patch.



Security-related fixes

Yokohama Patch 4 includes fixes for security-related problems that affected certain ServiceNow® applications and the ServiceNow AI Platform®. We recommend that customers upgrade to this release for the most secure and up-to-date features. For more details on security problems fixed in Yokohama Patch 4, refer to KB2150760.

Changes in Yokohama Patch 4

QueryRangeACLAuditor

This patch includes the May Maintenance update script in the form of a script include (QueryRangeACLAuditor). This script is not triggered automatically and must be run after a patch upgrade. More details on running the QueryRangeACLAuditor and its functionality can be found in KB2046494.

Create multiple configurations

The product configurator displays the product configuration, including the bundle product options and characteristics. Child offerings that can have multiple configurations have information icons. Select the Information icon to view a message indicating that the offering can have multiple configurations.

Navigate to the child offering in the product hierarchy, which displays the offering summary page.

Multiple configurations

When agents add configurable products to new opportunities, quotes, and orders, they can create multiple configurations for a child offering. They navigate to a summary page for a selected child offering. From this page, they can do the following:

- Change the quantity of a child offering.
- Clone a child offering.
- Split a child offering that has a quantity greater than 1, to create child offering instances with different quantities.

Each offering instance becomes a new line item that can be configured separately.

In the following example, the Home Automation Bundle is a child offering that has a default quantity of 2 in the Quadplay Home Tech Bundle. An information icon displays next to each child offering that can have multiple configurations. The information icon, when selected, displays a message indicating that multiple configurations can be created for the child offering.

When agents review a bundle offering in the product configurator, they identify the child offerings that can have multiple configurations. They navigate to the summary page for the appropriate child offering to create multiple configurations.

In the offering summary page, a message indicates that the offering supports multiple configurations and the aggregated quantity of configurations that can be created. Agents can change the quantity of the child offering on this page.

The More options icon displays next to the **Quantity**. Selecting the icon lists the options available for creating and managing multiple configurations.

When the child offering configurations are created, each offering name reflects the child product offering name followed by an incremental number. For example, Home Automation Hub configurations are named Home Automation Hub 2, Home Automation Hub 3, and so on. Agents can then select the appropriate offering instance to configure it. If the agent changes the **Quantity** value, the Current Selection pane reflects the new quantity and associated pricing.

The system also uses the cardinality rules to determine when certain configuration options (**Split** and **Delete**) should be enabled or turned off, based on the context. For example, if the minimum child offering quantity is 1 and a child offering has a quantity of 1, the system disables the **Delete** option in the More options menu.

Create multiple configurations

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Change the quantity of a child offering that can have multiple configurations.

Even when the multiple configurations feature is enabled, there are scenarios in which some configuration options might not be available. The system uses the default, minimum, and maximum quantity values from the product definition to determine valid configurations and then enables or disables the **Split** or **Delete** options for managing child offering configurations. For more information on validation, see .

Navigate to the child offering in the product hierarchy, which displays the offering summary page.

Identity Type

Use the Identity Type define the correct identity type while creating a user. You can select **Human**, **Machine**, or **AI Agent** based on the user identity.

The Web service access (WSA) only checkbox is automatically enabled for Machine identities and read-only for Human or AI Agent identities. You can mark Identity Type as Machine for creating WSA accounts.

Notable fixes

The following problems and their fixes are ordered by potential impact to customers, starting with the most significant fixes.

Problem	Short description	Description	Steps to reproduce
AI Search PRB1823459	AI Search indexing Topic Path Translation doesn't work for non system user preference language	Session users assigned as 'guest' with the sys_user_preference file 'name=user.language' and 'value=some_non_user_session_language' will have topic paths indexed in this language. The set language is not effective, which is the cause of incorrect translations.	**1.** Ensure sys_language has two active languages, **en**for English and **de** for Deutsch. **2.** Create an entry in the sys_user_preference table with the following values: ○ system = true ○ user = empty with language as 'de' **3.** Create the catalog item with translations for topic and topic path. Expected behavior: AI Search should index, and be able to search with the 'en' topic value. Actual behavior: AI Search indexes content with Deutsch translations for documents with both English and Deutsch languages, and the search for English will fail.
Condition Builder PRB1843987	Predicate builder Date Time filter is displaying JavaScript	Quotation marks should be surrounded by the condition '-->', causing an issue with the query.

Problem	Short description	Description	Steps to reproduce
	condition with quotation marks missing around the date parameter		
Email Notifications PRB1881286 KB2074932	In Yokohama, recipients are no longer populated in Email Client and the Major Incident Recipient list when using JavaScript	The **Recipient** field should be populated with all recipients.	Refer to the listed KB article for details.
Flows (Family Channel) PRB1834406	App installation deletes base instance sys_complex_object 'FDCollection'	Deleting the flow does not remove the sys_complex_object record from the source instance, but the app installation removed the record from the target instance. Sys_complext_object is not listed in the application file of the app, but appears in the payload of the sys_hub_flow record.	**1.** Hop onto any base instance. **2.** Create a scoped app. **3.** Create a flow (sys_hub_flow) with some actions, such as log. **4.** Confirm the sys_id is being included in the flow. **5.** Check the payload of the captured flow from sys_update_xml. **6.** Delete the flow from the list view of sys_hub_flow. **7.** Confirm the deletion is captured in sys_metadata_delete. **8.** Publish the scoped app to a repo or app store. **9.** Install the app from another instance from the app store. Notice that after the installation, the base instance sys_complex_object removes a sys_id on the instance.
Related Lists PRB1887019 KB2122691	Users can't edit from a related list on a **Reference** field configured to be read-only in the dictionary	Users are no longer able to add existing related records via the 'Edit' function on a related list when the **Reference** field on the target table is marked as read-only. This behavior was previously functioning as expected. The issue has been verified in multiple relationships.	Refer to the listed KB article for details.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Problem	Short description	Description	Steps to reproduce
		Removing the 'read-only' attribute from the reference field restores expected functionality, confirming the change in behavior post-upgrade.	
Reporting PRB1878029 KB2046103	A drill down report isn't working as expected with sorting added to the report	It's impacting the filter conditions by appending 'ORDERBY' at the beginning of the condition value to the last filter condition of the report.	Refer to the listed KB article for details.
Service Portal PRB1502280 KB0994649	The **File attachment** field does not appear on portal form page	The file attachment field **My file** doesn't appear on the form page of the incident record.	**1.** Log in as an admin user. **2.** Open the form page of the incident record. Notice that the file attachment field **My file** doesn't appear on portal, but shows in native view.
System Import Sets PRB1850436 KB2115235	There's unexpected column creation when importing an Excel file with Japanese headers	When importing a file with Japanese headers, a new 'u_xxx' column is created, even though the u_email column already exists. This issue also occurs in Washington DC.	Refer to the listed KB article for details.

All other fixes

Problem	Short description	Description	Steps to reproduce
Access Control List (ACL) Rules PRB1891090	Addition of Query ACLs in Access Control List (ACL) Rules	This change adds new Query ACLs on certain table(s) and field(s) to grant query_range access.	
Access Control PRB1889718	Addition of Query ACLs in Access Control	This change adds new Query ACLs on certain table(s) and field(s) to grant query_range access.

Problem	Short description	Description	Steps to reproduce
Access Control PRB1889719	Addition of Query ACLs in Access Control	This change adds new Query ACLs on certain table(s) and field(s) to grant query_range access.	
Access Control PRB1892867	Basic query range operation is broken	The basic query_range operation on allowed fields is not working, and the user sees records not applied by the filter.	**1.** Log in as an admin user. **2.** Navigate to any table, for example: sn_customerservice_case. **3.** Apply any query_range filter on any field. Notice that the list shows all the records instead of the filtered.
Accounts Payable Invoice Processing PRB1889729	Addition of Query ACLs in Accounts Payable Invoice Processing	This change adds new Query ACLs on certain table(s) and field(s) to grant query_range access.	
Activity Stream PRB1860591	Work notes are presented as encrypted text within the 'Activity' section of the ServiceNow Workspace when the encryption configuration is active	There's column-level encryption enabled and configured for the **work_notes** field. When a user with a target role specified in the sys_platform_ encryption _configuration record is posting worknotes in workspace, they are unable to see unencrypted text. Instead, they're seeing encrypted text. When the same user posts worknotes in the native view, the text isn't encrypted.	
Activity Stream PRB1882348	Avatars are not shown for AI agent updates in the Activity Stream	When agents update fields and post work notes to the Activity stream the agent avatars are not shown next ot their activities.	
Activity Stream	Two extras in the SQL count from the activity

Problem	Short description	Description	Steps to reproduce
PRB1890397	Jelly template are seen in znowassiststable, causing a DMT SQL Spike		
Advanced Risk PRB1891325	Addition of Query ACLs in Advanced Risk	This change adds new Query ACLs on certain table(s) and field(s) to grant query_range access.	
Advanced Work Assignment PRB1825616	Enhance the log statements for capturing the time it takes to route a work item in QueueRouter.java	There are no timing metrics or entries present in the log statements for the time taken to route a work item.	1. Install Advanced Work Assignment on any Yokohama instance. 2. Install Agent Chat. 3. Create a chat and a work item. Observe the node logs.
Advanced Work Assignment PRB1888546	Default service channel group routing limit of 25 is too low and noticeably affects throughput	An instance with the service channel group's routing limit set to the default of 25 experiences steady degradation of performance, with the backlog of un-routed cases growing into the 10000s and the time between cases and work items created growing to several minutes.	
Agent Chat PRB1886920	Interaction divider shows up as 'undefined' on Agent Workspace	Interaction divider shows up as 'undefined' on Agent Workspace after starting a conversation as a requester and ending it as an agent.	1. Enable conversation history for Agent chat. 2. Start a conversation as a requester and accept it as an agent. 3. End the conversation. 4. Start a new conversation and accept it as an agent. 5. Scroll up to see the conversation history. Observe that the interaction divider shows up as 'undefined' on Agent Workspace.
Agile Development	Addition of Query ACLs in Agile Development	This change adds new Query ACLs on certain table(s) and field(s)

Problem	Short description	Description	Steps to reproduce
PRB1889742		to grant query_range access.	
AI Search PRB1755617	The **DocID** field is being populated with the wrong sys_id in the Search Signal Result Event table results	The sys_search_signal _result_event table is not capturing the correct sys_id in the result AIS DocID for the Knowledge Genius search.	**1.** Hop into a base instance. **2.** Navigate to the /ESC portal. **3.** Search for **Microsoft outlook issues**. **4.** Select the Genius Result. **5.** Search anything else so that the previous search session data is stored. **6.** Navigate to sys_search_signal _result_event table. Notice that the DocID is not populating, however XML has value since the sys_id is not valid reference field not capturing any value
AI Search PRB1814576	The property glide.search. onboarding. popover.dismissed is not created for external users	The property glide.search.onboarding. popover.dismissed is not being created for external users with the role snc_external in the sys_user_preference table. It is being created only for internal uses, such as agents with the snc_internal role, but does not appear for a second time once it is cancelled.	**1.** Log in to the instance. **2.** Open /CSM. **3.** Cancel the smarter chats modal that is displayed for the first time. **4.** Reload the page. Expected behavior: The smarter chats modal is not shown again once it is cancelled. Actual behavior: The smarter chats modal continue to appear for the type-ahead search widget.
AI Search PRB1850651	The 'All' tab is selected after a page is refreshed or when using the browser **Back** button	When performing a search in global, the The 'Knowledge' tab and the facet should be selected even after refreshing the page or using the **Back** button on the browser.	Scenario 1: **1.** Open a Xanadu or Yokohama instance. **2.** Perform search in global for an incident or knowledge. **3.** Select the 'Knowledge' tab. **4.** Select any facet. **5.** Refresh the page. Expected behavior: The 'Knowledge' tab and the facet should be selected. Actual behavior: The facet is not selected after refreshing the page, and the 'All' tab is selected.

Problem	Short description	Description	Steps to reproduce
			Scenario 2: **1.** Perform a search in global for an incident or knowledge. **2.** Select the 'Knowledge' tab. **3.** Select any facet. **4.** Select any search result. **5.** Use the **Back** button on the browser. Expected behavior: The 'Knowledge' tab and the facet should be selected. Actual behavior: The facet is not selected after using the **Back** button on the browser, and the 'All' tab is selected.
AI Search PRB1857215	There's a KB performance issue when there are a large number of user criteria assigned to a KB	The AI Search on ITSP has become slow after a Washington DC upgrade. AI Search is invoking Knowledge Management without any filters on the KB bases that are associated with the profile. Once the property 'glide. ais. disable_kbb' is set to true, response times come back to the pre-upgrade times.	
AI Search PRB1880703	The 'Find what you need faster with Now Assist' pop-over is displayed even though FPE is not enabled	The pop-over is stuck to the homepage search bar. This should only be displayed when Full Page (FPE) is configured for a given portal and not for Dynamic Window.	**1.** Navigate to **sys_now_assist_ deployment_ channel_list.do**. **2.** Set the active 'false' for self-service dialog setting for customer support portal. **3.** Set it back 'active: true'. **4.** Log in to an instance. Observe that the pop-over is stuck to the homepage search bar.
AI Search PRB1885285	When Zing is the search engine for global search, data broker is still executed and pollutes the syslog	The underlying cause is that the composite data broker resource in the UI Builder app for the global search page is wired up to use the search term from the URL as an input, and so	**1.** On an instance with Next Experience enabled, turn off AI Search for global search by setting the 'glide.ui.polaris. ais_ready' system property to false. **2.** In the navigator, type **rest batch**. **3.** Select the link to **Suppress REST Batching**.

	portal in New Assistant		

AI Search
 	
PRB1887375
	'OR' conditions aren't correctly evaluated in EVAM lite	In SearchResultTemplate Generator, there's logic to revert to legacy EVAM template engine if the condition is complex, but it doesn't currently catch 'OR' conditions.	1. Set active=false to the Service Portal default view configuration.
			2. Search for 'IPV6' in Service Portal.
			  ○ Observe users get 1 result (expected).
			3. Modify the Service Portal 'Knowledge Search Results' view config to add 'knowledge_base is Known Error'.
			4. Search for 'IPV6' in Service Portal.
			  ○ Observe users get 1 result (expected).
			5. Add an 'OR' condition to the 'Knowledge Search Results' view config for 'knowledge_base is IT'.
			6. Search for 'IPV6' in Service Portal.
			
			Observe users no longer get the result (not expected).

AI Search PRB1888274	Enlarged loading sign before loading synth response on portal	When searching on an instance with the latest znowassist build and May store apps with DW enabled on portal, an enlarged loading sign appears before results load.	
AI Search PRB1895431	The first 'regular' search in Full Page Experience (FPE) doesn't log SEARCH_EVENT, causing subsequent clicks not to be logged	This issue only happens on the first search.	1. Open an AI Search-enabled instance with NA4S set up. 2. Enable Full Page Experience in a portal. 3. Open the portal. 4. Enter something in the search bar. 5. Select **Enter**. 6. Open the Network tab. 7. Filter for **event**. 8. Switch from the chat to the search page. 9. Execute the search. Expected behavior: A call to the Signals API to log a SEARCH_EVENT occurs.

		module being set to 'reject' by default.	
Application Rationalization PRB1885498	Software asset management is a dependency for Technology Portfolio Management	This is a product update.	
Assessments PRB1895396	Query range error seen on Surveys & Assessments table even for privileged users	Query range errors are seen on the asmt_assessable_record table in Surveys & Assessments.	1. Create a user Assessment Admin. 2. Assign the assessment_admin role to the user. 3. Impersonate as the user. 4. Open the asmt_assessable_record.list page. 5. Search for 'test' in the **Type** field search. Expected behavior: No error should be seen. Actual behavior: The 'Query range' error is seen even though the user has full access to the table.
Banner Frame PRB1878987 KB2091173	An HTML link for a page header caption (glide.product.description) is broken in a logo tooltip	On Yokohama, an HTML href attribute (link reference) included into a page header caption on the 'Basic Configuration UI16' page (glide.product.description sys property) doesn't render the href attribute.	Refer to the listed KB article for details.
Capacity and Reservations Management PRB1877635	The data in the capacity console does not populate properly when the capacity is counted in buckets	The data in the capacity console does not give the aggregated values for the demand channels.	1. Log in as a user with elevated privileges. 2. Create a capacity definition for the territory San Francisco in buckets and add two buckets or more. Notice that the data in the capacity console does not give the aggregated values for the demand channels.
Career Aspirations	Addition of Query ACLs	This change adds new Query ACLs on certain

PRB1890426	in Career Aspirations	table(s) and field(s) to grant query_range access.	
Career Conversations PRB1889708	Addition of Query ACLs in Career Conversations	This change adds new Query ACLs on certain table(s) and field(s) to grant query_range access.	
Case and Knowledge Management for HR Service Delivery PRB1842199	RCA is generated when an HR lifecycle event is created		Create an HR lifecycle event case. Expected behavior: The RCA should not be generated. Actual behavior: The RCA with 'source_copre: Human Resources: Lifecycle Events' and 'target_scope: Human Resources: Core is generated'.
Case and Knowledge Management for HR Service Delivery PRB1874503	RCAs created during Email reply recommendation [GenAI-2025-May]	The error message, 'Wrong status for RCA privilege' occurs.	
Case and Knowledge Management for HR Service Delivery PRB1874549	RCAs for KMGenAISimilarTaskSearchUtil are generated during multi-case KB generation	RCAs from KMGenAISimilarTaskSearchUtil to HR Core, Employee Relations, Legal Entities were added as requested RCAs in app-hr-gen-ai and will be allowed with the fix script. They previously did not target app-hr-genai, but did not get added to the apps that target them. This causes RCAs to be generated when we generate multi-case KB that are in a 'Requested' state. It would need to be allowed for multi-case KB generation.	
Case and Knowledge	AI Agent Invoker topic	Selecting the usecase in NAP with an open	**1.** Log in as an admin user. **2.** Open an HR case for total rewards.

Problem	Short description	Description	Steps to reproduce
	domain separated instance	for the same attributes. However, attempted to replicate this behavior in a domain separated instance, the reconciliation rules weren't honored, and the lower-priority data source was able to update the CI. The domain path in the cmdb_datasource _last_update table was empty, which causes the reconciliation rules to be ignored.	
Configuration Management Database (CMDB) PRB1872524	There's an exception RTE BeforeScript when trying to replace values corresponding to an item	When users try to replace item values, it causes an exception, like: 'ava.lang.RuntimeException: Before script unable to process records with error message: null'. IREScopedMapValues is expecting a map instead of an object. This needs to fixed for all other places where it is expecting java native objects.	
Configuration Management Database (CMDB) PRB1880595	Some script includes marked as sandbox use APIs not compatible with sandbox	The issue occurs in an instance using multisource with non-cmdb ci sys_user, and has related properties set to true. Once the sys_user exists in the multisource table, the table cleaner seeks to remove multisource deny classes. Non-cmdb based on the sys_property gets the wrong value for the non-cmdb sys_property from gs.getProperty() when this script runs in the sandbox. This results in non-cmdb classes being removed from the multisource table	1. Set the glide.identification_engine.multisource_non_cmdb_ci_enabled property to true. 2. Navigate to the background script. 3. Run a critical line from the script once with the sandbox not checked, and then with the sandbox checked. Observe gs.getProperty fails and returns the wrong result in the sandbox environment.

Problem	Short description	Description	Steps to reproduce
		even though properties are configured to have these classes in multisource.	
Contract Management PRB1889710	Addition of Query ACLs in Contract Management	This change adds new Query ACLs on certain table(s) and field(s) to grant query_range access.	
Database Persistence - Data Access PRB1859194	Identified shadow tables containing 'my_row_id' as a primary key (PK), causing PK mismatch with TableCloner	This issue was found in Xanadu instances. When a record is deleted from the table, an error can occur because it attempts to sync schema between the original table, and the shadow table can't alter the PK. This fix ensures the PK will be a 'sys_id' on tables where 'sys_id' is required.	
Database Persistence - Data Management PRB1784019	Unoffload is not preserving the attachment upload date and time for the record	The unoffloaded time of the attachment becomes the attachment's new upload time.	**1.** Create an incident with two image attachments, audits, journals **2.** Offload the record to S3. **3.** Unoffload the record to ar_ table. **4.** Restore the record and related records to S3. **5.** Verify the attachment's uploaded time. Expected behavior: The attachment's original upload time is preserved in the record. Actual behavior: The unoffloaded time becomes the attachment's upload time.
Database Persistence - Data Management PRB1859906	Investigating failing archive restore operation	This issue occurs in a Xanadu instance.	Run archive restore on the parent record. Notice that only a subset of archive related records in the original archive run are restored, and the transaction is showing high SQL counts and times.
Database Persistence - Data Management	Randomize the monthly/ yearly physical table stats aggregator/	The monthly and yearly jobs are randomized over the day instead of in-between an hour.	Refer to the listed KB article for details.

Problem	Short description	Description	Steps to reproduce
PRB1887439	with a home page that includes encoded characters such as %2f as a re-direction result after login, a 400 error occurs	URL with encoded characters, edge will throw the 400 error blocking access to the home page.	**3.** Log in as abel.tuter through edge. **4.** Navigate to **Preferences**. **5.** Set the home page to **Default**. **6.** Log out. **7.** Log in as abel.tuter through edge again. Observe the http 400 error.
Employee Center PRB1809382	The hrm_todos_page list of tasks is incorrectly defined	To-do tasks from the hrm_todos_page list are not defined as list items, impacting the user's ability to navigate through the list.	**1.** Navigate to **hrm_todos_page** for any user with to-do tasks assigned to them. **2.** Inspect each list item. Notice that they are not defined as list items.
Employee Center PRB1827503	Accessible names are overly verbose for links in the Employee Service Center (ESC) portal	Links that appear in the 'Recommended for you' and 'Support resources' sections of the Employee Center portal are overly verbose. The accessible name format for each link is 'Item x of y, Short description, Task type, Article text'. This issue impacts screen reader users.	**1.** Navigate to **/ESC**. **2.** Select **Popular topics** > **Email Accounts**. **3.** Turn on a screen reader, such as VoiceOver for Mac. **4.** Navigate through the cards in **Support resources** using the **Tab** key. Expected behavior: Each card has the following accessible name format announced, 'Card short description, Task type'. Actual behavior: Each card has the following accessible name format announced, 'Item x of y, Short description, Task type substantial article text'.
Employee Center PRB1831309	Email returned from the HR Auto resolution test is missing some fields	Email script used in sysevent_email_template (sn_hr_core_case.ess.general) is not present in Washington DC and Xanadu.	
Employee Center PRB1862534	Keyboard navigation in the topic page is not working as expected for accessibility	Using keyboard actions to focus on the **Show more** button doesn't allow the user to move to the next element.	**1.** Log in as an admin user. **2.** Navigate to **All**. **3.** Select any topic page. **4.** Use the keyboard action.

Problem	Short description	Description	Steps to reproduce
Knowledge Article Templates PRB1855083	Toolbar options and plugins for the TinyMCE editor are missing in the dictionary attribute for the Knowledge **Article body** field	Options like A11yChecker, Clear formatting, Anchor, and others are missing.	**1.** Create or open any knowledge record. **2.** Notice that some of the TinyMCE toolbar options are missing in **Article body** field.
Knowledge Article Templates PRB1863956	Name and role is not defined properly for the Latest Version under Knowledge Article	The **Latest Version** should be defined and announced as a button by the screen reader.	**1.** Launch any base instance. **2.** Navigate to **All**. **3.** Enter **kb_knowledge_list.do**. **4.** Select any record from the knowledge list containing multiple versions, for example 'KB0000108'. **5.** Navigate to **Related links** > **View article**. **6.** Navigate to Latest Version link for the KB article. **7.** Interact with the Latest Version link. **8.** Observe the issue. Expected behavior: The name of the control should be defined and announced by screen reader, and the **Latest Version** KB should be defined as a button. Actual behavior: Screen reader doesn't announce the name of the control and only announces it as link, and expanded links are not announced as opened by the screen reader.
Knowledge Management PRB1864356	When displaying a KB article, the breadcrumb must contain the article title		**1.** Log in to an instance. **2.** Open the KB portal. **3.** Open any article. Observe that the breadcrumb doesn't have the name of the article.
Lifecycle Events PRB1830703	Base instance account notification workflow issue for Onboarding Lifecycle event	Account notifications are sent only occasionally for New Hire cases, when they should always be

Problem	Short description	Description	Steps to reproduce
PRB1863944	panes divider handle	resizable panes divider handle.	**3.** Navigate to **List** > **Resizable panes divider handle**. **4.** Observe the announcement of screen reader. **5.** Verify whether the instructions are provided or not. Expected behavior: Instructions should be provided, like left and right arrows keys, to resize the divider handle. Actual behavior: Instructions are not provided for the Resizable panes divider handle.
List Views PRB1854405	The Xanadu Date Picker Calendar pop-up appears below the field, making it difficult to select other dates	The Xanadu Date Picker Calendar opens on the below field and isn't letting users select other dates when they add a variable editor on the form configuration.	**1.** Navigate to a Xanadu instance. **2.** Navigate to incident.LIST. **3.** Add a variable section. **4.** Add an incident variable editor to the form. **5.** Navigate to the TASK SLA related list. **6.** Select the **Start time** field. Notice that the calendar pop-up appears below the field, making it difficult to select other dates. The date picker should open above the field.
List Views PRB1865826	Multi-select not working in the Certification Review page for data certification	This issue occurs in Washington DC, Xanadu, and Yokohama. In the 'Review Completed' and 'Review not completed' lists, selecting the **Select all** button and the message **Select all x item from the list** from one list selects all the records in the other list as well.	**1.** Select **All x item** from the list not working properly on Xanadu and Yokohama. **2.** Open any certification task in Yokohama. **3.** Certify or fail some records. **4.** Navigate to the 'Review Completed' tab. **5.** **Check** the **Select all** box. **6.** Select the 'Select all X item from the list' message. **7.** Navigate to the 'Review not completed' tab. **8.** Notice all records from the review that are not completed are also selected. **9.** Observe that the count is updated to all the records.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Problem	Short description	Description	Steps to reproduce
			Expected behavior: Only the selected records in should be in the 'Review completed' tab. Actual behavior: Notice that records from the 'Review not completed' tab are also in the 'Review completed' tab.
Major Incident Management PRB1757151	Base instance list control on the Affected CI related list throws an error in the syslog when incidents are accessed on the mobile app	An error is thrown with the following warning when any user opens an incident record while accessing the instance through the browser on a mobile device.	**1.** Open an instance. **2.** Log in to the instance. **3.** Navigate to any available incident. **4.** Switch to desktop view. **5.** Navigate to **syslog.list**. Observe the error in the logs.
MID Server PRB1842102	Session mismatch on MID server when an agent experiences VPN issues	Host data collection also fails with MID logs showing, 'Failed to send check instance check-discovery-basic due to closed communication session'.	**1.** Use MID in the ITOM lab. **2.** Connect the agent to MID in ITOM lab. **3.** Disconnect the agent by disconnecting from the ITOM VPN. **4.** Reconnect the agent by reconnecting to ITOM VPN. **5.** Check the MID logs. Expected behavior: Notice the MID logs with the agent ID mapped to the message, 'Agent registered for communication', and the agent websocket session should be different than it was before it disconnected. Actual behavior: Notice the MID logs with the agent ID mapped to the message, 'Agent registered for communication', and the agent websocket session is the same according to MID logs.
Mobile Platform PRB1840495	List screen presents error and doesn't present items in offline mode due to a specific input form screen configuration	In the case where the parameter screen is pre-fetched, the list screen shows an error and does not present items. In the case where the parameter screen is on-demand, the parameter action does not open in offline mode.	**1.** Create a list screen. **2.** Create a swipe action such as 'fnc_ai_Y_enhancements _multi_page'. **3.** Create an action item that uses the parameter screen such as 'ai_Y_enhancements _multi_page'. **4.** Create an action of type attachments for the parameter screen such as 'attach4str'.

Problem	Short description	Description	Steps to reproduce
			5. Add data binding to the action. **6.** See the 'attach4str' action. **7.** Configure the list screen and all components to be available offline. **8.** Check the list screen in offline mode. Notice that when the parameter screen is pre-fetched, the list screen shows an error and does not present the items.
Mobile Platform PRB1844072	Error when executing action in Offline for Android and iOS	An error occurs indicating the WBA failed.	**1.** Download the offline cache. **2.** Turn on Offline when in offline mode. **3.** Select the **CTT-Test** icon. **4.** Select incidents ending with '0004'. **5.** Select the **CTT Scripted** footer button in the form screen. **6.** Skip all pages. **7.** Select **Submit**. Notice the error banner shows, indicating the WBA failed.
Mobile Platform PRB1844650	Button action that uses a scripted screen causes an error in the loading an item section	An error occurs and the item section is not displayed.	**1.** Create an item section that links to the list screen. **2.** Navigate to the list item configuration for the list screen. **3.** Ensure that there is no Embedded Screen configuration. **4.** Create a new button instance with the 'list item' location. **5.** Create a button that uses the scripted screen for the button instance. **6.** Open the Android mobile application. **7.** Open ALP with the item section configured. Expected behavior: The item section should be displayed, and the scripted screen should open when the item is selected. Actual behavior: The error, 'Could not load the applet launcher' is displayed and the item section is not displayed.

Problem	Short description	Description	Steps to reproduce
Next Experience Unified Navigation PRB1690651	Zing Exact Match search on workspaces intermittently navigates to an incorrect URL in Next Experience	Zing Exact Match search opens the record in record view instead of kb_view.	**1.** Log in to an instance in incognito mode. **2.** Ensure Next Experience is enabled. **3.** Ensure global and workspace searches are using zing. **4.** Select **Service Operations Workspace** in the search context. **5.** Perform an exact match search for 'KB0000001'. **6.** Notice that it should open the record in kb_view. **7.** Wait for 5 to 10 minutes. **8.** Repeat the steps. Observe that the record opens in record view.
Next Experience Unified Navigation PRB1871341	Text is truncated in the 'leave page' pop-up in Next Experience after upgrading to Yokohama	The issue isn't happening on previous releases like Washington DC or Xanadu. The issue is also not happening with UI16 on the Yokohama release.	**1.** Turn on Next Experience. **2.** Access the 'Basic Configuration UI16' module. **3.** Modify the value of 'Browser tab title' to a longer value. **4.** Select **Save**. **5.** Re-log in the instance to make sure the change take effect. **6.** Select **Create New** under the 'Incident' or 'Knowledge' module to create a record. **7.** Make some changes on the form. **8.** Select the **Back** arrow on the left-top of the form. Expected behavior: The 'Leave page' pop-up appears, which displays a completed message. Actual behavior: The 'Leave page' pop-up appears, but it displays a truncated message.
Next Experience Unified Navigation	The desktop notification banner doesn't display in Windows when	It displays the notification in the Notification Center but it doesn't display the banner.

Problem	Short description	Description	Steps to reproduce
Performance Analytics PRB1890020	Addition of Query ACLs in Analytics Hub	This change adds new Query ACLs on certain table(s) and field(s) to grant query_range access.	
Personal Data Rights PRB1890994	Addition of Query ACLs in Personal Data Rights	This change adds new Query ACLs on certain table(s) and field(s) to grant query_range access.	
Platform Analytics Migration API PRB1865209	**View dashboard** automigrates dashboards that should not be migrated when unified is 'true'	This behavior can be seen for Yokohama and previous families.	1. Mark dashboard on pa_dashboard list as **Do not bulk migrate**. 2. Run bulk migration. 3. Activate it. 4. Return to the dashboard in pa_dashboard. 5. Select **View Dashboard**. Expected behavior: The dashboard should not be migrated since it is blocked from migration. Actual behavior: The dashboard is auto-migrated.
Playbook Experience Core PRB1841873	Slowness within Playbook activities when there are a large number of stages and activities	This issue within the Playbook activities occurs when large number of stages and activities, such as 100 to 200 activities, have condition to run on the lanes and activities.	1. Create a playbook process with a large number of stages and activities. 2. Attempt to progress through the playbook in the workspace or playbook preview. Notice the slowness increases as the number of stages and activities grow.
Playbooks (Family Channel) PRB1861646	Questionnaire order is not synchronized in update_set or persisted when duplicating a Playbook	The order of questions in the Questionnaire Activity should persist in a duplicated playbook.	1. Create a new Playbook with a Questionnaire Activity. 2. Add three questions. 3. Select **Save**. 4. Duplicate the playbook. Expected behavior: The order of questions persists in the duplicated playbook.

Problem	Short description	Description	Steps to reproduce
Predictive Intelligence PRB1885063	Add model parameters from model configuration as advanced parameters in classification solution	This is a product update.	
Predictive Intelligence PRB1885952	Incorrect use of current.update() in a base instance business rule	The script run by the BR includes a current.update() call without setworkflow call to disable other BRs.	
Predictive Intelligence PRB1890514	A 'Feature Importance' tab displays for java classifications		1. Train a classification solution with glide.platform_ml. api.enable_ workflow_classification as 'false'. 2. Observe that the 'Feature Importance' tab appears even though it's not trained with explainability. Expected behavior: The 'Feature Importance' tab shouldn't appear. Actual behavior: The 'Feature Importance' tab is appearing.
Process Mining PRB1870032	Uppercase and lowercase sys_ids for the same record break mining	A script changes the document ID in sys_audit for records so that some document ID values are uppercase and lowercase.	
Process Mining PRB1889675	Addition of Query ACLs in Process Mining	This change adds new Query ACLs on certain table(s) and field(s) to grant query_range access.	
Schedule Optimization PRB1889701	Work order tasks are assigned from the agent schedule start time based on the agent's timezone.	Results should be in UTC relative to the cmn_schedule timezone, even if the user's timezone is different.	
Security Customer Actions	Steps can't be re-opened for a completed action due	The user is not able to re-open the step to continue working on it again.	1. Open a Xanadu instance. 2. Navigate to **Security Center** > **Customer Actions (Critical Updates)**.

Problem	Short description	Description	Steps to reproduce
PRB1873948	o Playbook archiving		3. Complete the **Enable 3DES deprecation for Password2 Fields** action. 4. Wait 14 days on the instance to allow for playbook archiving. 5. Navigate to the completed **Enable 3DES deprecation for Password2 Fields** action. 6. Navigate to **Steps**. 7. Select one of the steps. Expected behavior: The user is able to re-open a step by using the **Restart** button to proceed working on it again. Actual behavior: The user is not able to re-open the step.
Server-side scripts PRB1856234	Fetch in non-module scopes look for classes improperly	An error is thrown about abort controller.	
Service Catalog Builder PRB1866781	When calling the CatalogItem.get API with the Catalog Item GlideRecord for a CRP record, the type on the catalog item cached object will be sc_cat_item_producer	The type on the catalog item cached object will be sc_cat_item_producer when it should be sc_cat_item_composite_producer.	1. Take a sys_id of base instance record producer. 2. Flush the system cache. 3. Query the sc_cat_item table with the CRP sys_i from background scripts. 4. Call the CatalogItem.get API with the glideRecord. 5. Call the API GlideappCatalogItem.get().getType() from background scripts. Expected behavior: The type should be sc_cat_item_composite_producer. Actual behavior: The type will be sc_cat_item_producer because of the issue, and the catalog builder subsequently doesn't work on the node where the cache is corrupted.
Service Creator PRB1847033	A user with the catalog_editor role is able to access all records in	In a Yokohama instance, the data filter record for the table catalog_category_reques is not appearing	1. Create any record in catalog_category_request table. 2. Attempt to access the table records with a user with a catalog_editor role.

Problem	Short description	Description	Steps to reproduce
	catalog_category request table	automatically. It appears only after repairing the Service Creator plugin.	Expected behavior: The user is unable to access the records. Actual behavior: The user is able to access the records.
ServiceNow IDE (Family Release) PRB1878154	A sync notification appears after deploying an app	The sync mechanism should detect changes from sys_update_xml by default.	1. Create an app. 2. Create a Table({}) using Fluent in index.now.ts. 3. Deploy the app. Expected behavior: Changes made by Fluent shouldn't trigger a sync. Actual behavior: A sync notification appears immediately after deploying even though it was the user's changes that were deployed.
Service Portal Core Widgets PRB1862176	Service Portal fails to a submit catalog item when a required HTML variable is empty and re-submitted with a filled value	After selecting **Submit** on a Service Catalog Item widget when the required HTML variable is empty, it rejects the submission as expected. However, filling the HTML variable after the submission is rejected and still detects the HTML variable as not filled. Because of this, users are only able to submit catalog items from Service Portal when the required HTMl variables are filled properly before submission.	
Service Portal PRB1861832	Accessibility issues on Business Portal Home Page	Accessibility issues regarding the **Language selection** field for users.	
Service Portal PRB1884533	Dynamic window pinned mode causes layout issues on a catalog item	The catalog item overlaps with dynamic chat window.	1. Navigate to {instance}/sp with dynamic window enabled. 2. Navigate to the catalog page and select a catalog item. 3. Open a dynamic window, pin it and increase the window size to half of the page.

Problem	Short description	Description	Steps to reproduce
			Notice that the catalog item overlaps with dynamic chat window.
Service Portal PRB1894604	To reduce regressions, query ACLs are only enforced when certain conditions are met for widget-data-table		
Sidebar (Family Release) PRB1893827	Revert true-up for SFS for Yokohama Patch 4	There should be no version true-up for SFS in Yokohama Patch 4.	
Sidebar PRB1877077	Dynamic Expert Finder is not working in Yokohama instances	There are test failures in the Dynamic Expert Finder tests. The participants list is not loading.	
Smart Assessment Engine PRB1890890	Addition of Query ACLs in Smart Assessment Engine	This change adds new Query ACLs on certain table(s) and field(s) to grant query_range access.	
Software asset analytics PRB1860159	There's an issue with the 'potential savings indicator' filter for reclamation candidates	By default, all new reclamations have a user subscription mapped to the 'Subscription to reclaim' M2M table. Where there's a downgrade or consolidate use case, the product and user subscription isn't stamped. Where there's a low usage use case, the product and user subscription is stamped. Due to this, some reclamation candidates are missed by the potential savings calculation.	1. Create M365 integration. 2. Run the 'Usage' job. 3. Create entitlements. 4. Run the 'Reclamation' job for M365. 5. Check the user subscription and product for downgrade or consolidate case. 6. Run the Platform Analytics indicator job 'Subscription Daily Job'. Some potential savings for these candidates are missing on the 'Software Asset Analytics' page.

Problem	Short description	Description	Steps to reproduce
PRB1824234	as expected when the 'same day selection flag' is toggled on	start date, the user cannot pick the same date for end date even though 'Enable same day' is toggled on. The user is allowed to pick the same day only if they select another date or modify the time.	**3.** Pick any page. **4.** Add the 'now-date-time-interval'. **5.** Select **Preview**. **6.** Pick the start date. **7.** Attempt to pick the same start date as the end date.
UI Field Administration PRB1560731 KB1113102	The **Template Value** field can lose data if the record is updated before it is finished loading	Data in **Template Value** type fields are lost or cleared when they are saved.	**1.** Navigate to **sys_script.do**. **2.** Fill the mandatory fields. **3.** Navigate to **Actions** > **Set field values**. **4.** Select **description**. **5.** Set the **value**.3. Save the record. **6.** Allow the record to load. **7.** Quickly select **Update** on the form header once the record is saved. **8.** Return back to the business rule. Notice that **Set field values** is empty.
UI Form Administration PRB1814991	Bulk-edit pop-up form in a presentational list won't refresh after previous transaction	The bulk-edit UI action pop-up form contains the input from the **Description** field from a previous transaction to other records that are opened.	**1.** Navigate to **UI Builder** > **Service Operations Workspace**. **2.** Add a variant to the List. **3.** Select **List Page Template** in the Template Picker. **4.** Ensure the new variant has a smaller order than the existing one, so it becomes the default list. **5.** Navigate to **Workspace** > **Service Operations Workspace** > **List** > **Incident** > **All**. **6.** Select any record. **7.** Select the **Edit (1)**UI action. **8.** Update the **Description** field in the pop-up to **ABCDE**. **9.** Select **Update**. **10.** Notice the success update message. **11.** Select another record. **12.** Select the **Edit (1)** UI action. **13.** Notice the **Description** field contains the user input 'ABCDE' from the last transaction.

Problem	Short description	Description	Steps to reproduce
			14. Select **Cancel**. 15. **Confirm** to discard the changes. 16. Select another record. 17. Select the **Edit (1)** UI action. Notice the **Description** field still contains the user input 'ABCDE' from the previous transaction.
UI Form Administration PRB1829603	Workspace fields are cleared when using multiple tabs with an agent	After upgrading to the Washington DC release, an issue occurs when accessing multiple tabs during a chat with a live agent, in which already completed interaction records are cleared.	1. Log in to an instance. 2. Impersonate a user. 3. Navigate to the **Service Operations Workspace**. 4. Update the status to **Available** in two different tabs. 5. Impersonate two users. 6. Initiate a chat from portal. 7. Fill all the fields in the interaction record. 8. Search for 'REQ0010001' in the workspace. 9. Attempt to open REQ0010001. 10. Navigate to **Related Record** > **Requested Items** > **Catalog Tasks**. 11. Add to the work notes. 12. Close the Related Record tab. 13. View the interaction records. 14. Notice that the values are cleared. Expected behavior: The updated values in the interaction record shouldn't be cleared after opening multiple tabs. Actual behavior: The updated values in the interaction record are cleared after opening multiple tabs.
UI Form Administration PRB1876467	timeAgo.js generates an incorrect string for date/time, more than 12 months in the future	It incorrectly indicates the past.	1. Open any form in UI16/Next Experience with a **date/time** field. 2. Set the **date/time** to 13 months in the future. 3. Hover over the **date/time** text in the input and look at the tooltip text.

Problem	Short description	Description	Steps to reproduce
			Expected behavior: 'About a year from now'. Actual behavior: 'About a year ago'.
UI Policies PRB1894468	Performance degradation for Core UI performance	Core UI performance testing shows 250 to 300ms degradation for most direct load user actions.	
Usage Analytics PRB1860251	Fix the incorrect migrated user consent decisions	Users who consented as 'N/A' or 'Agree' for tracking are not tracked after upgrading to Vancouver or recent families. After upgrading to the latest release, observe that if the decisions are 'N/A' or 'Agree' in the old table, they are migrated as false in the new table sys_analytics_user _consent_decision. These decisions should be migrated as true 'Y'; any decision other than 'N' should be considered as 'Y'. These decisions are migrated as false 'N' for 'N/A' and 'Agree'.	
UX Framework PRB1834286	maxMainTabLimit is not honored on workspace tabs	After updating the properties 'maxCachedPageCount' and 'maxMainTabLimit' to 15, the user should be able to open 15 case tabs in the Customer Service Management/ FSM Configurable Workspace.	1. Log in to the instance as admin. 2. Update the property **maxCachedPageCount** to 15. 3. Update the property **maxMainTabLimit** to 15. 4. Log in to the instance as a user. 5. Navigate to the Customer Service Management/FSM Configurable Workspace. 6. Attempt to open 15 case tabs. 7. Attempt the scenario multiple times. Expected behavior: The limits set for the properties should always be honored, and the user should always be able to open a maximum of up to 15 tabs.

Problem	Short description	Description	Steps to reproduce
			Actual behavior: The user can only open 10 tabs in some cases, and 15 tabs in other cases.
UX Framework PRB1860400	Mega-menu lacks tab-panel markup on a demo Portal app	The list of tabs and buttons without a 'collapsed' or 'expanded' state are not announced for screen reader users.	1. Open an instance. 2. Open Demo Portal App by appending the URL using /now/demo/portal/home. 3. Wait for the Portal Home page to open. 4. Use a screen reader to navigate the page using the **Tab** key. 5. Expand the **Navigation Menu 2** menu. 6. Select a sub-menu such as **Menu Item 1**. 7. Notice how these menu items and the subsequent content is announced for screen reader users. Expected behavior: The left-hand list of tabs should announce as such, and the buttons should have state information such as 'collapsed' or 'expanded'. Actual behavior: The left-hand list of tabs are not announced and the buttons with no state information such as 'collapsed' or 'collapsed'.
UX Framework PRB1866363	Opening more than the max limit CSM workspace tabs outside ServiceNow AI Platform does not trigger the 'Max limit reached' pop-up	Configuring the sys_ux_page_property to not allow more than 10 tabs open in CSM workspace. When selecting '+' 11 times manually inside the CSM Workspace, 10 tabs are opened as expected. When 11 tabs are opened, a pop-up appears. When the tabs are triggered from outside the ServiceNow AI Platform using simple JavaScript, 10 tabs are open as expected, when 11 tabs are triggered, all 10 tabs are closed and a new tab is opened.

Problem	Short description	Description	Steps to reproduce
UX Framework PRB1868302	Interaction Related Records for 'View Knowledge Articles' in the Service Operations Workspace (SOW) are incorrect after upgrading Xanadu	Interaction related records does not map correctly when viewed from SOW.	1. Hop on to a base instance. 2. Open the Service Operations Workspace. 3. Select **Lists** > **Interactions**. 4. Select **New**. 5. Completed all required fields. 6. Select **Save**. 7. Select **Agent Assist** from the left pane. 8. Open any KB article in full view. 9. Navigate to **interaction_related_ record.LIST**. 10. Observe that the record is created, and that the ID of the related record is empty and that the table is incorrect. 11. Observe that the knowledge article is empty, and the record type should be 'Knowledge'. 12. Navigate to the **Filter navigator** > **interaction_related_ record.LIST**. 13. Find the entry created and compare it to the pre-upgrade entries that have completed information.
UX Framework PRB1884646	There's multiple occurrences of the 'js-common-mega' bundle in the 'Asset' table		
Virtual Agent Designer Legacy PRB1886617	Dynamic Action component returns duplicate sys_ids		
Virtual Agent PRB1845590	Phone number Generative AI regex pattern masks unwanted utterances	Generative AI regex pattern masks unwanted utterances such as dates.	1. Install the Generative AI Controller, Data Privacy and Data Discovery plugins. 2. Navigate to dp_configuration_ domain_separated table.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Problem	Short description	Description	Steps to reproduce
			3. Activate the Phone Number GB (Generative AI) regex for the Now Assist Data Channel. **4.** Execute a capability with **2025-01-17 12:53:00** in the utterance. Observe the bug that masks the date.
Virtual Agent PRB1851088	Catalog items are not displayed in the card format in the AI Search block in non-English languages	This issue only occurs when the preferred language is set to non-English languages, and behaves as expected when the preferred language is English.	**1.** Log in to an instance. **2.** Change the preferred language to German or any non-English language. **3.** Navigate to Service Portal. **4.** Initiate a chat. **5.** Search for **iPhone 13**. **6.** Select **(Katalog) Apple iPhone 13**. Notice that the result is not displayed in the card format.
Virtual Agent PRB1862323	Translate Texts subflow sending text_type as null to DT subflow for Virtual Agent after upgrading to Xanadu	The 'textType': null should not be passed in additional_parameters to the Microsoft Translate or Google Translate spoke subflow.	
Virtual Agent PRB1868975	Some text in some OutputCardContent isn't translating	Specifically the **msg_heading** and **heading** fields sent in custom Teams notifications aren't translated.	**1.** Set up local instance with chat, DTVA, and MS Teams channel configuration. **2.** Install a language pack. **3.** Change the language. **4.** Create a custom notification. **5.** Trigger a notification. Notice the message and the message heading aren't translated.
Virtual Agent PRB1879865	Now Assist doesn't generate Japanese answers properly	The results are mostly in English.	**1.** Provision an instance with the Japanese plugin, Now Assist for AI Search (latest version 10.18), and Now Assist for VA installed. **2.** Enable Now Assist for AI Search, Now Assist for VA, Now Assist Genius result, and include feature in the esc portal.

Problem	Short description	Description	Steps to reproduce
Web Content Accessibility Guidelines (WCAG) 2.0 AA Compliance PRB1857608	The 'of' string is hardcoded in the mega header in i18n	This issue occurs after expanding the Workspace menu.	1. Launch any base instance. 2. Navigate to the Workspace menu on the header. 3. Expand it. Observe that after expanding it, an issue with the suggestions appear.
Workforce Optimization for IT Service Management PRB1889670	Addition of Query ACLs in Workforce Optimization for IT Service Management	This change adds new Query ACLs on certain table(s) and field(s) to grant query_range access.	
Work Order Management PRB1846321	Refactor script of remote table v_st_fsm_schedule_event	Querying table v_st_fsm_schedule_event with a giving sys_id does not return a valid record, and the record is mostly empty. Remote table v_st_fsm_schedule_event generates a random sys_id to accommodate a repeated schedule event, making the sys_id non-deterministic.	
Work Order Management PRB1888734	The **Dispatch group** field remains empty onLoad when a work order task is manually created	This prevents the qualifier from progressing.	
Workplace Core PRB1889743	Addition of Query ACLs in Workplace Core	This change adds new Query ACLs on certain table(s) and field(s) to grant query_range access.	

Fixes included

Unless any exceptions are noted, you can safely upgrade to this release version from any of the versions listed below. These prior versions contain PRB fixes that are also included with this release. Be sure to upgrade to the latest listed patch that includes all of the PRB fixes you are interested in.

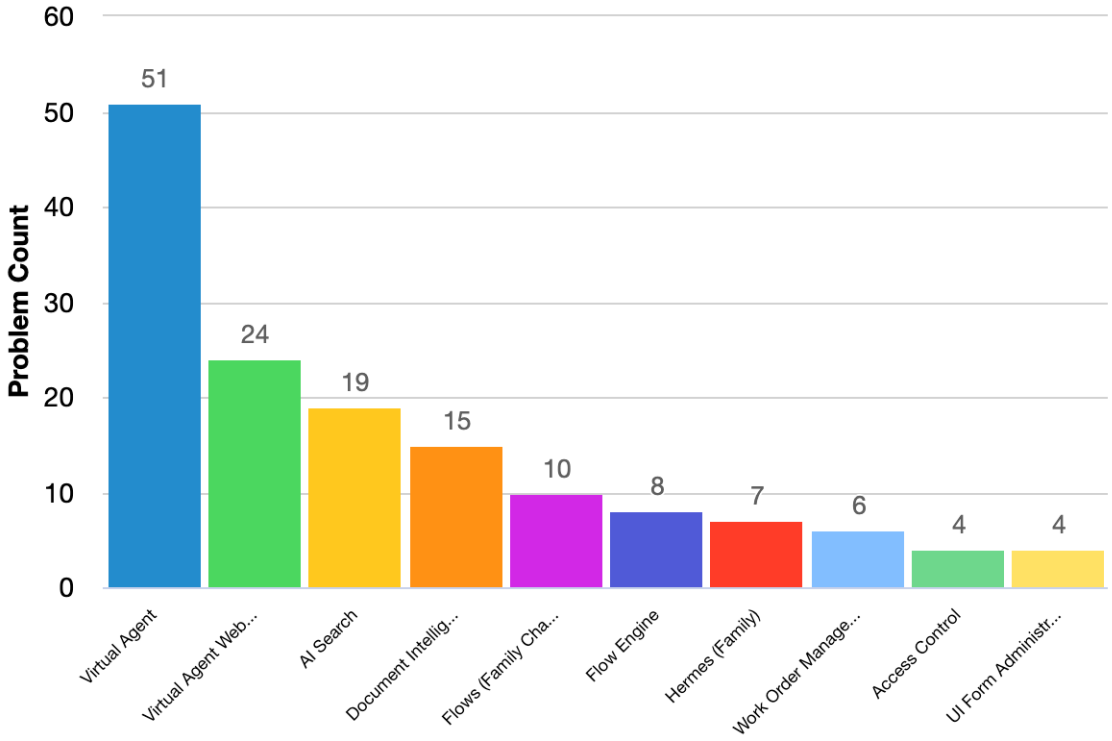
Top 10 problem categories



Security-related fixes

Yokohama Patch 3 includes fixes for security-related problems that affected certain ServiceNow® applications and the ServiceNow AI Platform®. We recommend that customers upgrade to this release for the most secure and up-to-date features. For more details on security problems fixed in Yokohama Patch 3, refer to KB2060631.

Changes in Yokohama Patch 3

Activate indexing of catalog variable content on Catalog Item records

Activate indexing of searchable content from variables on Catalog Item records. Configure the set of Catalog Items eligible for catalog variable indexing and the set of variables to index.

AI Search system properties

glide.ais.ingestion.catalog_variables_filter_query: Encoded query string for a query that Catalog Item records must satisfy to be eligible for catalog variable content indexing.

glide.ais.ingestion.ignore_catalog_variables_read_roles: Option to allow indexing of searchable content from role-restricted catalog variables on Catalog Item records.

glide.ais.ingestion.index_catalog_variables: Option to allow indexing of searchable content from globally accessible catalog variables on Catalog Item records.

Field Service Management release notes

Variable types supported by AI Search indexing

Service Catalog variable types indexed from Catalog Items.

Notable fixes

The following problems and their fixes are ordered by potential impact to customers, starting with the most significant fixes.

Problem	Short description	Description	Steps to reproduce
Agent Chat PRB1862727	A 'Show audio' modal appears when an agent presence state is changed to 'Available' for Safari users	A user interaction is required on the page for the audio to work, especially in inactive tabs. This was enforced by a modal when the audioContext was detected to be suspended, which occurs when a new AudioContext is created in the page. Now, the modal appears for Safari whenever the presence changes in the inbox to 'Available' to avoid having users refresh the browser to see the modal.	
Form Builder PRB1820975	A form isn't saved on a cross scope in ServiceNow studio	There's an error in the networking calls.	
List Filters PRB1801767	Japanese names cannot be filtered by a Japanese term but can be filtered by an English term under the Japanese setting	Unable to filter lists by **Translated Text** fields in non-English languages when using the non-English translation	
MID Server PRB1870465 KB2022624	ECCSender does not use the correct character set when reading XML queue files	ECCSender uses the default file encoding/ character set when reading XML queue files from a disk. This results in incorrect characters in the response for some	Refer to the listed KB article for details.

Problem	Short description	Description	Steps to reproduce
		special characters. ECCSender should use UTF-8 when reading these files, as XML queue files on disk are always UTF-8.	

All other fixes

Problem	Short description	Description	Steps to reproduce
Access Control PRB1859273	A query that consumes significant time is invoked every minute by the UserHasRole Patcher sys_trigger	It's an issue with CSM performance.	Prepare an instance with CSM with 5 times the data. Observe the time taken by the query executed as part of the UserHasRole Patcher scheduled job.
Activity Stream PRB1830587	Activity Stream doesn't limit the size of **Journal** fields	The maximum size of journal entry appears to be either 50Kb or 100Kb by default. UI16 has a 10MB limit on the total **Journal** field size. Once this limit was reached it truncates every journal entry to 50K. The entry cap is 250 by default. The entry cap is 30 for attachments. The size cap + entry cap is what ensured no out of memory errors in UI16.	**1.** Create a script that creates a 10MB work note. This can be a 100 character string that is appended to the work note 100,000 times in a loop. **2.** Add 2-3 of these to a single incident. **3.** Request the incident in Service Operations Workspace (SOW). Expected behavior: The incident should load with these massive strings. Actual behavior: Chrome and Edge crash as the browser runs out of memory. **1.** Add 100 of the 10MB work notes from #1. **2.** Request the incident. Expected behavior: The incident should load in SOW. Actual behavior: The Glide server crashes with an out of memory error.
Activity Stream PRB1834000	Reaper query needs an index to perform optimally	When the reaper query runs, it does not use an index to find the expired records.

Problem	Short description	Description	Steps to reproduce
Advanced Work Assignment PRB1867023	When a blind transfer work item is created from a work item with the consult state as 'transferred', it retains the consult state	The agent can accept only work items created in the 'requested' or empty state.	**1.** Have Agent 1 get a call. **2.** Agent 1 consult transfers to Agent 2. **3.** Agent 1 leaves the call. **4.** Agent 2 blind transfers to Agent 1. **5.** Agent 1 gets the offer card in their inbox. **6.** Agent 1 accepts. Observe that the card stays, and the work item is also always in a 'pending accept' state.
Agent Chat PRB1868186	The conversation history in the Agent Chat only displays one previous interaction	All previous closed conversations should be displayed, but only one past closed conversation is shown.	**1.** Enable conversation history in Agent Chat in **Conversational Settings** > **Agent Chat** > **Conversation History**. **2.** Log in as an agent in Safari. **3.** Log in as a non-guest user in any other browser. **4.** Start a conversation and accept as an agent. **5.** Close the conversation. **6.** Have a few more conversations (about 2-3) and close them. **7.** Start a new conversation and scroll up to see the past closed conversations in the chat panel in Agent Chat. Expected behavior: All previous closed conversations (up to the amount configured in the conversation history settings) are shown. Actual behavior: Only one past closed conversation is shown.
AI Search PRB1783862	The wrong search events get deleted due to incorrect sort logic	The method called via a scheduled job that runs weekly deletes signals that are both older than 90 days and are older than the 500K 'most recent' search events for the search application. When an end user closes a suggestion from their recently searched terms, it causes the

Problem	Short description	Description	Steps to reproduce
		suggest_to_user field on the sys_search_event record to be updated, which updates the **sys_updated_on** field in the process. This can lead to older search events that have suggest_to_user set to 'false' being preserved over newer ones that the user may still wants as a suggestion.	
AI Search PRB1824166	A translated reference field is indexed in a different language in a single record update vs a full table index	The peekahead is using the same value for different languages.	**1.** Enable i18n Spanish. **2.** Insert a KB record kb_knowledge_base=knowledge, language=es. **3.** Wait for incremental index and dump the document. **4.** Verify that kb_knowledge_base is in Spanish. **5.** Re-index kb_knowledge. **6.** Wait for incremental index and dump the document. Expected behavior: kb_knowledge_base is in Spanish. Actual behavior: kb_knowledge_base is in English.
AI Search PRB1841579	sn-search-combobox-desktop's use of createGraphQLEffect dispatches errorActionType due to a 401 error for public GraphQL endpoints	The batch request fails due to 401 even though the GraphQL request in the batch was actually successful.	**1.** Set the Service Portal home page to public. **2.** Set the Typeahead Search widget to public. **3.** Open Service Portal without logging in. **4.** Open Developer Tools. **5.** Select the search box. Observe in Seismic Dev Tools that the batch request failed due to 401. Then, observe in the Network tab that the GraphQL request in the batch was actually successful.
AI Search	When multi-node ingestion

Problem	Short description	Description	Steps to reproduce
PRB1847810	s enabled on a production instance, all cloned instances from production enable multi-node ingestion		
AI Search PRB1856064	Now Assist Panel (NAP) displays the error, 'Trouble processing your request' while promoted skills are working correctly	The skill is not being identified and indexing is not occurring automatically on the 'Skill' table. Skill discovery is not happening, and the following error message is displayed: 'We're having trouble processing your request right now due to a temporary system issue. Please try again later.' However, when the 'Skill' table is manually indexed, the skill gets discovered.	
AI Search PRB1860558	The indexing history of a quick test on an admin console does not show a link to the platform indexing history page	The start time column should be populated with a link to an indexing history record, but instead it is blank.	**1.** Using admin console V5, select any indexed source. Notice that it redirects to the indexing history page and the indexing history record is created after a couple seconds. **2.** Reload the list. Expected behavior: The start time column is populated with a link to an indexing history record on the platform. Actual behavior: The start time column is blank.
AI Search PRB1863971	RAGRertirval API throws an error if the searchSource given request is not present	When the user submits a RAGRetrieval API request with a search source that is not part of the search profile or is not an indexed source, RAGRetrievalAPI fails with no search results.

Problem	Short description	Description	Steps to reproduce
AI Search PRB1869616	RAG capability isn't honoring return fields for child tables' columns		Try invoking Uber Rag or Retriever capability with child tables columns as return fields. Expected behavior: Child table fields should be returned in the response. Actual behavior: Child table fields aren't returned in the response.
AI Search PRB1870966	When topics are searched, the term logged to the suggested utterance table is unrelated to the topic		**1.** Ensure that utterance readers are mapped to the search application. **2.** Search a topic on the portal. It should return a synthesized Genius Results answer. **3.** Check that the utterance is logged to the sys_suggested_utterance table. Observe that the logged term is sometimes unrelated to the topic searched.
AI Search PRB1871798	Dynamic Window (DW) chat returns an error reading 'Sorry there was a problem on my side'		**1.** Enable dynamic window on Service Portal **2.** Perform a search in chat. Notice an error that reads 'Sorry there was a problem on my side'.
AI Search PRB1878130	External content ingestion isn't sending a URL to AI Search's (AIS) backend		**1.** Ingest a KB document. **2.** Observe AI Search (AIS) backend logs. **3.** Create external content setup. **4.** Start an external content ingestion, like web crawler. **5.** Observe AIS backend logs.
AI Search PRB1878248	Auto-correct is not turned off in search if it's triggered from the chat	Auto-correct should be turned off if a search is triggered from chat, and a rewritten query should be used.	**1.** Navigate to search toggle in Full Page Experience. **2.** Search for 'Abel Tuter'. Expected behavior: It should search for Abel Tuter.

Problem	Short description	Description	Steps to reproduce
			Actual behavior: The search term gets auto-corrected to Abel Tuner and does not return any result.
AI Search PRB1881968	The full page responsive mobile is unusable	The pre-search box is cropped on both the left and right sides. The search results search box is cropped and buttons aren't accessible.	
AI Search PRB1882714	A KG response in streaming mode might stream 'kg_information'		**1.** Set up NA4S and NAVA on the instance. **2.** Set up KG. **3.** Ensure to enable streaming. **4.** Run a KG people search query. Expected behavior: 'kg_information' shouldn't be part of streaming text. Actual behavior: Sometimes a streaming answer might contain the string 'kg_information'.
AI Search PRB1882832	Fix tracer functionality end-to-end for search use cases		**1.** Perform end-to-end searches. **2.** Collect search timings.
AI Search PRB1883872	A FPE new search isn't routed to the 'All' tab		**1.** Open an instance with a May Store app. **2.** Ensure that FPE is enabled on the ESC portal. **3.** Search for the query 'what is cookie?'. **4.** Toggle the search. **5.** Perform the search again. **6.** Navigate to the 'Knowledge' tab. **7.** Perform a new search 'Apple iPhone' while still on the 'Knowledge' tab. Notice no results are found.
AI Search PRB1883953	Signals aren't being captured for a carousel on the Portal	This isn't working for synthesized Genius results either.	**1.** Open an instance with May store apps. **2.** Enable Now Assist QnA and Now Assist Actions on portal.

Problem	Short description	Description	Steps to reproduce
			3. Perform search for queries 'Apple Iphone' and 'what is spam?'. **4.** Perform actions like 'Open source'. **5.** Trigger the 'Process Queued Signals' job. Expected behavior: Signals should be logged in the sys_search_genius _result_event_action_list table. Actual behavior: Notice no entries are found in the sys_search_genius _result_event_action table.
AI Search PRB1884610	When a dynamic window is active, reloads on the search page result in double queries		**1.** Navigate to the Portal. **2.** In the main search bar (not the NAVA chatbot), enter 'what is spam?'. Portal Genius results return. **3.** Navigate to sys_generative_ai_log and see there is one synthesized QnA response. **4.** Return to the page where the genius result is already displayed and reload the page. **5.** Navigate back to the sys_generative_ai_log and observe there are two synth QnA capability calls. One has a conversationID of DefaultAISearch and one has a NAVA conversation ID. Observe that it acts as if the query was simultaneously entered from both the NAVA chatbot interface and also the Portal search bar.
AI Search PRB1887382	For Global search, subsequent searches can't be submitted	There is no issue on Service Portal.	
Analytics Data API PRB1847323	The apply_to object isn't parsing properly for custom data sources in a multivisdata API		**1.** Add a custom data source. **2.** Create a resolution API for the data source. **3.** Add a filter to the inline dashboard with the data source and a visualization.

Problem	Short description	Description	Steps to reproduce
			4. Save the dashboard. **5.** Select something from the filter. **6.** Check the multivisdata API and see the filter configuration where apply_to object has valid values. **7.** Once applied, check the data provider method defined in sys_viz_data_source table. **8.** Check the request body passed to this method. See the apply_to object is passed as an empty list.
Application Install Engine PRB1846815	Admins users aren't able to repair/install all dependencies when domain separation is enabled	An issue was observed where a parent application (for example, Now Assist For CSM) was installed successfully, even though its dependencies (for example, sn_genai_platform) weren't installed during the process. This behavior is unexpected.	**1.** Open an instance where domain separation is enabled. **2.** Create an admin user in a different domain. **3.** Log in or impersonate as that admin user. **4.** Change the domain to global. **5.** Attempt to install a parent application with known dependencies. New dependencies aren't installed and there's domain related errors in plugin logs. **6.** Try to repair the same plugin. **7.** Verify that the new dependencies are still not installed and the domain related errors in plugin logs are still present. All the dependencies should be installed with the parent app.
Appointment Booking PRB1874123	When a slot's end time is 'Arrive by', unavailable slots are displayed as available	In the case of 'Arrive by', when an appointment is being booked, it is only considering the exact slot's worth of block while making the booking. However, the slot may have been shown as available since the work could have been done	**1.** In the appointment booking configuration, select the use slot end time as 'Arrive by'. **2.** Configure the slots from 5AM, the appointment window as 2 hours, and the work duration as 1 hour. **3.** Create a work schedule for an agent from 8-5. Observe that the first slot 5-7 should be unavailable but it is displayed

Problem	Short description	Description	Steps to reproduce
		between a time. After post-performance changes, it isn't adding the additional 30 min that is normally done when booking of the slot, which is leading to an available slot not being booked.	as available. However, when an appointment is booked for that slot, it throws an error.
Authentication PRB1852202	A 'Tracking' status isn't changing to self-enrollment in a tracking table		**1.** Log in via an admin. **2.** Enable MFA, AA and MFA context. **3.** Navigate to sys_properties.list. **4.** Set SWP to 30 and MAX_SWP to 90. **5.** Log in via a newly created user or any existing user. **6.** Navigate to a profile and configure MFA. **7.** Log in via an admin. **8.** Navigate to the sys_user_mfa_enforcement_info.list. Expected behavior: The status should change from 'Tracking' to 'Self Enrolled'. Actual behavior: The status doesn't change; it remains as 'Tracking' only.
Capacity and Reservations Management PRB1868046	Event cells of capacity on a calendar aren't visible in the dark coral theme		**1.** Enable the coral theme dark mode. **2.** Open capacity console using a user with elevated privileges. The user should be able to view the event cells without any issue.
Case and Knowledge Management for HR Service Delivery PRB1852603	A record handling agent is unable to fetch HR case details	The record handling agent gives an error: 'The system is unable to get the record information'.

Problem	Short description	Description	Steps to reproduce
Case Management PRB1872131	Clustering isn't triggered because of a missing ACL		1. Navigate to **All** > **Now Assist Admin** > **Feature** > **Now Assist Skills**. 2. Select **suggested steps generation skills**. 3. Select **clustering progress**. Observe that the clustering progress bar is stuck.
Change Advisory Board (CAB) Workbench PRB1870269	There's a 'Write operation against 'cab_definition' from scope 'sn_sow_chg' has been refused due to the table's cross-scope access policy' alert present after selecting **Refresh CAB meetings** on SOW CAB Definition	**Refresh CAB meetings** actions in UI16 work without any issues, but returns an error in Service Operations Workspace.	1. Log in. 2. Navigate to **SOW** > **Change Advisory Board** > **All CAB Definitions**. 3. Select **New**. 4. Populate mandatory fields. 5. Create scheduled entries from the 'Related records' tab via the **New** button. 6. Populate mandatory fields. 7. Select **Submit**. 8. See a scheduled entry created for the CAB Definition. 9. Select the 'Details' tab. 10. Select the **Refresh CAB Meetings** button. Expected behavior: CAB Meetings are generated without errors/alerts. Actual behavior: CAB Meetings generated with an error/alert: 'Write operation against 'cab_definition' from scope 'sn_sow_chg' has been refused due to the table's cross-scope access policy" presents on the form'.
Change Management PRB1849821	The **Closed Change Count** field under the 'std_change_record_producer' table is calculated incorrectly when multiple template records are created with	This is caused because the 'group by' query defined in the script 'StdChangeUtilsSNC' Inside the function 'calculateVersionAndTemplateStats' is attempting to group by on the name rather than the sysID, which is leading to the incorrect calculation of the closed change count.

Problem	Short description	Description	Steps to reproduce
	the same template name		
Change Management PRB1875123	CAB AMB controller is too strict on the number of parameters passed on registration, preventing enhancements for Store applications		
Change Management PRB1880887	com.snc.change_management.standard_change is activated on an upgrade	com.snc.change_management.standard_change_catalog standard_change_flows is installed on an upgrade and zboot. This has a dependency on the standard change catalog. The dependency needs to be removed.	
Code Signing PRB1854759	Frequent updates on the 'sn_kmf_record_signature' table leads to excessive generation of text index events	Frequent updates on the 'sn_kmf_record_signature' table leads to excessive generation of text index events, delaying the text index events processing on the instances.	
Code Signing PRB1860810	Generate signatures for sys_auto_script table with wildcard mode	Generating signatures for sys_suto_script table records as they are invoking scripts writing to ecc_queue directly from sys_auto_Script.	
Code Signing PRB1869613	Guardrails should respect filter conditions on the signature configuration	Don't validate signatures for records not meeting filter conditions, and skip validating records that don't participate in MID.	Run guardrails. Observe that it validates all signatures and doesn't care about filters.
Column Level Encryption PRB1829680	Key Migration should succeed when EFCs and tables are in different scopes	When the EFC scope is different from the configured table scope, the key migration job will not modify it and fail the key migration. Key migration fails due

Problem	Short description	Description	Steps to reproduce
		to a scope mismatch between EFCs and the associated table during key migration.	
Condition Builder PRB1845617	A duration editor is modifying the typed in value and adding to it		1. Navigate to a Yokohama instance. 2. Navigate to now/SOW/list. 3. Select the **Incidents** > **All.** 4. Open the PCB by selecting the **Filter** button. 5. Select a duration value editor. 6. Type the '1' character into the **Days** field. Expected behavior: It should set the value to what the user types in, but something is modifying the value before it goes to the editor. Actual behavior: The value for days jumps to 3079 with hours red and set to -1.
Configuration Management Database (CMDB) PRB1868449	Fix family compatibility issues for the 'Reject task' feature	The Data Manager (DM) subflow does a double rejection process for rejected tasks in the Workspace, and the business rule 'Clean up TaskToCI records' fails to process records with a NullPointerException.	1. Create a DM retire policy on the cmdb_ci table where the condition name starts with 'SAP'. 2. Assign the policy to user. 3. Publish the policy. 4. Run the scheduled job 'SNC.CMDBDataManager ScriptableApis. executeRetirePolicies();'. 5. Notice that a task is assigned to a user. 6. Impersonate the user. 7. Open the CMDB Workspace. 8. Navigate to **Open my task** > **Open the task** > **Review task** > **Reject**. 9. Give a reason for the rejection. 10. Select **Save**. 11. Observe that the task is rejected successfully, and CIs should be available for any other DM policy to pick up. 12. Re-run the same scheduled job 'SNC.CMDBDataManager

Problem	Short description	Description	Steps to reproduce
			ScriptableApis. executeRetirePolicies();' or any other policy process. Expected behavior: A new task should be created with the CIs with the matching condition because the task was rejected. Actual behavior: No task is created, and the cmdb_data_management_task_to_ci table is not clearing the old CIs from the rejected task.
Content Management System PRB1880403	The CMS portal is corrupted after a Yokohama upgrade	It looks like there are CSS files for the portal that aren't loaded as expected.	
Contextual Search PRB1872960	An external link can no longer be accessed in the cxs_new_window UI page		
Core Platform PRB1881092	In an activity stream, be able to determine actions performed by an AI Agent on behalf of a user	This is a product update.	
Customer Service Management PRB1848565	Creating a consumer user from a consumer form doesn't work	Creating a consumer user from a consumer form creates a sys_user, not a csm_consumer_user. As a result, this user can't be linked with a consumer. This process should work according to documentation.	1. Open any csm_consumer record. 2. Navigate to the 'Login Details' related list. 3. Select the **User lookup** icon. 4. Select **New** to create a user. Expected behavior: The user created should be csm_consumer_user, so this user can be linked with csm_consumer. Actual behavior: The user created is sys_user, so users can't select this user to link it with csm_consumer.

Problem	Short description	Description	Steps to reproduce
Database Persistence - Data Access PRB1833232	There's an incomplete 'NULLS FIRST' clause in multi-column indexes on new (non-migrated) RaptorDB instances	This means that all multicolumn indexes can't leverage their natural sort order.	
Database Persistence - Data Access PRB1881074	Provide introspection methods to get back the table/prefixes for views in the Genius Results returned from cypher2Results	This is a product update.	
Database Persistence - Data Management PRB1861048	ServiceNow documentation is showing incorrect information for 'Clean peripheral' option	ServiceNow documentation needs to be updated regarding the 'Clean peripheral' option in the Table cleaner form. The default behavior when a parent record is deleted is that the system will automatically delete records from sys_attachment table and not 'sys_journal_field' table.	
Database Persistence - Data Scale PRB1800841	JavaScriptMembers, ScriptableObjects, and JavaMembers use a HashTable that causes a concurrency bottleneck	The 'get' method is synchronized. The HashTable is initialized and then not modified again. It's unnecessary to synchronize all 'get' access.	
Database Persistence - Data Scale PRB1846741	Adjust tuple size thresholds to avoid failing legitimate queries	Adjusting the threshold to a reasonable value to avoid failing some queries.	1. Create a query pattern record with sizable executable SQL. 2. Attempt to open the query pattern record.

Problem	Short description	Description	Steps to reproduce
PRB1881134	Yokohama Now Assist		
Document Intelligence Unified Backend PRB1881135	Extract text and embedded images using Docx4j for Docx and pdfbox for PDFs	This is a product update.	
Document Intelligence Unified Backend PRB1881136	Glide API to convert a PDF to an image	This is a product update.	
Document Intelligence Unified Backend PRB1881137	Fix the Docx path for custom XML so extraction of the text is successful	This is a product update.	
Dynamic Translation for Virtual Agent PRB1848023	Messages sent for DT are always using the system language property (glide.sys.language), which could result in LLM messages not being translated	This can cause LLM responses to go directly to the user without any translation taking place. This visible text is not hardcoded, but received from the LLM.	1. Set glide.sys.language to a non-English language. 2. Ensure the com.glide.cs.llm.default.Language is English/en. 3. Ensure that native translations is turned off. 4. Create a custom LLM topic in the same language as the system property language. 5. Add some LLM components, such as an LLM enabled bot response. 6. Publish the LLM topic. 7. Set the session language to the same language as the glide.sys.language property. 8. Start a Now Assist Virtual Agent (VA) conversation. 9. Trigger the new topic. 10. Observe the results. 11. Set session language to the same language as the LLM default language.

Problem	Short description	Description	Steps to reproduce
			12. Start a Now Assist VA conversation. 13. Trigger the new topic. 14. Observe the results. 15. Set session language to a language different than the LLM default language and the system property language. 16. Start a Now Assist VA conversation. 17. Trigger the new topic. 18. Observe the results. Expected behavior: VA responses are in same language as the session language. Actual behavior: VA responses may be mixed, with LLM responses in the default LLM language.
Dynamic Translation PRB1883401	The synthesized QnA capability fails for P3 languages when invoked from a Portal interface		1. Navigate to a Service Portal page. 2. Enter 'Vad är Sverige?' as a Swedish session user in the main portal page. 3. Navigate to the generative AI log and observe 'Error occurred during Generative AI execution' for a synth QnA invocation. In the one_api_service_plan _feature_invocation table, see that the error message is given: 'Cannot invoke 'com.glide.oneapi. entity.FeatureInput. getPayload()" because the return value of 'com.glide.cs.qlue. module.oneextend. proxy.trackers. GenAIExecutionTracker .getOriginalRequest()' is null'. If sn_vad_genai. com.glide.cs.one_ extend.auto_ proxy_enabled is set to false, the E2E works successfully.
Embedded Help PRB1870178	The embedded help link redirects to the page 'not_allowed.do' instead of the documentation site	The issue occurs in the Yokohama release.	1. Open a Yokohama instance. 2. Open the 'cmdb_ci_business_app' or 'incident' table. 3. In top right corner, select the **?** or the 'Show help' icon. 4. Scroll down to link. 5. Select it.

Problem	Short description	Description	Steps to reproduce
			Expected behavior: Users are redirected to the documentation. Actual behavior: Users are redirected to the 'not_allowed.do' page.
Employee Center PRB1818417	JavaScript console errors on the Human Resource Management (HRM) ticket page	Navigating to the 'to-do' page displays console errors.	1. Create a HR case - Employee Travel Visa Request for an employee with the manager 'Abel Tuter'. 2. Let the case move to 'Awaiting approval'.The approval record is created for a user with no roles (in this case - Abel). 3. Open the approval task in the 'to-do's' page. 4. Select **HR Service**, which opens the 'HRM ticket' page. 5. Select the approval to-do in the 'HRM ticket' page. Expected behavior: The user should be able to approve or reject the task from the 'HRM ticket' page. Actual behavior: The 'to-do' page has console errors.
Encryption PRB1854358	Protected script decryption fails for a cloned instance which is upgraded before the 'Protected Script Values Migration' job is executed		1. Create a Xanadu/Yokohama instance. 2. Create a 3des data. 3. Clone the instance into other instance. 4. After the clone is successful, verify the key exchange won't happen and the cm_glide_protected _script_encrypter module key isn't present in the instance. 5. Upgrade the instance before the 'Protected Script Values Migration' job runs and keys are created. After an upgrade is successful, as the static key is removed and the key isn't available, protected scripts decryptions fail.
Field Service Quality Management	The dictionary override on wm_task causes issues	In a Washington DC instance, there's no override attribute for the **State** field at the wm_task. In the Xanadu, the override

Problem	Short description	Description	Steps to reproduce
PRB1860999		attribute is introduced for the **State** field at the wm_task.	
Flow Engine PRB1751544 KB1710818	There's a change in behavior from V1 to V2 in handling JS arrays	This change in behavior causes the failure of a following REST step in a Surf action where the 'If_Matches' header who's value is 'etag' isn't matching.	Refer to the listed KB article for details.
Flow Engine PRB1854665	Asynchronous business rules are not getting triggered on sys_flow_context when the condition has a 'change' operator	The business rule 'Testing flow rules' is not triggered even if it is changed after the update, and does not work on async.	
Flow Engine PRB1867133	The **Summarize** quick action gives a 'The current execution is in the waiting state' message	The flow caller is present. Async HTTP is used and that causes flows to go to a waiting state while waiting for the Async HTTP response. The 'The current execution is in the waiting state' exception is expected when Async HTTP is used.	**1.** Log in to the instance as an admin. **2.** Navigate to ESC portal. **3.** Initiate a chat with LA. **4.** Log in as a user and accept the work item. **5.** Trigger the **Summarize** quick action. Expected behavior: The **Summarize** action should show the chat summary. Actual behavior: The quick action gives a 'The current execution is in the waiting state' message and an error in the sys_log.
Flow Engine PRB1874438	There's a 'LLM Instruction Executor' error on flow execution		**1.** Log in as a user with elevated privileges. **2.** Activate the plugin com.glide.utilities.capability_step. **3.** Create an action. **4.** Add a LLM step to the action. **5.** Create a flow. **6.** Add the action created in step 3.

Problem	Short description	Description	Steps to reproduce
			7. Run the flow. **8.** Users see a 'LLM Instruction Executor' error when running the flow with LLM step.
Flow Engine PRB1874873 KB2042735	A deserialization issue occurs to flows when upgrading from Washington DC to Yokohama	Flows containing the 'Make a decision' logic don't resume and error out after upgrading to Yokohama. This is caused by a deserialization issue in Flow Engine V2, which prevents the flow from progressing.	Refer to the listed KB article for details.
Flow Engine PRB1878005	The success status for the **Call Now Assist Skill** action step is displayed differently		**1.** Log in to an instance. **2.** Enable Now Assist. **3.** Enable flow summarization. **4.** Enable a flow generation skill. **5.** Create a flow. The install plugin ID: com.glide.utilities.now_assist_skill_step. **6.** Create an action to the above flow and add the 'Call Now Assist Skill' step. **7.** Run the flow. **8.** Once the flow succeeds, check the status. Notice that the success status for the 'Call Now Assist Skill' action step is empty.
Flow Engine PRB1880998	Unable to deserialize a 'Make a decision' instruction after upgrading to Yokohama	When the flow is in a 'Waiting' state in the Washington DC release with Engine_V2, the event opening the flow execution fails after upgrading to the Yokohama release.	**1.** Create a flow with a 'Make a decision' flow logic. **2.** Ensure the flow has a waiting scenario so that flow_context goes to a 'Waiting' state. **3.** Execute the flow. **4.** Ensure the flow is in a 'Waiting' state in the Washington DC release with Engine_V2. **5.** Upgrade the instance to Yokohama.

Problem	Short description	Description	Steps to reproduce
			6. Notice that the event opening the flow execution in **Operation view** fails, and resuming the flow by satisfying the waiting condition fails. Expected behavior: The flow should resume on Yokohama without any errors. Actual behavior: The flow errors out in Yokohama.
Flow Engine PRB1881094	Create the ability to pass the context of the AI agent that triggered the flow	This is a product update.	
Flow Generation (Family) PRB1881140	Flow generation Glide changes	This is a product update.	
Flows (Family Channel) PRB1837338	Seeing log errors and warnings when creating flows	No functional breakdowns were seen, but the errors are consistent when creating flows.	1. Impersonate a GenAI user with NAC, preferably an admin. 2. Navigate to Workflow Studio. 3. Create a flow. 4. Use a build with Now Assist. 5. Use any example and select **Generate preview**. 6. While the flow is generated, select the 'Network' tab. 7. Copy the transaction ID from the response payload. 8. On the other tab, open **All** > **System log** > **Utilities** > **Node Log File Browser**. 9. Paste the transaction ID in the **Message** field. Observe the logs.
Flows (Family Channel) PRB1839860	Trigger Designer role users face insufficient access errors and missing options in the	When attempting to open the external trigger created using Github Spoke or Jira Spoke as a user with the trigger_designer role, the error message	1. Log in as a user with the admin role. 2. Create an external trigger using GitHub Spoke or Jira Spoke. 3. Log out.

Problem	Short description	Description	Steps to reproduce
	'Application' list for external triggers	appears, 'Insufficient level of access for eventsource'.	4. Create a new user with the trigger_designer role. 5. Log in as the user with the trigger_designer role. 6. Navigate to the Workflow Studio. 7. Attempt to open the external trigger created. 8. Observe the error banner that appears displaying the message, 'Insufficient level of access for eventsource'. 9. Attempt to create a new external trigger. 10. Select the trigger type as **Event** on the trigger creation page. 11. Verify the Application list. Notice that the Application list no longer shows any options.
Flows (Family Channel) PRB1865407	Mismatching data on an action instance can cause issues with flow execution	Actions don't perform as expected in various ways.	
Flows (Family Channel) PRB1869580	Subflow creation through image issues	Images are partially generated, or are returned with placeholders.	Attempt to create a subflow with attached images. Notice that they are partially generated or placeholders are returned for whole image.
Flows (Family Channel) PRB1873141	CopyFlow doesn't set generationSource values as empty		1. Create a flow with a trigger/action/subflow/flowlogic instances using Flow Generation. 2. Copy the flow. 3. View generationSource value on the flow and trigger/action/subflow/flowlogic instances on the copied flow. Expected behavior: All generationSource values are blank. Actual behavior: All generationSource values in trigger/action/subflow/flowlogic instances are 'text2Flow'.

Problem	Short description	Description	Steps to reproduce
			8. Refresh the page once the flow is created. **9.** Observe the Get Flow API response. Expected behavior: The attachment ID and image prompt from the image generation can be seen. Actual behavior: There is no image prompt or attachment ID.
Flows PRB1868224	In Flow Designer, a dynamic choice isn't using a child alias	As a result, the first dynamic choice field value doesn't display as selected. This issue is happening in Xanadu and Yokohama versions.	**1.** Create a connection alias with a parent and child alias. **2.** Consider the **Create issue** action, or anything that uses dynamic choices. In the flow override aliases, observe that the override to the child alias doesn't happen in the cases of dynamic choices.
Form Builder PRB1828559	Changing a field type doesn't surface errors on saving		**1.** Navigate to the ServiceNow studio home page. **2.** Open a table in Table Builder. **3.** Select a field. **4.** Change the type of the field to reference from string when some data is in a record in that field. Expected behavior: An error message telling the user why the save failed. Actual behavior: The save silently fails.
Form Builder PRB1836580	Selecting **Edit in Original Scope** from the Form Builder banner enables the override properties of the field for editing	When a field is inherited from a parent table, it has the ability to override field properties. Previously, override properties were controlled by isFormReadOnly. However, with this PR update, the implementation has been refined how readability is determined.

Problem	Short description	Description	Steps to reproduce
Form Controller PRB1876936	GFORM#ADD_DECORATION isn't working in forms workspace like in they are in UI16 as g_form.addDecoration		
Hermes (Family) PRB1821659	The full topic name for longer instance names and/or topic names are truncated in the **cluster_topic_name** field		1. Install an application that requires Hermes (StreamConnect as an example). 2. Navigate to sys_kafka_topic. 3. Create a topic with a long name value. 4. The **Name** field has a 100 character limit. 5. View the **cluster_topic_name** field to confirm the truncation.
Hermes (Family) PRB1833479	Upgrade a fix by removing previous sys_choice records for the 'Application Id' list	In Washington DC, a release application ID was originally configured as a list that relied on sys_choice list. In the later releases, this was changed to be a list that relied a new table that defined the configured applications which are associated to its respective Hermes service.	1. Configure an instance on a Washington DC release. 2. Note sys_choice list entries for 'Application ID'. 3. Upgrade the instance to. Note that the 'Application ID' list uses the reference table, but the sys_choice_list entries still exist on the instance, but they aren't used.
Hermes (Family) PRB1846241	The Hermes metrics dashboard displays data off by 1		1. Open an instance with data in the hermes_usage_metrics table. 2. Switch the preference timezone to GMT in preference settings. 3. Compare the data points on the graph vs the table. Expected behavior: It shows the same date as the table. Actual behavior: The date is one day behind.
Hermes (Family) PRB1847005	The 'Hermes Metric Aggregation' job is joining dates together	The job should be moved further into the day with the GMT timezone to avoid a skew. Also, add limits	1. Have an instance with Hermes installed. 2. Create a topic and produce and consume it.

Problem	Short description	Description	Steps to reproduce
	due to a job skew	so that the aggregation is only picking updates of the previous day's start and end and not have it depend on when the job is run. There should be similar limits for clean-up jobs and monthly aggregation.	**3.** Verify usage metrics are logged every 1 hr. **4.** The next day, verify that all hourly metrics are aggregated to the daily metrics of the previous day and that hourly metrics are clear.
Hermes (Family) PRB1856021	Data in throughput shown on hermes_usage_metrics when producing data in inconsistent patterns	Inaccuracies in 'Total MB Value Per Hour' when data flows in an inconsistent pattern. When producing data at a relatively constant rate, hermes_usage_metrics values closely matched the actual value, but when producing data in large spikes, the values in hermes_usage_metrics are significantly above or below the actual value.	**1.** Set up Kafka producer on a local machine using Kafka Java APIs. **2.** Produce a large batch of messages. **3.** Wait until the hourly aggregation job runs to populate hermes_usage_metrics. **4.** Check the corresponding value in 'Total MB Value Per Hour'.
Hermes (Family) PRB1876312	There's a missing call to refresh clients when clusters are removed	When clusters are removed during a 'Retire' request, the deletion should also refresh the clients. A recently added function was missing that refresh call.	
Horizon Component Library PRB1862345	A component needs to be deregistered on disconnect when using now-trigger-library's deregisterComponent	Not deregistering a component results in detached DOM nodes/ memory leaks, as the registry object still retains a reference to the element even should it be removed from the DOM.	**1.** Navigate to a page in a workspace that has the element in question on it (now-alert-list). **2.** Use the console to check the componentRegistry that exists in window.uxfTriggerLibrary. **3.** Navigate away from the tab in question or perform any action that removes the element from the DOM. Expected behavior: As the element no longer exists in the DOM, its entry in the componentRegistry should no longer be there.

Problem	Short description	Description	Steps to reproduce
Integration Hub PRB1852454	com.service_now.mid.connections.jdbc.JDBCConnection splits a property on equal signs	This '==' value is removed when the code saves to the property, which caused a save to an incorrect value string.	1. Set up a JDBC data source. 2. Add the string 'dGVzdCBzdHJpbmchIQ==' as a property. Notice that when it's processed, the '==' are stripped.
Integration Hub PRB1878255	Suggested actions are erroring out on the Yokohama Now Assist table	This issue appears to have been caused by an underlying script, including call adding to the scope stack, which exposed a problem in how the flow engine cleans up the scope stack after a flow execution.	1. Create a flow that adds to the scope stack but does not clean it up. 2. Execute the flow in the background. Expected behavior: Flow executes without exception. Actual behavior: An error is thrown when the flow completes.
Integration Hub Remote Process Sync PRB1874002	Remote Process Sync (RPS) is triggered by changes from non-captured fields	RPS captures changes to a record when any changes are made to the fields selected by the user as part of the CDC Definition (change data capture). Even though changes are being made to fields that are not part of the CDC Definition, RPS still captures these changes.	1. Set up RPS. 2. Create a record that syncs. 3. Modify a field on that record that isn't part of the CDC definition. Observe that this creates an update record on cdc_queue_ih, which should not be created.
Key Management Framework (KMF) PRB1854256	Legacy SEK rekey fails due to the **password2** field size not being large enough	Instance rekey use sys_dictionary.max_length for field size detection, leading to rekey failure.	1. Provision an instance. 2. Populate the oauth_credential.token_received with a large value. 3. Clone the instance from step 1. Expected behavior: Legacy SEK rekey completes successfully. Actual behavior: Legacy SEK complains that the field isn't large enough.
Lifecycle Events PRB1848546	In Yokohama, when the property use_flow is false, creating a LE case using the 'LE Testing'	This doesn't happen on Yokohama when the 'sn_hr_le.use_flow' property is set to true, and it doesn't happen on Xanadu.	1. On a Yokohama instance, as a user with elevated privileges, activate the 'HR Xanadu Deprecated Workflow' [com.sn_hr_xanadu_deprecated_wf] plugin. 2. Set the 'sn_hr_le.use_flow' property to false.

Problem	Short description	Description	Steps to reproduce
		column. Selecting **Apply** still retains the older filter. In another scenario, there's also an inconsistency between the data shown and the filter applied for empty values. Fields, which are empty in a table, are displayed as 0 in the presentational list based on the data type. When they are filtered, they should be considered empty or should be considered as 0 if it is shown as zero.	
MID Server PRB1840424 KB1772428	MID Server ECCSender thread gives an 'Invalid byte 2 of 4-byte UTF-8 sequence' error, blocking sending of valid ecc_queue inputs to an instance	This is most likely to be seen in LDAP user imports, or Import Set JDBC Data Sources, where large data is involved. Large data is likely to include extended unicode characters such as emojis. For LDAP probes, emojis have been seen in OU/CN group names and user details data. For REST integrations synching incidents, emojis have been seen in comments of cases. They could potentially appear anywhere, for any feature's probe result data.	Refer to the listed KB article for details.
Mobile Platform PRB1886492	(MAB) card generation with Now Assist is failing on Yokohama	Now Assist based card generation is currently failing on the Y track due to a missing required column. The 'Creation Method' column, needed for handling records created by Now Assist is missing, resulting in insertion failures during the card generation	1. Provision a Yokohama instance with Now Assist for Creator installed. 2. Enable mobile card generation skill. 3. Open the web to mobile flow for a record screen. 4. Select the **Generate with Now Assist** option. Observe an error message: 'unable to insert record into table

		process. Now Assist-based card generation doesn't work for users.	sys_sg_view_config - setValue called for unknown field **creation_method** in table 'sys_sg_view_config''.
Mobile Virtual Agent PRB1881114	Mobile NASS GenAI visual uplift	This is a product update.	
Multi-factor Authentication (MFA) PRB1862612	The 'More information' link on MFA registration has the old documentation link structure	There's an incorrect documentation link structure present in the page 'multi_factor_auth_setup_page'.	1. Log in to an instance that has MFA setup but the user isn't enrolled into MFA yet. 2. After logging in during MFA enrollment, users would see the 'More information' hyperlink. 3. Verify that on selecting the link, it redirects to documentation home page.
Multi-Instance Framework - Core PRB1849745	Turn off collect_metadata and recurring_diagnostics in sn_mif record on hermes_app_services	The collect_metadata and recurring_diagnostics flags aren't set in the hermes_app_services record. By default in this table dictionary, those flags are true. That means that the instance automatically connects to the Hermes configured in that record, creates metadata and diagnostics topics, and starts sending traffic. For some Hermes running, this data isn't needed or used and observations show that this activity puts significant load on the cluster.	1. Check the sn_mif record in hermes_app_services. 2. Note that both collect cluster metadata and recurring diagnostics are checked.
Next Experience Unified Navigation PRB1862338	A component must be deregistered on disconnect using now-trigger-library's deregisterComponent

Problem	Short description	Description	Steps to reproduce
	component it is placed into	set on it. As a result child elements of the UIB component are unable to inherit the height of the container it is placed into.	4. Populate it with any content in left and right panes. 5. Set the height and min-height of a resizable component to 100%. 6. Save the UIB component. 7. In an experience built from Workspace App Shell, create a page. 8. Add the previously created component to the page. 9. Set the height and min-height of the body to 100%. 10. Set the height and min-height of component to 100%. Expected behavior: It is possible to set up a component built in UIB to take the full height of the container or page it is placed into. Actual behavior: The component doesn't stretch to the full height of the page.
UX Framework PRB1853498	Backslashes in UX Library's asset's source map URL causes an empty screen	It is possible to create custom components that have a source map URL path with backslashes. In the bundling logic, it looks for each asset source map URL line and remove it. That logic isn't full matching the strings that include backslashes and it leaves a partial string in the JavaScript content. This partial string is what's causing the empty screen, since the JavaScript content is malformed.	Modify the source map URL path with blackslashes instead of forward slashes in any UX library asset that is included in a core bundle. Expected behavior: The instance should display pages. Actual behavior: Empty screens are displayed.
UX Framework PRB1860878	sn-canvas-badge-connected fetches the count and then subscribes to the channel provided as	Updates in between aren't captured by the badge.

Virtual Agent PRB1868677	Added a fix script for auto_prompt_tuning internal in sys_one_extend_batch_run	This is a product update.	
Virtual Agent PRB1869860	System property 'proxy=false' with a carousel output does not return a Genius Response	Genius Response is stuck on 'Looking into your request' after updating the 'web client' output type to '= carousel' and updating the value of sn_vad_genai.com.glide.cs.one_extend.auto_proxy_enabled to 'false'.	1. Navigate to now_assist_va_search_results_output_type table. 2. Update the 'web client' output type to '= carousel'. 3. Navigate to sys_properties table. 4. Update the value of sn_vad_genai.com.glide.cs.one_ extend.auto_proxy_enabled to 'false'. 5. Start a new conversation with Now Assist Virtual Agent on an /ESC portal. 6. Enter 'What is a cookie?'. Expected behavior: The response appears as a carousel. Actual behavior: The response is stuck on 'Looking into your request'.
Virtual Agent PRB1871270	Additional read of conversation in worker.lockAndProcess should be moved	A new call to retrieve the conversation and read values form the context before every lock and process operation in Worker for the AI Agents. This adds unnecessary overhead to any transaction that is not LLM or Agent AI related.	
Virtual Agent PRB1872922	Domain separation issue when running AI Agents	When retrieving a record from a separate domain using an AI agent, no is data returned.	
Virtual Agent PRB1872958	Virtual Agent search result showing issues after upgrade	Virtual Agent results returned were misaligned after upgrading to Yokohama.	1. Log in to an Employee Service Center (ESC) portal. 2. Impersonate a user. 3. Initiate a Virtual Agent chat. 4. Enter **bereavement policy**.

Problem	Short description	Description	Steps to reproduce
			Notice that the search results are shown in misaligned order.
Virtual Agent PRB1874300	A grammatically incorrect message is thrown by the API	Part of an error message from Now Assist skill capability is grammatically incorrect: 'Failed to execute the feature due to an error while executing it's depends on feature'.	
Virtual Agent PRB1876378	A KB article is not returned in NAVA during a Yokohama Now Assist upgrade	When a plugin stage user types 'what is spam' during an upgrade, the conversation gets stuck.	
Virtual Agent PRB1877176	Enabling KG isn't making unified slot fill calls	This causes slot filling to not work.	**1.** Ensure KG is enabled at the instance level as well as for a conversation catalog. **2.** Impersonate a user. **3.** Request the 'Employee Details' catalog item. Expected behavior: Slot fill should happen for most of the questions, and the unified slot fill call happens. Actual behavior: Slot fill doesn't happen for questions and the unified slot fill call didn't happen.
Virtual Agent PRB1877432	Dynamic loading message control (on Virtual Agent chat client) should contain non-agentic 'processing messages'	Non-agentic messages should appear in the chat client response.	**1.** Set up Agentic. **2.** Perform a search, such as 'What is spam?'. Expected behavior: In the VA chat client, the 'View AI Agent Processing Steps' collapsible control should contain all update messages. Actual behavior: Only the first two messages ('Figuring out next steps', 'Executing agent Search QnA Agent') that were initiated from the Agentic frameworks are included inside the 'View AI Agent Processing Steps' collapsible control on the VA chat client. The next two status update messages ('Finding

Problem	Short description	Description	Steps to reproduce
			the needed info', 'Reviewing the details') appear as standalone messages.
Virtual Agent PRB1878226	When running AI Agent Studio on a non-English language instance, the stacked message renders until the conversation moves into the error topic	During the updateDynamicProgressMessage scriptable path, one of the progressMessages in the DynamicLoaderRichControl has a message of 'null'. This causes an exception.	1. Provision and instance with a language plugin installed and enable DT for that language. 2. Set up NowAssist and AI Agents. 3. Ensure that the DT optimizer is on and the sys_cs_dynamic_translation_text table is cleared or that the optimizer is off. 4. Change the user's language to a language other than English. 5. Start a conversation in Agent Studio. Expected behavior: The stacked messages should all be translated/ localized. Actual behavior: Conversation ends abruptly.
Virtual Agent PRB1880022	The skill applicability URL condition isn't working	The skill applicability is broken and doesn't apply correctly. The root cause is confirmed to be a URL query failing.	1. Navigate to CMDB Workspace. 2. Open the Now Assist Panel (NAP). Expected behavior: 'Diagnose a service graph connector' should be a recommended topic. Actual behavior: The **Diagnose a service graph connector** topic button doesn't appear.
Virtual Agent PRB1880277	Dynamic Translation (DT) in the full page experience does not translate all elements	Some elements are not translated in the user's language in the full page experience.	1. Enable DT. 2. Index sources for KB, Catalog, and skills. 3. Impersonate a user. 4. Change the language to Spanish. 5. Search for KB, Catalog, or topics. 6. Open the left panel. 7. Check for the translation of elements. Expected behavior: All elements in full page should be translated to the user's language. Actual behavior: Some objects are not translated to the user's language.

Problem	Short description	Description	Steps to reproduce
Virtual Agent PRB1881125	As an AI Practitioner, users should be able to select a solution, and be able to navigate to additional configurations sections	This is a product update.	
Virtual Agent PRB1881126	Create a new API for getTestDatasets for agentic-type datasets	This is a product update.	
Virtual Agent PRB1882397	ReAct Search Agent stuck in a loop	This issue occurs with a search query and a meeting agent. Synthesized answers are returned in the logs, but are not displayed.	**1.** Navigate to /ESC. **2.** Open the NASS query, 'Let's get info on password reset then set up meeting'. Notice that the search agent is stuck in a loop with the message, 'Sorry no agents are available', and a synthesized answer is returned in logs but is not displayed.
Virtual Agent PRB1882692	Assistant-based agents functionality is missing		
Virtual Agent PRB1883231	Sync calls are happening every 5 seconds when creating a new chat		**1.** Navigate to dynamic window/FPE. **2.** Open the browser console. **3.** Create a conversation. Expected behavior: '/sync' calls should be happening as often as the 'syncIntervalTime' is set. Ensure that 'syncIntervalTime' isn't displaying in the /sync calls response when initiating a new conversation. Actual behavior: that '/sync' calls are happening every 5 seconds.
Virtual Agent PRB1883338	Skill discovery for a non-agent topic (caller's assets) redirects to	In NAP, skill discovery sometimes redirects to the default Virtual Agent workflow (AI Agent) instead of

	a AI Agent workflow in Now Assist Panel (NAP)	starting the caller assets skill.	
Virtual Agent PRB1883376	Responses aren't coming when a user summarizes a record after providing an incident ID	An error happens in MessageBatchingSession.escapeList(), which escapes a list of strings before calling DT. The problem is the list is immutable, so it fails to update the list with the escaped values.	1. Log in to the instance as Beth Anglin with the Spanish language 2. Select the 'NAP' icon. 3. Search for 'Resumir un registro'. 4. Once the response comes back, provide the incident ID as INC0009009. Expected behavior: The incident summarization should come in Spanish. Actual behavior: There's no response in the chat, and an error in the log.
Virtual Agent PRB1883466	Parity with FD in NowLLM invocation		
Virtual Agent PRB1883829	Verify 'Summarize a Record from Record View'		1. Navigate to the 'Incident' table. 2. Select any incident number. 3. Navigate to the Now Assist Panel (NAP) panel by selecting the NAP icon in the top right corner of the unified navigation. 4. Select the **Summarize a record skill** pill. Expected behavior: The summary should be displayed. Actual behavior: A 'What is the record number? 'question is displayed.
Virtual Agent PRB1884082	Input text messages from agents are displaying with a lower sequence number than they should	This affects the conversation history.	1. Navigate to an instance with the 'Ticket status' agent. 2. Type 'What is the status of my tickets?'. Expected behavior: The messages when sorted by sequence should reflect the actual flow of the conversation. Actual behavior: In the sys_cs_message table, if users sort the messages by the

Problem	Short description	Description	Steps to reproduce
			sequence number, they appear to be out of order.
Virtual Agent PRB1884615	Citations in NAVA and Now Assist Panel (NAP) for non-English conversation languages are displaying incorrectly		**1.** Navigate to the SP portal. **2.** In the NAVA chatbot, enter 'Quels sont quelques monuments célèbres à Paris ?'. Observe that in the returned Genius Results, the citation at the end is displayed as just [1]. In the English session, users can type 'what is spam' to see expected response format.
Virtual Agent PRB1884694	Proactive triggers with topics don't launch in dynamic window (DW)		**1.** Set up proactive triggers for the portals with topics that can be launched. **2.** Navigate to the portal on DW and wait for the proactive trigger. **3.** Launch the topic in proactive trigger. Expected behavior: The topic should launch in DW. Actual behavior: The topic doesn't launch and the user lands on a new chat in DW.
Virtual Agent PRB1887021	A conversation call is taking too long after an update	There's no 'IN' clause on a query on the sys_cs_message table.	**1.** Load Now Assist Panel (NAP). **2.** Check the conversation call form network. Observe that the times are more than 1 second.
Virtual Agent Web Client PRB1820930	The **Show More** button isn't working consistently in iOS Safari	The **Show More** button in a NAVA synthesized response is shown despite not having more responses to display.	**1.** Have NAVA enabled on an instance. **2.** Create a user to log in using a mobile browser. **3.** Enter 'What should I know about direct deposit?'. **4.** Select the **Show More** button on the response. Expected behavior: More of the SR should show without any issues. Actual behavior: SR is rendered incorrectly with the **Show Less** button showing behind the rest of the message.

Problem	Short description	Description	Steps to reproduce
Virtual Agent Web Client PRB1869818	Toggling between the search and Now Assist isn't retaining the search term		1. Navigate to Service Portal. 2. Enter 'what is spam' in the portal search test box. 3. Select the **New chat** button in the 'NASS' page. 4. Select the search toggle. Expected behavior: An empty search should be displayed. Actual behavior: The search term from step 2 is retained.
Virtual Agent Web Client PRB1871159	The 'DW' icon is visible and popups for citations aren't clickable		1. Navigate to dynamic window (DW)/Full Page (FP). 2. Open in floating mode. Expected behavior: The 'DW' icon shouldn't be available. Actual behavior: The 'DW' icon is available and clickable.
Virtual Agent Web Client PRB1871232	Chats aren't in sync when navigating multiple portal pages		1. Enable full page (FP) for Service Portal. 2. Navigate to dynamic window (DW). 3. Run a few conversations such that there are a few chats in the 'Active' section. 4. Perform another search in the search bar on FP. 5. Switch to another chat on FP. 6. Navigate to Knowledge, Catalogs, Requests, System Status, Tours and other pages on the portal. Expected behavior: The chat should remain in sync when the user opens DW in these pages. Actual behavior: The chat isn't in sync when the user goes through multiple pages and there's content from another chat on DW.

Problem	Short description	Description	Steps to reproduce
PRB1877908			Notice that it gets stuck in loading. If the user refreshes and uploads again, it works.
Virtual Agent Web Client PRB1878155	Icons for different sources aren't visible in the 'Sources' section		**1.** Navigate to NAVA. **2.** Search for a person and KB/catalog 'who is abel tuter and what is spam' / 'who is abel tuter and how can i order a laptop'. **3.** Expand the 'Sources' section to view citations. Expected behavior: Each source should have a corresponding icon beside the citation number. Actual behavior: No icons are visible except for the KB and the 'People' card. The current icon for the 'People' card is incorrect. It should be a generic icon instead of a user profile picture.
Virtual Agent Web Client PRB1879738	Chats are not in sync when navigating multiple portal pages	After enabling Full Page (FP), switching between multiple chats and navigating away to different Portal pages in the Dispatcher Workspace, the chats are not in sync when the user returns to them.	**1.** Enable Full Page (FP) for Service Portal. **2.** Navigate to the Dispatcher Workspace. **3.** Run a few conversations so that there are a few chats in the Active section. **4.** Perform another search in the search bar on FP. **5.** Switch to another chat on FP. **6.** Navigate to other pages on Portal such as Knowledge, Catalogs, or Requests. Expected behavior: The chat should remain in sync when user opens dynamic window (DW) in these pages. Actual behavior: The chat is not in sync when user goes through multiple pages, and content from another chat on DW can be seen.
Virtual Agent Web Client PRB1880258	Focus isn't on the input box in dynamic window (DW)		**1.** Navigate to SP portal in DW mode. **2.** Open DW. Expected behavior: The focus should be on an input text area where the user can start typing.

Problem	Short description	Description	Steps to reproduce
			Actual behavior: The focus isn't anywhere.
Virtual Agent Web Client PRB1880490	Loading a document with .doc ends document QnA with an error	Now Assist gives a message: 'Something went wrong. I'm not able to process the uploaded document right now. I will end this Document Q&A. You can start a new session by uploading the document again, or you can try uploading something else.'	
Virtual Agent Web Client PRB1880493	The **Send** button isn't enabled after a document Q&A topic exits with an error		
Virtual Agent Web Client PRB1880507	Input and output topics are not rendered properly in dynamic window (DW) and Full Page (FP)	Topics will have to be imported to VA Designer with a selected assistant.	**1.** Import attached topics or create topics with all input/output controls **2.** Run both in DW and FP. Expected behavior: All topics should run correctly. Actual behavior: Input and output topics are not rendered correctly in both DW and FP, and an assistant must be selected to import them to VA Designer.
Virtual Agent Web Client PRB1880552	Agentic reasoning messages continue loading after topic completion		**1.** Enable AI agents in NAVA/DW. **2.** Run the laptop ordering assistant. **3.** Complete all steps for a topic. Expected behavior: All agentic reasoning messages should have a checkmark showing completion. Actual behavior: Some messages are still loading after an AI agent topic is complete.
Virtual Agent Web Client	People card citations are grayed out and occasionally	Searching for People cards in the Dispatcher Workspace returns a synthesized response that is grayed out,	**1.** Setup Knowledge Graph and People card on the instance. **2.** Open Dispatcher Workspace. **3.** Enter 'who is Abel Tuter'.

Problem	Short description	Description	Steps to reproduce
PRB1880646	eturn duplicates	and with occasional duplicates.	Expected behavior: Synthesized response with single citation people card for Abel Tuter is displayed and it is not grayed out. Actual behavior: Synthesized response with duplicate citation links are displayed sometimes and the citation is grayed out even before selecting it.
Virtual Agent Web Client PRB1881744	An attachment icon is enabled in the middle of a conversation on a page refresh		**1.** Start a topic execution on a chat client. Notice that the attachment icon no longer appears as expected. **2.** Refresh the browser page. Notice that the attachment appears again. Expected behavior: The attachment icon should no longer appear on page refresh in the middle of the conversation. Actual behavior: The attachment icon shows up on a refresh.
Virtual Agent Web Client PRB1881830	Float mode of dynamic window (DW) is not resizable after minimizing from a pinned state	A resizing issue of DW occurs in float mode.	**1.** Open DW. **2.** Notice it's resizable. **3.** Pin it and then minimize. **4.** Select the tab to display the DW again. Expected behavior: Float mode is always resizable irrespective of other state changes. Actual behavior: Observe it is not resizable anymore.
Virtual Agent Web Client PRB1881836	The UIs for chats are mixed up when switching between chats	Components are overlapping in the UI and dynamic window (DW) can't be minimized past 420px.	Components are overlapping in the UI: **1.** Navigate to DW and run a few conversations. **2.** Do a search on Full Page. **3.** Return to DW's home. **4.** Try switching between the active chats. DW cannot be minimized past 420px:

Problem	Short description	Description	Steps to reproduce
			1. Navigate to Service Portal with DW configured. 2. Select the 'FAB' icon. 3. Try to drag the side of DW to make it a smaller chat window.
Virtual Agent Web Client PRB1881936	Elements in dynamic window (DW)/ Full Page (FP) aren't translated to the user selected language	Untranslated items: titles in the left panel, show/hide sources, the **Skip** button, tooltips, the **Live agent** button in support, toggles and titles in the settings of the left panel, topic descriptions, and the **Submit** button.	1. Install a language. 2. Switch the profile language to that language. 3. Configure a full window/enhanced chat NAVA in a portal. 4. Navigate to the chat location with the nowassistselfservice ID passed to see the full page experience. 5. Select around the UI. 6. Run a catalog/KB/topic by searching 'prestamista de ordenadores portatiles' 'que es el spam' 'pedir cafe'. Expected behavior: All elements on the page are translated to the user selected language. Actual behavior: All the elements aren't displayed in the user language.
Virtual Agent Web Client PRB1883412	'Show more' is removed after streaming is done, and for non-streaming, it's not displayed		1. Navigate to Service Portal. 2. Enter 'what is cookie and as follow how to set it in browser'. Expected behavior: 'Show more' shouldn't be displayed. Actual behavior: 'Show more' is displayed during streaming and then it's removed.
Virtual Agent Web Client PRB1883668	The **Attachment** button comes after a page refresh when in doc QnA mode		1. Open the Virtual Agent chat. 2. Attach a document to it. 3. Ensure QnA mode is entered. 4. Observe the **Attachment** button is turned off. 5. Refresh the page. 6. Observe that now the **Attachment** button is enabled.

Problem	Short description	Description	Steps to reproduce
Virtual Agent Web Client PRB1883927	Turned off text is unreadable		**1.** Set up Now Assist for May. **2.** Set up a full page. **3.** Navigate to /esc. **4.** Type 'order laptop'. **5.** Start an execution. The link displays as turned off text. Notice that it shows as unreadable.
Virtual Agent Web Client PRB1883963	Context data doesn't send start_conversation_immediately: true when going from the Portal to FPE		**1.** Open a portal page with 'Enhanced Chat' setup. **2.** Enter a search term into a search combo box. Expected behavior: It should send 'start_conversation_immediately: true' so that the server knows to immediately start the conversation in the session call and not wait for a sync call to kick off the state machine. Actual behavior: The '/session' call doesn't contain 'start_conversation_immediately: true' in the contextData.
Virtual Agent Web Client PRB1884003	The 'People' icon is flashing when going from a streaming response to a final response		**1.** Open a portal page with 'Enhanced Chat' setup. **2.** Enter a search term into the search combo box that results in a people search result, such as: 'who reports to Abel Tuter'. See that the 'People' icon gets shown, goes away, and comes back.
Virtual Agent Web Client PRB1884112	The dynamic window (DW) should occupy the entire screen for a browser window width less than 420px		**1.** Open DW on a portal. **2.** Reduce the browser window width size to smaller than 421px. Expected behavior: DW should fill the entire screen for a width to smaller than or equal to 420px. Actual behavior: DW is cut off and not able to occupy the entire screen.

Problem	Short description	Description	Steps to reproduce
			10. Select the territory from the territory filter. 11. Drag and drop the WOT created in step 7 to the contractor group under 'Contractor Groups'. Expected behavior: The **Assigned_to** field should be populated with the contractor manager. Actual behavior: The **Assigned_to** field comes up as empty.
Work Order Management PRB1859719	Upgrade to the new Google Maps Places API for Platform and Portal	Using the new Places API to query and display suggestions on the NDS typeahead component.	
Work Order Management PRB1880140	Getting a pop-up error while opening the Work Order Task (WOT) on Portal	The error 'There is a JavaScript error in your browser console' pops up.	1. Hop to any instance. 2. Attempt to open any WOT on the portal. Notice that the error message pops up.

Fixes included

Unless any exceptions are noted, you can safely upgrade to this release version from any of the versions listed below. These prior versions contain PRB fixes that are also included with this release. Be sure to upgrade to the latest listed patch that includes all of the PRB fixes you are interested in.

- Yokohama Patch 2 Hotfix 2
- Yokohama Patch 2 Hotfix 1
- Yokohama Patch 2
- Yokohama Patch 1a
- Yokohama Patch 1
- Yokohama security and notable fixes
- All other Yokohama fixes

Yokohama Patch 2 Hotfix 3

The Yokohama Patch 2 Hotfix 3 release contains fixes to these problems.

Fixed problem

Problem	Short description	Description	Steps to reproduce
Activity Stream Compose Component PRB1897434	The 'Email' tab in the Activity Stream in the CSM Configurable Workspace doesn't resize when the text is larger than the vertical limit	This issue is found in Yokohama, but works as expected in Xanadu.	1. Hop into a Yokohama instance as an admin user. 2. Navigate to the **Activity Stream** > **More** > **Email**. 3. Select **Return past vertical limit**. Expected behavior: The email text box auto-resizes vertically. Actual behavior: The email text box doesn't auto-resize.

Fixes included

Unless any exceptions are noted, you can safely upgrade to this release version from any of the versions listed below. These prior versions contain PRB fixes that are also included with this release. Be sure to upgrade to the latest listed patch that includes all of the PRB fixes you are interested in.

Fixed problem

Problem	Short description	Description	Steps to reproduce
Flow Engine PRB1874873 KB2042735	Deserialization issue occur to flows when upgrading from Washington DC to Yokohama	Flows containing the **Make a decision** logic don't resume and error out after upgrading to Yokohama. This is caused by a deserialization issue in Flow Engine V2, which prevents the flow from progressing.	Refer to the listed KB article for details.
Flow Engine PRB1880998	Unable to deserialize **Make a decision** instruction after upgrading to Yokohama	When the flow is in a 'Waiting' state in the Washington DC release with Engine_V2, the event opening the flow execution fails after upgrading to the Yokohama release.	1. Create a flow with a **Make a decision** flow logic. 2. Ensure the flow has a waiting scenario so that flow_context goes to a 'Waiting' state. 3. Execute the flow. 4. Ensure the flow is in a 'Waiting' state in the Washington DC release with Engine_V2. 5. Upgrade the instance to Yokohama. 6. Notice that the event opening the flow execution in **Operation view** fails, and resuming the flow by satisfying the waiting condition fails. Expected behavior: The flow should resume on Yokohama without any errors. Actual behavior: The flow errors out in Yokohama.

Yokohama Patch 2

The Yokohama Patch 2 release contains important problem fixes.

Yokohama Patch 2 was released on April 4, 2025.

- Build date: 04-02-2025_0516
- Build tag: glide-yokohama-12-18-2024__patch2-03-20-2025

Important:
For more information about how to upgrade an instance, see ServiceNow upgrades.

For more information about the release cycle, see the ServiceNow Release Cycle.

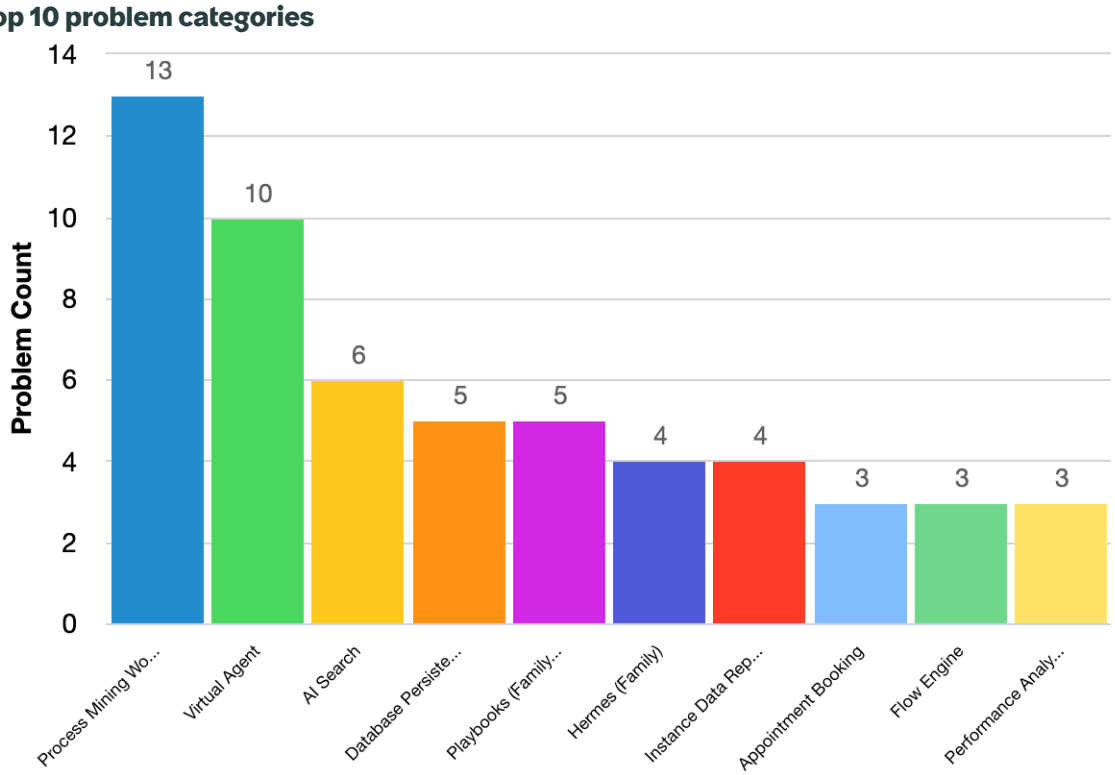
Note:
This ServiceNow AI Platform major family release is now available in ServiceNow's Regulated Market environments. For more information about services available in isolated environments, see KB0743854.

For a downloadable, sortable version of the fixed problems in this release, click here.

Overview

Yokohama Patch 2 includes 159 problem fixes in various categories. The chart below shows the top 10 problem categories included in this patch.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



Security-related fixes

Yokohama Patch 2 includes fixes for security-related problems that affected certain ServiceNow® applications and the ServiceNow AI Platform®. We recommend that customers upgrade to this release for the most secure and up-to-date features. For more details on security problems fixed in Yokohama Patch 2, refer to KB2002785.

Changes in Yokohama Patch 2

Create a decision tree for troubleshooting a failed transaction

Question font sizeEnter the desired font size for the questions in the guided decision tree. Example: `14`

Create a guidance in the Core UI

Hide completed guidance
Hides the guidance recommended for a case resolution.

In other words, the completed guidance in the View my response section of a Decision Tree is not displayed for the agent.

Note:
This field is visible only when the Guided Decision Experience plugin is installed. You may need to configure the form to add this field.

Create a decision tree in Core UI

Question font size
The font size of the questions in the guided decision tree. It reflects in the workspace and service portal.

The font size defined in the parent decision tree is inherited by the child decision tree even though the Question font size for the child decision tree has its own Question font size defined.

You may need to configure the form to add this field.

Create a guidance in Recommended Actions

Select **Hide completed guidance** to hide the guidance recommended for a case resolution.

Exploring Instance Data Replication

You can only create one scheduled replication set in IDR, with only one outbound entry in that set.

Set up scheduled replication

You can only create one scheduled replication set, with only one outbound entry in that set.

If a table that you select has child tables, create one or more continuous replication sets and add outbound entries for each child table to maintain data integrity.

Notable fixes

The following problems and their fixes are ordered by potential impact to customers, starting with the most significant fixes.

Problem	Short description	Description	Steps to reproduce
User Criteria for Service Catalog PRB1819841	Semaphore exhaustion is caused by the getAllUserCriteria function getting called in widgets	When a public page is accessed by a guest user or web crawler, this prompts a call to the getAllUserCriteria API, which causes semaphore exhaustion.	
Playbooks (Family Channel) PRB1839341 KB1891818	**Update Set with Playbook** change failed to install	The invalid preview error, 'Could not find a record in sys_pd_snapshot for column snapshot referenced in this update' occurs when moving changes to related to Playbook via update set from one instance to another.	Refer to the listed KB article for details.
Flow Engine PRB1825217 KB1709497	When applying inline scripting to pass the value in an input of a dynamic template, it's not working, and the field appears empty	When users create a new action from scratch with one input of a dynamic template and apply inline scripting to pass the value to this input in the flow, it doesn't work.	Refer to the listed KB article for details.

Problem	Short description	Description	Steps to reproduce
Database Persistence - Data Management PRB1859358 KB1968830	The orphan cleaner does not check both the primary and archive tables to determine if a record is an orphan	Orphan cleaner is enabled by setting property 'glide.db.orphan_cleaner.peripheral_tables' to clean records from the peripheral tables sys_attachment, sys_attachment_doc, and sys_audit, sys_journal_field. It only checks if a record exists based on the document ID reference's tablename. When the document ID reference's tablename is not updated after archiving records during archive reparenting, the orphan cleaner deletes non-orphan records.	Refer to the listed KB article for details.
Standard Change Catalog PRB1856886 KB1931818	**Value** is not populated from the template if a new text area field is added when creating or modifying a standard change proposal	The **template_value** field contains 'STARTSWITH' instead of the '=' operator, which doesn't allow the field to be populated with the value when the template is applied to the change request record.	Refer to the listed KB article for details.

All other fixes

Problem	Short description	Description	Steps to reproduce
Activity Stream PRB1858896	Posts generated by Agentic AI or Now Assist should be posted as an 'AI' user vs ServiceNow	This is a product update.	
Advanced Work Assignment	Agent Outside Workspaces that use OpenFrame soft phone	If an agent isn't also on a workspace, the presence reverts to 'Offline' within about a minute. Since the agent

Problem	Short description	Description	Steps to reproduce
PRB1857820	are set to an 'Offline' presence state within a minute after the agent moves to an available state	is using OpenFrame to manage capacity, it shouldn't automatically revert to 'Offline'. The issue occurs after an Xanadu upgrade.	
Advanced Work Assignment PRB1858547	Flow Designer interactive mode should be base instance for phone, video, chat, and messaging service channel types		1. Install agent chat and external AWA plugins. Do not add or change the com.glide.awa.external_event_interactive_channels property value. 2. Implement an external provider or use the demo data provider. 3. Set up an external queue on a 'Chat' type service channel. 4. Route a chat, then check the resulting flow context. Expected behavior: The 'new' and other external event subflows that are executed should indicate that they were run in interactive mode. Actual behavior: The subflows are executed using the standard FDIH jobs, not in interactive mode.
AI Search PRB1849325	thumbnailHeader in the mini Genius Result Card is not translated	This problem occurs in both global and portal search.	1. Enable AI Search. 2. Ensure the instance has Now Assist Q&A enabled. 3. Turn on translation prefix in **All** > **System Localization**. 4. Search the query 'request computer' in either global or portal search. 5. Wait for Genius Results to load. Notice that the thumbnailHeader in the mini Genius Result cards are not tagged with the translation prefix except for 'Catalog'.
AI Search PRB1850218	ais_child_table cache is not flushed when glide.ais.disable_kbb property is changed	KBBs (knowledge blocks) should not be indexed as separate document. Instead, they are indexed with the KB document as embedded documents.	1. Enable the knowledge block (KBB) flag. 2. Navigate to cache_inspect.do. 3. Check that CACHE_AIS_CHILD_TABLE has kb_knowledge_block.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Problem	Short description	Description	Steps to reproduce
		When only KBB is enabled, the KBB table is removed from the tables.	**4.** Disable the flag. **5.** Index kb_knowledge datasource. Observe that the KBB is indexed as separate documents.
AI Search PRB1851725	Typo Handling blocked terms state doesn't change from **New** to **Published** when publishing a search profile	Blocked terms are published, and the UI did not change the state from **New** to **Published**.	**1.** Add a new blocked term to the Typo Handling dictionary. **2.** Publish the parent profile. Observe that the new term still has a **New** state, the blocked term is actually published, but the UI did not change the state.
AI Search PRB1857237	Images aren't returned for Now Assist actions on Service Portal		**1.** On a Yokohama instance with Now Assist for search 10.0.14, navigate to Service Portal. **2.** Search for 'Apple' or 'Laptop'. Expected behavior: Images should be returned for the Now Assist actions Genius Results. Actual behavior: Notice that the images aren't coming back for Genius Results.
AI Search PRB1861957	Duplicate migration requests for a model upgradation is allowed for same target version of a model upgrade request		
AI Search PRB1863971	RAGRertirval API throws an error if the searchSource given request is not present	When the user submits a RAGRetrieval API request with a search source that is not part of the search profile or is not an indexed source, RAGRetrievalAPI fails with no search results.

Problem	Short description	Description	Steps to reproduce
Application Install Engine PRB1836818	A parent application installs successfully despite missing dependencies	A parent application (for example, Generative AI Controller 9.0.1-Snapshot) is installed successfully even though its dependencies (for example, Microsoft Azure AI Speech Spoke) were not installed during the process	1. Attempt to install a parent application with known dependencies. 2. Simulate a scenario where the dependency (for example, Microsoft Azure AI Speech Spoke) fails to install. Observe that the parent application still installs, creating a record in the sys_store_app table, but dependencies remain missing.
Appointment Booking PRB1853892	When the daily capacity is reached, the appointment booking modal shows a slot for that day, but throws an error upon booking	Even though the capacity definition is set, appointment slots still appear even if the day if fully booked. When a user attempts to book an appointment on a fully booked day, the error 'ErrorAppointment window is no longer available. Please select another appointment' occurs.	1. Create a capacity definition of type, **Task and 1 task** as capacity. 2. Tag the definition to an assignment group for a 20 day period. 3. Create a Work Order Task (WOT). 4. Assign the task to an agent in the assignment group. 5. Notice that capacity usage records recorded that '1 out of 1 task' is used. 6. Log into the CSM portal. 7. Attempt to book an appointment for the same catalog. Expected behavior: Since the capacity is already booked for that particular day, slots should not appear. Actual behavior: Slots are visible for that day and upon booking, and the page throws as error 'ErrorAppointment window is no longer available. Please select another appointment'.
Appointment Booking PRB1860174	The appointment calendar does not work in **Request a replacement catalog**	**Select appointment** is displayed as blank.	
Appointment Booking PRB1860844	In Portal, when unified UI and week view is enabled, if a holiday falls in the next week, that	When **Consider holidays** in leadtime is checked in at the service configuration level, the holidays aren't honored properly to recalculate the	1. Enable unified UI and week view. 2. Set the lead time such that slots are available from next week. 3. Create a holiday in next week.

Problem	Short description	Description	Steps to reproduce
	holiday isn't considered	leadtime. Users are still seeing the slots in the next week.	Observe that the holiday isn't considered in this case and slots are shown for holidays as well. 4. Set **Consider holidays** for the lead time flag as true and set a holiday within a lead time. Observe that the holiday isn't considered for lead time calculation.
Cache PRB1860082	CacheMetricsManager causes a performance bottleneck at high workloads	Enhance the performance of the Cache Metrics API to accommodate a high volume of concurrent requests.	
Calendar Component PRB1837613	A robot calendar isn't working on Y trueup instances	On nightly builds, the robot calendar isn't loading and timezones aren't associating with the calendar.	1. Navigate to an instance. 2. Navigate to a workspace. 3. Open a robot linked to a bot process. 4. Select the **Robot calendar** button. Expected behavior: The calendar should be loaded to show the schedules of robots. Actual behavior: The calendar doesn't load.
Capacity and Reservations Management PRB1847774	There's a performance issue in the capacity console	For **Group by demand channel**, all territory data is fetched for the expanded demand channel. When adding a customization function for a summary, the event alt text should be labeled but it'd coming as a field name.	
Cloud Provisioning and Governance PRB1852065	Stack state is changed to **Terminated** when deployment fails, and no task is created	The stack status is changed to **Terminated** instead of **Resolving Error**.	1. Log in to an instance. 2. Create an Azure Resource Manager (ARM) or Cloud Formation Template (CFT) catalog. 3. Navigate to the ESC Portal. 4. Launch the CFT catalog created.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Problem	Short description	Description	Steps to reproduce
			5. Provide all required parameters and give any invalid values. **6.** Order the catalog. Observe that if deployment fails, stack status is changes to **Terminated** instead of a **Resolving Error**PFA.
CMDB CI Class Manager PRB1845236	Update CMDB table descriptions based on current documentation	The CMDB table descriptions are not updated based on current documentation.	**1.** Navigate to CI (configuration item) class manager. **2.** Select any class. **3.** Open the Info tab. Notice that the descriptions are not updated based on the current CMDB table description documentation on the ServiceNow Documentation site.
Code Signing PRB1857413	Signatures created by **Signing** jobs have the **update_name** field empty		Run the **Signing** job to generate a signature for records. Expected behavior: Generated signatures should populate the **update_name** field. Actual behavior: The **update_name** field is empty for a generated signature. This prevents records from Git check-in and the 'Publish to App' repo.
Code Signing PRB1857416	Signatures created by signing jobs have an empty **update_name** field	The record field **update_name** is empty for generated signatures to prevent records from being checked in to git and to be published to the App repo. Generated signatures should populate the 'update_name' field.	Run a signing job to generate a signature for the record field **update_name**.
Customer Service Management PRB1855041	Unable to create an email draft in an application scope	The sys_email_draft table has table-level access limitation. Only **Can Read** is allowed in the application scope.	**1.** **AI Agent** > **Testing**. **2.** Select the AI agent **CSM Response Handler.** **3.** Enter the task detail as: **a.** record_table = 'sn_customerservice_case' **b.** record_sysid = '5078cc9a2be71210f980f0aef291bf0b'

Problem	Short description	Description	Steps to reproduce
PRB1847469	esponse in English		**3.** Change the language to Spanish. **4.** Type or select a skill pill. Expected behavior: The user gets the entire response in Spanish. Actual behavior: The user gets a response in English and Spanish.
Dynamic Translation PRB1859540	Missing functionality for inbound text from Virtual Agent (VA) to bypass DT for an LLM conversation		**1.** Provision an instance with VA LLM installed. **2.** Install one of the native languages supported by LLM. **3.** Switch a user preferred language to the language. **4.** Start a VA conversation in the language. Expected behavior: VA shouldn't DT the user utterance before sending to LLM. Actual behavior: VA DTs the user text to English and sends to the LLM, which responds in English. This isn't expected since the user language is different than English.
Employee Center Pro PRB1814341 KB1704519	The 'Give Feedback' text in Experience Feedback Drawer widget is upside down for the Chinese/ Japanese/ Korean languages	All the vertical languages are considered and are read from top to bottom.	**1.** Install EC Pro. **2.** Install Chinese, Japanese or Korean languages. **3.** Switch to the above installed language. **4.** Open /esc?id=hri_user_profile. Expected behavior: The 'Give feedback' text displays vertically. Actual behavior: The 'Give feedback' text displays upside down.
Event Management PRB1829897	**Description** field of the Event Rule transform tab execute JavaScript code	In cases when the Event has spacial characters, using the marker for those inputs won't work and the regular expression has to be written manually.

Problem	Short description	Description	Steps to reproduce
Event Management PRB1852761	NullPointerException (NPE) in Impact Calculation after topology change	NPE occurs after performing a topology change in Event Management.	1. Navigate to Application Services. 2. Navigate to ServiceNow Event Management. 3. Select **View Map**. 4. Add a Linux (lnux100) server under Alert Processing. 5. Send a minor alert on lnux100. 6. Select the Impact Tree. 7. Navigate to **Impact Calculation** > **Impact**. 8. Change the influence for impact rule to 50 to perform a topology change. Observe the following NPE, 'Exception at executeImpactCalculation. Msg: Cannot invoke 'java.lang.Integer.toString()' because 'this.fContributedSeverity' is nulllastImpactCalcDate: nullImpactSyncHandler'.
External Triggers PRB1848664	Change the spoke sys_id to the spoke ID in the definition for external triggers telemetry		
Flow Engine PRB1825217 KB1709497	When applying inline scripting to pass the value in an input of a dynamic template, it's not working, and the field appears empty	When users create a new action from scratch with one input of a dynamic template and apply inline scripting to pass the value to this input in the flow, it doesn't work.	Refer to the listed KB article for details.
Flow Engine PRB1828174 KB1709903	Do-In-Parellel branch remains on a 'Waiting' state after MID action	Flow should go to a 'Complete' state after it returns from MID, but it remains in a 'Waiting' state with only one of the parallel branches having been executed.	Refer to the listed KB article for details.
Flow Engine	Support retries for interactive, non-quick flows	This is a product update.

Problem	Short description	Description	Steps to reproduce
PRB1865703			
GRC Platform Plugins PRB1843595	The **Details** field is missing in Attestation Designer after Xanadu upgrade	The**Details** field is missing in the attestation designer after the upgrade to Xanadu from Washington.	1. Navigate to attestation designer. 2. Select the gear icon for any of the questions. Observe that no **Details** field is present. 3. View the same attestation designer in a Washington DC instance. Observe that the **Details** field is present.
GRC Platform Plugins PRB1854275	Risk Assessment Designer doesn't launch or open a saved assessment	The session hangs and causes the browser to time out when using Risk Assessment Designer.	1. Impersonate a user. 2. Enter assessment types in the Filter Navigator. 3. Navigate to **GRC Risk** > **Administration** > **Assessment Types**. 4. Open an Assessment. 5. Select **Risk Assessment Designer UI**. 6. Notice that the session hangs and eventually causes the browser to time out. 7. Close the browser. 8. Wait two minutes. 9. Relaunch the browser. 10. Impersonate the same user. 11. Enter assessment types in the Filter Navigator. 12. Navigate to **GRC Risk** > **Administration** > **Assessment Types**. 13. Select **Risk Assessment Designer UI** from the list. 14. Select **New Assessment New Assessment Load Assessment** > **Load Assessment** when the designer opens. 15. Search for the assessment in the search modal. Notice that it hangs and eventually times out the session.
Health Log	MID server stops when it

Problem	Short description	Description	Steps to reproduce
Instance Data Replication (IDR) PRB1829495	High turn around time to send scheduled seeding through metadata topic	After schedule seeding data has been processed, the system should not send data to the consumer and block the metadata topic.	1. Create a schedule seeding replication set for a 12 hour interval. 2. Load data up to 3 mil. 3. Verify turnaround time grows with large amounts of data. Expected behavior: Once data is processed, the turnaround time should be quick. Actual behavior: The turnaround time is long.
Instance Data Replication (IDR) PRB1829496	**Retry** shows duplicate run log records	When **Retry** is initiated, the DCT result and run log should not have duplicates.	
Instance Data Replication (IDR) PRB1858358	Excessive KMF traffic on some instances	This is a product update.	
Instance Data Replication (IDR) PRB1863650	There is a limit to sets and entries	One replication set with one outbound entry can be scheduled for Yokohama. Scheduled seeding should work for five replication sets each with a single outbound entry.	
Integration Hub PRB1839006 KB1952753	OpenAPI Step with MID is failing	When following the OpenAPI Step document to create an action to make an API to an OpenAPI Step, a Guice configuration error occurs.	Refer to the listed KB article for details.
Integration Hub PRB1865702	Support Retry policy when using Async HTTP	This is a product update.	
Issue Auto	IAR Simulation does not use the correct API	Custom intents are returned when the regular IAR flow is

Problem	Short description	Description	Steps to reproduce
Resolution for Virtual Agent PRB1862157		executed. Custom intents are not returned when simulation is used, because the API takes in a list of objects instead of a single object. The simulation feature is using the single prediction instead of the bulk one, so the custom IAR's are not being returned.	
Key Management Framework (KMF) PRB1839570	Upgrading to Xanadu causes module keys that are wrapped with a deactivated IKEK to be rekeyed with the active IKEK and then deactivated	This is an issue in KMF that causes module keys that are wrapped with a deactivated IKEK to be rekeyed with the active IKEK and then deactivated. The user is using a specific filter to find the correct module key to use for CLE, based on the sys_id. However, because that key was deactivated, CLE failed.	
Knowledge Article Templates PRB1852356	Articles in the 'Published' state are not changed state to 'Pending retirement' when retired	Knowledge Base (KB) articles that have the retire policy set to 'Knowledge - Approval Retire' cannot be changed to the state 'Pending review'. This problem is found in Yokohama.	1. Locate any KB that has the retire policy set to 'Knowledge - Approval Retire'. 2. Find any article in the 'Published' state within that KB. 3. Select **Retire action**. 4. Select **No** in the pop up dialog for the option to replace the current article with a new article. 5. Return to the article. Notice that the workflow state has not been updated yet.
Knowledge Management PRB1827639	Selecting a knowledge base from 'Explore our Knowledge Bases' in a portal redirects to the wrong URL	A strange URL with incorrect seach results is returned when selecting a knowledge base from /esc?id=kb_home with AI Search enabled on the application 'Knowledge Management - Service Portal' version 1.0.0.

Problem	Short description	Description	Steps to reproduce
Knowledge Management PRB1849608 KB1906766	Knowledge Management (KM) notifications are unable to be triggered	Email notifications aren't triggered for Knowledge Articles because some KM artifact records in the Knowledge Advance plugin are overridden by the Activity Subscription plugin. This occurs in Xanadu and Yokohama.	1. Select any Knowledge Base (KB) that is under subscription. 2. Publish any Knowledge Article from the KB. 3. Notice that the published article is not triggered to the subscriber in the KM subscription. 4. Attempt to trigger the published article by navigating to **Notification** > **Related list** > **Email log**. Notice that the notification is not getting triggered for 'KM Subscription: Article published'.
List Administration PRB1866920	Support export to Google sheets functionality in UI16	This is a product enhancement.	
List Controller PRB1826487	Record watcher stops working if more than 1000 records exist in the query	Records don't appear on the list if there are more than 1000 records.	1. Create a list. 2. 2. Toggle the 'Live' list to be on. 3. 3. Create new record or wait for new record to appear in the list. Expected behavior: When a new record is created, it should appear on the list. Actual behavior: The new record doesn't appear because the list contains more than 1000 records.
MID Server PRB1840424 KB1772428	MID Server ECCSender thread gives an 'Invalid byte 2 of 4-byte UTF-8 sequence' error, blocking sending of valid ecc_queue inputs to an instance	This is most likely to be seen in LDAP user imports, or Import Set JDBC Data Sources, where large data is involved. Large data is likely to include extended unicode characters such as emojis. For LDAP probes, emojis have been seen in OU/CN group names and user details data. For REST integrations synching incidents, emojis have been seen in comments of cases.	Refer to the listed KB article for details.

Problem	Short description	Description	Steps to reproduce
			Expected behavior: The message, 'No recommendations available' should be displayed. Actual behavior: The message, 'All recommended definitions are already included in the library' is displayed when there are actually no findings added. Scenario 2: **1.** Create a process configuration without completing the Process Perspectives section. **2.** Create a project. **3.** Select **Get recommended fields**. Expected behavior: The message, 'No recommendations available' should be displayed. Actual behavior: The message, 'All recommended fields are already in use in other activity definitions' is displayed.
Process Mining Workspace PRB1848238	Transitions freeze when max constrains are set to 0	The max duration in the constraints set is automatically handled as 0 when not filled in. This results in 0 matched records. Second, the UI freezes when the transition as 0 records, making it impossible to set a max duration field manually. This can also happen when a filter set has a transition with an activity from a previous version, which isn't present in the current version.	**1.** Create a project with any AD **2.** In the analyst workbench, open the **Transition** field. **3.** Configure 2 conditions/activity. **4.** Configure a constraint with ○ Start = step 1 ○ End = step 2 ○ Min duration = 1 min ○ max duration: Keep empty Expected behavior: When the max duration is left empty, the max duration should be set to infinite (so all records longer than the min duration should match). Also, the user should be able to use the transition UI to add/remove fields and constraints. Actual behavior: When applying the transition, zero records match despite some matches. The max duration fields are set to 0 rather than kept empty. Also, when zero records match the condition, the user isn't able to change anything in the transition.

Problem	Short description	Description	Steps to reproduce
Service Mapping PRB1816925	Service Mapping (SM) Discovery state always remains Active' if entry points are not reachable	When SM scheduler is run, the Discovery status for SM Discovery and end point status is created. The host is not in CMDB, so the end point status runs 'Host detection'. Host detection creates a new prob with agent_correlator with horizontal Discovery. When host detection is finished, it updates the end point and the state becomes 'Complete'. However, SM Discovery doesn't update, so the business rule was not triggered to set the Discovery status to 'Completed'.	**1.** Created the service with two unreachable entry points. **2.** Create scheduled discovery that runs on this service by name attribute. **3.** Run a discovery scheduler. Notice that the discovery state will always remain 'Active'.
Service Mapping PRB1851972	Updating the same **last_mark** in blob table during recomputation	During recomputation, the blob tables (svc_model_obj_relation for example) are updated with today's date in the **last_mark** field. The code is using 'date time' instead of the date to update the field.	**1.** Open the SQL debug. **2.** Change a CI that connects to a service. Users see an update to the **last_mark** field with 'date time' instead of just the date. **3.** Repeat the process. Observe the same record updating with the same date.
Service Portal PRB1855070	Post-Upgrade to Yokohama EA, an error is caused by the business rule 'Create SP Communication ChannelList'	An error found in the logs after upgrading to Yokohama EA 'Recursive business rule call for 'Create SP Communication ChannelList' on sp_portal'. A number of simple transaction results in this error.	
Software Asset Management PRB1854090	Cross product downgrade rights should exclude inactive downgrade relationships	There's no behavior change for the users on recon. This is intended to exclude inactive products in the backend.	**1.** Create cross product downgrade rights in samp_downgrade_model. **2.** Set the Active column to **False**. **3.** Run reconciliation.

Problem	Short description	Description	Steps to reproduce
			Although the reconciliation result is as expected, it was found that inactive cross products downgrade rights been processed during recon logs, which is incorrect.
Standard Change Catalog PRB1856886 KB1931818	Value is not populated from the template if a new text area field is added when creating or modifying a standard change proposal	The **template_value** field contains 'STARTSWITH' instead of the '=' operator, which doesn't allow the field to be populated with the value when the template is applied to the change request record.	Refer to the listed KB article for details.
Stream Connect Core PRB1859532	Producer Retry job fails to run		
Survey Management PRB1842390 KB1832412	The HR case number is not displayed completely on the survey card on the My surveys page	The HR case number is not displayed completely on the survey card rendered using the 'My surveys' widget on My surveys page.	Refer to the listed KB article for details.
Survey Management PRB1855459	Additional service and service endpoint needed for clotho as part of Digital End-User Experience (DEX)		Navigate to sys_service and sys_service_endpoint table. Notice the records for this service.
Territory Planning PRB1848653	Problems on Capacity Console		
User Criteria for Service Catalog	Semaphore exhaustion is caused by the getAllUserCriteria function getting called in widgets	When a public page is accessed by a guest user or web crawler, this prompts a call to the getAllUserCriteria API, which causes semaphore exhaustion.

Problem	Short description	Description	Steps to reproduce
PRB1819841			
UX Framework PRB1833790	There's a 'Max Tab Reached' message on Workspace	The user has Next Experience off and has a link in the menu to open the workspace. This issue happens only when a user opens a workspace from the link directly.	**1.** Open an Xanadu instance. **2.** Navigate to any workspace. **3.** Try to open more than 10 tabs. Expected behavior: Opening more than 10 tabs should work. Actual behavior: Opening more than 10 tabs isn't working in workspace after an Xanadu upgrade. Users get the message 'Max Tab Reached: You have reached max number of tabs you can have open at one time. Close tabs in order to open more.'
Virtual Agent Designer Legacy PRB1817185	In an LLM-enabled user input, the enforced user prompt isn't translated		**1.** Open Virtual Agent designer. **2.** Open the 'Pizza order' topic **3.** Select the **customer name** node. **4.** See the 'Enforce User' prompt on the right side. **5.** Run the test. Expected behavior: There should be a prefix 'MSG: May I know your name?'. Actual behavior: There's no prefix 'MSG' for the customer name prompt.
Virtual Agent PRB1849287	Topic reduction causes some unexpected errors when selecting an action		Check the topic execution from the skill picker, by clicking from a synthesized response, and on auto launch.
Virtual Agent PRB1851004	Skill discovery and execution fails with the proxy sys_prop enabled in Yokohama	Discovery and execution fails when the sysprop com.glide.cs.one_extend.auto_proxy_enabled = false. This is enabled by default.	**1.** Open a NAVA portal. **2.** Execute a topic. The topic executes with error messages in each stage. **3.** Try to perform a topic discovery. Observe that discovery fails with a sorry message.

Problem	Short description	Description	Steps to reproduce
Virtual Agent PRB1852222	'Time Out Abandoned Virtual Agent (VA) Conversations' is not respecting the timeout configured for NAP in sys_cs_channel	VA conversations are not closed out according to the timeout configured for NAP.	**1.** Set the timeout on NAP channel to four hours. **2.** Create a conversation. **3.** Don't update the conversation Expected behavior: Conversation should be closed after four hours. Actual behavior: Conversation is closed after two hours.
Virtual Agent PRB1855393	User KnowledgeGraph data should be applied for search		
Virtual Agent PRB1857219	Skill discovery fails on xselfservice upgraded instance	This is a product update.	
Virtual Agent PRB1857900	A deflection log table doesn't set a 'no response' state when AI Search returns 'no answer found'		**1.** Navigate to NAVA. **2.** Type in a search term that has no synthesized result and no regular result. **3.** Navigate to the deflection log table (sys_cs_deflection_log). **4.** Check the record corresponding to this search. Notice that the **State** field isn't set to 'no response'.
Virtual Agent PRB1858954	Follow-up after a navigation skill isn't working		**1.** Select **NAP**. **2.** Enter 'show me list of unassigned incidents'. **3.** Select **incident**. **4.** Enter 'show list of open incidents'. Observe that a processing message keeps loading and no response is displayed.

Problem	Short description	Description	Steps to reproduce
Virtual Agent PRB1859339	An attachment icon isn't aligning with the rest of the other icons in the chat box		1. Navigate to an Xanadu instance. 2. Log in as a user and then open Service Portal. 3. Initiate a chat to see the attachment icon. Expected behavior: All the icons in the chat box should align. Actual behavior: The attachment icon is slightly above the other icons and doesn't align with the rest.
Virtual Agent PRB1866633	In APAC data center instances, AI agents are not working even after accepting the Global Routing Consent information message	Global routing is not working even after consenting on the info message for data center instances in the Asia-Pacific region.	1. Deploy a new instance from the APAC data center. 2. In an APAC region instance, select **Agree on the Global Routing Consent info message**. Expected behavior: The AI Orchestrator should be invoked. Actual behavior: Even after accepting the consent, AI agents are not functioning, and the error message occurs: 'Sorry, there was a problem on my side trying to complete this request. Try asking again later'.
Virtual Agent PRB1866635	Trail Assists are incorrectly loaded for 6 or more tools triggered from Now Assist Panel (NAP) with skill Discovery	This problem doesn't occur with playground and NAP triggers.	1. Have a use case with 6 or more tools. 2. Navigate to NAP. 3. Enter an utterance for the use case with 6 tools and skill Discovery. 4. Invoke AI Agents use case: ○ Utterance: Get me price of ○ Washing machine - 2 ○ Refrigerator – 3 ○ Monitor – 2 ○ Toaster – 1 ○ Vacuum cleaner – 2 ○ Dishwasher – 2 Expected behavior: Trail Assists should be 50.

Problem	Short description	Description	Steps to reproduce
			Actual behavior: Trail Assists are loaded as 25.
Virtual Agent Web Client PRB1861185	An animated icon isn't visible in NAVA when enabled		1. Enable **sn_nowassist_va.nass_animated_avatar_enabled**. 2. Navigate to NAVA. 3. Type an utterance like 'what is spam'. Expected behavior: An animated icon is visible next to the loading messages. Actual behavior: No icon loads next to loading messages.
Workspace App Shells PRB1838088	A breadcrumb isn't updating when updating the corresponding record page data	This issue is specific to the master version of Glide.	1. Create a fresh UI Builder experience from scratch. 2. Create a standard record page in it. 3. Use the table 'sn_align_core_feature' or any table where the record page update does update a breadcrumb item. 4. Update the name of the feature record and save. Expected behavior: The breadcrumb should reflect the new name. Actual behavior: The breadcrumb isn't updated.
Workspace App Shells PRB1839369	SCREEN_STATUS_CHANGED isn't working for a breadcrumb app shell	The functionality for the SCREEN_STATUS_CHANGED event to close a page in breadcrumb app shell workspace is broken.	

Fixes included

Unless any exceptions are noted, you can safely upgrade to this release version from any of the versions listed below. These prior versions contain PRB fixes that are also included with this release. Be sure to upgrade to the latest listed patch that includes all of the PRB fixes you are interested in.

- Yokohama Patch 1
  - Yokohama security and notable fixes
  - All other Yokohama fixes

Yokohama Patch 1

The Yokohama Patch 1 release contains important problem fixes.

Yokohama Patch 1 was released on March 12, 2025.

- Build date: 03-05-2025_2133
- Build tag: glide-yokohama-12-18-2024__patch1-02-21-2025

Important:
For more information about how to upgrade an instance, see ServiceNow upgrades.

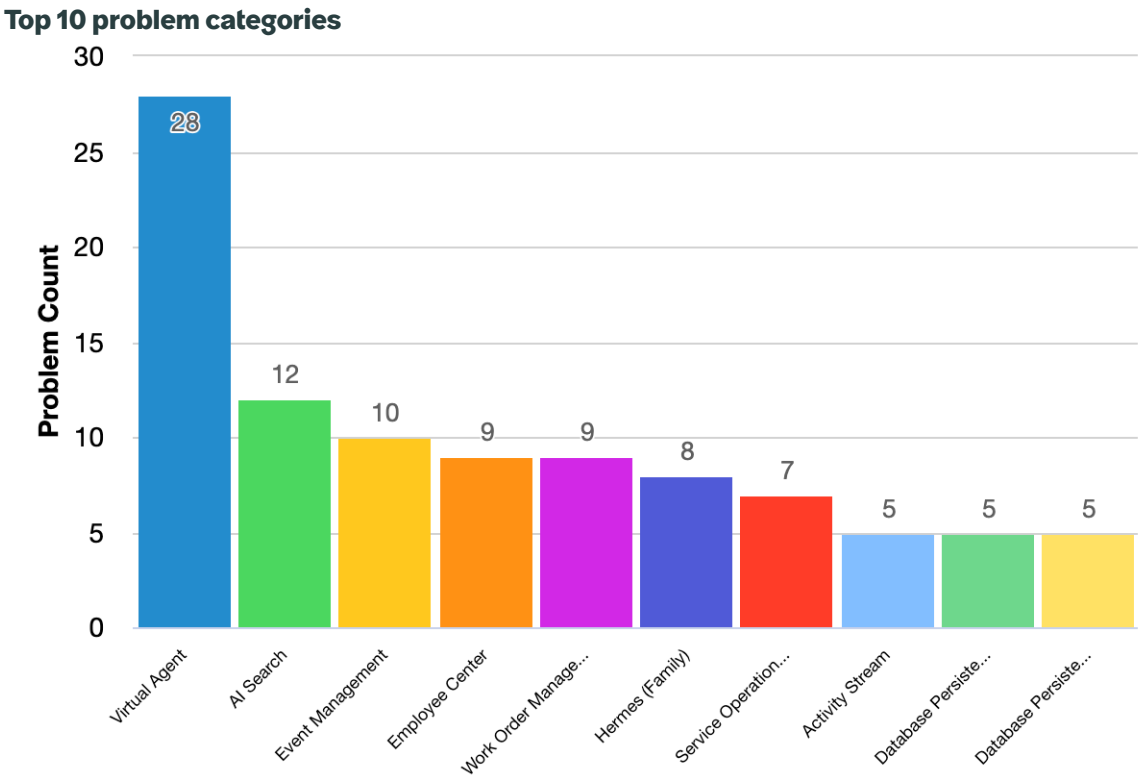
For more information about the release cycle, see the ServiceNow Release Cycle.

Note:
This ServiceNow AI Platform major family release is now available in ServiceNow's Regulated Market environments. For more information about services available in isolated environments, see KB0743854.

For a downloadable, sortable version of the fixed problems in this release, click here.

Overview

Yokohama Patch 1 includes 289 problem fixes in various categories. The chart below shows the top 10 problem categories included in this patch.



Security-related fixes

Yokohama Patch 1 includes fixes for security-related problems that affected certain ServiceNow® applications and the ServiceNow AI Platform®. We recommend that customers upgrade to this release for the most secure and up-to-date features. For more details on security problems fixed in Yokohama Patch 1, refer to KB1953930.

Problem	Short description	Description	Steps to reproduce
PRB1845668 KB1810362	Skips steps due to race conditions	sc_req_item table cause race conditions allowing approval steps to be skipped.	
List Administration PRB1402594 KB0956006	Unable to edit a field in the list view when it is dependent on another field that is read-only for the user	This issue has been observed since New York. Users are not able to edit a field on list view when it is dependent on another field that is read-only or has an ACL making it read-only.	1. Open any incident record. 2. Set the field **Contact type** in the dictionary definition to be dependent on 'Configuration Item.Asset', which is read-only by default. Expected behavior: The field should not be editable only when there is a list_view ACL preventing the field from being edited. Actual behavior: In the form view, the field **Contact type** is editable, but in the list view it is not.
Platform Analytics Dashboard API PRB1760775	There's an issue with reports on a workspace dashboard	Legends display duplicate values when translated into non-English language.	1. Provision an instance with the 'Install Platform Analytics workspace' plugin installed. 2. Create a Platform Analytics dashboard with a column report with 2 data sources. 3. Change the language to Brazilian Portuguese.

All other fixes

Problem	Short description	Description	Steps to reproduce
Access Control PRB1850716	There should be a check for customization before the removal of the snc_internal ACL role from a set of ACLs	If a snc_internal acl role record has an entry in the sys_update_xml table, then the record shouldn't be deleted.	
Activity Stream PRB1834293	Activity stream activity events with empty **event_created_by** field values cause the activity stream

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Problem	Short description	Description	Steps to reproduce
	screen on mobile to crash		
Activity Stream PRB1835318	'Fit-to-parent' for emails doesn't work as expected	Observe that the email compose text area does not expand as expected because the 'fitToParent' property already exists as an option on the composer.	**1.** Log in to the instance. **2.** Navigate to CSM workspace. **3.** Select any incident record. **4.** Navigate to the Activity Stream settings and toggle the 'Side by Side' view. **5.** Select the 'Email' tab. Observe that the email compose text area does not expand as expected.
Activity Stream PRB1837845	A **File Attachment** type field isn't added in the activity log in Workspace	A **File Attachment** type field isn't added in the activity log in Workspace when attaching from a field. It's a ZZ_YY prefix problem.	**1.** Create a **New file attachment** type field for some record type. **2.** Ensure that the field is visible in some view. **3.** Attach an image to an existing record via the **New file attachment** field. **4.** View the activity stream for the existing record in any workspace. Expected behavior: The image appears in the workspace activity stream. Actual behavior: The image doesn't appear in the workspace activity stream.
Activity Stream PRB1843408	If a user deletes drafts after sending mail, the last sent email disappears in the filtered 'Activity Stream' section		**1.** Open an email page record. **2.** Select the 'Email' tab. **3.** Compose an email with valid recipients. **4.** Select the **Send** button. **5.** Once the email history is updated, select the 'Email drafts' icon and delete all drafts. **6.** Close the dialog/modal. Expected behavior: Sent email logs should be displayed on the email's history. Actual behavior: The last sent email has disappeared from the email's history.

Problem	Short description	Description	Steps to reproduce
Activity Stream PRB1843720	The activity log captures changes but aren't displaying them as the newest entry in Workspace	For a field with name and label of length more than 40 characters, any changes made to the field aren't reflected in the activity stream as a new entry.	1. Create a new field name and label of length of more than 40 characters. 2. Add the newly created field in the Service Operations Workspace (SOW) view and configure the activity stream filter to display that field in SOW. 3. Open SOW. 4. Try updating the value in the field. 5. **Save**. Expected Behavior: The field change should be added as a entry in activity stream. Actual Behavior: The change doesn't reflect in the workspace activity stream but reflects in the UI16 activity stream. Instead, the field change appears to overwrite the first initial field change record. If users follow the steps with a field name and label of less than 40 characters, the change would reflect in both workspace and UI16 activity stream.
Advanced Work Assignment PRB1857820	Agent Outside Workspaces that use OpenFrame soft phone are set to an 'Offline' presence state within a minute after the agent moves to an available state	If an agent isn't also on a workspace, the presence reverts to 'Offline' within about a minute. Since the agent is using OpenFrame to manage capacity, it shouldn't automatically revert to 'Offline'. The issue occurs after an Xanadu upgrade.	
Agent Chat PRB1846351	Audio notifications don't play intermittently when the browser has 'Allow All Auto-Play' configured	On a Safari browser, when the user doesn't allow the Auto-Play for ServiceNow site, audio notifications intermittently don't play for an agent. This is applicable for inbox and conversation notifications. For example, if an agent doesn't hear an audio notification for an incoming inbox notification, it's	1. In a Safari browser, as an agent, open Service Operations Workspace. 2. Change the status to 'Available'. 3. Using a Chrome browser, impersonate a requester. 4. Turn off audio notifications in the web client. 5. Initiate a chat and attempt to connect to a live agent. 6. In the Safari browser, as an agent, accept the incoming work item. The audio notification plays.

Problem	Short description	Description	Steps to reproduce
		possible the following conversation's audio alert to play or not play. Once audio notifications begin to play, proceeding audio notifications usually play. The audio state can be 'interrupted'.	7. From the Chrome browser, as a requester, send a message to ensure an audio notification plays on the agent's side. 8. In the same Safari browser, as an agent, open a new tab with a random URL. Keep this as the active tab and workspace tab in background. 9. In Chrome, as the requester, wait for the timeout reminder and observe if the audio notification plays. 10. In Chrome, as the requester, send a message. Observe at this time, the audio notification stopped working, even though the console log says it successfully played audio.
Agile Development PRB1845010	Add the spm_agile_common_user role to the planned task.* ACL to view a rm_story form	A spm_agile_common_user should be able to have CURD access on the rm_story table.	
AI Search for Virtual Agent PRB1855428	Synthesized answer responses intermittently fail with error 400001	The flow engine log shows the entry 'Cancelling flow due to timeout' and the error in the flow execution says 'Prompt generation failed'.	
AI Search PRB1827624	A search doesn't return any results	After configuring the search profiles and the user, the search results don't appear, but if the **location.state** field is changed for the user, search results appear.	1. Download and import the search profiles. 2. Ensure the search profiles were uploaded. 3. Find the 'Location boost' risk intelligence report. 4. Select the 'Location boost' risk intelligence report. 5. Navigate to **positive**. 6. Change the match field from **location.city** to **location.state**. 7. Publish the profile. 8. Set up a user. 9. Assign the user the knowledge_admin and ITIL roles.

Problem	Short description	Description	Steps to reproduce
			10. Ensure the values in the **Company** field are empty. 11. Change the **location** field to 'California'. 12. Select **Save**. 13. Select the value 'California'. 14. Ensure that the column 'state' is 'California'. 15. Ensure that the 'name' is 'California'. 16. Run this query 'Employee benefits?' on Global, Service Portal, and Now Assist Virtual Agent. 17. Navigate to 'sys_generative_ai_log.list'. 18. Check the response. Expected behavior: The Knowledge Base article, 'Employee Benefit - US' should be at the top. Actual behavior: The search results don't appear, but if the user changes the **location.state** field, the Knowledge Base article appears.
AI Search PRB1832851	There's no hover over for a Q&A source citation		1. Get a Q&A result. 2. Hover over the source citation. There's no hover over of the source title.
AI Search PRB1835340	sys_updated_on for ais_datasource isn't updated upon changes in Advanced Configuration, Field Configuration and Semantic Index Configurations		
AI Search PRB1838451	AisJournalFieldProcessingJob throws NullPointerException (NPE)	Leaving the value empty when adding a journal value column to kb_knowledge throws an NPE.	1. Add a journal value column to kb_knowledge. 2. Leave the value empty. 3. Attempt to ingest the document. Observe the NPE.

Problem	Short description	Description	Steps to reproduce
AI Search PRB1843005	The text '(number) results for (keyword)' text is not translated when using AI Search	After installing a language plugin and switching the language to a non-English language, the text '(number) results for (keyword)' is not translated when using AI Search. This occurs when a keyword is misspelled when using AI Search.	**1.** Install any language plugin. **2.** Install AI Search. **3.** Log in to the instance. **4.** Switch the language to non-English. **5.** Open an Employee Service Center portal. **6.** Search for any misspelled keyword. Expected behavior: The text '(number) results for (keyword)' text is translated to the non-English language. Actual behavior: The text '(number) results for (keyword)' text is seen in English and is not translated.
AI Search PRB1843571	AI Search's NLQ Genius result 'None of the above' option doesn't work as expected		**1.** Enable the NLQ Genius result for a search application. **2.** Search for an utterance that contains multiple table names. **3.** Select **None of the above** in one of the menus of the Genius result card. Observe that there's no result in the table. The NLQ query didn't properly remove the table which had **None of the above** selected for it. An error shouldn't display.
AI Search PRB1850631 KB1949808	The table field for EVAM view configuration matching of a search record is always the parent table	With the new EVAM-lite implementation, there are 3 gaps in the logic for determining which view configuration to use for a given search result. 1. If a view configuration has a condition based on a field that isn't included in the list of table fields, that field won't be returned from AIS, and so the condition never matches. Even if the field is included on the 'Table Fields' list, if it's a field that only exists on a child table of the table the indexed source is based on,	**1.** Set the system property glide.search.evam.logger.enabled to true. **2.** Open the Service Portal and search for 'new hire'. **3.** Open the syslog. **4.** Filter on 'Created'. **5.** Notice there's a message that contains: '[SEARCH EVAM] SearchResultTemplateGenerator: Using View Config 633c3b5d53a710 10968addeeff7b1218 for Result with table sc_cat_item and sys_id 6690750f4f7b 4200086eeed18110c761'. Expected behavior: Service Portal's EVAM Def'n has a view configuration

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Problem	Short description	Description	Steps to reproduce
		the field won't be returned from AIS and so the condition never matches. If the first view configuration for a particular table comes after the default/global view config, it is never used. Whereas, EVAM had a more nuanced selection process that would look for all view configuration that matched on the table before falling back to those for ancestor tables or the global/ default table.	called 'Catalog Search Results - Order Guides', which has a condition of 'sys_class_name = sc_cat_item_guide^EQ'. This is the view configuration that should be used, and the syslog entry should contain: '[SEARCH EVAM] SearchResultTemplateGenerator: Using View Config 44c37371c3202010 825039b06e40dd4b for Result with table sc_cat_item and sys_id 6690750f4f7b 4200086eeed18110c761'. Actual behavior: The incorrect view config is being used. 633c3b5d53a710 10968addeeff7b1218 is the sys_id of the view configuration called 'Catalog Search Results', which is the generic view configuration for catalog items, and doesn't have any conditions beyond table. But the 'New Hire' category item is an 'Order Guide', and there's an EVAM view configuration specifically for that.
AI Search PRB1852129	Selecting a search result in the Portal adds the parameter 'SearchTerm', leading to a 404 error	With AI Search enabled, searches in the Portal lead to a '404 page not found' error. This occurs when search results that are external links are presented in the search results. When a search result is selected, an additional parameter is added to the URL '&searchTerm=', which causes the 404 error.	1. Navigate to a Xanadu instance. 2. Add an external link to the AI Search source. 3. Navigate to the Employee Portal. 4. Search for the external link. 5. Select the top search result. 6. Observe that 'searchTerm=' is added to the URL. Expected behavior: The user lands on the external link after selecting the search result. Actual behavior: The user lands on an page with the error message '404 Page not found'.
AI Search PRB1852402 KB1909618	SearchAnalyticsService pruneSearchSignalEvents occasionally purges events with the wrong application ID	The sys_auto_script scheduled job, 'Prune Search Signal Events', may cause sys_search_events and its related tables to be incorrectly pruned.	Refer to the listed KB article for details.

Problem	Short description	Description	Steps to reproduce
AI Search PRB1857237	Images aren't returned for Now Assist actions on Service Portal		1. On a Yokohama instance with Now Assist for search 10.0.14, navigate to Service Portal. 2. Search for 'Apple' or 'Laptop'. Expected behavior: Images should be returned for the Now Assist actions Genius Results. Actual behavior: Notice that the images aren't coming back for Genius Results.
Analytics Data API PRB1834167	Slow indicator based PA widgets		1. Navigate to the SaaS Overview page of SAM workspace. 2. Monitor network calls and slow patterns and leverage WPT for further analysis. Notice stale subscriptions by instance.
Analytics Export API PRB1842896	The legends of visualizations are too small and null text appears for the heading and description	This is a product update.	
Antivirus Scanning PRB1835660	The antivirus job updates all columns instead of only the 'State' column	The antivirus job updates all columns in some scenarios. It should only update the state column when attachment.setState(advice) is called. However a forceUpdate is occurs, which ultimately updates the entire row, including the state data. Additionally, when the old table name and table sys_id are updated, the attached file is moved to the previous table.	1. Log in to a Washington DC instance. 2. Navigate to **All** > **Self service** > **Service catalog** 3. Select > **Mobiles** > **Add to cart** 4. Upload a 10MB file. 5. Select **Order nowb** 6. Navigate to sys_attachment.list. Expected behavior: The table name should be sc_req_item on the available 'State'. Actual behavior: The antivirus job updates all columns instead of only the 'State' column.
Application Install Engine PRB1836818	A parent application installs successfully despite	A parent application (for example, Generative AI Controller 9.0.1-Snapshot) is installed successfully	1. Attempt to install a parent application with known dependencies. 2. Simulate a scenario where the dependency (for example, Microsoft Azure AI Speech Spoke) fails to install.

Problem	Short description	Description	Steps to reproduce
	missing dependencies	even though its dependencies (for example, Microsoft Azure AI Speech Spoke) were not installed during the process	Observe that the parent application still installs, creating a record in the sys_store_app table, but dependencies remain missing.
Attachments to Records PRB1849752 KB1885864	There's an issue with archive table clean-up using the "PurgeOrphanAttachments" job	There's an issue that may result in the unintentional removal of records from the sys_attachment table under specific conditions. The issue may impact instances on Washington DC and later releases.	Refer to the listed KB article for details.
Automated Test Framework (ATF) PRB1852376	The user observes an error banner when a test is generated	An error is posted in a banner reading: 'Not allowing update of property: glide.lastplugin.'	1. Log in to an instance as a user with the now.assist.creator and atf_test_admin roles. 2. 2. Navigate to **ATF** > **Steps** > **Create with Now Assist**. 3. 3. Enter a prompt and select **Generate Test Preview** 4. Check page after preview is loaded. An error is posted in a banner reading: 'Not allowing update of property: glide.lastplugin.'
Case and Knowledge Management for HR Service Delivery PRB1827858	Ship RCA for a KB search in the target scope		1. Set up Now Assist for HR. 2. Enter a query in Virtual Agent: 'Tell me about parental leave policy' or any other KB related query. Expected behavior: The numbers should be visible and clickable. Actual behavior: The numbers aren't displayed in the KB result.
Case and Knowledge Management for HR Service Delivery PRB1842923	An RCA is generated when a contact is added on the My Profile page in ESC portal	An RCA error is shown and no details are displayed on page.	1. Log in as admin and navigate to ESC portal. 2. Select the Avatar icon and select a profile. The HR contact widget is displayed.

Problem	Short description	Description	Steps to reproduce
Configuration Management Database (CMDB) PRB1838429	The Configuration Management Database (CMDB) cleanup job deletes valid records from sys_object_source while cleaning up invalid records in the table	The CMDB cleanup job deletes all rows from sys_object_source, both valid and invalid, instead of deleting only invalid records.	1. Create multiple CIs with respective SysObjectSourceInfo. 2. Duplicate where needed based on the data setup. 3. Run the script to make target_table. 4. Run the sysauto_script job: CMDB Sys Object Source Cleanup. Expected behavior: Only some rows are deleted. Actual behavior: All rows get deleted at each run of the clean up job.
Content Analytics PRB1837889 KB1899731	Content Analytics daily processing job evaluates all non-campaign data	Only recently added records should be updated, however all records in the sn_cd_analytics_stat table were updated after several days.	Refer to the listed KB article for details.
Content Experiences PRB1846722	Software Composition Analysis (SCA) form doesn't save after 'Use a content template' is unchecked	Publish plans generated by the Content Template should be generated even again after being deleted and unchecking 'Use a content template'.	1. Install the latest Content Publishing. 2. Navigate to **Create New** > **Articles & Pages** > **Company Event**. 3. Complete the required fields. 4. Select **Save and Continue**. 5. Enter in the default schedule. 6. Select **Save Availability**. 7. Select **Activate Generated Plans**. 8. Delete the publish plans generated by the Content Template in the Publish tab. 9. Select the **Design** tab. 10. Uncheck 'Use a content template'. a. Re-enable it. b. Select **Save in the modal (Change templates modal)**. c. Select **Save and Continue**. Expected behavior: The Content Template publish plans should be generated again when the user wants to use the same plan after deleting it without needing to switch to another content template.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Problem	Short description	Description	Steps to reproduce
			Actual behavior: Content Template publish plans are not generated.
Content Publishing PRB1831890	The publish plan is missing for audience groups other than active users in the content record view	The publish plan for the 'Active users' audience group shows up in the related list, when it should display all publish plans associated with the content.	
Content Publishing PRB1833603	A category from a new content template doesn't appear in a list in the design panel	The category from content template doesn't appear in the list, but it appears in the SCA preview.	1. Add a category to the news content template. 2. Create news content with the above content template. Expected behavior: All categories are displayed in the design panel list. Actual behavior: The category from content template doesn't appear in the list, but it appears in the SCA preview.
Content Publishing PRB1837860	The Event Calendar widget 'Holiday Calendar' isn't generating the correct .ICS file	Users are unable to import all events from that .ICS file into Mac Calendar or MS Outlook.	1. This issue can be reproduced using either Mac Calendar or MS Outlook. Using Mac Calendar: 2. Navigate to /esc?id=esc_dashboard. 3. Find the Holiday Calendar. 4. Select **Add all to Calendar**. 5. Double click on the downloaded .ICS file. 6. Open the file by double-clicking it. 7. When adding a new event, select **New Calendar...**. 8. Select **OK**. 9. Verify that a new calendar named 'Holidays_2025' has been added to the Mac Calendar. 10. Browse through the months and observe that only one entry is present, while all other entries are missing. Expected behavior: The import for all events should work in the calendar. Actual behavior: Users can't import all events into the calendar. It only imports the first entry.

Problem	Short description	Description	Steps to reproduce
Customer Service Management PRB1838688	The Agent email address is displayed to the customer in the history instead of the distribution list when an agent replies	The Agent email address is displayed to the customer in the Activity Stream Observation instead of the distribution list	1. Log in as an agent. 2. Navigate to any case or email interaction record. 3. Send an email from workspace. 4. Select **Reply** or **Reply All** from the Activity Stream Observation once a customer replies. Notice that the Agent email address is displayed to the customer when an agent replies in the history.
Customer Service Management PRB1855041	Unable to create an email draft in an application scope	The sys_email_draft table has table-level access limitation. Only 'Can Read' is allowed in the application scope.	1. **AI Agent** > **Testing**. 2. Select the AI agent 'CSM Response Handler'. 3. Enter the task detail as: a. record_table = 'sn_customerservice_case' b. record_sysid = '5078cc9a2be71210f980f0aef291bf0b' c. email_reply_content = 'We can't complete this case until missing fields and missing documents are added' Observe the email response tool 'Draft Email' returns an error message 'Email draft is failed created'.
Data Archiving PRB1826830	Rearchiver runs for few days due to incorrect query logic when the archive rule has an 'OR' condition	Re-archiver can run for over 4 days without completion. In the localhost log, there can be a long query result set, such as 1409626 rows.	
Database Persistence - Data Access PRB1840224	Upgrading an instance with many sys_user records results in significant unresponiveness	RecordHierarchyPathComputation makes a database call to fetch data for 100 users from the sys_user table. Because this table contains around 10 milllion records, this could slow down performance significantly.

Problem	Short description	Description	Steps to reproduce
Email Notifications PRB1846432	SMIME Configuration with encryption doesn't work for the outbound flow	An email sent with encryption enabled is set to send-ignored and throws an error.	**1.** Provision an instance with the SMIME plugin installed. **2.** Configure the CA, issuing and recipients certificates in the instance. **3.** As a user with elevated privileges, install the email account certificates. **4.** Enable the SMIME properties for both inbound and outbound flows. **5.** Open an incident. **6.** Send a email with encryption enabled. Expected behavior: The email is sent with encryption. Actual behavior: The email is set to send-ignored with an error: 'Exception while encrypting the mime message: No default SecureRandom specified and one requested - use CryptoServices Registrar.set SecureRandom() or CryptoServices Registrar.setSecure RandomProvider().'
Email Notifications PRB1848037	Email client template doesn't register external users as recipients	In Yokohama, email clients aren't registering external users with email addresses that aren't part of the sys_user table from the client template.	
Employee Center PRB1800350	Web Content Accessibility Guidlines (WCAG) issue for the widgets on the Portal is not announcing a section or groups	The screen reader is not announcing the concerned group as the user tabs through widgets with subsections.	**1.** Use a screen reader. **2.** Go to the Employee Service Center or Service Portal. **3.** Tab through a widget that has subsections. Expected: The screen reader should announce the group name when user navigate to any group or section, and the user will come to know in which group the focused element is in. Actual: The screen reader is not announcing the concerned group as the user navigates any of the sections or groups in the home page, and instead announces just the focused element details.

Problem	Short description	Description	Steps to reproduce
Employee Center PRB1806589 KB1704673	Employee Center autocomplete suggestions don't work in Xanadu	The autocomplete suggestions of a base instance ESC AI Search doesn't work in Xanadu.	1. Open a base instance ESC Portal in Xanadu. 2. In the Search box, type 'What is spam?'. Expected behavior: There are suggestions in the typeahead widget. Actual behavior: There are no suggestion results.
Employee Center PRB1817222	Level 2 subcategories don't follow a tree form in the 'Categories' widget	The 'SC Categories' widget doesn't display the proper indentation for the Level 2 categories. The tree structure of the second level is the same as the parent and this creates confusion of where the categories end.	1. Navigate to any Washington DC instance. 2. Navigate to esc?id=sc_category. 3. Select the second level catalogs. Expected behavior: The second level content under the tree should get aligned similarly to the first level. Actual behavior: The content under the first level is properly aligned below the tree. The second level content isn't aligned properly under the tree.
Employee Center PRB1820904 KB1705991	A missing semi-colon in the EC Theme breaks the CSS resolution	A missing semi colon at the end of a new theme variable in EC Theme causes the CSS resolution to break.	1. Log in to an instance with the latest EC apps. 2. Create an incident using the 'Create Incident' catalog item on the ESC Portal. 3. Navigate to 'My Requests'. 4. Open the newly created incident. Observe that the 'Start' text isn't encircled in a green color.
Employee Center PRB1827901	On the EC homepage, the 'My items' widget displays 'You don't have any items yet', then loads	The text 'You don't have any items yet' shouldn't come up unless there aren't any active activity configurations on the instance.	
Employee Center PRB1835498	The 'Delegate this task' on a Journey Task is missing on the jny_task_details	Under certain circumstances, 'Delegate this task' might not be visible on the jny_task_details	Refer to the listed KB article for details.

Problem	Short description	Description	Steps to reproduce
KB1778952	page if the same task is not part of any to-do configuration	page for some Journey Tasks.	
Employee Center PRB1843331	The ACL for kb_knowledge in Employee Center Core provides admins access to edit the knowledge article in the 'Retired' Workflow	Users are able to edit knowledge articles that are in the 'Retired' Workflow when the Employee Center Core application is installed.	1. Navigate to an Xanadu instance with the Employee Center Core application installed. 2. Navigate to any knowledge article in the 'Retired' workflow state. Observe that an article is editable with the workflow state as read-only.
Employee Center PRB1846423	HTML fields on published articles are minimized in Native UI even when they contain content in Yokohama	The content of the article cannot be seen unless the field window is manually expanded.	1. Create an article using an article template. 2. Add a line to each of the HTML fields. 3. Complete the publishing process. 4. Navigate to the article in Native UI once it is published. Notice that the content cannot be seen unless each field is manually expanded.
Event Management Connectors PRB1842835 KB1775976	AWS SNS basic authentication isn't working with the Rest API Access policy for the inbound_event rest API used by push connectors		Refer to the listed KB article for details.
Event Management Connectors PRB1846463	Events are not generated using Azure authorization		1. Navigate to a Xanadu or Yokohama instance. 2. Create Azure authorization. 3. Send an event. Notice that events are not generated.
Event Management PRB1822392	After an upgrade to Xanadu, if automated grouping is	The sa_analytics.aggregation_enabled property should be responsible only for automated,

Problem	Short description	Description	Steps to reproduce
	turned off, (sa_analytics.aggregation.enabled=false) tag-based grouping isn't working	CMDB and text grouping are added, there should be a feature flag property on the entire query job (sa_analytics.query_job_enabled). When set to false, no logic inside the query job executes.	
Event Management PRB1833315	Update itom-noc-app version	This is a product update.	
Event Management PRB1834020	A user with the role evt_team_operator can read all records from the em_root_cause table.	In the em_root_cause table, a user with the role evt_team_operator should only be able to read root_cause_alert or parant_alert records that are part of their groups.	
Event Management PRB1835099	evt_team_operator has no access to flow information	evt_team_operator has no access to flow information and evt_team_operator doesn't know when the flow of playbook is done.	1. Log in / impersonate evt_team_operator. 2. Open express list and open an alert. 3. Activate the playbook button. 4. Run remediation - Create incident. Notice that the incident is created but remains 'In progress' rather than 'Complete'.
Event Management PRB1835604	Impact path in Service Map not showing alerts	An evt_team operator user cannot see alerts in an impact path.	1. Impersonate an evt_team_operator. 2. Open Service Map. 3. Open an impact path. Notice that alerts cannot be seen by the user.
Event Management PRB1838597 KB1743614	Event Rule changes can cause event_rule.update_events to block system events processing, causing a performance	When Event Rules are inserted or updated, an 'event_rule.update_events' system event is fired in the default events queue to re-check any event records not yet covered by any previously existing event rule. The script	1. Open an instance with Event Management installed. 2. Insert, update, or delete an Event Rule in which there will be a considerable number of existing em_event record that will match it.

Problem	Short description	Description	Steps to reproduce
	issue in the instance	action 'Update event rules for empty events/ Update rules after deletion of ER' runs for the event, which processes batches of system events from the platform and other features. When an instance has a large number of em_event records matching the new rule criteria, this causes a long running transaction. Events can take several minutes to process, blocking the 'Events process 0' job of the app node, delaying the processing of other important events that should be processed in near real time.	
Event Management PRB1840955	Network traffic groups are created when the property sa_analytics.aggregation _enabled is set to 'false'		1. Open a track instance. 2. Install the event management plugin. 3. Install the Tag Based Clustering Engine scoped app (sn_em_tbac), Service Management plugin, and the Service Mapping Plus app (sn_sm_scoped_app). 4. Set the property sa_analytics.aggregation _enabled to 'false'. 5. Run the script to create service mapping data. 6. Make sure the 'hash sm_is_data_training_complete' in the sa_hash table is 'true'. 7. Execute the scheduled job 'Event Management - Populate Service candidate process to process mapping'. 8. Navigate to the table em_service_candidate_ process_mapping.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Problem	Short description	Description	Steps to reproduce
			a. Choose a record in that table. b. Send alerts on the 'first ci in connection' and 'second ci in connection'. 9. Notice that a network traffic group was created.
Event Management PRB1842565	Simulation results are not being displayed	When there are no matches in the first bulk query of 300 alerts, the simulation results appear but then disappear after a few seconds.	1. Create a new grouping automation where alerts with the node not containing a name are excluded. 2. Run the simulation. Observe several results in the total, then the number disappears and is replaced by "No matching alerts. There are no alerts that match the defined conditions and filters for this simulation."
Flow Engine PRB1843277	Users get an error when creating a flow from Table Builder or from logic and automation on a partially upgraded instance	An error is thrown: 'java.lang.NullPointerException: Cannot invoke "com.glide.db. PrimaryKey.addQuery (com.glide.db. meta.Query, String)...'	1. Provision an instance having Washington DC installed. 2. Partially upgrade it to Yokohama. 3. Navigate to AES. 4. Create an app or use existing an app. 5. Create a table in it. 6. Edit the table. 7. Create a flow in it. Expected behavior: The user must be able to create the flow in it. Actual behavior: The user is getting an error.
Flow Engine PRB1856307	Use VA-threads in Flow Engine		This is a product update.
Flow Engine PRB1856308	Flow Engine Glide tracing		This is a product update.
Flows (Family Channel)	The 'String to Date' function is not working as expected	On Flow Engine v2, when an invalid transformation such as 'String to Date' is	Refer to the listed KB article for details.

Problem	Short description	Description	Steps to reproduce
Hermes (Family) PRB1847936	Reduce DB query for producing to shared topic	This is a product update.	
Hermes (Family) PRB1850227	Topic sync runs for apps that don't need it	TopicSynchronizer only syncs snc.* topics, so it is not needed for apps like MIF (Multi-nstance Framework).	Run a topic sync job with MIF installed. Observe that it makes a list topic call unnecessarily.
Horizontal Portal Capabilities for Customer Service PRB1827623	'[Add to Wishlist]' isn't displayed in the CSM portal after upgrading to Xanadu	It can be added in Service Portal, but in the CSM portal, the 'CSM SC Cat item' widget doesn't have [Show Add/Update Wish List buttons] as an instance option.	**1.** Provision an instance with the Customer Service Management plugin to have a CSM portal. **2.** Find one sc_cat_item with 'Catalogs' and 'Category' defined and 'Catalog' enabled with Wishlist=true. **3.** Confirm it in the CSM portal. Expected behavior: It should be with the [Add to Wishlist] option, same as Vancouver. Actual behavior: [Add to Wishlist] isn't displayed in Washington and Xanadu.
HR Service Delivery Case Management for Lifecycle Events PRB1848928	There's an RCA error on creating LE and ER Cases for summarization	An error is thrown: 'Read operation on table 'sn_hr_le_case' from scope 'Now Assist context menu' was denied. The application 'Now Assist context menu' must declare a cross scope access'.	**1.** Log in to an instance. **2.** Create an LE case as an agent with the sn_hr_le.case_writer role. Observe that an RCA error is thrown.
HR Service Delivery for Healthcare PRB1782987	Relocation assistance and work visa transfer request are missing in pre-boarding	Relocation assistance and work visa transfer request are missing in pre-boarding when the checkboxes are checked during onboarding, and the record producer do not trigger the cases.	**1.** Open the healthcare onboarding catalog as a manager. **2.** Fill the required details. **3.** Check the checkboxes for **relocation assistance** and **work visa transfer request**. Expectation behavior: These record producer variables should trigger respective cases. Actual behavior: The variables are not triggering the respective cases.

Problem	Short description	Description	Steps to reproduce
KB1813433	with an html-editor on it	after upgrading to Xanadu.	
Instance Data Replication (IDR) PRB1795757	The IDR queue dashboard displays an incorrect value for the remaining messages that are to be processed for V2 sets	The queue dashboard displays the end offset of partition 1 as remaining messages, even though from the topic inspector it's evident that there are no new messages arriving there (current and end offset same). The logic for remaining messages should account for an active partition and then calculate the remaining messages based on the current and end offset values.	
Instance Data Replication (IDR) PRB1838458	Selected fields in 'Outbound Entry' aren't replicated to 'Inbound Entry' when a transformation is enabled (specifically sys_fields)	When a user creates a 'Replication Entry' with transformation enabled, this freezes the selected/ deselected sys_ fields. Specifically, it freezes the ones that are gated by the 'Preserved Modified By' checkbox.	**1.** On a 'Producer Replication' set, have sys_ fields included and enable transformation on any table. **2.** Establish a 'Consumer' set. **3.** Ensure replication works. **4.** Remove/add a sys_ field on a 'Producer Entry' set. **5.** Synchronize on the consumer side. Observe that the removal/addition isn't present on the 'Consumer Inbound Entry'.
Instance Data Replication (IDR) PRB1846711	If the legacy cluster is offline, the 'IDR Producer' job is in a 'doNothing' state	This prevents processing for Hermes sets too, even if the Hermes cluster is online.	Have the legacy cluster offline. Notice errors in the log and observe that the Hermes replication sets are also not processed.
Integration Hub PRB1827642	Incorrect encoding of the URL in a REST step	A new action created in Flow Designer with a REST step is encoded unnecessarily.	**1.** Open an instance. **2.** Navigate to Flow Designer. **3.** Create a new action. **4.** Add a REST step. **5.** Configure the REST step. Notice that spaces around the EQ operator are being replaced with

Problem	Short description	Description	Steps to reproduce
		number of sys_trigger records created and unnecessary queries run by this BR.	
List Administration PRB1767773	The list calculation shows an incorrect count when applying 'Group by' on the list	After ensuring the total sum at the bottom of the list is the sum of all the priority values added together, applying 'Group by' results in the total sum at the bottom of the list to be incorrect.	**1.** Open any list that contains more than 100 records. **2.** Add the priority column. **3.** Navigate to **Configure** > **List Calculations** > **Total Value for the Priority list**. **4.** Ensure that the total sum at the bottom of list should be the sum of all the priority values added together. **5.** Apply 'Group by Short Description or by Number'. Expected behavior: The total sum should be sum of all the priority values. Actual behavior : The total sum at the bottom of the list is incorrect.
List Administration PRB1838932	Workspace list header disappears on reload	The list header is not shown.	**1.** Navigate to CSM/FSM Configurable Workspace. **2.** Open any list view. **3.** Refresh the page. Expected behavior: The list heading is shown on refresh. Actual behavior: The list heading disappears.
List Administration PRB1840323	The **Resume / cancel** UI component doesn't show the **Date** field	Selecting the **Resume / Cancel** buttons doesn't show the date field.	
List Filters PRB1839491	Issue with filter query on Record List component when used from UIB	When a list view with the Record List component is created using UIB, and the table query is passed as a parameter, the filter is applied but doesn't appear the conditions set.	**1.** Navigate to provided URL. **2.** Select the record preview icon. This navigates to another page with the filter applied and filters the record as per the applied filter. **3.** Open the conditions set. Expected behavior: Conditions from the applied filter should be present.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Problem	Short description	Description	Steps to reproduce
			Actual behavior: The conditions set is empty.
Major Incident Management PRB1851629	Major Incident Management (MIM) is not loading when the Digital End-User Experience (DEX) plugin is installed	When the DEX plugin is installed, MIM functionalities do not load.	**1.** Log in as an admin. **2.** Install MIM. **3.** Install the DEX plugin. **4.** Create a new Major Incident. **5.** Select**View Workbench**. Observe that the workbench is not loading.
MID Server PRB1760614	SudoProcessor doesn't properly support commands with file paths	When configuring certain commands used by 'Parse File', they fail with 'Permission Denied' errors if configured in Sudo with a filepath specified, such as: /bin/cat /path/to/file.	
MID Server PRB1842068	Removing 'Check instance' from the policy does not remove it from the agent's check list for that policy	When the list of checks on a policy is updated (checks are removed/added), the list of checks on the agent is only updated with the checks that have been added to the policy list, while checks that were removed from the policy list are not updated on the agent.	**1.** Create a policy running check-discovery-basic check definition. **2.** Publish the policy and wait for it to start executing on the agent. **3.** Edit the policy in sandbox and replace check-discovery-basic with check-read-log. **4.** Republish the policy and wait for policy to sync to agent. Expected behavior: The agent logs that the check list for the policy is just check-read-log. The agent only executes check-read-log as part of the policy run. Actual behavior: The agent logs that the check list for the policy is check-read-log and check-discovery-basic. The agent executes both check instances as part of the policy run.
Mobile Experience for Field Service Management	A map doesn't load when users tap 'set location'	Users see a blank screen.

Problem	Short description	Description	Steps to reproduce
PRB1840564			
Mobile Platform PRB1826545	Unable to source a part from the part requirement flow for Mobile iOS	An error message occurs when the user sources a part in the part requirement flow for Field Service Management (FSM) in iOS only.	1. Navigate to **All** > **System logs** > **Emails** > **Open recent email** for a user with the role wm_agent. 2. Select **Enter**. 3. Log in as the user with the wm_agent role. 4. Navigate to **My Inventory** > **My part requirements** > **Create part requirement** > **Model : 3com cat 5 cable**. a. Enter any required details. b. Select **Submit**. 5. Select **Create part requirement** in the list view. 6. Select **Find part** > **Give radius** > **Submit**. 7. Select any card on the map. 8. Select a stockroom as a 'personal stockroom' for the user. Expected behavior: It should be submitted and the success message should be seen. Actual behavior: Notice the error message.
Mobile Platform PRB1843738	Field parameters for the URL button type that are used for the URL template are always encoded even when it's not needed	When selecting the options below on the Now Mobile app, the page doesn't navigate as expected. Instead, it is taken to a 'The page you are looking for could not be found' search screen. After selecting 'Go', the page is redirected correctly. Options: 'Open my Reservation » mesp?id=wsd_reservations' and 'Create a new general reservation »mesp?id=wsd_search'.	1. Access the instance via Now Mobile. 2. Select the following options and notice the issue described: a. Open my Reservation » mesp?id=wsd_reservations b. Create a new general reservation »mesp?id=wsd_search 3. Select **Go**. Notice that the page redirects correctly after selecting **Go**.
Mobile Platform	If a **dot-walk** field references a	Document data isn't displayed offline	1. Create a Table A extending task. 2. Add a reference column.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Problem	Short description	Description	Steps to reproduce
PRB1844740	column in the parent table, document data isn't saved	because it isn't saved in SQLite DB.	3. Create a child Table B extending from Table B. 4. Add a few columns. 5. Add a form screen to display the Table B record to show the reference field defined in Table A. 6. Verify that the form screen is displayed correctly in the mobile app. 7. Go offline. Notice that the form screen can't be displayed offline because the document data for Table B isn't saved in an SQLite database.
Next Experience Unified Navigation PRB1836091	There's a 'Session Expired 401' modal on public pages	The 'sn-banner-announcement-list' component emits an HTTP_ERROR_OCCURRED event causing a CANVAS_GLOVAL_ERROR event to open the 401 alert dialog.	1. Create a page in UI Builder. 2. Make it public. 3. Log out. 4. Open that public page. Notice a 'Session Expired (401)' dialog displays.
Now Assist Panel PRB1852531	The latency feedback messages are cut at the bottom	The problem likely stems from a height issue for the container.	1. Navigate to NAP. 2. Type 'summarize a record'. 3. Check the latency feedback messages. Expected behavior: The message text is displayed whole in the container. Actual behavior: The bottom part of the messages are cut.
OneExtend PRB1856501	Non-integer temperature value in sys_generative_ai_config record results in NumberFormatException during OneExtend processing	For TextToApp, our Azure OpenAI prompts have a temperature setting of 0.7. This results in a NumberFormatException being thrown in the console, and a generic error being written to the system log.	1. Configure an Azure OpenAI prompt with a non-integer temperature value (for example, 0.7). 2. Ensure system property sn_vad_genai.com.glide.cs.one_extend.auto_proxy_enabled = true. 3. Execute the prompt via OneExtend. Expected behavior: The prompt executes successfully.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Problem	Short description	Description	Steps to reproduce
			Actual behavior: The prompt is never sent to the LLM, and errors are present in the logs.
Performance Analytics PRB1837861	Incorrect Data is populated in CDC fact table when any record is created / updated / deleted at same time	Mining occurs for the inserted record but not the updated record.	1. Enable NAM on indicator and run first day and incremental jobs. 2. Insert and update a record for the source table of the indicator at same time. Observe that mining occurs for the inserted record but not the updated record.
Performance Analytics PRB1854242	Turn off data snapshots on instances that are Raptor standard	From the 'pa_indicators' list view and 'indicator' form view, users shouldn't see data snapshots. MLB-related buttons shouldn't be visible to users. Users shouldn't be able to modify them via the MLB system property.	
Platform Analytics Dashboard API PRB1843769	Dashboard metadata broker is not evaluating early	DashboardSysId is a CLIENT_TRANSFORM_SCRIPT, which makes it impossible for UXF to early evaluate this data broker.	1. Open Platform Analytics Dashboards. 2. Open any dashboard. 3. Refresh the page. 4. Observe network calls. Expected behavior: Dashboard metadata is evaluated early and is a part of the macroponent call. Actual behavior: A new batch request is made which includes the metadata data broker.
Playbook Experience PRB1833127	Playbook doesn't display new cards when previous cards are completed in the HR Workspace	New activities will appear only appear when the page is refreshed, instead of automatically appearing upon completing and closing the previous activity.	1. Setup a lifecycle event. 2. Select the Additional Actions icon at the top right of the page. 3. Select **Preview**. 4. Select **Test**. 5. Observe that an HR case record was created. 6. Open the created record in the HR Agent Workspace.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Problem	Short description	Description	Steps to reproduce
			7. Observe that Activity Set 1 in the Playbook tab created four activities. 8. Complete the four activities. 9. Observe that a fifth activity will appear. 10. Open the fifth activity. 11. Set the state to 'Closed complete'. Expected behavior: A sixth activity will automatically appear. Actual behavior: The sixth activity appears only when the page is refreshed.
Playbooks (Family Channel) PRB1842669	Data definition synchronization slows down Playbook activation even when Playbook has no questionnaire activities	Activating Playbook can take over 1 hour to complete on a Xanadu instance. After setting a system property to turn off flow data variable sync, the activation time decreased to 40 minutes. When running a background script to activate, the process took 19 minutes. Previously, activation time took between 8 and 10 minutes.	1. Create a Playbook with 100 activities but without any questionnaire activities, adding a trigger and filling all required fields. 2. Activate the Playbook.
Playbooks (Family Channel) PRB1848445	A PD update set generation takes a long time and/or timeouts for large playbooks with many conditions to run	This can happen with large processes. In extreme cases, update set generation takes 60+ minutes, where the entire process errors out.	1. Create a large process (e.g. 200 activities), where all activities have a condition to run. 2. Activate. Notice how long it takes to generate the update set, and if it fails.
Predictive Intelligence PRB1843673	The 'ML Cluster Detail Purge' scheduled job causes out of memory issues

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Problem	Short description	Description	Steps to reproduce
Predictive Intelligence Similarity Solution PRB1826156	Untranslated annotations with the i18n language plugin	The annotation, 'STEP 1: Please select the table & field(s) you want to use to retrieve your similarity results, and the table and fields you want compared' is left untranslated and in English.	**1.** Set up a Xanadu testing environment. **2.** Install an i18n language plugin for French. **3.** Navigate to **now/nav/ui/classic/params/target / ml_capability_definition_similarity.do**. Observe the hardcoded string, 'STEP 1: Please select the table & field(s) you want to use to retrieve your similarity results, and the table and fields you want compared'.
Process Mining PRB1834245	Workbench loading times out for a 'Case' table	The change made part of PRB1834245 times out the workbench because it takes time to query the records in a table that has huge data.	**1.** Mine a project. **2.** Share to a user that doesn't have a process mining role and has access to incidents. **3.** Ensure the user can see at least one incident in the table. Observe that the user can't see the workbench.
Project Management PRB1829307	A project actual isn't populated in the resource aggregated monthly for October, though it's populated for September and November	A category project actual isn't populated in table resource_aggregate_monthly for October. It does populate for September and November. There is one record for a project actual in October. If looking in resource_aggregate_weekly, all project actual records are there.	**1.** Open the resource aggregate monthly [resource_aggregate_monthly] table. Only 1 record displays under the monthly table and it excludes the month of October. **2.** Check in resource aggregate weekly [resource_aggregate_weekly]. Records are displayed as expected including the month of October.
Project Management PRB1829721	For a group-based ORA, if users update allocation dailies, it's rolling up to only immediate user-based allocation but not rolling up to group allocation without a user

Problem	Short description	Description	Steps to reproduce
Remote Tables PRB1833193	There is a spike in performance when trying to get the display value of st_sys_design_system_tables_vbnc	In the class ScriptableTableDataCacheHelper, the method getSingleRowQuerySysId tries to retrieve cached rows for non-editable tables which causes the issue.	
Resizable Panes Component PRB1830568	Resizable panes divider handle is not working properly in the CSM Configurable Workspace	When adding an iFrame component in the tab sidebar, it causes an issue while trying to adjust the size of the panes in the workspace.	1. Duplicate a page variant from the base instance page 'CSM default record page' in the CSM Configurable Workspace in the UI builder. 2. Add a new tab in the tab sidebar. 3. Add an iFrame component. 4. Open a Case that applies the duplicated variant. 5. Verify that the sidebar resizing issue occurs when the iFrame tab is open
Resource Management PRB1841076	After an Xanadu upgrade, there's a resource reports issue	Resource reports are broken after an Xanadu upgrade when the glide.sys.date_format is dd-MM-yyyy.	1. On Xanadu, set the date format to dd-MM-yyyy or dd/MM/yyyy. 2. Navigate to **All** > **Resource** > **Resource Reports** > **Resource Reports**. a. Start date auto populates = today's date. b. End date auto populates = 1 year from today's date - 1 day. 3. Update the start date to 10/12/2024 and end date to 11/11/2025. 4. Select **Run**. Observe the error message 'Report duration can't be more than 12 months'. The system considers the start date as being 12th of October and not 10th of December.
Rollback Contexts PRB1844400 KB1803428	The 'Clean Expired Rollback Contexts' job causes memory issues and node restarts	The job is streaming through large rowblocks of data and causing node restarts. The heap dump shows 1.2GB of memory taken by this job.	Refer to the listed KB article for details.

Problem	Short description	Description	Steps to reproduce
SaaS integration with Adobe Cloud (Glide) PRB1843443 KB1913878	sn_samp. UpdateReclamationCandidates > getUserSubscriptionCost code issue	The **potential_savings** field is not present on the samp_sw_reclamation_candidate table, and not in samp_sw_rc_m2m_subscription. This is causing the 'SAM - Updating Existing Reclamation Candidates' job to fail when updating the hybrid subscription cost.	Refer to the listed KB article for details.
Scheduled Jobs PRB1851796	Intermittent errors in GenAI calls due to missing startDate in transaction	JobYieldCheck fails with a Null Pointer Exception (link) because fJobYieldInfo.getStartDate() is null.	1. Set up NAVA with latest versions on yselfservice track. 2. Launch a chat window and enter "What is spam" with streaming enabled. 3. Execute a load test for the same flow (5/10 users). Notice the exceptions in the error logs, sys_generative_ai_log table. The log file says failed due to "date must not be null".
Schedule Optimization PRB1837461	Overlapping territories don't work as expected when file caching is enabled	When file caching is enabled, the work order tasks of the qualifying territories are not sent for optimization.	1. Enable territory model in the instance. 2. Add an agent to more than one 'Territory' group (for example, Sunnyvale and Cupertino). 3. Add one of the above territories as the qualifier in the scope. 4. Add the same scope to the 'Batch'. 5. Trigger a batch run. 6. Validate for an intraday run. Expected behavior: Both overlapping territory groups should be considered for optimization, and two solution files should be generated for each territory group. Actual behavior: When file caching is enabled, the work order tasks of the qualifying territories are not sent for optimization.

Problem	Short description	Description	Steps to reproduce
Schedule Optimization PRB1844169	Errors such as Request Timeout, Syntax Error/ Access Rule Violation, and Insufficient Access are seen on the Dispatcher Workspace	Error messages occur in the Dispatcher Workspace as a result of server response timeout, SQL syntax errors, and queries being ignored due to insufficient access.	Scenario 1: 1. Request a Timeout Leave in the Dispatcher Workspace. 2. Idle for sometime. 3. Notice the alert message, 'Request Timeout: The server took too long to respond. Please try again later'. Scenario 2: 1. Open the 'My Crews' page. 2. Notice the Syntax Error or Access Rule Violation message due to an SQL syntax error. Scenario 3: 1. Assign a crew task to a crew in the Dispatcher Workspace by dragging and dropping the task. 2. Notice the Syntax Error or Access Rule Violation due to an SQL syntax error. Scenario 4: 1. Open the Work Order Task record page. 2. Notice the Insufficient Access error due to the query on sn_fsm_map_integr_usage being ignored because of insufficient access.
Schedule Optimization PRB1846785	A performance issue with beans symmetric travel time and flaten response	This issue introduces symmetric travel time and flatten response for beans calls in Yokohama.	
Schedules PRB1831078	The 'Timeline' page isn't displaying properly with sub items after an Xanadu upgrade	When there is a [cmn_timeline_sub_item] record attached, 'View Timeline' doesn't seem to work. The issue is only there when there's a timeline sub item in the 'Timeline' page.	1. Navigate to **All** > **Timeline Pages**. 2. Select **ServiceNow Roadmap**. 3. Select the **View Timeline** button.

Problem	Short description	Description	Steps to reproduce
		If there's no timeline, there's no issue.	
Server-side scripts PRB1841707	Turn on ECMAScript 2021 (ES12) mode is not toggled after upgrade/zboot	Turn on ECMAScript 2021 (ES12) mode is off.	**1.** Unload a sys_script_include xml with Turn on ECMAScript 2021 (ES12) mode toggled. **2.** Make sure sys_es_latest_script=true. **3.** Add the script include to the 'update' folder in the com.glide.sg plugin. **4.** Zboot the instance. **5.** Spin the instance with Zboot. **6.** Check the record. Expected behavior: Turn on ECMAScript 2021 (ES12) mode is on. Actual behavior: Turn on ECMAScript 2021 (ES12) mode is off.
Service Catalog PRB1834958	The onLoad Mandatory and Visible UI policies aren't working	For the onLoad Mandatory policy, questions can be skipped. For the onLoad Visible UI policy, an incorrect question is prompted indicating that the policy didn't hide the correct variables.	
Service Catalog PRB1835283	A UI policy script is running in Virtual Agent though the UI type is set to 'Desktop'		In Virtual Agent chat, request the item 'Seating Arrangement for Onboarding.' This has an onLoad UI Policy to make will_this_employee _be_ seated_flex_or_remote' read only. Expected behavior: The first question should be about a desk request. Actual behavior: The question 'Will this employee have a reserved desk, flexible desk, or work remotely?' is asked. This indicated that this isn't a read only question, and the onLoad UI Policy did run.
Service Mapping PRB1836767	When deleting a solution in ml_solution table, a cascade delete is	When deleting a solution in ml_solution table, a cascade delete is triggered on ml_cluster_detail, and it times out and does

Problem	Short description	Description	Steps to reproduce
	triggered on ml_cluster_detail, but the records are not deleted	not delete all of the records because there are too many records in the table to handle a cascade delete.	
ServiceNow Security Center (Family Release) PRB1843476	At upgrade time with updated content, the completed steps of a customer action keeps the action status as 'ready', which turns off the action's **Complete** button		
Service Operations Workspace for Change Management PRB1834196	The **New** button on the 'Changes assigned to me' page doesn't navigate to the SOW change landing page		1. Log in as an admin role user. 2. Enable the property 'glide.ux.user_criteria_enabled'. 3. Navigate to **Change** > **Create** and create a new change request assigned to 'Change Manager' user. 4. Impersonate Change Manager [tier 2 user]. 5. Navigate to the SOW Home landing page. 6. Select the **View all** button of the 'Changes assigned to me' donut section. 7. Switch to the List view of the records display section. 8. Select the **New** button. Expected behavior: The user is navigated to the Change landing page. All **New** buttons on the list page should work. Actual behavior: The **New** button on the 'Changes assigned to me' page navigates to the change landing page. The **New** button on other donut lists doesn't work.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Problem	Short description	Description	Steps to reproduce
			Notice that only overdue tasks are displayed, while incidents with breached SLAs are not.
Service Operations Workspace for Incident Management PRB1841972	The new Service Operations Workspace (SOW) landing page have Performance and Analytics Reporting (PAR) variants update entries from SOW version 6.1	Observed after installing SOW 7.0 after SOW 6.1.	**1.** Install SOW 6.1 on an instance. **2.** Observe that the PAR variants on the landing page have update entries. **3.** Install SOW 7.0 with some changes to the sys_ux_screen record corresponding to the variants. Expected behavior: Changes are applied. Actual behavior: Changes are skipped.
Service Operations Workspace for Incident Management PRB1843168	Donuts are not visible after upgrading SOW Technical Dashboard customization		
Service Operations Workspace for On-Call Scheduling PRB1836197	gs.addErrorMessage fails to appear in Service Operation Workspace (SOW) schedules	The error message does not appear as gs.addErrorMessage() for SOW Schedules. However, the business rule that prevents users from selecting SMS as a channel if they are not assigned to the group also includes gs.addErrorMessage(), which reminds the user of the failure reason if they do not have the required role.	**1.** Log in to an instance. **2.** Open the Service Operations Workspace. **3.** Select **Schedules** in the left sidebar. **4.** Select the tab **On-Call notification preferences**. **5.** Navigate to **My escalation notification rules**. **6.** Edit the preferred communication channel in **Attempt**. **7.** Select **SMS**as the communication channel. **8.** Select **Save**. Notice that the message 'On-call user preference has been updated successfully' appears, however SMS is not stored successfully as the preferred communication method in 'Attempt' because it already detects the failure due to the business rule, and the error message doesn't appear in SOW when the user saves the preferences.

Problem	Short description	Description	Steps to reproduce
Service Operations Workspace ITSM Admin Center PRB1825127	Dashboard is not visible after selecting 'Configure' on 'Landing page configurations'	The error message 'Can't display this dashboard' occurs and the dashboard is not visible, even though the user should be able to view it in edit mode after configuring the landing page.	**1.** Log in to the instance as an admin user. **2.** Navigate to **All** > **Service Operations Workspace** > **Configuration**. **3.** Open **Landing page configurations**. **4.** Select **Configure** from the donut configurations from the tier 1 or tier 2 sections. Expected behavior: Dashboard should be visible to the user in edit mode. Actual behavior: Observe the message 'Can't display this dashboard', and notice that the dashboard is not visible.
Service Operations Workspace PRB1799519	An event team operator user received the 'Page not found' message when selecting the Service Operations Workspace (SOW)	An event team operator user doesn't see the SOW and encounters a 'Page not found' message.	**1.** Open the instance. **2.** Log in as an Event Management admin. **3.** Impersonate an event team operator. **4.** Select SOW. **5.** Observe the application. Expected Result: The 'Page not found' message is not displayed for the user. Actual result: The 'Page not found' message is displayed for the user.
Service Operations Workspace PRB1837413	Dynamic translation is not enable on Service Operations Workspace (SOW)	This issue can be observed in the Activity Stream in SOW. After configuring dynamic translation with Microsoft Translation, the dynamic translation icon doesn't appear when switching from Customer Service Management (CSM) to SOW.	**1.** Activate the dynamic translation plugin (com.glide.dynamic_translation). **2.** Navigate to **Connection & credential aliases**. **3.** Open Microsoft Translation. **4.** Navigate to Connection. **5.** Select **New**. **6.** Configure 'Name=MS connection'. **7.** Search 'Credential'. **8.** Select **Create new**. **9.** Configure the API key credential. **10.** Configure the connection URL. **11.** Select **Submit**. **12.** Navigate to the Translator Configuration.

Problem	Short description	Description	Steps to reproduce
			13. Select **Open Microsoft**. 14. Configure 'Active=true'. 15. Check 'Mark as default for translation and detection'. 16. Activate dynamic translation. 17. Ensure it is configured. 18. Post a work note or a comment in a non-English language in Customer Service Management. 19. Verify that the translation icon appears. 20. Switch to SOW. Notice that the dynamic translation icon doesn't appear.
Service Portal PRB1829670	Genius results shows both catalog items and knowledge articles even when the user is filtering with the navigation tabs	Searching in a portal displays Now Assist Genius results, including catalog items and knowledge search results. Selecting a catalog navigation pane or a knowledge navigation pane, the filtered results display both a catalog item and Now Assist QnA instead of displaying respective filtered results.	1. Set up Now Assist in AI Search in the instance. 2. Activate it for the portal /esc. 3. Enable AI Search in portal. 4. Map the Genius result configuration in the Genius result related list tab. 5. Select the existing link. A new form appears after entering a catalog item in a Genius result configuration. 6. Navigate to /esc. 7. Search in the search widget for **Password reset**. It displays some Genius results, including a knowledge article summary and catalog item. 8. Select on navigation's **Requests**. 9. It displays the same Genius results, including the knowledge summary as well. Expected behavior: When selecting the **Requests** navigation pane, it should only display a catalog item Genius result and not knowledge. If users select the knowledge navigation pane, it should display only knowledge and not a catalog Genius result.

Problem	Short description	Description	Steps to reproduce
			Actual behavior: Irrespective of the navigation pane, the Genius result displays both a catalog item and a knowledge summary.
Service Portal PRB1840878	The display of the Genius Results card using Now Assist and Knowledge Base articles are not aligned properly after resizing the browser	This issue also impacts the display in mobile devices.	**1.** Navigate to a Xanadu instance with Now Assist configured. **2.** Ensure the Portal has AI search enabled. **a.** Set the Genius search results limit to ten in the Search Application Configuration of the Portal Record. **b.** Ensure the Search Profile has the Genius Results configuration 'Now Assist Q&A' set in 'Related List'. **3.** Navigate to the Portal. **4.** Search for any keyword. **5.** Notice that catalog items populate in Genius Results. **6.** Resize the browser. **7.** Notice that the alignment of the Genius Results are not correct. **8.** Navigate to the **Knowledge** tab in the search results. **9.** Notice that the alignment of the Knowledge Base results are also not properly aligned.
Session Validation PRB1846625 KB1812394	Deeplinks redirection failed with a node switch from an unauthenticated session to an authenticated session	On opening a deeplink URL, the user should authenticate and redirect to a specific resource.	Refer to the listed KB article for details.
Software Asset Management PRB1840899 KB1801232	New License Metrics for CrowdStrike	This is a product update.	Refer to the listed KB article for details.

© 2026 ServiceNow, Inc. All rights reserved.

Problem	Short description	Description	Steps to reproduce
Software Asset Management PRB1842738	Auto-select a metric group based on the CrowdStrike software model	This is a product update.	
Software Asset Management PRB1853225	Remediation options buttons aren't triggering a scheduled job immediately if date_format is different	Scheduled job should be scheduled to run immediately.	
Software Asset Management Workspace PRB1833497	There's a workspace functionality issue where filtering products under license usage isn't working	There's an issue with filter products under license usage. All records are displayed if users select a record for any particular version for a product while entering the name of the product in the search field. All the products display again.	
Special Handling Notes PRB1836082	Simplify 'Refresh SHN' conditionals for readability and backportability	In Xanadu, if users set the Special Handling Notes (SHN) property 'Display special handling notes only once per session' to false, then the SHN pop-up window isn't displayed at all each time a user accesses a record. However, in Xanadu, once the property is set to false, the SHN pop-up window isn't displayed at all each time a user accesses a record. According to the documentation, the SHN pop-up window should be displayed each time a user accesses a record.	1. Ensure that the plugin 'Special Handling Notes' (com.sn_shn) is activated. 2. Ensure to upgrade the Store apps to the latest versions. 3. Create a 'Special Handling Notes' (sn_shn_notes) for the 'Incident' table. 4. Specify a condition, such as 'Short description', that contains something. 5. Open the SHN 'Properties' page and set the property 'Display special handling notes only once per session' to false. 6. Open an 'Incident' record which matches the condition in Service Operations Workspace or CSM Workspace. Notice that the 'Special Handling Notes' pop-up window isn't displayed at all each time a user accesses the record in either workspace.

Problem	Short description	Description	Steps to reproduce
Stream Connect Core PRB1845639	Kafka Consumer stops consuming messages once it receives a 'null' message from Producer	When a 'null' message error is observed from the source, the Kafka stream no longer consumes the messages.	
System Import Sets PRB1847486	Multiple concurrent import sets are created for one data source		1. Install an AWS version with parallel loading. 2. Configure AWS. 3. Run import. 4. Check the concurrent import set attached to the imports sets.
Table Cleaner PRB1836111	The dot walk in the **Match** field isn't working	There's no unintended data deletion. Table Cleaner thinks the **Match** field with dot walk isn't valid, and therefore doesn't clean anything for that invocation.	
UI Form Administration PRB1820922	The display business rule causes info messages to not display on quick-edit of records in the Service Operations Workspace (SOW)	An info message doesn't display the message when using the 'i' quick-edit feature in SOW or any other workspace. When selecting the 'i' icon to edit a record in quick edit from the list view in the Workspace, the info message is not shown. However, the info message appears correctly when previewing a record using the 'i' icon in the Native UI.	1. Open any Xanadu or Washington DC instance. 2. Create a business rule for the incident table that executes on 'Display'. 3. Add an info message in the script section of the business rule. 4. Open the incident list in the Native UI. 5. Select on the **i** preview of a record. Observe that the business rule is executed and displays the info message. 6. Open SOW or any workspace. 7. Select the **i**icon for the quick view edit of a record in the list view. Expected behavior: The info message should be displayed upon triggering the business rule in the workspace.

Problem	Short description	Description	Steps to reproduce
			Actual behavior: The info message is not displayed in the quick-edit view in the workspace.
UI Form Administration PRB1836016	Fields in the Metric Data Task of the ESG Workspace are displayed in a single column	This issue occurs when the screen is opened at 100% zoom. If the screen is displayed at approximately 75% zoom, the fields are displayed in two columns according to the defined view. The affected view is as follows: Metric Data Task [sn_grc_metric_data_task] - View: Data task info. This issue doesn't occur in Vancouver, but it occurs after upgrading to Xanadu.	**1.** Navigate to a Next Experience instance. **2.** Open the 'sys prop' table and set the value of the property glide.ui.form.breakpoints.enable as false. **3.** Open any configurable workspace. **4.** Open any form record. **5.** Select the 'Details' tab. **6.** Select the resizable panes divider handle and drag this on to left side Expected behavior: The form layout should display as a two column layout. Actual behavior: The form layout displaying as a single column layout.
UI Form Administration PRB1848506	List Control Form has duplicate fields preventing updates	The form should update with changes, but duplicate fields prevent the value from being applied.	**1.** On a Xanadu instance modify the form layout and save. **2.** Upgrade the instance to Yokohama. Notice that there are duplicate fields on the form. **3.** Try to update one (but not both) of the duplicate fields, for example, **Hierarchical Lists**. **4.** Save the Form. Expected behavior: The form updates with the change. Actual behavior: Duplicate fields are preventing the value from being applied.
Upgrade Center PRB1844300	sys_claims customization protection behaves differently than sys_update_xml during upgrades when the sys_policy of the file changes	The installer has no historic knowledge and can't tell if a record was previously unprotected and just became protected in a subsequent release version. This applies both to sys_claims as well as sys_update_xml as a	**1.** Open a Washington DC instance. **2.** Install the sn_hr_agent_ws app. **3.** Customize the 'sys_ux_macroponent_1d033475eb3011106eb96bf3a252287f' file. **4.** Publish to the app repo. **5.** Create a customization pack. **6.** Open another instance.

Problem	Short description	Description	Steps to reproduce
	button is selected, it automatically redirects to the new creation plan page		3. Select the **Preventive Maintenance** icon on the side bar. 4. Navigate to **All Plans** > **New**. 5. Give the plan a name. 6. Choose today's date in the start date. 7. Choose an end date in the future. 8. Select a location (Plan type). 9. Select any building (Ams - B1). 10. Select **Next**. When a maintenance item is selected and the **Next** button is selected, it automatically redirects to the new creation plan page.
UX Framework PRB1843697	The user is unable to tab to side panel on Safari in Yokohama	The 'Questions' tab is not hiding at all when clicked, and the 'Questions' tab hides only when clicked.	1. Open Assessment Workspace. 2. Search and click on Operation Risk Management list item. 3. Select the **Copy** button on the top right. 4. Select Copy in the modal. Notice that the page redirects to a new screen. 5. Wait until the "Copy in progress. This may take a while..." info message appears Notice on that screen that the Questions tab hides when clicked in Washington DC and Xanadu instances but not in Yokohama. After a couple of seconds page will again refresh and the tab will be visible again.
Virtual Agent Designer Legacy PRB1854102	Application scope is not copied over on a duplicate topic in Yokohama	Duplication fails with an error message: 'Application scope is required.'	1. Navigate to Conversational Studio (CS). 2. Create the topic (by default Global is the selection for the Application scope). 3. In the canvas, duplicate the topic and provide the name. Observe that the duplication fails with an error message: 'Application scope is required.'

Problem	Short description	Description	Steps to reproduce
			5. Select a WOT from the 'Calendar' panel and hover over it to verify the scheduled start date and time displayed. 6. Select the WOT and verify the scheduled start and time displayed in the CSP. Observe that the time displayed in 'Task' panel as well as the CSP is converted to UTC time instead of the user's timezone.
Work Order Management PRB1841899	Observe higher response times for dispatcher workspace transactions during 1x load test	When executing a 1x load test with WFO data, the response times of few transactions are above SLA.	
Work Order Management PRB1842749	Remove client callable script include	This is a product update.	
Work Order Management PRB1853746	Unable to source a part from the part requirement flow from Work Order Tasks (WOT) in the Mobile Agent App	An error message occurs when the user sources a part in the part requirement flow from Work Order Task for Field Service Management (FSM) in the Mobile Agent App.	1. Navigate to **All** > **system logs** > **Emails** > **Open recent email** for a user with the role wm_agent. 2. Select **Enter**. 3. Log in as the user with the wm_agent role on the Mobile Agent App. 4. Navigate to **My Work** > **My Tasks**. 5. Select a work order task (WOT). 6. Navigate to **Parts** > **Part Requirements** > **.** 7. Select **Create Part Requirement** 8. Enter 'Model: 3Com Cat 5 Cable (10ft) Quantity: 1'. 9. Select **Submit**. 10. Open the newly created part requirement. 11. Select **Find Part**. a. Enter 'Enter Radius: 50000'. b. Select **Search**.

Problem	Short description	Description	Steps to reproduce
			12. Notice that that it navigates to the Map Screen. 13. Select on the **Asset**card. 14. Select **Source Part**. a. Enter 'To Stockroom: Personal Stockroom'. b. Enter 'Quantity: 1'. c. Select **Submit**. Expected behavior:It should be submitted and the success message, 'Parts have been sourced, and transfer orders have been created' should be seen. Actual behavior: Issue: Notice the error message, 'Source part failed'.
Work Order Management PRB1853754	Schedule conflicts aren't displayed for wm_manager when the contractor management plugin is installed	A conflict error message should be displayed when scheduled Work Order Tasks (WOT) conflict and are assigned to the same user with the wm_manager role.	1. Provision an instance with the Field Service Management Contractor Management plugin installed. 2. Create a WOT. 3. Assign the WOT to a wm_manager. 4. Create another task that conflicts with the previous task. 5. Assign the WOT to a same wm_manager. Expected behavior: The conflict error is displayed. Actual behavior: The conflict errors aren't displayed.
Work Order Questionnaires PRB1836194	Removal of sn_smart_asmt.assessment_admin from inherited roles of questionnaire_admin	This is a product update.	

Fixes included

Unless any exceptions are noted, you can safely upgrade to this release version from any of the versions listed below. These prior versions contain PRB fixes that are also included with this release. Be sure to upgrade to the latest listed patch that includes all of the PRB fixes you are interested in.

Yokohama EA Hotfix 1

The Yokohama EA Hotfix 1 release contains fixes to these problems.

Build information:

Build date: 02-17-2025_2042

Build tag: glide-yokohama-12-18-2024__patch0-hotfix1-02-11-2025

Important:
For more information about how to upgrade an instance, see ServiceNow upgrades.

For more information about the release cycle, see the ServiceNow Release Cycle.

Note:
This ServiceNow AI Platform major family release is now available in ServiceNow's Regulated Market environments. For more information about services available in isolated environments, see KB0743854.

Fixed problem

Problem	Short description	Description	Steps to reproduce
AI Search PRB1847092	A part of the query on sys _generative _ai _config has been ignored because of insufficient access for 'query_match operation on sys_generative _ai_config definition	Results in warning message pop-ups.	
Performance Analytics PRB1854242	Turn off data snapshots on instances that are Raptor standard	From the 'pa_indicators' list view and 'indicator' form view, users shouldn't see data snapshots. MLB related buttons shouldn't be visible to users. Users shouldn't be able to modify them via the MLB system property.

Yokohama security and notable fixes

The Yokohama release contains important problem fixes.

Yokohama was released on January 30, 2025.

- Build date: 01-22-2025_0439
- Build tag: glide-yokohama-12-18-2024__patch0-01-14-2025

Important:
For more information about how to upgrade an instance, see ServiceNow upgrades.

For more information about the release cycle, see the ServiceNow Release Cycle.

Note:
This ServiceNow AI Platform major family release is now available in ServiceNow's Regulated Market environments. For more information about services available in isolated environments, see KB0743854.

For a downloadable, sortable version of the fixed problems in this release, click here.

Security-related fixes

Yokohama includes fixes for security-related problems that affected certain ServiceNow® applications and the ServiceNow AI Platform®. We recommend that customers upgrade to this release for the most secure and up-to-date features. For more details on security problems fixed in Yokohama, refer to KB1710869.

Notable fixes

The following problems and their fixes are ordered by potential impact to customers, starting with the most significant fixes.

Problem	Short description	Description	Steps to reproduce
Access Control PRB1833782 KB1721153	Slowness when loading forms with **Table Choice** fields related to the RecordFamilyResolver code path	Accessing the any form with a **TableChoice** field where the instance has more than 250 archive tables can result in slowness due to RecordFamilyResolver .archiveTableHasACLTerms code path and a change to	Refer to the listed KB article for details. RecordFamilyResolver .archiveTableHasACLTerms

Problem	Short description	Description	Steps to reproduce
		CACHE_ARCHIVE_TABLE_HAS_ACL_TERMS in Xanadu.	
Activity Stream PRB1757236 KB1700513	The workspace activity stream displays the 'From' email as the actual user who has sent the email	The 'From' of the entry displays 'From: [userId]@snc'.	Refer to the listed KB article for details.
Activity Stream PRB1778011	Audit and Journal events don't need to sanitize in the backend	SysAudit:218 and SysJournalRule don't need to sanitize, just getHtmlValue.	1. Post the following comment: [code]<IMG SRC=# onmouseover="alert('xxs')">[/code]. A broken image icon should appear in the comment for the activity stream. 2. Hover over the icon. No alert dialog should display. 3. Open the Developer Inspector on the image element. The element should only have: 'img src="#">'.
Activity Stream PRB1780340 KB1649222	Post-Washington DC upgrade, GlideRecord for [sys_email] updates all fields	The transaction should display that only the relevant information on the sys_email record was updated, but extraneous fields are also updated.	Refer to the listed KB article for details.
Activity Stream PRB1781721 KB1705519	Embedded images, such as images that are copied and pasted in the Workspace activity stream, aren't displayed in the Customer Portal	When an agent copies and pastes an image in the activity stream of the CSM Workspace, the image isn't visible to the user who accesses the case via the CSM portal.	Refer to the listed KB article for details.
Activity Stream PRB1803978	The SysActivityRuleRepo should be share aware for event source tables	When the name of the updated table does not match the root name, a new email event was not created. The SysActivityRuleRepo	Refer to the listed KB article for details.

Problem	Short description	Description	Steps to reproduce
KB1704344		should allow emails to appear in both the activity stream and in the workspace.	
Activity Stream PRB1811273	Users can no longer view attached Excel files and DOCX files on Work Order Tasks (WOT) from the Agent app	Users can no longer view Excel sheets and docx files attached to work order tasks on the Agent app after upgrading to Xanadu. When users attempt to view the attached files from work order tasks on the Agent app, a modal with the message 'Unsupported file type' appears.	**1.** Open a Xanadu instance. **2.** Open any work order task. **3.** Assign the work order task to a user. **4.** Add an Excel file or and docx file to the work order task. **5.** Log in to the Agent app as a user. **6.** Open the work order task. **7.** Navigate to the 'Activity Stream' tab. **8.** Open the attached files. Notice that a modal appears with the message, 'Unsupported file type'.
Activity Stream PRB1816292	An attachment isn't visible in the activity stream in workspaces	When an attachment is added to Record Producer, it can't be found in the activity stream.	**1.** Add a variable with Type = 'Attachment' to Record Producer (for example, create a case for CSM Outlook). **2.** Open Record Producer in Service Portal. **3.** Attach a file to the field created in step 1 and submit. **4.** Navigate to CSM and FSM Configurable workspace and search for the item created after submitting. **5.** Check the activity stream. Expected behavior: The attachment should be visible in the activity stream in workspace. Actual behavior: The attachment isn't visible in activity stream in workspace.
Activity Stream PRB1832633	'Assignment group' changes are hidden in an activity stream on HR Agent Workspace, which is intermittently	An activity stream in the workspace for the 'Case' table is intermittently missing the **Assignment Group** field change. Native has the change reflecting in 'Additional comments'.	**1.** Open an incident. **2.** Set the assignment groups and **Assigned to** field. **3.** Save the record.

Problem	Short description	Description	Steps to reproduce
	different to native		**4.** Check the activity stream for the missing assignment group in the audit event. **5.** Repeat steps 2 through 4 several times. Expected behavior: The activity stream should be the same in both workspace and native. Actual behavior: The **Assigned Group** field change is missing intermittently in the HR agent workspace activity.
Adaptive Authentication PRB1657050	The 'Trusted Mobile Device' filter should also be used in the Post Authentication context	After creating a policy in the Post Authentication context with allowed IP ranges and Mobile App conditions, a user with a trusted, registered device should be able to log into the instance from the Now Mobile app. Currently, the login fails when the user uses a registered device with an IP that is not allowed. The Trusted Mobile device filter can be used pre-authentication, but should also be supported post-authentication.	**1.** Search for 'Post Authentication context' with the application navigator. **2.** Navigate to the **Post Authentication context** module. **3.** Create a policy in the Post Authentication context with allowed IP ranges and Trusted Mobile App conditions. **4.** Enable Adaptive Authentication and Device Trust on the instance. **5.** Select **User Profile.** **a.** Select **UI action** **b.** Register a trusted mobile device. Notice that it displays a QR code to register the device. **6.** Open the NowMobile app. Register the device by scanning the QR code. **7.** Log into the instance from the Now Mobile app after registering the device. Expected behavior: The user should be able to login to the instance, as the user has registered the device, and post-authentication policies should pass and allow the user to log into the instance. Actual behavior: The user login fails from the registered device from an IP that is

Problem	Short description	Description	Steps to reproduce
			not allowed when the Trusted Mobile Filter is used in post-authentication.
Advanced High Availability (AHA) PRB1816356	A rare deadlock occurs during Glide start up	The deadlock is caused by ScriptsMetricsPublisher.	
Advanced Work Assignment PRB1792311	Advanced Work Assignment (AWA) causes significant memory pressure when used in the UI16 environments	When AWA is configured on an instance, but the agents primarily use UI16 to work tasks, unopened items build up in the users AWA inbox. This leads to very large AMB messages (i.e. 3Mb +) and significant memory pressure when the user opens a workspace.	
Advanced Work Assignment PRB1823284 KB1743632	There's 'Fix ErrorMessages' in UpdateSegment when 'confirmed on' is passed	Users see an error: 'Script execution error: Script Identifier: null.null.script, Error Description: undefined is not a function., Script ES Level: 0 Evaluator: com.glide.script.RhinoEcmaError: undefined is not a function.'	Refer to the listed KB article for details.
Agent Chat PRB1823530	Input text is occasionally truncated in 'now-textarea'	Characters are truncated when typing quickly as an agent.	1. Set up Agent Chat and accept a chat as an agent in Agent Chat. 2. Type fast in the input text area. Observe that characters are truncated.
AI Search PRB1709322 KB1645499	Text seen when using AI Search can't be translated	The text '[number] results for [keyword]' can't be translated.	Refer to the listed KB article for details.
AI Search PRB1745648	Some of the CSS variables for theming AI Search in	$now-sp-tabs--selected--color and $now-sp-button--primary--color no

Problem	Short description	Description	Steps to reproduce
	Service Portal no longer work	longer work. They used to work in Tokyo.	
AI Search PRB1750999	The 'More' tab label displays 'More_menu'		
AI Search PRB1767776	Incorrect empty state (no Genius results)	Genius results aren't appearing on a query that should produce results.	
AI Search PRB1778235	There's an 'Invalid or unexpected token' error message on a browser console when accessing any page on a portal after upgrading to a Washington DC version	The issue can be seen on any portal, like 'sp' or 'esc', as well as an empty testing page. There shouldn't be an error message on the browser console.	
AI Search PRB1779636 KB1651332	Carousel and regular search results do not appear, and are stuck in a loading state	The carousel gets stuck in a loading state when a search query is performed.	Refer to the listed KB article for details.
AI Search PRB1794353	v_search_genius_result becomes unreadable after opening a v_search_genius_result ACL	AI Search stops rendering Genius Results after opening a v_search_genius_result ACL record. A Null Pointer Exception (NPE) is observed in the system logs.	1. Search with an AI Search search application and confirm the observation of Genius results. 2. Open the Access Controls table (sys_security_acl). 3. Search for any v_search_genius_result ACL and click into it. 4. Search again. Observe that the Genius results are no longer rendering.
AI Search PRB1794674	The top results carousel gets stuck in a loading state when the EVAM bundle doesn't have any view	Typically, regardless of if a search returns Genius results or not, geniusResultsTemplates is a JSON object with an 'items' property that is an array. If there are no Genius results	1. Open ESC on a AIS-enabled instance. 2. Search for '***'. 3. Verify that there's no Genius results. 4. Open the EVAM definition for ESC, 'ESC Portal Search'.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Problem	Short description	Description	Steps to reproduce
	configuration for Genius results	for that query, items are just an empty array. However, if the EVAM definition doesn't have any view configurations for Genius results in any of its bundles, EVAM instead returns an empty response, which causes it to ultimately return 'null' for geniusResultsTemplates. While this doesn't impact the 'stacked' view of Genius results, it does break the logic in our top results component, and so the state is never updated to stop loading.	**5.** On the 'EVAM View Config Bundle M2Ms' related list, unlink 'Taxonomy Portal Search Bundle'. **6.** Refresh the portal page. **7.** Search for '***' again. Expected behavior: There's no Genius results and the top results component hides itself. Actual behavior: The top-results component gets stuck in a loading state.
AI Search PRB1797747 KB1706071	The Genius results' loading spinner shows up despite unconfigured Genius results	The top spinner is visible when Genius results aren't linked and sometimes spins for a longer period of time. This occurs even if Genius results aren't linked to a profile used in the application that is being searched. The loader causes the page to continue rendering even if Genius results aren't linked to a profile.	Refer to the listed KB article for details.
AI Search PRB1802473 KB1704430	Tab counts change for all the tabs when users select from 'All' to another tab	Tab counts also change on pagination.	Refer to the listed KB article for details.
Analytics Hub PRB1798071	Analytics Hub throws an error when multiple breakdowns are applied	An error message appears: 'Expected ',' or ']' after array element in JSON at position 951652 (line 1 column 951653)'.	
Application Install Engine	Batch Install doesn't handle circular dependencies	The BatchInstallDependencyMap.java class doesn't handle circular dependencies when the app	**1.** Open a Washington DC instance. **2.** Attempt to batch install App Engine Studio.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Problem	Short description	Description	Steps to reproduce
PRB1786797	for non-app V2 apps	being installed isn't a V2 app. The shouldEvaluateDependencies method incorrectly returns true when a circular dependency is encountered. When loading a non-V2 app and there's a dependency pair that's already seen, shouldEvaluateDependencies returns true because it checks the list of V2 plugins visited, which is empty because it's not a V2 app.	Observe that the progress bar doesn't go beyond 0%, and eventually a StackOverflow message appears.
Application Install Engine PRB1792128	There's a race condition when nodes try to download the same app package at the same time	During the cloning process, the list of nodes of clones are upgraded/ downgraded. They restart at the same time and tend to download the app package at the same time. There is an existing logic which cleanups all the other attachments for the current app other that the download it made. Since the downloads are happening at the same time, nodes are deleting each other's downloads and nodes are failing to download the apps.	**1.** Have multiple nodes (>=4) in clone. **2.** Reset the clone.
Application Manager PRB1781787 KB1695712	Dependencies are not loading on Now Assist for Creator	The dependency processor repeatedly adds the same dependency for further processing, causing the list to grow continuously in an infinite loop.	Refer to the listed KB article for details.
Attachments to Records PRB1823698	Out Of Memory (OOM) caused by the misuse of BufferedInputStream	Attachments created from previously prepared TMP files are read with BufferedInputStream	Refer to the listed KB article for details.

© 2026 ServiceNow, Inc. All rights reserved.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Problem	Short description	Description	Steps to reproduce
KB1709552	when creating attachments	and have an internal buffer of 512M.	
Authentication PRB1767180 KB1700280	A global policy shouldn't apply to internal APIs	Global policies shouldn't block internal APIs, but users get a 401 error.	Refer to the listed KB article for details.
Authentication PRB1768642 KB1649654	OAuth Client (consumer) refresh token expiry should not get updated	The token receiver cannot determine the exact expiration date of the refresh token.	Refer to the listed KB article for details.
Automated Test Framework (ATF) PRB1793151	Screenshots are blank when certain characters appear in Service Portal HTML	context.drawImage() is unable to properly parse the end of a comment that goes for multiple lines and includes extra dashes. Standalone commas in an element's attributes also prevent rendering of the document image.	1. Create a Service Portal widget (sp_widget). 2. Add ca omment to the body HTML template with extra dashes and new lines, or add a comma character inside an element's attributes. 3. Add the widget to an sp_instance in an sp_column, and add that column to an sp_page. 4. Create an ATF test with the 'Open Service Portal Page' step that opens the sp_page from step 3 in any portal. 5. Run the test with GlideScreenshot capturing the full page. Expected behavior: A screenshot is captured successfully. Actual behavior: A screenshot is blank and a client test runner console error appears.
Automated Test Framework (ATF) PRB1805778	'Validate Record Present in List' fails for a related list	Related list records are failing to run when the user preference 'Load related lists in classic forms' is set to 'On Demand'.	
Case and Knowledge Management for HR	The 'Manage Human Resource' catalog page isn't loading	An error displays in the console: 'Uncaught SyntaxError: Unexpected token ')...'	Refer to the listed KB article for details.

Problem	Short description	Description	Steps to reproduce
Service Delivery PRB1785629 KB1698772			
Case and Knowledge Management for HR Service Delivery PRB1815083 KB1704517	The banner image and production description are missing in UI16 if the plugin 'Human Resources Application: Core (com.snc.hr.core)' is activated	This issue only happens on Xanadu.	Refer to the listed KB article for details.
Case Management PRB1803076	The role gs.hasrole is missing on a base instance script include	The role is missing for the 'Consumer role' condition.	
CMDB Data Manager PRB1811393	The 'CMDB DependentCI Policy Processor' scheduled job consumes excessive memory with long execution times		1. Find or create an instance with a large number of CIs. 2. Add ledger (cmdb_dependent_ci_ledger) entries, such that over 10k applies to a single policy. 3. Run a scheduled job 'CMDB DependentCI Policy Processor'. Note the execution time and memory consumption.
CMDB Query Builder PRB1796164 KB1701193	Query Builder queries with the 'AND' node have different result structures/the data is split over multiple result records	A fix was applied to the performance of QB queries with the 'AND' node by avoiding multiplexing data in the results of such queries. However, this might break the way users consume the results in their systems.	Refer to the listed KB article for details.
CMDB Query Builder	Users are unable to add columns in the query to be displayed	This issue might not display on all instances because the problematic tables	Refer to the listed KB article for details.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Problem	Short description	Description	Steps to reproduce
PRB1831836 KB1710849	n the query results	might be coming from various plugins.	
Code Signing PRB1783883 KB1710348	LoggerConfiguration access privileges doesn't allow creation of a source record for Log Export Service (LES)	Despite an upgrade, when a user tries to create a LES source record, they get the message: 'Execute operation on script include 'LoggerConfiguration' from scope 'Log Export Service' was denied. The application 'Log Export Service' must declare a cross scope access privilege. Please contact the application admin to update their access requests. Error MessageSomething went wrong with the configuration setup. Please try again later by setting active to true and updating the record'.	Refer to the listed KB article for details.
Column Level Encryption PRB1781726 KB1648610	Duplicate 'Encryption Configuration' field records for tables in the CMDB hierarchy cause errors when the tables are queried	Duplicate 'Encryption Configuration' field records for tables in the CMDB hierarchy can lead to new tables not having the correct number of clone descendant records, causing errors when the tables are queried.	Refer to the listed KB article for details.
Column Level Encryption PRB1798601	Encrypted field configuration (EFC) records in the global scope for tables that are in a non-global scope can't be edited	When this happens, the global scope EFCs were all created by 'system' around the same time.	
Condition Builder	Change Advisory Board (CAB) workbench	CAB workbench displays an extra backslash in the **Planned start date** field	Refer to the listed KB article for details.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Problem	Short description	Description	Steps to reproduce
PRB1777164 KB1650812	displays an extra backslash in the **Planned start date** field	every time the CAB meeting is saved and refreshed.	
Configuration Management Database (CMDB) PRB1332966	The 'Reset Unknown Discovery Source State' business rule (BR) calls current.setWorkflow(false) and thus cancels all the BRs that should have run after it	The **Convert to application service** action inserts/updates the cmdb_ci_service_discovered table. But because the service had a discovery source set to 'Unknown', the 'Reset Unknown Discovery Source State' ran and the model update BR that should have been executed didn't. Thus, the service model wasn't created.	1. Add a BR with an order higher than the order of 'Reset Unknown Discovery Source State' (1010) to the cmdb_ci table. 2. Update the table. 3. Check if the new BR has ran.
Configuration Management Database (CMDB) PRB1672625 KB1364738	Choices for the **Life Cycle Stage** and **Life Cycle Stage Status** fields are not translated	In the list view, both translations do not work. In the form view, **Life Cycle Stage** translations do not work.	Refer to the listed KB article for details.
Configuration Management Database (CMDB) PRB1696232	The 'CMDB Query Builder suggested relationship' job executes a long running and expensive query, causing DB performance issues	Slow query ran for close to 2 hours.	
Configuration Management Database (CMDB) PRB1739806	Discovery jobs are causing an influx of queries to the ire_mutex table, causing DB congestion		
Configuration Management	The job 'CMDB Health Dashboard -	The slow query causes a high DB CPU and	Run the job "CMDB Health Dashboard - Completeness Score Calculation".

Problem	Short description	Description	Steps to reproduce
Database (CMDB) PRB1781459	Completeness Score Calculation' runs a slow query, which causes performance issues	increases history list length (HLL).	Observe the long running query.
Configuration Management Database (CMDB) PRB1790374 KB1698757	The de-duplication template doesn't honor the 'Only allow updates from duplicate CIs when the main CI value is null' option	The main CI attributes are updated with the values of the duplicate CI.	Refer to the listed KB article for details.
Contextual Security Manager PRB1769723	A query business rule prevents non-admin users commenting on a Service Catalog task (SCTASK) from copying over to a requested item (RITM)		
Continuous Integration/ Continuous Delivery (CI/CD) API PRB1774672	Continuous Integration/ Continuous Delivery (CICD) publishing fails with a ScriptEvaluator error but appears successful on the tracker	The error reads: 'ScriptEvaluator SEVERE *** ERROR *** Evaluator.evaluateString() problem'.	1. Update the sn_appauthor.ScopedAppUploader to throw a script evaluator error (for example, clear the entire script field so that when a function is called it triggers an error due to the function not existing.) 2. Using a REST API explorer, publish an application by ID. Expected behavior: The tracker shows failure. Actual behavior: The tracker shows success.
Core Platform PRB1732676	The variable ${comments_and_work_notes} isn't working for HR cases after an	After upgrading to Vancouver, email notifications with ${comments_and_work_notes} are displaying as empty in the recipient's email.	Refer to the listed KB article for details.

Problem	Short description	Description	Steps to reproduce
Database Persistence - Data Access PRB1818225 KB1705517	Using 'order by' on a single field with a limit clause produces error messages in Xanadu	Users are experiencing 'Syntax Error' or 'Access Rule Violation' messages when they use an 'order by' function on a single field with a limit clause. This error occurs in the within the CMDB workspaces and CMDB hierarchy when viewing tables in the list view. This also occurs if the ordered list displays no data yet indicates a valid, non-zero row count.	Refer to the listed KB article for details.
Database Persistence - Data Access PRB1826425	An Application Menu Module [sys_app_module] with a space character causes a display failure in the filter navigator	An application menu module (sys_app_module) may not be visible in the filter navigator if there is a whitespace character (non-null value) in the **Query** field.	
Database Persistence - Data Management PRB1771921	If a physical table name is different from the logical, the daily scheduled compaction job isn't working		1. Make the sys_report_flow_doc_a5e table compaction eligible by setting up data and compaction criteria. 2. Run compaction. Observe that it prints 'The compaction is not enabled for table: sys_flow_report_doc_chunk_a5e. skipping..'.
Database Persistence - Data Management PRB1794621	The user is unable to get data management update jobs to be applied when using 'Run at' time		1. Create an incident with a short description of 'DM update test'. 2. Create a sys_dm_update record. 3. Set the table as 'Incident' and the conditions as 'Short Description contains 'DM update test''. 4. In 'Field' and 'Values', set 'Assignment group' to 'Approvers'. 5. Set the 'Run at' to a few minutes in the future (the record may need to be saved first, before this field appears).

Refer to the listed KB article for details.
Integration Hub PRB1766824	Non-Integration Hub (IH) outbound calls are counted as IH usages if a flow is called earlier in the IH transaction, even if this flow doesn't cause the outbound request		
JVM at Scale PRB1783992 KB1698970	Nodes are unresponsive after Java Virtual Machine (JVM) hangs or crashes	A change in the Washington DC upgrade causes the JVM nodes to become unresponsive, leading the Java Service Wrapper to determine the JVM node is hung. The nodes do not appear to restart, and out of memory (OOM) errors are not posted in the logs. This causes the node to stay down and causes performance impact for instances that are affected.	Refer to the listed KB article for details.
Key Management Framework (KMF) PRB1740666	Publickeywrap and Publicsigver certificates aren't regenerated when certificates are missing	If an instance only has an active key pair (for Instance Asymmetric Encryption Key (IAEK) and Instance Signature Key (ISK)) but certificates corresponding to it don't exist, certificates corresponding to IAEK

	and keys are present	and ISK should be regenerated, but aren't.	
Knowledge Management PRB1783762 KB1695361	Authors that are not a member of the ownership group can no longer edit a Knowledge Base article, even if the glide.knowman.ownership_group.override property is set to true	The relevant condition does not check if the user is the author of the KB article, and if the glide.knowman.ownership_group.override property is set to true, causing the ACL to fail.	Refer to the listed KB article for details.
Language and Translations PRB1766013	For Japanese, the dirty update dialog isn't translated correctly in U16	{HTML:displayValue} is displayed without a value from sys_ui_message. # is missing in the Japanese translation.	1. Provision an instance with the Japanese translations plugin installed. 2. Change the system property glide.ui.polaris.experience to false to enable U16. 3. Open an incident record. 4. Change the description without saving. 5. Select the **Back** button to trigger the dirty update dialog.
List Administration PRB1688076 KB1585842	In Vancouver, changing the rows per page in UI Builder results in security restraints messages	When a user changes the rows per page on Tokyo or Utah and refreshes, it resets to 20 per page and this error doesn't appear.	Refer to the listed KB article for details.
List Administration PRB1770231	A list doesn't load when a fixed filter is null and a live list is enabled	The 'List' screen hangs when applying a filter.	
List Administration PRB1797758 KB1705540	When scrolling horizontally in any table in list view, field names do not scroll	When scrolling horizontally, the field names on the top are frozen in place but the values change.	Refer to the listed KB article for details.
List Administration	The **Edit columns** functionality	If a user opens the workspace the first time and do the re-column

Problem	Short description	Description	Steps to reproduce
PRB1798031	Isn't working as expected in Configurable Workspace	options, the user preference is saved in a format: workspace.list.columnOrder.xyz. If users then open a new tab in Chrome, and change it again, the preference is saved with a different suffix: workspace.list.columnOrder.abc. If users then go back to the first tab in Chrome and update the user preference, it updates back to: workspace.list.columnOrder.xyz. The workspace latches onto one of these user preference suffixes, and ignores the others.	
List Administration PRB1804211	A list is failing to load due to ACL failures	Lists do not load, and a response is returned in the call for the record list composite data broker.	
List Administration PRB1827799	A filter condition in a module is displaying additional filters when opened in new tab	The filter condition displays backend details.	1. Create a module. 2. On a table, select **Incident**. 3. Add any dot-walking fields. 4. Create a user and a system level user preference record 'glide.ui.polaris.ui16_tabs_inside_polaris' as a type string and set the value to true. 5. Impersonate a user. 6. Navigate to a module created incident. 7. Open the module in a new tab. Expected behavior: When the module is clicked to open in a new tab, only the dot-walking filters should apply. Actual behavior: When the module is clicked to open in a new tab, additional backend filters are applied. Observe that some additional filters are applied. This issue only happens when opening the module in a new tab. If opened in the same tab, the issue doesn't happen. If

			the user preference value for the user is set as false, the issue isn't observed.
List Controller PRB1789532	The 'Open Panel' event doesn't allow for reusability outside of list-controller		1. Open a record list bundle in UI Builder. 2. Add a button to the page. 3. Bind the event to 'Open Panel' list controller. 4. In the event, add a field object of 'sysId: <sys id of first row>'. 5. In the event, add the route 'quick-edit'. 6. Save. 7. Open the app. 8. Trigger the button. The pane doesn't open as expected.
Major Incident Management PRB1815931 KB1709324	Impersonation logic in the Major Incident Management (MIM) script include causes events to fail post-upgrade	System events error out as a result of user impersonation logic in the 'ExecuteMIMTriggerRulesWithImpersonation' script include. When this script include is called during async processing, the system impersonates the logged in user, marking subsequent events as processed or updated by an individual user instead of the 'System'. As a result, these events error out.	Refer to the listed KB article for details.
MID Server PRB1773302 KB1646558	Start and stop permissions for MID Server Windows service users triggers security alerts by enumerating all local administrator users	Security monitoring tools flag the execution of 'net localgroup administrators' due to user enumeration of SAM-R queries going to the Active Directory server. The group 'net localgroup administrators' is used for all users.	Refer to the listed KB article for details.
MID Server	The MID Server Dashboard doesn't show	Windows MID Servers can fail to fetch CPU Usage metrics from the host, resulting in blank	Refer to the listed KB article for details.

Problem	Short description	Description	Steps to reproduce
PRB1805368 KB1703778	is broken in the Next Experience navigation filter input and end keyboard buttons in Xanadu	Right don't move the cursor or select text.	
Next Experience Unified Navigation PRB1806148	A long contextual pill pushes the search, help, notification, and user menu out of the viewport	Extra long text in the contextual menu is not truncated and causes spillover of the search and other icons.	**1.** Log in to any instance. **2.** Navigate to any page that has a long title. Notice that the extra long text in the contextual menu is not truncated and causes spillover of the search and other icons.
Next Experience Unified Navigation PRB1806521 KB1705141	Next Experience menus are blurred/ unreadable in Safari v18	It's related to the CSS style 'webkit-backdrop-filter' being applied incorrectly to the pages. Instead of applying the blur to the background of the menus, it's applying to the entire menu, including the text.	**1.** Open the instance using Safari 18.0 (20619.1.26.31.6). **2.** Navigate to the top menus. Expected behavior: The navigation is readable. Actual behavior: The menu is blurred and unreadable.
On-Call Scheduling PRB1819083	The 'On-call schedules' (all on-call schedules) tab isn't loading	The 'All on-call schedules' tab gets stuck at 'loading'. The following error message displays in the console: 'TypeError: Cannot read properties of undefined (reading 'name')...'	**1.** Navigate to on-call schedules. The 'All on-call schedules' tab is stuck at 'loading'. **2.** Select 'my on-call schedules'. Verify that it works. If a user selects the 'all on-call schedules' tab, the display doesn't change and still displays 'my on-call schedules' tiles.
Performance Analytics PRB1789424	Https _request_ decompression doesn't work correctly, as it doesn't strip the 'Content-Encoding'

Problem	Short description	Description	Steps to reproduce
	header after it unzips the body		
Platform Analytics Component API PRB1779614	The PAR dashboard search isn't giving the expected results when a non-English language is set on the instance	User gets 'Items removed from this page due to security constraints' or 'No data to display'. Messages are in a translated language, whichever exists at that time on the user session.	1. Navigate to an instance with one of the language plugin installed. 2. Navigate to **Platform Analytics** > **Library** > **Dashboards**. 3. On 'User Preferences', set the language to English. 4. Navigate to 'All'. 5. Search with a dashboard name like 'change' or 'incident'. 6. On 'User Preferences', set the language to German, or any other installed non-English language. 7. Search with a dashboard name like 'change' or 'incident'. The same set of dashboards that were returned in step 5 do not appear. A few dashboards are displayed and a message exists that filters out other dashboards. Expected behavior: The dashboard search results should be consistent in all languages. Actual behavior: In the English language, there's expected results but in others, the result is inconsistent.
Platform Analytics Dashboard API PRB1760775	There's an issue with reports on a workspace dashboard	Legends display duplicate values when translated into non-English language.	1. Provision an instance with the 'Install Platform Analytics workspace' plugin installed. 2. Create a Platform Analytics dashboard with a column report with 2 data sources. 3. Change the language to Brazilian Portuguese.
Playbooks (Family Channel) PRB1781451	Only the first activity is valid when a playbook definition run condition		1. Create a playbook definition with three or more activities. 2. Add a run condition to the third activity.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Problem	Short description	Description	Steps to reproduce
		First, 'Shadow' table records are deleted, then the 'Snapshot' table. Time between log statements would be the time taken to delete shadow records. It takes more than 1 minute to delete records from a 'Shadow' table.	
Script Includes PRB1805747 KB1704606	Restructure upgrade transition for the sandbox_callable script to include the schema change	There's been issues with different upgrade scenarios when separating the sandbox callable functionality of client callable in pre-Y releases.	Refer to the listed KB article for details.
Server-side scripts PRB1786423 KB1650937	Transpiler doesn't respect the custom per-thread memory limit, causing an error	Some threads in the transpiler do not respect the value of the system property, com.glide.script.swc .memory_threshold_in_kb, and instead throw an exception when memory usage exceeds the default per-thread limit of 16MB. The error is logged repeatedly and prevents a portion (up to 1/4) of the server-side scripts executed on the node to fail.	Refer to the listed KB article for details.
Server-side scripts PRB1796259	Failure to instantiate a GlideElement during a sandboxed script execution can take down a node	It should obtain the global scope to reinitialize GlideController instead of trying to traverse to global from the current GlideElement and, potentially, grabbing the sandbox scope instead.	Trigger GlideElement.specialReinitialize using the sandbox scope.
Server-side scripts PRB1809279	The SWC version in Xanadu leaks memory	The transpiler leaks a small amount of memory, on the order of 50 bytes, with each script that it processes. Eventually, enough memory is leaked that	Refer to the listed KB article for details.

Problem	Short description	Description	Steps to reproduce
		but not the 'Catalog item' widget.	
Service Portal PRB1781293 KB1710481	com.glide.encryption.enable_attachment_key_ui=TRUE has different behavior in Xanadu	When com.glide.encryption.enable_attachment_key_ui=FALSE there's no issue. In Washington DC, the property is set to true but the issue didn't occur.	Refer to the listed KB article for details.
Service Portal PRB1794718	A knowledge category displays as '{{::category.label}}' when the language is non-English	Build information: Xanadu EA Issue Description: [Xanadu EA]: Knowledge category is shown as {{::category.label}} when language is non-English	
Service Portal PRB1803497	attachment.upload.success event is triggered incorrectly, and cannot be relied on to disable the **Catalog - Order Now** button	When uploading multiple attachments consecutively, the 'attachment.upload.success' event is triggered immediately after the first batch of attachments finishes uploading instead of waiting for all batches to complete. The attachment modal is also hidden before the upload process is fully completed.	
Service Portal PRB1809948 KB1703663	Using the auto-fill function in an Edge browser triggers a search of all reference fields in the Service Portal catalog form	Starting from Edge browser 129.0.2792.52+, when the user fills the personal information with the auto-fill function on the Service Catalog form in the Service Portal, it triggers a search of all reference fields in the form. Sometimes this causes the form to freeze, and it must be reloaded to proceed.	1. Enable the auto-fill function on Edge browser 129.0.2792.52+. 2. Open a service catalog with multiple reference fields in Service Portal. 3. Select one of the fields and fill the personal information by auto fill. Expected behavior: Only fields that are related to personal information are populated. Actual behavior: Fields related to personal information are populated, but all the reference fields on the form were in focus and triggered the searches of the fields.

Service Portal PRB1823470	After an applied autofill, the cursor is moved to another field	The cursor focus moves to another field. Also, the **List collector** field is expanded and the focus is moved to a dropdown field. An empty value is displayed in the dropdown field.	
Service Portfolio Management PRB1808035 KB1705403	An error message occurs when submitting a service in the Service Builder	Submitting a service in Service Builder prompts the error message, 'Status can only move forward to retiring or retired or obsolete from operational'.	Refer to the listed KB article for details.
Software Asset Management PRB1665612 KB1641524	Purchased rights in alm_license are limited by an integer field type	A user can have a value that can only be contained by a long field type, causing issues due to the limitation.	Refer to the listed KB article for details.
Software Asset Management PRB1731774	The 'Software Asset Connections' job is creating install records on retired configuration items		
Software Asset Management PRB1775506 KB1648325	The software lifecycle report in classic view is empty	The report for 'Software Lifecycle reports' table has empty records in the Washington DC Release.	Refer to the listed KB article for details.
Software Asset Reclamation PRB1792829 KB1698752	A 'Maximum JavaScript call depth of 1000 exceeded' error is thrown in the SAMPPreBuiltSuitesAPI. lookupSuiteComponents function call	If a suite parent has a suite child with the same product, there could be a case where the lookupSuiteComponents() function calls addM2MSuiteComponentProducts(). This again calls lookupSuiteComponents(),	Refer to the listed KB article for details.

Problem	Short description	Description	Steps to reproduce
		and so leading to an infinite loop.	
Software Asset Reclamation PRB1795844 KB1702053	The incorrect user is assigned to a single install per user-based reclamation candidates	Usage/Installs used to create RC belongs to the previous user and aren't current or changed to the user. User aggregate isn't ordered by the user.	1. Create a single install/low usage for the same user on a device. 2. Create an install for a few users on other devices. 3. License all installs by the 'per user' metric. 4. Run the RC job. Notice that RC is stamped by the incorrect user.
Software Asset Reconciliation PRB1790386	There's a replication lag caused by 'untagSoftwareModelForUnlicensedInstall' in AutomaticSMRCreation		
Software Entitlements PRB1787017 KB1650157	In Software Asset Workspace, the 'Total cost' is generated incorrectly when the glide.sys.date_format property value is set to anything other than the default format 'yyyy-MM-dd'	In Software Asset Workspace, the 'Total cost' is generated incorrectly when the glide.sys.date_format property value is set to dd-MM-yyyy. The Entitlement Total Cost functions properly in the classic view of the alm_license table, but not in the workspace view. When the default format is used (yyyy-MM-dd), the Total Cost calculation is correct on both Software Asset Workspace and the alm_license table. The root cause of this issue is the base instance client script 'Update total cost onChange subscription', which does not recognize date formats other than 'yyyy-MM-dd' for the start date and end date of the software entitlement in the workspace view.	1. Set the 'glide.sys.date_format' property value to dd-MM-yyyy. 2. Navigate to **Software Asset Workspace** > **License Operations**. 3. Open any entitlement with the license type as 'Subscription'. 4. Attempt to change the subscription period to something other than 'Entire Subscription Period'. Notice that the 'Total cost' is generated incorrectly due to the new date format preference.

Problem	Short description	Description	Steps to reproduce
Software Lifecycles PRB1759420	Changing the 'phase' data type from the 'string' to a 'choice' value for better reporting	This is a product update.	
Software Models PRB1786414	The sam_admin role failed to load the 'publish to software catalog' list when catalog records aren't readable by role		
Source Control Engine PRB1789863 KB1652375	There's failure to install an app with a dependency that was converted to 'application repository' mode	Trying to install an app with a dependency on another app that was converted from a Store app into a developer app with 'application repository mode' results in failure.	Refer to the listed KB article for details.
Source Control Engine PRB1795465	getRemoteTags doesn't have a timeout specified	If the git server can't be reached, the job can seem to stall indefinitely. The job can run for days.	1. Create an app in Studio. 2. Link to Source Control successfully. 3. Set a breakpoint in AGitRepository.getRemoteTags(). 4. Refresh the repository (perhaps via sys_repo_config). 5. Make the git server unresponsive when the breakpoint from step 3 gets reached. 6. Resume the breakpoint.
Subscription Management PRB831241	A unique key violation is detected by the database (Duplicate entry) on the ua_app_usage table	When Usage Analytics is used, the following error generates intermittently: 'FAILED TRYING TO EXECUTE ON CONNECTION'.	
Survey Management	HTML formatting and	The HTML formatting and line breaks	Refer to the listed KB article for details.

Problem	Short description	Description	Steps to reproduce
PRB1817570 KB1704997	line breaks are no longer working on the 'Assessment' page	in the Document Titles (sys_ui_title) are not functioning correctly. As a result, the descriptions and other instructions are rendered as raw HTML code instead of plain text on the 'Assessment' instance pages.	
System Import Sets PRB1796959	JDBC data source errors are generic messages starting in Washington DC, such as 'Cannot invoke 'java.util.Map.keySet()' because 'this.fImportSourceFields' is null'	Since the Washington DC upgrade, it appears that users aren't directly seeing the JDBC Data Sources SQL errors in progress workers or when doing a 20 records load on Set UI. It is replaced by a generic message 'Cannot invoke "java.util.Map.keySet() ...this.fImportSourceFields" is null'. When checking the agent log file of the MID Server, the JDBC SQL error that should be present isn't in the progress worker log. Before Washington DC, these kind of SQL errors were retrieved directly in the instance and it wasn't needed to retrieve the MID Server logs.	1. Set up a JDBC data source with incorrect credentials. 2. Test load 20 records for the data source. An error message is noticed in the UI 'Cannot invoke "java.util.Map.keySet()" because "this.fImportSourceFields" is null'.
System Import Sets PRB1804838 KB1705523	New fields with double byte characters are not created automatically upon loading data	When loading data, new fields are created if the loading file or data source contains headers that don't match the fields in the import set table. Since the Xanadu release, new fields are not created when headers contain double byte characters, and a warning message is logged in the import log. This occurs even if com.glide.use_column	Refer to the listed KB article for details.

Problem	Short description	Description	Steps to reproduce
		_name_optimizer property is 'true'.	
Table Administration and Data Management PRB1527645 KB1225737	A null pointer exception is thrown by the database view where the driving table is a TPC child of the task table, which has off-rowed fields on task_offrow	The error occurs if the following conditions exist: 1. A table which is a direct child of task has TPC as its extension model. 2. At some point in the past ServiceNow has executed a change to off-row one or more columns from the task table to workaround a dynamic row size error. 3. A database view is created with just the TPC table as a view table, with no other view table to join. 4. The view table has the default of no view fields being defined.	Refer to the listed KB article for details.
Table Administration and Data Management PRB1735107	The 'Data Management' job state doesn't update correctly when the node stops abruptly	A 'Data Management' job state in 'sys_dm_delete' doesn't update correctly when the node processing the DM job stops/ restarts abruptly.	
Table Administration and Data Management PRB1743783	setAllowCascadeDelete() method of GlideMultipleDelete is not scriptable	Users are referred to use GlideMultipleDelete when cleaning up their data. Large amounts of data cleanup is a requirement for users with the recent change in data footprint policies. Enabling platform features for users to better manage their data footprint is essential.	
Table Administration and Data Management PRB1792808	Running an instance health scan table check throws a null pointer expection error if a	Table check fails with the error message 'Rhino error: java.lang.NullPointerException'.

Problem	Short description	Description	Steps to reproduce
	sys_storage_alias record has an empty storage_table_name		
Table Rotation PRB1726430	Rotations for sys_scheduler_job_history and sys_scheduler_job_history were incorrectly created in the Vancouver release	The sys_history_job_node table is missing the primary key.	sys_history_job_node0000
Third-party Software PRB1793365	Commons-beanutils hits BEANUTILS-509, causing severe default thread contention, leading to 429s	In a few cases, this caused a node to completely hang indefinitely because all the threads were attempting to enter a synchronized block of a WeakHashMap that was being hogged by a thread stuck in an infinite loop.	
Time Card Management PRB1785263	Managers are unable to copy timecards	When a manager attempts to copy time cards for one of their reports, the system returns {0} time cards created.	1. Impersonate a manager in an instance. 2. Select a user from the user dropdown. 3. Select the **Copy time card** button. 4. Select the date for the time sheet. 5. Select **Okay**. Observe the error message.
UI Field Administration PRB1779043	There's an error inputting a decimal value into a decimal field when glide.system.locale has a value set		1. Log in to an instance. 2. Navigate to Agent Workspace. 3. Open any incident. 4. Enter '123456789.09' on the **Test** field and select out of the field Notice that the below message is seen: 'Could not parse 123.456.789,6 as a number'. This issue is reproducible on any workspace and when the system property glide.system.locale isn't empty.

Problem	Short description	Description	Steps to reproduce
UI Field Administration PRB1793495	Service Operations Workspace (SOW) has poor performance on **CI** fields	Poor performance of the **CI** field and its reference qualifier within an incident record in SOW. The issue is only seen in workspace and not in the platform/native view.	
UI Field Administration PRB1795835	The campaign date picker opens in a lower position than usual	The campaign date picker, which is the calendar with a date and time selection field, is positioned offset and lower than its usual correct position.	1. Install the latest Content Publishing and Content Experiences app. 2. Navigate to the Content Experience Builder. 3. Select the date pickers **Start Time** and **End Time.** Expected behavior: The date picker opens in the correct position. Actual behavior: The date picker is opens in a lower position than usual in the campaign builder.
UI Form Administration PRB1767288 KB1710682	Adding the **Sort** button on sys_ux_list opens new record instead of allowing edits	When a filter has a sort condition and the filter tries to load or add a new condition, there's an error thrown that causes the filter to not load or to not add a new sort row.	Refer to the listed KB article for details.
UI Form Administration PRB1783850 KB1651462	High memory usage by viewrule_all_cache (Workspace View Rules)	The viewrule_all_cache can consume excessive memory on application nodes. This can cause memory contention/ increased garbage collection/application node performance degradation.	Refer to the listed KB article for details.
UI Policies PRB1725664	Date validation isn't working as expected when the user timezone is set to the 'other' region	The platform considers the system (actual machine which user uses) timezone to calculate the time calculation rather than the instance timezone which the user is in. An error message displays.

Problem	Short description	Description	Steps to reproduce
UI Scripts PRB1784983 KB1649352	Duplicate UI scripts that have the same exact name prevent a workspace page from loading	Workspace pages fail to load if there are duplicate UI scripts with the same API name in the sys_ui_script table. This is caused by a functional change to how the workspace UI scripts are called.	Refer to the listed KB article for details.
Upgrade Center PRB1797126 KB1704373	The **Save Merge** button throws a 'GlideList is not defined' error for ACL records when trying to resolve conflicts in Xanadu	When resolving conflicts for skipped records from an upgrade, the 'Save Merge' record throws an error for ACL records in Xanadu. The error message reads, 'Error MessageonSubmit script error: ReferenceError: GlideList2 is not defined:' and the record is not updated.	Refer to the listed KB article for details.
Upgrade Center PRB1812035	Records with <sys_es_latest_script action="INSERT_OR_UPDATE"> in the XML are listed in the plugin update list as 'skipped' during the plugin upgrade	It seems that the entire XML file is diffed for UPDATE's when users would expect only the contents of the record to matter.	1. Choose any application that has records with <sys_es_latest_script action="INSERT_OR_UPDATE"> in the xml. 2. Side-load the application via 'install application' from either the file or Nexus. 3. Navigate to sys_upgrade_history. 4. Select the recent record. 5. Check records with <sys_es_latest_script action="INSERT_OR_UPDATE"> in the XML are in the 'Changes Applied' tab. 6. Repair the application. 7. Navigate to sys_upgrade_history. 8. Select the recent record. 9. Check records with <sys_es_latest_script action="INSERT_OR_UPDATE"> in the XML are marked as 'Skipped'. 10. Check logs to confirm the record is skipped because of sys_es_latest_script action.

Problem	Short description	Description	Steps to reproduce
UX Framework PRB1754230	A data resource doesn't pick up default values when input values are missing	The 'Data Visualization API for table data source' defines 'useDataCache' as a query parameter in the URL. Sending this value as null marks the URL as invalid and the data resource throws an invalid URL error.	**1.** Add 'Data Visualization API for table data source' to any page in UI Builder (UIB). Observe that the output value returns a valid JSON. **2.** Save the page. **3.** Navigate to 'Page definition'. **4.** Remove the 'useDataCache' input value from the data resource JSON in the **Data** field. **5.** Open the page again in UIB. **6.** Open the 'Data resource' configuration. Expected behavior: The output is the same as in step 1. Actual behavior: An invalid URL error is shown.
UX Framework PRB1766794	Closing multiple tabs quickly converts an existing workspace tab to a non-functional 'Details' workspace tab that can't be closed	A non-functional 'Details' tab appears when closing inactive tabs quickly.	**1.** Open CWF or SOW workspace. **2.** Open ten existing 'incident' tabs. **3.** Click through the tabs to make them active, but keep switching and do not let them load all the way. **4.** Close an inactive tab before the new tab loads. **5.** Continue closing tabs this way until a non-functional tab is observed. Expected behavior: The subtab details get closed out. Actual behavior: The non-functional details tab appears when closing out inactive tabs quickly.
Virtual Agent PRB1763848	Manual account linking fails non-admin users	There's errors in the logs.	**1.** Navigate to an instance. **2.** Log in as a non-admin user. **3.** Start a conversation on Teams. **4.** Select **Link to servicenow**.

Problem	Short description	Description	Steps to reproduce
			The chat fails after choosing any topic. The channel user profile isn't created for the user.
Virtual Agent PRB1784826	A JavaScript console error appears when the Virtual Agent chat is open in the Service Portal UI	A JavaScript console error appears in the Service Portal UI as a result of a keyboard shortcut API returning with a code in the 400-500 range.	1. Select **Track your Tickets**. 2. Open any case. 3. Select the chat option to launch the Virtual Assistant in the Engagement Messenger. Notice that the console error appears on your browser and in JavaScript.
Virtual Agent PRB1789855	In Virtual Agent after a Washington DC upgrade, every input that matches more than one keyword throws an error	Virtual Agent should display all topics that match a keyword, but it displays a technical error message or occasionally hangs.	
Virtual Agent Web Client PRB1814179	Selecting links causes the link to be opened inside Web Client	Selecting **T&E Card Request** breaks the Now Assist Virtual Agent (NAVA) experience.	
Visual Task Boards PRB1765065	ChecklistItemResponder is too slow to efficiently scale normal usage of the platform, resulting in a backlog in the record watcher queue	ChecklistItemDAO has the functions canRead/ canDelete that triggers an ACL.	Trigger the ChecklistItemResponder with a check list has 50+ items.
Web UX Runtime PRB1776097 KB1709413	Chats close automatically on the workspace after they are opened within a few seconds	This issue was introduced in Washington DC. Chats are closed automatically in the workspace after they are opened within a few seconds. Shortly after the chat window is opened, it is then closed, and the chat	Refer to the listed KB article for details.

Problem category	Problem	Short description
AI Search	PRB1808466	AI Search yields a 'No results found' message on the Now Mobile app, but works as expected in the Service Portal
AI Search	PRB1779622	'Attachment' isn't translated in the suggested search pop-up
AI Search	PRB1832346	Selecting search results adds a parameter 'SearchTerm', which leads to a 404 error
AI Search	PRB1802419	The autocomplete suggested result navigates to the backend record for a Request Item, Incident, Change, or Problem
AI Search	PRB1791896	Search Evam Data Resource returns the error 'Duplicate key title (attempted merging values com.Glide.ux.runtime. data_broker.composite .model.IterableItem $Field)'
AI Search	PRB1811885	Risk Intelligence Report (RIR) doesn't boost for a language match
AI Search	PRB1726217	Global search fails with a 400 error for custom Workspace applications with the application administration flag set to true
AI Search	PRB1770996	The preview link on an AI Search source breaks if any special characters are present in the conditions
AI Search	PRB1792826	The search preview link doesn't take into account a 'New Condition' from an indexed source
AI Search	PRB1831427	A browser refresh doesn't work when searching with an integer in Global Search, and it throws a 'r.trim isn't a function' error
AI Search Assist	PRB1787918	In AI Search results for a knowledge article, only view counts and ratings are visible
AI Search for Virtual Agent	PRB1771693	Videos incorporated into topics in My Bot load slowly, such as the topic 'Email Setup on Phone'
Analytics Data API	PRB1778742	Some breakdown elements filters aren't applied to the widget
Analytics Data API	PRB1826719	The 'Walk-Ups by Hour' and 'Walk-Ups by Day of the Week' widgets on the Customer Service Management (CSM) Walk-Up Experience Dashboard fail to display the data
Analytics Data API	PRB1769933	A bar chart displays different values for the same applied 'group by'
Analytics Data API	PRB1790714	'Group by' doesn't work in database view reports

Problem category	Problem	Short description
Analytics Data API	PRB1815564	Platform Analytics doesn't correctly interpret the > symbol in the title and instead displays '&glt;' or '>'
Analytics Data API	PRB1794715	Breakdown elements are repeatedly queried when fetched with a PAR filter
Analytics Data API	PRB1820588	Vendor Management Workspace performance reports display: 'error'
Analytics Data API	PRB1725658	The filter generates an incorrect query for fields with a different reference key
Analytics Export API	PRB1809223	Enabling the **Export** button only if there are valid entries of recipients for manual export
Analytics Export API	PRB1810971	In Platform Analytics, '[embedded list]' doesn't work on a scheduled export
Analytics Hub	PRB1785933	Multiple translations are missing in the Performance Analytics Hub for the Dutch language
Antivirus Scanning	PRB1734157	Update com.Glide.snap.url to snap-v2 for the release of Glide
Antivirus Scanning	PRB1813543	Certain file types aren't scanned (available) by antivirus scanning
Application Install Engine	PRB1785858	When an application customization is installed, there might be only a 'history' version for a customized record and no 'current' (in sys_update_version)
Application Install Engine	PRB1785858	When an application customization is installed, there might be only a 'history' version for a customized record and no 'current' (in sys_update_version)
Application Install Engine	PRB1753470	App customizations still have sys_claim after being reverted to a base instance
Application Install Engine	PRB1789108	Upgrading the base app when a customization is present results in a mix of custom and base choices
Application Install Engine	PRB1769363	Unpublished customizations are reverted after upgrading to the base application
Application Install Engine	PRB1802004	A cluster message processing other nodes throws a NullPointerException (NPE) after app installation
Application Install Engine	PRB1792512	Translations are loaded repeatedly when loading conditional content for sn_vul
Application Install Engine	PRB1776624	The host app isn't able to load the macros under 'ui.jtemplates', so openframe isn't loading with Next Experience turned off

Problem category	Problem	Short description
Application Install Engine	PRB1822879	In the case of a combination of hosted plugins with app customization, the existing higher version host app store plugin object isn't used
Application Install Engine	PRB1788335	Remote app table entries are populated with 'undefined' in the 'sys_code' column
Application Install Engine	PRB1789812	Uninstalling an application that added fields to an existing table removes the metadata for the field but won't drop the column in the database
Application Manager	PRB1780803	Remote app table entries are populated with 'undefined' in the 'sys_code' column
Application Manager	PRB1770423	There's different behavior in a product page versus an app page (update/installed) for applications
Application Manager	PRB1792061	The schedule install/update of the application isn't working as expected in both new and classic Application Manager
Application Rationalization	PRB1790822	When an empty object is given as input in a source field, docs aren't loaded
Application Vulnerability Response	PRB1828326	The GitHub AVI 'First found' and 'Last found' dates are swapped
Appointment Booking	PRB1802606	An appointment booking cancellation error email doesn't respect timezones
Appointment Booking	PRB1789260	Personal events on a technician calendar are ignored when booking an appointment for an appointment booking user
Appointment Booking	PRB1792635	When the last day of bookable days falls on the first day of the upcoming month, the AB modal doesn't load the first day of month
Appsee - Platform Infrastructure	PRB1802917	GeoIP has an error while retrieving the country/policy, and a null pointer exception error displays
App Template Framework	PRB1763884	Payloads with multiple sys_complex_object records with same sys_id aren't loaded properly
Archive Rules	PRB1789753	A Table Cleaner rule for sys_archive_run impacts the restoration of records older than one year
Archive Rules	PRB1764487	Related records are inserted with a display value instead of a sys_id when they are archived
Archive Rules	PRB1762255	Archived approvals aren't displaying because of a broken ACL

Problem category	Problem	Short description
Ask for Approval - Flow Action	PRB1779799	A stage column on a Requested Item (RITM) list incorrectly shows 'guest' as an approver in the 'Waiting For Approval' stage
Asset Management	PRB1791993	Hundreds of errors display in the system log reading: 'Cannot call sendRedirect() after the response has been committed'
Asset Management	PRB1781337	The 'Stock Runner' job is failing with an error
Asset Management	PRB1784173	When deploying an asset, the location file isn't set properly
Asset Management	PRB1789417	Asset and CI synchronization might not work properly on domain separated instances in the Washington DC release due to the scoped cache mechanism
Asset Management	PRB1778297	The Hardware Asset Management (HAM) 'Incident' view rule within Asset Management Workspace targets Agent Workspace
Asset Management	PRB1802625	While retiring a consumable, the related Stockroom options aren't all visible at once on the pop-up
Asset Management	PRB1822129	The order of the substate choices in the 'Retire Asset' modal aren't displayed in the order defined in the dictionary entry of the field
Asset Management	PRB1770430	Attachments uploaded from the Now Agent app get mapped to the parent table (alm_asset) instead of the child table (alm_hardware)
Asset Management	PRB1805243	Email client isn't showing on Assets Workspace in compose
Asynchronous Message Bus (AMB)	PRB1833926	ExecutorQueue consumes large memory by copying GlideSnapShotSession, which has large a fCache filed in 'Transaction'
Asynchronous Message Bus (AMB)	PRB1822973	Record Watcher (RW) exceptions out when it encounters an invalid record and fails to execute repsonders, which can cause flows to stall
Attachments to Records	PRB1769071	There's an error when trying to attach a BMP file to a record manually or via the REST API
Attachments to Records	PRB1801182	The **Attach File** field 'Pencil/Edit' icon disappears for an attachment after saving a record
Audit History	PRB1793551	A null object returned by HistoryChangeList Iterator should be handled

Problem category	Problem	Short description
Audit History	PRB1837362	NoBroadcast() logs are consumed by Log Export Service (LES) topics
Authentication	PRB1764389	After single sign-on (SSO) login in and logout, navigating to the /log page shows 'Security constraints prevent access to requested page'
Authentication	PRB1756224	When a user is locked out and then unlocked in the user profile, the search displays a blank page
Authentication	PRB1775791	View rules on customer_contact makes the **Set Password** UI action change the Password Needs Reset of the admin user instead of the changed user
Authentication	PRB1782128	Error messages reading 'CSRF validation failed' are logged even though the validation property is false
Authentication	PRB1799507	Provide better logging / diagnostics / debugging to show details of why IP access was allowed or denied
Authentication	PRB1764318	OIDC Authenticating Clients doesn't take the client secret into account
Authentication	PRB1753368	Information link for Rest API Access Policy Prioritization directs to the ServiceNow staging documentation site during an upgrade case
Authentication	PRB1763499	Session timeout doesn't work as expected in the Engagement Messenger
Authentication	PRB1791895	When an explicit role plugin is installed and the property 'Glide.security.explicit _roles.do_not_fix'= true, single sign-on (SSO) login fails if the post auth policy requires an snc_internal role
Authentication	PRB1800758	The URL is incorrectly decoded after session timeout for Next Experience when the user logs back in within the top navigation
Automated Test Framework (ATF)	PRB1764100	ATF (Automated Test Framework) steps that execute without explicitly setting 'Success' or 'Failed' statuses can leave pending suite results and stuck cloud run executions
Automated Test Framework (ATF)	PRB1772058	ATF (Automated Test Framework) tests can sometimes generate modified records for 'label_history', which can block tests from running in parallel

Problem category	Problem	Short description
Customer Service Management	PRB1779338	Recipient list supports the 'Reference Variables' but doesn't support any list variables
Customer Service Management	PRB1832361	When Customer Service Management (CSM) is installed in Xanadu, the 'Overview' dashboard isn't appearing
Customer Service Management for Field Service Management	PRB1817415	'My Dispatch Map' doesn't load
Data Archiving	PRB1773987	'Restore related' fails when the reference field is for the parent table in a hierarchy
Database Indexes	PRB1719709	A slow query on sn_cmp_order is missing a supportive database index covering discovery_status
Database Persistence	PRB1736140	Auto-increment fields with a default value of 0 aren't corrected after migration using an early Utah build
Database Persistence	PRB1776634	GlideQueryString warnings should provide exception details and stack trace
Database Persistence	PRB1508047	Failing a copy during DB alter prevents an update set from using bootstrap batching, and results in multiple table alters
Database Persistence	PRB1605677	Adding 'Tags' in the column view for a table on the gateway database throws an error
Database Persistence - Data Access	PRB1699977	A **Function** field with Glidefunction:concat() shows an error when opening the table list in other languages
Database Persistence - Data Access	PRB1825857	Unused and missing joins in query generation for a TS query with many 'contains' conditions
Database Persistence - Data Access	PRB1636284	There's an inaccurate group count in a reference field with duplicate display values when results are paginated
Database Persistence - Data Access	PRB1751743	Parsing the FromItem type '[SubSelect]' isn't supported
Database Persistence - Data Access	PRB1789910	'Order by' columns aren't added to the 'Group by' clause when joined on a denormalized table with aggregation via 'RLQuery'
Database Persistence - Data Management	PRB1801384	Orphan archive-related records (Archive_Map NULL) aren't ignored by the archive job

Problem category	Problem	Short description
Service Catalog	PRB1799840	The 'Migrate clear value actions' script action to update the UI policy actions resulted in the catalog item version being increased during the upgrade
Service Catalog	PRB1811236	A newly created catalog item using the wizard is available to edit in existing templates without edit access defined on the catalog item creation, so making any modification to the template locks the field after publishing again
Service Catalog	PRB1794884	The **Back** button in a category item or order guide view on platform redirects to 'Page not found'
Service Catalog	PRB1779033	g_form.setValue() isn't working in the platform for multi-row variable sets (MRVS), when used in a ClientScript
Service Catalog API	PRB1782677	UI policies using the 'OR' clause don't work as expected in Now Assist in Virtual Agent
Service Catalog Builder	PRB1813682	The catalog item for non-English users is taking up the details from English users when publishing/submitting the item
Service Catalog Builder	PRB1793265	The 'catalog_builder_ editor_blank_template' role, which is used to create a catalog item directly, should be removed
Service Catalog Builder	PRB1756914	Modifying the catalog item task step through builder isn't working as expected
Service Catalog Builder	PRB1751174	Unable to remove the dynamic behavior filter condition in Catalog Builder
Service Catalog Builder	PRB1771626	A Catalog Builder item isn't publishing when two containers are split with the same name is added to the catalog item, with one inside the variable set and one as a normal variable
Service Catalog Builder	PRB1801524	The **Create a catalog item template** button in Catalog Builder is enabled even if the user doesn't have the required roles to create/edit a catalog template
Service Catalog Components	PRB1793214	After changing the instance date format, an 'Invalid date' error message displays in a multi-row variable set preview window in a Workspace
Service Catalog Portal Widgets	PRB1791330	ServiceNow components fail an accessibility test, selecting the 'Escape' key should allow the modal to close

Phone Mobile*	Not supported	Not supported	Not supported	Latest version of iOS and Safari Latest version of Android and Chrome

*Mobile phone browsers do not support the desktop version of the UI. Instead, mobile browsers use the mobile UI.

Firefox

The iOS version of Firefox does not support ServiceNow Community or other Service Portal pages.

Accessibility and conformance

View a summary of accessibility updates and improvements completed for the Yokohama family release. Learn which Voluntary Product Accessibility Template (VPAT) was used to create Accessibility Conformance Reports (ACRs) for ServiceNow® products and where to access them.

Release Highlights

Next Experience, Configurable Workspace, and Builder Improvements

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Leverage Platform and Product upgrades to strengthen WCAG 2.1 AA accessibility conformance. This release enhances usability for all users, particularly those relying on keyboard navigation, assistive technologies, or with visual impairments. Key improvements include expanded zoom capabilities (including 400% reflow), enhanced contrast of text and images, implementation of alternative text to images, and refined control labeling.

- Platform and Products upgrades include the following Configurable Workspaces and Components:
  - Audit Management
  - Collaborative Work Management
  - Compliance Case Management
  - Configuration Management Database (CMDB)
  - Data Loss Prevention
  - Enterprise Agile Planning
  - Enterprise Asset Management
  - Project Workspace
  - Resource Management Workspace
  - Security Incident Response Workspace
  - Software Asset Management
  - Strategic Planning
  - Vendor Management Workspace
  - Workplace Central Event Planner
  - Workplace Maintenance Management
  - Workplace Move Management
- Builders upgraded to support WCAG 2.1 Level AA:
  - Decision Table Builder
  - Flows, subflows, and actions in Workflow Studio
  - Table Builder
  - Theme Builder
  - Workspace Builder

New features and other improvements

- **Voice Input for Now Assist**- Enable an optional voice input setting for the Now Assist panel in the Now Assist Admin console. This feature gives users a voice-to-text input option to access the Now Assist skills in the panel in any supported language.
- **Customized Next Experience keyboard shortcuts**- Leverage 40+ keyboard shortcuts in Next Experience or design your own at the Admin or User level setting.
- **Categorized Next Experience Keyboard shortcuts** – Find keyboard shortcuts quickly and easily with new categories: Page Action, Page Navigation, Global Navigation, and General. This organization improves navigation for users who rely on keyboards, including those with mobility impairments.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- **New Next Experience keyboard shortcuts**- Two new Next Experience keyboard shortcuts are available, one shortcut to open and close the Now Assist panel and another to enable voice input for Now Assist.
- **Document Services**– Create and export accessible PDFs from records and lists using Document Services.
- **Rich Text Editor (TinyMCE) Upgrade for Knowledge and Service Catalog**- Identify and resolve accessibility related issues in Knowledge articles via the accessibility checker.
- Improved the experience for users of Assistive Technology (AT) by resolving potential limitations that could have prevented seamless content access, application navigation, and feature utilization.

Now available in the ServiceNow Store:

Text Adjust Neurodiversity Extension – Empower users with neurodivergent conditions (Dyslexia, Autism, ADHD, etc.) to personalize their reading experience. Install the Text Adjust Neurodiversity Extension (Chromium-based) to modify the webpage's user interface (UI) by changing the font families and adjusting letter, word, and paragraph spacing. Features include the ability to:

- Adjust the default font on a webpage with a different font family.
- Adjust the spacing of letters, words, line height, and paragraphs on a webpage.

Product Accessibility

A Voluntary Product Accessibility Template (VPAT) is a globally recognized reporting format used to evaluate the accessibility of a product or service. ServiceNow uses the international version of the VPAT to create Accessibility Conformance Reports (ACRs). ACRs are available for the currently supported ServiceNow releases.

For a full list of available accessibility conformance reports, see Accessibility conformance reports.

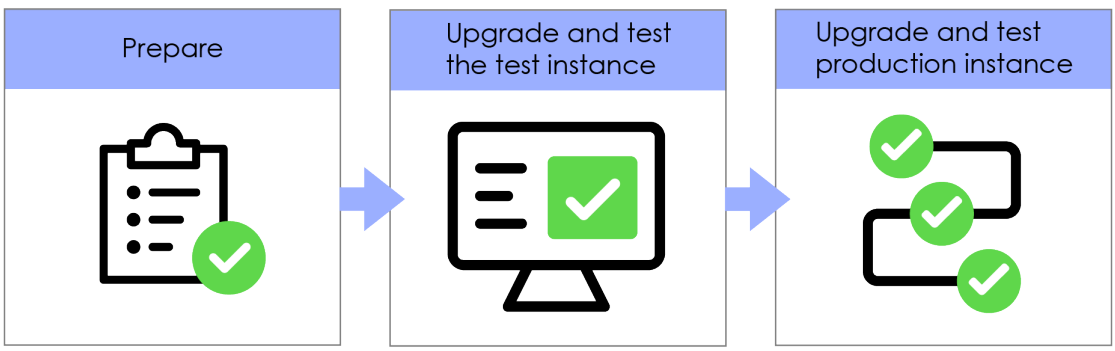
ServiceNow upgrades Learn high-level information about upgrades, such as duration, rollback options, and testing.	**Pre- and post-upgrade tasks** Identify any tasks to complete before and after the upgrade for your applications and features.	**Upgrade planning checklist** Use the end to end checklist to plan and track the activities for your upgrade.
Upgrade tools and resources Learn about ServiceNow products, tools, and resources that can improve your upgrade experience.	**Upgrades and the ServiceNow® Store** Learn about how upgrades are applied to ServiceNow® Store applications.	

ServiceNow upgrades

The upgrade process moves your instance to a new ServiceNow release version. Understand the difference between upgrading and patching, release definitions, rollback and backup options, and how to test your non-production and production instance upgrades.

Before you begin the upgrade process, read the Yokohama release notes and review the upgrade and migration tasks for your applications and features.



System upgrades can be significant projects. Each ServiceNow feature release includes major additions, and you should always consider the impact of new functionality on an instance. Upgrading implements enhancements to all features that are part of the base system or are

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

already active, unless the feature is customized on your instance. For a list of all available plugins and whether they are active by default on the base system, see List of Yokohama plugins.

Careful preparation and knowledge of the available software, tools, and resources can contribute to a successful upgrade. In addition to the materials provided by ServiceNow, it is important to understand how your ServiceNow instance is currently operating and the performance level of key business functionality. Set the expectation with IT and business users that time must be dedicated to preparing for, implementing, and testing ServiceNow upgrades.

If you have any issues during the upgrade process, contact Customer Service and Support. Customer Service and Support is available 24 hours a day, 7 days a week to assist you with any questions or issues.

For additional help with upgrades, ServiceNow also offers various Production Readiness Services. These services specifically address challenges with instance upgradability, manageability, scalability, and performance. The reviews are performed by a ServiceNow certified professional consultant, who provide recommendations to align customer configurations with ServiceNow best practices. Contact your ServiceNow sales representative for more details.

Upgrade and update durations in Yokohama

The upgrade process takes a significantly shorter time for both updates and upgrades. (An update occurs when an instance moves from one patch or hotfix to another within the same release family. An upgrade occurs when an instance moves from one release family to another). As always, test your upgrades, but don't assume from the much faster completion time that the update or upgrade wasn't successful.

Supported upgrades

You can upgrade directly to the latest release family. If multiple software versions are involved in your upgrade, be sure to consult the release notes for each version between your current version and the target version. For more information about release terminology and availability phases, see the ServiceNow Release Cycle [KB0547244] article in the Now Support Knowledge Base.

Upgrades vs. updates

ServiceNow organizes its releases into families. A family is a set of releases that are named after a major city, such as Yokohama. Families also contain patches and hotfixes. For example, the following releases are both part of the Orlando family:

- Orlando Patch 4
- Orlando Patch 3 Hotfix 2

Upgrading is the act of moving to a release that is in a different family than your current release. For example, a move from London Patch 7 to Orlando Patch 3 is an upgrade because London and Orlando are different families.

Updating is the act of moving from one patch or hotfix to another within the same release family. For example, a move from Orlando Patch 1 to Orlando Patch 3 is a update because both versions are part of the Orlando family.

In both cases, the target release is Orlando Patch 3. It is the difference between your current and target release family that determines whether you are upgrading or updating.

Features, patches, and hotfixes

Each release family contains features, patches, and hotfixes.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

A feature provides a complete solution that customers can implement to add value to their organization. New features are generally only available as part of a feature release. Features are supported with patches and hotfixes.

Type	Scope
Feature	• Introduces new features • Includes all available fixes to existing functionality • Is production-oriented; quality and stability are of the highest priority throughout the lifecycle
Patch	• Supports existing functionality with a collection of problem fixes • Generally does not include new features
Hotfix	• Supports existing functionality with a specific problem fix for a feature release • May or may not include any previous fixes for a given release • Does not include new features

For more information about release terminology and availability phases, see the ServiceNow Release Cycle [KB0547244] article in the Now Support Knowledge Base.

Rollbacks and backups

When you plan an upgrade, remember that ServiceNow does not provide a universal rollback option. Rollbacks are available for updates (for example, Yokohama patch-to-patch and Yokohama patch-to-hotfix). The rollback window is 10 days by default. You can customize this window by modifying the *glide.rollback.expiration_days* property. To request a rollback, contact Customer Service and Support.

Avoid restoring a production instance from backup, when possible, due to downtime and data loss. When a problem cannot be solved using other methods, restoring a production instance from backup is a final option. ServiceNow can restore an instance to any point in time, regardless of when a backup is completed. Customer Service and Support provides support 24 hours a day, 7 days a week for assistance with critical post-upgrade issues.

Note:
ServiceNow does not perform on-demand backups. Instances are automatically backed up daily during non-peak business hours on schedules defined by ServiceNow. The timing of existing backup schedules is not adjusted.

Testing throughout upgrades

Testing is an integral portion that occurs after each instance is upgraded. After you upgrade an instance, test and validate it.

This instance naming convention assumes that you have three ServiceNow instances. If you have three instances, upgrade your instances in this order:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

1. Development
2. Test
3. Production

If you have more or less than three instances, or if you are using Team Development, these instance labels will be different. In general, upgrade your instances furthest from production towards your production instance.

Instance	Type of testing required
Development	Conduct smoke tests.
Test	• Use the ServiceNow Automated Test Framework to assist you in testing your non-production instances. • You can use Automated Test Framework quick start tests and product testing suites to help you jump start your testing before and after upgrades. For a list of available tests and activation information, see Quick start tests. • For extra testing coverage, you can also conduct user acceptance testing (UAT) on your non-production instances.
Production	Conduct UAT. **Note:** The Automated Test Framework is intended for use on non-production instances. On your production instance, conduct UAT only.

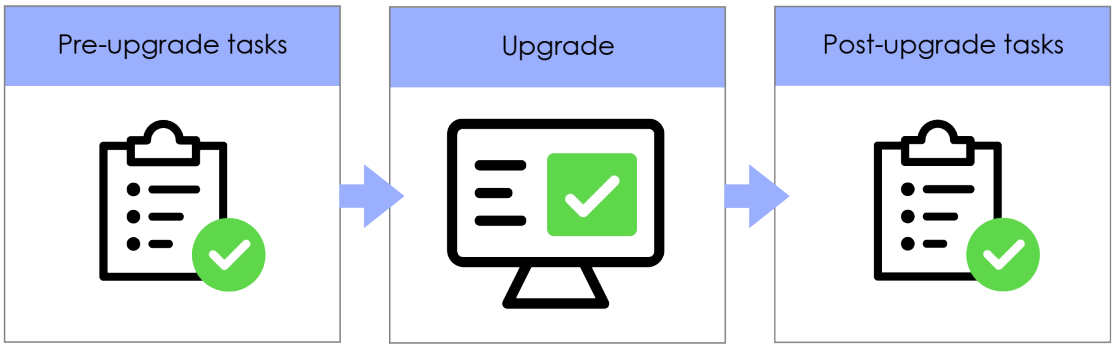
If you encounter any post-upgrade issues, document the issue's conditions, steps to reproduce the issue, and your customizations. Contact Customer Service and Support to open an incident for each issue, and provide this information accordingly. Customer Service and Support is available 24 hours a day, 7 days a week to assist you with any questions or issues.

Pre- and post-upgrade tasks for various products

In preparation for your upgrade, review the upgrade and migration tasks for various applications and features. Plan to complete these tasks, when applicable, before or after the upgrade is complete.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Prepare your instance for a smoother upgrade



Before you upgrade to Yokohama, review these pre- and post-upgrade tasks and complete the tasks as needed.

Upgrade and migration tasks

Important:
For any changes in the upgrade procedure for self-hosted customers, see KB0563844 for details.

Product	Release notes	Family
AI Control Tower	Not applicable.	Australia
AI Desktop Actions	Upgrade the currently installed *AI Desktop Actions* Software Installers (MSIs) by downloading and installing the newer version of the application. Make sure to close the current execution and close the desktop app before staring the installation for upgrade. For more information, see Download installer.	Australia
Application Manager	*Application Manager* is active by default on instances on the *Australia* release. Upgrade your instance to *Australia* patch 4 or later to use the latest features. For information about upgrading your *ServiceNow AI Platform* instance, see Prepare your upgrade.	Australia
Application Vulnerability Response	• If you are currently using *Application Vulnerability Response*, and you do not intend to upgrade to *Unified Security Exposure Management (USEM)*, install a version below v30.x of *Application Vulnerability Response* and for upgrades to supported third-party integration applications.	Australia

	• For information about the new features of *Vulnerability Response*, see the Vulnerability Response release notes. • For more information about the released versions of the *Application Vulnerability Response* application as well as the third-party and *ServiceNow* applications that are compatible with the *Australia* release, see the Vulnerability Response Compatibility Matrix and Release Schema Changes [KB0856498] article in the Now Support Knowledge Base.	
Asset Audit Response	The *Australia* release introduces enhanced protections for read#only fields across the *ServiceNow AI Platform*®. These changes include a new “read_only_option” field with granular control levels, including “strict_read_only” and “client_script_modifiable". The changes occur in the back end and maintain backward#compatible behavior. This update helps strengthen your instance security while preserving the flexibility you need. Refer to KB2718122 for additional technical details on how to identify affected fields and adjust their settings. For more information about granular read-only security options, see Configuring read-only security options.	Australia
Care Team Operations for Biomed	The *Australia* release introduces enhanced protections for read#only fields across the *ServiceNow AI Platform*®. These changes include a new “read_only_option” field with granular control levels, including “strict_read_only” and “client_script_modifiable". The changes occur in the back end and maintain backward#compatible behavior. This update helps strengthen your instance security while preserving the flexibility you need. Refer to KB2718122 for additional technical details on how to identify affected fields and adjust their settings. For more information about granular read-only security options, see Configuring read-only security options. If you have the feature administrator role you can now complete tasks that were initially reserved for users with the broader administrator role.	Australia
Care Team Operations for Environmental Services	If you have the feature administrator role you can now complete tasks that were initially reserved for users with the broader administrator role.	Australia
Care Team Operations for Facilities	If you have the feature administrator role you can now complete tasks that were initially reserved for users with the broader administrator role.	Australia

	• The *ServiceNow AI Platform* now brings you a new AI experience with three licensing tiers available:
	  ○ Foundation: AI basics to deliver insights
	  ○ Advanced: AI to boost productivity across relevant use cases
	  ○ Prime: Act autonomously with all AI assets, and create your own
	For more information, see ServiceNow product tiers.	

Customer Engagement Sequences	If you configured sequences with the Schedule call activity on a release before *Zurich*, the activity is now labeled **Schedule call - Deprecated** in the activity picker in *Workflow Studio*. Existing sequences continue to work, but the Call icon doesn't appear on the **Callback number** field on the Sequence Steps page during runtime. To enable the click-to-call capability, update the *Customer Engagement Sequences* application to use the new Schedule call activity.	Australia
Dispute Rules Content Pack for Mastercard	The *Australia* release adds 14 new data fields to the Authorization and Financial Transaction tables to support the new eligibility rules. The `transactionAmountLocal` field already exists in the Financial Transaction table but is being extended to the Financial Transaction Authorization table in this release. No other pre-existing fields are affected. After upgrading, confirm that the new fields are available and populated on your instance. For a full list of new fields, see New in this release.	Australia
Employee Center Pro	The *Australia* release introduces enhanced protections for read#only fields across the *ServiceNow AI Platform*®. These changes include a new “read_only_option” field with granular control levels, including “strict_read_only” and “client_script_modifiable". The changes occur in the back end and maintain backward#compatible behavior. This update helps strengthen your instance security while preserving the flexibility you need. 	Accounts, and Service Organizations UX list category records. For more details on relabeling, navigate to **All** > **Constituent Service** > **Administration** > **Guided Setup**, and select **Configurable Workspace for Public Sector Digital Services** > **Customize Workspace Labels Manually**.	
RPA Hub	Upgrade any of these currently installed *Microsoft* Software Installers (MSIs) by downloading the RPA applications: • *RPA Desktop Design Studio* • *Attended Robot* • *Unattended Robot* • *Unattended Robot* Login Agent For more information, see Download the RPA applications from RPA Hub. The following upgrade information is applicable only when you're upgrading from *San Diego* or *Tokyo* to *Australia*. Based on the number of records in the application file table, you may experience a delay while upgrading the *RPA Hub* applications from *Tokyo* or earlier releases to *Australia*. Before upgrading *RPA Hub* to *Australia*, you must set the value of the *glide.rollback.blacklist.TableParentChange.change* system property to **false**. If this property doesn't exist in the System Property [sys_properties] table, add the property and set its value to false. For more information on how to add a property, see Add a system property. After you upgrade to *Australia*, the bot process definitions change to the new structure, which is the bot process configuration. Although the bot process configuration doesn't replace the bot process completely, most fields are moved from the bot process to the bot process configuration. If you upgrade to *Australia* without updating the system property value, the tables don't extend the Application File [sys_metadata] table. To update the table changes manually, see the Restructuring RPA Hub tables to sys_metadata in Utah and beyond release [KB1223629] article in the *Now Support Knowledge Base*.	Australia
ReleaseOps	If you have customized the *ReleaseOps* sample playbooks, the runbook task playbook activity will not automatically populate when you upgrade to *Australia*.	Australia

SQL API	*ServiceNow* provided customers with a free SOAP-based ODBC client. If you have an active *RaptorDB Professional* entitlement, you can migrate to the REST-based *SQL API* client by completing the required configuration on both the server and client sides. For more information, see Configure.	Australia
Service Exchange (formerly Service Bridge)	**Important:** Do not upgrade your *ServiceNow*® instance to the *Australia* release if you rely on *Service Exchange*. A known RPS issue prevents *Service Exchange* from functioning correctly. Proceed with the upgrade only after *Australia* Patch 1 becomes available. • *Service Exchange* version 2.x.x, which was first released with the *Xanadu* release, doesn't support migration of *Service Exchange* (Legacy) versions. *Service Exchange* (Legacy) version: Before you upgrade to the *Australia* release, consult the Service Exchange for Providers (Legacy) - Migration Utility [KB1499823] article in the *Now Support* Knowledge Base to find out how to migrate your configuration data. • *Service Exchange* version 1.x.x: When upgrading, consult the Upgrade Guide - Service Exchange for Providers and Consumers application (v2.x.x release) [KB1700387] article in the *Now Support* Knowledge Base to find out how to migrate your *Service Exchange* applications. • *Service Exchange* version 2.x.x: New entitlements that require the latest compatibility version cannot be activated until both consumers and providers upgrade to *Service Exchange* version 2.x.x. New entitlements configured with a lower compatibility version can be activated. Older active entitlements continue to work but new ones can't be activated. • When using *Service Exchange* for Providers and *Service Exchange* for Consumers in a single instance, you must upgrade both applications simultaneously to the same version to maintain compatibility. If the versions diverge, a scan check will report version mismatches and the Health Dashboard will show a version mismatch issue. After upgrading, run and validate the post-upgrade scan suite to identify and resolve any post-upgrade issues. • If you have upgraded to *Service Exchange* version 2.0.55 before upgrading the platform to the *Australia* release and your instance has *Sales Customer Relationship Management* plug-in version 1.0.4	Australia

	installed, the new Deny ACLs aren't installed. After upgrading to the *Australia* release, select Repair to reinstall the *Service Exchange* application to ensure Deny ACLs are installed. • When you install the *Service Exchange* application, the *Service Exchange* Global script include is automatically installed or updated on the following platform versions: ○ *Yokohama* ○ *Zurich* ○ *Australia*	
ServiceNow AI Platform core feature	The dynamic schema application framework was revised in the *Zurich* release. If you implemented dynamic schema in the *Xanadu* or *Yokohama* releases, the application is automatically migrated to a new framework as part of the upgrade to releases starting with the *Zurich* release. For details on the migration and steps you might need to perform, see the Dynamic Schema Zurich Migration Guide [KB2146133] article in the *Now Support Knowledge Base*. The *Australia* release introduces enhanced protections for read#only fields across the *ServiceNow AI Platform*®. These changes include a new "read_only_option" field with granular control levels, including "strict_read_only" and "client_script_modifiable". The changes occur in the back end and maintain backward#compatible behavior. This update helps strengthen your instance security while preserving the flexibility you need. Refer to KB2718122 for additional technical details on how to identify affected fields and adjust their settings. For more information about granular read-only security options, see Configuring read-only security options.	Australia
ServiceNow IDE	*ServiceNow IDE* version 3.2.3 is active by default on instances on the *Australia* release. Update to *ServiceNow IDE* version 4.0 or later to use the latest features. For information about updating *ServiceNow IDE*, see Install or update the ServiceNow IDE.	Australia
ServiceNow SDK	To upgrade to the latest version of the *ServiceNow SDK* globally or within an application, see Upgrade the ServiceNow SDK. *ServiceNow SDK* version 4.4 supports integration with *ServiceNow* instances beginning with the *Washington DC* release.	Australia

Product	Release notes	Family
	On *Windows* systems, after upgrading to *ServiceNow SDK* version 4.3 or later, existing stored credentials aren't supported due to the deprecation of Keytar. Users on Windows systems must add their user credentials again using the `now-sdk auth --add` command to authenticate with instances. For more information, see Authenticate. **Important:** For minor releases of the *ServiceNow SDK*, see the ServiceNow SDK release notes on *GitHub*.	
ServiceNow Studio	*ServiceNow Studio* no longer has to be downloaded from the *ServiceNow Store*. It's available on the *ServiceNow AI Platform* by default.	Australia
ServiceNow Vault	*ServiceNow Vault* is a bundle of the following products: • ServiceNow Vault • Data Discovery • Data Privacy • Zero Trust Access • Field Encryption • Code Signing • Log Export Service (LES)	Australia
Source-to-Pay Operations Integrations	**Important:** Due to a performance issue identified with the upgrade fix script, the sourcing fix script has been modified. This script will no longer execute automatically during the upgrade process. Instead, it is now delivered as an on-demand job. Administrators must manually execute this job outside of business hours after the upgrade is complete.	Australia
Subscription Management	*Subscription Management* version 6.1 is active by default on all instances of the *Australia* release. Update to *Subscription Management* version 6.1 or later to use the latest features. For more information about updating *Subscription Management*, see Update an app or plugin.	Australia
Third-party Risk Management	If you're a *VRM* user upgrading to *TPRM* and upgrading to *Australia* from an earlier release, you must run each upgrade sequentially to ensure that fix scripts run correctly. For example, you must upgrade from *Xanadu* to *Yokohama*, *Yokohama* to *Zurich*, and so on. If the scripts don't run in	Australia

Product	Release notes	Family
	the correct order, you can get data inconsistencies, broken functionalities, and conflicts. After upgrading to version 21.0.x, you can enable the *Smart Assessment Engine* (*SAE*) by setting the *Smart Assessment Engine* enabled (**sn_vdr_risk_asmt.sae_enabled**) property. After setting this property, *Smart Assessment Engine* (*SAE*) becomes the default assessment engine and replaces the legacy experience. The transition isn't reversible. **⚠ Warning:** Set this property in your non-production instances and conduct thorough testing before changing your production instances. Failure to do so may result in unexpected issues. For more information on upgrading from *VRM* to *TPRM* and the differences between the Smart and Classic Assessment engines, see Third-party Risk Management upgrade information. For existing *TPRM* customers, after upgrading to version 21.0.3, data from the Industry column in the Company [core_company] table is automatically migrated to the tprm_industry column. Migration can take several hours depending on the number of records in the Company [core_company] table. After migration, a system log message confirms that the migration is complete. Review the Company [core_company] table content and update any customizations referencing the Industry field to use tprm_industry. After verifying the migration and updating customizations, you can drop the Industry column.	
UI Builder	Saving section for later.	Australia
Vulnerability Response	If you're currently using *Vulnerability Response*, and you do not intend to upgrade to *Unified Security Exposure Management* (*USEM*), install a version below v30.x of Vulnerability Response and for upgrades to supported third-party integration applications. For more information about the released versions of the *Vulnerability Response* application as well as the third-party and *ServiceNow* applications that are compatible with the *Australia* release, see the Vulnerability Response Compatibility Matrix and Release Schema Changes [KB0856498] article in the *Now Support Knowledge Base*	Australia

Product	Release notes	Family

AI Search	*Washington DC* Patch 9:
	• After you upgrade to *Washington DC* Patch 9 from an earlier release, make knowledge block content searchable by reindexing all your indexed sources that include knowledge articles. For details on reindexing, see Index or reindex an indexed source or Index or reindex multiple indexed sources.
	
	Washington DC:
	• When you upgrade to *Washington DC*, *AI Search* automatically updates your existing Genius Result configurations to use the new *AI Search* Genius Result Configuration form fields. This update procedure makes the following changes:
	  ○ Removes existing **Genius result answer type** field values.
	  ○ Migrates **Genius result logic** field values to the new *AI Search* **request processor** and *AI Search* **response processor** fields as appropriate.
	• After you upgrade your instance to *Washington DC*, *AI Search* retains the value that you previously set for the **Boolean search operator to use when a search query includes multiple terms** (`glide.ais.query.search_operator`) system property. To gain the benefits of the new enhanced query mode for multi-term searches, set this system property's value to *AND then OR 2+ key terms*. For details on *AI Search* system properties, see AI Search system properties.
	• Starting in *Washington DC*, the User [sys_user] table defaults to sorting indexed records by their sys_created_on dates instead of sorting them by their sys_updated_on dates. This change requires reindexing of the User table indexed source for *AI Search*, which can be time-consuming. When you upgrade to *Washington DC* from a previous family release, *AI Search* does not automatically reindex the User table indexed source. If you need to be able to search the latest configuration for user records, you can manually reindex the User table indexed source, which may take some time. Otherwise, *AI Search* will reindex individual User table records as they're updated until all records have been reindexed.
		Washington DC

Automated Test Framework	Copy and customize quick start tests provided by the *ServiceNow AI Platform*® to validate that your instance works after you make any configuration changes. For example, if you apply an upgrade or develop an application.	Washington DC

Product	Release notes	Family
	The tests can produce a pass result only when you run them on a base system without any customizations and with the default demo data that is provided with the application or feature plugin. To apply a quick start test to your instance-specific data, copy the quick start test and add your custom data. For more information, see Available quick start tests by application or feature.	
Business Continuity Management	After upgrading to the *Washington DC* release, you must note the following important information for the existing business impact analyses, business continuity plans, and events: • For business impact analyses, the Source column in the dependency assessment is renamed to Primary source and the **BCM** source is renamed to **Manual** for manually added dependencies following an upgrade. When you select the **Update dependencies** button, the system adds the *CMDB* dependencies. • For business continuity plans, the Source column is renamed to Primary source following an upgrade. When you select the **Update dependencies** button, the system adds the *CMDB* and BIA dependencies. To maintain compatibility with the previous releases, the *BCM* administrator can configure the sources and keep only the BIA upstream dependency and BIA downstream dependencies as the sources in the updated configuration. • For events and exercises, when you select the **Update dependencies** button, the system adds the *CMDB*, BIA, and Business Continuity Planning (BCP) dependencies after an upgrade. To maintain compatibility with the previous releases, the *BCM* administrator can configure the sources and keep only the BIA upstream dependency and BIA downstream dependencies as the sources in the updated configuration.	Washington DC
Configuration Management Database (CMDB)	• The column *product_instance_id* has been added to the base Configuration Item [cmdb_ci] table to support the new product instance identifier (PID), which enables the lookup and linking of any pre-existing related assets, CIs, and Install Base Items (IBI). For more information about the impact of that change during upgrade and how to minimize that impact, see the Upgrade impact of CMDB_CI schema changes for Washington release [KB1534035] knowledge base article. • If you enable CMDB 360 for the first time after upgrading to the *Washington DC* release, to enable the capture of CMDB 360 data for CIs from non-CMDB classes (classes not derived from the Configuration Item [cmdb_ci] class) you must set the	Washington DC

	glide.identification_engine.multisource_non_cmdb_ci_enabled system property to true. • If you have been using the legacy Data Certification application on Core UI, then any associated definitions won't be available in the new implementation of Data Certification in CMDB Workspace. After upgrading to the *Washington DC* release and to CMDB Workspace version 6.0, you can convert definitions created in the legacy Data Certification application into draft Data Manager Certification policies in CMDB Workspace. For more information, see .	
Core ServiceNow AI Platform	Previously, if a transaction was canceled, certain auditable operations were not being recorded. This behavior of missing audit records is because the platform executes some operations between the record change and is canceled before audit creation. But now, audits are created immediately after the record is changed, reducing the chance of a canceled transaction aborting the operation before the audit is recorded. To facilitate this update, audits are now recorded in the same thread as the transaction. Earlier audits were created in a background thread. This change redefines the default value of the `glide.db.audit.lazy` property from true to false. Ideally, this property is not defined in the Properties table, which means that the majority of instances start using the new default value and behavior with the *Washington DC* release. On some instances, this property may have been inserted with the value set to true, which means that these instances won't be able to use this change to audit behavior. Delete this property to leverage this update.	Washington DC
Encryption Key Management	If you upgrade your instance to *Washington DC* but don't upgrade your *MID Server*, Secrets Management authentication fails. Avoid authentication failures by upgrading your *MID Server* to *Washington DC*. If you can't upgrade, you must turn off authentication until *MID Server* is upgraded to *Washington DC* to avoid authentication failures. For details on MID Server upgrades, see MID Server upgrades.	Washington DC
Enterprise Asset Management	After you upgrade to *Washington DC*, the model_component field isn't available in the Enterprise asset [sn_ent_asset] table. Instead, a new model_component_id field is available in the Asset [alm_asset] table. The ENT - Migrate to new model component script moves the existing model_component field data to the model_component_id field.	Washington DC

Product	Release notes	Family

	Note the following upgrade scenarios for the Total Cost of Ownership (TCO) of assets:
	• Upgrade works for all *Enterprise Asset Management* flow tasks
	• You must have task rate cards for each workflow task.
	• The TCO upgrade populates the **Asset** and **Expense category** fields on expense lines corresponding to each task.
	• Expense category is populated based on the expense lines and the source of the expense line.
	• You need to populate the TCO benchmark cost and the TCO benchmark threshold field on all existing models manually or using the bulk import functionality.
	• TCO upgrade populates following fields on asset forms:
	  ○ **Asset end of useful life**: The created date plus the useful life in months.
	  ○ **Asset first used date**: The created date.
	  ○ **Asset TCO**: The aggregated sum of all the expense lines related to the asset. For simple assets, Asset TCO is the aggregated sum of expense lines under it. For complex assets, Asset TCO is the aggregated sum of expense lines of the parent as well as its child assets.	

Financial Services Operations Core	During the upgrade to *Washington DC*, the *Financial Services Operations Core* plugin reparents the following tables: **Note:** You may experience a longer time for the upgrade to complete if your upgraded instance has a large number of records. • The Service Definition [sn_bom_service_definition] table extends from the Service Definition [sn_case_type_selection] table instead of the Request Definition [sn_ind_request_definition. • The Financial task [sn_bom_task] table extends from the Customer Service Task [sn_customerservice_task] table instead of the Global Task [task] table. • The Policy Participant [sn_bom_policy_participant] table extends from the Sold Product Related Party [sn_install_base_sold_product_related_party] table. Reparenting enables leveraging of the benefits and advancements introduced by *ServiceNow® Customer Service Management (CSM)* while preserving the functionality of existing applications.	Washington DC

Product	Release notes	Family

Hardware Asset Management 10.0.0	After your upgrade to *Washington DC*, keep in mind the following upgrade scenarios for the Total Cost of Ownership (TCO) of assets:
	• Upgrade works for all *Hardware Asset Management* flow tasks.
	• You must have task rate cards for each workflow task.
	• TCO upgrade populates an asset and expense category field on the expense line corresponding to each task.
	• Expense category is populated based on the expense lines and the source of the expense line.
	• You must populate the TCO benchmark cost and the TCO benchmark threshold field on all existing models manually or using the bulk import functionality.
	• TCO upgrade populates the following fields on assets:
	  ○ Asset end of useful life: Created date along with useful life in months.
	  ○ Asset first used date: Same as the created date.
	  ○ Asset TCO: Aggregated sum of all the expense lines related to the asset. For simple assets, Asset TCO is the aggregated sum of expense lines under it. For complex assets, Asset TCO is the aggregated sum of expense lines of the parent as well as its child assets.
		Washington DC

Healthcare and Life Sciences Service Management Core	During the upgrade to *Washington DC*, the Healthcare sold product [sn_hcls_sold_product] parent table changes to Install base item [sn_install_base_item] for the following tables: • Member Plan [sn_hcls_member_plan] • Medication [sn_hcls_medication] • Immunization [sn_hcls_immunization] • Enrolled Program [sn_hcls_enrolled_program] • Enrolled Program Service [sn_hcls_enrolled_program_service] In addition, the following tables have had their parent tables removed and are standalone tables: • Healthcare Organization[sn_hcls_organization] • Healthcare Location[sn_hcls_location] • Practitioner Location[sn_hcls_practitioner_facility] This reparenting enables customers to use the organizations and location tables for a broader set of use cases. Existing data is migrated in the following manner so that existing functionality isn't impacted:	Washington DC

Product	Release notes	Family
	Service. For details, see Upgrading legacy replication sets to V2 in Instance Data Replication. Log rotation is automatically enabled for the Replication Payload Error [idr_replication_payload_error] table after the upgrade. By default, the log rotation schedule is comprised of seven shards, with five days for each shard. All log entries in this table created before the upgrade are automatically truncated.	
MID Server	For the latest *MID Server* system requirements, see MID Server system requirements. The minimum JRE version supported is 11.0.9 and the recommended version is 11.0.16.1. If you have installed your own JRE, the upgrade process takes the following actions to ensure that the *MID Server* uses a supported JRE: • If a *MID Server* is using an unsupported version of the JRE when it upgrades, the upgrade process displays a warning message with the minimum and recommended JRE version. • If a supported JRE is running on the *MID Server* host, the upgraded *MID Server* uses that version. All *MID Server* host machines require access to the download site at `install.service-now.com` to enable auto-upgrades. For additional details, read how the system manages *MID Server* upgrades. Only one *Windows MID Server* service is permitted per executable path. Upgraded *Windows MID Servers* that have multiple services pointing to the same installation folder can't start. See *MID Server* fails to start for more information. For more information about *MID Server* upgrades, see the following topics: • *MID Server* pre-upgrade check: Describes how the AutoUpgrade monitor tests the ability of the *MID Server* to upgrade on your system before the actual upgrade. • Upgrade the *MID Server* manually: Describes how to upgrade your *MID Servers* manually.	Washington DC
Now Assist for Creator	To receive *Workflow Studio* performance improvements, install one of these versions of the *Workflow Studio* application from the *ServiceNow Store*. For more information about upgrading *Workflow Studio*, see Update to the latest version of Workflow Studio.	Washington DC

Playbooks in Workflow Studio	After you upgrade to *Washington DC*, update the *Playbooks* and *Workflow Studio* applications in the ServiceNow Store.	Washington DC
Portfolio Planning	Starting with v8.0.0, you can access the *Strategic Portfolio Management* (*SPM*) Pro-licensed features only in *Strategic Planning Workspace*. If you have been using *Portfolio Planning Workspace* to access *SPM* Pro-licensed features, such as Goals, Product Feedback, and Hybrid Portfolio Planning, you must now install *Strategic Planning* to access these features. For more information on the features that can be accessed only in *Strategic Planning* Workspace, see Comparing Portfolio Planning with Strategic Planning.	Washington DC
Predictive Intelligence	If you're upgrading to *Washington DC*, you won't be able to create new regression solutions. If you have existing solutions, they will still be supported and you will be able to train and modify them, but you won't be able to create new ones. The changes to the similarity and clustering solutions apply to all instances that are on *Washington DC*.	Washington DC
Proactive Service Experience Workflows	Customers who prefer not to receive trouble ticket notifications can disable the business rules related to the incident and case tables. To learn more about how to disable the business rules for trouble ticket notification, see Deactivate trouble ticket notification.	Washington DC
Product Catalog Management and Pricing Management	If you used attribute characteristics in the Standard Price Adjustment matrix in the initial release of the *Sales Customer Relationship Management* applications, and you're upgrading to the May 2024 release of *Sales Customer Relationship Management* applications, you must run a scheduled job that corrects the format of the automatically generated **Code** values. Run the **Schedule job to modify code field on characteristic records that contain special characters** on demand job to replace any character that is not a letter (a-z, A-Z), a number (0-9), an underscore (_), or a dollar sign ($) with an underscore (_). This job corrects the **Code** value so that it doesn't start or end with an underscore, doesn't begin with a digit, and contains no consecutive underscores.	Washington DC
Public Sector Digital Services	After the upgrade, certain public sector menus and menu items in the *CSM Configurable Workspace* revert to their original *CSM* label names. You can relabel these items for public sector use by updating the UX List Categories	Washington DC

	for Customer and Service Organizations. For more details on relabeling, navigate to **All** > **Constituent Service** > **Administration** > **Guided Setup**, and select **Configurable Workspace for Public Sector Digital Services** > **Customize Workspace Labels Manually**.	
Robotic Process Automation (RPA) Hub	Ensure that you upgrade any of the following currently installed Microsoft Software Installers (MSIs) by downloading the RPA applications: • *RPA Desktop Design Studio* • *Attended Robot* • *Unattended Robot* • *Unattended Robot* Login Agent For more information, see Download the RPA applications from RPA Hub. The following upgrade steps are applicable only when you're upgrading from *San Diego* or *Tokyo* to *Washington DC*. Based on the number of records in the application file table, you could experience a potential delay while upgrading the *RPA Hub* applications from *Tokyo* or before to *Washington DC*. Before upgrading *RPA Hub* to *Washington DC*, you must set the value of the *glide.rollback.blacklist.TableParentChange.change* system property to **false**. If this property doesn't exist in the System Property [sys_properties] table, add the property and set its value to false. For more information on how to add a property, see Add a system property. After you upgrade to the *Washington DC*, the bot process definitions change to the new structure, which is the bot process configuration. Although the bot process configuration doesn't replace the bot process completely, most fields are moved from bot process to bot process configuration. If you upgrade to the *Utah* version without updating the system property value, the tables don't extend the Application File table. To update the table changes manually, see the Restructuring RPA Hub tables to sys_metadata in Utah article in the *Now Support* Knowledge Base.	Washington DC
Security Posture Control	For a complete list of the applications that are required to implement Security Posture Control, see Install the supported applications for Security Posture Control.	Washington DC

Product	Release notes	Family
	Additionally, field-level read ACLs are enforced for filter conditions in Simple List widget instances by default. A new system property, *glide.service_portal.enable_acls_for_encoded_query_in_list*, enforces these ACLs regardless of whether the **Enforce field-level Read ACLs on Filter query terms** option is selected for Simple List widget instances. To use the **Enforce field-level Read ACLs on Filter query terms** option, change the value of *glide.service_portal.enable_acls_for_encoded_query_in_list* to false. For more information, see Simple List widget. If a user previously selected a user consent preference for user experience analytics for portals different from the rest of the platform, the preference selected for the platform is also used for portals in the *Washington DC* release. For example, if users opted out of tracking for portals but opted in to tracking for the rest of the platform in the *Vancouver* release, user experience analytics for portals are tracked for them in the *Washington DC* release. Users can update their selection from the user profile page in portals at any time.	
Software Asset Management	After upgrading to *Washington DC*, you must redo all your customizations related to *Adobe* and *Microsoft 365* integrations with your *ServiceNow* instance because the functionalities of these integrations are moved to the *Software Asset Management – SaaS License Management* store application. • If you've customized an impacted file, the upgrade process skips the file and indicates a conflict. You must manually resolve the conflict and ensure that the old existing file is deleted. • If you haven't customized an impacted file, the file gets deleted as part of the upgrade, and a file with a new sys_id is created.	Washington DC
Strategic Planning	Starting with v4.0.2, you can access the *Strategic Portfolio Management* (*SPM*) Pro-licensed features only in *Strategic Planning Workspace*. If you have been using *Portfolio Planning Workspace* to access *SPM* Pro-licensed features, such as Goals, Product Feedback, and Hybrid Portfolio Planning, you must now install *Strategic Planning* to access these features. For more information on the features that can be accessed only in *Strategic Planning Workspace*, see Exploring Portfolio Planning in Strategic Planning. If you're upgrading to *Strategic Planning* v4.1.2 and previously had customized the List view or the Hierarchy view of the Goals page using the Personalization side panel, the user interface enhancements done in v4.1.2 may not appear. In this case, you must delete your user preference records.	Washington DC

Product	Release notes	Family
	For more information on how to delete user preferences made using the Personalization side panel, see KB1642037.	
Supplier Lifecycle Operations	After upgrading from the *Vancouver* release to the *Washington DC* release, you will see only the *Source-to-Pay Workspace* on the **All** navigation tab. You don't have to do anything if you choose to continue to use the *Source-to-Pay Workspace*. However, you will see both the *Source-to-Pay Workspace* and *Supplier Manager Workspace* on the **Workspaces** tab. If you want to use the *Supplier Manager Workspace* instead of the default *Source-to-Pay Workspace*, ensure that you run the `fixscript_migrate_workspace_to_smw.xml` fix script after upgrading to the *Washington DC* release. You can download the `fixscript_migrate_workspace_to_smw.xml` file from the *ServiceNow Store*. If you want to revert to using the *Source-to-Pay Workspace*, run the `fixscript_migrate_workspace_to_s2p.xml` fix script. You can download the `fixscript_migrate_workspace_to_smw.xml` file from the *ServiceNow Store*. For more information about how to run a fix script, see Run fix scripts. After you upgrade to *Washington DC*, you must review all the post-upgrade tasks and complete them as needed. For more information, see Post-upgrade tasks for Supplier Lifecycle Management.	Washington DC
Third-party Risk Management	If you are a *VRM* user upgrading to *TPRM*, when upgrading to *Vancouver* or later from an earlier release, you must run each upgrade sequentially to ensure that fix scripts run correctly. This means upgrading from *Utah* to *Vancouver*, *Vancouver* to *Washington DC*, and so on. If the scripts do not run in the correct order, it can result in data inconsistencies, broken functionalities, and conflicts. For more information on upgrading from *VRM* to *TPRM*, see Third-party Risk Management upgrade information.	Washington DC
User Experience Analytics	• Users can opt out of basic tracking. • A funnel data visualization is available for *Usage Insights* data sources.	Washington DC

	(KB1644544) article in the *Now Support Knowledge Base*. To learn more about update sets, see System update sets.	
Accounts Payable Operations	If you are upgrading from a previous release, you must configure the reference field in the Tax Code [sn_fin_tax_code] table. The exception engine validates the invoice using the tax code and raises exceptions if necessary.	Xanadu
Analytics, Intelligence, and Reporting	If you are upgrading, you can use the *Platform Analytics Migration Center* to take advantage of a single set of visualizations and unified filters for all data sources.	Xanadu
App Engine Studio	Due to a new process for assigning groups in *App Engine Management Center* (*AEMC*), ensure you have the same version of the *Application Intake* plugin installed on each of your instances.	Xanadu
Application Vulnerability Response	• For information about the new features of *Vulnerability Response*, see Vulnerability Response release notes. • For more information about the released versions of the *Application Vulnerability Response* application as well as the third-party and *ServiceNow* applications that are compatible with the *Xanadu* release, see the Vulnerability Response Compatibility Matrix and Release Schema Changes [KB0856498] article in the *Now Support Knowledge Base*.	Xanadu
Assessments and Surveys	Update the *Automated Test Framework* (ATF) tests, if you're upgrading to *Xanadu* from any version prior to *Utah*. In the *Utah* release, all the buttons on the assessments or surveys cards have been removed. To run ATF tests successfully, the Click the Take Survey button step must be replaced with the Click the Survey card step for all tests that have this step.	Xanadu
Business Continuity Management	The relationship tables introduced in the plan records are generated by the *Update BCP dependencies snapshot* scheduled job. After upgrading to the *Xanadu* release, you can view these tables only after the scheduled job has run or by manually selecting the **Update dependencies** button.	Xanadu

Product	Release notes	Family
Case management for CSM	The customer service manager role [sn_customerservice_manager] includes the approver user role [approver_user]. The approver user role replaces the approval admin role [approval_admin]. Users with the customer service manager role can approve the approval requests that are assigned to them.	Xanadu
Cloud Cost Management 8.0.0	On upgrading to *Cloud Cost Management* 8.0 version, the new Tag Category **AI Service** is available for *Amazon Web Services* (*AWS*), *Microsoft Azure*, and *Google Cloud Platform (GCP)* service providers. Because *Cloud Cost Management* executes the Billing Download job only from the current month onwards, the spend on AI services will be included only for the current month. If you want to view the billing details for the months prior to the current month, you must manually execute the Billing Download job. Once the Billing Download job is executed successfully, you can view the spend data of your AI services.	Xanadu
Configuration Management Database (CMDB)	• Before the upgrade to *Xanadu*, the 'Updated CIs' and 'Updated application services' trend lines in the Recent CI activity and Recent application services activities tiles on the Management view in *CMDB* Workspace, might not have accurately reflected on changes in your system. After upgrading to *Xanadu* and to versions 5.5, 6.2, or 7.2 of *CMDB* Workspace, those trend lines will reflect on the more accurate detection of updated CIs and updated application services. • *CMDB* Health: If either the *CMDB Health Dashboard - Relationship Compliance Processor* or *CMDB Health Dashboard - Relationship Score Calculation* dashboard job is active, that job is deactivated during the upgrade to *Xanadu*. After the upgrade is complete, you can reactivate those jobs to resume health reports for CI relationships. The active state of all other *CMDB* Health dashboard jobs is retained. Any failure threshold for a KPI or metric that is greater than 100,000, is set to 100,000 during upgrade. This upper limit is enforced to avoid excessive processing when a large number of CIs are failing the specified metric tests. • Bookmarks for the CI dashboard no longer work after an upgrade to *Xanadu*. A `Page not found` error message appears. To see *CMDB* Health reports for a CI, open the CI form in *CMDB* Workspace.	Xanadu

Product	Release notes	Family
	• The legacy Application Service Dashboard on *Core UI* isn't supported in the *Xanadu* release. After upgrading, you can still access that legacy dashboard by using a previously created bookmark. You can also instead access the Application Services dashboard in *CMDB* Workspace from the Application services tile in the Insights view in *CMDB* Workspace. • The *CMDB* Integrations Dashboard on *Core UI* isn't supported in the *Xanadu* release. After upgrading, you can still access that legacy dashboard by using a previously-created bookmark. • All records that exist in the CMDB Health Result [cmdb_health_result] table before an update to *Xanadu* Patch 5, are deleted during the upgrade. To access a legacy dashboard on an upgraded instance, navigate to **All** > **Self-Service** > **Dashboards** and then search for the dashboard.	
Data Management	A data management policy record is automatically created for each table that is configured with an archive rule or a table cleaner rule prior to the upgrade.	Xanadu
Data Privacy	Licensing changes enable you to install *Data Discovery*, *Data Discovery* APIs, Data Anonymization, and *Data Privacy* APIs without an entitlement, but you must have an entitlement to run a job.	Xanadu
Decision tables in Workflow Studio	*Workflow Studio* is automatically installed on your instance. However, *Workflow Studio* is a *ServiceNow Store* application, so to get the latest features, you must update your version manually to the most recent version. As of Washington DC Patch 3, updating *Workflow Studio* automatically updates all its application dependencies such as *Workflow Studio*, *playbook*, and *Decision Builder*. You can no longer see or update the individual application dependencies of *Workflow Studio* from the *ServiceNow Store* or the list of plugins.	Xanadu
DevOps Change Velocity	If you are an upgrading customer, you must run the **ReConfigure Bitbucket Server Repositories for PullRequest** job to re-configure your existing Bitbucket Server or Bitbucket Data Center repositories so that pull request records can be imported. You can navigate to **All > System Definition > Scheduled Jobs** to search for this job and run it.	Xanadu

Product	Release notes	Family
External Content Connectors	Beginning with version 2 of the External Content Connectors application, external content connectors implement semantic vector indexing for crawled items. When you upgrade to a version that supports semantic vector indexing, your existing connectors will reindex all previously retrieved items the next time they're visited by a crawl, even if those items' content is unchanged. To force semantic vector indexing of your external content items as soon as possible after upgrading, cancel any running crawls, then restart the canceled crawls manually.	Xanadu
Field Service Management	Effective March 1, 2025, Google has designated the Places API, Directions API, and Distance Matrix API as Legacy services. The newer versions of these services are Places API (New) and Routes API. You can't enable or generate new API keys for these legacy services. However, you can continue using these services with the existing API keys. If you need to create a new Google API key after March 1, 2025, you must enable the new APIs from Google Console and upgrade to Xanadu Patch 9 version or higher to ensure compatibility.	Xanadu
Flows, subflows, and actions in Workflow Studio	After upgrading, users who previously had the fd_read_operations role will now see only basic execution details such as the run state and duration. This restriction prevents users with this role from seeing sensitive information in execution details. To provide read access to all execution details such as input configuration and runtime values, grant the user the new role fd_read_operations_all.	Xanadu
Goal Framework for SPM	After upgrading to *Goal Framework for SPM* v2.3.0, run the **Migrate BreakdownInterval To Checkinfrequency** scheduled job. This scheduled job migrates the existing values in the **Review frequency** and **Breakdown interval** fields to the **Check-in frequency** field in the target records. For more information on how these values are migrated for targets with different values, see Target breakdowns migration.	Xanadu
Hardware Asset Management 11.0.0	After upgrading to *Xanadu*, you can view both the *Core UI Performance Analytics* dashboards and the *Next Experience Platform Analytics* dashboards for *Hardware Asset Management*. **Note:** While migrating the *Core UI Performance Analytics* dashboards to the *Next Experience Platform Analytics* dashboards, auto-migration is disabled by default to avoid duplicate dashboards.	Xanadu

Product	Release notes	Family
	If you're upgrading from *Order Management for Telecommunications and Media* version 6.0 or earlier: • Starting with the *Washington DC* release, the Monthly Recurring Charges (MRC) and the Non-Recurring Charges (NRC) for product offerings and product attribute characteristics are no longer stored in the product offering data model. Instead, the MRC and NRC are stored in the Pricing data model in price lists and price list lines. If you want to upgrade your pricing information to use price lists after upgrading to *Washington DC*, see the Price Management Plugin (com.sn_csm_pricing) uptake for Telecommunications, Media, and Technology customers upgrading to Washington [KB1585863] article in the *Now Support Knowledge Base*. • After upgrading to the Xanadu release, a fix script runs automatically to deactivate certain telecommunications list records that are no longer needed to resume the capture of an unfinished order. For more information on these records and using the former order capture process, see the Deprecating Telco List for Order Capture [KB1586538] article in the *Now Support Knowledge Base*. If you're an upgrade customer who uses the **contract start date** and **contract end date** fields and has records, you can migrate those records to the latest data model by running the *Migrate data from deprecated contract fields to new fields on Order and Order Lines* scheduled job. This scheduled job must be manually executed by navigating to **System Definitions** > **Scheduled Jobs**. For more information on scheduled jobs, see Scheduled jobs.	
Platform Analytics experience	New customers: The *Platform Analytics* experience is automatically available on the *ServiceNow AI Platform*. It offers an intuitive interface to help you better understand and utilize your data. Upgrading customers: If you are currently using *Core UI* responsive dashboards, you will continue to have access without any disruption. Consider transitioning to the *Platform Analytics* experience to take full advantage of the new capabilities.	Xanadu
Playbooks in Workflow Studio	After you upgrade to *Xanadu*, update the *Playbooks* and *Workflow Studio* applications in the *ServiceNow Store*.	Xanadu
Product Catalog Management	If you're using the extension point *sn_csm_pricing.PricingAdjustmentsExtensionPoint* for pricing adjustments, change the default pricing plan	Xanadu

Product	Release notes	Family
	Before upgrading *RPA Hub* to *Xanadu*, you must set the value of the *glide.rollback.blacklist.TableParentChange.change* system property to **false**. If this property doesn't exist in the System Property [sys_properties] table, add the property and set its value to false. For more information on how to add a property, see Add a system property. After you upgrade to *Xanadu*, the bot process definitions change to the new structure, which is the bot process configuration. Although the bot process configuration doesn't replace the bot process completely, most fields are moved from the bot process to the bot process configuration. If you upgrade to *Xanadu* without updating the system property value, the tables don't extend the Application File table. To update the table changes manually, see the Restructuring RPA Hub tables to sys_metadata in Utah and beyond release article in the *Now Support* knowledge base.	
Security Posture Control	For a complete list of the applications that are required to implement *Security Posture Control*, see Install Security Posture Control.	Xanadu
Service Exchange	• *Service Exchange* 2.x.x that is being released with the *Xanadu* release does not support migration of the *Service Exchange* (Legacy) versions. If you are using a *Service Exchange* (Legacy) version, before you upgrade to the *Xanadu* release, you must follow instructions in the *Service Exchange* for Providers (Legacy) - Migration Utility (KB1499823) article in the *Now Support* Knowledge Base to migrate your configuration data. • If you are upgrading from version 1.x.x of *Service Exchange*, follow the steps listed in Upgrade Guide - *Service Exchange* for Providers and Consumers application (v2.x.x release - KB1700387) to migrate your *Service Exchange* applications. • Due to the introduction of mismatched version support, new entitlements cannot be activated until both the consumers and providers upgrade to the *Xanadu* release. Older active entitlements will continue to work but new ones cannot be activated.	Xanadu

	job downloads all groups and group memberships configured on *Microsoft Entra ID*.	
Strategic Planning	After upgrading to *Strategic Planning* v4.3.2, run the **Migrate BreakdownInterval To Checkinfrequency** scheduled job. This scheduled job migrates the existing values in the **Review frequency** and **Breakdown interval** fields to the **Check-in frequency** field in the target records. For more information on how these values are migrated for targets with different values, see Target breakdowns migration.	Xanadu
Subscription Management	*Subscription Management* version 3.2 is active by default on all instances of the *Xanadu* release. Update to *Subscription Management* version 4.0 or later to use the latest features. For more information about updating *Subscription Management*, see Update an app or plugin.	Xanadu
Telecommunications Network Inventory	If you are an existing user of previous releases, both legacy and new product models will be available in the Network Inventory Workspace menu after upgrading to *Xanadu*. To rectify this issue, you must migrate your legacy product model data to the new product model tables in your current instance. For more details about the procedure, see KB1695167.	Xanadu
Third-party Risk Management	If you are a *VRM* user upgrading to *TPRM*, when upgrading to *Vancouver* or later from an earlier release, you must run each upgrade sequentially to ensure that fix scripts run correctly. This means upgrading from *Utah* to *Vancouver*, *Vancouver* to *Washington DC*, and so on. If the scripts do not run in the correct order, it can result in data inconsistencies, broken functionalities, and conflicts. For more information on upgrading from *VRM* to *TPRM*, see Third-party Risk Management upgrade information.	Xanadu
Vulnerability Response Integration with Claroty CTD	Claroty CTD v5.1 is also supported for the Vulnerability Response Integration with Claroty CTD application.	Xanadu
Vulnerability Response integrations	• For more information about the released versions of the *Vulnerability Response* application as well as the third-party and *ServiceNow* applications that are compatible with the *Xanadu* release, see the Vulnerability Response Compatibility Matrix and Release Schema	Xanadu

Product	Release notes	Family
	Changes [KB0856498] article in the *Now Support* Knowledge Base. • For information about the new features of *Vulnerability Response*, see Vulnerability Response release notes.	
Workflow Studio	As of *Washington DC* patch 3, updating *Workflow Studio* automatically updates all of its application dependencies such as *ServiceNow® Workflow Studio*, Playbook, and *ServiceNow® Decision Builder*. You can no longer see or update the individual application dependencies of *Workflow Studio* from the *ServiceNow® Store* or the list of plugins.	Xanadu
AI Control Tower	General availability release, no upgrade.	Yokohama
AI Search	When you upgrade to *Yokohama* from an earlier release, make knowledge block content searchable by reindexing all your indexed sources that include knowledge articles. For details on reindexing, see Index or reindex an indexed source or Index or reindex multiple indexed sources.	Yokohama
Accounts Payable Operations	If you're upgrading from a previous release, you must configure the reference field in the Tax Code [sn_fin_tax_code] table. The exception engine validates the invoice using the tax code and raises exceptions if necessary.	Yokohama
App Engine Studio	Due to a new process for assigning groups in *AEMC*, the same version of the Application Intake plugin must be activated on each of your instances. For more information, see App Readiness and Compliance Report.	Yokohama
Application Manager	*Application Manager* is active by default on instances on the *Yokohama* release. Upgrade your instance to *Yokohama* patch 11 or later to use the latest features. For information about upgrading your *ServiceNow AI Platform* instance, see Prepare your upgrade.	Yokohama
Application Vulnerability Response	• For information about the new features of *Vulnerability Response*, see Vulnerability Response release notes. • For more information about the released versions of the *Application Vulnerability Response*	Yokohama

Product	Release notes	Family
	application as well as the third-party and *ServiceNow* applications that are compatible with the *Xanadu* release, see the Vulnerability Response Compatibility Matrix and Release Schema Changes [KB0856498] article in the *Now Support Knowledge Base*.	
Automated Test Framework	Copy and customize quick start tests provided by the *ServiceNow AI Platform*® to validate that your instance works after you make any configuration changes. For example, if you apply an upgrade or develop an application. The tests can produce a pass result only when you run them on a base system without any customizations and with the default demo data that is provided with the application or feature plugin. To apply a quick start test to your instance-specific data, copy the quick start test and add your custom data. For more information, see Available quick start tests by application or feature.	Yokohama
Configuration Management Database (CMDB)	Three new indexes (parent, type), (child, type), and (child, parent, type, port) are added to the CI Relationship [cmdb_rel_ci] table to improve the performance of Identification and Reconciliation Engine (IRE) querying this table. This change is likely to increase upgrade time. For more information about the impact of this change during upgrade and to learn how to minimize that impact, see Increased Yokohama Upgrade Time due to cmdb_rel_ci index additions [KB1703367].	Yokohama
Data Management	• After upgrading a self-hosted instance to *Yokohama*, the sys_physical_table_stats table doesn't display the latest data for table size, with the sample_period_start column showing dates prior to the upgrade. To see the correct table size, you can set the com.glide.stats.storage_disk_usage.information_schema system property to true, which allows the statsGatherer job to use the information schema to generate the required database statistics. • A data management policy record is automatically created for each table that is configured with an archive rule or a table cleaner rule prior to the upgrade.	Yokohama
Data Privacy	Licensing changes enable you to install *Data Discovery*, *Data Discovery* APIs, Data Anonymization, and *Data Privacy* APIs without an entitlement, but you must have an entitlement to run a job.	Yokohama

Product	Release notes	Family
DevOps Change Velocity	If you are a new customer or are using a zBoot instance and you want to create type-based workflow change requests in *DevOps Change Velocity*, you must add the *com.snc.change_management.change_model.type_compatibility* property and set it to True. For more information, see Add a system property. If you are an upgrading customer, you must run the **ReConfigure Bitbucket Server Repositories for PullRequest** job to re-configure your existing Bitbucket Server or Bitbucket Data Center repositories so that pull request records can be imported. You can navigate to **All > System Definition > Scheduled Jobs** to search for this job and run it.	Yokohama

Encryption Key Management	• The GlideEncrypter API uses the three-key Triple Data Encryption Standard (3DES) encryption standard which NIST 800-131A Rev 2 has recommended against using after 2023. The following changes are taking place in the *Yokohama* release in preparation for a full deprecation of GlideEncrypter/3DES in the future.
	  ○ New *Yokohama* instances can't use GlideEncrypter. All base system scripts have been changed to use alternative encryption processes.
	  ○ if you're upgrading your *Yokohama* instances, you can still use 3DES, but you can also disable 3DES usage with a system property.
	  ○ Learn more about 3DES deprecation in KB1704481.
		Yokohama

External Content Connectors	Beginning with version 2 of the External Content Connectors application, external content connectors implement semantic vector indexing for crawled items. When you upgrade to a version that supports semantic vector indexing, your existing connectors will reindex all previously retrieved items the next time they're visited by a crawl, even if those items' content is unchanged. To force semantic vector indexing of your external content items as soon as possible after upgrading, cancel any running crawls, then restart the canceled crawls manually. When you upgrade to version 4 of the External Content Connectors application from an earlier version, searches may not show all previously crawled content until you've completed both a content crawl and a user mapping crawl for each upgraded connector. The first content crawl run after the upgrade will reindex all searchable content from the source system, and the user mapping crawl will reindex all security principals from the source system. All crawled content should be shown in searches after both of these crawls are complete.	Yokohama

Product	Release notes	Family
Field Service Management	• Upgrading to Yokohama may extend the upgrade maintenance time of a customer due to Appointment Booking. The Appointment Booking configuration tables get extended to the Application File [sys_metadata] table as a part of the upgrade. After upgrading to Yokohama, re-parenting occurs automatically and the duration of the re-parenting depends on the number of records in Application File [sys_metadata] table. • Effective March 1, 2025, Google has designated the Places API, Directions API, and Distance Matrix API as Legacy services. The newer versions of these services are Places API (New) and Routes API. You can't enable or generate new API keys for these legacy services. However, you can continue using these services with the existing API keys. If you need to create a new Google API key after March 1, 2025, you must enable the new APIs from Google Console and upgrade to Yokohama Patch 3 version or higher to ensure compatibility.	Yokohama
Financial Services Card Operations	During the upgrade to *Yokohama*, the *Financial Services Card Operations* plugin reparents the Card Disputes Transaction table [sn_bom_credit_card_disputes_transaction] to the Financial Task table [sn_bom_task] in *Financial Services Operations Core*. Reparenting leverages the benefits and advancements of *ServiceNow® Financial Services Operations Core* while preserving the functionality of existing applications. **Note:** If your instance uses the Card Disputes Transaction table [sn_bom_credit_card_disputes_transaction] and it contains a large amount of data, you may experience increased upgrade times.	Yokohama
Generative AI Controller	*Generative AI Controller* is installed and updated when you install or update any *Now Assist* application. If you have issues installing or updating applications, see this knowledge article for steps that may address your issue. Otherwise, you can make a Support case.	Yokohama
ITOM Visibility	3DES support is planned for permanent removal from the *MID Server* for *MID Servers* with SSH-based Discovery or SSH-based integrations. For more information, see 3DES deprecation in SSH from Xanadu [KB1644950]. After upgrading to Yokohama, a Fix Script named "Add Explicit Public SNMP Credential" might create a public	Yokohama

	SNMP credential in Production instances. This could lead to unnecessary records via *Discovery*. The Fix Script is present in Yokohama instances, including OOB. Before applying the upgrade of *Discovery* core, Yokohama version, verify the fix script behavior in a sandbox environment. Remove the public SNMP credentials if not required.	
Impact	The *Impact Store Application* configuration requires a sequence of tasks. See Configuring the Impact Store Application for details.	Yokohama
Instance Data Replication	Improve the performance and processing efficiency of *Instance Data Replication* (*IDR*) by upgrading your replication sets to V2, which uses *Hermes Messaging Service*. For details, see Upgrading legacy sets. Log rotation is automatically enabled for the Replication Payload Error [idr_replication_payload_error] table after the upgrade. By default, the log rotation schedule is comprised of seven shards, with five days for each shard. All log entries in this table created before the upgrade are automatically truncated.	Yokohama
MID Server	For the latest *MID Server* system requirements, see MID Server system requirements. The minimum JRE version supported is 17.0.10 and the recommended version is 17.0.12. If you have installed your own JRE, the upgrade process takes the following actions to verify that the *MID Server* uses a supported JRE: • If a *MID Server* is using an unsupported version of the JRE when it upgrades, the upgrade process displays a warning message with the minimum and recommended JRE version. • If a supported JRE is running on the *MID Server* host, the upgraded *MID Server* uses that version. All *MID Server* host machines require access to the download site at `install.service-now.com` to enable auto-upgrades. For additional details, read how the system manages *MID Server* upgrades. Only one *Windows MID Server* service is permitted according to the executable path. Upgraded *Windows MID Servers* that have multiple services pointing to the same installation folder can't start. See *MID Server* fails to start for more information. For more information about *MID Server* upgrades, see the following topics:	Yokohama

Product	Release notes	Family
Playbooks in Workflow Studio	After you upgrade to *Yokohama*, update the *Workflow Studio* application in the *ServiceNow Store*.	Yokohama
Portfolio Planning	After upgrading to *Portfolio Planning* v8.8.0, the custom view settings previously saved under user preferences will be cleared. You must reapply these changes and create views as needed. For instructions, see Create a portfolio plan view in Portfolio Planning and Create a free-form roadmap view in Portfolio Planning.	Yokohama
Product Catalog Management and Pricing Management	After upgrading to the May 2025 release of *Sales Customer Relationship Management* applications, you must run a scheduled job that automatically enables the **Allow multiple configurations** option when your catalog admin creates product offerings with an associated product specification. This job is called **Scheduled job with an upgrade script to set 'allow_multiple_configurations' to true on an Offering**. When multiple product offering configurations are allowed in configurable opportunities, quotes, or orders, agents can create multiple instances of a child product offering and define custom configurations for each offering instance. **Note:** The **Allow multiple configurations** option is always enabled (set to true) for all product offerings that have an associated product specification. However, if the product specification has a child hierarchy, this option is honored only for orders placed through the TMF APIs. For specifications without a hierarchy, the flag is honored across all ordering channels. The May 2025 release provides a default pricing plan that includes a new step, Apply Renewal Adjustment. If you've been using a custom pricing plan from an earlier release, review the default pricing plan, which is in a Retired state after upgrading to the May 2025 release. Determine whether you want to publish the default plan or customize the default pricing plan for your needs and then publish the custom plan to be used.	Yokohama
Public Sector Digital Services	After the upgrade, certain public sector menus and menu items in the *CSM Configurable Workspace* revert to their original *CSM* label names. You can relabel these items for public sector use by updating the labels for the **Customer**, **Accounts**, and **Service Organizations** UX list category records. For more details on relabeling, navigate to **All** > **Constituent Service** > **Administration** > **Guided Setup**,	Yokohama

	and select **Configurable Workspace for Public Sector Digital Services** > **Customize Workspace Labels Manually**.	
RPA Hub	Upgrade any of these currently installed *Microsoft* Software Installers (MSIs) by downloading the RPA applications: • *RPA Desktop Design Studio* • *Attended Robot* • *Unattended Robot* • *Unattended Robot* Login Agent For more information, see Download the RPA applications from RPA Hub. The following upgrade information is applicable only when you're upgrading from *San Diego* or *Tokyo* to *Yokohama*. Based on the number of records in the application file table, you may experience a delay while upgrading the *RPA Hub* applications from *Tokyo* or earlier releases to *Yokohama*. Before upgrading *RPA Hub* to *Yokohama*, you must set the value of the *glide.rollback.blacklist.TableParentChange.change* system property to **false**. If this property doesn't exist in the System Property [sys_properties] table, add the property and set its value to false. For more information on how to add a property, see Add a system property. After you upgrade to *Yokohama*, the bot process definitions change to the new structure, which is the bot process configuration. Although the bot process configuration doesn't replace the bot process completely, most fields are moved from the bot process to the bot process configuration. If you upgrade to *Yokohama* without updating the system property value, the tables don't extend the Application File [sys_metadata] table. To update the table changes manually, see the Restructuring RPA Hub tables to sys_metadata in Utah and beyond release [KB1223629] article in the *Now Support Knowledge Base*.	Yokohama
Security Posture Control	For a complete list of the applications that are required to implement *Security Posture Control*, see Install Security Posture Control.	Yokohama

Product	Release notes	Family

Service Exchange	• When using *Service Exchange* for Providers and *Service Exchange* for Consumers in a single instance, you must upgrade both applications simultaneously to the same version to maintain compatibility.
	• The *Service Exchange* Global Script Include is automatically installed or updated when you install the *Service Exchange* application on the following platform versions:
	  ○ *Washington DC* Patch 9
	  ○ *Xanadu* Patch 4
	  ○ *Yokohama*
	• *Service Exchange* 2.x.x, which was first released with the *Xanadu* release, does not support migration of *Service Exchange* (Legacy) versions. If you are using a *Service Exchange* (Legacy) version, before you upgrade to the *Yokohama* release, you must follow instructions in the *Service Exchange* for Providers (Legacy) - Migration Utility [KB1499823] article in the *Now Support* Knowledge Base to migrate your configuration data.
	• If you are upgrading from *Service Exchange* version 1.x.x, follow the steps in Upgrade Guide - *Service Exchange* for Providers and Consumers application (v2.x.x release) [KB1700387] to migrate your *Service Exchange* applications.
	• Due to the introduction of mismatched version support, new entitlements cannot be activated until both the consumers and providers upgrade to *Service Exchange* version 2.x.x. Older active entitlements will continue to work but new ones cannot be activated.
	• If you upgrade to *Service Exchange* version 2.0.55 with *Sales Customer Relationship Management* plug-in version 1.0.4 before upgrading the platform to the *Yokohama* release, the new Deny ACLs will not be installed. To ensure the Deny ACLs get installed, after upgrading to *Yokohama*, you must click Repair to reinstall the *Service Exchange* application.
		Yokohama

Service Operations Workspace for ITSM	Ensure that the following applications have compatible upgraded versions: • *Service Operations Workspace ITSM* Applications application (sn_sow_itsm_cont) • *Service Operations Workspace ITOM* Applications application (sn_sow_itom_cont)	Yokohama

Product	Release notes	Family
	For more information on compatible versions, see Version compatibility between Service Operations Workspace for ITSM and Service Operations Workspace ITOM.	
ServiceNow IDE	*ServiceNow IDE* version 1.1.4 is active by default on instances on the *Yokohama* release. Update to *ServiceNow IDE* version 2.0 or later to use the latest features. For information about updating *ServiceNow IDE*, see Updating apps.	Yokohama
ServiceNow SDK	Upgrade to the latest version of the *ServiceNow SDK* with the `now-sdk upgrade` command. For more information, see Upgrade the ServiceNow SDK. *ServiceNow SDK* version 3.0 supports integrating with *ServiceNow* instances beginning with the *Washington DC* release. **Note:** For more information about minor releases of the *ServiceNow SDK*, see the ServiceNow IDE, SDK, and Fluent articles in the *ServiceNow Community*.	Yokohama
ServiceNow Studio	*ServiceNow Studio* no longer has to be downloaded from the *ServiceNow Store*. It's available on the *ServiceNow AI Platform* by default.	Yokohama
Software Asset Management	Starting from the *Yokohama* release, all the reconciliation script includes are being moved from the family release to the *Software Asset Management* store application (com.sn_itam_samp). When upgrading to *Yokohama*, if you have made customizations to reconciliation script includes, you must move your customizations to the new script includes. The old script includes will be deprecated. When upgrading to *Yokohama* Patch 1 with the *Software Asset Management* (sn_itam_samp) 2.1.0 store application installed, you must delete the entitlements for the existing *CrowdStrike* integration profiles. Then, create new entitlements for various *CrowdStrike* products, such as *CrowdStrike* Falcon Endpoint Protection and *CrowdStrike* Falcon Discover, based on their license metrics. These metrics include the Reserved Hourly Average Sensor and Sensor Subscription, which are found under the *CrowdStrike* License Metric Group. • If any existing *CrowdStrike* profiles are in the Draft state, create new integration profiles and delete the existing ones. • If any existing *CrowdStrike* profiles are in the Published state, their state changes to Draft. Strategic Planning	After upgrading to *Strategic Planning* v4.7.0, the following changes apply to user preferences: • Custom view settings previously saved under user preferences will be cleared. You must reapply these changes and create views as needed. For instructions, see Create a portfolio plan view in Strategic Planning and Create a free-form roadmap view in Strategic Planning. • Customizations made to the Timeline and Kanban views in the **Roadmap** tab, and the Kanban view in the **Prioritization** tab at the portfolio plan level, will be copied to the Default view of the portfolio plan. Similarly, any customizations made to the Timeline and Kanban views in the free-form roadmap will also be copied to the Default view of the free-form roadmap.	Yokohama
Subscription Management	*Subscription Management* version 4.1 is active by default on all instances of the *Yokohama* release. Update to *Subscription Management* version 6.0.2 or later to use the latest features. For more information about updating *Subscription Management*, see Update an app or plugin.	Yokohama
Telecommunications Network Inventory	The *Yokohama* release needs the *Xanadu* platform version to support the Design and Assign playbook feature.	Yokohama
Telecommunications Service Operations Management (TSOM)	After installing *Telecommunications Service Operations Management* TSOM, any customized IRE identification rules applied to interface cards, slots, sub-slots and network interfaces may be affected. You must review and validate the rules to ensure proper functionality.	Yokohama
Third-party Risk Management	Starting with the *Vancouver* release, if you're a *VRM* user upgrading to *TPRM*, from an earlier release, you must run each upgrade sequentially to ensure that fix scripts run correctly. This means upgrading from one release to the next rather than skipping to the latest release. Not running scripts in the correct order can result in data inconsistencies, broken functionalities, and conflicts. For more information on upgrading from *VRM* to *TPRM*, see Third-party Risk Management upgrade information. For existing *TPRM* customers, after upgrading to version 20.2.4, data from the Industry column in the Company [core_company] table is automatically migrated to the tprm_industry column. Migration can take several hours depending on the number of records in the Company	Yokohama

	[core_company] table. After migration, a system log message confirms that the migration is complete. Review the Company [core_company] table content and update any customizations referencing the Industry field to use tprm_industry. After verifying the migration and updating customizations, you can drop the Industry column.	
Usage Insights	• The *Usage Insights* module is moved under Platform Analytics. • Custom user properties must be reconfigured. • Default country and user consent policies are updated to No Consent Required. • The *Usage Insights* UI and navigation structure are reworked.	Yokohama
Vulnerability Response Integration with Claroty CTD	Claroty CTD v5.1 is also supported for the Vulnerability Response Integration with Claroty CTD application.	Yokohama
Vulnerability Response integrations	• For more information about the released versions of the *Vulnerability Response* application as well as the third-party and *ServiceNow* applications that are compatible with the *Yokohama* release, see the Vulnerability Response Compatibility Matrix and Release Schema Changes [KB0856498] article in the *Now Support* Knowledge Base. • For information about the new features of *Vulnerability Response*, see Vulnerability Response release notes.	Yokohama
Workforce Optimization for ITSM	**Enhanced security to access *Workforce Optimization for ITSM*** When you upgrade to the *Yokohama* release, you have the option to turn on enhanced security for the *Workforce Optimization for ITSM* application. To get the enhanced security, you must contact *Now Support* to install the ITSM Enhanced Security Features plugin (com.snc.itsm.enhanced_security). After you install the plugin, you need the roles listed here to access the respective features.	Yokohama

	• For information about the new features of Vulnerability Response, see the Vulnerability Response release notes. • For more information about the released versions of the *Application Vulnerability Response* application as well as the third-party and *ServiceNow* applications that are compatible with the *Zurich* release, see the Vulnerability Response Compatibility Matrix and Release Schema Changes [KB0856498] article in the *Now Support Knowledge Base*.	
Automated Test Framework	Copy and customize quick start tests provided by the *ServiceNow AI Platform*® to validate that your instance works after you make any configuration changes. For example, if you apply an upgrade or develop an application. The tests can produce a pass result only when you run them on a base system without any customizations and with the default demo data that is provided with the application or feature plugin. To apply a quick start test to your instance-specific data, copy the quick start test and add your custom data. For more information, see Available quick start tests by application or feature.	Zurich
CPQ Configurator	If you used the legacy product configurator previously and want to use the CPQ Configurator, after upgrading, you must set the *sn_prd_pm.enable_advanced_configuration* system property to true to be able to use the configurator in *Sales Customer Relationship Management* workflows. .	Zurich
Change Management	As part of the update to use Flow instead of Progress Workers for conflict detection, the Conflict Checker Progress UI Formatter record references a new UI macro, change_conflict_worker_progress_gate. This macro checks the *change.conflict.useprogressworker* system property to determine the conflict detection mechanism and then displays the corresponding UI macro to work with either Progress Workers or the Change Management Worker table. For more information, see Conflict detection.	Zurich
Cloud Cost Management 9.0	The *Cloud Cost Management* platform support is available beginning with the *Xanadu* release. For instructions on upgrading *Cloud Cost Management* to *Zurich*, see Upgrade Cloud Insights.	Zurich

Product	Release notes	Family
Cloud Exposure View	The Cloud Exposure View is a workspace in the Cloud Security for Cloud Workspace application that is supported by the *Unified Security Exposure Management* application. *Unified Security Exposure Management* (*USEM*) and the Cloud Security for Cloud Workspace applications are required. *USEM* is available to all customers who are entitled to *Vulnerability Response*. See Unified Security Exposure Management release notes for more information.	Zurich
Configuration Compliance	If you are currently using *Configuration Compliance*, and you do not intend to upgrade to *Unified Security Exposure Management* (USEM), install a version below v30.x of *Configuration Compliance* and for upgrades to supported third-party integration applications. The Missing Assets [sn_vul_wiz_missing_asset] table used for storing assets imported by the backfill integrations for the Vulnerability Response Integration with Wiz is deprecated. If you are currently using the Vulnerability Response with *Wiz* integrations, after updating to version 1.1, you must backdate any of your existing *Wiz* primary integrations by three days and run them. Please review more information about the *Wiz* integration at SecOps articles on the Security Operations Community. For more information about the released versions of the *Vulnerability Response* application as well as the third-party and *ServiceNow* applications that are compatible with the *Zurich* release, see the Vulnerability Response Compatibility Matrix and Release Schema Changes [KB0856498] article in the *Now Support Knowledge Base*.	Zurich
Configuration Management Database (CMDB)	Due to the removal of the **Design** value for the operational status attribute in a CI, after an upgrade, you must review all CIs that have the discovery source attribute set to *Manual via IRE*. Review the operational status attribute of those CIs and set it to a supported value in *CMDB* for your environment. For example, you can set the attribute to *Non-Operational*. For more information about the operational status values, see Tangible/physical life cycle. On an upgraded *Zurich* instance, to configure the sn_cmdb_admin and the sn_cmdb_editor user roles with the necessary permissions to perform some *CMDB Workspace* tasks, you must manually run the scheduled job *Remove CMDB Roles from ITIL roles and Add CUD access to sn_cmdb_admin/sn_cmdb_editor roles*. This scheduled job modifies the user roles as follows:	Zurich

Product	Release notes	Family
	against using after 2023. The following changes are taking place in the *Zurich* release in preparation for a full deprecation of GlideEncrypter/3DES in the future: ○ New *Zurich* instances can't use GlideEncrypter. All base system scripts have been changed to use alternative encryption processes. ○ if you're upgrading your *Zurich* instances, you can still GlideEncrypter, which has been updated to use AES256-GCM encryption via the Key Management Framework. ○ Learn more about 3DES deprecation in KB1704481.	
Encryption	For the GlideEncrypter API, NIST 800-131A Rev 2 has recommended against using the Triple Data Encryption Standard (3DES) encryption. The following changes are taking place in the *Zurich* release with the official removal of 3DES encryption for GlideEncrypter. • The GlideEncrypter API defaults to using the Key Management Framework (KMF) based algorithm, Advanced Encryption Standard (AES), for encryption and decryption operations for upgraded instances only. • For instances created with the *Zurich* release or later, this API isn't supported. • Learn more about 3DES deprecation in KB1704481. In the *Zurich* release, Column Level Encryption has received a required upgrade to Key Management Framework Column Level Encryption (KMF-CLE) due to the platform-wide deprecation of 3DES. For more information about this upgrade, see KB1700704.	Zurich
Enterprise Asset Management	Starting with *Zurich* release, a new menu, Asset put away, has been added to the *ServiceNow Agent* app navigation bar. When upgrading to the *Zurich* release, a fix script identifies whether the *ServiceNow Agent* app navigation bar was customized and takes the necessary action. • If the navigation bar wasn't customized before the upgrade, a new Asset put away icon () is included in the navigation bar • If the navigation bar was customized before the upgrade, two navigation bars appear: Customized old IT Asset Management and IT Asset Management. The new icon appears in the IT Asset Management navigation bar.	Zurich
External Content Connectors	Beginning with version 2 of the External Content Connectors application, external content connectors implement semantic vector indexing for crawled items. When you upgrade to a version that supports semantic vector indexing, your existing	Zurich

Product	Release notes	Family
	connectors will reindex all previously retrieved items the next time they're visited by a crawl, even if those items' content is unchanged. To force semantic vector indexing of your external content items as soon as possible after upgrading, cancel any running crawls, then restart the canceled crawls manually. When you upgrade to version 4 of the External Content Connectors application from an earlier version, searches may not show all previously crawled content until you've completed both a content crawl and a user mapping crawl for each upgraded connector. The first content crawl run after the upgrade will reindex all searchable content from the source system, and the user mapping crawl will reindex all security principals from the source system. All crawled content should be shown in searches after both of these crawls are complete.	
Field Service Management	Effective March 1, 2025, the *Google* Places API, Directions API, and Distance Matrix API have been designated as legacy services. The newer versions of these services are Places API (New) and Routes API. *Google* Maps APIs for *Field Service* capabilities uses the latest version of the APIs in the *Zurich* release and *Dispatcher Workspace* version 8.0. To help avoid issues with the *Google* Maps APIs, enable Places API (New) and Routes API from *Google Cloud Platform* Console.	Zurich
Flows, subflows, and actions in Workflow Studio	An earlier version of the save as you go feature was released and withdrawn from the *Washington DC* release. If you're upgrading from the *Washington DC* release, you might have manually turned off the save as you go features by setting a system property. To restore the save as you go features, see Restore save as you go functionality.	Zurich
Generative AI Controller	*Generative AI Controller* is installed or updated when you install or update a *Now Assist* application. If you have issues installing or updating applications, see this knowledge article or open a support case.	Zurich
Hardware Asset Management	• Starting from the *Zurich* release, a few workflows have been migrated to *Workflow Studio* as flows. **Note:** The migration of workflows to *Workflow Studio* applies to *Asset Management*, *Procurement*, and *Contract Management* applications.	Zurich

Product	Release notes	Family
	○ The following workflows have been migrated to *Workflow Studio* as flows: ▪ Procurement Process Flow – Hardware ▪ Transfer Order ▪ Transfer Order Line ▪ Source Request ▪ Contract Approval ○ When upgrading to the *Zurich* release, a fix script identifies whether the workflows were customized and takes necessary action. ▪ If the workflows weren't customized before the upgrade, the legacy workflows are deactivated from the instance, and *Workflow Studio* flows are installed and executed post-upgrade. ▪ If the impacted workflows were customized before the upgrade, the *Workflow Studio* flows are installed but aren't executed for any of the impacted flows post-upgrade. You can view and access the impacted workflows in the instance after the upgrade. However, the deprecated workflows are considered custom code and aren't supported for maintenance. • After upgrading to the *Zurich* release, if an approval history record exists for a contract that is no longer required, reject the record instead of deleting it. If the approval history record is deleted, *Workflow Studio* doesn't support updating the contract's **Substate** field value to display the correct state. • Starting with *Zurich* release, a new menu, Asset put away, has been added to the *ServiceNow Agent* app navigation bar. When upgrading to the *Zurich* release, a fix script identifies whether the *ServiceNow Agent* app navigation bar was customized and takes the necessary action. ○ If the navigation bar wasn't customized before the upgrade, a new Asset put away icon () is included in the navigation bar ○ If the navigation bar was customized before the upgrade, two navigation bars appear: Customized old IT Asset Management and IT Asset Management. The new icon appears in the IT Asset Management navigation bar. • A new role, sn_itam_recomm.recommendations_read, helps ensure that only valid users can execute APIs related to the Important Actions menu in the *Asset Workspace*. The following roles, which have

Instance Data Replication	• Improve the performance and processing efficiency of *Instance Data Replication* (*IDR*) by upgrading your replication sets to V2, which uses *Hermes Messaging Service*. For details, see Upgrading legacy sets. • Log rotation is automatically enabled for the Replication Payload Error [idr_replication_payload_error] table after the upgrade. By default, the log rotation schedule is composed of seven shards, with five days for each shard. All log entries in this table created before the upgrade are automatically truncated.	Zurich
MID Server	For the latest *MID Server* system requirements, see MID Server system requirements. The minimum JRE version supported is 17.0.10 and the recommended version is 17.0.12. If you have installed your own JRE, the upgrade process takes the following actions to verify that the *MID Server* uses a supported JRE: • If a *MID Server* is using an unsupported version of the JRE when it upgrades, the upgrade process displays a warning message with the minimum and recommended JRE version. • If a supported JRE is running on the *MID Server* host, the upgraded *MID Server* uses that version. All *MID Server* host machines require access to the download site at `install.service-now.com` to enable auto-upgrades. For additional details, read how the system manages *MID Server* upgrades. Only one *Windows MID Server* service is permitted according to the executable path. Upgraded *Windows MID Servers* that have multiple services pointing to the same installation folder can't start. See *MID Server* fails to start for more information. For more information about *MID Server* upgrades, see the following topics: • *MID Server* pre-upgrade check: Describes how the AutoUpgrade monitor tests the ability of the *MID Server* to upgrade on your system before the actual upgrade. • Upgrade the *MID Server* manually: Describes how to upgrade your *MID Servers* manually.	Zurich
Notify	Starting with the *Zurich* release, *Notify* uses subflows instead of workflows. For existing users in *Zurich*, your	Zurich

Product	Release notes	Family
	the 'admin' role in the code will be substituted with the new feature-specific granular roles for authorization use cases. Read https://www.servicenow.com/docs/r/platform-security/granular-admin-roles.html to learn more.	
On-Call Scheduling	Starting from the *Zurich* release, *On-Call Scheduling* uses subflows, not workflows. You must transition from workflows to subflows, because the workflows are considered as legacy workflows. For existing users in *Zurich*, your current workflows continue to be supported. However, for new users, the *On-Call Scheduling* plugin installations on *Zurich* and later instances only use subflows. Maintain, build, and modify your own custom on-call scheduling flows in *Workflow Studio* with subflows for new instances. The following subflows are available for configuration:	Zurich
Operational Resilience	After upgrading to *Operational Resilience* version 21.0.x, rerun the *Update CSDM and other dependencies* scheduled job to populate the additional metadata that was introduced in this release.	Zurich
Performance Analyzer	Starting with the *Zurich* release, Performance Analyzer is available on your instance automatically. For access to Performance Analyzer on earlier instances, install Performance Analyzer from the *ServiceNow® Store*.	Zurich
Platform Analytics experience	On upgrade, any homepages on your instance that have been opened are migrated to *Core UI* dashboards, which are visible in the dashboard library. For more information, see Homepage deprecation. Simple lists are all converted to the new List element on upgrade.	Zurich
Playbooks in Workflow Studio	After you upgrade to *Zurich*, update the *Workflow Studio* application in the *ServiceNow Store*.	Zurich
Product Catalog Management and Pricing Management	*Pricing Management* v15.0.0 provides a default pricing plan that includes new steps to support pricing strategies introduced in this release. If you're using a custom pricing plan from an earlier release, review the default pricing plan, which is in a Retired state after you upgrade. Determine whether you want to publish the default plan or customize the default pricing plan for your needs. The default plan contains new steps for calculating net pricing and roll-up	Zurich

Product	Release notes	Family
	values for configurable products in quotes and orders: Net Price Calculation, Line Rollup, and Header Rollup steps. This pricing functionality existed in previous releases for quotes and orders but wasn't included in the default pricing plan. To retain this previous functionality for quotes and orders, you must add the Net Price Calculation, Line Rollup, and Header Rollup steps in your custom pricing plan before you publish it for use. If you used the legacy product configurator previously and want to use the CPQ Configurator, after upgrading set the *sn_prd_pm.enable_advanced_configuration* system property to true. When set to true, this property enables the CPQ Configurator. If you want to use *AI Search* for product catalog searches, before upgrading install *Now Assist for Sales Force Automation (SFA)*, which includes the plugins needed for *AI Search* functionality. After upgrading, complete various steps to implement *AI Search*. These steps include running a scheduled job to set up *AI Search* and enabling *AI Search* in the product catalog interface by setting the *enable_ai_search_in_catalog* system property to true. For details on these configuration steps, see Configuring AI Search for product catalog search.	
Public Sector Digital Services	After the upgrade, certain public sector menus and menu items in *CSM Configurable Workspace* revert to their original *CSM* label names. You can relabel these items for public sector use by updating the labels for the Customer, Accounts, and Service Organizations UX list category records. For more details on relabeling, navigate to **All** > **Constituent Service** > **Administration** > **Guided Setup**, and select **Configurable Workspace for Public Sector Digital Services** > **Customize Workspace Labels Manually**.	Zurich
RPA Hub	Upgrade any of these currently installed *Microsoft* Software Installers (MSIs) by downloading the RPA applications: • *RPA Desktop Design Studio* • *Attended Robot* • *Unattended Robot* • *Unattended Robot* Login Agent For more information, see Download the RPA applications from RPA Hub. The following upgrade information is applicable only when you're upgrading from *San Diego* or *Tokyo* to *Zurich*.	Zurich

(continued)

Product	Release notes	Family
	Based on the number of records in the application file table, you may experience a delay while upgrading the *RPA Hub* applications from *Tokyo* or earlier releases to *Zurich*. Before upgrading *RPA Hub* to *Zurich*, you must set the value of the *glide.rollback.blacklist.TableParentChange.change* system property to **false**. If this property doesn't exist in the System Property [sys_properties] table, add the property and set its value to false. For more information on how to add a property, see Add a system property. After you upgrade to *Zurich*, the bot process definitions change to the new structure, which is the bot process configuration. Although the bot process configuration doesn't replace the bot process completely, most fields are moved from the bot process to the bot process configuration. If you upgrade to *Zurich* without updating the system property value, the tables don't extend the Application File [sys_metadata] table. To update the table changes manually, see the Restructuring RPA Hub tables to sys_metadata in Utah and beyond release [KB1223629] article in the *Now Support Knowledge Base*.	
Retail applications	Starting with this release onwards, the retail base case has been made abstract. (An abstract case or abstract case type is a base configuration of a case that is intended to be extended by specialized case types rather than used directly.) After upgrading to the *Zurich* release and for any version updates beginning with the *Yokohama* release, if you are using the retail base case table you will no longer be able to create new cases or update existing cases. Use the following case types instead: • Store Inquiry • Retail Customer Complaint • In-store Operations • HQ Communications You can also extend your own case types. For more information on these changes, see the Impact analysis and guidance: Retail case table updates [KB2216547] article in the *Now Support* Knowledge Base.	Zurich
SQL API	ServiceNow provided customers with a free SOAP-based ODBC client. If you have an active RaptorDB Pro entitlement, you can migrate to the REST-based SQL API client by	Zurich

Product	Release notes	Family
	`sdk auth --add` command to authenticate with instances. For more information, see Authenticate. **Note:** For more information about minor releases of the *ServiceNow SDK*, see the ServiceNow SDK repository on *GitHub*.	
ServiceNow Studio	*ServiceNow Studio* no longer has to be downloaded from the *ServiceNow Store*. It's available on the *ServiceNow AI Platform* by default.	Zurich
ServiceNow Vault	To install *ServiceNow Vault*, the following must be installed: • Data Discovery • Data Privacy • Data anonymization • Field Encryption • Zero Trust Access	Zurich
Skills Foundation	You cannot download industry skills data as part of the guided setup.	Zurich
Software Asset Management	Starting from the *Zurich* release, the following workflows are migrated to Flow Designer as flows: • Reclamation workflow • Procurement Process Flow - Auto allocation enabled When upgrading to the *Zurich* release, a fix script identifies whether the workflows were customized. If you haven't customized the workflows before the upgrade, the fix script deactivates the legacy workflows from the instance and deploys the Flow Designer flows on the instance post-upgrade. If you have customized the impacted workflows in the previous release, the fix script doesn't deploy the Flow Designer flows on the instance post-upgrade. You can view and access the impacted workflows in the instance after the upgrade. However, the deprecated workflows are considered as custom code and *ServiceNow* doesn't support those workflows. Starting from the *Zurich* release, the *Software Asset Workspace* plugin (com.sn_sam_workspace) is moved from the family release to the *Software Asset Workspace* store application. After upgrading to *Zurich*, the *Software Asset Workspace* plugin (com.sn_sam_workspace) is inactivated and the *Software Asset Workspace* store application (sn_sam_workspace) is enabled in the instance.	Zurich

(continued)

Product	Release notes	Family
	When upgrading to the *Software Asset Management – SaaS License Management* plugin (sn_sam_saas_int) version 16.0.6 or later in the Zurich release, verify that the *Software Asset Workspace* store app (sn_sam_workspace) is updated to version 9.0.4.	
Source-to-Pay Operations Integrations	**Important:** Due to a performance issue identified with the upgrade fix script, the sourcing fix script has been modified. This script will no longer execute automatically during the upgrade process. Instead, it is now delivered as an on-demand job. Administrators must manually execute this job outside of business hours after the upgrade is complete.	Zurich
Strategic Planning	After upgrading to *Strategic Planning* v4.8.0, the existing **Investment type** and **Investment class** fields will appear as **Investment type (Deprecated)** and **Investment class (Deprecated)** respectively across the Planning page including in the Prioritization and Roadmap views and in the Scenario Planning page. The values from these deprecated fields will be automatically copied to the new **Investment type** and **Investment class** fields. If you previously applied filters or personalized your view using the deprecated fields, you must update those configurations to use the new **Investment type** and **Investment class** fields across the workspace—including in the Prioritization and Roadmap views on the Planning page, as well as in the Scenario Planning page.	Zurich
Subscription Management	*Subscription Management* version 5.0 is active by default on all instances of the *Zurich* release. Update to *Subscription Management* version 6.1 or later to use the latest features. For more information about updating *Subscription Management*, see Update an app or plugin.	Zurich
Synthetic monitoring	If you want to run monitors using a *MID Server* as a location, you must restart the *MID Server* after upgrading.	Zurich
Third-party Risk Management	If you're a *VRM* user upgrading to *TPRM* and upgrading to *Vancouver* or a later release from an earlier release, you must run each upgrade sequentially to ensure that fix scripts run correctly. For example, you must upgrade from *Utah* to *Vancouver*, *Vancouver* to *Washington DC*, and so on. If the scripts don't run in the correct order, you can get data inconsistencies, broken functionalities, and conflicts.	Zurich

Product	Release notes	Family
	After upgrading to version 21.0.x, you can enable the *Smart Assessment Engine* (*SAE*) by setting the *Smart Assessment Engine* enabled (**sn_vdr_risk_asmt.sae_enabled**) property. After setting this property, *Smart Assessment Engine* (*SAE*) becomes the default assessment engine and replaces the legacy experience. The transition isn't reversible. **⚠ Warning:** Set this property in your non-production instances and conduct thorough testing before changing your production instances. Failure to do so may result in unexpected issues. For more information on upgrading from *VRM* to *TPRM* and the differences between the Smart and Classic Assessment engines, see Third-party Risk Management upgrade information. For existing *TPRM* customers, after upgrading to version 21.0.3, data from the Industry column in the Company [core_company] table is automatically migrated to the tprm_industry column. Migration can take several hours depending on the number of records in the Company [core_company] table. After migration, a system log message confirms that the migration is complete. Review the Company [core_company] table content and update any customizations referencing the Industry field to use tprm_industry. After verifying the migration and updating customizations, you can drop the Industry column.	
Unified Security Exposure Management	*Unified Security Exposure Management* is available to all customers who are entitled to *Vulnerability Response*, however, migrating to *USEM* is a major upgrade that introduces a unified architecture for improved performance, scalability, and streamlined workflows. Before upgrading, leverage the *Migration assistant for Unified Security Exposure Management* that is available as an update set. See the Migration Guidance to Unified Security Exposure Management [KB2556844] Knowledge Base article for more information. This tool provides a guided experience for plugin installation, data mapping, rule migration, and post-migration validation, reducing risk and manual effort. Ensure that all integrations and workflows are reviewed for compatibility before initiating migration. For more information, see Migrating to USEM and Migrate to USEM.	Zurich
Vulnerability Response	If you're currently using *Vulnerability Response*, and you do not intend to upgrade to *Unified Security Exposure Management* (*USEM*), install a version below	Zurich

	v30.x of *Vulnerability Response* and for upgrades to supported third-party integration applications. The Missing Assets [sn_vul_wiz_missing_asset] table used for storing assets imported by the backfill integrations for the Vulnerability Response Integration with Wiz is deprecated. If you're currently using the *Vulnerability Response* with *Wiz* integrations, after updating to new version 1.1, you must backdate any of your existing *Wiz* primary integrations by three days and run them. Review more information about the *Wiz* integration at SecOps articles on the Security Operations Community. For more information about the released versions of the *Vulnerability Response* application as well as the third-party and *ServiceNow* applications that are compatible with the *Zurich* release, see the Vulnerability Response Compatibility Matrix and Release Schema Changes [KB0856498] article in the *Now Support Knowledge Base*.	
Zero Copy Connector for ERP	If you have existing scheduled extractions and have upgraded to Zurich, run the *Scheduled Extraction V2 Move* fix script to place scheduled extractions in a new table where scheduling is done by the scheduled scripts engine. For detailed steps, see Run fix scripts.	Zurich

Upgrade planning checklist

Plan and track the activities related to your ServiceNow instance upgrade. To help ensure that you complete all the tasks for a successful upgrade, follow the step-by-step instructions in the upgrade planning checklist to track and plan the upgrade.

Some optional steps may not be appropriate depending on the number of instances, customizations, and so forth. Mark the ones you do not need in the **N/A** column.

Tip:
To download a PDF version of this checklist, click here.

The process for completing steps for self-hosted customers may vary (for example, requesting an instance clone or upgrades). These differences must be considered during planning.

	Description	Yes	No	N/A
Phase 1 - Read the release notes and plan your upgrade				
1	Review the Yokohama release notes for the target ServiceNow feature release and patch, in addition to product and release documentation. For Yokohama -specific upgrade considerations, see Pre- and post-upgrade tasks for various products.	❑	❑	❑
Phase 2 - Complete these planning tasks.				
2	Confirm which ServiceNow instances are in-scope for upgrade.			
3	Confirm the instance hosting model. For example, ServiceNow cloud, on-premise, or off-premise.	❑	❑	❑
4	Based on the Yokohama release notes and other release materials, determine new functionality or notable changes that need to be validated after the upgrade.	❑	❑	❑
5	Confirm plans to enable or disable features introduced in the new product release.	❑	❑	❑
6	Review the Browser support to determine browser prerequisites. For example, versions and types supported, and additional requirements for new UI versions. Compare these supported browsers to your corporate standard and identify any gaps.	❑	❑	❑
7	Create a project plan for cloning, upgrading, and testing.	❑	❑	❑
8	Identify the core team of testers, power users, and key stakeholders required to validate functionality in the ServiceNow instances before and after the upgrade.	❑	❑	❑
9	Confirm whether there are any change freeze windows impacting the timing for environment clones or upgrades. For example, end quarter.	❑	❑	❑
10	Confirm which of the following situations applies to your ServiceNow non-production instances:

	Description	Yes	No	N/A
	customer instance, or other supporting documentation must be updated to align with the upgraded version. For example, changes in functionality or user interface.			
19	**Optional:** Schedule the ServiceNow Configuration Review, which provides recommendations to align the customer configurations with ServiceNow best practices. **Note:** There may be a service charge and require professional services engagement.	❑	❑	❑
20	On your production instance, create a system clone and select your development instance as the **Target instance**. Notify impacted users and internal stakeholders of the scheduled date/time for cloning (from production) and upgrade of the non-production instance. **Note:** It is important to test on a system that reflects the production instance as closely as possible. If your non-production and production instances are the same size, include the production audit log and the attachment data, and ensure that you have deselected the exclude options.	❑	❑	❑
Phase 3 - Verify your upgrade configurations and schedule the development instance upgrade in Now Support				
21	Check the configuration of the *`Check distribution for possible upgrade`* scheduled job to view how often and when it runs.	❑	❑	❑
22	Verify that the **Check distribution for possible upgrade** sys_trigger is set properly for upgrading.	❑	❑	❑
23	Verify that the **Check database for possible upgrade** sys_trigger is set properly for upgrading.	❑	❑	❑
24	Schedule the upgrade in Now Support.	❑	❑	❑
25	If applicable, request a version entitlement.	❑	❑	❑
Phase 4 - Upgrade and validate the development instance

	Description	Yes	No	N/A
49	Monitor the upgrade to your instance and validate that the upgrade to your production instance is complete.	❑	❑	❑
50	Apply any update sets and post-upgrade fix scripts that you have.	❑	❑	❑
51	Validate and test your instance by conducting user acceptance testing (UAT). Verify with all key stakeholders that the system is performing properly after production upgrade, and key functionality is available.	❑	❑	❑

Upgrade tools and resources

Learn about ServiceNow products and tools that can improve your upgrade experience.

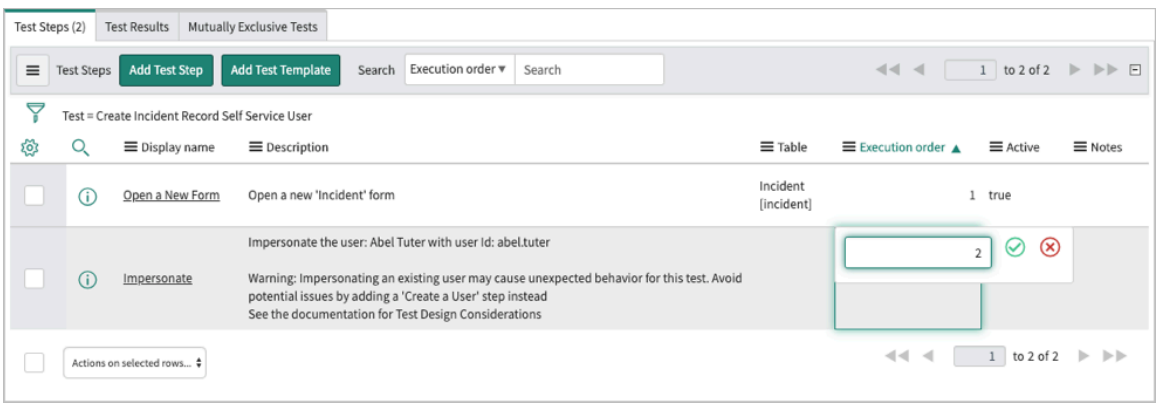
Products

Use these ServiceNow products to automate parts of your upgrade testing and manage your upgrades from one central place.

Automated Test Framework

The Automated Test Framework (ATF) enables you to create and run automated tests to confirm that your instance works after making a change. For example, after an upgrade, during application development, or when deploying instance configurations with update sets. Review failed test results to identify the changes that caused the failure and the changes that you should review.

Note:
By default, the system property to run automated tests is disabled to prevent you from accidentally running them on a production system. Run tests only on development, test, and other non-production instances to avoid data corruption and outage.



Upgrade Center

Use ServiceNow® Upgrade Center to plan and manage your upgrades. Use the Upgrade Preview module to explore different release versions available to you

Upgrades and the ServiceNow Store

The ServiceNow Store includes official applications that are developed and released by ServiceNow. Users can download, access, and configure Yokohama apps on their instances. Store application versions can be upgraded when you upgrade your instance to a new release version.

New versions for a ServiceNow® Store app can be defined in patch and family releases. This includes the ability to define a minimum version and/or a hotfix for a version you already have installed. If your instance has an installed app version below the defined minimum version, the app will be upgraded to the minimum required version. Similarly, if your instance has an installed app below the defined hotfix version, your app will be upgraded to the hotfix version.

For example, consider an application that defines these versions in a release: 1.7.0, 2.4.1, and 3.0.1. In this example, version 1.7.0 is the minimum version. Versions 2.4.1 and 3.0.1 are hotfix versions.

When an instance upgrades to the release version, the following behavior occurs:

Minimum version upgrades

Version installed before the upgrade	Expected version after the upgrade
1.0.0	1.7.0 - The version upgrades to the minimum version
1.3.2	1.7.0 - The version upgrades to the minimum version
1.7.0	1.7.0 - The version stays the same, because the instance was already on the minimum version
1.7.2	1.7.2 - The version stays the same, because the instance was already ahead of the minimum version

Hotfix version upgrades

Version installed before the upgrade	Expected version after the upgrade
1.8.0	1.8.0 - The version stays the same, because the instance was already ahead of the defined hotfix version
2.0.0	2.4.1 - The version upgrades to the defined hotfix version

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Hotfix version upgrades (continued)

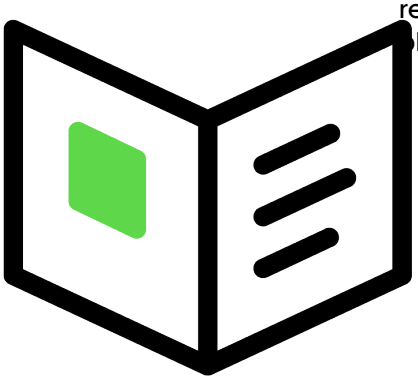
Version installed before the upgrade	Expected version after the upgrade
2.6.0	2.6.0 - The version stays the same, because the instance was already ahead of the defined hotfix version
3.0.0	3.0.1 - The version upgrades to the defined hotfix version
3.0.5	3.0.5 - The version stays the same, because the instance was already ahead of the defined hotfix version
4.0.0	4.0.0 - The version stays the same, because there are no hotfix versions defined for 4.0.0+.

Upgrade to the Yokohama release

Upgrading and patching your instance requires planning, testing, and validation. To ensure a safe and effective upgrade, read the release notes, create upgrade plans, and test your upgrade on non-production instances before upgrading your production instance.

Important:
These topics contain in-depth explanations about upgrades. For a step-by-step reference of upgrade steps, refer to the Upgrade planning checklist.

Phase 1 - Read the release notes and plan your upgrade



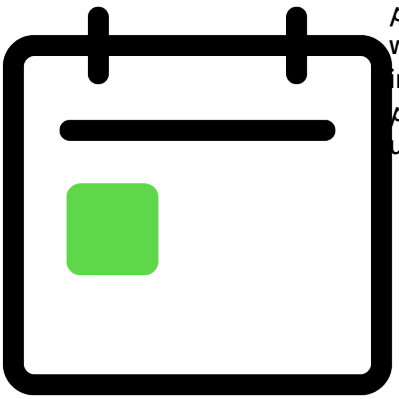
Before you begin the upgrade process, it is essential to read the release notes for your target version so you understand the required upgrade and migration tasks. This information helps you plan a safe and effective upgrade.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Phase 2 - Prepare for the development instance upgrade

For a better understanding of your production upgrade duration, request a full clone of your production instance (including large tables and attachments) onto a non-production instance. Confirm your current and target release versions, because you will later use this information when scheduling your upgrade in Now Support.

Phase 3 - Verify your upgrade configurations and schedule the development instance upgrade in Now Support



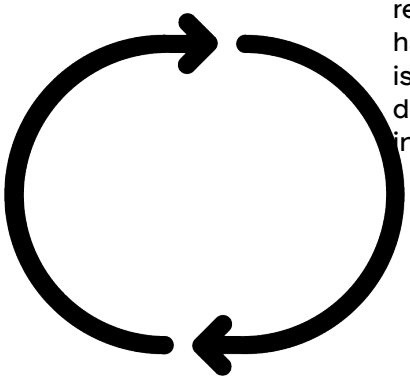
Check the configuration of the *Check distribution for possible upgrade* scheduled job to view how often and when it runs. Review information about timing your upgrade in coordination with the *Check distribution for possible upgrade* scheduled job. Then, schedule your upgrade in Now Support.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Phase 4 - Upgrade and validate the development instance

Track the progress of your upgrades with the Upgrade Monitor. For your first non-production instance upgrade (your development instance), use the Upgrade Monitor to process the skipped list of records that were not addressed in the upgrade. Then identify your update sets and perform functional testing.

Phase 5 - If applicable: Upgrade and validate your other non-production instances, such as your test instance



After you've configured and refined your development instance, request to upgrade any other non-production instances you have, such as a test instance. Immediately after the upgrade is complete, apply the post-upgrade changes made to your development instance, including activating optional plugins, installing and upgrading applications, and applying update sets.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Phase 6 - Prepare to upgrade the production instance

After you have configured and refined your test environment to be a good representation of your production environment, prepare to upgrade your production instance.

Phase 7 - Upgrade the production instance

After you have upgraded your development, non-production, and test instances, upgrade your production instance last. Then validate that the upgrade was complete, apply update sets and fix scripts, and perform post-upgrade user acceptance testing (UAT).

Phase 1 - Read the release notes and plan your upgrade

Before you begin the upgrade process, it is essential to read the release notes for your target version so you understand the required upgrade and migration tasks. This information helps you plan a safe and effective upgrade.

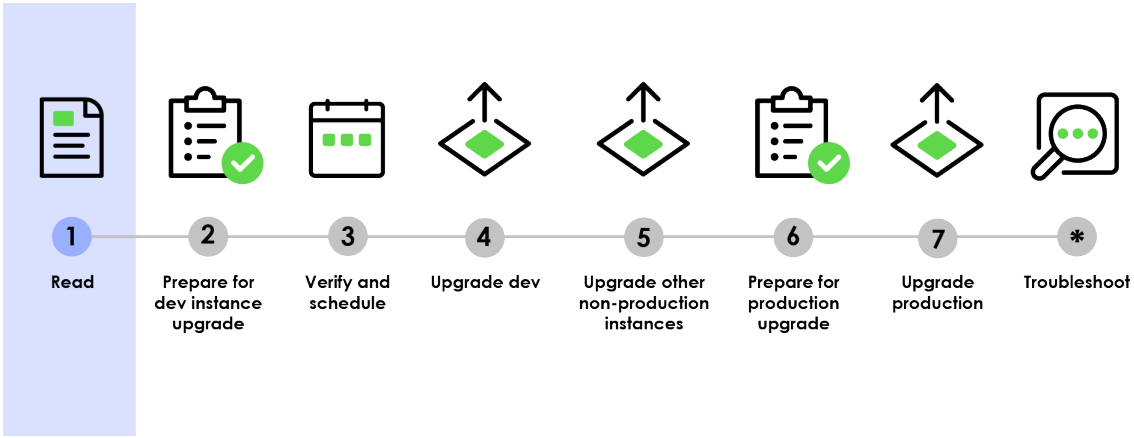
Before you begin

Important:
If multiple software versions are involved in your upgrade, be sure to consult the release notes for each version between your current version and the target version.

Role required: admin.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task



Procedure

1. Read the release notes for your target version.
   Review upgrade and migration tasks that you will need to complete before or after your upgrade.

   - ServiceNow provides release notes for every release. The release notes offer valuable information about new functionality, notable changes, and fixes available in a particular version. Read the Yokohama release notes to determine whether the upgrade contains functionality you need and fixes that resolve any issues affecting your instance. The release notes can also help you determine whether items you previously customized are being upgraded.
   - For Yokohama -specific upgrade considerations, see Pre- and post-upgrade tasks for various products.
   - If you are thinking about upgrading to the Yokohama family, problem (PRB) fixes can be an important factor in your upgrade plans. You can generate a list of . Compare the lists of fixed problems across various Yokohama upgrade scenarios to help you decide which release version to upgrade to.

2. Complete the preparation and planning tasks in Phase 2 of the Upgrade planning checklist.

   The checklist contains a list of planning tasks that guide you through various aspects of upgrade preparation. You are guided through tasks such as scoping, gathering stakeholders, identifying features to disable and enable, and creating test plans to use throughout the upgrade. Follow these steps to ensure that all aspects of your organization are ready for the upgrade.

3. To better prepare for the upgrade, evaluate the level of customizations on your instances.

   For information on customization best practice guidelines, visit the Customer Success Center website.

Complexity score	Customization examples
Low	○ Modification to form layout/design ○ Add fields and/or UI policies to forms ○ Build simple custom integration ○ Extend an existing table (such as incident) in scope with new fields only

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Complexity score	Customization examples
Low-medium	○ Extend an existing table (such as incident) in scope with some scripting ○ Extend an existing table (such as incident) as the basis for a different application, such as HR
Medium	Build a new scoped application
Medium-high	Build a new global application
High	○ Change baseline business rules (such as modifying the SLA process) ○ Build a complex custom integration

4. Create a comprehensive test plan that includes test cases for all core instance functionality and integrations, including any customizations you may have.

   To efficiently test and evaluate system functionality, create a set of detailed test scripts for your testing team to use. You will use this test plan throughout each instance upgrade.

Instance	Type of testing required
Development	Conduct smoke tests.
Test	○ Use the ServiceNow Automated Test Framework to assist you in testing your non-production instances. ○ You can use Automated Test Framework quick start tests and product testing suites to help you jump start your testing before and after upgrades. For a list of available tests and activation information, see Quick start tests. ○ For extra testing coverage, you can also conduct user acceptance testing (UAT) on your non-production instances.
Production	Conduct UAT. **Note:** The Automated Test Framework is intended for use on non-production instances. On your production instance, conduct UAT only.

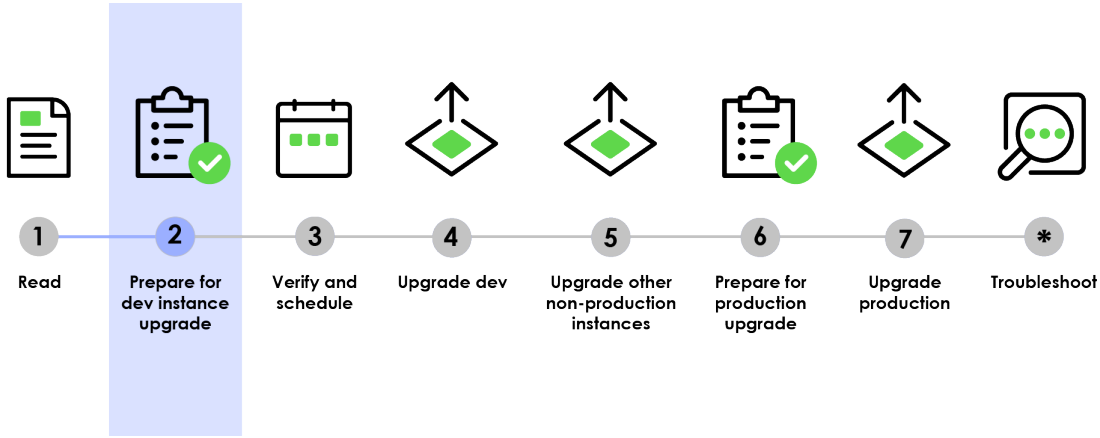
Phase 2 - Prepare for the development instance upgrade

For a better understanding of your production upgrade duration, request a full clone of your production instance (including large tables and attachments) onto a non-production instance. Confirm your current and target release versions, because you will later use this information when scheduling your upgrade in Now Support.

Before you begin
Role required: admin.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task



Procedure

1. On your production instance, create a system clone and select your development instance as the **Target instance**.

   The clone provides you with an exact copy of production. Performing an upgrade on your clone allows you to simulate an upgrade on your production configuration in a non-production environment. Refer to System clone for details.

   Important:

   For effective upgrade testing, use this clone to test on a system that reflects the production instance as closely as possible. If your non-production and production instances are the same size, include the production audit log and the attachment data on your production clone. To ensure that all production data is included with the clone, make sure that you clear all the **Exclude** check boxes on the Request Clone form. On your non-production instance, replicate typical user behaviors that occur on your production instance to enhance an estimate of your upgrade duration.

2. Set expectations for performance during upgrades.

   During an upgrade, your performance may be impacted because your nodes initiate the distribution upgrade. All nodes are restarted during an upgrade, but your multi-node instances are available during an upgrade because ServiceNow instances operate on a multi-node system. This multi-node system staggers node distribution upgrades, ensuring that there is at least one active pair of nodes for multi-node instances during an upgrade.

   To help you set accurate expectations for performance during upgrades, be aware of the differences between the nodes on your non-production and production instances. Instances with one node experience a short period of downtime during the upgrade, but multi-node instances do not have UI downtime. For details on your nodes and their status, see the Upgrade Progress screen.

Phase 3 - Verify your upgrade configurations and schedule the development instance upgrade in Now Support

Check the configuration of the *`Check distribution for possible upgrade`* scheduled job to view how often and when it runs. Review information about timing your upgrade in coordination with the *`Check distribution for possible upgrade`* scheduled job. Then, schedule your upgrade in Now Support.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin

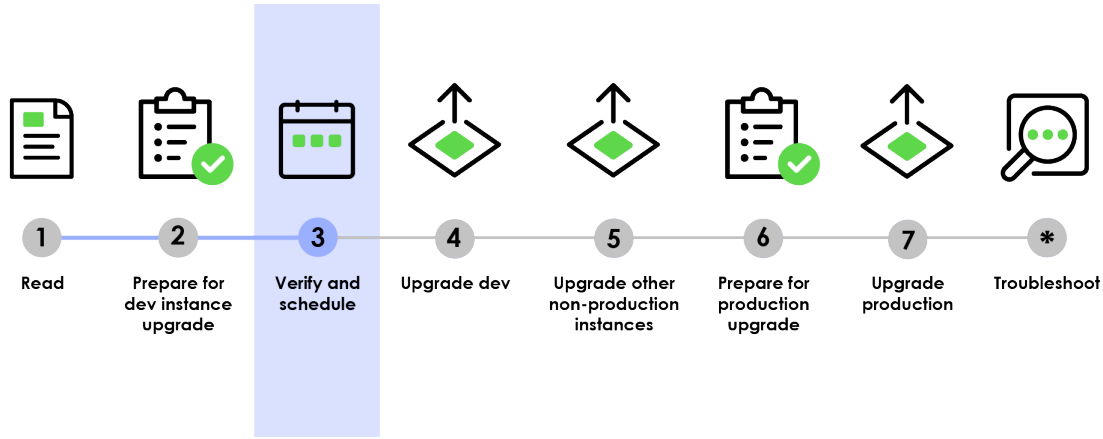
Role required: admin.

You must check the configuration of the **Check distribution for possible upgrade** and **Check database for possible upgrade** sys_triggers, which are essential to making sure your instance upgrades to the correct target version.

Note:
Starting in the Paris release, 'Upgrade' job has been renamed to 'Check distribution for possible upgrade'. In addition, the 'Check Upgrade Script' job has been renamed to 'Check database for possible upgrade'.

sys_trigger	Function
Check distribution for possible upgrade	• Queries Now Support to ask whether an upgrade is going to happen in a given time interval, which is determined by the configuration for the *Check distribution for possible upgrade* scheduled job. • Asks whether the instance should be running a different version. If so, the distribution for that version is downloaded, and your instance upgrades to the target version.
Check database for possible upgrade	• Runs after the distribution has been upgraded. • Performs the database upgrade.

About this task



Important:
Your upgrades are orchestrated out of your instance, not Now Support.

Now Support keeps records of what version you should be running, and your instance periodically queries Now Support to check its assigned version. When you designate a time for your upgrade, your instance begins the upgrade at that time. For example:

Action	Result
You schedule an upgrade to Yokohama Patch 8 to take place on June 10 at 3:00pm.	Now Support changes its records to reflect that you should be on Yokohama Patch 8 on June 10 at 3:00pm.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Action	Result
Now Support waits to get pinged by your instance after the scheduled time on June 10.	Your instance continues to operate on its current release version, and it periodically pings Now Support.
After the scheduled time on June 10, Now Support receives a ping from your instance.	Now Support tells your instance that it should be on Yokohama Patch 8.
Your instance receives a Now Support notification that it should be running a different version.	Your instance starts the upgrade.

How to schedule and manage instance upgrades on Now Support

You can browse the Now Support service catalog to request and self-service tasks such as scheduling an upgrade.

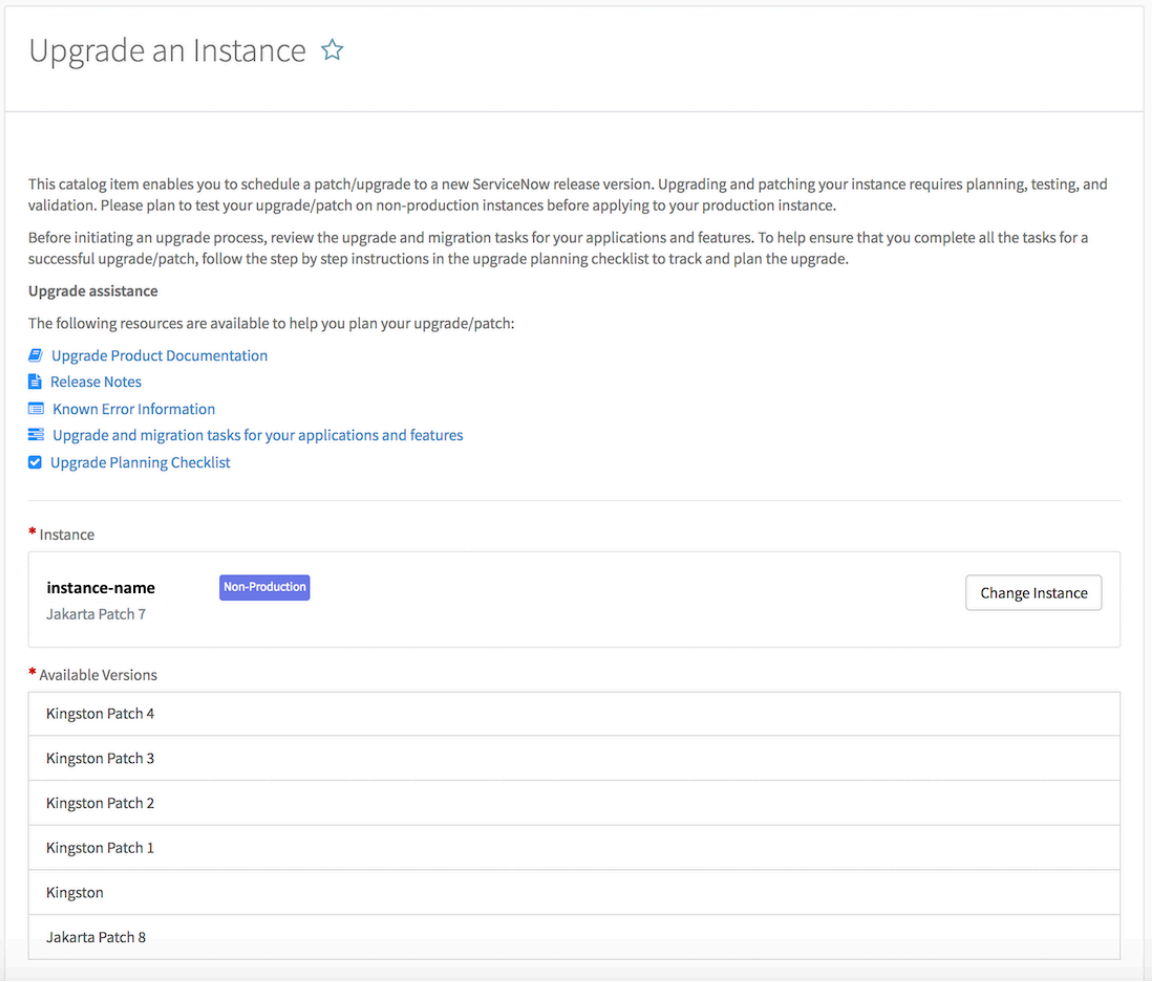
Request plugins and self-service tasks using service catalog on Now Support

Procedure

1. Check the configuration of the *Check distribution for possible upgrade* scheduled job to view how often and when it runs.
   a. Navigate to **System Scheduler** > **Scheduled Jobs** > **Scheduled Jobs**.
   b. In the list, find the *Check distribution for possible upgrade* scheduled job.
   c. View the **Next action** column to determine when the job next runs.
2. Verify that the **Check distribution for possible upgrade** sys_trigger is set properly for upgrading.
   a. Navigate to **System Scheduler** > **Scheduled Jobs** > **Scheduled Jobs**.
   b. Find and click the *Check distribution for possible upgrade* scheduled job.
   c. Make sure that the **Trigger type** is set to **Interval**.
   d. Make sure that the **System ID** is set to **None**.
3. Verify that the **Check database for possible upgrade** sys_trigger is set properly for upgrading.
   a. Navigate to **System Scheduler** > **Scheduled Jobs** > **Scheduled Jobs**.
   b. Find and click the *Check database for possible upgrade* scheduled job.
   c. Make sure that the **Trigger type** is set to **Run at System Startup**.
4. Schedule the upgrade in Now Support.
   a. Log in to Now Support.
   b. Click **Instances** in the left navigation menu.
   c. Select **Manage Instances**.
   d. Partners only: From the user menu, use the **Switch Company** feature to select a company.
   e. Select the instance that you want to upgrade or patch.
   f. In the **Actions** menu, click **Upgrade Instance**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The **Upgrade an Instance** Service Catalog item opens up. It is prepopulated with the instance name and available versions to which you can upgrade or patch the instance.



g. To specify a date and time for the upgrade or patch, click the calendar icon next to the **Start Date and Time** field.

h. Click the clock icon to select the time for the upgrade or patch.

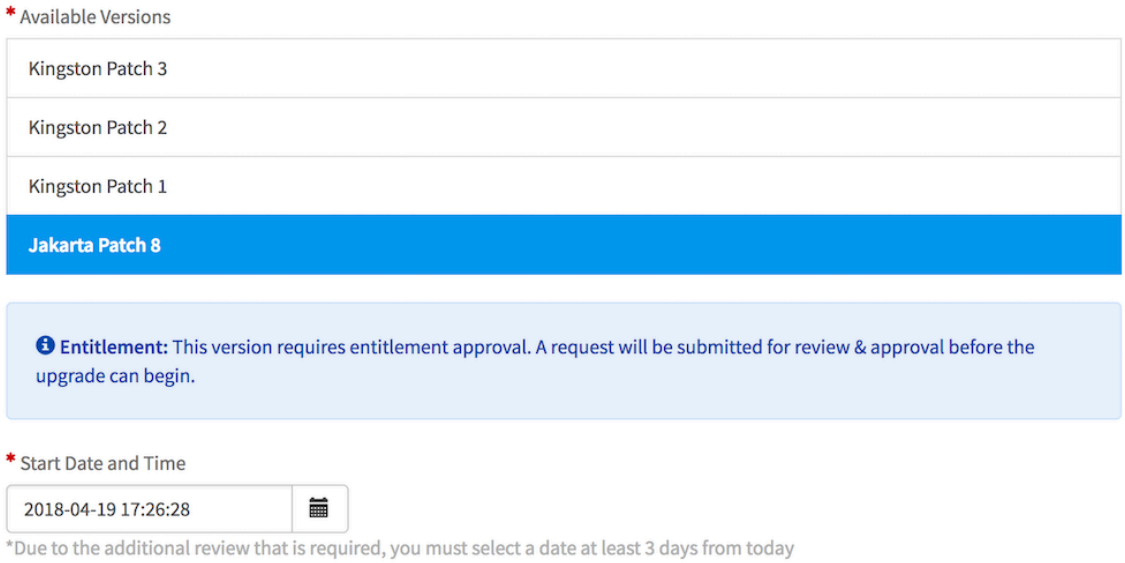
> **Note:**
> Setting the time for an upgrade or patch is important. Set the upgrade or patch to start 10–15 minutes before the *`Check distribution for possible upgrade`* scheduled job runs. This setting allows enough time for the upgrade or patch request to update Now Support 's records about which release version your instance should be on before the *`Check distribution for possible upgrade`* scheduled job runs.

i. Click **Submit**.
A confirmation message appears. If you do not need an entitlement, a change request is created.

5. If applicable, request a version entitlement.

a. In the **Actions** column, click **Schedule**.
If the version does require an entitlement, this screen appears:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



b. Click the calendar icon and specify a date and time at least three days in the future.

ServiceNow entitlement managers respond to your entitlement request within three days.

> **Note:**
> Setting the time for an upgrade or patch is important. Set the upgrade or patch to start 10–15 minutes before the *`Check distribution for possible upgrade`* scheduled job runs. This setting allows enough time for the upgrade or patch request to update Now Support 's records about which release version your instance should be on before the *`Check distribution for possible upgrade`* scheduled job runs.

c. Click **Schedule**.
A confirmation message appears. If you need an entitlement, the entitlement request number is included. Click the entitlement request number to view the request.

d. If you have any questions about your entitlement, comment on your entitlement request after you have submitted it.

Phase 4 - Upgrade and validate the development instance

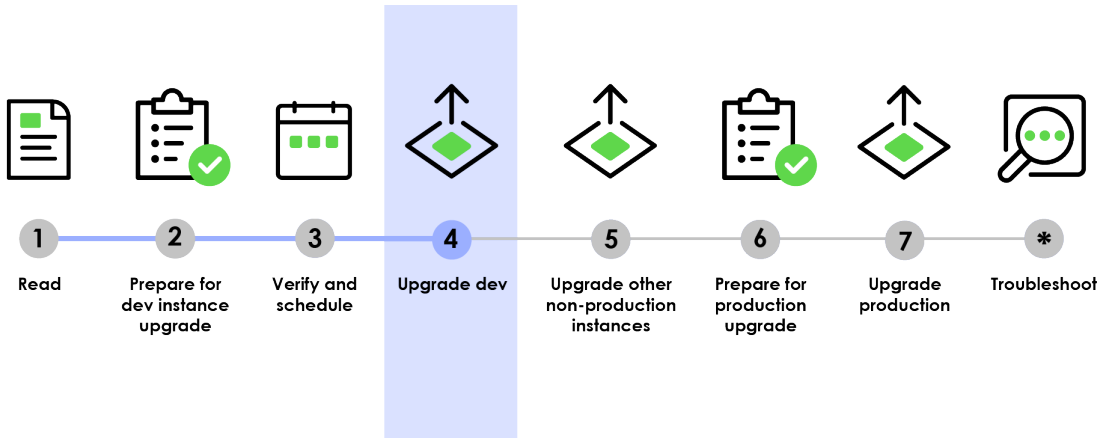
Track the progress of your upgrades with the Upgrade Monitor. For your first non-production instance upgrade (your development instance), use the Upgrade Monitor to process the skipped list of records that were not addressed in the upgrade. Then identify your update sets and perform functional testing.

Before you begin

Role required: admin.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task



The Upgrade Monitor helps you upgrade an individual instance. You can monitor the progress of an upgrade and resolve conflicts between the upgrade and customizations.

Procedure

1. Using the Upgrade Monitor, monitor the upgrade to your instance and validate that the upgrade to your development instance is complete.
2. After the upgrade for your development instance is complete, process the skipped records list in the Upgrade Monitor.

   As you are processing the skipped list, you may merge and revert records, resolve conflicts for an individual record, and make additional customizations. These changes go into the latest version, which goes into your current update set.

3. Identify your update sets.

   You need these update sets for your subsequent non-production instances. If there are issues that must be addressed after the upgrade, make the appropriate changes and they will go into your current update set. Collect the update sets that:

   - Were created while reviewing the skipped updates list.
   - Were created while changing customizations to work with the latest release.
   - Must go live immediately after your next upgrade.

   Gathering these update sets before your upgrade expedites the process of exporting, importing, and committing them onto your other instances. After the correct update sets are identified, follow the standard process for moving and applying those update sets. Refer to System update sets for details.

4. Before and after upgrading, conduct smoke tests on your development instance. Use your comprehensive test plan to perform functional testing.

   After upgrading, track any defects or deviations from the pre-upgrade testing results. Defect tracking can help identify root causes and create fixes. When a fix is identified, capture the fix in a single update set. The resulting update sets hold the cumulative fixes that should be applied to the production instance.

   To help automate your testing and validation on non-production instances, use the Automated Test Framework. You can use Automated Test Framework quick start tests and product testing suites to help you jump start your testing before and after upgrades. For a list of available tests and activation information, see Quick start tests.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

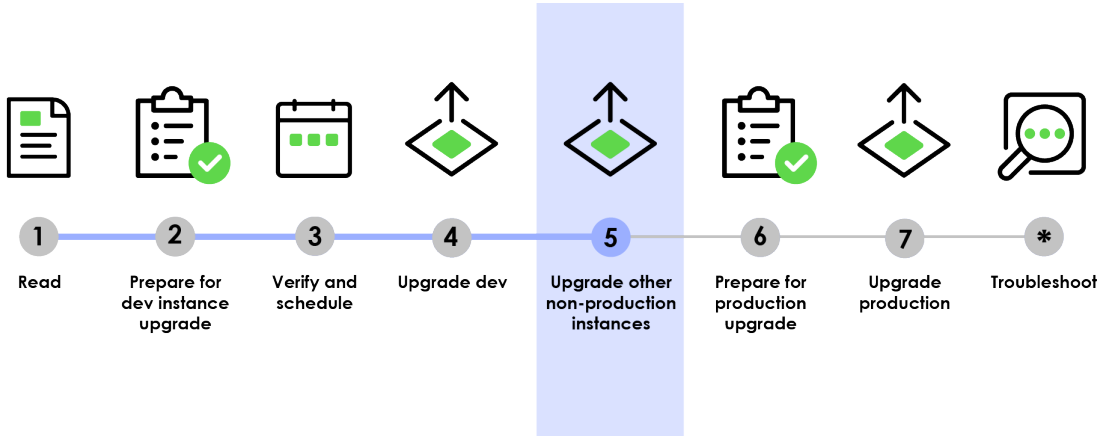
Phase 5 - If applicable: Upgrade and validate your other non-production instances, such as your test instance

After you've configured and refined your development instance, request to upgrade any other non-production instances you have, such as a test instance. Immediately after the upgrade is complete, apply the post-upgrade changes made to your development instance, including activating optional plugins, installing and upgrading applications, and applying update sets.

Before you begin

Role required: admin.

About this task



This instance naming convention assumes that you have three ServiceNow instances. If you have three instances, upgrade your instances in this order:

1. Development
2. Test
3. Production

If you have more or less than three instances, or if you are using Team Development, these instance labels will be different. In general, upgrade your instances furthest from production towards your production instance.

After you have applied your development update sets to your test instance, perform the following tasks on your test instance (and other non-production instances, if applicable).

Procedure

1. Create a system clone down from your production instance.
2. Schedule the non-production upgrade in Now Support and verify your upgrade configurations.
3. Validate that the upgrade to your non-production instance is complete.
4. Install any optional plugins that were installed on your development instance.
5. Install any custom applications and post-upgrade fix scripts that you need.
6. Install update sets.
   Use these update sets to move your initial changes into your subsequent non-production instances.
7. Perform functional testing and monitor the performance of your instance.
   Reproduce the typical user activities that occur on your production instance. The Automated Test Framework can greatly assist you in testing your non-production instances. You can use

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Automated Test Framework quick start tests and product testing suites to help you jump start your testing before and after upgrades. For a list of available tests and activation information, see Quick start tests. For extra testing coverage, you can also conduct user acceptance testing (UAT).

Phase 6 - Prepare to upgrade the production instance

After you have configured and refined your test environment to be a good representation of your production environment, prepare to upgrade your production instance.

Before you begin

Role required: admin.

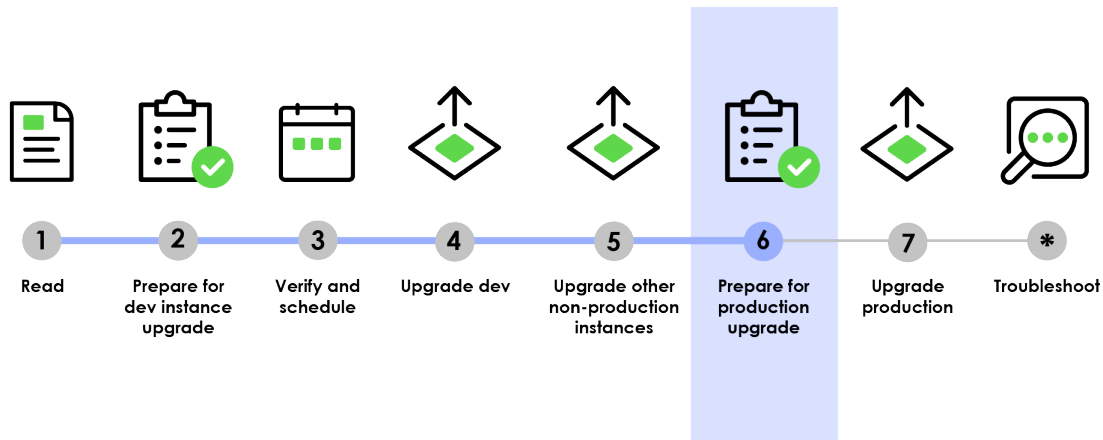
To ensure that all stakeholders in your company are prepared for the final production upgrade, complete the administrative planning tasks in Phase 6 of the Upgrade planning checklist. When upgrading a production instance:

- Obtain confirmation from IT and management that all non-production instance defects have been fixed, validated, and included in an update set.
- Use the change management process established by your organization to track the upgrade.
- Communicate effectively with your user community regarding changes, new features, and process updates resulting from the upgrade.
- Negotiate a suitable upgrade time for all users of the ServiceNow system.

  For example, schedule the upgrade after hours, to minimize impact to your users. Remember to schedule the upgrade to occur 15–20 minutes before the *Upgrade* scheduled job interval.

- Allow time in your change window to run all test cases and validate that all integrations, key business functionality, and system performance are acceptable. Add a time buffer for responding to errors without breaching the change window.

About this task



Procedure

1. Profile the performance of your instance before upgrading.

   Pre-upgrade instance validation can provide a reliable benchmark of the current operating environment and alert you to any issues that may appear after the upgrade. For example, it sometimes appears that specific functionality is broken by an upgrade. Analysis might show that the functionality did not work properly in the production instance, even before the upgrade.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before performing the upgrade, analyze the current operating environment. Specifically, review:

- Key functionality
- Integrations
- Instance performance

2. Use the ServiceNow Performance homepage to document the performance of your instance before the upgrade.

   You will later compare and contrast this information during your post-upgrade validation and testing. Benchmarks will be different for each of your instances.

   To access the ServiceNow Performance homepage:

   a. Log in to your instance.

   b. From the list in the top left of the instance homepage, select **ServiceNow Performance**.

3. On your clone, perform functional testing and monitor the performance of your instance. Replicate typical user behaviors that occur on your production instance. Assign a consistent core team of power users and key stakeholders to validate important functionality in the ServiceNow instance before and after upgrades.

Phase 7 - Upgrade the production instance

After you have upgraded your development, non-production, and test instances, upgrade your production instance last. Then validate that the upgrade was complete, apply update sets and fix scripts, and perform post-upgrade user acceptance testing (UAT).

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

b. Click the calendar icon and specify a date and time at least three days in the future.

ServiceNow entitlement managers respond to your entitlement request within three days.

> **Note:**
> Setting the time for an upgrade or patch is important. Set the upgrade or patch to start 10–15 minutes before the *`Check distribution for possible upgrade`* scheduled job runs. This setting allows enough time for the upgrade or patch request to update Now Support 's records about which release version your instance should be on before the *`Check distribution for possible upgrade`* scheduled job runs.

c. Click **Schedule**.
A confirmation message appears. If you need an entitlement, the entitlement request number is included. Click the entitlement request number to view the request.

d. If you have any questions about your entitlement, comment on your entitlement request after you have submitted it.

3. Monitor the upgrade to your instance and validate that the upgrade to your production instance is complete.
There are several methods of verifying that your upgrade is complete:

- Navigate to the **System Diagnostics** > **Upgrade Monitor**.
- Navigate to **System Diagnostics** > **Upgrade Log** and locate the `Notifying HI that upgrade has been completed` message.
- Navigate to **System Definition** > **System Upgrades**. Information about all system upgrades is listed.
- Navigate to **System Diagnostics** > **Upgrade History** and search for the most recent upgrade.

4. Apply any update sets and post-upgrade fix scripts that you have.

5. Validate and test your instance by conducting user acceptance testing (UAT).
Performance and operating information is available in the system logs, which offer an excellent source of information for evaluating the inner workings of a ServiceNow instance. Use this
