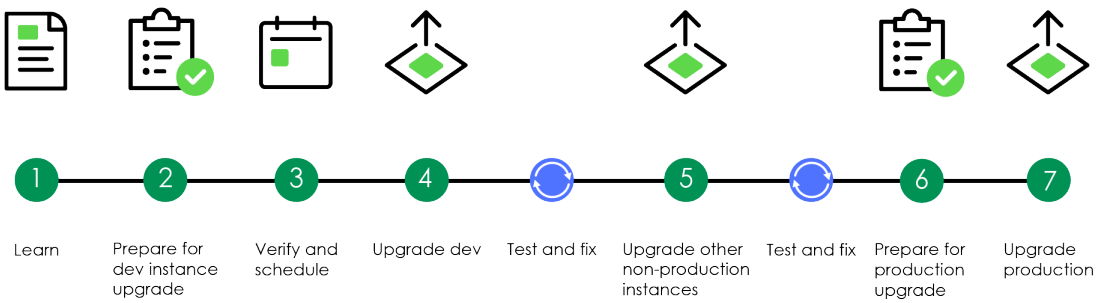
# Xanadu release notes

The ServiceNow® Xanadu release includes new products and applications, as well as additional features and fixes for existing products. Read the release notes to learn about the release, prepare for your upgrade, and upgrade your instance.

## Xanadu highlights

**AI purpose-built for every industry**
Leverage Now Assist automation that is purpose-built for the unique needs of Retail Operations, Telecommunications, Technology, Public Sector, and Banking.



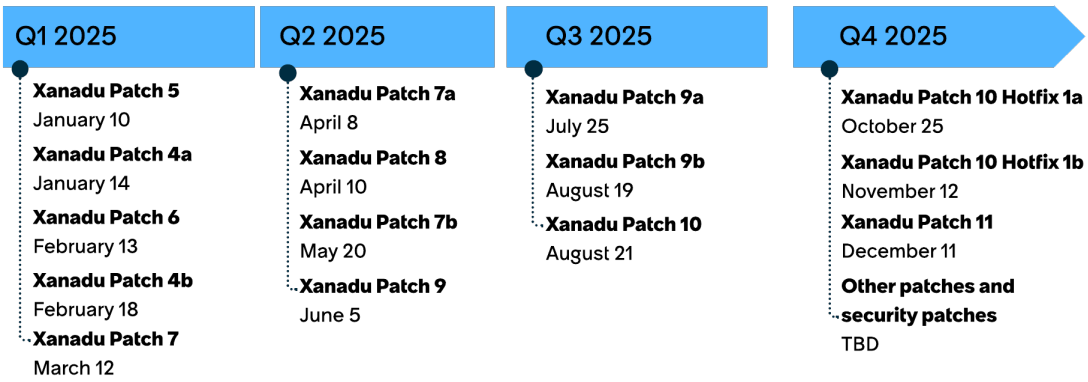
**Service and operational resiliency**
Improve responsiveness with dynamic alert tagging. Deliver operational insights to service delivery teams so they can better manage their work with Event Management and Service Reliability Management.

**Making AI actionable**
Now Assist makes it simple to take action with new analytics generation, custom AI skills development, reply recommendations, and native integration with MS 365 and Slack, all built on a single platform.

## Path to successful upgrades

Upgrading your instance involves planning, testing, and validation. The release notes guide you through completing all of the phases and tasks for a successful upgrade.

## Start your upgrade journey



To use the release notes in your upgrade process, choose the upgrade phase that you're ready to start with. It's recommended you complete the phases in the order listed. For a guide to the redesigned release notes experience, see Using the release notes.

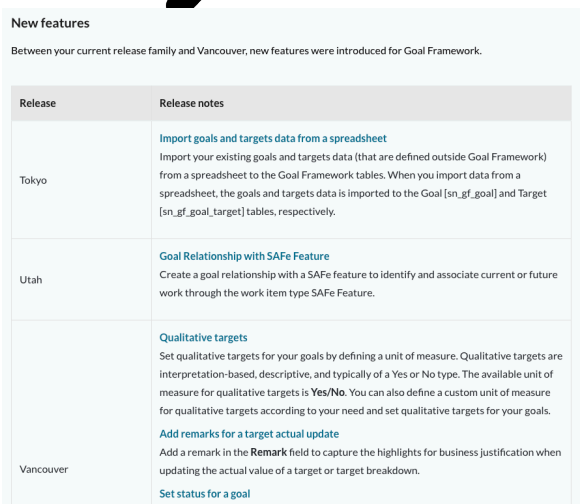
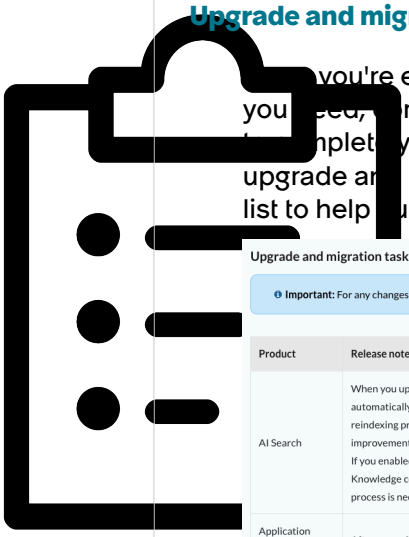
## Personalized PRB release notes



With personalized PRB release notes, collect a list of fixes to fit your specific upgrade scenario. Choosing your current release version and your targeted release version generates a list of all the fixes included in your upgrade. View this list in a table, or download a spreadsheet to sort and review PRBs as needed.

## Combined product release notes



If your upgrade involves skipping one or more family releases, combined product release notes ensure you have all the information you need to prepare for your upgrade. From a list of available products, you can filter changes and features for your specific applications across the relevant releases, and view the information all on one page.

- Combined product release notes for upgrades from Washington DC to Xanadu
- Combined product release notes for upgrades from Vancouver to Xanadu

# Xanadu General Availability release highlights

High-level overview of products and features in the ServiceNow AI Platform Xanadu General Availability (GA) release.

## Overview of the Xanadu General Availability (GA) release

## ServiceNow AI Platform

### Now Assist

- Data visualization generation: Enable users of any skill level to easily create analytics visualizations. Provides dynamically updated analytics for better decision-making and continuous data exploration.
- Chat and email reply generation: Auto-generate context-aware reply suggestions to help agents respond faster. Responses can be easily refined as needed.
- Custom skills development: Create GenAI skills with custom prompts, connecting to platform data for better accuracy. Users can choose models and deployment options.
- Microsoft Copilot integration: Combine two generative AI assistants into one experience, providing personalized solutions within the platform.
- Slack integration: Allow users to get answers and take actions directly from Slack, offering personalized, self-service solutions.

### Core Technology

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- RaptorDB: Improves transaction times by up to 53%[1], runs reports, analytics, and list views up to 27 times[2] faster, and unlocks up to a 3 times[2] increase in transactional throughput so you can support more users and more workflows on your ServiceNow instance.
- Integrated Development Environment (IDE): Empower Visual Studio developers to build scoped applications with source code directly on the platform. Compile, execute code, and integrate seamlessly with familiar Git providers.

[1]RaptorDB Professional vs MariaDB for a Global Hotel & Resort Company

[2]ServiceNow Benchmark on RaptorDB Professional vs MariaDB

### Platform Security

- Data Privacy: Identify sensitive information in journal fields within modern UI applications. Use enhanced real-time discovery to apply existing rules for data anonymization and processing of inbound emails. Focus on specific fields containing Personally Identifiable Information (PII) instead of scanning entire tables.
- Access Controls: Establish detailed access controls on the platform using a combination of 'allow' and 'deny unless' Access Control lists. Implement new decision types that deny access to resources unless all specified conditions are met.
- Access Analyzer: Preview how changes to a user's roles or group memberships affect access to resources. Verify the effectiveness of modifications to minimize the risk of unintended access. Apply adjustments to group and role memberships after confirming the intended access assignments.
- Security Center
  - Security Posture Dashboards: View in a single place all critical security KPIs across all instances.
  - Security Event Notifications: Create policies without creating code that trigger notifications when users or system accounts take action in the ServiceNow AI Platform.
  - Security Banner Announcements: Trigger new banners in instances that are visible to System Admins and inform them of new, urgent security threats with additional detail.

## Technology Workflows

### IT Service Management

- Digital End-User Experience: Proactively alert end-users to device or application health, deflect incidents, and keep them focused on core tasks. Create reports with out-of-the-box insights on the health of key devices and applications. Embed Virtual Agent with Now Assist directly in the desktop client for streamlined support.
- Service Operations Workspace: Speed up incident resolutions with contextual recommendations and AI Search directly in the side panel. Reset passwords faster with tailored assistance based on the end-user scenario. Automate migration to Service Operations Workspace with only a few clicks.
- Digital Product Release: Accelerate migration from legacy Release Management with simplified utilities. Gain additional flexibility to manage product releases based on defined timelines or completion objectives. Simplify release and

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

product management, as well as reporting, by defining parent and child relationships.

- Now Assist for IT Service Management: Quickly summarize change requests and related data. Seamlessly integrate Now Assist and Copilot to increase agent and employee productivity. Generate more accurate knowledge content by automatically drawing on information from multiple incidents powered by Now Assist.

### IT Operations Management

- Service Reliability Management: Track and alert on business-critical services to improve uptime and reliability. Enable teams to take ownership of their services and increase innovation. Correlate alerts automatically with service level objectives (SLOs).
- Automated alert context: Add business context to alerts using fields and tags. Enable correlation without a fully mature CMDB. Use an intuitive UX to group alerts by common fields or tags, including exact match, fuzzy match, or patterns. Escalate alerts to incidents easily and set up email notifications for alert groups.
- Discovery Admin Workspace: Opt in to a new content service to enhance discovery capabilities. Improve visualizations of discovery processes. Jump from discovered applications to a unified map for a complete view of your technology.
- Manage ACME certificates alongside other certificates. Automate DNS challenges, renewals, and revocations—set up once and let workflows take over. Create custom webhooks and configure low-code scripts.
- Link view on Express List: Use map visualization to understand the impact of alerts based on alert tags. View relationships between alerts and technology elements, with or without a mature CMDB. Compatible with Vancouver family release and activated view through Link View application.
- Now Assist for IT Operations Management
  - Alert analysis and incident population: Group alerts by tags, alert text, or CMDB relationships, and explain these groupings to operators. Simplify alerts using clear language from AI. Add technical context to help speed up resolution of alerts and incidents.

### Configuration Management Database (CMDB)

- Service Graph Connectors for AWS, Azure, and Google Cloud Platform (GCP): Integrate major cloud providers into the CMDB using certified connectors. Support various platform outcomes, including visibility, software asset management, high-level architecture (HLA), and service operations. Benefit from iterative updates that enhance functionality with each store release to keep up with changing cloud offerings.
- Cloud Service Catalog support for Google Cloud Platform (GCP): Use Cloud Service templates to request Google Cloud resources quickly. Set up your Cloud Service Catalog in minutes with CSC Guided Setup. Integrate GCP easily. Manage services and instances from a dashboard to optimize resource allocation and control costs while minimizing sprawl.

### Software Asset Management

- Software inventory analytics: Examine and address issues pertaining to discovery, normalization, end-of-life, and version sprawl using integrated workflow. Increase visibility with day 0 insights into software deployments, normalization, lifecycle,

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

and application sprawl. Anticipate risk with workflows to remediate end-of-life software.

- SAP Digital Access license management: Create entitlements using new license metric for digital access. Gather document types and counts from various clients/systems for compliance view in ServiceNow. Show digital access over/under utilization and compliance with reconciliation process.

**Cloud Cost Management**

- Spend management for AI services: Gain insights into your AI service expenditures, including comparative analysis of major AI platforms to ensure each dollar contributes to strategic business value. Utilize budgets and alerting mechanisms to assess AI spending and align it with business needs. Streamline cost management processes to address data quality limitations from AI service providers.

**Hardware Asset Management**

- Device as a Service (DaaS): Use the command center view of DaaS inventory to fulfill orders and manage return merchandise authorizations (RMAs). Pick, pack, and ship incoming requests through the order fulfillment workflow. Address RMA requests to repair or replace customer assets using the RMA response workflow.
- Zero touch request: Save time and reduce logistical overhead with automated asset requests. Integrate with external providers to streamline asset fulfillment without local IT support. Ship assets directly from external vendors to employees.

**Hardware Asset Management**

- Inventory repair: Initiate, execute, and track asset repairs in repair deposits and warehouses. Troubleshoot to identify and resolve asset defects. Validate repaired assets to help ensure operational readiness or move them for disposal.
- Inventory picking with indoor maps: Retrieve stock from inventory for fulfillment via interactive pick task function. Leverage floor mapping and location info to provide directions to assets. Scan to select assets and utilize mobile UI with indoor maps to streamline user experience and improve accuracy.

**Enterprise Asset Management**

- Asset calibration: Automate calibration scheduling and tracking to minimize the risk of missed calibrations. Ensure all assets are calibrated according to industry standards and regulations with traceability. Use a guided experience with mobile compatibility to perform and document calibration events.
- Configurable workspaces: Manage specific asset classes such as industrial, medical, and facility with tailored workspaces for functional departments. Provide a holistic view of assets managed and help ensure that users only see relevant data to their asset class. Improve productivity by providing users with workspaces designed specifically for their functional area.

**Security Operations**

- Now Assist for Security Operations: Summarize security incidents (with context on threat and impact) for faster incident comprehension at any stage of the security incident. Generate resolution notes for faster incident closure. Understand incidents with on-demand incident lifecycle-driven contextualization.
- Security Response

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Native Sidebar chat: Facilitates seamless transition between shifts through detailed communication of critical information, tasks, and updates. Enhances operational continuity, reduces errors, and improves overall efficiency in the workplace.
- Security Incident Response Health dashboard: Obtain detailed information on alert sensors and their operational performance. Gain visibility into customization. Identify and highlight any issues or errors within the environment.

**Strategic Portfolio Management**

- Now Assist for Strategic Portfolio Management
  - Multi-feedback summarization: Enhance decision making with actionable insights, enabling product managers to make better informed decisions. Boost efficiency by streamlining the feedback process, allowing for effective product development cycles. Quickly synthesize multiple feedback items into a concise summary, reducing the time needed for manual analysis and work item creation.
  - Document summarization: Quickly summarize, shorten or elaborate text, making information across teams more accessible and manageable. Improved productivity allowing teams to focus on strategic tasks by reducing the manual effort required for document handling.
- Scenario Planning: Create multiple plan alternatives for trade-off analysis and strategic alignment. Accelerate planning with side-by-side scenario comparisons that highlight key differences and strategic impacts. Streamline the approval process by storing and sharing approved scenarios with clear decision rationales to improve efficiency and communication.
- Export roadmap to PPT: Enhance presentation with detailed and customizable exports. Visualize progress tracking enabled roadmaps on the presentations. Streamline stakeholder communication with clear, up-to-date timelines.

**Collaborative Work Management**

- My Work: Centralize tasks from CWM, projects, demands, RIDAC, and stories in one view to streamline work management. Quickly assess the status and volume of work to optimize time management. Identify high priority and overdue tasks, or filter by task type or date range.

**Enterprise Architecture**

- Enterprise Modeling & Visualization: Intuitive one-click current state modeling with ServiceNow data. Support for standards such as ArchiMate shapes. Visualize and assess the impact of proposed changes and identify potential risks before implementing strategies or projects.
- Consolidated Technology Portfolio Management: Set and share standards with TRM category catalog for easy access. Request new product approvals from Enterprise Architecture Workspace. Advise organizations on approved software and hardware product standards.
- Enhanced Digital Integration Management: Create duplicate integrations with different applications. Reference subscriber and provider company information when creating new integrations. View and analyze past audit records in activity log.

**Operational Technology Management**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Task-oriented landing page: Deliver a better experience with personalized landing pages based on persona and use cases. Increase OT engineer efficiency gains with easy to navigate user experience and task overviews that breakdown task type, status, and urgency level.
- Operational Technology Vulnerability Response (OTVR) solution management: Simplify workload by accessing authoritative OT recommendations directly from the vendor. Manage complex mixed-vendor ecosystems through a unified display by consolidating recommendations from multiple OEMs in one trusted source. Significantly reduce effort required to determine best action for OT vulnerabilities.
- OT request management: Enable users to access OT products and service catalog to create and fulfill complex, multi-step OT requests. Provide secure 3rd party remote access request so service providers and vendors can assist with OT management. Increase visibility of OT landscape with centralized platform to track, monitor, and manage OT requests.

**Risk and Resilience products**

- Business Continuity Management
  - BIA and plan enhancements, task automation, nested related plans: Enhanced tracking of RTOs, RPOs, recovery tiers, tasks and dependencies for improved continuity awareness. Speed ITDR plan execution and automate updates of plan dependencies from the CMDB. Minimize impact of a crisis event with greater visibility into task execution and asset recovery order across multiple levels of nested recovery plans.
- Integrated Risk Management
  - AI-powered recommendations to map incoming regulatory changes: AI/ML-powered recommendations identify the closest match between internal documents or citations and incoming alerts. Explore additional context and insights on recommended citations. Associate only those alerts that are relevant for your organization Regulatory Change Management.
  - Cyber Risk Institute Accelerator powered by Smart Assessment Engine: Import CRI Profile containing related authority documents, citations and control objectives based on NIST CSF. Streamline the risk management process with automated tiering and selection of CRI assessment to be performed using the smart assessment engine. Enjoy automated control creation based on tier and a compliance score calculated from responses to the CRI assessment, rolling up to the entity level.
  - Cybersecurity Executive Dashboard: Obtain a single pane of glass with security, risk, third party, compliance, business continuity, and audit metrics. Operational dashboard to track the Quarterly goals to improve security and risk posture. Peer benchmarking of security and risk metrics to report wins & support budget planning.
  - Personal Data Rights, visual data lineage: Efficiently collect, process, and respond to Data Subject Access Requests (DSARs) with ServiceNow Personal Data Rights. Capture and visualize data lineage spanning processing activities, business processes, applications, vendors, and more. Centralize and organize regulatory requirements and correspondence by regulatory agency, and automate breach notification based on regulator specifications.
- Third-party Risk Management
  - New third-party element sub-hierarchy, visualization features: Leverage new flexible, user-defined third-party element sub-hierarchy for more granular risk assessments. Examine or aggregate risk scores across individual engagement

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

elements –people, facilities, products, etc. – to make better informed decisions. Map risk at the element level to visualize risk concentration; understand potential geo-political, weather, ESG, or other global impacts to your third parties.

- New Risk Intelligence framework, enhanced IRQ scoring logic: Ingest broader Risk Intelligence content types – ex. sanction screening – for use within TPRM workspace. Leverage new Risk Intelligence framework to easily manage providers, normalize scores, order reports within the workspace for increased insights. Streamline workflow, reduce vendor fatigue with more complex IRQ logic, scoring criteria to trigger assessments.

### Environmental, Social, and Governance

- Scope 3 dashboard: Track your organization's GHG emissions for scope 1, 2, and 3. Define your own categories and representation of data. Utilize automated metric definitions.
- Metrics enhancements: Define custom labels in formula builder and view labels while constructing formulas. Collect data in custom fiscal calendars. Run metrics on demand.
- Content and integrations: Introduce additional emissions factors including emissions activity source into the content accelerator. Update the emissions factors to the most recent version. Add content for CDP, ISSB, and IFRS.

## Employee Workflows

### HR Service Delivery

- Guided Decision Trees: Create decision trees with questions, navigation paths, and guidance for agents. Speed up time to resolution by providing guidance throughout the triage process for complex employee inquiries.
- Employee Journey Management: Create out of the box analytics dashboards with critical metrics and personas. Enable journey admins to create actionable analytics that drive journeys forward.
- Content engagement for Employee Center: Create configurable interactions for news article content including reactions, comments, replies, and views. Enable users to flag content for review and provide feedback. Build re-usable templates for consistent and effective news publishing.
- Guided Self-Service: Guide users to the correct article or catalog item through a visual Q&A experience. Create use cases easily, with pre-built activities and templates for self-service help. Streamline the ability to author non-technical documents.

### Talent Development

- Leader Hub: Visualize data of overall employee engagement with various talent development activities. Understand the organization's skill competency status. Explore individual skills and competencies with skills information and statistics.
- Gigs & Projects: Create configurable opportunities for gigs, projects, volunteer roles, and custom job types. Enable employees to proactively search for opportunities of interest and receive system generated recommendations. Allow managers to quickly review an employee's interest and fit for a posted position.
- Now Assist - Proactive Prompts: Engage employees and managers with the relevant reminders to take action on pending activities, approvals, and more.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Create conversational experiences for employees that support proactive behavior. Leverage the power of AI to assist employees in keeping up with important to-dos and milestones.

### Workplace Service Delivery

- Workplace Services Kiosk: Enable visitors to autonomously register, check-in, and check-out of the workplace. Provide flexibility for workplace admins to configure check-in flows using passcode, phone number, visitor name, or email address.
- Multi-building scenario planning: Create and visualize scenario plans across multiple buildings. Facilitate granular allocation changes by accessing floor plans and stack plans of multiple buildings within the same scenario. Move departments, teams, and individuals from one building to another.

### Health and Safety

- Health and Safety Case Management: Submit Health and Safety inquiries directly within Employee Center on any device. Enable safety teams to kick off the return to work process from an injury case to track medical clearance information and accommodations. Organize the return to work process cross departments with HRSD journey integrations to successfully coordinate an employee's return to work.
- Health and Safety Offline Inspections: Automatically assign scheduled Health and Safety inspections to employees. Enable employees to take Health and Safety inspections when there is no connectivity or Wi-Fi. Proactively identify hazards and reduce risk of employee incident or injuries.

### Legal Service Delivery

- AI-powered request categorization and routing: Use machine learning to automatically categorize general legal requests. Automatically route requests to legal staff based on availability, capacity, and skills with Advanced Work Assignment.
- Microsoft Outlook integration: Enable fulfillers to create legal requests and pre-populate information directly from Outlook emails. Add emails and attachments to requests with drag and drop. Find legal requests related to emails or search for other requests directly in Outlook.
- Contract Management Pro for Sales and Order Management: Leverage one simplified experience to seamlessly integrate the contract workflow into the sales and order management workflow. Seamlessly handle the workflow for configuring, pricing, and quoting with Sales and Order Management. Provide contract creation and review capabilities with Contract Management Pro.
- Microsoft Word add-in for signature blocks: Leverage a Word add-in to create and customize signature blocks within contract templates. Add tags to signature blocks such as external vs internal signer, name, title, and date. Enable contract requesters and fulfillers to add additional signers to contracts directly within the document.
- Internal review framework: Initiate contract reviews from internal reviewers. Enable internal reviewers to accept or reject tasks and add comments to redlines. Track multiple reviews and their respective deadlines across multiple documents and reviewers.

## Hyperautomation and Low Code

### App Engine

- Now Assist for Creator
  - Data visualization generation: Create analytics visualizations through text, without needing to be an expert. Explore and refine analytics queries with ease for new business insight. Quickly create a data visualization from any KPI in Performance Analytics.
  - Playbook generation enhancements: Generate previews for quick review and prototyping to build better playbooks. Re-prompt using simple text to ideate for ideal playbook creation. Automate using GenAI recommendations for activity placeholders.

### Automation Engine

- Enhanced security in Integration Hub: Use personal authentication to reduce the need for super user/admin log in credentials to access third-party systems. Store OAuth tokens on MID Server and mTLS certificates in CyberArk. Unlock additional use cases in industries with stringent security requirements, such as in banking and healthcare.
- Queue efficiency tracker: Determine cost and time savings at the work-item level of an automation. Improve business processes, resource allocation, and reporting with granular automation value metrics.
- Sample automations: Jumpstart your automation journey with a library of pre-built sample automations.

## Customer Workflows

### Customer Service Management

- Rich messaging in Service Catalog: Complete request intake during chat, eliminating pop-ups and lengthy Q&As. Direct customers to service catalogs that trigger optimal process to resolution. Make service catalogs accessible on non-ServiceNow portals and native mobile apps (with Engagement Messenger).
- Service model foundation - Inter-organization support: Streamline communication for service organizations and improve visibility. Reduce back and forth communication by providing key context alongside cases for service organizations. Define support structures for service organizations through hierarchies or relationship criteria.
- Email enhancements for CSM Workspace: Enable agents to quickly and effectively respond to emails. Make it easier for agents to learn CSM Workspace based on similar UX (e.g. Gmail). Consolidate locations for common actions (e.g. discards, drafts) and increase real estate for composition.

### Now Assist for Customer Service Management

- Email reply recommendations: Enable agents to quickly and effectively respond to customer emails while reducing manual errors. Personalize email replies to match customer tone and sentiment.
- Chat reply recommendations: Enable agents to respond to the customer quickly and effectively during chat interactions. Personalize chat responses to match customer tone and sentiment.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Prompt configurability: Receive more comprehensive summaries, enabling agents to respond more accurately and quicker. Improve agent productivity with more complete and contextual summaries.
- Sidebar summarization: Summarize Sidebar conversations and make them easily shareable to the case.

### Sales and Order Management

- Lead Management: Create or import leads, manage the end-to-end lead cycle, use Kanban view to change status via drag and drop. Launch needs analysis questionnaire to identify relevant product offers. Manage lead activities and view priority activities needing attention, like incoming email or upcoming tasks. Quickly create opportunities and map to accounts/contacts or consumers.
- Contract Management for Sales and Order Management: Automate creation of legal sales contracts from quotes to reduce manual steps and errors. Generate document with quote header, line details, terms, conditions and signatories. Configurable workflows ensure company-defined approval matrices are followed. Tailor contracts based on customer and products purchased to improve customer satisfaction.
- Quote Management Sales Agreements: Quickly convert quotes to sales agreements to accelerate revenue and improve operational efficiency. Create sales agreements in ServiceNow or sync externally created agreements for a consistent, unified view. Enforce agreements while creating orders by filtering catalogs and applying agreement-based prices.
- Opportunity Management integration with Field Service Management: Allows technicians to create opportunities during field engagements leveraging previously captured information. Upsell or cross-sell additional products and services during field service visits.
- Product Catalog Management enhancements: Associate product specifications to any level of product offer hierarchy to improve technical catalog mapping. Use eligibility rules to dynamically filter catalogs, categories, and product offers, increasing customer satisfaction, accuracy, and agent efficiency. Set default configurations and pre-populate values in configurator..

### Field Service Management (FSM)

- Now Assist for Field Service Management
  - Knowledge article generation: Generate draft knowledge articles based on task finalization. Share useful information with technicians from solutions implemented to address customer issues. Reduce the need for extensive research and information gathering to shorten repair times.
  - Prompt configuration: Edit input configurations and output formats to customize out-of-the-box skills. Test generated responses to help ensure accuracy and relevancy. Customize Now Assist skill availability.
  - Sidebar chat summarization: Minimize time spent searching and sifting through conversation histories with concise summaries. Acquire necessary information quickly to efficiently schedule and prepare tasks for completion.
  - Extended work order task summary: Equip technicians with essential work order task details to expedite task completion. Fine-tune prompt through configuration to improve accuracy of work order task summary. Generate a concise work order task summary, inclusive of affected products, on one screen.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Opportunity management with field service: Generate opportunities in the field with intuitive data capture, multimedia support, and real-time sync. View, search, and filter self-created opportunities with ease to track progression and maturation. Position technicians as trusted advisers to increase the conversion rate of opportunities into revenue.
- Collaborative mobile sidebar: Communicate with relevant parties natively in the Mobile Agent app. Seamlessly engage experts for issue resolution within the context of a task. Preserve task-related conversations for ongoing process enhancement.
- Temporary technician territory relocation: Designate destination territory, location assignment, and timeline enforcement for temporary placements. Match resource availability to task execution when addressing unscheduled work.
- Dispatcher Workspace scheduling options: Visualize and select work blocks in identification of the best technician available according to schedule. Schedule work order tasks from map view as opposed to hybrid mode.
- Multiple work configurations: Define distinct processes based on work type to execute tasks more accurately. Configure business rules, service level agreements, and questionnaires to improve data collection. Centralize enterprise processes within a single instance to avoid workflow consolidation.

## Industry Products

### Financial Services Operations (FSO) for Banking

- Now Assist for Financial Services Operations
  - Dispute summarization: Improve customer satisfaction with faster, informed communication. Boost agent productivity by automating tedious work, like digging through voluminous case details. Promote collaboration and seamless hand-offs amongst agents by automatically providing role-specific case details.
- Verifi integration: Bolster customer trust by handling disputes quickly, with timely merchant communications. Save money on operational costs with real-time notifications to merchants for pre-dispute resolutions. Consolidate systems with the flexibility to resolve Visa and non-Visa dispute cases on a single platform.
- Dispute rules content pack for Visa: Leverage proactive dispute resolution and the automated assignment of reason codes to drive faster resolutions. Decrease dispute costs with optimized processes that determine chargeback eligibility immediately, ahead of the submission network. Reduce IT costs on Visa rules updates with pre-configured integration and built-in ongoing rules maintenance.
- Dispute rules content pack for Mastercard: Leverage proactive dispute resolution and the automated assignment of reason codes to drive faster resolutions. Decrease dispute costs with optimized processes that determine chargeback eligibility immediately, ahead of the submission network. Reduce IT costs on Mastercard rules updates with pre-configured integration and built-in ongoing rules maintenance.
- Cardholder dispute portal: Improve customer experience through reduced back and forth with agents and self-service visibility on dispute status. Reduce contact center volumes by allowing customers to initiate a dispute through self-service, requiring sufficient details for the case agent. Minimize total time to resolve disputes by capturing all the relevant case details from the customer at the start.
- Dispute content pack for US regulations: Support timely resolutions of high priority disputes through automated prioritization, tracking, and reporting. Maintain compliance and provide customers with dispute status visibility

through email templates, complete with in-process triggers aligned to regulation requirements. Help avoid fines and penalties by providing dispute agents with a convenient method to refund fees, interest, and issue provisional credits.

### Financial Services Operations for Insurance

- Now Assist for Financial Services Operations
  - Claim summarization: Provide users with crucial case context through straightforward and concise claim summaries. Boost customer satisfaction with better informed agents, minimizing the need to ask repeat questions to customers. Promote transparency and consistency across personas by easily inserting a synthesis of claim work and history directly into the claim file.
  - Email reply recommendations: Enable users to quickly and effectively respond to customer emails while reducing manual errors. Personalize email replies to match customer tone and sentiment. Respond to customers faster, reducing time to resolve.
  - Chat reply recommendations: Enable users to respond to customers quickly and effectively during chat interactions. Personalize chat responses to match customer tone and sentiment. Provide users with recommendations to help them effectively position offers at the right time.
  - Prompt configurability: Receive better summaries, enabling users to know how and when best to act. Handle cases more effectively with more empathy and confidence. Improve user productivity with more complete summaries with full context.
- Life claims foundation: Relieve employees of time-consuming tasks with automation and task orchestration capabilities for the end-to-end life claims process. Avoid confusion and allow for quicker processing with multiple policies and beneficiaries supported from a single claim file. Increase speed to market with a robust foundation and data model that allows customers to easily expand use cases.

### Manufacturing Commercial Operations

- Service Bridge enhancements: Streamline Service Catalog management across internal and provider requests. Enable real-time access to provider data during service request submissions. Facilitate seamless task-to-task integration between provider and consumer instances. Support version mismatches to allow providers to update while maintaining consumer compatibility.
- Configure Price Quote enhancements: Automate creation of legal sales contracts from quotes to reduce manual steps and errors. Generate comprehensive contract documents including quote details, terms, and signatories. Enable single-click conversion of quotes to sales agreements for faster revenue realization. Enforce agreement terms during order creation with filtered catalogs and agreement-based pricing. Enhance product catalog management with improved technical mapping and eligibility rules.
- Lead and Opportunity Management: Manage the complete lead lifecycle with Kanban view and needs analysis questionnaires. Quickly convert qualified leads to opportunities and map to accounts or contacts. Enable field service technicians to create sales opportunities during customer visits. Foster better customer relationships by identifying and capturing additional needs on-site. Improve upsell and cross-sell capabilities during field service engagements.

### Technology

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Now Assist for Telecom, Media, and Technology
  - Customer Service Problem Management: Self-service summaries make handoffs easier and provide both agents and customers real-time status updates as problems get resolved. Quickly and easily interpret test results in plain language and automate test results, diagnosing issues faster, and speeding up resolution. Save time with clear, concise resolution summaries that speed up case wrap-up, keep customers informed, and serve as future reference for agents.

### Technology Provider Service Management

- Account Life cycle Events: Understand engagement details such as success initiatives, touchpoints, and risks in a single workspace. Enable customer success managers with automated, easy-to-trigger workflows without requiring technical knowledge. Increase customer lifetime value by ensuring product adoption, achieving business objectives, and measuring tangible success results.
- Customer Service Problem Management: Implement a structured approach to identify and resolve issues efficiently with diagnostic framework. Optimize service management by navigating through four core stages: Service Verification, Service Diagnostics, Resolution, and Test & Closure. Utilize a defined diagnostic framework to effectively handle service issues.
- Service Bridge - Mismatched version support and configuration revisions: Improve scalability for providers and enhance customer support by accommodating different versions of Service Bridge. Enable providers to develop and deliver new capabilities to customers on recent application versions. Enhance deployment and support of Service Bridge entitlements with configuration revisions.
- Service Bridge - Consumer pre-flows: Enable consumers to initiate a flow before synchronizing Remote Record Producer requests with providers.

### Sales and Order Management for Technology Providers

- Service Bridge - Order Management support: Providers can publish product and service offerings to Service Bridge connected customers as remote record producers. Order and manage product offerings published as RRPs on the customer instance. Facilitate new, disconnect, suspend, and resume product and service orders
- Order Management: Enable customers to easily request a service move via the channel of their choice. Streamline the process to validate and confirm the change order is feasible. Seamlessly disconnect and reconnect services to ensure smooth transitions between locations.

### Telecommunications

- Now Assist for Telecom, Media, and Technology (TMT)
  - Customer Service Problem Management: Self-service summaries make handoffs easier and provide both agents and customers real-time status updates as problems get resolved. Quickly and easily interpret test results in plain language and automate test results, diagnosing issues faster, and speeding up resolution. Save time with clear, concise resolution summaries that speed up case wrap-up, keep customers informed, and serve as future reference for agents.

### Telecommunications Service Management

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Account Life cycle Events - Customer Success: Understand engagement details such as success initiatives, touchpoints, and risks in a single workspace. Empower customer success managers with automated, easy-to-trigger workflows, requiring no technical knowledge. Increase customer lifetime value by ensuring product adoption, achieving business objectives, and measuring tangible success results.
- Customer Service Problem Management: Implement a structured approach to identify and resolve issues efficiently with diagnostic framework. Optimize service management by navigating through four core stages: Service Verification, Service Diagnostics, Resolution, and Test & Closure. Utilize a dedicated case type based on the TM Forum-defined framework.
- Service Bridge - Mismatched Version Support and Configuration Revisions: Improve scalability for providers and enhance customer support by accommodating different versions of Service Bridge. Enable providers to develop and deliver new capabilities to customers on recent application versions. Improve deployment and support of Service Bridge entitlements with configuration revisions.
- Service Bridge - Consumer Pre-flows: Enable consumers to initiate a flow before synchronizing Remote Record Producer requests with providers.

### Telecommunications Network Inventory

- Enhanced Circuit Visualization: View current and historical designs of connections for informed decision- making during network upgrades. Display and manage redundancy paths of connections and deliver reliable networks. Assign card, slot, and port for connection elements and maintain accurate circuit data. Easily identify route topology connection points.
- Enhanced Planned Revision: Display logical connection details and connection elements in a single circuit overview page for accurate planning. Validate revised designs against the original design for a clear understanding of changes. Keep one year record of circuit design changes for historical reference and troubleshooting.
- Enhanced Rack Management User Interface: Add, move, or remove rack equipment with ease and increased flexibility and scalability to maintain rack inventory. Reserve rack units for future implementation or un-reserve when not required. View rack edits side-by-side to the current rack layout prior to saving edits and increase inventory accuracy. Display rack power and weight KPIs and monitor rack limitation.

### Sales and Order Management for Telecommunications

- Service Bridge - Order Management Support: Providers can publish product and service offerings to Service Bridge connected customers as remote record producers. Customers gain easy access to order and manage product offerings published as RRPs on the customer instance. Facilitates new, disconnect, suspend, and resume product and service orders.
- Order Management - Change orders for location changes: Empower customers to easily request a service move via the channel of their choice. Streamline the process to validate and confirm the change order is feasible. Seamlessly disconnect and reconnect services to ensure smooth transitions between locations.

### Government

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Information Request playbook enhancements: Process record requests efficiently with out of the box document redaction embedded directly into workflows. Reduce administrative burden with easy document search, text masking, change previews and version control. Securely obscure the sensitive and classified information in public records.
- Now Assist for Public Sector Digital Services (PSDS)
  - Case summarization: Provide a summary of prior actions and recommended next steps for a seamless workflow. Speed up resolution times by reducing the effort needed for agents to begin their tasks.
- Retail Data Model: Reduce time to value with retail specific attributes within OOTB retail fields. Improve admin experience by including important retail attributes during configuration. Increase operational efficiency by providing foundational data required for retail cases and future automation.
- Retail Base Case: Reduce time to value with a retail case type for OOTB usage and to reduce customization needs. Improve agent experience by displaying key retail content for store support use cases. Improve store worker experience by tailoring default case submission forms to store use cases.

### Retail Operations & Retail Service Management

- Retail Data Model: Reduce time to value with retail specific attributes within OOTB retail fields. Improve admin experience by including important retail attributes during configuration. Increase operational efficiency by providing foundational data required for retail cases and future automation.
- Retail Base Case: Reduce time to value with a retail case type for OOTB usage and to reduce customization needs. Improve agent experience by displaying key retail content for store support use cases. Improve store worker experience by tailoring default case submission forms to store use cases.

## Finance & Supply Chain Workflows

### Source-to-Pay Operations

- Now Assist for Sourcing and Procurement Operations: Guide requesters using natural language to easily find and order the right products and services from the best suppliers. Create better procurement intake experience at scale without relying on experts or manual processes. Reduce costs, errors, and cycle times by automating the intake and fulfillment of requests.
- Sourcing & Procurement Operations + Contract Management Pro: Streamlines contracting requests and creates an efficient end-to-end process. Reduces manual work and keeps teams focused on productive activities. Reduces risks by integrating compliance and risk mitigation into a collaborative contract lifecycle.

## ServiceNow Impact

### SeviceNow Impact

- Impact adoption accelerators:
  - Jumpstart Your Common Service Data Model (CSDM)
  - Jumpstart Your Event Management
  - Jumpstart Your Process Mining
  - Jumpstart Your Issue Auto Resolution

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

  - Jumpstart Your Document Intelligence
  - Extend Your Employee Center to Pro
- Impact assessment accelerators:
  - Integrated Risk Management
  - Software Asset Management
  - CSDM – Technical Services
  - CSDM – Business Services
  - UX Taxonomy Review & Design
- AI recommendation engine enhancements: Receive relevant recommendations quickly, triggered by similar or related Impact initiatives completed. See the reasons behind each recommendation on the "All Recommendations" page that features an updated UI and richer contextual detail.
- Health assessment dashboard enhancements – automated insights: Act swiftly on detailed findings quickly after completing a health scan. Mitigate conflicting actions effectively. Begin work more quickly with streamlined prioritization process.
- Value blueprint enhancements: Generate a new value blueprint to replace one that is out of date. Build automated value blueprints for multiple instances. Automate data collection for App Engine and Enterprise Architecture (formerly APM) products.

### Upgrading to the Xanadu release

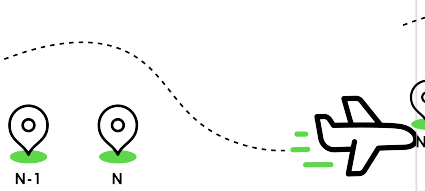
Upgrade to the ServiceNow AI Platform Xanadu release today. Take advantage of these ServiceNow resources to help you stay current.

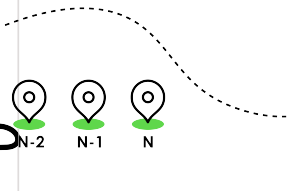
Get your Xanadu release upgrade kit: Find everything you need to get started on your upgrade, including a summary of new features, demos, key resources, and more.

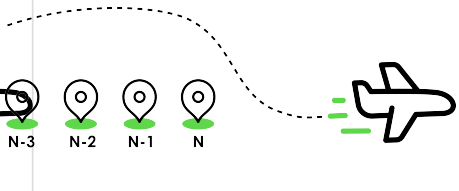
ServiceNow Releases and Upgrades community: Ask questions and get answers from ServiceNow experts and peers, get access to the latest best practices and resources, and register for releases and upgrades community events for additional support.

## Learn about the Xanadu release

The Xanadu release includes new features and improvements built on the ServiceNow AI Platform®.







### Release dates

- Early availability: August 1, 2024
- General availability: Targeted for late Q3 2024

### Release notes for upgrades

Before you upgrade, review release notes from your current version to the Xanadu release. The release notes offer valuable information about new functionality, notable changes, and available fixes. They help you determine whether the upgrade contains functionality you need and fixes that resolve any issues affecting your instance. The release notes can also help you determine whether items you previously customized are being upgraded.

## New products in Xanadu

The Xanadu release includes new products.

**Employee Service Management**

- HR Service Delivery for Healthcare release notes
- Journey designer release notes
- Leader Hub release notes
- Skills Intelligence release notes

**Field Service Management**

Now Assist for Field Service Management (FSM) release notes

**Financial Services Operations**

- Dispute Content Pack for US Regulations release notes
- Dispute Rules Content Pack for Mastercard release notes
- Individual Life Claims release notes
- Now Assist for Financial Services Operations (FSO) release notes
- Verifi Spoke release notes

**Governance, Risk, and Compliance**

Smart Assessment Engine release notes

**IT Operations Management**

Service Reliability Management release notes

**IT Service Management**

Proactive Engagement release notes

**Hyperautomation and Low Code**

ServiceNow IDE release notes

**Operational Technology**

- Operational Technology Request Management release notes
- Vulnerability Response Integration with Microsoft Defender for IoT (Azure) release notes

**Retail Operations**

Retail Operations release notes

**Sales Customer Relationship Management**

- Lead Management release notes
- Sales Agreement Management release notes

**Security Operations**

Threat Intelligence Security Center release notes

**Telecommunications, Media, and Technology**

- Field Service Management for Telecommunication release notes
- Now Assist for Telecommunications, Media and Technology (TMT) release notes

## Updated features and products

Other products were changed and updated in the Xanadu release. For more information, refer to the release notes topics, which are organized by product area.

### API release notes

ServiceNow® APIs let you build custom applications and experiences. APIs were enhanced and updated in the Xanadu release.

## API highlights for the Xanadu release

- Use server-side JavaScript APIs in scripts to change the application functionality.
- Run client APIs whenever a client-based event occurs, such as when a form loads, a form is submitted, or a field value changes.
- Use inbound REST APIs to interact with various ServiceNow functionalities within your application.

See API implementation and reference for more information.

## New in the Xanadu release

**New scoped classes and additional methods to existing scoped classes in Xanadu**

| Class | Methods |
|---|---|
| CMDBQBScopedScriptableAPI - Scoped | • createReport()<br>• deleteQuery()<br>• getSavedQueryExecutionDetails()<br>• saveQuery()<br>• updateQuery() |
| HistoryWalker - Scoped, Global | walkTo(checkpoint) |
| NumberFormatter - Scoped, Global | • parseWithLocale()<br>• parseWithSeparators() |
| PDAutomationProvider - Scoped, Global | • activateProcess()<br>• deactivateProcess()<br>• duplicateProcess() |
| PDFGenerationAPI - Scoped, Global | redact() |

| Threat Intelligence Security Center for Security Operations | V3.5.0 | TISC API | POST /sn_sec_tisc/threat_intel_data/add_observables |

## Changed in this release

### Changed scoped classes in Xanadu

| Class | Methods |
|---|---|
| HistoryWalker - Scoped, Global | Added parameter for specifying the type of history walker implementation to use.<br><br>HistoryWalker() |

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

### Changed global classes in Xanadu

| Class | Methods |
|---|---|
| GlideAggregate - Global | Added support for dynamic schema.<br>• addAggregate()<br>• addHaving()<br>• getValue()<br>• groupBy()<br>• orderBy()<br>• orderByAggregate() |
| GlideRecord - Global | Added support for dynamic schema.<br>• addQuery()<br>• getDisplayValue()<br>• getValue()<br>• orderBy()<br>• orderByDesc()<br>• setDisplayValue()<br>• setValue() |
| HistoryWalker - Scoped, Global | Added parameter for specifying the type of history walker implementation to use.<br>HistoryWalker() |

### Changed REST APIs in Xanadu

| Class | Methods |
|---|---|
| AWA Manual Assignment API | Added new request body parameters.<br>POST /awa/workitems/{work_item_sys_id}/assignments |
| Continuous Integration/ Continuous Delivery (CICD) API | Added new optional query parameters for specifying whether to run a test suite as a performance test and in Cloud Runner.<br>POST /sn_cicd/testsuite/run |

### Changed scoped classes in the ServiceNow store

| Application | App version | Class | Methods |
|---|---|---|---|
| Lead to Cash Core | V1.3.1 | LeadtoCashCore - Scoped | The LeadtoCashCore script include is enhanced to support reconfiguration use cases: |

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

### Changed scoped classes in the ServiceNow store (continued)

| Application | App version | Class | Methods |
|---|---|---|---|
| | | | • createInstance() - Returns *_state* identifying whether the entity record is in an active or inactive state.<br>• delta() - *additionalParams* now supports the ability to ignore attributes to compare in source and dirtyJSONs.<br>• effect() - *additionalParams* now supports the ability to provide context variable keys instead of dictionary field names. Additionally, effect() returns the *_state* parameter identifying whether the entity record is in an active or inactive state. |
| Lead to Cash Core | V2.0.0 | LeadtoCashCore - Scoped | *commitInstance()* now returns the dataObject object which displays the status of an asynchronous transaction for users to review and submit the transaction for further fulfillment. |

### Changed client APIs in the ServiceNow store

| | | Class | Methods |
|---|---|---|---|
| CSM Openframe | V1.0 | openFrameAPI - Client | Added *workitem_rejected* and *workitem_accepted* response payloads.<br><br>subscribe() |
| CSM Openframe | V1.1 | openFrameAPI - Client | Added *isAutoAccepted* flag in response payloads.<br><br>subscribe() |

### Changed REST APIs in the ServiceNow store

| Application | App version | Class | Methods |
|---|---|---|---|
| Customer Contracts and Entitlements | V4.0 | Service Contract API | Product specification information and automatically generated identification number were added to the following endpoints:<br>• GET /sn_pss_core/servicecontract/{id}<br>• GET /sn_pss_core/servicecontract/contractline/{id}<br>• POST /sn_pss_core/servicecontract<br>• POST /sn_pss_core/servicecontract/contractline |
| Entitlements Verification | V2.0 | Verify Entitlements API | Product specification information and automatically generated identification number were added to the following endpoints: |

- *PlaybookExperience*
- *Product Catalog Open API*
- *Service Order Open API*

The following APIs require plugin activation:

- The *Appointment Open API* requires the following plugins to be activated:
  - Appointment Booking (com.snc.appointment_booking)
  - Field Service Management (com.snc.work_management)
  - Field Service Management for Telecommunications (com.sn_fsmt)
  - Telecommunication Open APIs (com.sn_tmf_api)
- The *AWA Manual Assignment* API requires the Advanced Work Assignment (com.glide.awa) plugin to be activated.
- The *LeadtoCashCore* script include requires the Lead to Cash Core (com.snd.l2c.core) plugin to be activated.
- The *PersonalAuthAPI* requires the Personal Authentication (com.snc.sn_ihub_personal_auth) plugin to be activated.
- The *Proactive Engagement* API requires the Proactive Engagement (proactive-engagement) plugin to be activated.
- The *PSBPublicAPIUtil* requires the Service Exchange for Providers application (sn_sb_pro) and the Service Exchange Base (sn_sb) plugins to be activated.
- The *Resource Inventory Open* API requires the Customer Network Inventory Core application (com.app-ni-core) plugin to be activated.
- The *Service Contract* API requires the following plugins to be activated:
  - Customer Contracts and Entitlements (com.sn_pss_core)
  - Customer Service Install Base Management (com.snc.install)
  - Product Catalog Management Core (com.sn_prd)
- The *Service Test Management Open* API requires the Customer Service Problem Management (com.sn_sprb_mgmt) plugin to be activated.
- The *Verify Entitlements* API requires the Entitlement Verification (sn_ent_verify) plugin to be activated.
- The *WSD Extra Service Request* API requires the Workplace Reservation Management (com.sn_wsd_rsv) plugin to be activated.
- The *WSD Reservable* API requires the Workplace Reservation Management (com.sn_wsd_rsv) plugin to be activated.
- The *WSD Reservable V2* API requires the Workplace Reservation Management (com.sn_wsd_rsv) plugin to be activated.

### Conversational Interfaces release notes

Conversational Interfaces includes enhancements and changes in the Xanadu release.

Updates are available for the following Conversational Interfaces applications on the ServiceNow AI Platform.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

### Agent Chat release notes

The ServiceNow® Agent Chat application enables agents to interact directly with end users through chat. Agent Chat was enhanced and updated in the Xanadu release.

## Agent Chat highlights for the Xanadu release

Trigger Now Assist to generate a recommended response while interacting with users in Agent Chat.

See Agent Chat for more information.

**Important:**
Agent Chat is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

### Using Agent Chat

Trigger Now Assist while interacting with users in Agent Chat to generate a recommended response. You can edit the recommended response or have Now Assist shorten or lengthen it.

### Using Agent Chat

Agent Chat supports multiple languages in chat summarizations.

Configure when and to whom chat summarization is available by specifying channels and roles in the Now Assist Admin console.

## Activation information

Agent Chat is a ServiceNow AI Platform feature that is available with activation of the Agent Chat plugin (com.glide.interaction.awa). For details, see Configuring Agent Chat.

## Related ServiceNow applications and features

### Virtual Agent

Provide your employees and customers with a friendly messaging interface, featuring prebuilt conversations powered by artificial intelligence.

### Now Assist in Virtual Agent release notes

The ServiceNow® Now Assist in Virtual Agent application uses generative AI skills in your conversational experiences. Now Assist in Virtual Agent uses large language models (LLMs) to create a natural-language conversational experience that can improve the success of your self-service workflows. Now Assist in Virtual Agent was enhanced and updated in the Xanadu release.

## Now Assist in Virtual Agent highlights for the Xanadu release

Xanadu Patch 9

- Use enhanced chat to provide users with a conversational experience within a resizable and movable chat window that includes the ability to have multiple active conversations. Enhanced chat enables users to choose their way of engaging with Now Assist on their ServiceNow portals from a variety of entry points. Enhanced chat includes synthesized responses after entering a search query into a portal's search bar. If Now Assist in AI Search is turned on, enhanced chat also offers an optional full-page experience where your users can enter into a

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

full-page chat experience after entering a search query into a portal's search bar. Enhanced chat also offers an updated, modern look and feel along with chat controls to resize and move the chat window.

- View an expanded list of inline citations for both standard and enhanced chat. New inline citations for external content and people searches are available.
- View and work with suggested actions after completing an action in Now Assist in Virtual Agent.
- Stream responses for Now Assist LLM - enhanced chat conversations.
- Upload or drag documents and images into a standard or enhanced chat.
- Automatically switch to the user's detected language in enhanced chat conversations when language detection is turned on.
- Enable pinning a chat window on a portal by using the *sn_nowassist_va.enhanced_chat_pin_enabled.<portal-url>* system property.

### Xanadu Patch 7

- Stream responses for Now Assist LLM chat conversations.

### Xanadu Patch 3

- Run actions from a conversation.
- Run subflows from a conversation.
- Use an updated Virtual Agent Designer list-based home page that includes conversational subflows and actions.
- Use language detection and engage in small talk within LLM conversations.
- Link primary assistants with secondary assistants to use search sources from secondary assistants.
- Use language detection and engage in small talk within LLM conversations.
- Receive a synthesized response for Now Assist in Virtual Agent users.

### Xanadu Patch 1

- Enhancements to the Now Assist in Virtual Agent admin guided setup.

See Now Assist in Virtual Agent for more information.

## New in the Xanadu release

### Xanadu Patch 9

#### Use enhanced chat

Enhanced chat is a conversational support experience within a resizable and moveable window that also includes the ability to have multiple active conversations and superior search capabilities. Using enhanced chat's full-page experience further intertwines chat and search capabilities by redirecting users into a full-page chat after entering a query into a portal's search bar.

#### View inline citations

View the expanded list of inline citations for standard and enhanced chat:

- Catalog
- Topic, subflows, or actions

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Q&A Knowledge Base articles
- External content connections

**Note:**
External content connections now include the following connection types:

  - Microsoft SharePoint
  - Confluence
  - Atlassian Jira Cloud
  - Google Drive
  - Microsoft Teams
  - Predefined web sources
  - ServiceNow® documentation
  - Slack

- People

**Note:**
If Knowledge Graph is turned on, you can view information about a person. The people information in the Virtual Agent response typically includes their title, department, location, and email address. The people popover shows additional information.

### Use suggested actions

View suggested actions that were related to your prior conversation and that you consider doing next. After completing a conversational catalog request, conversational subflow, or Virtual Agent topic, two suggested actions appear after a `Here's what you can do next` header.

### Stream enhanced chat responses

Stream LLM response messages as they're generated instead of the response text appearing all at once to end users. Responses stream in either one letter or one word at a time.

### Use language detection to automatically switch the conversational language for enhanced chat conversations

Automatically switch the conversational language to the user's detected language during LLM enhanced chat conversations when language detection is turned on. This automatic switch can occur when a user enters an utterance at the start of a new conversation or within the portal home page's search field.

### Recognize the Boolean user input control during dynamic translation

Recognize the Boolean user input control in chat conversations during dynamic translation.

### Adjust Shorten responses toggle to impact Show more option in chat

For bot text responses, adjust the **Shorten responses** toggle in Virtual Agent Designer to turn off the **Show more** option on the user side. When **Shorten responses** is turned off, the **Show more** option does not appear in the chat to the user and the full answer is displayed rather than a truncated response.

### Configuring Now Assist in Virtual Agent

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

In addition to configuring Now Assist in Virtual Agent assistants, admins can configure the default Now Assist panel assistants. Options may vary for Now Assist panel assistants.

Create an assistant

- If multiple assistants are created, users can chat simultaneously with multiple assistants. Conversations are independent from each other.
- Turn on or off Now Assist panel (agent or creator) assistant. Contact support to configure Now Assist panel assistants.

Assign Now Assist skills to an assistant

- Now Assist Topic skill must be turned on at the assistant level for document uploads to be activated when managing the chat experience. For more information, see Manage an assistant chat experience.
- Create and manage agentic workflows in Now Assist AI Agents Studio and assign the workflows to the assistant.

Display your assistant on a portal or channel

- Display Now Assist in Virtual Agent enhanced chat, with or without the full-page experience, on your portal or mobile app. This dynamic window includes the ability to have multiple active conversations and search capabilities. To use enhanced chat, portals and mobile apps require AI Search to be enabled. For more information on the prerequisites, see Portal prerequisites for enhanced chat and Mobile app prerequisites for enhanced chat.

Manage an assistant chat experience

- Upload documents to Now Assist in Virtual Agent standard chat or enhanced chat experience. The Now Assist topics skill must be enabled in Now Assist skills. For more information on file formats, see Upload documents in Now Assist in Virtual Agent.

Review assistant settings

- Document uploads appear as active if it's turned on when managing the chat experience.

### Upload documents in Now Assist in Virtual Agent

Upload or drag and drop files to Now Assist in Virtual Agent (standard chat or enhanced chat). The assistant analyzes and understands the content of the files, and a user can ask questions about the content of the files or get a summary.

### Now Assist in Virtual Agent system properties

Enable suggested actions in Now Assist in Virtual Agent so that users are offered options for what they can do after completing a prior action. Suggested actions is applicable to standard and enhanced chat, mobile, and Microsoft Teams.

## Xanadu Patch 7

### Stream chat responses

Stream LLM response messages as they’re generated instead of the response text appearing all at once to end users. Responses stream in either one letter or one word at a time.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Xanadu Patch 3

### Use Now Assist to call Microsoft Active Directory v2 actions

Install Now Assist for Conversational Spokes plugin and start utilizing the conversational ability of the Look up User spoke action. You can call this action from a conversational interface like Now Assist.

### Run an action from a conversation

Run a Workflow Studio action from a Now Assist conversation. Create and configure the conversational action from Workflow Studio. View and edit conversational actions within Virtual Agent Designer.

### Run a subflow from a conversation

Run a Workflow Studio subflow from a Now Assist conversation. Create and configure the conversational skill from Workflow Studio. View and edit conversational subflows within Virtual Agent Designer.

### AI generated topic description message within topic migration

A `Topic description generated by Now Assist` message now appears near the **Topic Description** field during the topic migration's Review descriptions step.

### Small talk for LLM conversations

Use small talk in LLM conversations for greetings and farewells along with gratitude and complaint statements. A Semantic Filtering Framework (SFF) detects small talk and generates an appropriate response.

### Language detection for LLM conversations

Use language detection for your LLM conversations to improve your user's experience.

### Virtual Agent Designer home page

A new list-based Virtual Agent Designer home page appears for users who have activated Now Assist in Virtual Agent and the Agent assist Topics skill. The card-based UI is still available for those users who use only NLU/keyword or Virtual Agent Lite.

### Virtual Agent Designer user input controls

Updates to LLM user inputs include:

- Use the Validation toggle in the Advanced section of User Inputs to confirm user input values by scripts.
- Use the Allow slot filling toggle on User Inputs to switch between static (single field) and dynamic (define with scripts or data pill picker) detail description modes.
- Get a message that a mandatory field cannot be skipped when you attempt to skip a user input with conditions not set to be skippable.

### Configuring Now Assist in Virtual Agent

Updates to the admin guided setup include:

- Enhance functionality and efficiency of your Virtual Agent by linking primary assistants to secondary assistants, enabling a primary assistant to use search sources from secondary assistants.
- View the relationship between primary and secondary assistants within a map view.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Select portals and mobile applications to display Virtual Agents.
- Create conversational subflows and actions by launching Workflow Studio to make conversational subflows and actions available to the assistant.

#### Synthesized response

For Now Assist in Virtual Agent users, a synthesized response can appear. A synthesized response includes a brief summary of the requested information and search results along with Genius Results. Mid-topic switching can occur during a conversation with synthesized response. Users can continue with their original request or switch the conversation's focus.

#### New system properties

The following system property was added to increase flexibility of the search results and response:

- *sn_nowassist_va.synthesized_autostart_items*: When synthesized response only returns a singular action, configure whether to directly launch into that action. By default, whenever synthesized response returns a single Virtual Agent topic, that action is auto-launched. The following actions can be configured to auto-launch:
  - Synthesized response returns a single conversational catalog item.
  - Synthesized response returns a single Virtual Agent topic, along with Knowledge Base information.
  - Synthesized response returns a single conversational catalog item, along with Knowledge Base information.

### Xanadu Patch 1

#### Delete virtual agents

Delete a Virtual Agent from the assistants list.

#### Support virtual agents on a portal

Allow public availability of an LLM-based Virtual Agent on a portal.

#### Display a virtual agent in a channel

Integrate your preferred messaging channels to display your Virtual Agent.

#### Install proactive triggers

Install Proactive Triggers from within the Review page.

#### Support notifications in virtual agents

Support actionable and non-actionable notifications for LLM conversations in Virtual Agent.

## UI changes

### Xanadu Patch 9

#### UI chat updates

- The summary card in a Now Assist in Virtual Agent conversation was updated to a more modern look and feel.
- The default chat widget button for enhanced chat and standard chat now differs on the portal.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- An Ask Now Assist header now appears with suggested searches in a drop-down on the portal's search bar.
- The Boolean choice, static choice, and dynamic choice controls were updated to a more modern look and feel for requesters.

#### Xanadu Patch 3

#### UI chat updates

- The New `messages below` button in Virtual Agent was replaced with a simplified down-arrow indicator.
- The New `messages above` button was deprecated because Virtual Agent now auto-scrolls to the top of the oldest new message.
- Input text bar was updated to a more modern look and feel.
- The start a new conversation icon was updated.

## Changed in this release

#### Xanadu Patch 9

#### Standard chat

The existing Now Assist in Virtual Agent LLM conversational behavior received a terminology update and is now referred to as standard chat.

## Activation information

Now Assist features are available with activation of any Now Assist plugin from the ServiceNow Store. The following plugins are available:

- Now Assist for Accounts Payable Operations (APO)
- Now Assist for Configuration Management Database (CMDB)
- Now Assist for Creator
- Now Assist for Customer Service Management (CSM)
- Now Assist for Field Service Management (FSM)
- Now Assist for Financial Services Operations (FSO)
- Now Assist for Health and Safety
- Now Assist for HR Service Delivery (HRSD)
- Now Assist for IT Operations Management (ITOM)
- Now Assist for IT Service Management (ITSM)
- Now Assist for Legal Service Delivery (LSD)
- Now Assist for PSDS
- Now Assist for Security Incident Response
- Now Assist for Supplier Lifecycle Operations (SLO)
- Now Assist for Sourcing and Procurement Operations (SPO)
- Now Assist for Strategic Portfolio Management (SPM)
- Now Assist for Telecommunications, Media and Technology (TMT)

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

For more information, see Configuring Now Assist in Virtual Agent.

## Additional requirements

Now Assist in Virtual Agent requires a license for Virtual Agent and at least one Now Assist product.

## Browser requirements

Now Assist in Virtual Agent supports various browsers, including Google Chrome and Microsoft Edge. For more information, see Browser support.

## Localization information

Dynamic Translation is supported in Now Assist Virtual Agent conversations. For details, see Enable translation for Now Assist applications and Localization options for Virtual Agent.

## Related ServiceNow applications and features

**Now Assist**

ServiceNow® Now Assist uses generative AI that is designed to enhance user productivity and efficiency through conversation and proactive experiences.

**Now Assist in AI Search**

The Now Assist in AI Search ServiceNow® Store application combines the power of search with the Now LLM Service generative AI model to answer questions in user searches with actionable AI-generated summaries of relevant Knowledge articles.

**Virtual Agent**

Unlock your enterprise productivity with ServiceNow® Virtual Agent. Increase deflections by empowering your employees and customers to serve themselves using a friendly messaging interface, featuring prebuilt conversations powered by artificial intelligence.

**Workflow Studio**

Consolidate workflow authoring, configuring, and monitoring into a single page experience. Create and manage playbooks, flows, actions, decision tables, and integrations from one design environment.

### Sidebar release notes

The ServiceNow® Sidebar application enables agents and subject matter experts to collaborate on user issues. Sidebar was enhanced and updated in the Xanadu release.

## Sidebar highlights for the Xanadu release

- In addition to individual users, you can now add user groups to Sidebar discussions.
- Use Sidebar on the Mobile Platform if you're an agent.
- Create Sidebar discussions on all record types, and not just on interaction and task-based records.
- Use different expert finder services depending on where Sidebar is accessed from.
- Generate a chat summarization by using a quick action.

See Sidebar for more information.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

**Important:**
Sidebar is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

**Add user groups to Sidebar discussions**

In addition to individual users, you can now add user groups to Sidebar discussions.

**Use Sidebar on Mobile Platform for agents**

If you're an agent, use Sidebar, which is now available on the Mobile Platform.

**Create Sidebar discussions on all record types**

Create Sidebar discussions on all record types, and not just on interaction and task-based records.

**Use different expert finder services in Sidebar**

Use different expert finder services depending on where you access Sidebar from.

**Use the chat summarization quick action**

Generate a chat summarization by using a quick action.

## Activation information

Install Sidebar by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

### Virtual Agent release notes

The ServiceNow® Virtual Agent application provides user assistance through a conversational messaging interface so that you can design and build automated conversations that help users to quickly obtain information and to perform common work tasks. Virtual Agent was enhanced and updated in the Xanadu release.

## Virtual Agent highlights for the Xanadu release

Xanadu Patch 9

- View people information in the synthesized response along with people citation when you search a person in Microsoft Teams chat.
- AI agent support for Virtual Agent.
- View AI agents in Virtual Agent Designer.
- Integrate ServiceNow® Now Assist for Virtual Agent with Microsoft Copilot to enable making IT-related calls and resolve tasks without having to leave the Microsoft Teams tenant.
- Enable Now LLM Service support for Virtual Agent conversations in Conversational Integration with Microsoft Teams and Conversational Integration with Slack.
- Review and test large language model (LLM) topic descriptions against existing Natural Language Understanding (NLU) utterances, migrate Virtual Agent notifications and Proactive Triggers, and migrate NLU vocabulary sources in the NLU to LLM topic migration workflow.
- Configure One Extend Rate Limit for incoming requests for providers.
- Now Assist conversational experience using Now Virtual Agent bot and Self-configured bots within Microsoft Copilot.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Xanadu Patch 3

- Use an updated Virtual Agent Designer list-based home page that includes conversational subflows and actions.
- Work with conversations associated to primary and secondary assistants in Virtual Agent Designer.
- Use language detection and engage in small talk within LLM conversations.
- Receive a synthesized response for Now Assist in Virtual Agent users.

See Virtual Agent for more information.

**Note:**
Performance and the user experience are improved by tracking aggregate in-app activity, including interaction with the app. This tracking is focused on aggregated technical information rather than personal information.

## New in the Xanadu release

### Xanadu Patch 9

#### AI agents in Virtual Agent Designer

View AI agents created in AI Agent Studio in Virtual Agent Designer.

**Quick start tests for Virtual Agent**

After upgrades and deployments of new applications or integrations, run quick start tests to verify that Virtual Agent works as expected. If you customized Virtual Agent, copy the quick start tests and configure them for your customizations.

**Rich text for Static and Dynamic Choice controls: Static Choice user input control and Dynamic Choice user input control**

Use rich text options when creating Static and Dynamic Choice nodes in ServiceNow® Virtual Agent Designer.

**Virtual Agent Web Client branding: Set up your Virtual Agent bot's branding**

Customize colors in the New Messages Above and New Messages Below banners in the chat window.

**LLM topic type association: Create a Virtual Agent topic**

Associate LLM Assistants to Setup topics, Topic blocks, and Custom controls.

#### LLM topic testing

Define an assistant on the Virtual Agent (VA) testing panel, when selecting Test All Active Topics with selecting an assistant.

#### LLM Text bot response control

Use the LLM Text bot response control to generate messages in conversations using LLM topic discovery.

#### Conversational Analytics dashboard in Platform Analytics experience

The Conversational Analytics dashboard in the ServiceNow® Platform Analytics experience meets the compliance requirements of data regulated market environments, for example, Government Community Cloud (GCC). The dashboard contains indicators and breakdowns for rich visualizations and detailed analysis. You can access the dashboard by navigating to **All** > **Conversational Interfaces** > **Analytics**.

#### New system properties

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Determine whether actions for Virtual Agent notifications and Proactive Triggers are created after completing the full topic migration workflow via the *com.glide.cs.notification.create_llm_actions_after_topic_migration* and *com.glide.cs.proactive_trigger.create_llm_actions_after_topic_migration* system properties.

### NLU to LLM topic migration enhancements

- Migrate Virtual Agent notifications and Proactive Triggers actions on the Review connections step after publishing the newly migrated LLM topics in the NLU to LLM topic migration workflow.
- Review, edit, and test LLM topic descriptions against existing NLU utterances, if available, in the Review descriptions step. The Review descriptions step occurs after migration but before publication in the NLU to LLM topic migration workflow.
- Migrate NLU vocabulary sources automatically into either Dynamic Choice or Static Choice nodes, depending on the vocabulary sources setup in NLU.

### Max wait time queue allows LLM topic selection

Select LLM topics to be chosen after the max wait time is met during a Now Assist in Virtual Agent conversation. ServiceNow® Advanced Work Assignment queue triggers support LLM topics whenever the **Trigger Type** field's value is **Max Wait** and you're prompted to select a Virtual Agent topic.

### Catalogs for Virtual Agent

Search for and order services or products from catalog macroponents in Virtual Agent chat by using plain language. Customize the appearance of your catalogs to match your business' branding.

### Integrating Now Assist in Virtual Agent with Microsoft Copilot

Use your Self-configured bot to connect with Microsoft Copilot. The process of integrating the Self-configured bot with Microsoft Copilot is similar to that of integrating the Self-configured bot with Microsoft Teams.

You can @-mention the bot name to initiate a chat within Copilot and Copilot provides you the response based on your utterance.

Microsoft Copilot, when integrated with Now Assist in Virtual Agent, understands the ServiceNow context and routes users to Now Assist to conduct ServiceNow -related questions and tasks within Microsoft Teams.

Use your Now Virtual Agent bot to connect with Microsoft Copilot by @-mentioning the bot name.

Support for using declarative agents with Self-configured bots and transferring to live agents is available.

Support for the default Now Virtual Agent bot plugin is available on the Microsoft Teams Store.

### Integrating Virtual Agent with enterprise messaging apps

Now LLM Service support for channels enables LLM-based conversations with Now Assist in Conversational Integration with Microsoft Teams and Conversational Integration with Slack.

The Now LLM Service support also provides new ServiceNow AI Search experience in channels with the following features:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Legal disclaimers
- Pagination
- Search
- Generative AI Q&A card

### Configure rate limiting for providers

Configure rate limiting at the provider level to control the request flow for requests made within a stipulated time.

### Xanadu Patch 3

### Primary and secondary assistants are honored in Virtual Agent Designer

View which conversational assets are applicable to primary or secondary assistants.

### Language detection for LLM conversations

For Now Assist in Virtual Agent users, use language detection for your LLM conversations to improve your user's experience.

### Synthesized response

For Now Assist in Virtual Agent users, a synthesized response can appear. A synthesized response includes a brief summary of the requested information and search results along with Genius Results. Mid-topic switching can occur during a conversation with synthesized response. Users can continue with their original request or switch the conversation's focus.

### New system properties

The following system property was added to increase flexibility of the search results and response:

- *sn_nowassist_va.synthesized_autostart_items*: When synthesized response only returns a singular action, configure whether to directly launch into that action. By default, whenever synthesized response returns a single Virtual Agent topic, that action is auto-launched. The following actions can be configured to auto-launch:
  - Synthesized response returns a single conversational catalog item.
  - Synthesized response returns a single Virtual Agent topic, along with Knowledge Base information.
  - Synthesized response returns a single conversational catalog item, along with Knowledge Base information.

## UI changes

### UI chat updates

- The `New messages below` button in Virtual Agent was replaced with a simplified down-arrow indicator.
- The `New messages above` button was deprecated because Virtual Agent now auto-scrolls to the top of the oldest new message.
- Input text bar was updated to a more modern look and feel.
- The start a new conversation icon was updated.

**Virtual Agent Designer Topic testing window:** Testing LLM topics

Various UI updates to field descriptions for controls.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Modify conditions and scripts for additional instructions when testing LLM topics.
- Messages with potentially inappropriate content are now flagged in the **Modify Instructions** (formerly **Prompt Discovery**) tab when testing LLM Virtual Agent topics.

### NLU to LLM topic migration workflow

Changed the Review topic blocks step label to Review connections and added the new Review descriptions step prior to the Publish step in the NLU to LLM workflow.

### Xanadu Patch 3

### Virtual Agent Designer home page

For Now Assist in Virtual Agent users, a new list-based Virtual Agent Designer home page appears for users who have activated Now Assist in Virtual Agent and the Agent assist Topics skill. The card-based UI is still available for those who use only NLU/keyword or Virtual Agent Lite.

### Virtual Agent Designer user input controls

For Now Assist in Virtual Agent users, updates to LLM user inputs include:

- Use the Validation toggle in the Advanced section of User Inputs to confirm user input values by scripts.
- Use the Allow slot filling toggle on User Inputs to switch between static (single field) and dynamic (define with scripts or data pill picker) detail description modes.
- Get a message that a mandatory field cannot be skipped when you attempt to skip a user input with conditions not set to be skippable.

### Small talk for LLM conversations

For Now Assist in Virtual Agent users, use small talk in LLM conversations for greetings and farewells along with gratitude and complaint statements. A Semantic Filtering Framework (SFF) detects small talk and generates an appropriate response.

### Primary and secondary assistants within topic migration

View whether assistants are primary or secondary assistants in the Settings step of topic migration.

### AI generated topic description message within topic migration

For Now Assist in Virtual Agent users, a `Topic description generated by Now Assist` message now appears near the **Topic Description** field during the topic migration's Review descriptions step.

## Deprecations

- Starting with the Xanadu release, the Conversational Analytics dashboard is being prepared for future deprecation. It will be hidden and no longer available for installation but will continue to be supported. For details, see the Deprecation Process [KB0867184] article in the Now Support Knowledge Base.

## Activation information

Virtual Agent is a ServiceNow AI Platform feature that is available with activation of the Glide Virtual Agent plugin (com.glide.cs.chatbot), which requires a separate subscription. For details, see Activate Virtual Agent.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

**Note:**
The Glide Virtual Agent plugin initially installs the Topic Recommendations and Conversational Analytics apps. Subsequent updates to these apps must be installed from the ServiceNow Store.

ServiceNow® Virtual Agent Lite is a subset of the Virtual Agent platform that is available to ServiceNow® IT Service Management (ITSM) customers. It doesn't require activation and works with ITSM Virtual Agent Lite conversations, which are also available to ITSM customers.

## Browser requirements

Virtual Agent supports various browsers, including Google Chrome and Microsoft Edge. For more information, see Browser support.

## Localization information

The ServiceNow® Localization Framework is integrated in Virtual Agent.

## Related ServiceNow applications and features

### Now Assist

Now Assist uses generative AI that is designed to enhance user productivity and efficiency through conversation and proactive experiences.

### Conversational Interfaces Console

The ServiceNow® Conversational Interfaces Console enables you to install, manage, and monitor your virtual and live agents to support your users through chat.

### Prebuilt Virtual Agent topics, topic blocks, and ServiceNow NLU models

The following ServiceNow business applications provide prebuilt Virtual Agent conversation topics, NLU models, and, in some cases, topic blocks as reusable components:

- ServiceNow® Customer Service Management
- ServiceNow® Field Service Management
- ServiceNow® HR Service Delivery
- ServiceNow® Instance Security Center
- ServiceNow® IT Service Management
- ServiceNow® Project Portfolio Management
- ServiceNow® Universal Request

### Natural Language Understanding

Virtual Agent integrates with the Natural Language Understanding (NLU) application, which provides the NLU Workbench for creating NLU models. Virtual Agent uses these models to recognize and process user utterances, intents, and entities in bot conversations.

### Customer Service Management release notes

The ServiceNow® Customer Service Management application has new and updated applications and features in the Xanadu release.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

### Agent experience for CSM release notes

The ServiceNow® Agent Experience for CSM provides customer service agents with the tools they need to find, research, and resolve customer issues and questions. Agent Experience for CSM was enhanced and updated in the Xanadu release.

## Agent experience for CSM highlights for the Xanadu release

- Expand and collapse the header in the Compose Email modeless dialog to edit address fields or increase your working space in the email body.
- Use icons to quickly access email tools such as applying a template or adding an attachment.
- Open the Compose Email modeless dialog with the last saved email draft.

See CSM Configurable Workspace for more information.

**Important:**
CSM Configurable Workspace is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

### Quick start tests for Customer Service Management

After upgrades and deployments of new applications or integrations, run quick start tests to verify that Customer Service Management works as expected. If you customized Customer Service Management, copy the quick start tests and configure them for your customizations.

## Changed in this release

### Email enhancements

The Compose Email modeless dialog includes the following enhancements:

- A collapsible header that includes the **To**, **Cc**, **Bcc**, and **Subject** fields.
- Icons in the footer that enable you to discard the current email draft, apply a template, view a list of recent email drafts, and add attachments.
- Compose Email modeless dialog that you can open to see the last saved email draft.

## Deprecations

Starting with the Xanadu release, CSM Agent Workspace is no longer deployed, enhanced, or supported. For details, see the Deprecation Process [KB0867184] article in the Now Support knowledge base. CSM Configurable Workspace provides the latest experience for this functionality.

## Activation information

Install CSM Configurable Workspace by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Browser requirements

ServiceNow workspaces don't support mobile devices, Internet Explorer, or Microsoft Edge. Instead, use Microsoft Edge - Chromium or one of the other supported browsers listed in Browser support.

## Accessibility information

The following templates were updated to support reflow, which enables pages and content to be zoomed up to 400% through your browser settings without loss of content or functionality. Additionally, content can be enlarged without scrolling in two dimensions at a width equivalent to 320 CSS pixels or a height equivalent to 256 CSS pixels.

- Case playbook: horizontal stages template
- Case playbook: vertical stages template

This enhancement helps users with low vision or who have trouble seeing web content in a browser due to monitor size, device type, poor lighting, or other situations. Reflow can be turned off with a system property for instances, experiences, and pages. See Reflow for Configurable Workspace for details.

## Related ServiceNow applications and features

### Customer Service Management

Use the Customer Service Management application to provide the service and support that your external customers need.

### Now Assist for CSM

Use the ServiceNow® Now Assist for CSM application to summarize customer chat conversations on interactions, summarize case details, and generate case resolution notes.

### Next Experience UI Builder

Next Experience UI Builder is a low-code web user interface builder that enables developers to build pages for workspace and portal web-based experiences. Use the base system and custom web components to build your pages.

### Workspace

ServiceNow® Workspace is a graphical user interface that puts multiple tools on one page, including the tools that agents they need to find, research, and resolve issues. CSM Configurable Workspace is a customer service-specific implementation that provides tier 1 agents with the tools that they need to respond to customers and to resolve cases.

### Customer Contracts and Entitlements release notes

The ServiceNow® Customer Contracts and Entitlements application provides the foundation for storing and managing customer service contracts and entitlements. Customer Contracts and Entitlements was enhanced and updated in the Xanadu release.

## Customer Contracts and Entitlements highlights for the Xanadu release

- Track covered products through the contract records, enabling easier modifications and clearer insight into coverage specifics.
- Create a single contract from an order with multiple contract offerings.
- Create quotes for contract renewal or modification.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

See Customer Contracts and Entitlements for more information.

**Important:**
Customer Contracts and Entitlements is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

### Enhancements in service contracts and entitlements workflow

Track covered products directly through the contract records, facilitating changes and visibility of what is covered. Covered products refer to specific products or order line items included in a service contract. These items are linked to the contract to define what is covered for service or maintenance. Agents in Order Management can select the products to be covered by a contract when the order is captured for the contract offering.

### Create single contracts

Create a single contract from a single order with multiple contract offerings. Add multiple contract offerings from an order to an existing contract.

### Create quotes for contract renewal or modification

Create a quote or an order while renewing or modifying a service contract, service contract line, or an entitlement.

## Activation information

Install Customer Contracts and Entitlements by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Customer Contracts and Entitlements is available with activation of the Customer Contracts and Entitlements (com.sn_pss_core) plugin, which requires a separate subscription. For details, see Configure Customer Contracts and Entitlements.

**Note:**
With the activation of Customer Contracts and Entitlements, new contracts and entitlements are created using the new data model only. The new entitlement verification APIs and change workflows are based on the new data model. Older contracts and entitlements remain available for viewing.

## Related ServiceNow applications and features

### Flow Designer

ServiceNow® Workflow Studio components enable you to invoke flows or subflows that are designed as part of a workflow and used to find out the output or execution status of the flows or subflows.

### Order Management

Order and fulfillment agents can use ServiceNow® Order Management to fulfill customer orders created from the Sales Agreement Management application.

### Install base management

ServiceNow® Install Base Management is used to capture a customer's use or purchase of a product across any industry with the Customer Service Management application.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

### Next Experience UI Builder

ServiceNow® Next Experience UI Builder is a low-code web user interface builder that enables developers to build pages for workspace and portal web-based experiences. Use the base system and custom web components to build your pages.

### Product Catalog Management

ServiceNow® Product Catalog Management organizes products into catalogs and categories so that agents can easily find and add products and services to a quote.

### Pricing Management

ServiceNow® Pricing Management helps you set pricing for products and services that can be added to a quote. Pricing Management also enables agents to make pricing adjustments to products in the quote.

### Workspace

ServiceNow® Workspace is a graphical user interface that puts multiple tools on one page, including the tools that agents use to find, research, and resolve issues. CSM Configurable Workspace and CSM Agent Workspace are customer service-specific implementations that provide tools to the tier 1 agents that they must use to respond to customers and resolve cases.

## Case management for CSM release notes

The ServiceNow® Case management for CSM application enables customer service organizations and support teams to collaborate on customer problems proactively to resolve issues. Case management for CSM was enhanced and updated in the Xanadu release.

## Case management for CSM highlights for the Xanadu release

- Create pages and page variants that contain horizontal or vertical playbooks by using playbook templates.
- Use playbook record pages in CSM Configurable Workspace to guide users through the stages and activities of a playbook and resolve cases.
- Identify common inefficiencies in customer operations by using process mining definitions.

See Case management for Customer Service Management for more information.

## Important information for upgrading Case management for CSM to Xanadu

The customer service manager role [sn_customerservice_manager] includes the approver user role [approver_user]. The approver user role replaces the approval admin role [approval_admin]. Users with the customer service manager role can approve the approval requests that are assigned to them.

## New in the Xanadu release

### Playbooks

Use updated playbook templates in UI Builder that incorporate generative AI feature parity and Agent Experience modernization features such as the modeless dialogs, activity stream, lookup cards, and related items.

### Order Operations Case Management

Use the Order Operations Case Management application (com.sn_order_case) to create order cases that reference multiple line items, including orders and order

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

lines. Agents can use these cases to process order-related services such as order changes, inquiries, and disputes.

### Case lines and workflows

Use the Case lines and workflows application (com.sn_case_line) to reference multiple line items on a case record, including orders or order lines, invoices or invoices lines, contracts, and sold products.

### Quick start tests for Customer Service Management

After upgrades and deployments of new applications or integrations, run quick start tests to verify that Customer Service Management works as expected. If you customized Customer Service Management, copy the quick start tests and configure them for your customizations.

## Changed in this release

### Case type selector configuration

Configure the Product Service select version of the case type selector to hide the product filter.

### Roles included with the customer service manager role

The customer service manager role [sn_customerservice_manager] includes the approver user role [approver_user]. For upgrade customers, the approver user role replaces the approval admin role [approval_admin]. Users with the customer service manager role can approve the approval requests that are assigned to them.

### Process Mining

Added different variants of the two enhanced types of base system opportunities that you can use on a project to identify and address common inefficiencies in customer operations:

- Rule-based finding definitions: Execute one or more finding rule chains in sequence according to the definitions. The records that match the logic of these specifications are classified as a match for improvement opportunities.
- Automated finding definitions: Show improvement opportunities by using the default patterns that are already available for selection.

## Deprecations

Starting with the Xanadu release, CSM Agent Workspace is no longer deployed, enhanced, or supported. For details, see the Deprecation Process [KB0867184] article in the Now Support knowledge base. CSM Configurable Workspace provides the latest experience for this functionality.

## Activation information

Customer Service Management is a ServiceNow AI Platform feature that is available with activation of the Customer Service Management plugin (com.sn_customerservice). For details, see Activate Customer Service Management.

Additional Customer Service Management features are available with the activation of other plugins. For details, see Additional plugins for Customer Service Management.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Browser requirements

ServiceNow workspaces don't support mobile devices, Internet Explorer, or Microsoft Edge. Instead, use Microsoft Edge - Chromium or one of the other supported browsers listed in Browser support.

## Accessibility information

The following templates were updated to support reflow, which enables pages and content to be zoomed up to 400% through your browser settings without loss of content or functionality. Additionally, content can be enlarged without scrolling in two dimensions at a width equivalent to 320 CSS pixels or a height equivalent to 256 CSS pixels.

- Case playbook: horizontal stages template
- Case playbook: vertical stages template

## Related ServiceNow applications and features

### Now Assist for CSM

Use the ServiceNow® Now Assist for CSM application to summarize customer chat conversations on interactions, summarize case details, and generate case resolution notes.

### Communities

From the Customer Service Portal and Consumer Service Portal, enable your customers to connect, engage, and collaborate by using the ServiceNow® Communities application. Customer Service agents can create cases from the community discussion threads and resolve cases by using the community content.

### Continual Improvement Management

Use ServiceNow® Continual Improvement Management to request improvement opportunities. You can implement phases and tasks to meet performance goals, track progress, and measure success. You can also view, create, and associate improvement initiatives from within the Process Mining application.

### Integrating with Customer Project Management

The Customer Project Management plugin (com.snc.csm_ppm) enables you to create projects for a customer account by using the ServiceNow® Project Portfolio Suite with Financials application. It also gives end users visibility into their projects from the Customer Service Portal. This plugin requires the Project Portfolio Suite with Financials plugin (com.snc.financial_planning_pmo).

### Event Management

Customer Service Management provides an integration with ServiceNow® IT Operations Management Event Management. This integration enables you to create cases proactively from alerts either manually or through automation. Customer service agents can track the accounts and the corresponding install base items that are affected by the alert. Agents can also track the operational status of an account's install base to better correlate customer issues and provide faster responses.

### Field Service Management

Customer Service Management includes an integration with the ServiceNow® Field Service Management application. With this integration, you and your customers can perform the following tasks:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Field service technicians can view customer account and contact information on work orders and work order tasks in the Field Service Management application.
- Customer service agents can create work orders from cases in the Customer Service Management application.
- Customers and consumers can view the case-related work orders from the Customer Service Portal and Consumer Service Portal.

### Flow Designer

Workflow Studio components enable you to invoke flows or subflows that are designed as part of a workflow and to find out the output or execution status of the flows or subflows.

### Knowledge Management

From the Customer Service Portal and Consumer Service Portal, enable your customers to search for shared information by using the ServiceNow® Knowledge Management application. Customer service agents can resolve cases with the knowledge content.

### Process Automation Designer

Customer Service Management provides an integration with the ServiceNow® Playbooks application. This integration provides the ability to configure processes such as playbooks.

### Process Mining

ServiceNow® Process Mining helps analysts and process owners analyze the effectiveness of their business processes. Create automated business process flows from your data so that you can monitor and more quickly discover inefficiencies in your processes.

### IT Service Management applications

Customer Service Management includes integrations with the following ServiceNow® Service Management applications: Incident Management, Problem Management, Change Management, and Request Management. With these integrations, you can create incident, problem, change, and request records from customer service cases. Customers can also submit requests from the Customer Service Portal.

### Next Experience UI Builder

Next Experience UI Builder is a low-code web user interface builder that enables developers to build pages for workspace and portal web-based experiences. Use the base system and custom web components to build your pages.

### Workforce Optimization for Customer Service

Manage and maintain the productivity of your workforce from a single application using ServiceNow® Workforce Optimization for Customer Service. With this application, you can help to efficiently route work to members of your team, manage your team's skills and schedules, and monitor their performance.

### Workspace

ServiceNow® Workspace is a graphical user interface that puts multiple tools on one page, including the tools that agents use to find, research, and resolve issues. CSM Configurable Workspace is a customer service-specific implementation that provides agents with the tools that they need to respond to customers and to resolve cases.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

### Data management for CSM release notes

The ServiceNow® Data management for Customer Service Management application enables you to organize and manage the data for both your internal users and external customers. Data management for Customer Service Management was enhanced and updated in the Xanadu release.

## Data management highlights for the Xanadu release

- Enable your agents to get visibility into the business locations that they support by using the inter-organization support functionality.
- Enhance the adoption of the service organization data model by unparenting service organizations from the company table.
- Use the Provider Service Organization information of a sold product to enable agents to create cases.

See Data management for Customer Service Management for more information.

## New in the Xanadu release

### Unified user - employee as a consumer

Update the additional features and workflows, such as the case types Order Management, and Field Service Management integration, to support the unified consumer (sn_customerservice.unified_consumer) role.

### Inter-organization support

Enable your agents to get visibility into the business locations that they support so that they can resolve issues efficiently. You can provide the agents that are assigned to the fulfilling service organization with access to the cases, install base items, sold products, and member details of all the requesting service organizations that they're assisting.

### External business location as a fulfiller

Enable external business locations such as partners, external agencies, and franchises to fulfill customer cases with store-related issues.

### Associating assignment groups with a business location

Associate groups with an internal or external business location through a one-to-many (1:M) relationship, which means that one or more assignment groups can be associated with a business location.

### Install Base hierarchy visualization

View the entire hierarchy of an install base item by using the **Install Base hierarchy** tab on the CSM Configurable Workspace. You can expand the multiple nodes of the hierarchy and create cases for the install base item.

## UI changes

### New look and feel for Outsourced Service Provider dashboard and Proactive Customer Service - Advanced dashboard dashboards

Starting from the Xanadu release, the following dashboards have a new, modernized look and feel:

- Outsourced Service Provider dashboard
- Proactive Customer Service - Advanced dashboard

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

For more information, see Next Experience UI.

## Changed in this release

### Unparenting service organizations from a company

Enhanced the adoption of the service organization model to accommodate the various industry verticals, such as Healthcare and Life Sciences Service Management, Public Sector Digital Services, and Financial Services Operations, by unparenting the service organizations from the company table.

### Field Service Management integration with Service Model Foundation

Enabled your location staff to track the work orders for their business locations by using the business location service portal (BLSP).

### Data model for sold products

- You can now view the Provider Service Organization information that has sold a product or service to the customer on the Sold Product form.
- You can now use the **Product Location** and **Product Specification** fields on the Sold Product table (sn_install_base_sold_product) to capture information about the location of the sold product and the sold product that is associated with an offer.

### Product Instance directive for Install Base Management

Synchronized the changes between the asset and corresponding install base hierarchy with the extended product instance hierarchy.

### Customer Life Cycle Management Workflows

You can now select multiple sold products at the same time to trigger the **Suspend**, **Resume**, and **Disconnect** flows to update the existing root sold products and their services.

### Compose Sales and Order Management workflows

You can now use the sales and order management API to support use cases for order reconfiguration. To learn more about reconfiguration, see LeadtoCashCore - Scoped.

- Perform **Modify**, **Suspend**, **Resume**, and **Disconnect** actions on product inventory records from the Product Inventories related list.

> **Note:**
> The Product Inventories related list is available only from the Yokohama release. If you're using the Washington or Xanadu versions, you can manually add the related list.
>
> To retain both the Product Inventory and Sold product related lists, filter out the product inventory records from the sold product list. Use the product inventories related list to perform the MACD actions.

### Sales and Order Management Request tracker

- Monitor the status of sales and order management workflows and enable agents to track the status of synchronous and asynchronous flows.
- Use the enhances inbound Queue to view detailed request information for the sales and order management workflows and improve user experience.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Activation information

Customer Service Management is a ServiceNow AI Platform feature that is available with activation of the Customer Service Management plugin (com.sn_customerservice). For details, see Activate Customer Service Management.

Additional Customer Service Management features are available with the activation of other plugins. For details, see Additional plugins for Customer Service Management.

Sales Customer Relationship Management is a ServiceNow AI Platform feature that is available with the activation of the Lead to Cash Core plugin (com.snd.l2c.core). For details, see Exploring Sales Customer Relationship Management.

## Browser requirements

Starting with the Xanadu release, ServiceNow® Data Management doesn't support mobile devices and Internet Explorer. For more information, see Browser support.

## Related ServiceNow applications and features

### Communities

From the Customer Service Portal and Consumer Service Portal, you can enable your customers to connect, engage, and collaborate using the ServiceNow® Communities application. Customer Service agents can create cases from community discussion threads and resolve cases with community content.

### Field Service Management

Customer Service Management includes an integration with the ServiceNow® Field Service Management application. With this integration, your technicians, agents, consumers, and customers can perform the following tasks:

- Field service technicians can view customer account and contact information on work orders and work order tasks in the Field Service Management application.
- Customer service agents can create work orders from cases in the Customer Service Management application.
- Customers and consumers can view case-related work orders from the Customer Service Portal and Consumer Service Portal.

### Workforce Optimization for Customer Service

Manage and maintain the productivity of your workforce from a single application by using ServiceNow® Workforce Optimization for Customer Service. With this application, you can efficiently route work to your team, manage your team's skills and schedules, and monitor their performance.

### Workspace

ServiceNow® Workspace is a graphical user interface that puts multiple tools on one page, including the tools agents use to identify, research, and resolve issues. CSM Configurable Workspace and CSM Agent Workspace are customer service implementations that provide tier-1 agents with the tools that they must respond to customers and to resolve cases.

### Sales Customer Relationship Management

The Sales Customer Relationship Management applications enable you to manage the product sales and order fulfillment life cycles in your organization. It includes pre-sales opportunities, sales quote generation, order capture, order fulfillment, and post-sales engagement.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

### Intelligence for CSM release notes

The ServiceNow® Intelligence for CSM applications enable customer service organizations and service operations to configure and implement Guided Decisions, Recommended Actions, and Task Intelligence features. The Intelligence for CSM applications were enhanced and updated in the Xanadu release.

## Intelligence for CSM highlights for the Xanadu release

- Create multiple Recommended Actions context records for the same table to create different experiences that are based on criteria such as user attributes or domains.
- Restart a decision tree in a playbook and retain the history of previous decision tree executions.
- Enable customers to add decision trees as catalog items in a service catalog.
- Enable your users to search for decision trees by using keywords and open a decision tree from the search results.

See Intelligence for CSM for more information.

**Important:**
The following applications are available in the ServiceNow Store.

- Guided Decisions Experience (sn_ga_exp)
- Recommended Actions (sn_cs_nb_action)
- Task Intelligence for Customer Service (com.snc.csm_ml_task)

For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

### Recommended Actions - Task Intelligence similarity models integration

Use similarity models that are integrated with the Task Intelligence (TI) admin console to configure, train, and deploy machine learning models.

- Resource Generator: The Recommended Actions framework supports a new resource generator that leverages TI similarity models to configure recommendations.
- Admin Configuration: Administrators can configure the resource generator to point to TI solutions for predictions and use the topN optional parameter to fetch top recommendations.

### Task intelligence for Customer Service - Dependent field predictions

Help improve the model performance by identifying the dependent fields in a model before displaying the predicted values.

### Task intelligence for Customer Service - Records prediction

Predict the configured fields on the case record after entering the short description or description and see the predicted values without saving the case form.

### Task intelligence for Customer Service - On change predictions for interaction record

Predict the configured fields on the interaction record after entering the short description or description and see the predicted values without saving the form.

### Task Intelligence for Customer Service - Implement Task Intelligence for the CSM Similarity Model:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Similar cases recommendations:  Install the Task Intelligence for Customer Service plugin to view the preconfigured open and closed cases that are automatically trained and deployed as recommendations.
- Major case recommendations: Install the major issue management plugin and activate the feature as needed to get recommendations.

### Recommended Actions - Create multiple contexts for a single record entity

Support multiple contexts for the same table, such as the Case table, with one active context record that can be configured for the Recommended Actions component by using a UI Builder input property. By creating multiple contexts, you can create different experiences that are determined by criteria such as user attributes or domains. The recommendations and AI Search results adjust dynamically according to the configured active context.

### Recommended Actions - Attach knowledge article guidance

Enable agents to view and attach knowledge articles to task records and chat interaction records and share articles with customers by using the following guidances:

- Attach and share article: Enables the agent to share a recommended knowledge article in a comment, work note, or an email.
- Share article in chat interaction: Enables the agent to share a recommended knowledge article in a customer chat.

### Guided Decisions - Run a guidance as a system user

Enable the *guidance_honor_subflow* system property to run a guidance in a decision tree as the user that is specified in the guidance action subflow properties. If this property is set to false, the guidance runs as the current user.

### Guided Decisions - Decision Tree as a catalog item content type

Enable customers to add decision trees as catalog items in a service catalog. From the Customer Service Portal, customers can select the decision tree and open it in a new tab.

### Guided Decisions - Search for decision trees on portal

Enable portal users to search for decision trees with keywords. Selecting a decision tree in the search results opens a page with the decision tree widget.

### Guided Decisions - Enable a start node to contain only task input

Create start nodes for a decision tree that start directly from a task input and create paths that are derived from the data in the task reference. You have the option to create a start node from a question or from task input.

### Guided Decisions - Restart a decision tree in a playbook

Restart the execution of a decision tree. When a user completes the execution of a decision tree in a playbook, they can start and complete the decision tree again if desired. Restarting the playbook retains the history of the previous decision tree executions.

## Changed in this release

### Guided Decisions - Question field updated to type HTML

The **Question** field has been updated from type=string to type=HTML. When adding a question to a decision node, decision tree authors can include the text, formatted text, and images in the **Question** field.

## Activation information

Install the Guided Decisions, Recommended Actions, and Task Intelligence applications by requesting them from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Related ServiceNow applications and features

### Customer Service Management

Provide the service and support that your external customers need with Customer Service Management.

### Now Assist for CSM

Summarize customer chat conversations on interactions, summarize case details, and generate case resolution notes with the ServiceNow® Now Assist for CSM application.

### Document Intelligence

Extract the data from documents and integrate the data into automation workflows to save time and resources by using the Document Intelligence artificial intelligence (AI) solution.

### Predictive Intelligence

Improve processes across the platform, such as automatically populating fields during case creation, categorizing and routing work, and recommending resolutions for cases through the Predictive Intelligence artificial intelligence.

### Now Assist for Customer Service Management (CSM) release notes

The ServiceNow® Now Assist for CSM application brings generative AI to Customer Service Management. You can improve productivity and efficiency by delivering better self-service, recommending actions, and delivering answers. Now Assist for CSM was enhanced and updated in the Xanadu release.

## Now Assist for CSM highlights for the Xanadu release

Xanadu Patch 10: Enable security in Now Assist for CSM and AI agents and agentic workflows by enforcing access control lists (ACLs) and user identity-based permissions.

Xanadu Patch 9

- Use case resolution steps to generate recommended actions based on the data clusters from previously closed cases.
- Use enhanced AI agents and new standalone AI agents for more specific tasks. For example, the Duplicate identifier AI agent identifies the duplicate interactions and cases from the customers and then consolidates the information.

Xanadu Patch 7: Improve agent productivity by managing long running cases with the Triage cases AI agent use case.

- Enhance customer conversations by receiving relevant contextual recommendations in real time.
- Help improve productivity and decrease errors by the automatic generation of emails that can be verified and sent by the agent.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Consolidate information from multiple similar cases and bring it all together into a knowledge base article.
- Summarize records to make it easier to hand off calls between agents and help improve customer satisfaction.

See Now Assist for Customer Service Management (CSM) for more information.

**Important:**
Now Assist for Customer Service Management (CSM) is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

### Xanadu Patch 10

#### Triage cases agentic workflow security directives

Implement security on AI agents and agentic workflows through ACLs and user identities.

#### Now Assist for CSM Gen AI security directives

Implement security in Now Assist for CSM skills through ACLs and user identities.

Xanadu Patch 9

#### Suggested steps in Recommended Actions

Use Recommended Actions to generate suggested resolution steps for cases. You can increase agent productivity by outlining the next best actions for unfamiliar cases and automatically providing logical next steps.

#### Triage cases agentic workflows enhancements

Added new standalone AI agents to check duplicate cases and split some existing standalone AI agents to focus on more specific tasks. The AI agents available are the Triage cases planner AI agent, Context validator and analyzer agent, Duplicate identifier AI agent, Informational queries AI agent, Transactional queries AI agent, Case creation AI agent, Entity extraction AI agent, Document verification AI agent, and Email response AI agent.

Xanadu Patch 7

#### Triage cases AI agents use case

Use the Triage cases AI agents use case to improve agent productivity through faster assessment.

**Available AI agents use case**

| AI agent use case | Description |
|---|---|
| Triage cases | Use AI agents to handle all routine cases coming in through email and other offline channels, so that it improves customer satisfaction and reduces resolution times. |

#### Summarizing sidebar conversations

Use Now Assist for CSM to summarize sidebar discussions between agents, requesters, and subject matter experts.

#### Real-time chat reply recommendations

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Use generative AI to provide the agent with relevant contextual recommendations from sources such as knowledge bases, FAQs, similar cases, chats, and calls before they respond to the customer. Agents can also write a chat response with the help of generative AI. This feature helps agents stay focused on conversations with customers instead of doing manual tasks.

### Generative AI-powered email reply recommendations

Get recommendations for email responses that can be reviewed and sent by agents. Agents can also edit email replies recommendation with the help of generative AI.

### Multilingual support for Now Assist for CSM skills

Large language model (LLM) now supports the following languages across all skills in Now Assist for CSM: German, French, Japanese, Dutch, and French Canadian, Spanish, Brazilian Portuguese, and Italian.

## Changed in this release

### Enhancement in post-call summarization

- You can now review a call that has been handed off from one live agent to another agent, and then provide a summary of the key topics that are covered during the conversation.
- Support for outbound calls from agents to the customers.
- Generate a call summary when the real-time transcript is not available.

### Knowledge generation from multiple cases

You can now select and gather insights and data from multiple similar cases to draft an article by using Now Assist for CSM.

### Enhancements in chat summarization

Multiple Language Support via Digital technology (DT) support and a new step in the guided flow that allows the customization of how and when the skill capability will be available in the admin console.

### Enhancements in Email recommendation

Get recommendations for email responses when starting new emails, forwarding messages, or finalizing drafts. Help improve agent productivity by reducing the time taken to compose email and improve relevance of email reply recommendations. Also, get template recommendations while composing an email by leveraging AI search.

### Enhancement in Resolution notes generation

Generate resolution notes and then shorten or elaborate the content using the Now Assist context menu in the resolution notes field of the case form, in both Core UI (UI16) and Workspace.

### Enhancements in Knowledge generation

Revise the content in existing knowledge articles by using the Now Assist icon ✦, which is accessible as an inline capability, and create and refine knowledge articles. You can also generate knowledge articles in multiple languages.

### Xanadu Patch 7 Case summarization enhancement

Extended the capabilities of the case summarization feature so it can now be used on custom tables.

## Activation information

Now Assist features are available with activation of the Now Assist for CSM plugin. For more information, see Install Now Assist plugins.

Starting with Vancouver Patch 4, Now Assist for CSM is supported.

Starting with Xanadu Patch 7, Customer Service Management AI agent collection is supported.

## Additional requirements

The Now Assist for CSM application requires a Customer Service Management Pro Plus or Enterprise Plus license.

## Related ServiceNow applications and features

### Now Assist

Help improve the productivity and efficiency in your organization, deliver better self-service, recommend actions, provide answers, and empower your users to search more effectively.

### Now Assist Admin console

Use the Now Assist Admin console to provide you with quick and easy access to the important information that you need to set up, configure, and monitor Now Assist applications and features.

### Now Assist panel

Use this conversational interface in CSM Configurable Workspace to summarize a chat, a case, or resolution notes so that you can get the context of this information more quickly.

### Now Assist skills

Use the Now Assist products to provide generative AI skills to meet the needs of users in different workflows, including case or incident summarization, chat summarization, resolution notes generation, and code generation.

### Workforce Optimization for Customer Service CSM release notes

The ServiceNow® Workforce Optimization for Customer Service application enables you to efficiently route work to your team, manage your team's skills and schedules, and monitor their performance. Workforce Optimization for Customer Service was enhanced and updated in the Xanadu release.

## Workforce Optimization for Customer Service highlights for the Xanadu release

- Create and track recurring meetings with managers and their team members in the team calendar.
- Benefit from accessibility improvements to create a configurable workspace that supports Web Content Accessibility Guidelines (WCAG) 2.1 Level AA conformance.

See Exploring Workforce Optimization for Customer Service for more information.

**Important:**
Workforce Optimization for Customer Service is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## New in the Xanadu release

### Performance metrics for voice channel

Monitor and manage the health of voice queues on Channel Management by viewing more metrics and reports from Amazon Connect.

### Recurring meetings in scheduling

Schedule and track recurring meetings such as training sessions or one-on-one sessions with teammates.

### Scheduling enhancements

Efficiently manage and monitor time off and shift swap requests.

## Changed in this release

### Reflow for Configurable Workspace

Dispatcher Workspace and Workforce Optimization for Field Service support reflow that enables pages and content to be zoomed up to 400% through your browser settings without loss of content or functionality. For more information, see the Accessibility information section that follows.

## Accessibility information

### Accessibility improvements

Accessibility improvements were completed to create a configurable workspace that supports WCAG 2.1 Level AA conformance.

### Reflow

The Configurable Workspace supports reflow, which enables pages and content to be zoomed up to 400% through your browser settings without loss of content or functionality. Additionally, content can be enlarged without scrolling in two dimensions at a width equivalent to 320 CSS pixels or a height equivalent to 256 CSS pixels. Page layouts are transformed into a vertical, stacked view automatically when users increase browser zoom to 400%.

This enhancement helps users with low vision or who have trouble seeing web content in a browser due to monitor size, device type, poor lighting, or other situations. Reflow can be turned off with a system property for instances, experiences, and pages. See Reflow for Configurable Workspace for details.

## Activation information

Install Workforce Optimization for Customer Service by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Related ServiceNow applications and features

### Advanced Work Assignment

Automatically assign work items to your agents based on their availability, capacity, and skills using ServiceNow® Advanced Work Assignment.

### Skills Management

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Assess the skills that your organization needs, identify gaps, and plan for the hiring and training of your teams using ServiceNow® Skills Management.

#### CSM Workspaces

Agents can swap shifts, manage their time-off requests and approvals, and complete assigned training using ServiceNow® CSM Agent Workspace.

### Employee Service Management release notes

Employee Service Management has new and updated features in the Xanadu release

### Employee Center release notes

The ServiceNow® Employee Center application is a multi-department, dynamic portal for service delivery and employee engagement. Employee Center was enhanced and updated in the Xanadu release.

## Employee Center highlights for the Xanadu release

- Increase operational efficiency by field workers and shift workers by providing in-context information with the Employee Center Pro Kiosk.
- Gather quick feedback from the users on their user experiences and their service experiences with Experience and Service Feedback.
- Streamline the SharePoint Online Search Connector site permissions and other granular access control.
- Enable employees to engage with news articles through reactions, comments, or sharing the articles.
- Access content management tools from Content Publishing, Content Analytics, and Content Governance plugins in the Content Operations dashboard.

See Employee Center for more information.

**Important:**
Employee Center is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

#### Accelerate news article creation with reusable articles

Create news articles faster and more efficiently by leveraging prebuilt reusable articles within content templates. Reusable articles offer a predefined content layout into which content authors can input text and images.

#### Content engagement

Gather feedback on content:

- Employees can engage with news articles by selecting a reaction icon, leaving a comment, or sharing the article.
- Managers can view metrics for employee engagement with an article such as the number of views, shares, and reactions.

#### Employee Center Pro Kiosk

Empower deskless workers with simplified access to important information related to their job through a kiosk that provides self-serve opportunities such as:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Access shift and time-off details.
- Get queries answered with the help of AI Search.
- Track the status of requests.
- Provide enhanced Employee Center Pro kiosks that can highlight targeted communication and self-service content.
- Leverage guided help links that make the kiosk environment accommodative and easy to navigate.

### Guided Self-Service in Employee Center

Provide employees with an intuitive, visual, Q&A-based experience for self-serving on highly used complex topics such as time off balance through GSS.

### Content operations dashboard

View engagement metrics for published content, manage the content publishing calendar, handle incoming content requests, and review the ownership for pages and widgets through the Content Operations dashboard.

### Content Analytics support for Content Publishing

View data visualizations of performance metrics for content published to the portal or the Now Mobile app using a publish plan or content schedule. Access metrics such as the most-clicked content, most-clicked notifications, number of user interactions by content, and task status.

### Enhanced copy-paste options in Rich Content Editor

Copy and paste formatted content into the Rich Content Editor while retaining the original source formatting or paste the content as plain text that matches the formatting of the destination text box.

### Integrated service and experience feedback in Now Mobile®

Access feedback functionality more easily through the Experience and Service feedback functionality in Now® Mobile.

### Create rich content from portal widgets

Create or edit content directly from the Employee Center portal pages.

### Hide parameters in the Rich Content Editor

Content administrators can configure content rendering parameters for hosted videos to be hidden in the Rich Content Editor so these parameters can't be modified by users.

### New campaign demo data for Content Experiences

Access example campaigns to better understand campaign structuring, explore sample bundle trigger configurations, and discover possible use cases.

### Quick start tests for Employee Center

After upgrades and deployments of new applications or integrations, run quick start tests to verify that Employee Center works as expected. If you customized Employee Center, copy the quick start tests and configure them for your customizations.

## Changed in this release

### Content Analytics

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Content Analytics is now part of the Platform Analytics Experience. When you navigate to **All** > **Content Analytics** > **Dashboards**, the Content Analytics dashboards are displayed alongside Platform Analytics dashboards.

### Experience and Service Feedback

Access the following enhancements within the feedback functionality:

- Leverage three different types of feedback - Experience, Service, and Survey feedback to gain more insight from your users.
- Integrate the experience feedback response with the Success Dashboard indicators.
- Configure service feedback to keep it anonymous after feedback is submitted.
- Access Experience and Service Feedback in Virtual Agent assist.

### SharePoint Online Search Connector

Enhance your Microsoft SharePoint experience with the following upgrades:

- Streamline the site permissions and other granular access controls.
- Grant permission and provide access to specific personas.

## Removed in this release

The Content Publishing and Content Experiences demo portals have been removed.

## Activation information

Install Employee Center plugins by requesting them from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

### HR Service Delivery release notes

The ServiceNow® HR Service Delivery application improves the employee service experience by automating HR interactions and providing a single platform for all HR services. HR Service Delivery was enhanced and updated in the Xanadu release.

### Agent Workspace for HR Case Management release notes

The ServiceNow® Agent Workspace for HR Case Management application enables you to interact with employees, respond to inquiries, and resolve issues quickly. Agent Workspace for HR Case Management was enhanced and updated in the Xanadu release.

## Agent Workspace for HR Case Management highlights for the Xanadu release

- Minimize case transfers and improve agent efficiency by viewing HR service descriptions during case creation.
- View recently updated cases in list view.
- Enable agents to quickly respond to HR tasks using response templates.
- Enable HR agents to expedite services by creating decision trees.
- Support claims in Employee Relations cases by uploading attachments in personal notes.
- Benefit from accessibility improvements to create a configurable workspace that supports Web Content Accessibility Guidelines (WCAG) 2.1 Level AA conformance.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

See Agent Workspace for HR Case Management (Configurable) for more information.

**Important:**
Agent Workspace for HR Case Management is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

### Create a case in Agent Workspace for HR Case Management

HR agents can minimize case transfers and improve efficiency by viewing HR service descriptions populated in the HR service configuration by HR admins during case creation.

### Lists in Agent Workspace for HR Case Management

View recently updated cases using the **Recently updated** tab in the Lists view in Agent Workspace for HR Case Management.

### Using a Response template in an HR case or HR task record

Enable agents to quickly respond to HR tasks by using response templates as reusable messages that you can copy and paste into the comments or work notes for an HR task.

### Resolve HR cases using guided decision trees in Agent Workspace for HR Case Management

Expedite HR services by creating decision trees that agents can use to triage employee cases.

### Add personal notes

Upload attachments in personal notes that support the claim in Employee Relations cases for an assigned agent.

## Changed in this release

### Reflow for configurable workspace

The Agent Workspace for HR Case Management configurable workspace supports reflow, which enables pages and content to be zoomed up to 400% through your browser settings without loss of content or functionality. For information about how to upgrade, see the Accessibility information that follows.

## UI changes

### Use Guided Tours in Agent Workspace for HR Case Management

Selecting the help icon from the main sidebar initiates a guided tour of Agent Workspace for HR Case Management.

## Activation information

Install Agent Workspace for HR Case Management by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Accessibility information

#### Accessibility improvements

Accessibility improvements were completed to create a configurable workspace that supports WCAG 2.1 Level AA conformance.

**Reflow**

The Configurable Workspace supports reflow, which enables pages and content to be zoomed up to 400% through your browser settings without loss of content or functionality. Additionally, content can be enlarged without scrolling in two dimensions at a width equivalent to 320 CSS pixels or a height equivalent to 256 CSS pixels. Page layouts are transformed into a vertical, stacked view automatically when users increase browser zoom to 400%.

This enhancement helps users with low vision or who have trouble seeing web content in a browser due to monitor size, device type, poor lighting, or other situations. Reflow can be turned off with a system property for instances, experiences, and pages. See Reflow for Configurable Workspace for details.

## Related ServiceNow applications and features

### HR Service Delivery

Improve the employee service experience by automating HR interactions and providing a single platform for all HR services. Replace manual and siloed processes with cross-functional digital workflows for increased efficiency. Align business goals with employee needs, including onboarding, career growth, and other transitions.

### Now Assist for HR Service Delivery (HRSD)

Summarize case information, generate resolution notes, and summarize chat information using GenAI capabilities. Enable your agents to understand the chat and case context and to propose quicker resolutions to requesters.

### Case and Knowledge Management release notes

The ServiceNow® Case and Knowledge Management application enables you to standardize the documentation, interaction, and fulfillment of employee inquiries and requests, which helps to improve HR efficiency and services over time. Case and Knowledge Management was enhanced and updated in the Xanadu release.

## Case and Knowledge Management highlights for the Xanadu release

- Use the new HR guided setup that supports domain separation at the global and at the parent or child levels.
- HR Document Templates is being deprecated and is no longer available for use. You can use the ServiceNow Document Templates application instead of HR Document Templates.

See Case and Knowledge Management for more information.

## New in the Xanadu release

### Guided setup for HR Service Delivery

Run the guided setup for each domain within HR Service Delivery. Prior to the Xanadu release, you could run the guided setup at the global domain only.

**Workflow to Workflow Studio migration**

Because of the enhanced features in Workflow Studio, the HR Service Activities, HR Case User Acceptance, HR Case Approval subflows have been migrated from Workflow to Workflow Studio. As an HR administrator, you can configure the

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

**sn_hr_core.deprecated_workflows** system property to decide whether to run a legacy workflow or corresponding flow in Workflow Studio.

**Zero Trust Access (ZTA) for HR Service Delivery**

Enable an administrator to configure in-time access with the dynamic role relegation feature. Based on different criteria such as the IP address, location, device, or time, the administrator can craft policies to permit only a certain subset of the user's original roles in the session.

## Deprecations

Starting with the Xanadu release, HR Document Templates is being prepared for deprecation. HR Document Templates is hidden and is no longer installed on new instances but will continue to be supported. For details, see the Deprecation Process [KB0867184] article in the Now Support Knowledge Base. You can use the ServiceNow Document Templates application instead of HR Document templates.

## Activation information

Case and Knowledge Management is a ServiceNow AI Platform feature that is available with activation of the Human Resources Scoped App: Core [com.sn_hr_core].

## Related ServiceNow applications and features

### Agent Workspace for HR Case Management (Configurable)

The ServiceNow® Agent Workspace for HR Case Management application enables you to interact with employees, respond to inquiries, and resolve issues quickly.

### Document Templates release notes

The ServiceNow® Document Templates application enables you to create HTML and PDF document templates to generate standard letters or documents. You can automate and simplify the process of filling, signing, and reviewing a document online. Document Templates was enhanced and updated in the Xanadu release.

## Document Templates highlights for the Xanadu release

Record the date when a participant signs a PDF document using the Signature date capability in the PDF document template.

See Document Templates for more information.

**Important:**
Document Templates is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

### Signing date in PDF

Record the date automatically when a participant signs a document. When the **Use signing date** option is selected, the date appears on the PDF document within the field that you specify in the **Field name** field on the PDF template mapping record. This capability is available for the ServiceNow signing type only.

## Related ServiceNow applications and features

### HR Service Delivery

The ServiceNow® HR Service Delivery application helps improve the employee service experience by automating HR interactions and providing a single platform for all HR services. Replace manual and siloed processes with cross-functional digital workflows to help increase efficiency. Align business goals with employee needs, including onboarding, career growth, and other transitions.

### Employee Relations release notes

The ServiceNow® Employee Relations application provides tighter security for protecting privacy and sensitive information shared via Employee Relations cases. Employee Relations was enhanced and updated in the Xanadu release.

## Employee Relations highlights for the Xanadu release

- For single-subject Employee Relations cases, the **Subject of Allegation** field in is automatically filled in with the subject's name.
- Report cases directly related to discrimination using Core UI case creation, HR Service Delivery Agent Workspace for HR Case Management, or the Anonymous Report Center portal.

See Employee Relations cases for more information.

## New in the Xanadu release

### Create an allegation record for HR Service Delivery Employee Relations in the legacy UI or Agent Workspace

For single-subject Employee Relations cases, the **Subject of Allegation** field in relevant case tabs is automatically filled in with the subject's name.

### Create an HR Service Delivery Employee Relations case using the legacy UI, Create an HR Service Delivery Employee Relations case using Agent Workspace, Anonymously report discrimination

Create cases specifically related to discrimination using Core UI case creation HR Service Delivery Agent Workspace for HR Case Management, or the Anonymous Report Center portal.

## UI changes

Selecting the help icon from the main sidebar initiates a guided tour of Employee Relations cases.

## Activation information

Employee Relations is a ServiceNow AI Platform feature that is available with activation of the Employee Relations plugin (com.sn_hr_employee_relations). For details, see Activate Employee Relations.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Related ServiceNow applications and features

### HR Service Delivery

Improve the employee service experience by automating HR interactions and providing a single platform for all HR services. Replace manual and siloed processes with cross-functional digital workflows for increased efficiency. Align business goals with employee needs, including onboarding, career growth, and other transitions.

### Legal Investigations

Support inter-departmental transfer of sensitive case details between Legal Service Delivery Legal Investigations and HR Service Delivery Employee Relations.

### Anonymous Report Center (ARC)

Employees can submit sensitive complaints, misconduct, or discrimination cases anonymous to the agent working on the Employee Relations case using the Anonymous Report Center (ARC) portal.

### Employee Center

Employees can submit complaints through the Employee Center portal without having to know who or what department should investigate the complaint. During the triaging or investigation process, fulfillers working on these issues can transfer them back and forth between the Legal and HR departments as necessary for resolution.

### HR Service Delivery for Healthcare release notes

The ServiceNow® HR Service Delivery for Healthcare application creates a standardized, digitized, and automated physician onboarding workflow using the Healthcare Professional data model. The application enables you to see the full picture for all the required onboarding information during and after physician onboarding. HR Service Delivery for Healthcare is a new application in the Xanadu release.

## HR Service Delivery for Healthcare highlights for the Xanadu release

- Manage the data of a healthcare professional securely with the Healthcare Professional data model.
- Set up and auto-create necessary tasks automatically to onboard a healthcare professional smoothly into an organization with the default Healthcare Employee Onboarding workflow.

See HR Service Delivery for Healthcare for more information.

**Important:**
HR Service Delivery for Healthcare is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## HR Service Delivery for Healthcare features

### Healthcare Professional data model

Use the Healthcare Professional data model to store confidential data pertaining to a healthcare professional, such as practice name, medical degree, and practice locations. The Healthcare Professional data model enables the organization to access, track, and update healthcare profile information throughout the period of employment of a healthcare professional. The profile records are stored confidentially and aren't publicly viewable.

### Customize Healthcare Employee Onboarding workflow

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Use the default Healthcare Employee Onboarding workflow in Journey designer to set up and automate the following tasks for a newly hired healthcare professional at a healthcare organization:

- Auto-create a profile and email account for the healthcare professional.
- Auto-initiate the necessary form intake tasks for the healthcare professional.
- Auto-create credentialing and validation tasks for HR agents so the agents can review and validate information submitted by the healthcare professional.

## Activation information

Install HR Service Delivery for Healthcare by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Related ServiceNow applications and features

### HR Service Delivery

The ServiceNow® HR Service Delivery application helps improve the employee service experience by automating HR interactions and providing a single platform for all HR services. Replace manual and siloed processes with cross-functional digital workflows to help increase efficiency and align business goals with employee needs, including onboarding, career growth, and other transitions.

### Journey designer

The ServiceNow® Journey designer application enables managers and employees to create and track journeys. Journeys include transition plans, such as promotions, offboarding, onboarding, and role changes for employees.

### Agent Workspace for HR Case Management (Configurable)

The ServiceNow® Agent Workspace for HR Case Management application enables you to interact with employees, respond to inquiries, and resolve issues quickly.

### Journey designer release notes

The ServiceNow® Journey designer application enables managers and employees to create and track journeys. Journeys include transition plans, such as promotions, offboarding, onboarding, and role changes for employees. Journey designer was enhanced and updated in the Xanadu release.

## Journey designer highlights for the Xanadu release

- Use the Journey overview dashboard, a comprehensive dashboard that enables you to efficiently track and manage ongoing tasks and journeys within the organization.
- Use the Executive view dashboard with reports containing information such as the number of employees completing their journeys, SLA breaches, average days to complete journeys, and other metrics.
- Change the manager during journey configuration.
- Enhanced employee experience through the parental leave guide shipped as part of Parental Leave demo data.

See Journey designer for more information.

### Microsoft Exchange Online spoke

The Microsoft Exchange Online spoke creates and manages calendars and mail in Microsoft Exchange Online. To create, manage, or delete users and groups, use the Microsoft Azure AD spoke.

## Talent Development release notes

The ServiceNow® Talent Development application enables managers and employees to identify and track career growth and development opportunities. It supports career growth through conversations, talking points, and ongoing development tracking. Talent Development was enhanced and updated in the Xanadu release.

## Talent Development Core release notes

The ServiceNow® Talent Development Core application supports an end-to-end process for employees and managers to identify, track, and take control of their career growth and development journey. Talent Development Core was enhanced and updated in the Xanadu release.

# Talent Development Core highlights for the Xanadu release

Xanadu Patch 9

- Use the new Growth & Performance AI agents to streamline your employee growth discussions in Career Conversations.

The Employee Growth and Development Core application has been renamed to Talent Development Core.

See Talent Development Core for more information.

**Important:**
Talent Development Core is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

# New in the Xanadu release

Xanadu Patch 9

### Create a growth conversation with the help of an agent in Now Assist

As a manager using Talent Development, start a growth conversation with your reportees with the help of Conversation management AI agent in Now Assist.

### Generate talking points for a growth conversation with the help of an agent in Now Assist

As a manager using Career Conversations in Talent Development, generate talking points for a growth conversation with the help of Employee data summarization AI agent in Now Assist.

**Note:**
For the Growth Conversations AI agents to work, you need to be on 3.5.2 version Career Conversations and have the Now Assist for HR Service Delivery (HRSD) plugin which will install Now Assist for Talent and HR Talent AI Agent Collection.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

### Name update from Employee Growth and Development Core to Talent Development Core.

The name changed to provide better alignment with your organization's talent, growth, and development initiatives.

## Changed in this release

### New Talent Development Core name

The Talent Development Core name change enables easier alignment of growth and development goals across the enterprise. For information about the name change, see Talent Development Core.

## Additional requirements

Talent Development includes a suite of products the work and interact to create a better user experience.

- Talent Development SKU
- Manager Hub
- Proactive Prompts
- Skills Intelligence
- Employee Profiles
- Talent Development Core

### Opportunity Marketplace release notes

The ServiceNow® Opportunity Marketplace application transforms internal mobility, providing employees with a unified hub to explore career opportunities. Opportunity Marketplace was enhanced and updated in the Xanadu release.

**Important:**
Opportunity Marketplace is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

### Explore Opportunity Marketplace (OPM)

Opportunity Marketplace originally had a single opportunity type, Internal jobs. In the Xanadu release there are three additional opportunity types Projects, Gigs, and Volunteer. These opportunity types differ from traditional opportunities in that they’re temporary for a fixed duration. The duration can be short-term or long-term, but not permanent.

### Introduced the opportunity owner persona

The Opportunity owner is the leader or host of the opportunity. Owners can create and publish opportunities to the marketplace for employees to view and apply to. Additionally, Opportunity owners can manage and view status updates to their opportunities from the **Opportunities you own** dashboard.

Owners use the detail pages to review and select applicants. Applicants are employees who have applied for an opportunity. The applicant review experience includes match scores based on how well an employee meets the skills and criteria specified for the role.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

### Enhanced opportunities browsing

Employees can search and browse opportunities that match their preferences and skills from the **Other opportunities** page.

### Enhanced detail views of opportunities and roles

Employees can view the details of the opportunities and roles from an opportunity's details page. Employees see the required and preferred skills and understand their match scores for one or more roles. The opportunity details help employees to understand their own strengths and weaknesses compared to a role they're interested in applying for.

## Additional requirements

Required plugins and products

- Talent Development SKU
- Manager Hub
- Proactive Prompts
- Skills Intelligence
- Employee Profiles
- Talent Development Core

### Leader Hub release notes

The ServiceNow® Leader Hub application empowers organizational leaders to understand the strengths of their teams, identify gaps in skills, and facilitate changes that are conducive to the success of their workforce. Leader Hub is a new application in the Xanadu release.

## Leader Hub highlights for the Xanadu release

- Get quick access to a comprehensive overview of your organization's talent, including metrics for skill competency across different teams, identifying significant skill gaps, and employee engagement with the growth tools provided in the Talent Development suite of applications.
- Gain visibility into the skills and talent composition of each team that exists within your organization, at any level of granularity, through an organizational chart that illustrates the reporting relationships across the different teams in your organization.
- Give organizational supporters to whom the leader has delegated responsibilities access to Leader Hub from a view that enables them to see their designated leader's organization and provide support accordingly.

See Leader Hub for more information.

**Important:**
Leader Hub is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## Leader Hub features

### At a glance

Supply your organizational and HR leaders with instant access to a comprehensive overview of their organization's talent via the At a glance page. This page is the home page for Leader Hub and it offers a glance at data that measures employee engagement and skill proficiency, along with a glimpse of the teams that comprise

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

your organization. The At a glance page gives leaders quick and easy access to the following information about the teams in their organization:

- Skill scores
- Significant skill gaps
- Employee engagement with the growth tools available in the Talent Development suite of applications.

Leaders can access the At a glance page by selecting **At a glance** from the Leader hub drop-down list.

### Org talent

Provide your leaders with a centralized location to view the talents of each team that exists within their organization via the Org talent page. Leaders can view talent data at any level of granularity through an interactive organizational chart that illustrates the structure of their organization and the reporting relationships between managers and employees for each team in their organization.

Leaders can access the Org talent page by selecting **Org talent** from the Leader hub drop-down list.

### Org skills

Equip your leaders with the tools to understand the skill composition of their organization via the Org skills page. The Org skills page displays skills relevant to your leader's organization and provides metrics that leaders can use to identify critical skill gaps and hold managers responsible for developing talent within their teams. Leaders can further examine the details associated with each skill by selecting the name of the skill that they want to view to access the Skill details page.

Leaders can access the Org skills page by selecting **Org skills** from the Leader hub drop-down list.

### Orgs you support

Give organizational supporters insights into their leader's workforce via the Orgs you support page. Supporters entrusted with delegated responsibilities can be designated by their leaders to access Leader Hub so they can provide support in the capacity required for the organization to succeed.

Supporters can access the Orgs you support page by selecting **Orgs you support** on the mega menu from the Employee Center portal.

### Quick start tests for Leader Hub

After upgrades and deployments of new applications or integrations, run quick start tests to verify that Leader Hub still works. If you customized Leader Hub, copy the quick start tests and configure them for your customizations.

## UI changes

### Leader hub drop-down list

The Leader hub drop-down list is a new menu item that appears on the mega menu in the Employee Center portal. The Leader hub drop-down list is only accessible to employees with the leader (sn_egd_lh.leader) role assigned to their user record. This drop down list contains the following options from which you can select:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- **At a glance**
- **Org talent**
- **Org skills**

### Orgs you support menu item

Orgs you support is a new menu item that appears on the mega menu in the Employee Center portal. The Orgs you support menu item is only accessible to employees with the supporter (sn_egd_lh.supporter) role assigned to their user record.

## Activation information

Install Leader Hub by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Additional requirements

You must have Talent Development Core to use Leader Hub.

## Related ServiceNow applications and features

### Talent Development Core

Talent Development Core (sn_egd_core) includes the Skills Intelligence plugin (sn_skills_int) which must be enabled to use Leader Hub. Talent Development Core also provides the following modules which are growth tools used in the metrics that Leader Hub generates for measuring employee engagement:

- Aspirations
- Growth plans

### Skills Intelligence

Leader Hub uses the skill data from Skills Foundation in the metrics it produces for skill competency scores and critical skill gaps.

### Career Conversations

When you optionally install the Career Conversations plugin (sn_egd_act), Leader Hub generates metrics for employee engagement with the Career Conversations app, such as the percentage of managers in your organization who had conversations with their employees in the past 30 days.

### Mentoring

When you optionally install the Employee Connections plugin (sn_ecn), Leader Hub generates metrics for employee engagement with the Mentoring app, such as the percentage of employees in your organization currently engaged in mentorship.

### Learning

When you optionally install the Learning plugin (sn_lep), Leader Hub generates metrics for employee engagement with the Learning app, such as the percentage of employees in your organization who have completed courses in the past 30 days.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

### Skills Intelligence release notes

The ServiceNow® Skills Foundation application provides an overview of skills-related data and enables admins to work on Job architecture data from a single location. Skills Foundation was enhanced and updated in the Xanadu release to provide enhanced visibility into employee skill activities across a range of Talent Development products.

## Skills Foundation highlights for the Xanadu release

- View activity insights to gain more information on completed and in-progress activities related to skills. This focus on completed and recent activities allows you (managers) to track meaningful engagement and ensures data relevance in skill assessment. Activity insights are available both to the employee via Conversations and to the manager via Manager Hub.
- As a mentee, share mentoring information with your manager to help them validate your skill levels. As managers, access insights related to their assigned mentees' skill-based activities (when shared with a manager).
- As an employee, receive prompts tied to skill-based activities, nudging you to self-rate and refresh your skill profile.
- View and edit the Company Job Architecture as a node map to get a better sense of job families and role groups and the skills related to each other in Skills Workspace.
- View recommendations for role groups and skills in Skills Workspace.
- Select a Role level directly from your Career profile in the Career hub in Employee Portal and add skills to your profile.
- Migrate to a more dynamic and interactive playbook experience within the Skills Workspace.

See Skills Foundation for more information.

**Important:**
Skills Foundation is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## Skills Foundation features

### Skills Workspace

See how the Job architecture is currently structured and how job families and role groups and the skills related to them through the Job architecture view in Skills Workspace. Get a sense of issues that need to be fixed by looking at the node map.

Select role groups and skills from the recommendations displayed in the Skills Workspace.

Select and update Role level and skills through an interface for employees in Employee Portal.

Import and review skills through a dynamic and interactive playbook experience called Skill imports.

## UI changes

### Skills Workspace

Job architecture icon for easy access has been added to the Skills Workspace main panel.

In the Lists menu, Skills onboarding is renamed to Skill imports under Import history.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Removed in this release

The Skills onboarding feature is removed and is replaced with Skill imports playbook experience. For customers who already have their data in Skills onboarding, download all the skills in the Ready for review state and re-upload them using the new import process. For more information, see .

## Activation information

Install Skills Foundation by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Additional requirements

The Skills Workspace plugin (sn_skills_int_ws) must be installed to access the workspace experience.

### Enterprise Architecture (formerly Application Portfolio Management) Release Notes

The ServiceNow® Enterprise Architecture unites strategic and operational teams, enabling organizations to achieve their business objectives. Enterprise Architecture was enhanced and updated in the Xanadu release.

## Enterprise Architecture (formerly Application Portfolio Management) highlights for the Xanadu release

- The#ServiceNow® Application Portfolio Management product is expanding to ServiceNow® Enterprise Architecture.
- Some Application Portfolio Management modules are deprecated and no longer searchable from the **All** menu. However, all the deprecated modules are available within the Enterprise Architecture Workspace. You must use the Enterprise Architecture Workspace to leverage those features and functionalities.

  **Note:**
  Existing customers can continue to use these navigation links. However, for new activation customers, the navigation will not be available from the **All** menu.

- Create diagrams for your business applications hierarchy map, business capability map, and associate them with architectural artifacts and plan the future state modeling of your IT, with alignment to the business, using the Enterprise Modeling and Visualization functionality in Enterprise Architecture Workspace.
- Support for industry standard ArchiMate® shapes to create modeling diagrams. ArchiMate is a registered trademark of The Open Group.
- Support for Architectural Decision Record (ADR) type artifact to help you align artifacts with your business requirements.
- Create a one-to-many relationship between a digital interface and CMDB APIs. Find out which digital integrations and interfaces use which APIs. Identify the environments where they're deployed. Group the deployed APIs and relate them to the digital interface, which describes the design aspects of the related APIs.

See Enterprise Architecture for more information.

## New in the Xanadu release

### Exploring Enterprise Modeling and Visualization in the EA Workspace

Use the Enterprise Modeling and Visualization functionality in Enterprise Architecture Workspace to create diagrams for your applications hierarchy. You can associate the diagrams with architectural artifacts and plan the future state modeling of your IT with alignment to the business. Creating modeling diagrams can you help your stakeholders to understand the complexities of the organization. Perform the following tasks using the Enterprise Modeling and Visualization:

- Create and update modeling diagrams using the General, Enterprise Architecture, and ArchiMate shapes.
- Create diagrams from the Business Application view using the Create diagram menu option.
- Create diagrams for Business hierarchy map and Business capability maps from the Enterprise Modeling and Visualization page.
- Apply colors to business capability shapes in the capability hierarchy map.
- Add related records to a shape. Add CI relationship or Reference type relationship.
- Synchronize shapes, relationships, and entire diagrams to the repository.
- Select an architectural category while creating a diagram.
- Share your diagrams with the other users or groups and define their access levels for the diagram.
- Leverage a workflow to get approval for the diagrams, and to enable committing the diagram to the database.
- Configure access for Enterprise Modeling and Visualization menu items for roles, users, and groups.
- Initiate modeling in the Enterprise Modeling and Visualization directly from any Unified map.

### Technology Portfolio

The Technology Portfolio section has been restructured and new features have been added. The section now contains the following pages:

- TRM catalog
- Technical debt
- TPM lifecycles
- TPM risk
- Technology portfolio audit

### Digital integration and interface enhancements

- View Information Objects and SDLC Components associated with a digital integration or digital interface.
- View Credentials assigned to a digital interface, digital integration, and business application.
- Set the Provider company instead of Provider business application, for a Provider digital interface in a digital integration.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Portfolio section enhancements

The Portfolio section has been restructured and new modules and features have been added. The following is the new structure:

- Business Architecture
  - Business Units
  - Departments
  - Goals
  - Value Streams
  - Value Stream Stages
  - Business Capabilities
  - Business Processes
  - Demands
- Application Portfolio
  - Business Applications
  - Application Services
  - Digital Integrations
  - Digital Interfaces
- Information Portfolio
  - Data Domains
  - Information Objects
  - Architectural Artifacts
  - Architectural Artifact Versions
  - Diagrams
- My Entities
  - My Business Capabilities
  - My Business Processes
  - My Business Applications
  - My Application Services
  - My Information objects
  - My Architectural Artifacts
  - My Technology Reference Model Products
  - My Digital Integrations
  - My Digital Interfaces

## Setup section enhancements

The configuration for Enterprise Modeling and Visualization is the following:

- Shape Libraries
- Modeling menu options
- Entities
- Relationships

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The **TPM logs** details are now available in the Setup section.

### Connect a digital interface with the CMDB API in the EA Workspace

Create a relationship between a digital interface and a CMDB API from the digital interface related list. Find out which digital integration uses which API. Find the environments where they're deployed and group the deployed APIs.

### Working with the Enterprise Architecture Workspace dashboard

The following widgets are available on the TCO tab of the Enterprise Architecture Workspace dashboard.

- **Business applications by TCO score**
- **Business application TCO by cost type and planned disposition for FY:Q (Current quarter)**
- **Top 10 business applications with the highest cost for FY:Q (Current quarter)**

### Manage information objects of a business application in EA Workspace

Relate a business application to an information object using the CI relationship [cmdb_rel_ci] table of type Uses::Used by. Use this suggested relationship to get the logical data of the information object, which can be used to leverage the business application.

### Technology portfolio management (TPM) enhancements

Added support for all CMDB configuration items in Technology Portfolio Management (TPM). By default, TPM support docker containers and serverless hardware tables. An admin user can configure any of the supported CMDB CIs for TPM.

### TRM product enhancements

- For a software TRM product, the **Operating system** field is added. Using this field, the operating system on which the software TRM product can be deployed, is tracked.
- Added support for creating wildcard for TRM lifecycle versions, to make it easier to specify a TRM standard without the need to specify the minor version.

### Support for Architectural Decision Record (ADR) type artifact

Create or update an artifact with type architectural decision record (ADR) to align it with your business requirements.

## UI changes

### Technology Portfolio view

The Technology Portfolio icon (  ) is added in the left navigation of the Enterprise Architecture Workspace.

### Digital Integration and Interface

New tabs are added for Information Objects and SDLC Component in the Digital Integration and Digital Interface records.

### Portfolio list view

New modules and features have been added in the Portfolio section.

The Technology Portfolio section has been removed, containing the following sections:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Discovered Technology
- Technology Risk
- TPM Logs
- Technology Reference Model Products
- Technical Debt

These sections are now available in the Technology Portfolio page.

The TCO section is moved to the Application Portfolio section.

### Enterprise Architecture Workspace Dashboard page

In the Enterprise Architecture Workspace Dashboard page, the **Business Portfolio** tab has been added. For more details, see Working with the Enterprise Architecture Workspace dashboard.

### Enterprise Architecture Workspace home page

In the Enterprise Architecture Workspace home page, the **Technology Portfolio Audit** and the **Technical Debt** tabs have been removed from the Needs Attention section.

The Needs Attention section shows count for **My Requests**, **My Approvals, My Certifications**, and **My Assessment** in the respective tabs. The count helps you to know the number of items in each tab that you need to look at.

### Add a TRM product in Enterprise Architecture Workspace

The **Operating system** field is added to the Technical debt page and business application Lifecycle Timelines page.

### View the unified map for a business application in Enterprise Modeling and Visualization

A new button **Model** with Enterprise Modeling and Visualization is added in the business application CMDB node map.

### Add related records in the modeling diagram

The Entities section in the Add related records window shows the number of entities and the relationship type (CI relationship or Reference).

### Add additional category details for TRM products

The **Other Category** field is added in the Request TRM Product form and the Create TRM product form. Using this data, you can filter for TRM products using additional categories details.

### Business application form

The **Target date** field is added in thePlanned disposition section of the business application form.

## Deprecations

Starting with the Xanadu release, some modules are deprecated from Enterprise Architecture (formerly known as Application Portfolio Management). The navigation links to the deprecated modules are removed from the **All** menu. If you're an existing customer, you can continue to use these navigation links. However, if you're a new activation customer, navigation to these modules using the navigation links from the **All** menu won't be available. All the deprecated modules are available within the Enterprise Architecture Workspace. You're encouraged to use the Enterprise

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Architecture Workspace to leverage those features and functionalities. The deprecated modules are:

- Application Portfolio Management Home
- Application Portfolio
- Application Portfolio Analysis
- Architectural Artifacts
- Business Application Lifecycles - Service Requests
- Application Ratings
- Capability Ratings
- Information Portfolio
- Technology Portfolio Management
- Technology Reference Model
- Administration
  - Business Processes
  - Business Capabilities
  - Application Families
  - Application Category Groups
  - Application Categories
  - Application Indicators
  - Scoring Profiles
  - Bubble Chart
  - Demand Actions
  - Portfolio

## Activation information

Enterprise Architecture (formerly Application Portfolio Management) is available with activation of the Enterprise Architecture (com.snc.apm), which requires a separate subscription. For details, see Enterprise Architecture.

### Now Assist for Enterprise Architecture (EA) release notes

The ServiceNow® Now Assist for Enterprise Architecture (EA) application introduces generative AI skills into the Enterprise Architecture Workspace. You can summarize Architectural Decision Records (ADR) in the Enterprise Architecture Workspace. Now Assist for Enterprise Architecture (EA) is a new application in the Xanadu release.

## Now Assist for Enterprise Architecture (EA) highlights for the Xanadu release

Xanadu Patch 10: Implement security in Now Assist AI agents with access control lists (ACLs).

Xanadu Patch 7: Generate and summarize Enterprise Modeling and Visualization diagrams for business applications hierarchy, using the Enterprise Architecture Diagrammer AI agent.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Generate a summary of Architectural Decision Records (ADR) in the Enterprise Architecture Workspace.
- Request a business application or a digital integration using Now Assist in ServiceNow® Virtual Agent.

See Now Assist for Enterprise Architecture (EA) for more information.

**Important:**
Now Assist for Enterprise Architecture (EA) is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## Now Assist for Enterprise Architecture (EA) features

### Implement access control lists for security in AI agents

Enable security implementation to execute AI agents and agentic workflows through access control lists (ACLs) and user identities.

ACLs provide you with the capability to run AI agents and agentic workflow executions either as a dynamic user or an AI user.

To learn about ACLs for Now Assist for Enterprise Architecture (EA) agents and skills, see Configure Now Assist for Enterprise Architecture (EA) and Enterprise Architecture AI agent generate enterprise architecture diagram agentic workflow.

**Xanadu Patch 7** **Using Enterprise Architecture Diagramming AI agent**

Use the Enterprise Architecture Diagrammer AI agent to create Enterprise Modeling and Visualization diagrams for business applications hierarchy and summarize them.

**Xanadu Early Availability** **Now Assist for Enterprise Architecture (EA)**

- Use the ServiceNow® Now Assist for Enterprise Architecture (EA) application to summarize Architectural Decision Records (ADR) in the Enterprise Architecture Workspace. Use the Architectural Decision Records (ADR) to explain your infrastructure. ADR is a type of artifact that helps you to understand the background of a specific architectural decision.
- Register a business application and a digital integration with an interactive generative AI experience using the Now Assist in Virtual Agent. For more information, see Now Assist for Enterprise Architecture (EA).

## Activation information

Now Assist features are available with activation of the Now Assist for Enterprise Architecture (EA) plugin. The Now Assist for Enterprise Architecture (EA) application requires an Enterprise Architecture Pro plus license. For more information, see Install Now Assist plugins.

## Related ServiceNow applications and features

### Now Assist

Help improve productivity and efficiency in your organization, deliver better self-service, recommend actions, provide answers, and empower your users to search more effectively.

### Now Assist Admin console

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The Now Assist Admin console provides you with quick and easy access to the important information that you must set up, configure, and monitor in Now Assist applications and features.

#### Now Assist panel

Use the Now Assist panel to interact with and get assistance from generative AI.

#### Now Assist skills

Now Assist products provide generative AI skills that are tailored to meet the needs of users in different workflows, including content summarization in Docs.

### Environmental, Social, and Governance Management release notes

The ServiceNow® ESG Management application helps you to manage all your environmental, social, and governance (ESG) commitments. ESG Management was enhanced and updated in the Xanadu release.

## ESG Management highlights for the Xanadu release

- Track Scope 3 emissions from your value chain to gain knowledge of your environmental impact and promote compliance with evolving regulations.
- Create fiscal calendars to accommodate your organization’s unique fiscal calendar, providing the flexibility to collect and report data according to the defined fiscal calendars.
- Use the emission factors content in the ESG content accelerator.
- Enable ESG administrators to define either a simple approval flow or an advanced approval flow for all the metrics and metric definitions.
- Address off-cycle requests to collect data for existing metric definitions and metrics by creating ad hoc metric data tasks on manual metrics.

See Environmental, Social, and Governance Management for more information.

**Important:**
ESG Management is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

#### Track scope 3 emissions

Track Scope 3 emissions using the Scope 3 dashboard to fully grasp and manage your organization's environmental impact. These emissions constitute the largest part of your greenhouse gas output, stemming from indirect sources. This comprehensive understanding aids in regulatory compliance, and obtaining full carbon footprint disclosures. After you identify your scope 3 emission sources, you can take action to mitigate the largest sources of indirect emissions.

#### View emission factors in ESG content accelerator

Use the ESG content accelerator to automatically obtain the emission factors that are published by the standard sources. Emission factors are coefficients that quantify the emissions produced per unit of activity, material, or energy consumption. They’re crucial for calculating the amount of greenhouse gases (GHGs) or pollutants emitted into the atmosphere based on various activities.

#### Create fiscal calendars to collect metrics from different geographical locations

Collect, aggregate, and report data according to your fiscal calendars that could be different from the standard Gregorian calendar. Many global organizations might

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

have operations in different countries that could follow their own fiscal calendars. This feature enables the entities in other locations to collect data according to their own fiscal calendars.

### Choose the approval flow for metrics

Set the sn_esg.metric_approval property to use either a simple approval flow for your metrics and metric definitions or use the GRC: Approver Configurator to define multiple levels of approvals based on the business rule definitions. This property has two choices.

If you choose the **Simple** option, the Approval section is enabled both on the manual metric definition form and within the metrics. Using this section, you can designate approvers directly on the metric definition form. This option has a single level of approval.

If you choose the **Advanced** option, the Approval section is unavailable on the manual metric definition form and within the metrics, helping to prevent you from assigning approvers there. Instead, approval can be obtained by setting the approval conditions, tables, and approvers in the GRC: Approver Configurator application. This application also enables you to define multiple levels of approvals.

### Create ad hoc metric data tasks

Handle off-cycle requests for up-to-date information on existing metric definitions and metrics by creating ad hoc metric data tasks. These tasks address off-cycle requests and provide the latest information.

### Metric data table

Use the enhanced filters on the metric data table to filter your tasks. The filters help to show only the relevant and open tasks for data owners and approvers.

### Identify the energy usage and emission of every asset

Use the Sustainable IT dashboard to explore models within a specific category and view the energy consumption of each asset model and all its assets, listed in descending order. This functionality provides deeper insights into your energy usage, helping you identify the models that are in use and are consuming the most energy.

## UI changes

### Emission factor library

The emission factors are now available in the ESG Workspace.

## Changed in this release

### ESG program manager role enhanced

The ESG program manager (sn_esg.program_manager) can now create, read, update, and delete emission factors.

**Changes in the metric tables**

Enhanced the following metric related tables with read access control lists (ACLs):

- Metric definition
- Metric
- Metric data
- Metric data task
- Metric data task url

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

With this change, the following changes are in effect:

- Metric level Approver user or Approver group: This means that the specified user or group designated as the approver can access only the particular metric and the tables specified for which they are the approver.
- Multi-level approval: This means that the specified user or group designated as the approver can access only those records in the metric related tables for which they are the approver.
- Enable enterprise owners to access metric records: This means that an enterprise owner can access any metric related record.

## Deprecations

- Starting with the Xanadu release, the Global Reporting Initiative (GRI) content accelerator is deprecated. It will be hidden and no longer activated on new instances but will continue to be supported. The ESG content accelerator application provides the latest experience for this functionality.
- Starting with the Xanadu release, the Sustainability Accounting Standards Board (SASB) content accelerator is deprecated. It will be hidden and no longer activated on new instances but will continue to be supported. The ESG content accelerator application provides the latest experience for this functionality.

## Activation information

Install ESG Management by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

### Field Service Management release notes

The ServiceNow® Field Service Management application enables your organization to manage location-based work more efficiently and safely. Field Service Management was enhanced and updated in the Xanadu release.

## Field Service Management highlights for the Xanadu release

- Move agents between territories, optimize scheduling, and minimize manual tracking while agents execute tasks.
- Create and view sales opportunities during field service visits using the Now Mobile Agent application.
- Benefit from accessibility improvements to create a configurable workspace that supports Web Content Accessibility Guidelines (WCAG) 2.1 Level AA conformance.

See Field Service Management for more information.

## Important information for upgrading Field Service Management to Xanadu

Effective March 1, 2025, Google has designated the Places API, Directions API, and Distance Matrix API as Legacy services. The newer versions of these services are Places API (New) and Routes API. You can't enable or generate new API keys for these legacy services. However, you can continue using these services with the existing API keys. If you need to create a new Google API key after March 1, 2025, you must enable the new APIs from Google Console and upgrade to Xanadu Patch 9 version or higher to ensure compatibility.

## New in the Xanadu release

### Schedule Optimization features

Use Schedule Optimization to do the following tasks:

- Use new objectives such as **Maximize SLA compliance buffers**, **Minimize task time penalties**, and **Maximize preferred agent assignments** when you're creating a policy.
- Define start-of-day and end-of-day location for territory users, improving scheduling accuracy by calculating travel times based on actual agent locations.
- Keep similar tasks together by scheduling pre-made bundles.
- Reduce the beans.ai travel estimate processing time with asynchronous processing.
- Access the Field Service Management Scheduling Health dashboard to view task metrics, technician metrics, and optimization configuration details.
- Enable dispatchers to influence the behavior of schedule optimization by allowing dispatchers to edit select fields on a work order task. Dispatchers can override work order task parameters, assign tasks based on technician preferences, and allow overtime.

### Field Service Territory Capacity Analytics dashboard

Use the Field Service Territory Capacity Analytics dashboard for the following tasks:

- Use interactive charts and graphs to track capacity trends, including overall demand versus allocated capacity and capacity usage over time.
- Perform capacity gap analysis with a customizable pivot table view, which enables you to explore data by territory and demand channel.
- Apply filters to view specific data based on your setup, which enables targeted analysis and informed decision-making.

### Agent relocation

Manage your agents by performing the following tasks:

- Relocate agents from one territory to another for a particular duration.
- Facilitate precise destination territory selection, which ensures that each agent is placed in the most preferable location.
- Match resource availability with task requirements through improved schedule planning, which optimizes task execution and efficiently addresses unscheduled work.
- Minimize manual overhead and avoid manual tracking processes by simplifying the handling of temporary resource relocations.

### Optimize agent operations with flexible work locations

Add flexible work locations for agents by performing the following tasks:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Define different start-of-day and end-of-day locations for agents to start their day at one location and end at another location, providing flexibility in their operations.
- Offer additional flexibility by implementing exceptions to override default behaviors during specific periods.
- Improve scheduling accuracy by calculating travel times based on the agent's start and end locations.

### Sales opportunity in Now Mobile Agent app

Enable field service technicians to perform the following the Now Mobile Agent application.

- Create sales opportunities directly from customer locations during field service visits.
- Access data to view, search, and filter sales opportunities.

### Dispatcher Workspace

Use Dispatcher Workspace to perform the following tasks:

- View multiple time zones to see agents who are available for work order tasks across multiple locations.
- Receive intelligent guidance about all possible scheduling options for unscheduled tasks. Rank scheduling options based on agent-to-task match percentage, distance, and more.
- Hide off-shift agents so dispatchers can focus on who’s available and ready for tasks at that moment.

### Beans.ai map integration for bundled tasks

Optimize routes for bundled tasks with beans.ai.

### Appointment booking enhancements

Use appointment booking enhanced configurations to perform the following tasks:

- Book appointments for work order tasks.
- Enable the system to calculate or skip lead time when rescheduling appointments, depending on the selected configuration.
- Consider holidays when calculating lead time for appointments.

### Field Service Marketplace enhancements

- Automate the process of pushing tasks to the marketplace, automatically creating marketplace requests, and listing eligible contractors as determined by your specified criteria.
- Set up task filters to identify the work order tasks that qualify for the marketplace.
- Incrementally push marketplace requests to eligible contractors based on their ranking using the **Progressive push** check box.
- Evaluate contractor responses and automatically assign tasks to the lowest-cost contractor using the **Response evaluation flow** field.

### Field Service Quality Management

Use Field Service Quality Management to do the following tasks:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Review the quality and data from work order tasks before completion.
- Address work orders that have been reviewed and sent back for more information.
- Provide feedback to technicians and communicate as needed during the review process.

### Workforce enhancements

Use Workforce enhanced configurations to perform the following tasks:

- Extend access across all personas, allowing every user regardless of their role to view their own calendars.
- Configure settings to enable group and territory calendar visibility, authoring agents to view the list and calendars of members in their group or within their territory when Workforce Optimization for Field Service isn't enabled.
- Enable agents to create personal events for themselves.

### Multiple Work Configurations

Create configurations for multiple work types, such as Installation, Repair, Break fix, and Maintenance.

- Set up work configurations for different work types ensuring that relevant work types and flows appear for specified business units or departments.
- Create Service Management configurations (SM Configs) to support multiple workflows.
- Extend the work order task table to account for different work types.

## UI changes

### Capacity Management dashboard

Select date ranges and territories to view actual work demand alongside capacity metrics, as well as plot planned capacity against total work over a selected period using filters.

### Schedule Optimization

- The Task Filter tab is renamed as Optimization Targets.
- A new tab is added for Restricted tasks.

### Appointment Booking

Field Service configuration renamed as Field Service Order configuration for new customers.

## Changed in this release

### Capacity and Reservations Management

Capacity and Reservations Management data model has been changed to accommodate the agent's start and end location.

### Reflow for Configurable Workspace

Dispatcher Workspace and Workforce Optimization for Field Service support reflow, which enables pages and content to be zoomed up to 400% through your browser settings without loss of content or functionality. For more information, see the Accessibility information section that follows.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

#### Google Maps APIs for Field Service Capabilities

Upgrade to the new Places API (new) and Routes API for Field Service Capabilities.

Effective March 1, 2025, Google has designated the Places API, Directions API, and Distance Matrix API as Legacy services. The newer versions of these services are Places API (New) and Routes API.

You can't enable or generate new API keys for these legacy services. However, you can continue using these services with the existing API keys. Enable the new APIs from Google Console to continue using the API services without any issues.

If you create a new Google API key after March 1, 2025, enable the new APIs from Google Console to use these services with the new API keys.

For more information see, KB2111488, KB2112054, and Changes to Google Maps Platform automatic volume discounts, monthly credit, and services transitioning to Legacy status.

## Removed in this release

The Field Service dashboard is removed from the Emergency Exposure Management application.

## Deprecations

- Starting with the Xanadu release, FSM Agent Classic Workspace plugin (com.snc.agent_workspace.fsm) is no longer deployed, enhanced, or supported. For details, see the Deprecation Process [KB0867184] article in the Now Support Knowledge Base.
- Starting with the Zurich release, the **Enable capacity** constraint for Schedule Optimization is being prepared for future deprecation. It will be no longer be applied for Schedule Optimization. For details, see the Deprecation Process [KB0867184] article in the Now Support Knowledge Base.

## Activation information

Field Service Management is a ServiceNow AI Platform feature that is available with activation of the Field Service Management plugin (field_service_management). For details, see Activate Field Service Management.

Additional Field Service Management features are available with the activation of other plugins. For details, see Additional plugins for Field Service Management.

Enable field service technicians to initiate and monitor sales opportunities directly through the Now Mobile Agent application by activating Technician driven sales with the Field Service (com.snc.fsm_technician_sales) plugin.

## Accessibility information

#### Accessibility improvements

Accessibility improvements were completed to create a configurable workspace that supports WCAG 2.1 Level AA conformance.

#### Reflow

The Dispatcher Workspace and Workforce Optimization for Field Service workspace support reflow, which enables pages and content to be zoomed up to 400% through your browser settings without loss of content or functionality. Additionally, content

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

can be enlarged without scrolling in two dimensions at a width equivalent to 320 CSS pixels or a height equivalent to 256 CSS pixels. Page layouts are transformed into a vertical, stacked view automatically when users increase browser zoom to 400%.

In addition, the following pages were updated to support reflow:

- Territory planning
- Service location
- Geography
- Agent recommendation

This enhancement helps users with low vision or who have trouble seeing web content in a browser due to monitor size, device type, poor lighting, or other situations. Reflow can be turned off with a system property for instances, experiences, and pages. See Reflow for Configurable Workspace for details.

## Related ServiceNow applications and features

### Financial Management

Field Service Management integrates with the ServiceNow® Financial Management application to allocate, track, and report expenses in your organization.

**Note:**
The Financial Management for CSM plugin (com.snc.financial_management_for_csm) is no longer available for direct activation. You can request this plugin through Now Support Customer Service.

### Customer Service Management

The Customer Service with Field Service Management plugin (com.snc.csm_fsm_integration) integrates the Field Service Management and ServiceNow® Customer Service Management (CSM) applications to enable you to view account and contact information on work orders and work order tasks in the Field Service Management application.

### Service Portfolio Management

Field Service Management integrates with the ServiceNow® Service Portfolio Management application to enable you to create work orders directly from project tasks.

### Workspace

ServiceNow® Workspace is a graphical user interface that puts multiple tools on one page, including the tools that agents use to find, research, and resolve issues. CSM Configurable Workspace and CSM Agent Workspace are customer service-specific implementations that provide tier 1 agents with the tools needed to respond to customers and to resolve cases.

## Now Assist for Field Service Management (FSM) release notes

The ServiceNow® Now Assist for FSM application brings generative AI to Field Service Management. Now Assist for FSM is a new application in the Xanadu release.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Now Assist for FSM highlights for the Xanadu release

- Create knowledge articles from work order task information using generative AI.
- Summarize Sidebar discussions using generative AI.

See Now Assist for Field Service Management (FSM) for more information.

**Important:**
Now Assist for Field Service Management (FSM) is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

### Xanadu Patch 3

**Now Assist context menu for KB creation**

Use the enhanced Now Assist context menu to rewrite knowledge articles with generative AI. Opt to shorten or expand upon the existing content within articles.

### Multilingual support for Now Assist for FSM skills

Generate knowledge articles in multiple languages for work order tasks using the new multilingual support in Now Assist for FSM skills.

### Xanadu Patch 1

### KB Generation

Generate knowledge articles from work order tasks so agents can resolve known issues faster.

### Sidebar summarization

Summarize Sidebar discussions from the platform and the Mobile Agent application.

## Activation information

Now Assist features are available with activation of the Now Assist for FSM plugin. For more information, see Install Now Assist plugins.

## Additional requirements

The Now Assist for FSM application requires Field Service Management.

## Related ServiceNow applications and features

### Now Assist

Improve the productivity and efficiency in your organization, deliver better self-service, recommend actions, provide answers, and empower your users to search more effectively.

### Now Assist Admin console

Use the Now Assist Admin console to provide you with quick and easy access to the important information that you need to set up, configure, and monitor Now Assist applications and features.

### Now Assist skills

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Use the Now Assist products to provide generative AI skills to meet the needs of users in different workflows, including work order task summarization and knowledge base article generation.

### Financial Services Operations release notes

Financial Services Operations has new and updated features in the Xanadu release.

## Financial Services Operations applications

The Financial Services Operations solution works with the following applications:

- Service Bridge - connects multiple ServiceNow instances to provide seamless support and service experiences, and enables exchange of service requests between different entities to facilitate effective and consistent communication. See Service Exchange release notes.
- Field Service Management - enables you to create and view all work orders and appointments related to your case, depending on your business needs. See Field Service Management release notes.

### Dispute Rules Content Pack for Mastercard release notes

The ServiceNow® Dispute Rules Content Pack for Mastercard application provides a questionnaire for intake of dispute related information under various dispute categories as per Mastercard guidelines. Dispute Rules Content Pack for Mastercard is a new application in the Xanadu release.

## Dispute Rules Content Pack for Mastercard highlights for the Xanadu release

- Run chargeback eligibility rules based on Mastercard rules.
- Determine the chargeback eligibility for Mastercard transactions by using the provided decision tables. The eligibility is based on the reason code, intake responses, and transaction data from the dispute.

See Dispute Rules Content Pack for Mastercard for more information.

**Important:**
Dispute Rules Content Pack for Mastercard is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## Dispute Rules Content Pack for Mastercard features

### Decision tables

Streamline dispute processing by validating Mastercard transaction details and questionnaire answers against the eligibility rules in the decision tables that are included in this application.

## Changed in this release

### Updated references from questionnaire tables to intake tables in Card Operations

Updated references from the old questionnaire tables to the new intake tables in Card Operations.

## Activation information

Install Dispute Rules Content Pack for Mastercard by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Additional requirements

This application requires Financial Services Card Operations (sn_bom_credit_card).

## Related ServiceNow applications and features

### Financial Services Card Operations

The ServiceNow® Financial Services Card Operations application digitizes and automates the card operations of your financial institution, enabling quick processing of credit card applications and card transaction disputes.

### Financial Services Credit Operations

The ServiceNow® Financial Services Credit Operations application enables the management of credit cases and tasks that are used in ServiceNow® Financial Services Operations workflows.

### Customer Service Management

Enable the extension of tables from the Customer Service Management (CSM) application into the Financial Services Card Operations application.

### Playbook capabilities

Visualize business process workflows in a simple, task-oriented view with the Playbooks for Customer Service Management (CSM) to confirm consistent responses to commonly encountered situations.

### Dispute Rules Content Pack for Visa release notes

The ServiceNow® Dispute Rules Content Pack for Visa application enables issuers to access Visa card network rules for initiating and investigating card dispute cases. Dispute Rules Content Pack for Visa was enhanced and updated in the Xanadu release.

## Dispute Rules Content Pack for Visa highlights for the Xanadu release

- Optimize the chargeback process by identifying eligibility immediately, prior to submitting the dispute to the card payment network.
- Avoid penalties by identifying ineligible transactions that are based on the reason code and transaction data.

See Dispute Rules Content Pack for Visa for more information.

**Important:**
Dispute Rules Content Pack for Visa is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## Changed in this release

### Questionnaire and chargeback eligibility ruless

- Added new chargeback eligibility rules to reflect the latest dispute conditions from Visa.
- Updated the dispute questionnaire to support the following reason codes:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- 10.3 (Other fraud—card-present environment)
- 13.1 (Merchandise/services not received)
- 13.5 (Misrepresentation)

### Visa Resolve Online (VROL) 24.2 revision Alignment

- Updated chargeback reason codes and dispute questionnaire with VROL's latest release revision 24.2.
- Updated 12.1 chargeback rules to 11.3.

### Visa Resolve Online (VROL) 25.2 revision Alignment

The chargeback eligibility rule under the 12.6 reason code that validates **Is the other transaction paid by other means? == N** has been removed,

### Updated references in Card Operations tables

Updated references from the old questionnaire tables to the new intake tables in Card Operations.

### Updated data model

- Enhanced Dispute Rules Content Pack for Visa to support the updated chargeback eligibility conditions and the fields used for validating disputed transactions.
- Moved the following tables as generic intake tables, from Dispute Rules Content Pack for Visa [sn_bom_visa_cp] to Financial Services Card Operations [sn_bom_credit_card]:
  - Visa Dispute Intake [sn_bom_visa_cp_visa_dispute_questionnaire] → Dispute Intake [sn_bom_credit_card_dispute_intake]
  - Visa Dispute Cardholder Intake [sn_bom_visa_cp_visa_dispute_cardholder_intake] → Cardholder Dispute Intake [sn_bom_credit_card_cardholder_dispute_intake]

**Note:**
These tables have been moved only for new customers, but they are still available in the Dispute Rules Content Pack for Visa for existing customers.

## Activation information

Install Dispute Rules Content Pack for Visa by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Related ServiceNow applications and features

### Financial Services Card Operations

The ServiceNow® Financial Services Card Operations application digitizes and automates the card operations of your financial institution, enabling quick processing of credit card applications and card transaction disputes.

### Financial Services Credit Operations

The ServiceNow® Financial Services Credit Operations application enables the management of credit cases and tasks that are used in ServiceNow® Financial Services Operations workflows.

**Customer Service Management**

Enables the extension of tables from the Customer Service Management (CSM) application into the Financial Services Card Operations application.

**Playbook capabilities**

Visualize business process workflows in a simple, task-oriented view with the Playbooks for Customer Service Management (CSM) to confirm consistent responses to commonly encountered situations.

### Dispute Content Pack for US Regulations release notes

The ServiceNow® Dispute Content Pack for US Regulations application enables issuers in the United States (US) to track dispute cases and conform with regulatory guidelines. Dispute Content Pack for US Regulations is a new application in the Xanadu release.

## Dispute Content Pack for US Regulations highlights for the Xanadu release

- Streamlines the tracking and management of dispute cases.
- Complies with US Regulations such as Regulation E (Reg E) and Regulation Z (Reg Z).
- Incorporate Service Level Agreement (SLA) definitions to help issuers monitor deadlines and take actions.

See Dispute Content Pack for US Regulations for more information.

**Important:**
Dispute Content Pack for US Regulations is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## Dispute Content Pack for US Regulations features

**Configurable SLA Definitions for Reg E and Reg Z**

Configure SLA definitions for Reg E and Reg Z to enable dispute agents to manage cases efficiently and enable managers to monitor progress and take timely actions.

**Enhancements to dispute manager and dispute agent landing pages**

Modified the existing tabs **Debit card disputes cases** and **Credit card cases under incorrect billing** with **SLA breached** and **SLA at risk** on both the disputes manager and dispute agent landing pages.

## Activation information

Install Dispute Content Pack for US Regulations by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Related ServiceNow applications and features

**Dispute Rules Content Pack for Visa**

Integrate with the ServiceNow® Dispute Rules Content Pack for Visa application to maximize success in managing card disputes efficiently and in compliance with regulatory standards.

#### Financial Services Card Operations

Integrate with the ServiceNow® Financial Services Card Operations application to improve the efficiency and compliance of card operations in financial institutions.

### Individual Life Claims release notes

The ServiceNow® Individual Life Claims application enables your organization to perform end-to-end claim processing for individual life policies. Individual Life Claims is a new application in the Xanadu release.

## Individual Life Claims highlights for the Xanadu release

- Streamline the claims process with a clear and intuitive system for your intake specialists, claim specialists, and managers.
- Enable your claim specialists to handle multiple policies within a claim case.
- Use a customized playbook and workspace for various claim-related roles.
- Manage the entire claims life cycle, from the first-notice-of-loss (FNOL) to the case closure.

See Individual Life Claims for more information.

**Important:**
Individual Life Claims is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## Individual Life Claims features

#### Individual Life Claims application

Record key details at FNOL, verify documents, and manage the tasks for the primary claim and related claims.

#### Claims data model

Build a claims flow for individual benefits such as long-term care, disability, critical illness, and so on.

#### Customized playbook experience for FNOL

Use a customized playbook to complete the FNOL process with step-by-step guidance to verify that every task gets completed at the correct stage of the process.

#### New adjuster workspace

Resolve issues, complete tasks, and manage reserves and payments across multiple policies for individual life claims in a new workspace.

#### Death benefit workflow

Use the included death benefit claim workflow as an example to start building your own workflow.

#### Approval engine for reserves and payments

Route requests to managers to approve reserves or payments that are above an adjuster's authorized limit.

## Activation information

Install Individual Life Claims by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to

the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Related ServiceNow applications and features

### Financial Services Operations Core

ServiceNow® Financial Services Operations Core stores the customer data that is required for handling claims requests.

### Customer Service Management

ServiceNow® Customer Service Management enables the extension of tables from the ServiceNow application into the Individual Life Claims application.

### Playbook capabilities

Playbooks for ServiceNow® Customer Service Management provide a way to visualize business process workflows in a simple, task-oriented view, ensuring consistent responses to commonly encountered situations.

### Insurance claims release notes

The ServiceNow® Insurance claims application simplifies and enhances the entire claims process from start to finish with a flexible claims framework. Insurance claims is a new application in the Xanadu release.

## Insurance claims highlights for the Xanadu release

- Leverage a versatile framework that adapts to any single policy property and casualty (P&C) claim without creating case types or flows
- Set up and configure a comprehensive end-to-end claims workflow with ease
- Manage complex claims with multi-adjuster support
- Customize persona-based claims workspaces to support specific roles and responsibilities in your team

See Insurance claims for more information.

**Important:**
Insurance claims is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## Insurance claims features

### Set up new lines of business easily

Leverage the Insurance claims framework to configure a new line of business for one or more incidents.

### Customize your claims workflow

Configure which incidents to display for claim intake, depending on the line of business. Define how adjuster tasks are created based on the selected incidents, and enable or disable itemized loss and expenses as part of the flow.

### Set up persona-based claims workspaces

Set up workspaces for each persona that can be easily customized without requiring code changes.

### Refer to the travel insurance example

Refer to the included travel insurance line-of-business example to review the incident intake and resolution workflow.

## Activation information

Install Insurance claims by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Related ServiceNow applications and features

### Financial Services Operations Core

ServiceNow® Financial Services Operations Core stores the customer, product, and policy data models required for handling claims requests.

### Playbooks in Customer Service Management

Playbooks for ServiceNow® Customer Service Management provide a way to visualize business process workflows in a simple, task-oriented view, confirming consistent responses to commonly encountered situations.

### Financial Services Document Processor

ServiceNow® Financial Services Document Processor enables you to collect and verify documents that are used in workflows.

### Now Assist for Financial Services Operations (FSO) release notes

The ServiceNow® Now Assist for Financial Services Operations (FSO) application brings generative AI to Financial Services Operations. By creating summaries of the card disputes and insurance claims from the case records, agents can quickly view the key details. Now Assist for FSO is a new application in the Xanadu release.

## Now Assist for FSO highlights for the Xanadu release

Xanadu Patch 10

Implement security in Now Assist for FSO skills with access control lists (ACLs).

Early Availability

Enable agents to review card dispute and insurance claim cases more effectively by using the case summarization skill to generate an overview of key details.

See Now Assist for Financial Services Operations (FSO) for more information.

**Important:**
Now Assist for FSO is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## Now Assist for FSO features

**Xanadu Patch 10**

### ACL security implementation

Now Assist for FSO can be configured to enable security implementation to execute generative AI skills through ACLs and user identities. Some predefined ACLs are provided for case summarization.

**Early Availability**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

#### Case summarization skill

Designed to save time for your agents by allowing them to condense a record to a short summary (when configured). Now Assist for FSO includes the customized skills that can be configured to use for specific card dispute and insurance claim use cases.

#### Now Assist panel

Enable your agents to access Now Assist skills in a panel that is available in Financial Services Workspace. After configuration, agents can summarize the viewed record or a specific case number in Now Assist panel.

#### Now Assist Admin console

Use the Now Assist Admin console to activate and configure the capabilities and individual skills. For example, you can designate which roles have access to a skill, or whether the skill is available in Financial Services Workspace, the Now Assist panel, or both.

#### Skill availability restricted by user role

Specify the roles that can access the case summarization skill.

## UI changes

#### Now Assist icon in Next Experience Unified Navigation

You can now use the Now Assist icon in the Next Experience UI Framework to open the Now Assist panel.

## Activation information

Install Now Assist for FSO by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Additional requirements

The Now Assist for FSO application requires a Financial Services Operations Professional Plus or Enterprise Plus license.

## Related ServiceNow applications and features

#### Now Assist

ServiceNow® Now Assist uses generative AI that is designed to enhance user productivity and efficiency through conversation and proactive experiences.

#### Now Assist skills

Use the Now Assist generative AI skills to enable the needs of users in different workflows, such as case summarization.

#### Now Assist case or incident summarization

The Now Assist case summarization skill is designed to support quick learning of case or incident details.

### Financial Services Card Operations release notes

The ServiceNow® Financial Services Card Operations application introduces a dispute playbook on the portal, enabling cardholders to initiate disputes, retrieve enriched transaction details, and

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

receive real-time case updates through a dispute tracker. Financial Services Card Operations was enhanced and updated in the Xanadu release.

## Financial Services Card Operations highlights for the Xanadu release

- Enable cardholders to create and track disputes with a dispute playbook experience on the portal.
- Enhance navigation with intuitive transitions between different role-based landing pages.
- Permit scoped admins to modify landing pages with extensive capabilities, confirming that content aligns with the specific needs and preferences of their user base.

See Financial Services Card Operations for more information.

**Important:**
Financial Services Card Operations is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

### Playbook enhancements for dispute

These enhancements enable the cardholders to do the following:

- Initiate disputes directly through the portal by selecting your financial account and the transactions that you want to dispute.
- Simplify the process of initiating and tracking disputes with the user-friendly dispute portal interface.
- Collect detailed information about the dispute through a questionnaire on the portal.
- Enable cardholders to attach relevant documents to their dispute cases.
- Receive real-time updates on your case through the dispute tracker on the portal.
- Submit the dispute through the portal to land on a review page, where the agent can review and modify the details for the case as required before submitting it for investigation.

### Card disputes enhancements

- Added a common dispute questionnaire table with questions relevant to various card networks for both agents and cardholders.
- Moved the reason code field to the card dispute transaction table.
- Updated the logic to determine the reason code from the case to the card dispute transaction table.

## Changed in this release

### Updated data model

Introduced the following two new tables for questionnaire intake:

- Dispute Intake [sn_bom_credit_card_dispute_intake]
- Cardholder Dispute Intake [sn_bom_credit_card_cardholder_dispute_intake]

### Updated Card disputes transaction table

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Removed the following fields from the Card disputes case table:

- Account status as of transaction date
- Dispute amount modification reason
- Reason code
- Reason code message
- Suggested reason code

### Visa Resolve Online (VROL) version 25.1 updates

The domain value description for the **DisputeResponseReason** column has been updated from **Copy of ATM Cash Disbursement or Load Transaction** to **Copy of ATM Cash Disbursement**.

## UI changes

### Dispute workspaces

The updated landing pages for dispute personas feature a new visual design and improved navigation.

## Removed in this release

- Moved the reason code for Late Presentment from the processing error decision question to the authorization category.
- Updated the 12.1 chargeback rules to 11.3, aligning with VROL's latest release revision 24.2.
- Removed the **is_parcelado** column from the dispute intake table, in alignment with VROL's latest release revision 24.2.

## Activation information

Install Financial Services Card Operations by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Related ServiceNow applications and features

### Financial Services Operations Core

The ServiceNow® Financial Services Operations Core stores the customer data that is required for handling card requests.

### Financial Services Credit Operations

The ServiceNow® Financial Services Credit Operations application enables the management of credit cases and tasks that are used in ServiceNow® Financial Services Operations workflows.

### Customer Service Management

Enables the extension of tables from the ServiceNow® Customer Service Management (CSM) application into the Financial Services Card Operations application.

### Playbook capabilities

Visualize business process workflows in a simple, task-oriented view with the Playbooks for Customer Service Management (CSM) to confirm consistent responses to commonly encountered situations.

### Financial Services Operations Integration with Visa release notes

The ServiceNow® Financial Services Operations Integration with Visa application enables you to seamlessly integrate with Visa Resolve Online (VROL) (VROL) APIs using the Visa Spoke Actions to manage various dispute lifecycle events. Financial Services Operations Integration with Visa was enhanced and updated in the Xanadu release.

## Financial Services Operations Integration with Visa highlights for the Xanadu release

- Handle various dispute lifecycle events including transaction searches, dispute case creation, questionnaire submissions, fraud reporting, and more.
- Utilize data model elements to capture and store information used in subflows for seamless integration.

See Financial Services Operations Integration with Visa for more information.

**Important:**
Financial Services Operations Integration with Visa is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

### Updated subflows for Visa Resolve Online (VROL) 24.2 revision

Updated the following subflows to support the changes in the Visa Resolve Online (VROL) (VROL) release 24.2 revision:

- Look up Case Details
- Submit Fraud Report
- Update Case Resolution Status

## Changed in this release

### Visa Resolve Online (VROL) version 25.1 updates

Updated the following subflows to align with Visa Resolve Online (VROL) release 25.1 revision changes:

- Submit dispute questionnaire
- Submit fraud report

## Activation information

Install Now Assist for FSO by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Playbooks for ServiceNow® Customer Service Management provides a way to visualize business process workflows in a simple, task-oriented view for consistent responses to commonly encountered situations.

**Financial Services Card Operations**

The ServiceNow® Financial Services Card Operations application digitizes and automates the card operations of your financial institution, enabling quick processing of credit card applications and card transaction disputes.

**Financial Services Credit Operations**

The ServiceNow® Financial Services Credit Operations application enables the management of credit cases and tasks that are used in ServiceNow® Financial Services Operations workflows.

**Integration Hub**

Automate integration tasks by using ServiceNow components for ServiceNow® Workflow Studio, or develop custom integrations. A separate subscription is required.

**Integration Hub available spokes**

Activate spokes to improve your Workflow Studio experience with integration-specific content. Use prebuilt flows and actions to automate your integrations or create your own integration automation.

### Visa Spoke release notes

The ServiceNow® Visa Spoke enables the ServiceNow AI Platform® to seamlessly invoke Visa APIs under Visa Resolve Online (VROL) for Visa card dispute process. Visa Spoke was enhanced and updated in the Xanadu release.

## Visa Spoke highlights for the Xanadu release

- Use the Visa Spoke to manage card disputes with Visa Resolve Online (VROL).
- Leverage Visa Spoke actions, to perform transaction inquiry, order insight digital, collaborate with merchants, and perform other dispute events with enhanced security.

See Visa Spoke for more information.

**Important:**
Visa Spoke is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## Changed in this release

**Visa Resolve Online (VROL) version 24.2 updates**

Updated the following Visa Spoke actions to align with Visa Resolve Online (VROL) release 24.2 revision changes:

- Submit Transaction Inquiry Request Builder
- Look up Queue Response Parser
- Look up Batch Queue Response Parser
- Submit Dispute Questionnaire
- Create Dispute Pre Arbitration
- Look up Dispute Details Response Parser

© 2026 ServiceNow, Inc. All rights reserved.

- Look up Dispute Pre Arbitration Response Details Response Parser

### Visa Resolve Online (VROL) version 25.1 updates

Updated the following Visa Spoke actions to align with Visa Resolve Online (VROL) release 25.1 revision changes:

- Submit Fraud Report Request Builder
- Look up Fraud Report Details Response Parser
- Look up Dispute Response Details Response Parser
- Look up Dispute Details Response Parser
- Submit Dispute Questionnaire

## Activation information

Install Now Assist for FSO by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Related ServiceNow applications and features

### Integration Hub

Automate integration tasks using ServiceNow components for ServiceNow® Workflow Studio, or develop custom integrations. A separate subscription is required.

### Integration Hub available spokes

Activate spokes to enhance your Workflow Studio experience with integration-specific content. Use prebuilt flows and actions to automate your integrations or create your own integration automation.

### Integration with spokes

Integrate spokes with ServiceNow® Financial Services Operations (FSO) applications to enable flow designers to provide specific actions within Workflow Studio for those applications.

### Verifi Spoke release notes

The ServiceNow® Verifi Spoke application uses the Verifi Spoke actions to connect with the Verifi APIs and streamline the card dispute resolution process. Verifi Spoke is a new application in the Xanadu release.

## Verifi Spoke highlights for the Xanadu release

- Initiate case creation.
- Retrieve single and multiple cases.
- Inquire about merchant eligibility.
- Revoke or close cases.

See Verifi Spoke for more information.

Activate spokes to enhance your Workflow Studio experience with integration-specific content. Use prebuilt flows and actions to automate your integrations or create your own integration automation.

### Integration with spokes

Integrate spokes with ServiceNow® Financial Services Operations (FSO) applications to enable flow designers to provide specific actions within Workflow Studio for those applications.

### Governance, Risk, and Compliance release notes

Governance, Risk, and Compliance new and updated features in the Xanadu release

### Advanced Risk release notes

The ServiceNow® Advanced Risk application enables you to identify, analyze, evaluate, treat, and monitor risks that could impact your organization in achieving its business objectives. Advanced Risk was enhanced and updated in the Xanadu release.

## Advanced Risk highlights for the Xanadu release

- Create multidimensional entities by combining two or more entities from different entity classes and manage risks and controls for such composite entities.
- Perform assessment on multiple risks and controls by creating a risk assessment project.
- Use a uniform workflow for all types of risk response strategies, enable dynamic approvals using GRC: Approver Configurator, and create multiple strategies with various action items for each risk response plan.
- Link the open risk response tasks or copy the tasks along with the risk response strategy from the previous assessment when reassessing the risk.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Create an issue or link an existing open issue as an outcome of the risk assessment.
- Respond to risk identification questionnaires with an improved user experience using Smart Assessment Engine.
- Reopen closed risk events to identify and address overlooked or underestimated risks, updating existing risk events instead of creating new risk events.

See Advanced Risk Assessment for more information.

**Important:**
Advanced Risk is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

### Create multidimensional entities

Create multidimensional entities by combining two or more entities from different entity classes using the Composite Entity Management application. You can create multidimensional entity classes with a composite entity structure, such as Company | Department | Business Process. After defining the composite entity class, you can create composite entity that operates as a standalone entity. This feature enables you to manage risk and compliance workflows at the composite entity level, providing visibility into the combined risk and compliance posture.

**Note:**
Composite entity classes can be created in both the classic UI and the Risk Workspace. The creation of composite entities is supported only in Risk Workspace.

### Assess multiple risks and controls simultaneously

Create a risk assessment project to perform bulk assessments on multiple risks and controls, enabling assessors to evaluate them in a single project. This approach reduces time and effort, confirms consistency across multiple assessments, and provides a more comprehensive view of risks and controls within the same project. You can scope multiple risks related to the assessable entity within the project and perform assessments.

**Note:**
Assessment of multiple risks and controls is supported only in Risk Workspace.

### Addition of new roles

The following roles related to risk assessment project were added:

- Risk assessment project reader [sn_risk_advanced.risk_asmt_project_reader]: Provides read only access to the risk assessment projects.
- Risk assessment project user [sn_risk_advanced.risk_asmt_project_user]: Provides the ability to create risk assessment projects and update or delete only the projects created by the user.
- Risk assessment project manager [sn_risk_advanced.risk_asmt_project_manager]: Provides the ability to create, update, and delete any risk assessment projects.

### Enhanced risk response workflow

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Streamline your risk response workflow with the following enhancements:

- Use a uniform workflow for all types of risk response tasks. A standardized workflow for risk response tasks enhances the management of all types of risk response tasks, promotes consistency, and reduces the need for customization.
- Configure multiple levels of approvals for the risk response tasks using the approval configurator. By default, a single level of approval is enabled for all types of risk response tasks, where the risk owner can approve the tasks. These approvals can be configured based on requirements.
- Reject a risk response task and move it to the work in progress state without closing it. This feature helps the risk response task owner to modify the response strategy if the approver is unsatisfied with the response.
- Create action items with an independent workflow and link them to the risk response tasks when they are in the Draft or Work in progress state.

  **Note:**
  You can create risk response action items for all types of risk responses except for Risk acceptance tasks.

- Copy risk response plans from the previous risk assessment to the current risk assessment while reassessing.
- Link an open risk response task from the previous assessment to the current risk assessment while reassessing. You can also edit or remove an existing risk response task.

### Issue linking with risk assessments

Streamline your risk assessments with the following enhancements:

- Enable the issue linking option on the Risk Assessment Methodology (RAM) form to create an issue or link an existing open issue with the risk assessment.
- View issue details from the configurable issue card available on the risk assessment.
- Identify newly created issues from existing linked issues with a visual differentiator on the issue card.
- Edit or remove issues.

### Enhanced risk event task workflow

Streamline your risk event workflow with the following enhancements:

- Use a uniform and enhanced workflow for the risk event tasks. A standardized workflow enhances the management of risk event tasks.
- Configure multiple levels of approvals for the risk event tasks using the approval configurator.
- Reject a risk event task and move it to the work in progress state without closing it. This feature helps the risk event task owner to modify the risk event if the approver is unsatisfied.

### Improved user experience for risk identification questionnaire using Smart Assessment Engine

Respond to the risk identification questionnaires from the Assessment Workspace with an interactive and intuitive user experience. Risk admin can select between classic and smart assessment questionnaire in the risk identification configuration

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

without making it a forced behavior. You can migrate an existing risk identification template to the Smart Assessment Engine application. You can also create risk identification templates in the Assessment Workspace.

**Note:**
Only published assessment templates with a Risk Identification category are available for selection on the Risk Identification Configuration form.

### Configuring currency conversion dates

Define currency conversion dates for the risk event entries in the system properties. This feature enhances the accuracy of net loss calculations by enabling you to select specific dates for currency conversion rather than relying solely on the date of impact. You can select a currency conversion date at the system property level from the following options:

- Risk event entry date
- First loss entry date
- Last loss entry date
- First recovery entry date
- Last recovery entry date
- Custom date

**Note:**
You can also override the defined currency conversion dates in the risk response template configuration. These changes apply to both new and ongoing risk event workflows.

### Reopen closed risk events

Reopen closed risk events to update existing risk events with new discoveries, losses, or relevant information without creating new risk events. This feature saves time and effort, offering flexibility and boosting efficiency in managing risk events. You can reopen a risk event individually or in bulk.

### Miscellaneous enhancements and improvements

Streamline your processes with the following enhancements:

- Notify the risk assessor with a notification email when a risk assessment is approved or rejected.
- Define a specific group as the respondent type in the Feedback Integration Configuration form when the target record doesn't have a user or group. For more information, see Configure a feedback integration.
- Configure a single currency mode for advanced risk assessments. This feature displays all financial values in the selected single currency, confirming consistency and clarity in all fields. For more information, see Single-currency mode.
- View the completion date of the most recent risk identification in the new field **Last completed date**, added to the Risk Identification form. For more information, see Set up risk identification integration.

## UI changes

### Risk assessment column labels

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The following risk assessment column labels were renamed to avoid any confusion caused by duplicate names:

- Computed control effectiveness (control_computed_effectiveness) was renamed Computed control effectiveness rating.
- Computed inherent risk (inherent_computed_risk) was renamed Computed inherent rating.
- Computed residual risk (residual_computed_risk) was renamed Computed residual rating.
- Computed target risk (target_computed_risk) was renamed Computed target rating.
- Control effectiveness (summary_control_effectiveness) was renamed Control effectiveness rating.
- Control effectiveness when overridden (control_effectiveness_when_overridden) was renamed Control effectiveness rating when overridden.
- Inherent risk (summary_inherent_risk) was renamed Inherent rating.
- Override computed score (override_calculated_inherent_score) was renamed Override computed inherent score.
- Override computed score (override_calculated_residual_score) was renamed Override computed residual score.
- Override computed score (override_calculated_target_score) was renamed Override computed target score.
- Residual risk (summary_residual_risk) was renamed Residual rating.
- Residual risk when overridden (residual_risk_when_overridden) was renamed Residual rating when overridden.
- Target risk (summary_target_risk) was renamed Target rating.
- Target risk when overridden (target_risk_when_overridden) was renamed Target rating when overridden.
- Comments (target_justification) was renamed Comments for target risk.
- Comments (inherent_justification) was renamed Comments for inherent risk.
- Comments (control_justification) was renamed Comments for control effectiveness.
- Comments (residual_justification) was renamed Comments for residual risk.
- Comments (approver_comments) was renamed Approver comments.
- Comments (risk_response_justification) was renamed Comments for risk response.

## Deprecations

- The Risk portal has been deprecated, and a navigation link has been added to access the new Risk portal.

## Activation information

Install Advanced Risk by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Related ServiceNow applications and features

### GRC Risk Management

Use the Risk Management with the ServiceNow® Advanced Risk application to identify and monitor high-impact risks, improve your risk-based decision-making, and reduce reaction time from days to minutes.

### GRC Risk Workspace

The Risk Workspace with the ServiceNow® Advanced Risk application provides a simplified user experience with a single-pane view for all your risk-related activities.

### Audit Management release notes

The ServiceNow® Audit Management application supports activities related to planning audit engagements, executing engagements, and reporting findings to an audit committee. Audit Management was enhanced and updated in the Xanadu release.

## Audit Management highlights for the Xanadu release

- Manage your documents and work papers in Audit Management as cloud files.
- Link cloud files to any GRC record and share a single cloud file with multiple records.
- Upload documents from your local computer as cloud files and link them to any record in ServiceNow.
- Use the lite roles introduced in Audit Management for lighter business operations.

See Audit Management for more information.

**Important:**
Audit Management is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

### Generate an audit report for an engagement using Microsoft Word template

Use the Audit Workspace to generate audit reports for an engagement using Microsoft Word template to collaborate with your auditors in an effortless and user-friendly manner. You can manage the generated report as a cloud file either on cloud (Microsoft SharePoint) or as a sys_attachment that is attached to the engagement record.

### Cloud document management

Upload documents from your local computer as cloud files and link them to any record in ServiceNow. You can upload files to a predefined folder path and location.

### User role enhancements in Audit Management

The following roles have been added:

- Use the Audit approver (sn_audit.approver) role to approve an engagement and audit plan. Anyone with this role can be a part of an approver list. This role is also classified as a lite operator role.
- Use the Audit reader (sn_audit.reader) role to view the audit-related entities, such as engagements, plans, observations, and audit tasks. Anyone with this role has exclusive read access to all the entities in the Audit Management application. This role is also classified as a lite operator role.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Changed in this release

### Domain separation and Audit Management

Changes are made to the domain assignment process to manage data segregation by the Managed Service Providers related to the objects in Audit Management and Advanced Audit.

### Role change for users approving workflows

Approvers for an engagement and audit plan can also use the Audit approver (sn_audit.approver) role as a lite operator role to approve audit workflows.

## Activation information

Install Policy and Compliance Management by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

### Business Continuity Management release notes

The ServiceNow® Business Continuity Management application enables your organization to continue to deliver products and services at an acceptable level during disruptive events such as power outages, extreme weather, or equipment damage. Business Continuity Management was enhanced and updated in the Xanadu release.

## Business Continuity Management highlights for the Xanadu release

- Review the types, relationships, and sources of relationships for an asset through updated plan records.
- Access the most current information on the dependencies that are related to the Business Impact Analysis (BIA), plans, or events.
- Manage and assess the recovery tasks that are listed within your plan. You can organize the tasks by their dependencies.

See Business Continuity Management for more information.

**Important:**
Business Continuity Management is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## Important information for upgrading to the Xanadu release

The relationship tables introduced in the plan records are generated by the *Update BCP dependencies snapshot* scheduled job. After upgrading to the Xanadu release, you can view these tables only after the scheduled job has run or by manually selecting the **Update dependencies** button.

## New in the Xanadu release

### Create a business impact analysis

Analyze the business impact of an asset's dependencies by using the latest updates from the most recent Business Impact Analysis (BIA) record. You can also determine the recovery time frame and data backup needs for the asset.

### Create a business continuity plan

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Access the Business Impact Analysis (BIA) record from the BIA column in the plan asset form. This column has been updated from a document ID type to a reference type so that you can update the BIA information and navigate to the plan record.

Identify the assets that are affected when a primary scope is operationally down by marking an asset as a primary scope and identifying its related assets. This way, you get a clear view of the relationships between assets.

### Add asset and scope to the BCP

Identify the discrepancies between the primary and related assets by using the hierarchical view in the plan record. This way, you can address the gaps in the Recovery Time Objective (RTO), Recovery Point Objective (RPO), or Recovery Tier (RT) values.

### Dependency Configuration records

Access up-to-date information on the dependencies that are related to the BIA, plans, or events. You can analyze how these dependencies affect your business.

### Add recovery tasks

Calculate the time that it takes to recover each event asset by tagging the assets to the recovery tasks.

### Create New Recovery task form

Preview the execution order of the recovery tasks by their dependencies during an exercise or an actual event. You can identify any cyclic dependencies in the recovery tasks that might trigger error notifications and stop further actions on that recovery task. You can also record the estimated time that is required for a recovery task directly on the recovery task form.

### Create an exercise

Assess the time and effort for an activated plan and the recovery of the impacted assets. You can track the status of an open activated plan and monitor the progress during an actual event.

### Format PDF templates for BIAs, BCPs, and events

Improve the content in PDFs of BIAs, plans, and events by implementing a new layout:

- Arrange the various event tasks in a table format.
- Include the details of the asset owner and the description from the Business Impact Analysis.
- Display a table that outlines the dependencies of the plan assets.
- Mark the date of the PDF creation on the front page.

## UI changes

### Set up Impact analysis dependency update configuration

The **Source records to consider** option has been incorporated in the **Sources** tab within the Dependency configuration modules.

### Add asset and scope to the BCP

The Relationship source column has been included in the Asset dependencies.

The BIA column in the **Scope** tab has been updated from the previous document ID type to a reference type.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

### Create a business continuity plan

The following UI changes have been added to the plan records:

- The Add primary asset and Add related asset actions have been introduced to the plan records.
- The **Parent plans** tab has been added to the plan records.
- The Planned order column in the **Recovery tasks** tab displays the order of the tasks based on their dependencies.
- The **Open** state has been added to the activated plans.
- The **Asset dependencies** tab now displays the detailed information about the assets, replacing the Primary scope and Related asset toggles that were previously displayed in the **Scope** tab of the plan record.
- The **Planned duration** field in the recovery task displays the expected time frame for the recovery tasks.
- The **Tag assets** field has been added to the plans.
- The Type column in the plan records has been migrated to the Types column.
- The **Completion deadline** field has been migrated to the **Planned duration** field.
- The previously auto-populated BIA value in the Source column of the **Related plans** tab in the plan record is deprecated. Instead, the **From plan asset** value in the Source column is used.
- The Primary source column has been deprecated from the plan asset record. It has been moved to the **Asset dependencies** tab.

## Changed in this release

### Element definitions and variables

You can now add a Windows server asset in the Windows server element definition or a Linux server asset in the Linux server element definition. However, you can't add the Windows server asset or the Linux server asset in the filter of the Hardware element definition.

## Deprecations

- The BCM Classic Workspace isn't compatible with the new features and enhancements that were introduced with the Xanadu release. Any issues and errors encountered with its continued use aren't supported. To avoid any disruptions, transition to the BCM Configurable Workspace.

**Note:**
Although the BCM Classic Workspace is still available through the URLs after its deprecation, it doesn't appear in the navigation menu.

## Activation information

Install Business Continuity Management by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Browser requirements

Business Continuity Management requires the following browsers:

- Google Chrome
- Firefox and Firefox Extended Support Release (ESR)
- Microsoft Edge Chromium
- Safari 12.0 and later versions

## Accessibility information

Accessibility improvements for the Business Continuity Workspace include the following updates.

Screen reader support has been improved for the following features:

- Business impact analysis assessment
- Business impact analysis dashboard
- Contributors side panel
- **Assets** tab in the plans and events (Element picker)

### Common Governance, Risk, and Compliance feature release notes

The ServiceNow® Governance, Risk, and Compliance (GRC) application enables an organization to continue to provide its business services during adverse operational events, such as a pandemic, extreme weather, or hacking. Governance, Risk, and Compliance was enhanced and updated in the Xanadu release.

## GRC highlights for the Xanadu release

- Group issues within your workspaces to organize and manage related issues, and streamline the issue grouping process with the confidentiality and inheritance enhancements.
- Select an existing standalone issue to serve as the parent for other related issues during issue grouping.
- Track license consumption across different product families using the GRC Licensing Overview dashboard.
- Use the new GRC Employee role to report or request GRC workflows, and read and acknowledge policies from the Employee Center (Only applicable to customers who are entitled to and have installed the GRC Employee User application).
- Read and approve audits, and read audit related tables with the enhanced Lite Operator changes.
- Update and add content using Microsoft 365 for ServiceNow Reporting now integrated with the Document designer application.

See Governance, Risk, and Compliance for more information.

**Important:**
GRC is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

### Management method in issue grouping

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Group and manage issues from a parent issue, or manage child issues independently using the group issue management method. When you select the Management method as **Manage parent**, the child issues inherit the values of the **State**, **Response**, and **Explanation** fields from the parent issue. When **Manage child** is selected, the child issue maintains its own **State**, **Response**, and **Explanation** fields individually.

As a part of this feature, the following two new fields were added on the issue record in the Issue grouping section:

- **Group level**: Identifies whether an issue is a child, parent, or a standalone issue.
- **Management method**: Indicates whether the issue is managed from a parent issue or as an individual child issue.

### Confidentiality and inheritance enhancements in issue grouping

Streamline the issue grouping process with the following enhancements:

- Add confidential child issues only under a confidential parent issue.
- Add nonconfidential child issues under a confidential or nonconfidential parent issue.
- Change a confidential parent issue to nonconfidential. This action will remove all confidential child issues under the parent issue, making them standalone issues after you save the record.

> **Note:**
> When you change a nonconfidential child issue to confidential, which is under a nonconfidential parent issue, this action removes the child issue from the nonconfidential parent issue. The child issue becomes a standalone issue and no longer linked to the parent issue.

### GRC Licensing Overview dashboard

Use the self-service GRC Licensing Overview dashboard to track license usage trends and next month's projected usage based on role allocation. You can see the monthly aggregated counts of license consumption across different product families including Integrated Risk Management, Business Continuity Management, and Privacy Management. The following infrastructure enhancements were made:

- Expanded the unique user usage table capacity from 9 months to 12 months.
- License consumption details are archived for five years.
- Aggregated monthly counts of license usage are stored.

### Introducing GRC Employee role

Install the new GRC Employee User application and assign the GRC Employee role to your employees. The users with the GRC Employee role can perform the following activities from the Employee Center:

- Read and acknowledge organizational policies.
- Report risk events and issues.
- Request policy exceptions.
- Report a compliance case to the Compliance team.
- Raise inquiries and requests to the Compliance team.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

**Note:**
This update is only applicable to customers who are entitled to and have installed the GRC Employee User application. For more details, review the entitlement on the subscription dashboard or contact ServiceNow.

### Lite operator role enhancements

The sn_audit.reader and sn_audit.approver roles were added as Lite Operator roles. These new roles are available to all customers.

The following Operator roles are reclassified as Lite Operator roles when GRC Employee User application and GRC Business User Lite applications are installed:

- sn_grc.business_user
- sn_risk_advanced.ara_assessor
- sn_irm_cont_auth.authorization_official
- sn_irm_cont_auth.reader
- sn_irm_cont_auth.executive_read

**Note:**
This reclassification is only applicable to customers who are entitled to and have installed the GRC Employee User application. For more details, review the entitlement on the subscription dashboard or contact ServiceNow.

### Entity filter deletion or modification warning

Avoid the unintended consequences of deleting or modifying an entity filter with a warning message. This message includes an impact analysis of the affected entity, risk, and control records.

### Document designer integration

You can update and add content using Microsoft 365 for ServiceNow Reporting now integrated with the Document designer application to insert data and reports into a Microsoft Word document.

### Role attribution to licensing mapping tab

Use the Role attribution to licensing mapping tab on the GRC Licensing Overview dashboard to understand how licensing applies to roles and users. This tab helps you with the following:

- Identify the license treatment for all the default GRC roles.
- Determine the license treatment of a specific user based on their assigned roles.
- Determine the license treatment for a specific combination of roles.

### Map stakeholders in entity

Use the Stakeholders related list in the entity form to define stakeholders with customizable roles relevant to single and composite entities. This feature enables effective team involvement in risk assessments and risk assessment projects. You can add persona, group, and users in the stakeholder list.

## Activation information

Install GRC by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

### Compliance Case Management release notes

The ServiceNow® Compliance Case Management application helps you to report, investigate, analyze, and resolve a compliance case or raise a compliance request in a centralized location. Compliance Case Management was enhanced and updated in the Xanadu release.

## Compliance Case Management highlights for the Xanadu release

- Establish a centralized library of agencies for identifying the relevant regulatory authorities that are responsible for overseeing particular industries or sectors within each jurisdiction. The centralized library consolidates all regulatory communications via emails and implements the notification rules for data privacy or security breaches for the reported compliance cases.
- Auto-calculate the notification dates for the reported compliance cases.
- Monitor and access your compliance cases by the subtype classification through a new graphical chart.
- Enable your compliance analysts to access a homepage so that your compliance analysts can manage reported compliance cases or requests.

See Compliance Case Management for more information.

**Important:**
Compliance Case Management is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

### Regulatory Agency Library

Establish a centralized library of agencies for identifying the relevant regulatory authorities that are responsible for overseeing particular industries or sectors within each jurisdiction. The centralized library consolidates all the regulatory communications via emails and implements the notification rules for the data privacy or security breaches for the reported compliance cases.

### Auto-calculate future dates

Set up future auto-calculations to track your compliance cases or requests.

## Changed in this release

A new graphical chart enables your compliance case managers to monitor and access their compliance cases by the subtype classification.

## Activation information

Install the Regulatory Agency Library by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

### Continuous Authorization and Monitoring release notes

The ServiceNow® Continuous Authorization and Monitoring (CAM) application provides a standardized approach to defining an authorization package and walking through the seven stages of the NIST Risk Management Framework (NIST RMF). Continuous Authorization and Monitoring (CAM) was enhanced and updated in the Xanadu release.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Continuous Authorization and Monitoring highlights for the Xanadu release

- Use the added features in the CAM Workspace to help streamline your work and have an efficient end-to-end user experience.
- Export System Security Plan (SSP) files in the OSCAL format, which includes models like Catalog, Profile, and SSP.
- Use the lite roles introduced in CAM for lighter business operations.
- Group similar controls into a family-related and club-related to help identify and understand the controls.

See Continuous Authorization and Monitoring for more information.

**Important:**
Continuous Authorization and Monitoring is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

### CAM Workspace

Use the CAM Workspace for an end-to-end user experience. The Home page, overview pages of authorization boundary and authorization package, unified tasks page, and the dashboards help you capture information and give you a better insight into the data that aids in decision making.

CAM Workspace includes exclusive features with which you can:

- Add related control objectives.
- View controls by family for a control objective and report based on families for NIST 800-53.
- Add attachments to assessment procedures and document notes.
- View all Plan of Actions and Milestones (POA&M) in a single pane.

### CAM supports the OSCAL format to export control-related information

Export SSP files in the OSCAL format based on various models such as SSP, Profile, Catalog, and Catalog overlay. The generated report is compatible to share the information with other systems. CAM supports the National Institute of Standards and Technology (NIST) recommended OSCAL format to provide control-based information in machine-readable formats.

### CAM ATO artifacts

Generate ATO artifacts from an authorization package in Microsoft Word format for the following reports:

- SSP
- Security Assessment Report (SAR)
- POA&M

### Enhancements in CAM user roles

The existing user roles in CAM application have been enhanced with the following privileges:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Use the Information Owner (sn_irm_cont_auth.information_owner) role to view and update the information types of an authorization package.
- Use the Audit reader (sn_audit.reader) lite role to view audit-related entities, such as engagements.
- Create and manage issues as a system user.

## Changed in this release

### Role changes for Continuous Authorization and Monitoring Workspace users

Reader (sn_irm_cont_auth.reader), Authorization Official (sn_irm_cont_auth.authorization_official), and Executive Reader (sn_irm_cont_auth.executive_read) can now access Continuous Authorization and Monitoring Workspace.

### OSCAL Catalog model export

In exporting the control-related information as part of the Catalog model, the child control objectives of a control objective are mapped to the Control field. Furthermore, related control objectives of the control objective are mapped to the Links field.

### Enhancements in CAM Workspace

The following enhancements have been made in CAM Workspace:

- New pop-ups with additional capabilities are added to the hybrid controls creation.
- POA&Ms include all authorization package issues.
- The **Family** field and **Family ID** field are added to the Control objective page.
- The **Notes** field and **Attachment** field are added to the Assessment procedure page.
- The **360° View** button is configured in all pages of CAM Workspace.

### CAM user role changes

Defining roles and assigning privileges and permissions for approvals is critical to ensure security in the CAM application. The user role changes are:

- The Information Owner (sn_irm_cont_auth.information_owner) role can also update information types of an authorization package, and the role also contains the Audit user (sn_audit.user) role in addition to the Reader (sn_irm_cont_auth.reader) role.
- The Information System Security Manager (sn_irm_cont_auth.info_system_sec_manager) role can update the authorization package, and the role contains the Compliance user (sn_compliance.user) and Reader (sn_irm_cont_auth.reader) roles.
- The Information System Security Officer (sn_irm_cont_auth.info_system_sec_officer) role can update the authorization package.
- The Reader (sn_irm_cont_auth.reader) role contains the Audit reader (sn_audit.reader) role.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- The System User (sn_irm_cont_auth.system_user) role contains the Audit user (sn_audit.user) role.
- The System Owner (sn_irm_cont_auth.system_owner) role also contains the Audit user (sn_audit.user) and Compliance user (sn_compliance.user) roles.

## Removed in this release

- The Authorization Official (AO) (sn_irm_cont_auth.authorization_official) role no longer contains the sn_audit.user and sn_compliance.user roles. The AO role can only read and approve an authorization package.
- The Information System Security Officer (sn_irm_cont_auth.info_system_sec_officer) role no longer contains the sn_audit.user role.
- The Reader (sn_irm_cont_auth.reader) role no longer contains the sn_audit.user role.

## Activation information

Install Continuous Authorization and Monitoring by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

### Operational Resilience release notes

The ServiceNow® GRC: Operational Resilience Workspace application supports organizations in keeping business services running during adverse events like pandemics, severe weather, or cyber attacks. Operational Resilience was enhanced and updated in the Xanadu release.

## Operational Resilience highlights for the Xanadu release

- Monitor business service resiliency from start to finish, with a focus on operational risk and compliance.
- Identify and report operational vulnerabilities from Employee Center or Operational Resilience Workspace. Address these vulnerabilities through procedures such as reporting, assessing impact, evaluating criticality, managing issues, and planning treatments.
- Use the Digital resilience third-party registers application to establish, update, and manage contractual arrangements between the financial entities and Information and Communication Technology (ICT) service providers.
- Export the records for regulators and auditors in Microsoft Excel format by using the Microsoft Excel upload capability in Digital resilience third-party registers. Similarly, you can import the records from external sources by using the Microsoft Excel download functionality.

See Managing Operational vulnerability and Maintaining Digital resilience third-party registers for more information.

**Important:**
Operational Resilience is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

### Managing Operational vulnerability

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Address operational vulnerabilities through reporting, assessing impact, evaluating criticality, managing issues, and planning treatments in Operational Resilience Workspace. Report operational vulnerabilities by using either Employee Center or Operational Resilience Workspace.

### Maintaining Digital resilience third-party registers

Comply with Digital Operational Resilience Act (DORA) regulation requirements by creating contractual arrangements between the financial entities and the ICT service providers in Digital resilience third-party registers. The ICT third-party service provider records are maintained in Digital resilience third-party registers for DORA compliance.

Add or modify the records in bulk or individually for assessments, branches, contracts, functions, legal entities, supply chains, third parties, or third-party engagements. Export the records to Microsoft Excel format for the European Union to streamline the auditing process as per the regulation. You have the option to import the records from external sources into the Digital resilience third-party registers application.

## UI changes

The Operational vulnerability module is now part of the List view in Operational Resilience Workspace.

### Using Digital resilience third-party registers

The Digital resilience third-party registers module is now part of the List view in Operational Resilience Workspace.

## Changed in this release

### Reporting Operational vulnerability

The Operational vulnerability related list has been added to the following modules in the List view:

- Importance and impact tolerance assessment
- Scenario analyses
- Self attestations
- Services

## Activation information

Install Operational Resilience by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Browser requirements

Business Continuity Management requires the following browsers:

- Google Chrome
- Firefox and Firefox Extended Support Release (ESR)
- Microsoft Edge Chromium
- Safari 12.0 and later versions

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Accessibility information

Improved screen reader and translation support by adding ARIA button labels, tooltips, and alt text to the Operational Resilience Workspace. This support provides an explanation for button actions and identifies tooltip text to be translated.

## Related ServiceNow applications and features

### Advanced Risk Assessment

Use the Advanced Risk application to identify, measure, and track risks. The application includes workflows for risk assessments and events, ensuring efficient management of your organization's risk profile.

### Business Continuity Management

Use the Business Continuity Management application to ensure that your organization can keep delivering products and services at an acceptable level even when faced with disruptive events.

### Policy and Compliance Management

Use the Policy and Compliance Management application to create and manage policies, standards, and internal control procedures that are mapped to external regulations and best practices.

### Risk Management

Use the Risk Management application to identify and monitor high-impact risks, improve your risk-based decision-making, and reduce the reaction time from days to minutes.

Use the Vulnerability Response application to enable security users to analyze security data, implement changes, and generate security incidents.

### Policy and Compliance Management release notes

The ServiceNow® Policy and Compliance Management application provides a centralized process for creating and managing policies, standards, and internal control procedures that are cross-mapped to external regulations and benchmarks. Policy and Compliance Management was enhanced and updated in the Xanadu release.

## GRC: Policy and Compliance Management highlights for the Xanadu release

- Revise your policies and update the policy text periodically by integrating with Microsoft SharePoint.
- Use policy authoring and the redlining feature to enable policy owners and reviewers to collaborate, review, and redline policies.
- Perform a Cyber Risk Institute (CRI) assessment on a company as an entity to determine its control status and calculate the assessment score.
- Use the employee operator role introduced in Policy and Compliance Management for operations in Employee Center.

See Policy and Compliance Management for more information.

**Important:**
Policy and Compliance Management is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## New in the Xanadu release

### Upload policy document from your local machine to Microsoft OneDrive

Upload a Microsoft Word document that exists in your local machine to Microsoft OneDrive and link the document with the policy. You can access the document from any device and enable multiple users to collaborate on the policy document.

### Create and associate a policy text document in Google Drive

Integrate your ServiceNow instance with Google documents to manage documents in Google Drive. Create a Word document in Google Drive that you can access through a browser and store in Google Drive. You also have the option to create a Microsoft Word document that you can manage in Google Drive.

### Upload policy document from your local machine to Google Drive

Upload a Microsoft Word document that exists in your local machine to Google Drive and link the document with the policy to enable multiple users to collaborate on the policy document.

### Upload policy document from your local machine to Microsoft SharePoint

Upload a Microsoft Word document that exists in your local machine to Microsoft SharePoint and link the document with the policy to enable multiple users to collaborate on the policy document.

### Policy authoring using Microsoft SharePoint

Monitor and revise your organization's policies at regular intervals to maintain their relevance and compliance. Integrating Microsoft Word document files with multiple Microsoft SharePoint sites helps your policy owners, reviewers, and approvers to author, modify, and maintain different versions of a policy text and thus retain its history. You can also collaborate on policy drafting and review processes. The policy text is updated automatically. You can copy and paste text from a document into the **Policy text** field in HTML and then convert it to a PDF format.

### Using CRI assessment questions to profile an entity

Perform a CRI tiering assessment for an entity to determine its tier, and then perform a CRI assessment for that entity. Based on the response to the CRI questionnaire from the assessor, the compliance status of each mapped control to a question is determined. The overall compliance score of the entity is also calculated.

### User role enhancements in Policy and Compliance Management

Respond to policy acknowledgments and request a policy exception from the Employee Center portal with the employee operator role.

## Changed in this release

### Perform CRI tiering questionnaire to determine the tier value of entity

In addition to the Entity owner, the Corporate compliance manager [sn_compliance_ws.corporate_compliance_manager], Corporate compliance analyst [sn_compliance_ws.corporate_compliance_analyst], and IT compliance manager [sn_compliance_ws.it_compliance_manager] can trigger CRI tiering questionnaire and initiate CRI profile assessments.

- UI action button **Initiate CRI tiering assessment** has been renamed as **Initiate CRI tiering questionnaire**.
- UI action button **Initiate CRI assessment** has been renamed as **Initiate CRI profile assessment**.

### Domain separation in GRC: Policy and Compliance Management

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Now both manually created records and auto-generated records created through scheduled jobs or scripts are domain separated based on their parent object or user domain for all Policy and Compliance Management objects.

## Activation information

Install Policy and Compliance Management by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Browser requirements

GRC: Policy and Compliance Management requires the latest public release and two previous release versions of the following browsers:

- Google Chrome
- Firefox and Firefox Extended Support Release (ESR)
- Microsoft Edge Chromium
- Safari 12.0 and later versions

### Privacy Management release notes

The ServiceNow® Privacy Management application enables you to manage your organization's privacy risks and compliance to protect your customers, employees, and suppliers. Privacy Management was enhanced and updated in the Xanadu release.

## Privacy Management highlights for the Xanadu release

- Use the Personal Data Rights application to manage personal data rights requests from your customers or consumers, and employees in compliance with global privacy regulations.
- Establish a data lineage to visualize data consumption, sharing, and the associated risks for a processing activity.
- Use the Smart Assessment Engine to respond to and view new control attestations related to your processing activity.
- Create a regulatory agency library to store and access regulatory details, including correspondence with the regulators.
- Initiate chats from privacy assessments, processing activities, privacy cases, and personal data rights requests to collaborate with various teams to ensure quick responses.

See Exploring Privacy Management for more information.

**Important:**
Privacy Management is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

### Personal Data Rights

Use the Personal Data Rights application that provides configurable workflows to manage and automate personal data rights requests efficiently, reducing the risk of non-compliance. The Personal Data Rights application enables customers to efficiently manage and fulfill Data Subject Access Requests (DSARs), consumer rights requests, and so on, ensuring compliance with privacy regulations. The

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

application helps organizations to handle requests related to the personal data rights of their consumers while ensuring that employees can maintain data protection standards globally.

### Create data lineage

Establish a data lineage to understand how data is being consumed and shared in a given processing activity. Creating a data lineage also helps you to understand and manage the associated risks for the data being shared. This feature provides a visual representation of data lineage or hierarchy.

### Create a regulatory agency

Create regulatory agencies in the Privacy Workspace to identify the relevant regulatory authorities that are responsible for overseeing the businesses in the public interest. The centralized library consolidates all regulatory communication via emails.

### Collaborate and chat with cross-functional teams for processing activities, privacy cases, privacy assessments, and personal data rights requests

Initiate quick discussions with key stakeholders while working on a processing activity, privacy case, or a personal data rights request. The chat feature is integrated with Microsoft Teams and a group is automatically created on Microsoft Teams when a discussion is initiated. The chat conversations that take place using the **Discuss** button are stored in the respective record making it simpler for the privacy teams to refer to them when working on a task.

### View smart attestations on the processing activities

Use the Smart Assessment Engine feature to respond to attestations. View the reports of the new control attestations on the landing pages of the privacy analyst and the privacy manager. Utilize the filter in the Attestations report to select if you want to view the classic attestations or the new attestations.

### Changes in roles with the Privacy Employee user application

**Note:**
Only applicable to the customers with the GRC Privacy Employee User application (sn_privacy_emp) installed.

When you install the new GRC Privacy Employee User application and assign the sn_privacy_emp.privacy_employee role to your employees, the role enables your employees to perform the following operations from the Employee Center:

- Proactively request privacy impact assessments (PIAs) for new implementations, applications, and processes from the Employee Center.
- Report privacy cases related to data privacy policy and regulatory violations.
- Read and acknowledge organizational privacy policies.
- Create policy exceptions.
- Create privacy issues.

### Changes in roles with the GRC: Privacy Lite User application

If the GRC: Privacy Lite User application (sn_privacy_lite) is installed, the following roles are considered as lite operators:

- sn_privacy.business_user
- sn_privacy.assessment_responder

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- sn_privacy_case.privacy_case_business_user
- sn_grc_pdr.data_owner_admin

Users with the lite operator role can do the following:

- Respond to privacy assessment tasks as business users.
- Respond to the processing activity's criticality risk assessments and object-based assessment.
- View, update, and close assigned issues.
- Respond to the assigned control attestations.
- Respond to the assigned manual indicator tasks.
- Create, update, and close assigned remediation tasks.
- Work on the processing activity as a business user when it’s assigned to you to collect the required details.
- Work on breach assessments and other privacy case tasks.
- Respond to the detailed privacy risk assessments on each risk identified on a processing activity.
- Respond to the assessment and investigation tasks assigned by the privacy team.
- Work on personal data rights action tasks to handle data according to the requester's requests.

## Activation information

Install Privacy Management by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

### Regulatory Change Management release notes

The ServiceNow® Regulatory Change Management application enables you to check upcoming regulatory changes, assess their impact, and implement risk and compliance-related changes. The application verifies the overall regulatory compliance. Regulatory Change Management was enhanced and updated in the Xanadu release.

## Regulatory Change Management highlights for the Xanadu release

- Add AI-powered citations to the regulatory authority documents.
- Use the updated Next Experience Chat Collaboration and Discuss feature to interact with the virtual agents.
- Change the ownership of change tasks and action tasks easily with the enhanced Task Management feature.
- Assign regulatory alerts to domain experts for reviews that are based on the configured rules.
- Collaborate with virtual agents by using Next Experience Chat Collaboration and Discuss.

See Regulatory Change Management for more information.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

**Important:**
Regulatory Change Management is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

### Assign rule-based regulatory alerts

Define the routing rules to automatically distribute regulatory alerts to internal stakeholders. You can apply conditions to filter incoming regulatory feeds by Title, Description, Key dates, and many other fields. You can also auto-assign filtered regulatory alerts to domain experts for further review.

### Add an AI-recommended citation to a regulatory alert

Add AI-powered recommendations from the most relevant citations through incoming regulatory changes, authority documents, child citations, and related control objects. You can drill down into the recommendations to explore the details within the context of the alert.

## Changed features in the Xanadu release

### Enhanced Task Management

Enhanced the Task management feature to help the coordinator to change the ownership of change tasks and action tasks.

### Next Experience Chat Collaboration and Discuss

Enhanced the Next Experience Chat and Collaboration and Discuss feature.

### Action Tasks

Added action tasks that are segregated from the Regulatory Change Management or the Compliance Case Management application for differentiation and reporting in the **My Tasks** portal.

## Deprecated features in Xanadu release

- No plans to enhance the Calendar reporting view in the Classic UI that is shipped with the application.
- No plans to enhance the Overview dashboard in the Classic UI that is shipped with the application.

## Activation information

Install Regulatory Change Management by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

### Smart Assessment Engine release notes

The ServiceNow® Smart Assessment Engine (SAE) application helps you to reduce the manual burden and costs of your assessment processes through automation. Smart assessments can help you with evaluating various situations, aspects, or records. SAE is a new application in the Xanadu release.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Smart Assessment Engine highlights for the Xanadu release

- Create your assessments by using the new template designer.
- Improve your assessment processes with the new SAE Assessment experience.
- Combine the multiple assessments into a single, unified submission.
- Migrate the legacy assessment metric types to SAE templates.

See Smart Assessment Engine for more information.

**Important:**
SAE is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## Smart Assessment Engine features

### Using the template designer

By using the template designer in Smart Assessment Engine, you can easily create assessment templates and add instructions, questions, and reference information to an assessment template.

- Add instructions and questions to an assessment template: SAE supports the most commonly used question types such as radio buttons, check boxes, drop-down lists, and more. Smart assessments are highly customizable so that you can do the following tasks:
  - Organize questions into sections and subsections for clarity.
  - Add instructions to help the assessors understand the context and requirements of each question to improve the accuracy and relevance of the responses.
  - Configure the question guidance texts to help the assessors answer questions.
  - Configure the questions to appear or hide depending on the assessor's previous answers.
  - Integrate the response justification prompts that provide the assessors with the explanations that are based on their selected responses.
  - Require the assessors to attach the supporting documents like contracts, permits, or invoices that are based on the responses.
- Add reference information to an assessment template: Incorporate the live data from the Assessment Scope as reference information to help ensure that the assessors have immediate access to the necessary information while they're responding to the assessments. This live data minimizes the need for external references.
- Create an assessment template category: Create a template category as a container of related assessment templates. By creating an assessment template category, you can help to ensure that only authorized personnel can access and change the template.

### Respond to assessments

Navigate through the assessments more efficiently by using a progress indicator that shows how much of the assessment is completed. The questions are paginated to help you more easily navigate the assessment. Your work is automatically saved, which eliminates the need for manual saving and helps to prevent data loss. You

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

also have the option to reassign in-progress assessments to another user or cancel assessments that are no longer needed.

**Trigger assessments**

Initiate an assessment by using the Trigger Smart Assessment flow action that is based on a published assessment template. You can assign an assessment to a designated assessor with a defined scope and deadline.

**Combine multiple assessments into a single, unified submission**

Combine multiple assigned assessments into a single, streamlined view. You can efficiently manage, submit, or reassign these combined assessments at one time. You can use features, like Bulk Submit or Bulk Reassign, to handle all assessments in one action.

**Domain-separated Deployment**

Domain separation in the Smart Assessment Engine is supported starting with the Xanadu release, enabling data, processes, and administrative tasks to be organized into distinct domains. Within this framework, templates are separated by a process, while assessments are separated by data, helping to ensure controlled access and visibility according to the domain.

**Migrate legacy assessment metric types to Smart assessment templates**

Migrate existing assessment designs from the ServiceNow® Assessments and Surveys application. Your templates are automatically transferred as drafts with just one click. After you migrate the designs, you must review and publish these drafts, and confirm the results. The sets of questions in the Assessments and Surveys application are saved as metric types. When migrated, these metric types are saved as question types. Custom, Duration, Image scale, Percentage, Rankings, and Ratings question types aren't supported for migration.

## Activation information

Install SAE by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

### Third-party Risk Management release notes

The ServiceNow® Third-party Risk Management (TPRM) application provides a centralized process for managing your portfolio of third parties and their engagements, assessing and scoring risk, and performing remediation. TPRM was enhanced and updated in the Xanadu release.

## Third-party Risk Management highlights for the Xanadu release

- Collect, monitor, and assess third-party elements for engagements.
- Request risk intelligence reports (RIR) and scores so that you can manage and monitor your RIR requests all within TPRM.
- View the Third-party Risk Management data model.
- Use the Digital resilience third-party registers application to create, update, and track records for digital resilience third-party registers.

See Third-party Risk Management for more information.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

**Important:**
Third-party Risk Management is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## Important information for upgrading Third-party Risk Management to Xanadu

If you are a VRM user upgrading to TPRM, when upgrading to Vancouver or later from an earlier release, you must run each upgrade sequentially to ensure that fix scripts run correctly. This means upgrading from Utah to Vancouver, Vancouver to Washington DC, and so on. If the scripts do not run in the correct order, it can result in data inconsistencies, broken functionalities, and conflicts.

For more information on upgrading from VRM to TPRM, see Third-party Risk Management upgrade information.

## New in the Xanadu release

### Third-party element collection

Confirm that third-party elements adhere to the same security and compliance standards as an engagement by monitoring them through TPRM. Use this data to help identify, assess, and manage the risks that are related to your engagements that depend on third-party elements.

### Risk intelligence report requests

Make informed decisions about working with an engagement or third party by requesting and managing risk intelligence reports or scores from external risk intelligence content providers using the Third-party Risk Management application.

### Third-party risk management data model

Take full advantage of Third-party Risk Management by viewing its data model to see how you can best use it to assess, monitor, and mitigate the risks that are required for your risk management program.

### Digital resilience third-party registers

Create, update, and track records for digital resilience third-party registers by using the Digital resilience third-party registers application within the Vendor Management Workspace Vendor Management Workspace. You can bulk create or edit individual records for assessments, branches, contracts, functions, legal entities, supply chains, third parties, or third-party engagements using the Excel download/upload requests feature. This application helps you maintain records with information and communication technology (ICT) third-party service providers, helping ensure compliance with the Digital Operational Resilience Act (DORA).

## UI changes

### Using digital resilience third-party registers

The Digital resilience third-party registers module is now included in the List view of the Vendor Management Workspace.

## Deprecations

### Reminder workflows

Starting with version 19.1.x of the Third-party Risk Management application, the tiering questionnaire and external assessment reminders workflows are deprecated and migrated to Workflow Studio. If you have customized these workflows, they won't be deprecated or migrated as part of this change.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Activation information

Install Third-party Risk Management by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Quick start tests for TPRM. After upgrades and deployments of new applications or integrations, run quick start tests to verify that TPRM works as expected. If you customized TPRM, copy the quick start tests and configure them for your customizations.

## Accessibility information

Accessibility improvements for the Third-party Risk Management application include the following updates.

- Keyboard focus: Improved visual accessibility in the Third-party portal by increasing contrast between the focus border and white background.
- Screen reader support has been extended to announce the following:
  - Completed status after all questions have been completed in a section of an external questionnaire in the Third-party portal.
  - Correct labels and other relevant information for controls, images, card regions, menu items, and links in the Vendor Management Workspace.

## Related ServiceNow applications and features

### Operational Resilience

Operational Resilience helps organizations respond to adverse operational events by anticipating, preventing, recovering from, and adapting to such events.

### Operational Resilience Workspace

Use Operational Resilience Workspace to manage your resilience tasks and monitor resilience metrics from a single dashboard.

### GRC Risk Management

Use Risk Management with the ServiceNow® Advanced Risk application to identify and monitor high-impact risks, improve your risk-based decision-making, and reduce your reaction time from days to minutes.

### GRC Risk Workspace

The Risk Workspace in the ServiceNow® Advanced Risk application provides a simplified user experience with a single-pane view for risk-related activities.

### Third-party Risk Management upgrade information

ServiceNow® Third-party Risk Management application upgrade information for the Xanadu release.

## Important information for upgrading Vendor Risk Management to Xanadu

Starting with the Vancouver release, if you're a VRM user upgrading to TPRM, from an earlier release, you must run each upgrade sequentially to ensure that fix scripts run correctly. This means upgrading from one release to the next rather than skipping to the latest release. Not running scripts in the correct order can result in data inconsistencies, broken functionalities, and conflicts.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Plugin requirements

TPRM

- Activate the Third-party Risk Management application [com.sn_vdr_risk_asmt].
- Activate the Third-party Risk Due Diligence application [com.sn_tprm_dd].
- Activate the Vendor Risk Management Workspace application [sn_vrm_ws] if you want to use the Vendor Risk Management workspace.

VRM

- Activate the Vendor Risk Management application [com.sn_vdr_risk_asmt].
- Activate the Vendor Risk Management Workspace application [sn_vrm_ws] if you want to use the Vendor Risk Management workspace.

For more information on licensing or metering, see Tracking a managed activity, Third-party Risk Management (TPRM) Licensing and Vendor Risk Management (VRM) Licensing.

## VRM to TPRM changes

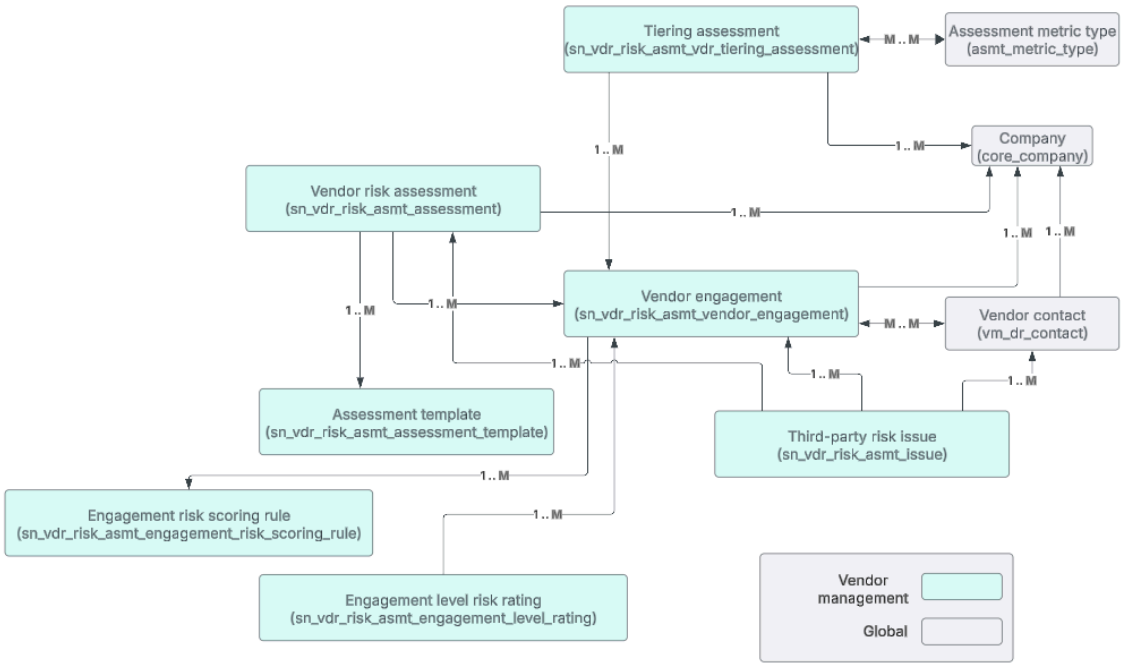
- The name of the application changed from Vendor Risk Management to Third-party Risk Management as part of the Vancouver release.
- The internal assessment [sn_vdr_asmt_internal_assessment] table is introduced, extending the tiering assessment [sn_vdr_risk_asmt_vdr_tiering_assessment] table.
- The Due Diligence Review (DDR) workflow is introduced, which uses both the internal assessment and the external (VRA) assessment.

**Note:**
If you have customizations on the Tiering assessment [sn_vdr_risk_asmt_vdr_tiering_assessment] and VRA [sn_vdr_risk_asmt_assessment] tables, they might need modifications to work with the DDR workflow.

- The Third-party Scores [sn_vdr_risk_asmt_security_score] table has been relabeled to Risk Intelligence Scores [sn_vdr_risk_asmt_security_score] to reduce confusion.
- All instances of “vendor” are changed to “third party” in the user interface, though some global instances might remain unchanged.

**Note:**
If you don’t want to use the due diligence workflow, your original workflow (Tiering assessment and External assessments (VRAs) should be the same).

## VRM and TPRM data model



The Vendor Risk Management data model primarily uses the term “vendor” and includes the Tiering assessment [sn_vdr_risk_asmt_vdr_tiering_assessment] and VRA [sn_vdr_risk_asmt_assessment] tables.

The Third-party Risk Management data model uses the term “third-party” in most user interface elements and introduces the DDR workflow, which uses both internal [sn_vdr_asmt_internal_assessment] and [sn_vdr_risk_asmt_assessment] external assessments.

The following models show VRM's and TPRM's capabilities.

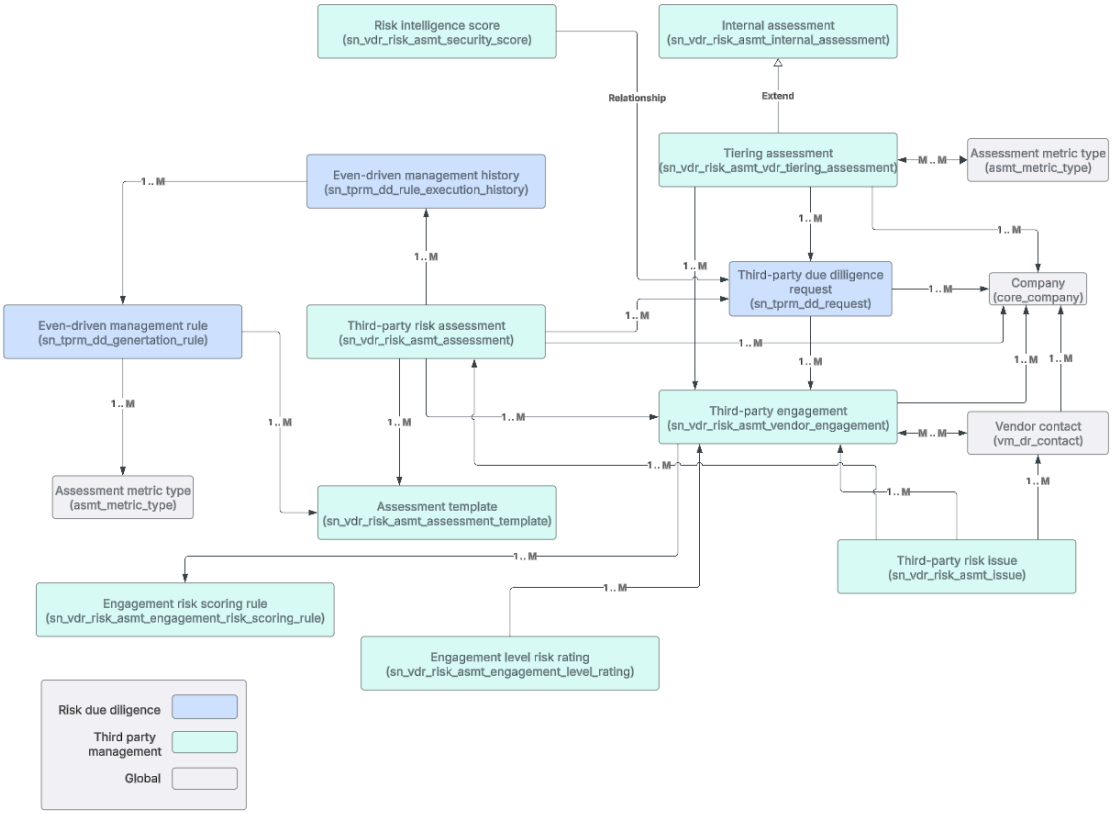
### VRM data model



The components included in the Vendor Risk Management data model are as follows:

- Tiering assessment [sn_vdr_risk_asmt_vdr_tiering_assessment]
- Company [core_company]
- Vendor risk assessment [sn_vdr_risk_asmt_assessment]
- Vendor engagement [sn_vdr_risk_asmt_vendor_engagement]
- Vendor contact [vm_dr_contact]
- Assessment metric type [asmt_metric_type]
- Assessment template [sn_vdr_risk_asmt_assessment_template]
- Engagement risk scoring rule [sn_vdr_risk_asmt_engagement_risk_scoring_rule]
- Engagement level risk rating [sn_vdr_risk_asmt_engagement_level_rating]

### TPRM data model

The components included in the Third-party Risk Management data model are as follows:

- Risk intelligence score [sn_vdr_risk_asmt_security _score]
- Internal assessment [sn_vdr_asmt_internal_assessment]
- Tiering assessment [sn_vdr_risk_asmt_vdr_tiering_assessment]
- Event-driven management history [sn_tprm_dd_rule_execution_history]
- Third-party due diligence request [sn_tprm_dd_request]
- Company [core_company]
- Event-driven management rule [sn_tprm_dd_generation_rule]
- Third-party risk assessment [sn_vdr_risk_asmt_assessment]
- Third-party engagement [sn_vdr_risk_asmt_vendor_engagement]
- Vendor contact [vm_dr_contact]
- Assessment metric type [asmt_metric_type]
- Assessment template [sn_vdr_risk_asmt_assessment_template]
- Third-party risk issue [sn_vdr_risk_asmt_issue]
- Engagement risk scoring rule [sn_vdr_risk_asmt_engagement_risk_scoring_rule]
- Engagement level risk rating [sn_vdr_risk_asmt_engagement_level_rating]

## Healthcare and Life Sciences release notes

Healthcare and Life Sciences has new and updated features in the Xanadu release.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

### Healthcare and Life Sciences release notes

Healthcare and Life Sciences has new and updated features in the Xanadu release.

### Healthcare and Life Sciences Service Management Core release notes

The ServiceNow® Healthcare and Life Sciences Service Management application streamlines healthcare operations with automated processes. Healthcare and Life Sciences Service Management was enhanced and updated in the Xanadu release.

## Healthcare and Life Sciences Service Management highlights for the Xanadu release

- Promote accurate and comprehensive patient data management by leveraging multiple patient identifiers within the enhanced Healthcare and Life Sciences Service Management data model.
- Utilize the performance updates within the healthcare workspace to optimize loading times.

See Exploring Healthcare and Life Sciences Service Management Core for more information.

**Important:**
Healthcare and Life Sciences Service Management Core is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

### Patient identifier table

Use the new Patient identifier table to maintain and manage multiple identifiers such as patient MRN, social security number, and more.

For instructions on migrating data from the patient table to the patient identifier table, please reach out to Now Support for the fix script.

## Changed in this release

### Workspace performance enhancements

The Healthcare Workspace has received performance enhancements to optimize loading times.

## Activation information

Install Healthcare and Life Sciences Service Management Core by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Related ServiceNow applications and features

### Customer Service Management

The ServiceNow Customer Service Management (CSM) application provides the foundation for the Healthcare and Life Sciences Service Management application. You can leverage the entire functionality of the ServiceNow® Customer Service Management (CSM) application within Healthcare and Life Sciences Service Management.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

### Healthcare Computerized Maintenance Management System release notes

The ServiceNow® Healthcare Computerized Maintenance Management System application manages the medical device-related in-service process, alternative equipment maintenance (AEM) review process, medical device issues, and out-of-service process. This application is currently supported for the Xanadu release, but it will be deprecated in a future release.

## Deprecations

Starting with the Xanadu release, Healthcare Computerized Maintenance Management System is being prepared for future deprecation. It will be hidden and no longer installed on new instances but will continue to be supported. For details on this process, see the Deprecation Process [KB0867184] article in the Now Support Knowledge Base. For information on maintenance and servicing, please see Field Service Management. For information on inventory and management, please see Enterprise Asset Management for Healthcare.

### Hyperautomation and Low-code release notes

The ServiceNow AI Platform® has new and updated hyperautomation and low-code features in the Xanadu release.

### App Engine Studio release notes

The ServiceNow® App Engine Studio (AES) application enables creators of varying skill levels to build applications that meet the immediate needs of your organization. App Engine Studio was enhanced and updated in the Xanadu release.

## App Engine Studio highlights for the Xanadu release

- Give users permission to work in AES or Creator Studio by assigning roles during the intake request review process in AEMC.
- Govern which AES and Creator Studio groups show as active by managing records on the User Group Permission Types [sn_app_intake_permission_type] table.
- Test AEMC on a non-production instance to ensure everything works as expected before moving to production.
- As of Xanadu Store Release 2, open an application in ServiceNow Studio directly from App Engine Studio.

See Build apps using App Engine Studio for more information.

**Important:**
App Engine Studio is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## Important information for upgrading App Engine Studio to Xanadu

Due to a new process for assigning groups in App Engine Management Center (AEMC), ensure you have the same version of the Application Intake plugin installed on each of your instances.

## New in the Xanadu release

### Add users to one or more user groups

When viewing an intake request in AEMC, add a user to one or more AES and Creator Studio user groups.

### Manage user groups for Application Intake

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Manage which AES and Creator Studio user groups are active in your instance by updating records on the User Groups Permission Types [sn_app_intake_permission_type] table.

### Test AEMC on a non-production instance

Test AEMC on a non-production instance to ensure everything works as expected before moving to your production instance.

### Open applications in ServiceNow Studio

As of Xanadu Store Release 2, open an application in ServiceNow Studio directly from a banner link in App Engine Studio to explore the more advanced application development environment ServiceNow Studio offers.

## UI changes

### Enhanced visibility of apps created by Now Assist

The App Engine Studio App Inventory page now clearly distinguishes apps created with Now Assist in the following ways:

- A transition animation from the Now Assist Panel into AES eases navigation after the application has been generated.
- A banner prompts users to review the generated items on landing in AES.
- Metadata records are tagged with labels and other UI highlights to indicate they were generated by AI.
- Metadata records have a **Review** button to identify records that need to be reviewed.
- App submission changes help inform users that they should be reviewing prior to deployment.

## Activation information

Install App Engine Studio by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Related ServiceNow applications and features

### Access Control

Work with access controls and roles for an application in AES.

### Catalog Builder

Edit the catalog items that you create in AES.

### Change Management

Control the life cycle of all changes systematically and facilitate changes with minimum disruption to IT services.

### Configuration Management Database (CMDB)

Build logical representations of assets, services, and the relationships between them that comprise the infrastructure of your organization.

### Create applications without writing code using Creator Studio

Edit apps built in Creator Studio and add features to customize functionality.

### Decision tables in Workflow Studio

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Add decision rules and use decision tables to decouple decision logic from code.

**Email notifications**

Create and edit email notifications that are automatically sent when a record is created or updated. Email notifications are also used as a reference in flows or can be triggered by an event.

**ERP Data Hub**

Simplify the use of Enterprise Resource Planning (ERP) data from the system of record, such as SAP.

**ERP Customization Mining (ERP-CM)**

Find legacy application candidates with custom ERP data that can be replatformed onto the ServiceNow AI Platform.

**Flows in Workflow Studio**

Edit the flows that you create in AES.

**Integration Hub - Import**

Import data into existing tables in AES.

**Mobile App Builder**

Add mobile experiences in AES.

**Now Assist for app generation in AES**

Create applications through a conversation with generative AI.

**Playbooks**

Edit cross-functional processes and consolidate them into automated task-oriented views.

**Table Builder**

Work with data models in a tabular format. Table Builder is exclusive to AES.

**UI Builder**

Edit the experiences that you create in AES.

**Workflow Studio**

Integrate workflow authoring, configuring, and monitoring into a single page experience.

**Workspace Builder**

Edit and customize workspaces built in AES.

### Creator Studio release notes

The ServiceNow® Creator Studio product is a guided application development experience that enables business process experts to create request-based applications without the barriers of traditional low-code development. Creator Studio was enhanced and updated in the Xanadu release.

## Creator Studio highlights for the Xanadu release

- Associate a topic with a form to appear in Employee Center
- Use questions as automation triggers
- Add dynamic behavior to forms based on user responses
- Implement custom activities for automated playbooks

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Automate sending emails in a process
- Add question sets curated by your admin to a form

See Creator Studio for more information.

**Important:**
Creator Studio is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

### Associate a topic with a form

You can now add a topic to the settings for a form, enabling users to browse forms by their related topics.

### Dynamic behavior for forms

As of Creator Studio version 26.2.1, you can add dynamic updates to forms and their questions based on how users answer questions. For example, you can define a question to appear based on the answer to another question. See the Accessibility section of these release notes for accessibility details.

### Define custom activities for use in automations

As of Creator Studio version 26.2.1, administrators can define custom activities on the ServiceNow AI Platform to use in automations when building apps in Creator Studio.

### Interact with sample records within Creator Studio

As of Creator Studio version 26.2.1, app creators can now see how records generated by Creator Studio apps will appear by previewing and interacting with a sample record on the **Form submissions** tab. Selecting a record in the app's workspace opens it in a new tab within the app in Creator Studio.

### Use questions as process triggers

You can now select one of the published questions from the app's form as a trigger for its process. For example, if a user selects "blue" as the reply about their favorite color on the app's form, you can specify "blue" as the trigger for an automated process.

### New send email activity in automations

When you create a process, you can now have your app's automation automatically send an email when specified conditions are met.

### Add curated questions to a form using question sets

When creating forms, developers can now select from preconfigured question sets, enabling them to select curated questions without worrying about the details. Admins create question sets on the ServiceNow AI Platform, and question sets can't be edited in Creator Studio.

## UI changes

### Improved navigation of form settings

As of Creator Studio version 26.2.1, the form settings modal has improved usability in the following ways:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- A new **Apply** button that appears when users select categories, topics, and user access provides a more intuitive way of saving changes and returning to the previous page in the modal.
- The **Save** button now automatically closes the modal when you select it after changing a form settings value.
- When you save changes to the properties for a question, the Question details panel now stays open and the question on the form stays highlighted, enabling you to keep working on the question without reopening the panel.

### View filtered number of apps on home page

A new counter quickly shows you how many apps exist for the **All apps**, **Your apps**, and **Shared with you** filters on the Creator Studio home page.

### Streamlined app preview page

As of Creator Studio version 26.2.1, the preview that appears when you create or open an app has updated styling.

## Changed in this release

### Better performance for reference-based form questions

The selection of a table for reference-based form questions has been improved. For example **Record choices** or **Multi-select** questions.

## Activation information

Install Creator Studio by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Additional requirements

You must have the App Engine Enterprise license to use Creator Studio.

## Accessibility information

As of Creator Studio version 26.2.1, the following enhancements were made for accessibility:

- To ensure that users know if a question has dynamic behavior without opening the side panel, questions within the form canvas are tagged.
  - For sighted users, the tag is an icon.
  - For screen reader users, the corresponding ARIA tags indicate the same information on the focusable element.
- Navigating between tabs on the app settings modal no longer selects the close (X) button.

## Related ServiceNow applications and features

### App Engine Management Center

Track and manage your Creator Studio requests, deployments, applications, and collaborative developers using App Engine Management Center (AEMC).

### App Engine Studio

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Open Creator Studio apps in AES to build more custom experiences, such as email notifications and additional security.

#### Catalog Builder

Create or edit a catalog item using a visual and guided experience.

#### Form Builder

Visually create, configure, and customize the different form views for your users using the form editor in Form Builder.

#### Workflow Studio

Integrate workflow authoring, configuring, and monitoring into a single-page experience.

#### Workspace

Address customer requests and issues in a workspace, which provides a suite of tools where agents, case managers, help desk professionals, and managers work with tools to resolve customer needs.

### ERP Customization Mining release notes

The ServiceNow ERP Customization Mining (ERP-CM) product enables ERP (Enterprise Resource Planning) consultants and architects to identify customizations and recommend candidates for replatforming from the ERP system onto the Now Platform. ERP Customization Mining was enhanced and updated in the Xanadu release.

## ERP Customization Mining highlights for the Xanadu release

Note the following highlights in Xanadu Patch 3:

- Export and import scan results by using the snapshot option.
- Re-trigger AI/ML execution on demand.
- See how implementing a recommendation can increase candidate potential.

See ERP Customization Mining (ERP-CM) for more information.

**Important:**
ERP Customization Mining is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

### Xanadu Patch 3

#### Candidate result snapshot

Better ensure that the results of the mining process can be used to develop customization on development instance by exporting and importing ERP scan results using the snapshot option.

#### Implement re-triggering of the ERP Mining

Improve candidate scoring after the creation of new custom ERP Models by re-triggering the AI/ML execution for ERP-CM on demand.

#### Score improvement metric for recommendations

View the possible score improvement in the overall potential for a candidate if a specific recommendation is implemented.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Activation information

Install ERP Customization Mining by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Related ServiceNow applications and features

### App Engine Studio

App Engine Studio consumes remote tables and extraction tables from the ERP system to enable you to create custom low-code apps and flows based on the migration candidates.

### ERP Data Hub

ERP Data Hub enables you to simplify the use of ERP data from the system of record, such as SAP. You can also create extraction tables on the ServiceNow AI Platform to transform data and create ERP models.

### Remote tables

Remote Tables connect the ServiceNow AI Platform to third-party sources or to another instance so that you can retrieve external data and optionally cache it in the memory.

### Workflow Studio

Integrate workflow authoring, configuring, and monitoring into a single-page experience. Consolidate Playbooks, Workflow Studio, Workflow Studio, Integration Hub integrations, and Decision Builder into one design environment.

### ERP Data Hub release notes

The ServiceNow® ERP Data Hub application (formerly known as ERP Canvas) enables you to connect to the ERP (Enterprise Resource Planning) system of record, query remote tables, and build data models to use ERP data on the ServiceNow AI Platform. ERP Data Hub was enhanced and updated in the Xanadu release.

## ERP Data Hub highlights for the Xanadu release

- In Xanadu Patch 3, enabled ODATA integration.
- In Xanadu Patch 3, added a monitor to track transactions and their progress.
- In Xanadu Patch 1, changed the name of the application from ERP Canvas to ERP Data Hub.
- In Xanadu Patch 1, updated the UI to clarify instructions and labels.

See ERP Data Hub for more information.

**Important:**
ERP Data Hub is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

### Xanadu Patch 3

### OData integration

Extract data securely from ERP OData APIs using ETL to be used in remote tables and extraction tables.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

### Schedule extraction

Schedule data extractions into extraction tables with encoded query for delta updates.

### Monitor transactions

Use the new monitoring feature to track each transaction and its progress; filter the ERP Data Hub task information, such as successes, failures, and more, as needed.

### Enhanced heartbeat data

Use the enhanced heartbeat feature that now shows RFC, HTTP, and other connectivity status for better visibility to the end user.

## UI changes

### Xanadu Patch 1

### Get notified while entities load

A new banner alert indicates that the **Manage entities** tab is loading data, so that you don't think the page is unresponsive when it retrieves data from the ERP system.

### Improved icon for configuring nested output parameters

The icon to configure nested output parameters has changed to a more accurate intent icon (  ).

### Clarified in-app text and name for model manager page

To help you better understand how to work with ERP models, several on-screen directions have been updated. Additionally, the name of the page where you manage models has been renamed from ERP Model Management to ERP model manager.

## Activation information

Install ERP Data Hub by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Additional requirements

SAP ECC and S/4 HANA are currently the only available systems that integrate with ERP Data Hub.

## Related ServiceNow applications and features

### Build apps using App Engine Studio

AES consumes Remote Tables as ERP data pills to help you create custom low-code apps and flows based on the migration candidates.

### ERP Customization Mining (ERP-CM)

Identify ERP application candidates from your system of record with custom data to re-platform using ServiceNow AI Platform® low-code apps.

### Remote tables

Remote Tables connect the ServiceNow AI Platform to third-party sources or to another instance so that you can retrieve external data and optionally cache it in the memory.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

### Workflow Studio

Integrate workflow authoring, configuring, and monitoring into a single-page experience. Consolidate Playbooks, Workflow Studio, Workflow Studio, Integration Hub integrations, and Decision Builder into one design environment.

### Integration Hub release notes

The ServiceNow® Integration Hub application extends the ServiceNow® Workflow Studio automation capabilities by enabling you to integrate your instance data with data in external systems. Integration Hub was enhanced and updated in the Xanadu release.

## Integration Hub highlights for the Xanadu release

- Send and receive messages in an Apache Avro format with ServiceNow® Stream Connect.
- Use the CyberArk Digital Vault to store and access your OAuth 2.0 credentials.
- Use your personal credentials to connect to third-party integrations.

See Integration Hub for more information.

## New in the Xanadu release

### Xanadu Patch 3

**Now Assist in Conversational Spokes**

Use Now Assist in Conversational Spokes to utilize the conversational ability of Integration Hub Spoke actions. Now Assist in Conversational Spokes offers generative AI capabilities to make spoke actions conversational. With this, you can perform business actions and automate business workflows through conversational interface.

Install Now Assist for Conversational Spokes plugin and start utilizing the conversational ability of the Look up User spoke action in Microsoft Active Directory v2 spoke. You can call this action from a conversational interface like Now Assist.

### Send and receive messages in an Avro format with Stream Connect

Import and create Avro schemas to store in the Stream Connect Schemas [stream_connect_schema] table. Stream Connect producers and consumers use the schemas to convert plain-text JSON messages into an Avro binary format and back. Using an Avro format can reduce the size of the payload and simplify your integration to your local Apache Kafka instance.

### Track incoming requests for SOAP and REST APIs, and URL Export

View the data egress details in the enhanced Usage dashboard. Using the dashboard, you can track the data egress usage per source over time. This information is presented in a line chart and, if needed, you can view the amount of data transfer by source on any given date within the specified date range. The dashboard retrieves data from the Data Egress Count table [data_egress_count].

### Enable parallel loading in custom (load by script) type data sources

Use a script to partition data into smaller sections, then load the sections in parallel. Parallel loading can enable your integrations to finish faster and reduce the impact on other tasks.

### CyberArk credential storage integration **Use the CyberArk Digital Vault to store and access your OAuth 2.0 credentials**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Use the ServiceNow® MID Server to access your OAuth 2.0 credentials stored on the CyberArk Digital Vault. The MID Server uses this information to generate OAuth 2.0 tokens for client credentials grant type that are then used to make REST API calls to the third-party server.

### Make outbound REST and SOAP calls through a MID Server using mTLS

Store mTLS password and certificate information on the instance, in a vault, or in a configuration file. The MID Server uses this information to make outbound REST and SOAP calls with the mTLS protocol.

### Use the Personal Authentication dashboard

Use your personal credentials to connect to third-party integrations. View, authenticate, revoke, and renew your personal authentications through a simplified, consolidated interface.

### Enhancements to the external trigger endpoints

Generate an endpoint for webhooks in the third-party applications that support OAuth 2.0 authentication. The endpoint enables webhooks to connect with your ServiceNow instance.

Generate the endpoints by updating the base system external event sources on your ServiceNow instance. After that, you can configure the endpoint on the third-party application and enable it to send a webhook to the ServiceNow instance to execute a flow. Based on the authentication type that the third-party system supports, you can generate a hash, secret, or token, or add roles or a user to the external event source. Finally, you generate the endpoint that you can use on the third-party system webhook.

### Automatically generate a JSON payload for the JSON Builder step

Enter a JSON payload into the step's script editor to automatically de-serialize the payload into structured input.

### Enhanced OpenAPI step

Choose to import an OpenAPI specification or a Postman Collection of a third-party outbound REST web service for building an integration. The OpenAPI step is now enhanced to support Postman API collections and is renamed as **OpenAPI/ Postman step**.

## UI changes

### Legacy dashboards migrated

The Legacy Usage Overview dashboard, Orchestration Usage dashboard, ROI dashboard, ROI dashboard, and ROI Premium dashboard are migrated to the Platform Analytics workspace.

## Changed in this release

### External Triggers framework to use new features provided by Platform Security

Upgrade the existing external triggers framework to use new features like Hash-based and Token-based authentication profiles with access policies.

## Removed in this release

- The Legacy Usage Overview dashboard is deprecated. This feature is no longer deployed, enhanced, or supported. For details, see the Deprecation Process [KB0867184] article in the Now Support Knowledge Base.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Activation information

Integration Hub is included in Workflow Data Fabric and is available with activation of an Workflow Data Fabric subscription package. For details, see https://www.servicenow.com/products/automation-engine.html.

## Related ServiceNow applications and features

### Workflow Studio

ServiceNow® Workflow Studio enables process owners to automate approvals, tasks, notifications, and record operations without having to code. You can use the Workflow Studio design environment to author flows and actions and to view the results that they produce.

### App Engine Studio

ServiceNow® App Engine Studio (AES) is a development tool for creators of varying skill levels to build applications that meet the immediate needs of your organization.

### MID Server

The Management, Instrumentation, and Discovery (MID) Server is a Java application that runs as a Windows service or UNIX daemon on a server in your local network. The ServiceNow® MID Server enables communication and the movement of data between a ServiceNow instance and external applications, data sources, and services.

### Robotic Process Automation (RPA) Hub

Use the ServiceNow® Robotic Process Automation (RPA) Hub to enable end-to-end automation for your organization. With a combination of UI interactions, element-based automations, and APIs that interact between the various business applications, you can emulate user actions and eliminate mundane and repetitive human activities.

### Connections and Credentials

Credentials and connection information are required to gain access to a computer or network device for ServiceNow® Discovery, ServiceNow® Service Mapping, and ServiceNow® Cloud Management, or to perform work using ServiceNow® Orchestration. When adding content to share on the ServiceNow® Developer Site or the ServiceNow® Store, you can configure connections and credentials relevant to your environment without modifying the built content.

### Next Experience release notes

The ServiceNow® Next Experience application delivers an intuitive, personalized experience that enables your organization to drive productivity, improve engagement, and inspire learning with the ServiceNow AI Platform®. Next Experience was enhanced and updated in the Xanadu release.

## Next Experience highlights for the Xanadu release

- Choose from multiple themes created with Theme Builder and apply them to your instance.
- A new keyboard shortcut enables you to access the OpenFrame UI.
- A new "User experience" user preference group has been added for the Turn off Next Experience, Enable analytics, and Current start page preferences.
- A new client interaction table displays UI load times for identifying and investigating performance anomalies.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

See Next Experience UI for more information.

**Important:**
Theme Builder is available in the ServiceNow Store. For details, see the "Activation Information" section of these release notes.

## New in the Xanadu release

### Next Experience keyboard shortcuts

Use a new keyboard shortcut to reduce the time required to open the OpenFrame window.

### User experience user preference group added

A new "User experience" user preference group has been added for the Turn off Next Experience, Enable analytics, and Current start page preferences.

### Pin your notifications menu

Pin your notifications menu for quick access to important updates.

### View Next Experience performance metrics

View performance metrics for any Next Experience page.

### Preserve your custom Next Experience theme during a clone

Cloning is optimized to preserve your Next Experience and Theme Builder themes. This helps ensure that the themes are not overwritten during the cloning process.

## Changed in this release

### Select a theme in Next Experience

If multiple core themes have been created using Theme Builder, then those themes and their alternate color palettes are displayed in the Theme user preference group.

## Activation information

Next Experience is a ServiceNow AI Platform feature that is active by default when the user loads or upgrades to the Xanadu release. An opt-out system property can be created prior to upgrade if there are known problems with turning on Next Experience on an instance.

Install Theme Builder by requesting it from the ServiceNow Store.

## Browser requirements

Xanadu no longer supports Internet Explorer 11. You can't log in through that browser. The iOS version of Firefox is also not supported.

## Accessibility information

### Next Experience keyboard shortcuts

In addition to the 40 keyboard shortcuts available, there is a new keyboard shortcut to reduce the time required opening the OpenFrame window. This shortcut allows agents to dial and answer the phone from the platform.

### Next Experience Developer (NED) Tools release notes

The ServiceNow® Next Experience Developer (NED) Tools application provides support for creating components to track and enhance performance and overall improve productivity. NED Tools was enhanced and updated in the Xanadu release.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Next Experience Developer (NED) Tools highlights for the Xanadu release

- Record backend data for page with server logs.
- Get an overview of potential issue for components and actions with a dashboard of health indicators.
- View a waterfall of calls made to the page with information on how long each call took.
- Get information on network calls made to your pages including the type of calls, timing, frequency, and network URLs.

See Next Experience Developer Tools for more information.

## New in the Xanadu release

### Health indicators in the Next Experience Inspector

The Home view provides information and communicates potential issues on the page through a dashboard of health indicators for components and actions.

### View traces in the Next Experience Inspector

The Trace view provides a waterfall of calls made to the page with information on how the duration for each call.

### Server-side logs in the Logs tab for Next Experience Inspector

Record and view backend data by changing your preference from client logs to server logs when you're logged in as an admin.

### Manage events in the Next Experience Inspector

The Events view provides contextual information and actions for managing events.

### Service workers tab in the Next Experience Inspector

The Service workers tab provides visibility into service worker behavior.

**Tab-specific filters for each page**

Filter through the elements provided within each tab of the Next Experience Inspector.

## Removed in this release

- The Actions tab has been removed from the Next Experience Inspector.

## Activation information

Download Next Experience Developer Tools from the Google Chrome Web Store.

## Browser requirements

Download Next Experience Developer Tools from the Google Chrome Web Store.

### Now Assist for Creator release notes

The ServiceNow® Now Assist for Creator application includes generative AI skills that can make developing on the ServiceNow AI Platform more efficient. Now Assist for Creator was enhanced and updated in the Xanadu release.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Now Assist for Creator highlights for the Xanadu release

### Xanadu Patch 3

- Generate appropriate data pill values for supported flow triggers and action inputs.
- Generate a playbook with out-of-the-box activities from text, an image or both.
- Generate a UI experience with natural language description.

### Xanadu Patch 1

- Preview and modify your text directions before generating your playbook outline with Now Assist.
- Show annotations of what text directions were used to generate actions, flow logic, and subflows during flow generation.

See Now Assist for Creator for more information.

**Important:**
Now Assist for Creator is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

### Xanadu Patch 3

#### Add visualization to any dashboard

You can add a generated data visualization to any dashboard you can edit. Previously, you could add a visualization only to a dashboard that was open when you opened the Now Assist panel.

#### Generate a playbook from an image

Generate a playbook with out-of-the-box activities from text, an image, or both.

#### Generate a UI experience

Generate a UI experience using natural language description.

#### Edit code with Now Assist

Edit code by telling Now Assist how to improve the code. You can refactor code, add comments, validation rules, error handling, and rename variables.

#### Generate data pill values during flow generation

Generate appropriate data pill values for supported flow triggers and action inputs.

#### Use Now Assist to create spokes and actions

Build custom spokes for the required third-party application by using its API documentation. Kickstart spoke creation by copying and pasting the required API documentation snippet in Workflow Studio. This feature is useful when the required third-party application doesn't have an OpenAPI specification or Postman collection. To use the feature, activate the spoke generation skill in the Now Assist for Creator feature.

#### Modify generated data visualizations

After you generate a data visualization, you can go on through an iterative conversation to modify the visualization.

#### Reference specific tables with hash tags during flow generation

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Enter a hash tag character in the flow directions to refer to a specific table by name. Use auto-complete to select a table name from the options that match your partial entry.

### Support more chart types for generating data visualizations

The Analytics Generation data visualization generation skill now supports dial, gauge, horizontal bar, area, column, scatter, spline, and step charts, in addition to the original chart types.

### Edit in ServiceNow Studio after generating an application

Use Now Assist for App Generation in ServiceNow Studio, which offers an advanced application development environment.

### Preview an application before generating

Visually preview an application in a new tab before generating to review for accuracy and reduce the amount of corrective work.

### Update applications that have already been generated

Augment existing applications with new application objects, such as tables, roles, ACLs, and record producers.

### Create new tables by extending existing tables

Create new tables for an application created with app generation by extending existing tables, such as the task table.

### Edit existing applications without having the admin role

Non-admin users with the delegated developer role can edit applications.

### Use Now Assist to call Microsoft Active Directory v2 actions

Install Now Assist for Conversational Spokes plugin and start utilizing the conversational ability of Disable User, Enable User, and Look up User actions. You can call these actions from a conversational interface like Now Assist.

### Xanadu Patch 1

### Get Playbook recommendations

Get suggestions on which activities to replace placeholder activities with.

### Re-prompt and preview while generating a playbook

Preview and modify your prompt before generating your playbook outline.

### Show annotations of the text directions used by flow generation

Show annotations of the text directions used for each item added by flow generation. Receive feedback about how your directions map to specific actions, flow logic, and subflows.

### Data visualization generation

Generate Platform Analytics charts through conversations.

## UI changes

### Xanadu Patch 3

### Now Assist for app generation opens from ServiceNow Studio

Now Assist for app generation can only be used when launching the Now Assist panel from within ServiceNow Studio.

### Xanadu Patch 1

### Enhanced visibility of apps created by Now Assist

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The App Engine Studio App Inventory page now clearly distinguishes apps created with Now Assist in the following ways:

- A transition animation from the Now Assist Panel into AES eases navigation after the application has been generated.
- A banner prompts users to review the generated items on landing in AES.
- Metadata records are tagged with labels and other UI highlights to indicate that they were generated by AI.
- Metadata records have a **Review** button to identify records that must be reviewed.
- App submission changes help inform users that they should be reviewing prior to deployment.

## Activation information

Install Now Assist for Creator by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Related ServiceNow applications and features

### App Engine Studio

ServiceNow® App Engine Studio (AES) is a development tool for creators of varying skill levels to build applications that meet the immediate needs of your organization.

### Integration Hub

Automate integration tasks using ServiceNow components for ServiceNow® Workflow Studio, or develop custom integrations. A separate subscription is required.

### Integration Hub available spokes

Activate spokes to enhance your Workflow Studio experience with integration-specific content. Use prebuilt flows and actions to automate your integrations or create your own integration automation.

### MID Server

The Management, Instrumentation, and Discovery (MID) Server is a Java application that runs as a Windows service or UNIX daemon on a server in your local network. The ServiceNow® MID Server enables communication and the movement of data between a ServiceNow instance and external applications, data sources, and services.

### Now Assist

Use AI recommendations to select the next component in your flow. The system generates recommendations based on the current position in the flow and the flow component names listed before.

### Process Automation Designer

ServiceNow® Playbooks enables process owners to author cross-enterprise workflows and create a single, unified process. You can also use Playbooks to provide end users with a simplified, task-oriented view of your process.

### Robotic Process Automation (RPA) Hub

Use the ServiceNow® Robotic Process Automation (RPA) Hub to enable end-to-end automation for your organization. With a combination of UI interactions,

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

element-based automations, and APIs that interact between the various business applications, you can emulate user actions and eliminate mundane and repetitive human activities.

### RPA Hub release notes

The ServiceNow® RPA Hub application enables end-to-end automation for your organization. RPA Hub was enhanced and updated in the Xanadu release.

## RPA Hub highlights for the Xanadu release

- Create the centralized credentials that you can reuse in multiple bot processes.
- Migrate the bot process configuration and associated assets from one environment to another environment with a click of a button.
- Rearrange the recorded actions and screens according to your preference and generate the automation flow.
- Use the 15 new sample automations that were added in RPA Desktop Design Studio that cater to different use cases.
- View and manage the skill versions used in packages from a central location in RPA Hub. You can override an existing skill version that was used for each bot process.
- Manage sensitive and non-sensitive data in two separate fields of a work item.
- Use Guided Tours to get quick instructions on how to create queues and configure bot processes.

See Robotic Process Automation (RPA) Hub for more information.

**Important:**
RPA Hub is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## Important information for upgrading RPA Hub to Xanadu

Upgrade any of these currently installed Microsoft Software Installers (MSIs) by downloading the RPA applications:

- RPA Desktop Design Studio
- Attended Robot
- Unattended Robot
- Unattended Robot Login Agent

For more information, see Download the RPA applications from RPA Hub.

The following upgrade information is applicable only when you're upgrading from San Diego or Tokyo to Xanadu.

Based on the number of records in the application file table, you could experience a potential delay while upgrading the RPA Hub applications from Tokyo or earlier releases to Xanadu.

Before upgrading RPA Hub to Xanadu, you must set the value of the *glide.rollback.blacklist.TableParentChange.change* system property to **false**. If this property doesn't exist in the System Property [sys_properties] table, add the property and set its value to false. For more information on how to add a property, see Add a system property.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

After you upgrade to Xanadu, the bot process definitions change to the new structure, which is the bot process configuration.

Although the bot process configuration doesn't replace the bot process completely, most fields are moved from the bot process to the bot process configuration. If you upgrade to Xanadu without updating the system property value, the tables don't extend the Application File table. To update the table changes manually, see the Restructuring RPA Hub tables to sys_metadata in Utah and beyond release article in the Now Support knowledge base.

## New in the Xanadu release

### Credential Management in RPA Hub

Create application credentials, robot credentials, and Time-based One-time Password (TOTP) authentications and reuse them in multiple bot processes through a credential group.

### Migration of a bot process configuration in RPA Hub

Migrate the bot process configuration and associated assets from one environment to another environment.

For example, when the bot process is ready to be migrated from a developer's environment to a UAT environment, an RPA developer or RPA administrator can select the **Ready for Migration** button on a published bot process. This action enables the **Migrate** button to appear. This button is only visible when the bot process migration isn't in progress. Then, the RPA release manager or RPA administrator can initiate the migration process by selecting the **Migrate** button. After the bot process and associated assets are migrated, a release manager can make any necessary changes, create and associate credentials, create an associated bot process record, and publish the bot process on the UAT (target) environment.

### Enhanced element interrogations using the recorder feature

In the RPA Desktop Design Studio application, while using the recorder feature, you can move and position your recorded actions and screens in the Recorded actions pane. You can also edit a recorded action and element name.

### New sample automations

Use the unattended and attended sample automations that were added to the Sample Automations page of RPA Desktop Design Studio. You can also view them in the Samples Explorer section.

- Merge CSV files
- Convert Excel to JSON
- Fetch contact info from email
- Resume Skill Matcher
- Copying a Range from One Excel File to Another
- Email Archiving or Deletion
- Streamlining Report Data Analysis
- Extract Excel Table to Embed in Email Body
- Zip and Unzip files
- XML to Excel Conversion
- Extract Data from Table and Saving to Excel

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Merge Excel Sheets
- Download attachments from Outlook

A sample automation is a prebuilt automation that shows how an automation works in the RPA Desktop Design Studio. The RPA Desktop Design Studio provides multiple sample automations that cater to different use cases.

### Skill enhancements

View a skill package version for an associated package in a bot process or attended and unattended packages in RPA Hub. As an RPA release manager, you can override a skill version to use a specific skill package version for your bot process.

For example, to use a latest version of the skill package, you can override the skill package version in RPA Hub without publishing the attended or unattended package again. You can either override a skill version for a bot process or select the bot processes to override in the skill package version.

You can use the different versions of the same skill for different bot processes depending on your specific requirements. When the bot process executes, it uses the selected version instead of the version that was defined in the automation.

The following tabs were added:

- Use the **Skill Overrides** tab on the bot process form to view the skill version that was used. You can also use this tab to override the skill version for a specific bot process.
- Use the **Skills** tab on the package version of either the type attended or unattended to see the skills that were used in the package version.
- Use the **Bot process** tab on the skill package version to override the skill version for one or more bot processes.

In the RPA Desktop Design Studio, the Assign Bot Process feature is enabled for Skills automation projects. It shows both attended and unattended bot processes in the **Bot process** field. For the unattended processes, the associated robots are listed in a drop-down menu. For more information, see Assign bot process to an automation project.

If any skills are overridden in the bot process, use the Assign Bot Process feature in the RPA Desktop Design Studio to use the revised skill version during the current execution.

If a skill is overridden while the robot is in execution, the robot doesn't use the overridden skill for the current execution. Instead, the robot considers the updated skill version starting from the next execution.

### Sensitive request content in queues

Pass both sensitive data and non-sensitive data separately in work items.

In the Work item form, the **Sensitive Request Content** field was added to store the sensitive content. For more information, see Work item form in RPA Hub.

In the RPA Desktop Design Studio, RPA developers can handle the sensitive data in the Queue connector methods:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- For the *CreateJSONWorkItem*, *PickWorkItem*, and *UpdateWorkItem* methods, RPA developers can identify and mark specific JSON fields as sensitive.
- For the *CreateStringWorkItem* method, RPA developers have an option to include both sensitive and non-sensitive request content. A new parameter *Sensitive Request Content* was added to capture those details. The data that is passed in the sensitive request content is stored as encrypted data and the data that is passed in the request content field is stored as plain data.

For more information about these methods, see Queue connector methods.

### New CreateFile component in the Zip category

Zip an existing folder or create a zip file by using the CreateFile component in RPA Desktop Design Studio.

### Robot user mapping in RPA Hub

Map an authorized user to an unattended robot to make the robot credentials accessible only to the mapped user.

In the Unattended robot form, the **User** field was added.

For upgrading customers, the **User** fields are automatically mapped with the user names who have recently created the process jobs for the selected unattended robots. If no process jobs are found for a selected robot, the RPA release managers must manually map the appropriate users to the robots.

### Guided Tours in RPA Hub

The following guided tours are available in the classic environment:

- Queues: Get step-by-step quick instructions in your instance on how to create queues.
- Bot process: Get step-by-step quick instructions in your instance on how to do an end-to-end configuration of the bot process and its related lists. You can select the tour to create an unattended bot process, attended bot process, or Embedded Task Automation.

### What's New tab in the Help Center for RPA Hub

Learn about the newly released features of RPA Hub in your instance.

If new content is available for you, the blue indicator on the **Help Center** button notifies that the feature content is new and unread by you on your instance.

## Changed in this release

### Process job with no logs

In the RPA Desktop Design Studio, the following process job records aren't displayed in the Attach log window:

- Process job records with no logs.
- Process job records that are stored in the robot machine.

### Credential sets are replaced by credential groups

In RPA Hub, the credential sets that were created for a bot process are now replaced with credential groups. You can now define the robot credentials, Time-based One-time Password (TOTP) authentication, and application credentials outside of the bot process and reuse them in multiple bot processes. By using

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

credential groups, you don't have to create the same credentials for each bot process.

For upgrading customers, the existing credential sets and associated credentials are migrated seamlessly.

### Changes in the Start Process UI action

In RPA Hub, when you select the **Start Process** button, you can't view the robots that are in the **In Maintenance** life-cycle stage status.

When a bot process is either in the **In Maintenance** or **Build** life-cycle stage status and is using a robot pool, new robots aren't deployed for dynamic allocation.

Dynamic allocation in the robot pool is only activated for published bot processes.

### Changes in the Start Process action

When invoking the **Start Process** Workflow Studio action, the robots that are in the **In Maintenance** life-cycle stage status are treated as failed robots.

### Changes in the Start Process subflow

If a process job isn't in the **Running** status, the robot that is associated with the process job is treated as **Failed** in the **Start Process** subflow output.

### Break component issue with loops

An issue with the break components in the nested activities that failed to break their loops is now fixed. For more information, see List of components compatible with latest version.

### Microsoft Software Installer (MSI) compatibility

Older MSIs that are related to Unattended Robot, Attended Robot, and RPA Desktop Design Studio from the RPA Hub store release versions 7.0.3 and 9.0.0 are compatible and can be used with the current store release version (10.0.X) of RPA Hub.

However, there are some limitations:

- Any new automation components available in the latest version aren't available in the older versions. For example, the CreateFile component in the Zip category in version 10.0 doesn't work in older versions.
- Components of the same name with different parameters aren't backward compatible.

If robot machines are using older MSIs than the current version of the instance, any new features that are added in the later versions aren't available for older MSIs. For example, the features released after version 7.0.3 don't work in version 7.0.3 MSIs. Only those features that exist in version 7.0.3 work in that version.

## Removed in this release

The credential set related list was removed from the bot process form in RPA Hub.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Deprecations

- The RPA Sample templates store application is deprecated and is no longer supported or available for new activation. RPA Desktop Design Studio provides the latest experience for this functionality. For more information, see RPA Desktop Design Studio user interface.
- In RPA Hub, the **Is Request Content Sensitive** field in the Queues form was deprecated.
- In RPA Hub the **Credential Set** field in the Process Robot Credentials form was deprecated.

## Activation information

Install RPA Hub by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

For cumulative release notes information on RPA Hub, see RPA Hub release notes.

For cumulative release notes information on RPA Desktop Design Studio, see RPA Plugin Bundle release notes.

If you have previously downloaded the application from the ServiceNow Store and a new version is available, you can update it in your ServiceNow AI Platform instance at **All** > **System Applications** > **All Available Applications**.

## Additional requirements

To use the Unattended Robot application, the minimum requirements are:

- Intel Processor (1vCPU).
- 4-GB RAM.
- Minimum 20-GB free disk space after installing the OS, patches, and base software.
- Microsoft Windows 10, Windows Server 2016, or Windows Server 2019.
- At least .NET Framework 4.7.1.
- DPI scaling setting must be deactivated.

To use the Unattended Robot application, the requirements are:

- Intel Processor (4vCPU).
- 8-GB RAM.
- Minimum 50-GB free disk space after installing the OS, patches, and base software.
- Microsoft Windows 10, Windows Server 2016, or Windows Server 2019.
- At least .NET Framework 4.7.1.
- DPI scaling setting must be deactivated.

An unattended robot is mapped to only one machine.

Virtual Machines (VMs) that are used for the Unattended Robot application must be persistent and constantly on.

To use the Attended Robot application, the minimum requirements are:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Intel Processor (1vCPU).
- 4-GB RAM.
- Minimum 20-GB free disk space after installing the OS, patches, and base software.
- Microsoft Windows 10, Windows Server 2016, or Windows Server 2019.
- At least .NET Framework 4.7.1.
- DPI scaling setting must be deactivated.

To use the Attended Robot application, the requirements are:

- Intel Processor (4vCPU).
- 8-GB RAM.
- Minimum 50-GB free disk space after installing the OS, patches, and base software.
- Microsoft Windows 10, Windows Server 2016, or Windows Server 2019.
- At least .NET Framework 4.7.1.
- DPI scaling setting must be deactivated.

An attended robot is mapped to only one user.

To use the RPA Desktop Design Studio application, the minimum requirements are:

- Intel Processor (At least, Core i5).
- 4-GB RAM.
- 20-GB free disk space.
- Microsoft Windows 10, Windows Server 2016, or Windows Server 2019.
- At least .NET Framework 4.7.1.
- Monitor with 1920x1080p resolution.
- DPI scaling setting must be deactivated.

To use the RPA Desktop Design Studio application, the requirements are:

- Intel Processor (Core i7).
- 8-GB RAM.
- 50-GB free disk space.
- Microsoft Windows 10, Windows Server 2016, or Windows Server 2019.
- At least .NET Framework 4.7.1.
- Monitor with 1920x1080p resolution.
- DPI scaling setting must be deactivated.

## Browser requirements

ServiceNow workspaces don't support mobile devices. For more information about the list of supported browsers, see Browser support.

## Localization information

RPA Hub supports international languages. For more information, see Internationalization support for RPA Hub.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Related ServiceNow applications and features

### Workflow Studio

ServiceNow® Workflow Studio integrates with RPA Hub for a seamless robot execution. You can use the Workflow Studio design environment to author flows and actions, as well as view the results they produce.

### ServiceNow IDE release notes

The ServiceNow® integrated development environment (IDE) application enables developers to create scoped applications in source code in an IDE based on Visual Studio Code for the Web on the ServiceNow AI Platform. ServiceNow IDE is a new application in the Xanadu release.

## ServiceNow IDE highlights for the Xanadu release

- Develop scoped applications in an IDE based on Visual Studio Code on the ServiceNow AI Platform.
- Write source code to define the metadata that makes up applications with ServiceNow Fluent.
- Collaborate with users of different skill sets across an instance and view changes in embedded ServiceNow AI Platform user interfaces.
- Manage applications in source control with common Git providers.

See ServiceNow IDE for more information.

**Important:**
ServiceNow IDE is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## ServiceNow IDE features

### Work in an IDE based on Visual Studio Code for the Web

Create and develop applications in a familiar integrated development environment based on Visual Studio Code for the Web. The ServiceNow IDE has many of the same features as Visual Studio Code, including type safety, IntelliSense, dependency enforcement, code search, and source control integration.

### Build scoped applications in source code

Write source code to define the metadata that makes up applications using ServiceNow Fluent. ServiceNow Fluent is a domain-specific programming language with APIs for defining the different types of application metadata. Developing applications in source code enables you to work in familiar development environments, create and modify complex applications, manage code in source control more easily, and catch errors at build time. Language processing and validation for ServiceNow Fluent is included in the ServiceNow IDE by default.

### Create and use JavaScript modules and third-party libraries

Organize and reuse code within scoped applications with custom JavaScript modules and third-party JavaScript utilities.

### Collaborate on applications with users of different skill sets

Collaborate on an application with users of different skill sets at the same time from the ServiceNow IDE and other ServiceNow AI Platform builder tools and interfaces. Developers build applications to compile source files into metadata, which they can view in embedded ServiceNow AI Platform user interfaces. Developers can

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

synchronize applications to pull in changes to application metadata from other interfaces into source code.

#### Manage applications in source control

Integrate with remote Git repositories to use source control in the ServiceNow IDE. Use basic authentication or OAuth 2.0 to connect to remote Git providers and repositories.

## Activation information

Install ServiceNow IDE (sn_glider) by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Related ServiceNow applications and features

#### ServiceNow SDK

The ServiceNow SDK is used in the background of the ServiceNow IDE as the application packaging service that builds applications and provides the ServiceNow Fluent APIs for developing applications in source code. Scoped applications created with the ServiceNow IDE or ServiceNow SDK can be developed with either application.

### ServiceNow SDK release notes

The ServiceNow® software development kit (SDK) enables developers to create scoped applications in source code locally in Visual Studio Code Desktop and upload changes to a ServiceNow instance. ServiceNow SDK was enhanced and updated in the Xanadu release.

## ServiceNow SDK highlights for the Xanadu release

Write source code to define the metadata that makes up applications with ServiceNow Fluent.

See ServiceNow SDK for more information.

## Important information for upgrading ServiceNow SDK to Xanadu

Upgrade to the latest version of the ServiceNow SDK with the `now-sdk upgrade` command. For more information, see Upgrade the ServiceNow SDK.

**Note:**
For more information about minor releases of the ServiceNow SDK, see the ServiceNow IDE, SDK, and Fluent articles in the ServiceNow Community.

## New in the Xanadu release

### Version 2.2.1

#### Turn off synchronizing changes to ServiceNow Fluent code

Turn off synchronizing changes to ServiceNow Fluent objects or files using the `@fluent-disable-sync` or `@fluent-disable-sync-for-file` comment directives.

### Version 2.1.1

#### Authenticate to an instance using OAuth 2.0

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Authenticate to a ServiceNow instance using OAuth 2.0 by setting the `type` parameter on the `now-sdk auth` command to `oauth`.

**Ignore ServiceNow Fluent diagnostics**

Suppress ServiceNow Fluent and TypeScript diagnostics using the `@fluent-ignore` comment directive.

**Version 2.0**

**Build scoped applications in source code**

Write source code to define the metadata that makes up applications using ServiceNow Fluent. ServiceNow Fluent is a domain-specific programming language with APIs for defining the different types of application metadata. Developing applications in source code enables you to work in familiar development environments, create and modify complex applications, manage code in source control more easily, and catch errors at build time.

**ServiceNow Fluent Language server in Visual Studio Code**

Get language processing and validation for ServiceNow Fluent in Visual Studio Code by installing the ServiceNow Fluent Language server from the Visual Studio Code Marketplace.

## Changed in this release

**Version 2.2.3**

**Convert command uses module project type by default**

The `projectType` parameter is set to `module` by default. By converting an application with the module project type, you can gradually migrate application metadata into ServiceNow Fluent code rather than converting all application metadata into code initially.

**Version 2.2.1**

**transpiledSourceDir parameter replaced with modulePaths parameter in now.config.json file**

Use the `modulePaths` parameter in the `now.config.json` file for your application to map the source directory for modules to the output directory for modules instead of the deprecated `transpiledSourceDir` parameter. The `modulePaths` parameter is used to compile TypeScript source files into JavaScript modules.

**Version 2.1.1**

**Table API includes label object**

Configure field labels [sys_documentation] for tables and columns with the *`label`* object in the *`Table`* API.

**Version 2.0.1**

**Create and convert commands include template parameter**

Specify whether to use JavaScript or TypeScript in modules with the `template` parameter on the `now-sdk create` and `now-sdk convert` commands. This parameter determines the configuration of the `package.json` and `now.config.json` files and adds a `tsconfig.json` file for TypeScript projects.

**Version 2.0**

**Default application structure**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The default application structure includes some changes to directories and files, including the addition of a `.gitignore` file and moving the `now` object configuration in `package.json` to its own `now.config.json` file.

#### Create and convert commands include project-type parameter

Specify the type of application to create or convert with the `project-type` parameter on the `now-sdk create` and `now-sdk convert` commands. This parameter determines the default application structure based on whether you want to use ServiceNow Fluent and JavaScript modules and third-party libraries in the application (`fluent`) or only use JavaScript modules and third-party libraries (`module`).

#### Fetch command includes debug parameter

Return debug logs generated during the fetch process by setting the `debug` parameter to true with the `now-sdk fetch` command.

#### Deploy command includes reinstall parameter

Uninstall and reinstall the application on the instance by setting the `reinstall` parameter to true with the `now-sdk deploy` command. Reinstalling an application ensures that the metadata on the instance matches the metadata in the deployment package.

> **⚠ Warning:**
> Metadata that is on the instance but not in your local application is removed.

## Removed in this release

- The `scopeId` parameter was removed from the `now-sdk convert` command, which supported converting global applications. Only scoped applications can be converted.
- The `mode` parameter was removed from the `now-sdk fetch` and `now-sdk deploy` commands. A complete fetch or deploy are always executed.

## Activation information

The ServiceNow SDK is available as an npm package from the public npm registry and installed locally. For information about installing the ServiceNow SDK, see Install the ServiceNow SDK in an application.

## Additional requirements

You must have Node.js and npm installed to install the ServiceNow SDK. For more information, see Install the ServiceNow SDK in an application.

## Related ServiceNow applications and features

#### ServiceNow IDE

The ServiceNow IDE uses the ServiceNow SDK as its application packaging service to build applications, and the ServiceNow SDK provides the ServiceNow Fluent APIs for developing applications in source code in the ServiceNow IDE. Scoped applications created with the ServiceNow SDK or ServiceNow IDE can be developed with either application.

#### ServiceNow Studio release notes

The ServiceNow® ServiceNow Studio application provides a unified experience for all ServiceNow® development activities, enabling admins and developers to extend base system

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

solutions and easily create custom apps. ServiceNow Studio is a new application in the Xanadu release.

## ServiceNow Studio highlights for the Xanadu release

- Create, edit, maintain, and deploy custom and globally scoped apps and app files in a single, integrated development environment instead of having to switch back and forth between tools and builders. You can also edit base system apps and files and customize store apps.
- Search for and edit any type of metadata record using the Navigator file taxonomy.
- Package app changes for deployment using System Update Sets, pipelines, and the Application Repository.
- Create applications using Now Assist for app generation.
- Bookmark applications and application files for easy, fast access.

See Building applications with ServiceNow Studio for more information.

**Important:**
ServiceNow Studio is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## ServiceNow Studio features

### Consolidated access to all integrated ServiceNow® builders and tools

Use all of your favorite ServiceNow builders and tools in one place, without opening them in different products. For example, you can open files for flows in the Workflow Studio tool directly within ServiceNow Studio.

### Work with all supported file types and metadata

Use the Navigator panel to quickly find, bookmark, and edit any type of supported ServiceNow metadata.

### Deploy updates within ServiceNow Studio

Manage your deployments using several of the ServiceNow app life-cycle options, such as pipelines, update sets, or the Application Repository, directly within ServiceNow Studio.

### Generate apps using Now Assist

Edit applications created with Now Assist for app generation directly in ServiceNow Studio.

## Activation information

Install ServiceNow Studio by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Related ServiceNow applications and features

### Access Control

Work with access controls and roles for apps and files in ServiceNow Studio.

### Catalog Builder

Create and edit catalog items directly in ServiceNow Studio.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

**Decision tables in Workflow Studio**

Add decision rules and use decision tables to decouple decision logic from code.

**Email notifications**

Create and edit email notifications that are automatically sent when a record is created or updated. Email notifications are also used as a reference in flows or can be triggered by an event.

**Flows in Workflow Studio**

Create and edit flows, subflows, and actions directly in a Workflow Studio tab within ServiceNow Studio.

**Integration Hub - Import**

Import data into existing tables in ServiceNow Studio.

**Mobile App Builder**

Add mobile experiences in a Mobile App Builder within ServiceNow Studio.

**Now Assist for app generation in ServiceNow Studio**

Create applications through a conversation with generative AI.

**Playbooks in Workflow Studio**

Edit cross-functional processes and consolidate them into automated task-oriented views.

**Table Builder**

Work with data models in a tabular format in a tab within ServiceNow Studio.

**UI Builder**

Create and edit experiences in a tab within ServiceNow Studio.

**Workflow Studio**

Integrate workflow authoring, configuring, and monitoring into a single page experience within ServiceNow Studio.

### Stream Connect dashboard release notes

The ServiceNow® Stream Connect dashboard application provides a central place where you can view and manage your Stream Connect integrations. The Stream Connect dashboard is a new application in the Xanadu release.

## Stream Connect dashboard highlights for the Xanadu release

- Manage your Stream Connect consumers, topics, and replicators through a single, consolidated interface.
- View detailed statistics for your Stream Connect integrations, including active entities, processed messages, and data consumption trends.
- Create or edit topics and add consumers directly through the dashboard.

See Using the Stream Connect Dashboard for more information.

**Important:**
The Stream Connect dashboard is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Stream Connect dashboard features

### Using the Stream Connect Dashboard

View detailed statistics for your Stream Connect integrations, and create or edit topics, replicators, and consumers with the ServiceNow Stream Connect dashboard.

## Activation information

Install the Stream Connect dashboard by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Additional requirements

Stream Connect requires an Workflow Data Fabric subscription and a Stream Connect subscription. For more information on the Workflow Data Fabric product, see Automation Engine on the ServiceNow website.

## Related ServiceNow applications and features

### Integration Hub

Automate integration tasks using ServiceNow components for ServiceNow® Workflow Studio, or develop custom integrations.

### UI Component CLI Extension release notes

The ServiceNow® UI Component CLI Extension provides an abstraction around various component development workflows including project scaffolding, starting a local development server, and deploying a component into a ServiceNow instance. UI Component CLI Extension was enhanced and updated in the Xanadu release.

## UI Component CLI Extension highlights for the Xanadu release

Improve developer server performance with module caching.

See UI Component Extension for more information.

## New in the Xanadu release

### Module caching

Module caching improves developer server performance by storing a module in memory when imported and returning the module from the cache for future uses.

## Activation information

To install the UI Component CLI extension, install the ServiceNow CLI and add the UI component extension. For details, see Environment Setup.

## Additional requirements

The UI Component CLI extension requires either Windows 10 or a MacOS with Yosemite or later.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

### UI Builder release notes

The ServiceNow® UI Builder application is a web user interface builder for building pages for workspaces and portals or custom web experiences with Next Experience Components. UI Builder was enhanced and updated in the Xanadu release.

## UI Builder highlights for the Xanadu release

- Explore a searchable library of videos, guided tours, and product documentation to develop and practice UI Builder skills.
- Take guided tours to learn about features and complete tasks in UI Builder step-by-step.
- Improve usability in low-light conditions by using dark theme.
- Design pages that look good and function well across a variety of form factors such as laptops, tablets, and mobile devices using responsive authoring.
- Fetch information from multiple data sources and more easily bind the data to components of your choice with a new multi-table data resource right from UI Builder.

See UI Builder for more information.

## New in the Xanadu release

**Set screen conditions declaratively**

Control the visibility of pages using a condition builder as an alternative to writing a script.

**Configure contextual sidebar with tabs**

The Contextual sidebar component now uses the Tabs component as a foundation instead of viewports for simplified configuration as a vertical set of tabs.

**Control page layout for different device sizes**

Create tailored pages that are appropriate for different size screens.

**Retrieve data from varied sources for a component**

More easily add data from different data sources to a single component based on field mappings.

**Support for multiple forms on a page**

Add multiple forms and form controllers to a single page.

## Activation information

UI Builder is active by default. You can update to the latest version of UI Builder by downloading it from the ServiceNow Store.

## Browser requirements

Internet Explorer isn't supported for UI Builder.

## Related ServiceNow applications and features

**App Engine Studio**

Once you create apps in ServiceNow App Engine Studio, you can then create their user interface in ServiceNow UI Builder.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

### Workflow Studio release notes

The ServiceNow® Workflow Studio application provides a single location to access all process automation applications. Workflow Studio was enhanced and updated in the Xanadu release.

## Workflow Studio highlights for the Xanadu release

- Create workflow items from any Workflow Studio page by using the **Create** button on the tab header.
- Create your own categories to organize actions, data streams, and subflows.
- Monitor playbook and flow operations with new usage dashboards.
- See an information banner when a new version of Workflow Studio is available.

See Workflow Studio for more information.

**Important:**
Workflow Studio is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## Important information for upgrading Workflow Studio to Xanadu

As of Washington DC patch 3, updating Workflow Studio automatically updates all of its application dependencies such as ServiceNow® Workflow Studio, Playbook, and ServiceNow® Decision Builder. You can no longer see or update the individual application dependencies of Workflow Studio from the ServiceNow® Store or the list of plugins.

## New in the Xanadu release

### Create workflow items from a button on the tab header

Create workflow items from any Workflow Studio page by using the **Create** button on the tab header.

### Create a category to organize your actions

Create your own categories to organize actions.

### Create a category to organize your data stream actions

Create your own categories to organize data stream actions.

### Create a category to organize your subflows

Create your own categories to organize subflows.

### See when a new version of Workflow Studio is available

See an information banner when a new version of Workflow Studio is available.

## UI changes

### Replaced the list of flow executions with the flow usage dashboard

Opening the operations view displays the Usage dashboard for flows and subflows rather than a list of recent executions. The list of flow and subflow executions is now under the monitoring section.

### Replaced the list of playbook executions with the playbook usage dashboard

Opening the operations view displays the Usage dashboard for playbooks rather than a list of recent executions. The list of playbook executions is now under the monitoring section.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Changed in this release

### Update Workflow Studio and all its dependencies

As of Washington DC patch 3, updating Workflow Studio automatically updates all of its application dependencies such as Workflow Studio, Playbook, and Decision Builder. You can no longer see or update the individual application dependencies of Workflow Studio from the ServiceNow Store or the list of plugins.

## Activation information

Install Workflow Studio by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Related ServiceNow applications and features

### Integration Hub

Automate integration tasks using ServiceNow components for ServiceNow® Workflow Studio, or develop custom integrations. A separate subscription is required.

### Integration Hub available spokes

Activate spokes to enhance your Workflow Studio experience with integration-specific content. Use prebuilt flows and actions to automate your integrations or create your own integration automation.

### MID Server

The Management, Instrumentation, and Discovery (MID) Server is a Java application that runs as a Windows service or UNIX daemon on a server in your local network. The ServiceNow® MID Server enables communication and the movement of data between a ServiceNow instance and external applications, data sources, and services.

### Robotic Process Automation (RPA) Hub

Use the ServiceNow® Robotic Process Automation Hub to enable end-to-end automation for your organization. With a combination of UI interactions, element-based automations, and APIs that interact between the various business applications, you can emulate user actions and eliminate mundane and repetitive human activities.

### Decision tables in Workflow Studio release notes

The ServiceNow® Workflow Studio application provides an intuitive interface that you can use to create and manage decision tables. By changing the rules and conditions in a decision table, you can more efficiently meet changing business requirements. Workflow Studio was enhanced and updated in the Xanadu release.

## Workflow Studio highlights for the Xanadu release

- Create a decision table inline while authoring a flow or subflow in Workflow Studio.
- Use decision tables directly in your playbooks in Workflow Studio. Add the **Make a Decision - First Match** activity with inputs from your playbook to manage complex decisions.
- In large decision tables, scroll within the table to see more rows.
- Rank the order in which decision rows are read in your table, and reorder rows as needed.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

See Exploring decision tables for more information.

**Important:**
Workflow Studio is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## Important information for upgrading Workflow Studio to Xanadu

Workflow Studio is automatically installed on your instance. However, Workflow Studio is a ServiceNow Store application, so to get the latest features, you must update your version manually to the most recent version. As of Washington DC Patch 3, updating Workflow Studio automatically updates all its application dependencies such as Workflow Studio, playbook, and Decision Builder. You can no longer see or update the individual application dependencies of Workflow Studio from the ServiceNow Store or the list of plugins.

## New in the Xanadu release

### Create a decision table in a flow

Create a decision table directly in your flow to add decisions quickly using the flow's inputs.

### Create a decision table in a subflow

Create a decision table directly in your subflow to add decisions quickly using the flow or subflow's inputs.

### Create a decision table in a Playbook

Add a decision table directly in a Playbook to manage complex business logic using the **Make a Decision - First Match** activity. Add inputs from the playbook and manage other actions based on the results of your decision tables.

### Rank and reorder decision table rows

Determine or change the sequence in which your decision rules are evaluated by reordering the rows in a decision table. Type a new value in the **Rank** column to easily change decision row order.

## Changed in this release

### Theme updates

Some details in the decision table UI have been updated to follow standard ServiceNow AI Platform themes.

### Usability enhancement for scrolling within decision tables

In large decision tables, scroll within the table to see more rows. Note that the headers stay at the top of the table.

## Localization information

The Localization Framework is integrated in decision tables. However, because editing in Excel doesn’t support localization, you cannot use this feature in any instance that doesn't use English.

## Related ServiceNow applications and features

### Workflow Studio

Integrate workflow authoring, configuring, and monitoring into a single page experience.

### Exploring flows

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Flows automate a repeatable multi-step process. When the flow trigger conditions are met, the flow runs a sequence of reusable actions and flow logic to complete the process.

#### Exploring playbooks

Workflow Studio playbooks enable process owners to author cross-enterprise workflows and create a single, unified process. Build the underlying processes for playbooks that Playbook Experience agents and fulfillers use.

### Flows, subflows, and actions in Workflow Studio release notes

The ServiceNow® Workflow Studio application enables process analysts to automate work without having to code and to build multi-step flows from reusable components. Workflow Studio was enhanced and updated in the Xanadu release.

## Workflow Studio highlights for the Xanadu release

- Protect sensitive data in execution details by using the operations read role.
- Provide improved support of the variables data type for subflow and action inputs.
- Show annotations of what text directions were used to generate actions, flow logic, and subflows during flow generation.
- Sign and validate any flow, subflow, or action.

See Workflow Studio for more information.

**Important:**
Workflow Studio is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## Important information for upgrading Workflow Studio to Xanadu

After upgrading, users who previously had the fd_read_operations role will now see only basic execution details such as the run state and duration. This restriction prevents users with this role from seeing sensitive information in execution details. To provide read access to all execution details such as input configuration and runtime values, grant the user the new role fd_read_operations_all.

## New in the Xanadu release

### Xanadu Patch 3

#### Generate data pill values during flow generation

Generate appropriate data pill values for supported flow triggers and action inputs.

#### Run an action from a conversation

Run a Workflow Studio action from a Now Assist conversation. Create and configure the conversational action from Workflow Studio. View and edit conversational actions within Virtual Agent Designer.

#### Run a subflow from a conversation

Run a Workflow Studio subflow from a Now Assist conversation. Create and configure the conversational skill from Workflow Studio. View and edit conversational subflows within Virtual Agent Designer.

#### Reference specific tables with hash tags during flow generation

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Enter a hash tag character in the flow directions to refer to a specific table by name. Use auto-complete to select a table name from the options that match your partial entry.

### Xanadu Patch 1

#### Show annotations of the text directions used by flow generation

Show annotations of the text directions used for each item added by flow generation. Receive feedback about how your directions map to specific actions, flow logic, and subflows.

### Xanadu family release

#### Control what users with read access can see in execution details

Grant a user role to control what users with read access can see in execution details. To limit read access to basic execution details only, grant a user the existing fd_read_operations role. To allow read access to all execution details, grant a user the new fd_read_operations_all role.

#### Sign flows, subflows, and actions

Sign and validate any flow, subflow, or action.

## UI changes

#### User preferences for flows

Flow preferences have been renamed User preferences.

## Changed in this release

#### Flow generation configures action and flow logic inputs

Use the Now Assist for Creator flow generation skill to create and configure a flow from text directions. Flow generation uses data pills to set input values for actions and flow logic.

## Removed in this release

- Removed the system property com.snc.process_flow.reporting.iteration.lastn that was used to specify the number of loop iterations that a flow would generate execution details for. To report on all iterations of a loop, create a flow execution settings record for the flow instead. For more information about flow execution settings, see Flow execution settings.
- The user preference for flow authors to include draft actions in the list of available actions has been removed. To see a custom action during flow design, publish the action. For more information, see Create an action in Workflow Studio.

## Activation information

Workflow Studio is a ServiceNow AI Platform feature that is active by default.

## Related ServiceNow applications and features

#### App Engine Studio

ServiceNow® App Engine Studio (AES) is a development tool for creators of varying skill levels to build applications that meet the immediate needs of your organization.

#### Integration Hub

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Automate integration tasks using ServiceNow components for ServiceNow® Workflow Studio, or develop custom integrations. A separate subscription is required.

**Integration Hub available spokes**

Activate spokes to enhance your Workflow Studio experience with integration-specific content. Use prebuilt flows and actions to automate your integrations or create your own integration automation.

**MID Server**

The Management, Instrumentation, and Discovery (MID) Server is a Java application that runs as a Windows service or UNIX daemon on a server in your local network. The ServiceNow® MID Server enables communication and the movement of data between a ServiceNow instance and external applications, data sources, and services.

**Now Assist for Creator**

Use generative AI skills to make developing on the ServiceNow AI Platform more efficient.

**Process Automation Designer**

ServiceNow® Playbooks enables process owners to author cross-enterprise workflows and create a single, unified process. You can also use Playbooks to provide end users with a simplified, task-oriented view of your process.

**Robotic Process Automation (RPA) Hub**

Use the ServiceNow® Robotic Process Automation (RPA) Hub to enable end-to-end automation for your organization. With a combination of UI interactions, element-based automations, and APIs that interact between the various business applications, you can emulate user actions and eliminate mundane and repetitive human activities.

### Playbooks in Workflow Studio release notes

The ServiceNow® Playbooks builder within the ServiceNow® Workflow Studio application enables playbook owners to create multiple-flow processes in a diagram or task board interface. The Playbooks builder was enhanced and updated in the Xanadu release.

## Playbooks highlights for the Xanadu release

- Use one playbook for multiple scenarios with variants.
- Get recommendations on which activities to replace placeholder activities with.
- Preview and modify your text directions before generating your playbook outline with Now Assist.
- Generate a playbook with out-of-the-box activities from text, an image or both.
- Collect custom responses from an end user, without requiring an existing table or fields.
- Better manage access to your playbooks and playbook components.

See Exploring playbooks for more information.

**Important:**
Playbooks is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Important information for upgrading Playbooks to Xanadu

After you upgrade to Xanadu, update the Playbooks and Workflow Studio applications in the ServiceNow Store.

## New in the Xanadu release

### Variants

Use one playbook for multiple scenarios with variants.

### Playbook recommendations

Get suggestions on which activities to replace placeholder activities with.

### Re-prompt and preview

Preview and modify your prompt before building your playbook.

### Image to playbook generation

Generate a playbook with out-of-the-box activities from text, an image, or both.

### Questionnaire activity

Reference flow glide variable input and output values in an activity's condition builders to collect up to 10 pieces of information from an agent or fulfiller to use later during a playbook run, without requiring an existing table or fields.

### Greater access controls

Better manage access to your playbooks and playbook components.

### Archived data enhancements

Schedule process execution data to be archived, and view the JSON files for your archived data.

### Script support for activate, restart, deactivate, and duplicate

Use a script include or business rule that calls the activate, deactivate, restart, or duplicate playbook APIs.

### Washington 25.2 release

See 25.2 features in the Washington DC Playbooks release notes:

- Playbook Assist

## Changed in this release

### Updated Roles

The pd_admin role is now playbook.admin.

**Activities trigger asynchronously**

To avoid slowing down the playbook runs, the first activities are triggered asynchronously.

## Removed in this release

Use the Questionnaire activity instead of the Collect User Data activity.

## Activation information

The application comes with the Workflow Studio ServiceNow Store app. Workflow Studio is part of the ServiceNow AI Platform® and is available by default. Get the latest Workflow Studio

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

features by downloading the app in the ServiceNow Store, as well as related applications like the Process Automation Experience Demo application.

To use the playbook generation feature in Workflow Studio, download the Now Assist for Creator application.

Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Additional requirements

The following features are part of the ServiceNow AI Platform® and are active by default:

- Archived data enhancements
- Script support for activate, restart, and deactivate
- Updated roles
- Greater access controls

Download the app in the ServiceNow Store to access the following features:

- Variants
- Questionnaire activity
- Playbook Recommendations
- Re-prompt and preview

For access to all Xanadu features, download the latest app in the store.

## Localization information

Playbook generation with images is not available in the APAC region.

## Related ServiceNow applications and features

### Workflow Studio

ServiceNow® Workflow Studio consolidates , Workflow Studio, Action Designer, Integration Hub integrations, and ServiceNow® Decision Builder into one design environment. Author, configure, and monitor all of your workflows in a streamlined experience.

### Flow Designer

ServiceNow® Workflow Studio enables process owners to automate approvals, tasks, notifications, and record operations without having to code. You can use the Workflow Studio design environment to author flows and actions and to view the results they produce.

### Playbook Experiences

ServiceNow® Playbook experiences enable you to customize the default playbook user experience for your agents.

### Next Experience Components release notes

The ServiceNow® Next Experience Components are the components used to build custom user interfaces. Next Experience Components was enhanced and updated in the Xanadu release.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Next Experience Components highlights for the Xanadu release

- Build rich UI experiences with prebuilt system or custom components. To view the Next Experience Components API reference, usage guidance, and ServiceNow® UI Builder setup documentation, visit the Developer site Next Experience Components doc.
- Use common web component patterns and principles, such as a JavaScript framework, immutable data, and simple action handlers.
- Reuse components across multiple user interfaces to create a cohesive experience for your end users.
- Use preset property values to configure properties and event handlers automatically for a component so the component is ready to work when you add it to a page. Presets can connect to a controller that acts as a data resource for the component. For more information, see Automatically configure components using presets and Bind data to UI Builder pages using controllers (advanced feature).

## New in the Xanadu release

### Components

| Component | Description |
|---|---|
| Custom illustration | Insert theme-able, inline Scalable Vector Graphics (SVG)s on a Workspace page. |
| Feedback | Capture granular user feedback for AI products through a series of pre-determined options or free-text responses. |

## Changed in this release

### Components

| Component | Enhancements |
|---|---|
| Appointment calendar | Reflow support in higher browser zoom levels of up to 400% in day and week view. |
| Badge | Option to enable partial number counts and additional characters, including the plus "+" symbol. |
| Breadcrumbs | Improved breadcrumb orientation experience with option to enable overflow menu. |
| Calendar | • Extra content slot in the header to add buttons.<br>• Column width control in the timeline view. |
| Checkbox | Customizable slot after the information button for inserting additional elements. |
| Checklist | • Additional configuration options like Disabled, Read Only, and Invalid.<br>• Font size customization. |

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

### Components (continued)

| Component | Enhancements |
|---|---|
| | • Option to configure mandatory field indicator.<br>• Error notification appears when the user attempts to submit a form with an incomplete required field. |
| Contextual sidebar | Improved configuration with vertical tabs structure. |
| Date-time | • Time zone displays for users.<br>• Horizontal layout option for date-time input field. |
| Email composer | • Improved draft management experience with email footer and side panel action buttons.<br>• Improved drafting experience with larger compose area and enhancements to save vertical space.<br>• Option to enable auto-load of most recent draft.<br>• Option to suppress "Send email" button.<br>• Support for international characters in email IDs. |
| Email composer (mini) | • Improved draft management experience with email footer and side panel action buttons.<br>• Improved drafting experience with larger compose area and enhancements to save vertical space.<br>• Option to enable auto-load of most recent draft.<br>• Option to suppress "Send email" button.<br>• Support for international characters in email IDs. |
| Form | Support for 2 or more forms on a page.<br>**Note:**<br>If you want to add a form to a legacy page with an existing form, see the Form UIB Setup documentation. |
| Highlighted value | Improved display of long text with text wrapping functionality. |
| Input | • Customizable slot after the information button for inserting additional elements.<br>• Added a caret slot that follows the user's text cursor. |
| Node map | In the hierarchical layout:<br>• Movable nodes in the map.<br>• Customizable control panel.<br>• Customizable node connections in new nodes. |

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

**Components (continued)**

| Component | Enhancements |
|---|---|
| | • Improved reflow in higher browser zoom levels.<br>• Support for pausing node map layout refresh (re-layout). |
| Radio button | Customizable slot after the information button for inserting additional elements. |
| Related items | • Show or hide the heading.<br>• Configure the background color.<br>• Refresh a specific list along with all other lists in the container. |
| Select | Customizable slot after the information button for inserting additional elements. |
| Text area | • Customizable slot after the information button for inserting additional elements.<br>• Added a caret slot that follows the user's text cursor. |
| Toggle | Customizable slot after the information button for inserting additional elements. |
| Typeahead | Customizable slot after the information button for inserting additional elements. |
| Typeahead multi | Customizable slot after the information button for inserting additional elements. |

## Activation information

Next Experience Components is a ServiceNow AI Platform feature that is active by default.

## Accessibility information

Next Experience Components are updated for accessibility in the Xanadu release.

**Updated components**

The following components were updated to support Web Content Accessibility Guidelines (WCAG) 2.1 level AA:

- 360 degree visualization [sn-grc-360-degree-visualization]
- Agent Messaging [sn-agent-messaging]
- Analytics Q&A [sn-nlq-analytics]
- Appointment calendar [now-appointment-calendar]
- Audio player [sn-audio-player]
- BCM Crisis map [sn-bcm-crisis-map-connected]
- Calendar [now-calendar]
- Capacity Planning [sn-capacity]

- VA Analytics Trend Score [sn-va-score-trend]
- Workplace Stack Plan [sn-wsd-stackplan]

## Related ServiceNow applications and features

### UI Builder

UI Builder is a low-code tool that enables users to build pages for workspace and portal web-based experiences.

### Configurable Workspace UI

Use components to build custom workspace experiences for agents who solve internal or external customer issues.

### Impact release notes

The ServiceNow® Impact application is a first-of-it's-kind value acceleration solution designed to meet customers where they are in their unique ServiceNow digital transformation journey. #Built on the ServiceNow AI Platform, Impact combines expert coaching, personalized insights and recommendations, peer benchmarking, technical support, role-based training, and curated content all delivered in a personalized digital experience. Impact was enhanced and updated in the Xanadu release.

## Impact highlights for the Xanadu release

- Jumpstart your understanding and assessment of ServiceNow platform capabilities with new Accelerators that provide a demonstration of the possibilities and capabilities with instance features and maximize value exactly where you need it.
- Jumpstart your understanding and assessment of ServiceNow platform capabilities with new Accelerators that provide a demonstration of the possibilities and capabilities with instance features and maximize value exactly where you need it.
- View monthly and quarterly trends and curated recommendations for auto-generated outcomes with the updated Objectives and outcomes, formerly Value Blueprint.

See Impact for more information.

**Important:**
Impact is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

### Initiatives & Accelerators

- Jumpstart Your Now Assist for Creator and SPP-AU version
- Jumpstart Your Now Assist for IT Service Management (ITSM) and SPP-AU version
- Jumpstart Your Service Mapping and SPP-AU version
- Jumpstart Your Database Management
- Jumpstart Your CSM Configurable Workspace
- TuneUp Your Employee Center
- Introduction to Instance Readiness Assessment
- CoEI Influencing Funding Strategy
- UX: Catalog Request Experience Review
- Generative AI - Virtual Agent Conversational Catalog
- Value Potential

### Initiatives & Accelerators

- Extend Your Employee Center to Pro: Provides prescriptive guidance on extending the Employee Center capabilities to include Pro features.
- Jumpstart Your CSDM: Foundation: Provides an overview and breakdown of the CSDM with a focus on Foundation data.
- Jumpstart Your Document Intelligence: Provides a demonstration of the possibilities and capabilities of Document Intelligence.
- Jumpstart Your Employee Center: Includes a demonstration of the possibilities and capabilities available with the ServiceNow Employee Center portal in your instance.
- Jumpstart Your Event Management: Provides a demonstration of the possibilities and capabilities of Event Management.
- Jumpstart Your Issue Auto Resolution: Provides a demonstration of the possibilities and capabilities of Issue Auto Resolution within your ServiceNow platform.
- Jumpstart Your Process Mining: Provides a demonstration of the possibilities and capabilities of Process Mining.
- UX: Taxonomy Review and Design: Optimizes content structure and navigation in your portal, with a focus on Knowledge and Catalog to improve usability and help users easily find the correct information.
- Common Service Data Model (CSDM) Assessment - Business Services (Run) - Advanced: Provides an assessment and guidance for CSDM Run maturity, including Business Services, Business Service Offerings, Request Catalog Items, and (Business) Service Portfolio.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Common Service Data Model (CSDM) Assessment Technical Services (Walk) - Advanced : Provides an assessment and guidance for CSDM Walk maturity, including Technical Services and Technical Service Offerings.
- ServiceNow Protected Platform – Australia (SPP-AU) versions of Accelerators are available, where applicable. The Accelerator catalog is updated with this information.

### HealthScan

- Consent for the self-service capability that automates monthly Health Assessment scans and reports to provide details that can help you to improve the health of your ServiceNow platform implementation.
- Consume HealthScan service environment script outputs in a clear format for Self-hosted NSG Air-gapped customers.
- Access HealthScan commercial features as a GCC or NSC customer.

### Value Journey

- Use the auto generated objectives and outcomes to save time and effort in the Impact Value Journey.
- View monthly or quarterly trends and curated recommendations for generated outcomes. See Trends, Benchmarks, and recommendations related to the outcome.
- Trends and Benchmarks will be available for outcomes with data.
- Use the Data Collection App, available from the ServiceNow® Store, to transfer data automatically into your Impact portal.

### Impact Instance Observer

- Detect additional anomalies for 16 metrics with Release 18.
- Configure self-serve alerts for Garbage Collection using Host Health.

## Changed in this release

### Accelerator catalog

- Updates to the  Accelerator
- The UX (User Experience) Design: Employee Center Accelerator name is changed to UX: Design for Employee Center
- The User Experience Review: Employee Center Accelerator name is changed to UX: Portal Experience Review

### HealthScan definitions updates: November release

Some definitions have been deprecated or enhanced to improve performance, reduce false positives, and meet the latest coding practices.

**Accelerators with minor updates to the descriptions**

- The Center of Excellence & Innovation Design
- TuneUp Your Hardware Asset Management
- TuneUp Your Software Asset Management

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- UX: Design for Employee Center
- UX: Portal Experience Review
- Jumpstart Your Strategic Portfolio Management – Planning Workspace

#### Objectives and outcomes

Value Blueprint is renamed to Objectives and outcomes.

#### HealthScan definitions updates: August release

Some definitions have been deprecated or enhanced to improve performance, reduce false positives, and meet the latest coding practices.

### Intelligent Experiences release notes

Intelligent Experiences has new and updated features in the Xanadu release.

### Document Intelligence release notes

The ServiceNow® Document Intelligence application is an artificial intelligence (AI) solution that quickly and accurately categorizes and extracts information from documents. Document Intelligence was enhanced and updated in the Xanadu release.

## Document Intelligence highlights for the Xanadu release

### Xanadu Patch 9

- Boost productivity by using the document and visual insights AI agent in Now Assist to autonomously analyze and extract data from documents and images.
- Streamline document data extraction by automating document tasks.
- Use Virtual Agent to ask questions about the document content.

### Xanadu Patch 3

- Extract information from contract documents by using Now Assist in Document Intelligence.

### Early Availability

- Extract the data from single fields by using the Draw tool to select a document area and extract the information.
- Standardize the extracted data by determining how to interpret ambiguous field values and by matching extracted values with data in a referenced table.
- Process documents that are written in Simplified Chinese or Japanese.
- Monitor your Document Intelligence implementation with improved dashboard charts.

See Document Intelligence for more information.

**Important:**
Document Intelligence is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

#### Xanadu Patch 10

#### Improved security for the document and visual insights AI agent

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Enable access control lists (ACLs) to improve the security for the document and visual insights AI agent. ACLs provide you with the capability to run AI agents and agentic workflow executions either as a dynamic user or an AI user.

The document and visual insights AI agent and its skills are classified as a worker or helper agent. A worker can act as an AI user with different privileges than the human user. A helper only has the privileges of a human user.

### Xanadu Patch 9

#### Document and visual insights AI agent

Use an AI agent to help process tasks that analyze and extract data from documents and images.

#### Full automation for document data extraction

Automatically extract document data and process the document task without agent review.

#### Document chat in Virtual Agent

Integrate Now Assist for Virtual Agent with Now Assist in Document Intelligence to enable chat responses based on document content.

#### Attachment summarization in ITSM

View the summaries of attachments with the record summary in ITSM.

### Xanadu Patch 3

#### Now Assist in Document Intelligence

Use Now Assist in Document Intelligence to extract information from contract documents with generative AI.

**Early availability**

#### Draw tool enhancements

Extract the data from single fields by using the draw tool to select a document area and extract the information.

#### Data normalization

Standardize the data extracted from documents with the following improvements:

- Determine a default interpretation of the ambiguous values for the date and number fields.
- Create a Reference field type to match the extracted field values with the fields in a referenced table record.

#### Dashboards in the Admin experience

Monitor the overall performance of Document Intelligence in the Document Intelligence monitoring dashboard. You can monitor the performance at the use case level in the use case performance dashboard.

#### Document classification integration workflow

Integrate document classification use cases with a custom application or workflow.

## UI changes

#### Usability enhancements to Draw tool features

Various Draw tool features are updated to create an effective user experience.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Removed in this release

Starting in the Xanadu release, the Platform Document Intelligence Usage dashboard is no longer supported or available through the Document Intelligence application. Performance metrics are available in the Document Intelligence Admin experience. For more information, see Document Intelligence monitoring dashboard.

## Activation information

Install Document Intelligence by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes. The Document Intelligence application (sn_docintel) depends on the Document Intelligence plugin (com.glide.platform_ml_di), the Predictive Intelligence plugin (com.glide.platform_ml), and the Document Intelligence UIB component (com.sn_docintel_iframe). For more details, see Install Document Intelligence.

## Accessibility information

### Support for reflow

The sn-docintel-iframe component was updated to support reflow, which enables pages and content to be zoomed up to 400% through your browser settings without loss of content or functionality. Additionally, content can be enlarged without scrolling in two dimensions at a width equivalent to 320 CSS pixels or a height equivalent to 256 CSS pixels.

This enhancement helps users with low vision or who have trouble seeing web content in a browser due to monitor size, device type, poor lighting, or other situations. Reflow can be turned off with a system property for instances, experiences, and pages. See Reflow for Configurable Workspace for details.

## Localization information

### Chinese and Japanese language support

Process documents in additional languages with added support for Simplified Chinese and Japanese.

## Related ServiceNow applications and features

### Now Assist in Contract Management

Use Now Assist in Contract Management to review contracts and extract information from signed contracts to add in the contract repository.

### Accounts Payable Operations

Use Document Intelligence for Accounts Payable Operations to extract information quickly and accurately from invoice documents that are received as attachments via email, as well as create invoice records in the Accounts Payable Operations application.

### Customer Service Management

Use Document Intelligence for Customer Service Management (CSM) to extract relevant information from email and case attachments, such as account numbers or customer addresses, and add that information to cases.

### Financial Services Operations

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Use Document Intelligence integrated with the digital workflows in the Financial Services Operations applications to help your organization quickly automate document processing and accurately extract information from documents to the ServiceNow AI Platform.

#### Automation Center

Use Document Intelligence for Automation Center to discover automation opportunities for document processing using DocIntel automation metrics.

### Generative AI Controller release notes

The ServiceNow® Generative AI Controller application enables you to use generative AI capabilities with third-party large language models (LLM) providers on the ServiceNow AI Platform. You can reduce complexity and enhance the user experience in your organization by generating and summarizing content, analyzing user sentiment, and writing unique prompts. Generative AI Controller was enhanced and updated in the Xanadu release.

## Generative AI Controller highlights for the Xanadu release

Xanadu Patch 3

- Review a read-only metadata log table for generative AI requests.
- Use the improved language support for skills and capabilities, including the Dynamic Translation services and native translation by the LLMs.

Xanadu Patch 1

- Updated prompts for capabilities, semantic filtering, and recursive summarization that improve latency and processing for Generative AI Controller capabilities and Now Assist skills.

See Generative AI Controller for more information.

## New in the Xanadu release

#### Xanadu Patch 3

#### Metadata log table for generative AI requests

Use the new metadata log table that includes information about the requesting conversation, the capability definition, provided feedback (if any), and error codes.

#### Translation for Now Assist

Support users who speak different languages with new language information in LLM request metadata, better controls for Dynamic Translation, and translated text logging.

#### Xanadu Patch 7

**Global Model selection for conversational skills**

Enable Now Assist Admins to choose between GPT4.o and Now Assist LLM model for data routing at a global level. This ensures compliance with any regional restrictions and helpful for APAC users who may face limitations with US-based models, such as GPT-4.0.

## Changed in this release

#### Directions for generative AI updates for Generative AI Controller

The prompts, which are the instructions to the large language model (LLM), for all four capabilities (Generic Prompt, Generate Content, Summarization, and Sentiment Analysis), semantic filtering, and recursive summarization have been updated.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Activation information

Generative AI Controller is a ServiceNow AI Platform feature that is available with activation of any ServiceNow® Now Assist application. For details, see Installing Generative AI Controller.

## Localization information

Generative AI Controller uses Microsoft Azure OEM for Dynamic Translation in Now Assist for multi-language support. You can enable dynamic translation from the Now Assist Admin console.

## Related ServiceNow applications and features

### Now Assist

Now Assist includes the Now Assist Admin console to set up, configure, monitor, and use Now Assist skills on the ServiceNow AI Platform. The Now Assist panel enables users to interact with Now Assist skills in the ServiceNow® Next Experience.

### Agent Chat

ServiceNow® Agent Chat provides various features that agents and requesters can use to streamline the agent and end-user chat experience. Agent Chat also provides features that managers can use to monitor and assist agents.

### Customer Service Management

The ServiceNow® Customer Service Management application enables you to provide the service and support that your external customers need. For example, your customers can communicate and get the help through the web, email, chat, telephone, and social media.

### Field Service Management

ServiceNow® Field Service Management enables you to manage work orders and related tasks, resources, skills, assets, and locations. Use this application to dispatch work order tasks and agents to the customer location for performing any kind of field work, such as installing, repairing, or maintaining equipment.

### Flow Designer

ServiceNow® Workflow Studio is a ServiceNow AI Platform feature that enables process owners to automate work. Build multi-step flows from reusable components without having to code.

### HR Service Delivery

The ServiceNow® HR Service Delivery application gives your employees the service experience that they deserve. By providing employees with a single place to manage their work needs while shielding them from back-end complexity, you can deliver a great experience to meet the demands of a modern-day workforce.

### IT Service Management

The ServiceNow® IT Service Management (ITSM) solution provides scalable workflows to manage and deliver IT services to your users all through a single cloud-based platform. The ITSM solution can help increase your agents' productivity, resolve issues quickly, and improve user satisfaction.

### Workspace

ServiceNow® Workspace is a graphical user interface that puts multiple tools on one page, including the tools that agents must find, research, and use to resolve issues.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

### Now Assist release notes

The ServiceNow® Now Assist experience brings generative AI to your organization. You can improve productivity and efficiency by delivering better self-service, recommending actions, delivering answers, and providing your users with AI Search. Now Assist was enhanced and updated in the Xanadu release.

## Now Assist highlights for the Xanadu release

### Xanadu Patch 10

- Use the Now Assist Readiness Evaluation app to automate the implementation assessment process before implementing Now Assist agentic and generative AI.

### Xanadu Patch 3

- Protect your users from offensive content, prompt injection attacks, and filtered subjects in AI-generated content with Now Assist Guardian.
- Use the native translation capabilities of the Now LLM Service models to speak to users in their preferred languages.
- Troubleshoot Now Assist skills from the Now Assist Admin console to locate the sources of configuration problems.
- Monitor the usage and performance of generative AI features and capabilities offered under Now Assist from the Analytics tab in the Now Assist Admin console.
- Use the multi-language capabilities of Now Assist to generate a Knowledge article for an incident, case, or other supported task type in a language other than English.
- Enable agents to utilize the generative AI capabilities of Now Assist to shorten or elaborate content in a Knowledge article using the context menu feature.
- Now Assist context menu enhancements.

### Xanadu Patch 1

- Support users who speak different languages with multi-language, dynamic translation.
- Make finding tables and lists easier and more efficient by using the navigation platform skill in the Now Assist panel.
- Write with Now Assist to provide chat and email suggestions for agents based on the content of a conversation.
- Enable developers to create their own custom skills by using the Now Assist Skill Kit.
- Generate a Knowledge Base article from a selection of similar cases or incidents to help address related concerns in a single article with Now Assist in Knowledge Management.

See Now Assist for more information.

For more Platform Now Assist feature release notes, see the following topics:

- AI Search release notes
- Document Intelligence release notes
- Generative AI Controller release notes
- Now Assist in Virtual Agent release notes

**Important:**
After purchasing a generative AI product, you can install it from the ServiceNow Store. For details, see the "Activation information" section of these release notes.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Important information for upgrading Now Assist to Xanadu

If you customized UI actions or other items that are associated with Now Assist skills, confirm that your customized code is updated with the new skill releases. Otherwise, certain functions may not work as expected.

If you run into issues when you're upgrading a Now Assist product, see KB1637452: Issues and mitigation for Now Assist (Generative AI) Applications and Plugin updates. You may need to log in to view the article.

## New in the Xanadu release

### Xanadu Patch 10

#### Now Assist Readiness Evaluation

Use the Now Assist Readiness Evaluation app to help you evaluate your organization's readiness to implement agentic and generative AI Now Assist capabilities.

Assessments for agentic AI include:

- IT Service Management (ITSM)
- Customer Service Management (CSM)

Assessments for generative AI include:

- AI Search
- Virtual Agent (VA)
- IT Service Management (ITSM)
- Customer Service Management (CSM)
- HR Service Delivery (HRSD)

Results shown are estimates. You should evaluate results provided by Now Assist Readiness Evaluation for accuracy and appropriateness for your use case.

### Xanadu Patch 3

#### Now Assist Guardian adds guardrails to log, block, and redirect unwanted content

Protect your users from offensive content, certain kinds of prompt injection attacks, and sensitive topics by logging attempts, blocking content, or redirecting to a new Virtual Agent topic.

#### Translation for Now Assist with native translation

Use the native translation capabilities of the Now LLM Service models or to translate user-generated and LLM-generated content into the preferred languages of your users.

#### Troubleshoot a Now Assist skill

Run diagnostics on certain Now Assist skills to identify common configuration errors that help to prevent your skills from working as intended.

#### Analyze Now Assist performance

Use the Now Assist Analytics dashboard to monitor the usage and performance of generative AI features and capabilities offered under Now Assist.

#### Configure and use a retriever with Now Assist Skill Kit

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Augment and add context to your prompts with AI Search results from custom retriever inputs.

### Get prompt assistance with Now Assist Skill Kit

Use prompt assistance to get a jump-start with your prompt development by selecting an example from the prompt library or using Now Assist to generate one.

### Evaluate skill prompts

Evaluate your prompts created within Now Assist Skill Kit using data collections created within Now Assist Data Kit. Evaluations return information on the correctness and faithfulness of the responses from running the custom skill.

### View skill run test history

View the history of your test results to assist your understanding of how changes to the prompt have adjusted the outcome.

### Generate a Knowledge article using multi-language support

Generate a Knowledge article for an incident, case, or other supported task type in languages other than English using the multi-language capabilities of Now Assist.

### Edit an article using the Now Assist context menu

Use generative AI capabilities of Now Assist to shorten or elaborate content within a Knowledge article.

### Use Now Assist Data Kit to add a dataset to the data catalog

Create a data collection and select the sampling data for publication. Once published, the evaluation data is available in Now Assist Skill Kit.

### Now Assist context menu

- Write with Now Assist is now called the Now Assist context menu.
- Explain the assessed and calculated change request risk with the Now Assist context menu in workspaces and UI16.
- Use the **Elaborate** and **Shorten** content editing capabilities of the Now Assist context menu in Knowledge articles.
- Configure the maximum number of content refinement calls using the Now Assist context menu.
- Use the Now Assist context menu recommendations to compose an email and complete the drafts.

## Xanadu Patch 1

### Dynamic theming enables different themes to be applied to chat summarization cards

Support dynamic theming for chat summarization cards.

### Write with Now Assist

Enable your agents to use Write with Now Assist for generative AI-powered text generation and editing assistance. This feature helps to improve and streamline their writing responsibilities.

### Use Now Assist Platform skills

- Use generative AI Platform skills in the Platform workflow starting with the Xanadu release to enhance and streamline your user experience.
- Enter search commands in plain language to retrieve and filter records and tables by using the Navigation skill.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

**Use Now Assist Skill Kit for Generative AI app developers**

Create and activate custom prompts and skills for your Now Assist agent use cases.

**Generate a knowledge article from multiple cases or incidents with Now Assist in Knowledge Management**

Draft Knowledge articles quickly from a configurable workspace or the classic environment based on similar cases or incidents with Now Assist. Knowledge articles can be generated by selecting from a list of similar cases or incidents, case or incident numbers, or even by searching keywords specific to a case or incident.

## UI changes

**Write with Now Assist has been renamed as the Now Assist context menu**

The Now Assist context menu uses generative AI to help agents create and edit written content, which streamlines writing tasks.

**New step in chat summarization guided setup**

You can now use the **Customize output** step to choose between paragraph and bulleted list formats.

**Service Portal and Virtual Agent display Genius Result answer cards in a carousel**

When a search returns multiple Genius Result answers, Service Portal and Virtual Agent display Genius Result answer cards in a carousel instead of a list. The modified UI lets you scroll through multiple Genius Result answers while keeping your search query's regular results more accessible on the results screen.

**Legal disclaimer in Now Assist panel and Now Assist in Virtual Agent**

The following text appears at the top of any Now Assist panel or Now Assist in Virtual Agent conversation: `Answers generated by AI. Review for accuracy.`

## Changed in this release

**Xanadu Patch 3**

**New conditions available in Define Availability step of guided setup for chat reply recommendation**

When activating or editing the chat reply recommendation skill, you can now add conditions to determine who can use the skill.

**Xanadu Patch 1**

**Get started step added to guided setup for resolution note generation**

A step has been added to the guided setup for the resolution notes generation skill to remind you to update any customized code that is associated with the skill after a new release.

## Activation information

Now Assist features are available with activation of any Now Assist plugin from the ServiceNow Store. The following plugins are available:

- Now Assist for Accounts Payable Operations (APO)
- Now Assist for Configuration Management Database (CMDB)
- Now Assist for Creator
- Now Assist for Customer Service Management (CSM)

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Now Assist for Field Service Management (FSM)
- Now Assist for Financial Services Operations (FSO)
- Now Assist for Health and Safety
- Now Assist for HR Service Delivery (HRSD)
- Now Assist for IT Operations Management (ITOM)
- Now Assist for IT Service Management (ITSM)
- Now Assist for Legal Service Delivery (LSD)
- Now Assist for PSDS
- Now Assist for Security Incident Response
- Now Assist for Supplier Lifecycle Operations (SLO)
- Now Assist for Sourcing and Procurement Operations (SPO)
- Now Assist for Strategic Portfolio Management (SPM)
- Now Assist for Telecommunications, Media and Technology (TMT)

For more information, see Install Now Assist plugins.

## Additional requirements

The Next Experience UI Framework must be enabled to use the Now Assist panel.

## Browser requirements

Now Assist supports various browsers, including Google Chrome and Microsoft Edge. Now Assist isn't supported in Microsoft Internet Explorer.

## Localization information

Now Assist supports Dynamic Translation for Xanadu.

## Related ServiceNow applications and features

### Agent Chat

The ServiceNow® Agent Chat provides various features that agents and requesters can use to streamline the agent and end-user chat experience. Agent Chat also provides features that managers can use to monitor and assist agents.

### AI Search

The ServiceNow® AI Search application provides a consumer-grade search engine for Service Portal, Now Mobile®, and Virtual Agent. Intelligent query features help you quickly find the answers that you need.

### Customer Service Management

The ServiceNow® Customer Service Management (CSM) application enables you to provide the service and support that your external customers need. For example, your customers can communicate and get the help through the web, email, chat, telephone, and social media.

### Dynamic Translation

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The ServiceNow® Dynamic Translation application enables you to dynamically translate text entered in an application or in a chat window for a seamless localization experience.

### Field Service Management

The ServiceNow® Field Service Management application enables you to manage work orders and related tasks, resources, skills, assets, and locations. Use this application to dispatch work order tasks and agents to the customer location for performing any kind of field work, such as install, repair, or maintain equipment.

### Generative AI Controller

The ServiceNow® Generative AI Controller lets you integrate third-party large language models (LLMs) with your workflows.

### HR Service Delivery

The ServiceNow® HR Service Delivery application gives your employees the service experience that they deserve. By providing employees with a single place to manage their work needs while shielding them from back-end complexity, you can deliver a great experience to meet the demands of a current-day workforce.

### Knowledge Management

The ServiceNow® Knowledge Management (KM) application enables the sharing of information in the Knowledge Base. A Knowledge Base contains articles that provide users with information such as self-help, troubleshooting, and task resolution.

### ITOM Health

The ServiceNow® ITOM Health product includes the ServiceNow® Event Management and ServiceNow® Metric Intelligence applications, which help you track and maintain the health of services in your organization.

### IT Service Management

The ServiceNow® IT Service Management (ITSM) solution provides scalable workflows to manage and deliver IT services to your users all through a single cloud-based platform. The ITSM solution can help increase your agents' productivity, resolve issues quickly, and improve user satisfaction.

### Security Operations

The Now Assist for Security Operations application permits security analysts to resolve security incidents faster with generative AI skills. Analysts and managers can condense long activity streams on security incidents into concise, easy-to-read summaries and automatically generate closure notes. Now Assist for Security Operations is a new application in the Xanadu release.

### Workflow Studio

ServiceNow® Workflow Studio enables you to integrate workflow authoring, configuring, and monitoring into a single page experience.

### Configurable Workspace UI

ServiceNow® Workspace is a graphical user interface that puts multiple tools on one page, including the tools that agents use to find, research, and resolve issues.

## Predictive Intelligence release notes

The ServiceNow® Predictive Intelligence application enables you to create and train machine learning models to improve performance, efficiency, and flexibility to your systems. Predictive Intelligence was enhanced and updated in the Xanadu release.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Predictive Intelligence highlights for the Xanadu release

- The dashboard for Prediction Results has been migrated to the Next Experience UI. Upgrading customers with existing Prediction Results dashboards can use either the Next Experience UI version or access the Core UI version from within the new dashboard.
- The dashboard for Solution Statistics has been deprecated. Upgrading customers can continue to use their existing Solutions Statistics dashboards from the application menu.
- New advanced options for classification solutions are available from Xanadu Patch 9.

See Predictive Intelligence for more information.

## UI changes

### Prediction Results dashboard

The dashboard for Prediction Results has been migrated to the Next Experience UI. For new customers onboarding with the Xanadu release, the Prediction Results dashboard is available only in the Next Experience UI. For upgrading customers, the Core UI dashboard is also accessible from within the new dashboard. For more information, see Track classification prediction results over time.

## Changed in this release

### Leverage new advanced options for classification solutions, from Xanadu Patch 9.

Five new advanced options are available for classification solutions, including new parameters and a new algorithm.

- Configure include only top N labels. Limit the classification model to use only the top most frequent labels. You can choose a number as the limit.
- Minimum records needed for label to include it. Set a threshold for the minimum number of records a label must have in your dataset to be included in model training.
- Remove others label. Reduce noise in the model and enhance predictive accuracy by removing records with the label "others" from training data.
- Use LightGBM algo for classification model training. Enable the LightGBM (Light Gradient-Boosting Machine) algorithm for training classification models.
- Config parameters for model config in classification. Customize training behavior by including a dictionary of parameters in the JSON format.

## Deprecations

The dashboard for Solution Statistics has been deprecated. Upgrading customers can continue to use their existing Solutions Statistics dashboards from the application menu. For new customers onboarding with the Xanadu release, the Solutions Statistics dashboard is not available. For more information, see Review classification solution statistics.

## Activation information

Predictive Intelligence is a ServiceNow AI Platform feature that is available with activation of the Predictive Intelligence Reports (com.glide.platform_ml_pa) plugin and its dependent Predictive Intelligence (com.glide.platform_ml) plugin. For details, see Install Predictive Intelligence.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Related ServiceNow applications and features

### Document Intelligence

Use Document Intelligence to extract and categorize key information from documents using artificial intelligence (AI).

### Task Intelligence

Create and train machine learning models to automate task creation, triage, and investigation.

### IT Asset Management release notes

IT Asset Management has new and updated features in the Xanadu release

### Software Asset Management release notes

The ServiceNow® Software Asset Management application systematically tracks, evaluates, and manages the cost, utilization, compliance, and optimization for software and SaaS applications. The Software Asset Management application was enhanced and updated in the Xanadu release.

## Software Asset Management highlights for the Xanadu release

- Gain insights into your software asset inventory from the first day, control version sprawl, and manage end of life (EOL) software products with the prescribed workflows.
- Use the added support for the Nutanix virtualization technology to meet your license compliance requirements for Microsoft Windows Server, SQL Server, and Red Hat Enterprise Linux Server (RHEL Server).
- Track and optimize IBM licenses across public clouds by using the IBM License Compliance for the Software Asset Management application.
- Track and manage the indirect usage of SAP applications, avoiding any unexpected licensing costs by using the SAP Digital Access licensing model.

See Software Asset Management for more information.

**Important:**
SaaS License Management, Data Collection for Oracle Global Licensing and Advisory Services, IBM License Compliance for Software Asset Management, ITAM Health Check, and Software Asset Management Guided Experiences are available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## Important information for upgrading Software Asset Management to Xanadu

After upgrading to the Microsoft Entra ID spoke 4.3 version, the *`Microsoft Azure AD - Download Group Membership`* directory job isn't executed for existing Microsoft Azure AD SSO or Directory integrations. This directory job also isn't created for new Microsoft Azure AD SSO or Directory integrations. Instead, the *`Microsoft Azure AD - Download Groups`* directory job downloads all groups and group memberships configured on Microsoft Azure AD.

## New in the Xanadu release

### Direct integration support for the Tableau Cloud application

Gain visibility into the subscriptions and reclaim stale licenses by integrating your ServiceNow instance with the Tableau Cloud application.

### Gain a complete view of your GitHub Enterprise Cloud Subscriptions

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Take advantage of the enhanced ability to optimize your GitHub Enterprise Cloud subscriptions, including outside collaborators, pending invitations, and pending outside collaborators.

**Minimize cost while optimizing Smartsheet subscriptions without the need for the Event Reporting add-on**

Optimize your Smartsheet subscriptions without the additional Smartsheet Event Reporting add-on. Use the Smartsheet integration to retrieve the last login information, enabling you to analyze the subscriptions that aren't used efficiently, reducing software spend for Smartsheet.

**Integrate your SaaS applications with minimal user permissions**

Minimize security risks and protect information by granting access only to the necessary user or API permissions for optimizing SaaS licenses.

**Get visibility into the login-based licenses of Salesforce CRM applications**

Gain insights into the number of Salesforce CRM login consumptions without the need to create user subscriptions.

**License your organization for Oracle Java SE Universal with the Employee license metric**

License all your employees that are using Oracle Java SE Universal with the Employee license metric. The tier-based licensing model also supports licensing discounts.

**Expand your analysis of asset information using the export capabilities in the Software Asset Workspace**

Gain more insights and streamline operations with support for exporting asset information from the Software Asset Workspace.

**Improve Software Asset Management licensing outcomes with actionable insights into discovered inventory**

Gain insights into discovered inventory, normalization, EOL software products, software version, and edition proliferation in your estate. Act to improve normalization, reduce version and edition proliferation, and remediate EOL software.

**Expand your analysis of overlapping software usage with added insights from spend transactions**

View data related to spend transactions in the Overlapping usage view in Software Asset Workspace. You can gain insights into the combined data from applications including spend detection, Direct integration profiles, and SSO integration profiles.

**Determine license compliance for Microsoft Windows Server, SQL Server, and RHEL Server deployed on Nutanix virtualization technology**

Address your license compliance requirements for Microsoft Windows Server, SQL Server, and RHEL Server with deployments on Nutanix virtualization technology.

**Reduce manual effort for managing Microsoft Windows Server Client Access Licenses (CAL) with automated usage tracking**

Track and manage the users and devices that are accessing your server software using ServiceNow® Discovery and use the automatic base CAL creation support for Microsoft Windows Server.

**Optimize Microsoft Visio, Project Online, and Microsoft 365 Copilot subscriptions on the Microsoft 365 Admin Center**

Track the usage of Microsoft Visio, Project Online, and Microsoft 365 Copilot subscriptions through the Microsoft 365 Admin Center and create reclamation

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

candidates for any unused subscriptions. Additionally, you can monitor blocked users across all subscriptions who are consuming licenses for potential removal.

### Improve licensing accuracy for software suites with additional configuration for detecting software suites

Improve licensing accuracy for software suites by setting an inference number for suite components. For newly created software models that include suite components, the **Number** inference option is selected by default.

### Limit the License usage view to managed software

Display software model results for only those software models that are associated with entitlements, limiting the License usage view to managed software.

### Gain comprehensive insights into cluster configuration, licensing, and optimization

Simplify cluster analysis by consolidating infrastructure, license usage, optimization, and cluster health data into a single, comprehensive view. This consolidation empowers Software Asset Management (SAM) managers to comprehend their cluster setup, examining details such as hosts, virtual machines, and software running on the cluster. Additionally, they gain insights into software license usage, optimization, and health issues. Equipped with this knowledge, SAM managers can make informed decisions that cover all aspects of their clusters.

### Gain improved normalization coverage for similar discovery models through wide-net normalization

Achieve improved normalization of software products that have similar discovery models through wide-net normalization. With wide-net normalization, the Software Asset Management application uses a single normalization rule to normalize software products that share the same patterns for the discovered major version, discovered publisher, and discovered product. The Software Asset Management application can then immediately normalize your discovered software products without requiring the Content Service team to create additional normalization rules for similar discovery models. With this streamlined normalization process, you can reconcile and determine the license compliance of your software products more efficiently.

### Manage content requests for software products directly through the Software Asset Management application

Submit, review, and disposition content requests for software products directly through the Software Asset Management application. If any publicly available software products don't exist in the Software Asset Management Content Library, you can add them to your ServiceNow instance as custom software products. By adding these custom software products to your instance, you can immediately use them in your downstream processes while automatically submitting corresponding content requests to the Content Service team. After these content requests are processed by the Content Service team, you can consolidate the custom software products with the software products that are added to the Software Asset Management Content Library.

### Manage license compliance for Red Hat Enterprise Linux (RHEL) software across hybrid infrastructures

Use bring your own subscription (BYOS) support for Red Hat Enterprise Linux (RHEL) to determine the license compliance of your RHEL software across both on-premise and public cloud environments. Supported public cloud providers include AWS, Microsoft Azure, and Google Cloud Platform (GCP). Use your license compliance information to remediate any RHEL software installations that are non-compliant.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

### Optimize IBM licensing across public clouds by using the IBM License Compliance for Software Asset Management application

Use the IBM License Compliance for Software Asset Management application to track and measure IBM licenses across public clouds. Supported public cloud providers include AWS, Microsoft Azure, and Google Cloud Platform (GCP).

### Optimize license costs for Microsoft Windows Server and Microsoft SQL Server deployments on your clusters

Use the Microsoft Core License Optimization reports to gain insight into the recommended cost-based licensing optimizations for your Microsoft clusters. Use this information to maximize cost savings across your Microsoft cluster deployments.

### Manage licenses for indirect access to SAP applications using SAP Digital Access licensing model

Track the usage of SAP applications through a third-party application or a non-SAP intermediary software by using the SAP Digital Access model. In this licensing model, the usage of SAP applications is licensed by the count of documents created by the third-party application. The documents include the following:

- Sales
- Invoices
- Purchase Orders
- Service & Maintenance
- Manufacturing
- Quality Management
- Time Management
- Financial
- Material

### Access software content data in National Security Cloud (NSC) Department of Defense (DOD) Impact Level 5 (IL5) deployments

Access Software Asset Management Content Library data and receive regular software content updates for your NSC DOD IL5 deployments through the NSC DOD IL5 Content Data Service (CDS).

### Gain increased visibility to Java landscape with enhanced ServiceNow Discovery application and reporting certified by Oracle Global License Advisory Services (GLAS)

Access Oracle verified GLAS data by downloading Oracle Java reports populated by the ServiceNow Discovery application. The Discovery application also supports the discovery and evidence download of the Oracle database and middleware.

## UI changes

### Reports displaying the combined data for SaaS and spend detection applications in the Overlapping usage view

On the Overlapping usage view of Software Asset Workspace, the following widgets have been changed:

- Highest count in overlapping software application is replaced by Total count for SaaS and spend detection applications
- Highest spend in overlapping software application is replaced by Total spend for SaaS and spend detection applications

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

### Report visualizations with details of published products on the License usage view

On the Publisher details page of the License usage view, the following widgets have been changed:

- True-up cost and Savings are replaced with score cards
- Software Model Statistics are removed
- Progress indicators are split into two widgets, with one widget showing only unlicensed entities

## Removed in this release

The following legacy dashboards are no longer available for new Xanadu users who have activated the Software Asset Management Professional (com.snc.samp) plugin or upgraded to Xanadu without activating the Software Asset Management Professional (com.snc.samp) plugin prior to Xanadu.

- Office 365 and Adobe Cloud dashboard
- Software Asset Analytics dashboard
- Software Publisher Analytics dashboard
- SaaS Overview dashboard
- Software Asset Management dashboard
- Engineering License Overview dashboard
- Normalization and Content Service dashboard
- Software Asset Management Foundation dashboard
- Overlapping Software dashboard

**Note:**
If you activated the Software Asset Management Professional (com.snc.samp) plugin prior to Xanadu but didn't activate the Workspace plugin (com.sn_sam_workspace), you have access to the legacy dashboards. If you activate the Workspace plugin, you aren't able to access the legacy dashboards from the **Software Asset** navigation menu in your instance. You can, however, access the legacy dashboards from the **Dashboards** navigation menu.

## Deprecations

- In the Software installation [cmdb_sam_sw_install] table, the Installs associated to lifecycle column is deprecated.
- In the Software lifecycle Reports [sam_sw_product_lifecycle_report] table, the Installs column is deprecated. You can view the Software installation related list by selecting the Name column.

## Activation information

Software Asset Management is available with activation of the Activate all Software Asset Management Professional plugins, including the Software Asset Workspace plugin (com.sn_samp_master_ws). Activating this plugin automatically activates the Activate all Software Asset Management Professional plugin (com.sn_samp_master) and the Software Asset Workspace plugin (com.sn_sam_workspace). After the new plugin is activated, you can't access the classic user interface. For details about the plugins and how to request them, see Components installed with Software Asset Management Professional.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

In the ServiceNow AI Platform® Xanadu release, there's limited support for the Software Asset Management classic user interface. While it remains active in your instance, including when you upgrade to a new ServiceNow AI Platform® release, you can move to the new workspace for an intuitive and personalized experience.

For releases prior to Utah, if you activated the older Software Asset Management Professional plugin (com.sn_samp_master), the Software Asset Workspace is available with activation of the Software Asset Workspace plugin (com.sn_sam_workspace). After the Workspace plugin is activated, you can't revert to the classic user interface. For details about the plugins and how to request them, see Request the Software Asset Management plugins.

To activate Next Experience, make sure that the *glide.ui.polaris.experience* system property in your instance is set to true.

Install the following Software Asset Management applications by requesting them from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

- Software Asset Management - SaaS License Management
- Data Collection for Oracle Global Licensing and Advisory Services
- IBM License Compliance for Software Asset Management
- ITAM Health Check
- Software Asset Management Guided Experiences

## Related ServiceNow applications and features

### Hardware Asset Management

The ServiceNow® Hardware Asset Management application provides advanced workflow, automation, and mobile capabilities to track and manage your asset environment.

### Enterprise Asset Management

The ServiceNow® Enterprise Asset Management application enables you to manage the entire life cycle of your connected and non-connected enterprise assets. It provides a comprehensive end-to-end solution for maintaining enterprise assets, minimizing costly downtime, and maximizing enterprise asset usability.

### Cloud Cost Management

The ServiceNow® Cloud Cost Management application enables you to analyze all costs that are associated with your cloud assets. You can use this information to optimize operations and reduce your cloud spend.

### Contract Management

The ServiceNow® Contract Management application enables you to track and manage your contracts.

### Procurement

The ServiceNow® Procurement application helps you to create purchase orders and to obtain items for fulfilling service catalog requests.

## Hardware Asset Management 11.0.0 release notes

The ServiceNow® Hardware Asset Management application provides advanced workflow, automation, and mobile capabilities to track and manage your technology asset environment. Hardware Asset Management was enhanced and updated in the Xanadu release.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Hardware Asset Management highlights for the Xanadu release

- Manage the entire life cycle of the assets that DaaS providers offer to their customers by using the Device as a Service (DaaS) feature.
- Enable hardware asset requests to be fulfilled with minimal intervention by using the Zero Touch request flow.
- Get defective hardware assets in a stockroom repaired quickly using the Repair flow.
- Locate and pick the assets in your stockroom efficiently by using the ServiceNow Mobile Agent application.

See Hardware Asset Management for more information.

**Important:**
Hardware Asset Management is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## Important information for upgrading Hardware Asset Management to Xanadu

After upgrading to Xanadu, you can view both the Core UI Performance Analytics dashboards and the Next Experience Platform Analytics dashboards for Hardware Asset Management.

**Note:**
While migrating the Core UI Performance Analytics dashboards to the Next Experience Platform Analytics dashboards, auto-migration is disabled by default to avoid duplicate dashboards.

## New in the Xanadu release

### Offer assets and asset management services through Device as a Service feature

Provide assets and asset management services to the customers of DaaS providers via a subscription model.

### Manage the hardware asset requests by using the Zero Touch request flow

Fulfill the hardware asset requests directly through an external vendor by using the Zero Touch request flow. When an employee submits a request for a hardware catalog item associated with the Zero Touch request flow, the request is sent to the external vendor who ships the asset directly to the employee.

### Manage repair of defective assets in the stockroom by using the Repair flow

Request repair of assets that are defective or pending repair by using the Repair flow, which includes troubleshooting, repair, and evaluation tasks. Repair orders are processed either in the Hardware Asset Workspace or the ServiceNow Mobile Agent application.

### Manage inventory picking within a stockroom

Pick assets in your stockroom easily for sourcing, hardware asset requests, and hardware asset refresh workflows by enabling the Pick task for your stockroom. The task lists the assets that you should pick from the stockroom, with aisle and space details providing the exact location from which the asset should be picked. Indoor mapping capabilities enable you to get directions to the location of the asset in the stockroom on your ServiceNow Mobile Agent application.

## UI changes

### Core UI Performance Analytics dashboards redirected to Hardware Asset Workspace

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The following Core UI Performance Analytics dashboard module links are redirected to Hardware Asset Workspace:

- Procurement Overview
- Asset Contract Overview

### Analytics Overview and My Asset Analytics dashboards

The following Platform Analytics dashboard versions of the Asset Overview and My Assets Core UI dashboards are available:

- Analytics Overview
- My Assets Analytics

## Deprecations

Beginning with the Xanadu release, the following Core UI Performance Analytics dashboards aren't available to new users of Hardware Asset Management:

- Hardware Asset Dashboard
- Hardware Normalization Dashboard
- My Assets
- Procurement Overview
- Asset Contract Overview
- Asset Overview

**Note:**
The Core UI Performance Analytics dashboards are available to the existing users of Hardware Asset Management.

## Activation information

Install Hardware Asset Management by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Related ServiceNow applications and features

### Software Asset Management

The Software Asset Management application enables you to track, evaluate, and manage the software licenses, software compliance, and software optimization. You can reclaim unused software rights, purchase new software rights, and manage allocations for entitlements.

### Enterprise Asset Management

The Enterprise Asset Management application enables you to manage the entire life cycle of your connected and non-connected enterprise assets. It provides a comprehensive end-to-end solution for maintaining enterprise assets, minimizing costly downtime, and maximizing enterprise asset usability.

### Contract Management

The Contract Management application enables you to track and manage your contracts.

### Procurement

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The Procurement application helps you to create purchase orders and to obtain items for fulfilling service catalog requests.

### Now Assist for Hardware Asset Management (HAM) release notes

The ServiceNow® Now Assist for Hardware Asset Management (HAM) application brings agentic AI to Hardware Asset Management. Now Assist for Hardware Asset Management (HAM) is a new application in the Xanadu release.

## Now Assist for Hardware Asset Management (HAM) highlights for the Xanadu release

Xanadu Patch 10 - Configure Access Control Lists (ACLs) for AI Agents and agentic workflows.

Xanadu Patch 9 - Automate and streamline your hardware asset request process by using an agentic workflow.

See Now Assist for Hardware Asset Management (HAM) for more information.

**Important:**
Now Assist for Hardware Asset Management (HAM) is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## Important information for upgrading Now Assist for Hardware Asset Management (HAM) to Xanadu

Only users with the procurement_user role can access the Help manage hardware asset requests agentic workflow including the following AI agents:

- Hardware asset management sourcing AI agent
- Transfer order creation AI agent
- Purchase order creation AI agent

## Now Assist for Hardware Asset Management (HAM) features

Xanadu Patch 10

### Configure ACLs for AI agents and agentic workflows

Configure the Access Control Lists for who can discover and trigger AI agents and agentic workflows in their guided setups in AI Agent Studio. You can determine whether an AI agent or agentic workflow behaves as a dynamic user or as an AI user. You can also specify if an AI agent or agentic workflow can be available to all authenticated users or publicly available.

Xanadu Patch 9

### Optimize hardware asset sourcing using the suite of AI agents

Automate your hardware asset sourcing by using AI agents in the Help manage hardware asset requests agentic workflow. These AI agents can efficiently handle tasks such as automatically consuming assets from local stock, creating transfer orders, and generating purchase orders. By automating complex and repetitive tasks in the hardware asset request process, AI agents help to reduce manual intervention significantly, speed up request resolution, enhance the productivity of asset managers, and improve operational efficiency.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Activation information

Install Now Assist for Hardware Asset Management (HAM) by requesting it from the ServiceNow Store.

**Note:**
To take full advantage of the Now Assist for HAM features, you should upgrade to Xanadu Patch 10 and install the Now Assist for Hardware Asset Management (HAM) store application.

Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Additional requirements

The Now Assist for Hardware Asset Management (HAM) application requires the Hardware Asset Management Pro plus license.

## Related ServiceNow applications and features

### Now Assist

Help improve the productivity and efficiency in your organization, deliver better self-service, recommend actions, provide answers, and empower your users to search more effectively.

### Now Assist Admin console

Use the Now Assist Admin console for quick and effortless access to the important information that you need to set up, configure, and monitor Now Assist applications and features.

### Now Assist panel

Use this conversational interface in ServiceNow® Service Operations Workspace to summarize a chat, an incident, or resolution notes so that you can get the context of this information more quickly.

### Now Assist skills

Use the ServiceNow® Now Assist products to provide generative AI skills to meet the needs of users in different workflows, including case or incident summarization, chat summarization, resolution notes generation, and code generation.

### Enterprise Asset Management release notes

The ServiceNow® Enterprise Asset Management application manages the entire life cycle of your enterprise's connected and non-connected assets, which enables you to maintain and maximize the life of your assets while minimizing any costly downtimes. Enterprise Asset Management was enhanced and updated in the Xanadu release.

## Enterprise Asset Management highlights for the Xanadu release

- Track and manage the calibrations that are made to your enterprise assets throughout their life cycles.
- Use designated roles to manage industry-specific assets and models through customized workspaces.
- Optimize your inventory by getting the defective enterprise assets in the stockroom repaired quickly using the Repair flow.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Return assets that are in your personal stockroom easily by creating Drop off tasks.
- Locate and pick the assets in your stockroom efficiently and with little effort by using the ServiceNow Mobile Agent application.

See Enterprise Asset Management for more information.

**Important:**
Enterprise Asset Management, Enterprise Asset Management for Healthcare, Operational Technology (OT) Asset Management, and Expanded Model and Asset Classes are available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

### Define required calibrations for your enterprise assets by using calibration attributes

Use calibration attributes to define the calibrations that are required for your enterprise assets. Specify the details and requirements of each calibration, such as the calibration frequency, the calibration quality standard, and the accuracy measurement guidelines. Maintain comprehensive and up-to-date records of each calibration so that you can improve the performance, safety, and longevity of your enterprise assets.

### Schedule and track enterprise asset calibrations through work orders

Use work orders to schedule, to execute, and to track the progress of your enterprise asset calibrations. View and manage corresponding work order tasks by using the guided playbook experience on either your ServiceNow® instance or the ServiceNow Mobile Agent application.

### Use personalized workspaces and roles tailored for healthcare and facility management industries

Enhance data security within your organization by creating and managing medical and facility assets and models in their customized workspaces. Use specific roles to limit access to these assets and models to improve the confidentiality and integrity of your data.

### Manage repair of defective enterprise assets in the stockroom by using the Repair flow

Request repair of assets that are defective or pending repair by using the Repair flow. Enterprise asset manager can submit an asset repair request in the Enterprise Asset Workspace or by using the Service Catalog. The Repair flow includes troubleshooting, repair, and evaluation tasks. Repair orders are processed either in the Enterprise Asset Workspace or the ServiceNow mobile Mobile Agent application.

### Drop off and receive assets at a stockroom

Return the assets that you have in your personal stockroom to a different stockroom by creating a Drop off task. The asset manager of the destination stockroom receives the assets that you dropped off through a Receive task. The asset manager then verifies the received asset and closes the Drop off task.

### Manage inventory picking within your stockroom

Pick assets in your stockroom easily for sourcing, enterprise asset requests, and enterprise asset refresh workflows by enabling the Pick task for your stockroom. The task lists the assets that you should pick from the stockroom. The aisle and space details of the asset provide the exact location from where the asset should be picked. You can work on pick tasks assigned to you by using the ServiceNow mobile Mobile Agent application. With the indoor mapping capabilities, you can

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

also get directions to the location of the asset in the stockroom on your ServiceNow mobile Mobile Agent application.

### Access Planned Work Management application's capabilities through the Enterprise Asset Workspace

Enable users of Field Service Management Pro or Field Service Management Enterprise to utilize the Planned Work Management application's functionality to manage work plans from within the Enterprise Asset Workspace.

### Manage your operational assets efficiently in the workspace

Get a comprehensive view of all your Operational Technology (OT) and Operational Equipment (OE) assets and manage them efficiently in the OT Asset Workspace. The OT asset manager and OT asset technician roles enable you to manage these assets.

### View the hierarchy details of an enterprise model in the Enterprise Asset Workspace

Gain visibility into hierarchy details of enterprise models directly on the contextual sidebar of the Model form. You can view all the model components of the pre-assembled and user-assembled models in a tree-like format.

### Manage the life cycle of enterprise models efficiently

Manage the complete life cycle of your enterprise models efficiently by applying calculated model life-cycle templates. When you associate any life-cycle template with an enterprise model record, details of all the life-cycle phases are calculated and shown on the Model form.

### Start the process of onboarding multiple assets directly in the Enterprise Asset Workspace

Onboard multiple assets in one go by creating Onboarding orders in the Enterprise Asset Workspace. The asset onboarding playbook is a guided experience that includes a deployment activity. This activity enables you to create deployment tasks for assets using Enterprise asset deployment tasks or Work order tasks. You can also specify the location where you want to deploy the assets.

### Firmware model classes added to the Expanded Model and Asset Classes Store application

Manage the firmware details by using Discovered firmware model and Firmware model classes available with the Expanded Model and Asset Classes Store application.

## UI changes

### Alternative equipment maintenance models widget

The alternative equipment maintenance models widget is added to the Model Management view of Enterprise Asset Workspace.

### New widget in the Work Management view

The following widgets are added to the Work Management view of Enterprise Asset Workspace:

- Alternative equipment maintenance assets
- Number of assets to be maintained within 30 days
- Closed work orders in the past 30 days

### Swap option in the Enterprise model management view

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The **Swap** option that's available for a parent of a multicomponent asset enables you to swap only one child asset at a time.

### Release assets option in the Enterprise model management view

The **Release assets** option that's available for a parent of a multicomponent asset enables you to release only one child asset at a time.

### Creating and viewing pallet models

Starting with version 8.1.0 of the Enterprise Asset Management application, the options to create and view pallet models has moved from the **Pallet** tab to the **All models** tab in the Enterprise model management view of the Enterprise Asset Workspace and in the OT model management view of the OT Asset Workspace. The **Pallet** tab is no longer available.

### Creating and viewing pallet assets

Starting with version 8.1.0 of the Enterprise Asset Management application, the options to create and view pallet assets has moved from the **Pallet** tab to the **All assets** tab in the Enterprise asset estate view of the Enterprise Asset Workspace and in the OT asset estate view of the OT Asset Workspace. The **Pallet** tab is no longer available.

## Activation information

Install the following applications by requesting them from the ServiceNow Store:

- Enterprise Asset Management
- Enterprise Asset Management for Healthcare
- OT Asset Management
- Expanded Model and Asset Classes

Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Related ServiceNow applications and features

### Field Service Management

The ServiceNow® Field Service Management application enables your organization to manage location-based work more efficiently and safely.

### Contract Management

The ServiceNow® Contract Management application enables you to track and manage your contracts.

### Procurement

The ServiceNow® Procurement application helps you create purchase orders and obtain items for fulfilling service catalog requests.

### Cloud Cost Management 8.0.0 release notes

The ServiceNow® Cloud Cost Management application (formerly known as ServiceNow® Cloud Insights) helps you to analyze the cloud resource costs so that you can identify and act on opportunities to save money and optimize the operations of your organization. Cloud Cost Management was enhanced and updated in the Xanadu release.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Cloud Cost Management highlights for the Xanadu release

- Easily diagnose and rectify issues in Cloud Cost Management implementations.
- View the spend details of your AI resources through a Machine Learning service category.

See Cloud Cost Management for more information.

**Important:**
Cloud Cost Management is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## Important information for upgrading Cloud Cost Management to Xanadu

On upgrading to Cloud Cost Management 8.0 version, the new Tag Category **AI Service** is available for Amazon Web Services (AWS), Microsoft Azure, and Google Cloud Platform (GCP) service providers. Because Cloud Cost Management executes the Billing Download job only from the current month onwards, the spend on AI services will be included only for the current month. If you want to view the billing details for the months prior to the current month, you must manually execute the Billing Download job. Once the Billing Download job is executed successfully, you can view the spend data of your AI services.

## New in the Xanadu release

### Troubleshoot billing issues in Cloud Cost Management implementation

Compare MetricBase (Clotho) data with your Spend data for Amazon Web Services (AWS), Azure, and Google Cloud Platform (GCP) to diagnose and troubleshoot Cloud Cost Management billing issues. You can also download the comparison data as a CSV file to analyze any mismatch in the cost values from both of the sources.

### Gain insights into your spend of AI resources

View the total spend details for your AI services under the Machine Learning service category in your current billing download for AWS, Azure, and GCP. You can also filter your results by cloud category, tag category, and tag values.

### Manage high transaction volume efficiently by installing the Cloud Cost Management Infra Stack application

Process and download billing files quickly with improved data download speed by installing the Cloud Cost Management Infra Stack application in addition to Cloud Cost Management version 8.1.

## Deprecations

Starting with the Xanadu release, note the following deprecations:

- The Core UI interface for the Cloud Cost Management application is no longer deployed, enhanced, or supported. For continued access and functionality, transition to the Cloud Cost Management Workspace. For more information, see Cloud Cost Management Workspace.
- The Cloud Spend Dashboard is no longer deployed, enhanced, or supported. The Asset Executive Workspace provides this functionality. For more information, see Visibility into Cloud Cost Management KPIs using the Asset Management Executive Dashboard.
- The Cloud Insights Billing application, which supports the Cloud Provisioning and Governance product with limited functionality, is being prepared for future deprecation. It will not be available on ServiceNow Store for download and installation but will continue to be supported.

For details, see the Deprecation Process [KB0867184] article in the Now Support Knowledge Base.

## Activation information

Activate Cloud Cost Management by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Related ServiceNow applications and features

### IT Asset Management

ServiceNow® IT Asset Management includes a family of products that work together to integrate the technological, contractual, and financial aspects of technology asset management through the complete asset life cycle.

### Software Asset Management

The ServiceNow® Software Asset Management application enables you to systematically track, evaluate, and manage software licenses, software compliance, and software optimization. You can reclaim unused software rights, purchase new software rights, and manage allocations for entitlements.

### Now Assist for Hardware Asset Management (HAM) release notes

The ServiceNow® Now Assist for Hardware Asset Management (HAM) application brings agentic AI to Hardware Asset Management. Now Assist for Hardware Asset Management (HAM) is a new application in the Xanadu release.

## Now Assist for Hardware Asset Management (HAM) highlights for the Xanadu release

Xanadu Patch 10 - Configure Access Control Lists (ACLs) for AI Agents and agentic workflows.

Xanadu Patch 9 - Automate and streamline your hardware asset request process by using an agentic workflow.

See Now Assist for Hardware Asset Management (HAM) for more information.

**Important:**
Now Assist for Hardware Asset Management (HAM) is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## Important information for upgrading Now Assist for Hardware Asset Management (HAM) to Xanadu

Only users with the procurement_user role can access the Help manage hardware asset requests agentic workflow including the following AI agents:

- Hardware asset management sourcing AI agent
- Transfer order creation AI agent
- Purchase order creation AI agent

## Now Assist for Hardware Asset Management (HAM) features

Xanadu Patch 10

Use the ServiceNow® Now Assist products to provide generative AI skills to meet the needs of users in different workflows, including case or incident summarization, chat summarization, resolution notes generation, and code generation.

### IT Operations Management release notes

IT Operations Management has new and updated features in the Xanadu release.

### ITOM Health release notes

The ServiceNow® ITOM Health product includes the Event Management, Agent Client Collector, Health Log Analytics, and Service Reliability Management applications. With ITOM Health, you can track and maintain the health of the services in your organization. ITOM Health was enhanced and updated in the Xanadu release.

## ITOM Health highlights for the Xanadu release

Agent Client Collector highlights:

- Configure the agent log level from the instance without needing to access the `acc.yml` configuration file.
- Ensure secure agent connections by adding a self-signed certificate.
- Gather expanded information on your Linux and Windows servers by using expanded Linux and Windows checks.

Health Log Analytics highlights:

- Enhance your system with the latest updates: Security fixes; Filebeat, Elasticsearch, and Microsoft Azure Event Hubs data input updates; Java JDK 17 update and support, and dependency upgrades.
- Stream system logs from Glide to Health Log Analytics using the Glide Syslog data input.

Event Management release notes highlights:

- View configuration item (CI) information on the preview panel in Express List.
- Optimize alert resolution with Now Assist AI-driven investigation of past related incidents.
- Generate an alert group description in Express List using Now Assist.
- Launch an alert analysis from the Now Assist panel.

**Important:**
Agent Client Collector is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## Important information for upgrading ITOM Health to Xanadu

Enhance your application service mapping by installing the App Service Extension app from the ServiceNow® Store.

## New in the Xanadu release

### Load the allow list only from the configuration file

Enhance your security by loading the allow list from the configuration file and ignoring the allow-list parameters.

### Configure the agent log level from the instance

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Configure the agent log level directly from the ServiceNow® instance without needing to access the `acc.yml` configuration file.

### Ensure secure agent connections

Ensure that your agent connections are secure by adding a self-signed certificate to your operating system's truststore. Adding a certificate to the truststore verifies that the certificate is authentic.

### Use the new application Service Reliability Management

Use the Service Reliability Management application to respond, collaborate, track, and self-remediate when working on alerts and incidents.

### Configure the Dynatrace connector instance

Starting in version 3.6.3, Event Management supports collecting raw metric data collection using the Dynatrace metric connector.

### Enable expanded processing for the MID server on Network Interface Controllers (NICs) during keepalive operation

Starting in version 3.6.3, benefit from enhanced stability when running a keepalive operation. You can use the enhanced MID Server capability to configure the number of Network Interface Controllers (NICs) that can be monitored by a keepalive operation.

### Stream log data from the System Log table in Glide to the Health Log Analytics AI engine

Use the Glide Syslog data input to stream log messages from the System Log table (Glide Syslog) in Glide to the Health Log Analytics AI engine (Occultus).

**Note:**
Only a single Glide Syslog data input can exist in the system. This data input doesn't run on a MID Server.

### Enrich automation

Map current alert fields values to specified new values through the **Change alert values** option, in the "If these conditions are met, don't add an alert in ServiceNow" section.

### Group automation

Track and optimize alert grouping efficiency through a new header displaying key details from the Test Automation section, including total alerts, alert groups, ungrouped alerts, and compression.

### View data on configuration items on the preview panel in Express List

View additional details about configuration items (CIs) that are bound to alerts on the Express List preview panel.

### Speed up alert resolution with a Now Assist analysis of past related incidents

Enhance efficiency and reduce downtime with a Now Assist analysis of past incidents related to the current alert. Now Assist investigates historical data to identify past incidents related to the current alert and reports their frequency and criticality levels. It also provides a summary of effective strategies used to resolve them. In addition, Now Assist offers contact information for individuals or teams who have resolved similar incidents in the past and could assist when needed.

### Generate an alert group description in Express List using Now Assist

Use Now Assist to generate a description of an alert group in Express List that encompasses all the alerts within the group. The generated description replaces the original description of the group.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

### Launch an alert analysis from the Now Assist panel

Analyze an alert from the Now Assist panel. The alert analysis displays directly in the Now Assist panel for convenient review.

## UI changes

### Integrations Launchpad enhancements

The **Related events** tab has been renamed **Events**.

The banner message has been updated, with a highlighted background added to emphasize the change.

The Health state has been renamed Integration Stats.

The Alert compression rate has been renamed Grouping ratio.

### Alert automation enhancements

The text on the landing pages for all automations has been updated to provide clearer context for each automation.

The text below the "If these conditions are met, don't add an alert in ServiceNow" section has been removed.

In Group automation, in the Simulation section, **Re-run test** has been renamed **Re-run simulation**.

## Changed in this release

### Alert automation enhancements

In Group automation, in the Simulation section, **Re-run test** has been renamed **Re-run simulation**.

The **Active** toggle switch has been replaced with a check box.

### Enrich automation

A new section, **And finally**, featured two radio buttons, **Run other enrich alert automations** and **Don't run other enrich alert automations**, which replace the previous **Continue running automations of this type** toggle switch. Although this section is new, the functionality is unchanged. Selecting **Run other enrich alert automations** continues running automations with the same filter conditions, while **Don't run other enrich alert automations** halts additional automations after execution except for those owned by other assignment groups.

### Associate services to use in Service Reliability Management

System admins can select any supported service and associate it to use in Service Reliability Management regardless of the owner or support group configurations.

## Deprecations

The following dashboards have been deprecated:

- Event Management scorecards
- Event Management insights
- Event Management overview
- Health Log Analytics Overview

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Service Management Dashboard is being prepared for future deprecation. It will be hidden and no longer activated on new instances but will continue to be supported. For details, see the Deprecation Process [KB0867184] article in the Now Support knowledge base.

## Activation information

ITOM Health is available with activation of the Event Management plugin (com.glideapp.itom.snac). To work with Health Log Analytics, you must purchase ITOM Predictive AIOps, a more comprehensive ITOM Health package. For details, see Event Management setup.

Install Service Operations Workspace (ITOM) by installing the AIOps Experience [sn_sow_aiops] application from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Related ServiceNow applications and features

### ITOM Visibility

The ITOM Visibility product consists of Discovery, Service Mapping, Certificate Inventory and Management, Service Graph Connectors, CMDB 360, and Firewall Audits and Reporting . Discovery and Service Mapping provide a unified, connected view of your entire IT network and the services that it supports.

### ITOM Optimization

ITOM Optimization contains the Cloud Provisioning and Governance feature. By using this feature, you can provision a private and public cloud infrastructure and services to achieve consistent management and cost visibility.

### Service Operations Workspace for ITSM

Service Operations Workspace ITSM and ITOM are integrated to streamline incident and operations management. ITSM focuses on managing service incidents, requests, and changes, while ITOM is responsible for operational tasks like monitoring infrastructure, handling alerts, and maintaining system health. Together, they provide a unified workspace that enables seamless collaboration between service management and operations teams, improving efficiency in resolving issues and maintaining service performance.

### Now Assist for IT Operations Management (ITOM)

The ServiceNow® Now Assist for IT Operations Management (ITOM) application analyzes alerts in Event Management. Alert analyses include a human-readable brief of the alert and technical information to help you investigate the alert more effectively.

### Event Management release notes

The ServiceNow® Event Management application helps you to identify health issues across the datacenter on a single management console. Event Management provides alert aggregation for discovered services, application services, and automated alert groups. Event Management was enhanced and updated in the Xanadu release.

## Event Management highlights for the Xanadu release

- Visualize the chain of events that caused an issue by viewing an alert group timeline in Express List.
- Understand the connection between the alerts by using Alert Assist's AI-driven technical analysis on alert groups.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Use the enhanced service map for alert impact visualization in Service Operations Workspace and Express List.
- Select all alerts in Express List to perform bulk actions.
- Remove alerts from an alerts group in Express List.
- Hide closed alerts in Express List.
- View data on Impacted Services in the preview panel in Express List.
- Create an incident with an AI-generated summary from alerts in Express List.
- View data on configuration items (CIs) on the preview panel in Express List.
- Optimize alert resolution with AI-driven investigation of past related incidents by Now Assist.
- Generate an alert group description in Express List using Now Assist.
- Launch an alert analysis from the Now Assist panel.

See Event Management for more information.

## New in the Xanadu release

### Customize the default order of the alert correlation algorithm

Configure the alert correlation algorithm sequence by customizing it according to your needs.

### Create team-based alert management rules

Assign alert management rules to specific assignment groups so that only those alerts that are assigned to the specified group are executed.

### Create tag based alert clustering definitions by teams

Create tag clusters only for alerts that are assigned to an alert group by assigning tag-based alert clusters to specific groups.

### Restrict alert groups across alert assignment groups

Improve the accuracy and relevance of the alert correlation by grouping alerts according to a diverse set of requirements.

### Scale out for alert group creation

Ensure efficiency when running a job during high-alert traffic by scaling out the alert grouping job.

### View unified service map and the impact paths in Service Operations Workspace

Explore the updated service map in the Service Operations Workspace, designed to focus on the path that was affected by an alert to help you quickly assess its impact on a service. The map displays all configuration items (CIs) for services with up to 60 CIs, regardless of alert status. For services with over 60 CIs that have alerts, it shows the path of the most severe, most recent alert. You can also investigate an even broader view of the service topology. Access the service map directly from Service Operations Workspace, or through the preview panel or an impacted service in Express List.

### Perform bulk actions on alerts in Express List

Perform an action on up to 1,000 alerts in the Active alerts list simultaneously.

### Remove alerts from an alerts group in Express List

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Remove secondary alerts from an alert group directly from the Express List pane or from the preview panel.

**Hide closed alerts on the preview panel and in Link View in Express List**

View only the open alerts on the preview panel and in Link View in Express List by toggling to hide the closed alerts.

**View data on impacted services on the preview panel in Express List**

View information about Impacted Services on the preview panel and in Link View in Express List and open the Service Map and Metric Explorer directly from the panel.

**Create an incident with Now Assist in Express List**

Generate incidents from alerts in Express List with a summary created by genAI that includes details on configuration items and impacted services.

**View data on configuration items on the preview panel in Express List**

View additional details about configuration items (CIs) that are bound to alerts on the Express List preview panel.

**Speed up alert resolution with a Now Assist analysis of past related incidents**

Enhance efficiency and reduce downtime with a Now Assist analysis of past incidents on the same or related CIs. Now Assist investigates historical data to identify past incidents related to the current alert and reports their frequency and criticality levels. It also provides a summary of effective strategies used to resolve them. In addition, Now Assist offers contact information for individuals or teams who have resolved similar incidents in the past and could assist when needed.

**Generate an alert group description in Express List using Now Assist**

Use Now Assist to generate a description of an alert group in Express List that encompasses all the alerts within the group. The generated description replaces the original description of the group.

**Launch an alert analysis from the Now Assist panel**

Analyze an alert from the Now Assist panel. The alert analysis displays directly in the Now Assist panel for convenient review.

## Changed in this release

**Alert page performance enhancements**

Benefit from the enhanced load time of the alert forms and service dashboard.

**Calculate impact during loop dependency**

Support for circular (loop) dependency between configuration items in the impact tree is enabled.

**Automated alert groups perform tag-based alert clustering**

Tag-based alert group correlation is performed as part of automated alert groups.

## Removed in this release

The Event Management Mobile application is no longer available.

## Deprecations

The following dashboards have been deprecated:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Event Management scorecards
- Event Management insights
- Event Management overview
- Health Log Analytics Overview

The Service Management dashboard is being prepared for future deprecation. It will be hidden and no longer activated on new instances but will continue to be supported. For details, see the Deprecation Process article (KB0867184) in the Now Support knowledge base.

## Activation information

Event Management is available with activation of the Event Management plugin (com.glideapp.itom.snac). For details, see Request Event Management.

## Related ServiceNow applications and features

### Metric Explorer

ServiceNow® Agent Workspace for Metric Intelligence provides a central interface that enables you to view the health of a CI associated with an alert. Health details for a CI include various metric charts with control bounds and aggregations for single score charts.

### Now Assist for IT Operations Management (ITOM)

The ServiceNow® Now Assist for IT Operations Management (ITOM) application analyzes alerts in Event Management. Alert analyses include a human-readable brief of the alert and technical information to help you investigate the alert more effectively.

### Health Log Analytics release notes

The ServiceNow® Health Log Analytics application helps you predict IT issues before they impact users by ingesting, analyzing, and correlating machine-generated log data in real time. When Health Log Analytics detects a deviation from a normal pattern, it alerts you of a possible issue. Health Log Analytics was enhanced and updated in the Xanadu release.

## Health Log Analytics highlights for the Xanadu release

- Enjoy a significantly faster log streaming rate with the Lighting gRPC client for MID Server communication with the ServiceNow instance.
- Stream system logs from Glide to Health Log Analytics.

See Health Log Analytics for more information.

**Important:**
Health Log Analytics is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

### Enjoy a significantly faster log streaming rate with the Lighting gRPC client for MID Server communication with the ServiceNow instance

Increase log streaming speeds to Health Log Analytics by up to six times through the Lightning gRPC client, which enhances MID Server communication with

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

your ServiceNow instance. Note that the Lightning gRPC client requires manual configuration to activate.

**Stream system logs from Glide to Health Log Analytics**

Use the Glide Syslog data input to stream log messages from the System Log table (Glide Syslog) in Glide to the Health Log Analytics AI engine (Occultus).

> **Note:**
> Only a single Glide Syslog data input can exist in the system. This data input doesn't run on a MID Server.

## Activation information

Install Health Log Analytics by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Localization information

The current available languages for Health Log Analytics are US English, UK English, French, German, Italian, Japanese, and Spanish. The default language is US English.

## Related ServiceNow applications and features

**Event Management**

The Event Management application uses events generated by Health Log Analytics. When Health Log Analytics detects an anomaly in your log data, it sends an event to Event Management. Event Management receives the event and generates an alert based on event and alert management rules.

**Agent Client Collector**

Agent data inputs beginning in Health Log Analytics Version 21.0.1 - September 2021 use Agent Client Collector to stream logs to the ServiceNow instance.

**MID Server**

Health Log Analytics uses the ServiceNow® MID Server product to stream logs to the ServiceNow instance.

**Service Operations Workspace**

Health Log Analytics generates alerts in the ServiceNow Service Operations Workspace, a configurable workspace that provides a unified experience for multiple IT Operations Management workflows.

### Agent Client Collector release notes

The ServiceNow® Agent Client Collector application enables you to monitor the service availability, performance, and infrastructure of your system. Agent Client Collector was enhanced and updated in the Xanadu release.

## Agent Client Collector highlights for the Xanadu release

- Ensure secure agent connections by adding a self-signed certificate.
- Enhance check functionality by using expanded Linux and Windows checks, enabling you to gather additional information on your Linux and Windows servers.
- Upgrade the Cloud Native Operations for Visibility Informer from the ServiceNow instance.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Store Instance credentials in the Microsoft Azure Vault when Informer uses Azure Kubernetes Engine (AKS).
- Enjoy multi-architecture support for docker image.

See Agent Client Collector for more information.

**Important:**
Agent Client Collector is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

### Load the allow list only from a configuration file

Enhance system security by loading the allow list from the file specified in the *allow-list* parameter of the configuration file while ignoring the allow lists that are bundled with the plugins.

### Configure agent log level from the instance

Configure the agent log level from the ServiceNow instance without having to access the `acc.yml` configuration file.

### Ensure secure agent connections

Ensure that your agent connections are secure by adding a self-signed certificate to your operating system's truststore, which verifies that the certificate is authentic.

### Update existing assets

Update your Agent Client Collector (ACC) plugins to the latest version by removing your existing plugins before reinstalling.

### Use expanded Linux and Windows checks

Enable enhanced check functionality by using the expanded Linux and Windows checks provided with the system.

### Upgrade Agent Client Collector for Kubernetes – Visibility Informers remotely

Starting in version 3.6.3, upgrade Informer pods in Kubernetes clusters remotely from the ServiceNow instance to avoid dependence on your Kubernetes admin.

### Override Informer parameters from the Instance

Starting in version 3.6.3, control CNO for Visibility Informer execution parameters from the ServiceNow instance to avoid dependence on your Kubernetes admin.

### Store Instance credentials in Microsoft Azure Vault when Informer uses Azure Kubernetes Service (AKS)

Starting in version 3.6.3, if your organization uses AKS, you can store the secret in the Microsoft Azure Vault. The Informer then pulls the ServiceNow credentials for accessing your instance from the Azure Vault.

### Enable Informer to connect to the instance using OAuth2.0 authorization

Starting in version 3.6.3, the Informer can use OAuth2.0 authorization to connect to the ServiceNow instance for enhanced security.

### Enable expanded processing for the MID server on Network Interface Controllers (NICs) during keepalive operation

Starting in version 3.6.3, benefit from enhanced stability when running a keepalive operation by using the enhanced MID Server capability to configure the number of Network Interface Controllers (NICs) that can be monitored by a keepalive operation.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

### Upgrade Agent Client Collector manually on a macOS system

Starting in version 3.6.3, run the consolidated upgrade procedure manually for the Agent Client Collector in a macOS environment.

### Configure the Dynatrace connector instance

Starting in version 3.6.3, Event Management supports collecting raw metric data collection using the Dynatrace metric connector

### Consolidate agent errors

Starting in version 4.1.0, view errors for all agents on the Agent Error Messages page. Additionally, you can view errors per individual agent by selecting the agent and selecting the **ACC Error Messages** tab .

### Use Linux commands to enable additional system capabilities beyond your permission level

Starting in version 4.1.0, use Linux commands to grant enhanced permissions, which are enabled once the installation `.exe` file is executed. These enhanced capabilities are provided securely, ensuring that there is no security risk to your environment.

### Use the new Windows event check for enhanced event details

Starting in version 3.12.0, use the new Windows event check to collect and filter Windows event logs.

### Use the network port check to determine port availability

Starting in version 3.12.0, use the Network port check to create events for all ports of a specified host address, which indicates whether each port is available or in use.

### Enjoy multi-architecture support for docker image

Starting in version 3.9.0 (Informer version 2.3.0), the docker image supports both arm64 and amd64 architectures. Upgrading from the previous image to the new one will not cause any disruptions. However, the new image requires more storage space in your image repository than the previous one.

### Change the Informer's extensibility settings from the instance

Starting in version 3.9.0 (Informer version 2.3.0), update the Informer's extensibility configuration directly from the Instance using the *`Additional resources ConfigMap`* parameter. By providing a JSON map with keys such as `resources`, `mappings`, and `mappings_oob`, you can instruct Cloud Native Operations for Visibility to retrieve additional information. If one of these keys exists and the system finds a change, it patches the ConfigMap and restarts the Informer.

### View the OpenShift version in the Cluster version field on the Kubernetes Cluster CI

Starting in version 3.9.0 (Informer version 2.3.0), see the OpenShift version and the Kubernetes Cluster version in one place. OpenShift operates on top of Kubernetes, so there's an OpenShift version and a Kubernetes Cluster version. By installing the Informer with the **--set openShift=true** flag, the system adds the OpenShift version number to the **cluster_version** field on the Kubernetes Cluster CI in addition to the Kubernetes Cluster version.

## Changed in this release

### Use the updated Windows event check

Starting in version 3.12.0, the Windows event check `os.windows.check-event-log` has been renamed `os.windows.check-event-log-count` and has enhanced data gathering capabilities.

#### Updated plugin dependency

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Starting in version 4.1.0, the Service Error Management plugin is dependent on the ACC-F scoped app. The plugin gets installed automatically when the customer installs the ACC-F scoped app from the ServiceNow store.

**New allow list parameter for checks running in shell execution mode**

Starting in version 4.1.0, when running a check in with execution mode (*Exec Mode*) set to **shell**, add the *allow_shell* parameter and set it to **true** for the allow list entry corresponding to the check.

## Activation information

Agent Client Collector is available with activation of the Agent Client Collector Framework plugin (sn_agent) and the Agent Client Collector Monitoring plugin (sn_itmon) in an instance on which Event Management is installed.

## Related ServiceNow applications and features

**Event Management**

Agent Client Collector works within an instance on which Event Management is installed to monitor infrastructure components. Agent Client Collector and Event Management share some connectors that pull metric data and events from the same data sources.

**Health Log Analytics**

The Health Log Analytics application predicts IT issues before they impact users. The application helps you to solve issues faster by ingesting, analyzing, and correlating machine-generated log data in real time.

### Service Reliability Management release notes

The ServiceNow® Service Reliability Management (SRM) application helps your organization to respond, collaborate, track, and self-remediate when working on alerts and incidents. Service Reliability Management is a new application in the Xanadu release.

## New in the Xanadu release

**Service Reliability Management and Service Level Objective Management**

Explore the Service Reliability Management and Service Level Objective Management pages in the Service Operations Workspace.

**Important:**
Service Reliability Management is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## Activation information

Install Service Reliability Management by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Related ServiceNow applications and features

**Agent Client Collector**

Agent Client Collector works within an instance on which Event Management is installed to monitor infrastructure components. Agent Client Collector and Event

Management share some connectors that pull metric data and events from the same data sources.

**Health Log Analytics**

The Health Log Analytics application predicts IT issues before they impact users. The application helps you to solve issues faster by ingesting, analyzing, and correlating machine-generated log data in real time.

**Metric Explorer**

ServiceNow® Agent Workspace for Metric Intelligence provides a central interface that enables you to view the health of a CI associated with an alert. Health details for a CI include various metric charts with control bounds and aggregations for single score charts.

### ITOM Cloud Accelerate release notes

The ServiceNow® ITOM Cloud Accelerate application provides the workflows to evaluate the cloud readiness of your organization and enforce the ITOM Cloud Accelerate guidelines. ITOM Cloud Accelerate was enhanced and updated with Terraform support for Google Cloud Platform (GCP), and UI changes in the Xanadu release.

## ITOM Cloud Accelerate highlights for the Xanadu release

- Leverage additional Out Of Box catalog items with Google Cloud Platform (GCP).
- Use the multiple repositories structure with the Terraform app and Infrastructure as Code (IaC) Discovery.
- Access and manage your cloud resources and publish your cloud offerings to a catalog by using the added features in the ServiceNow Cloud Services Catalog user interface.

See ITOM Cloud Accelerate for more information.

**Important:**
ITOM Cloud Accelerate is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## Changed in this release

**Enhanced Cloud Services Catalog Cloud Services Catalog experience**

Improved the hierarchical structure of multiple repositories with the support of Terraform Connector IaC discovery capabilities.

Support for integration of Google Cloud Platform (GCP) with Terraform Open Source.

## Activation information

The ITOM Cloud Accelerate features are available as an application with the activation of the Cloud Accelerate plugin, which requires a Cloud Governance subscription. Contact your ServiceNow sales representative to procure the ITOM Cloud Accelerate entitlement.

The https://servicenow.com/docs/bundle/xanadu-it-operations-management/page/product/cloud-services-catalog/concept/csc-home.html application is available with the ITOM Cloud Accelerate entitlements. Alternatively, you can install it by requesting them from https://store.servicenow.com/sn_appstore_store.do#!/store/application/bc3429fc24e02910f877b722d6bbdcaf.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

You must have Employee Center as a prerequisite to launch and use the Cloud Service Catalog application.

**Note:**

Cloud Provisioning and Governance is already included as a part of ITOM entitlements so you don't need to procure it separately. For details, see https://servicenow.com/docs/csh?topicname=request-plugin-cloud-mgt&version=xanadu&pubname=xanadu-it-operations-management.

If you have exchangeable ITOM Optimization: Cloud Insights licenses, contact your ServiceNow account representative to migrate your licenses to ITOM Cloud Accelerate without charge.

## Related ServiceNow applications and features

### Cloud Configuration Governance

The Cloud Configuration Governance application provides a set of ready-to-use policies that enable you to check the configuration settings of cloud resources in your organization to identify configuration violations.

### Cloud Action Library

The Cloud Action Library provides ready-to-use actions and subflows that enable you to interact with the cloud resources of the organization.

### Cloud Migration Assessment

The Cloud Migration Assessment enables you to plan, organize, and track the process of relocating your enterprise IT resources and workloads to cloud platforms.

### ITOM Optimization

ITOM Optimization provides automated cloud workflows that you can use to manage cloud resources through their life cycles. It enables certified and enterprise-compliant cloud deployment, cost visibility, and other cloud management processes.

### ITOM Visibility

The ITOM Visibility product consists of Discovery, Service Mapping, and Tag Governance. For more information, see Discovery, Service Mapping, Tag Governance, Certificate Inventory and Management, Service Graph Connectors, CMDB 360, and Firewall Audits and Reporting. Discovery and Service Mapping give you a unified, connected view of your entire IT network and the services that it supports.

### ITOM/OT SU Licensing and subscriptions

ITOM and OT SU Licensing enables you to view the total number of licenses assigned to your applications.

**Third-party products that integrate with the Cloud Service Catalog:**

Extend the capabilities of ITOM Cloud Accelerate and its connectors by integrating the following third-party products with it:

- Cloud Services
  - Amazon Web Services
  - Microsoft Azure

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- VMware
- Google Cloud Platform

- Ansible configuration management to radically automate the deployment of catalog items across platforms and cloud service providers with job templates.

### ITOM Optimization release notes

The ServiceNow® ITOM Optimization application automates the cloud workflows that you use to manage the cloud resources throughout their life cycles. You can also deploy certified and enterprise-compliant clouds, get visibility into your costs, and manage other cloud management processes. Cloud Provisioning and Governance was enhanced and updated in the Xanadu release.

## ITOM Optimization highlights for the Xanadu release

- Use the Cloud Services Catalog with ITOM Cloud Accelerate for the enhanced capabilities of Cloud Provisioning and Governance (CPG). These capabilities include the Out Of Box catalog items and the simplified and automated provisioning of cloud resources.
- Move your exchangeable ITOM Optimization licenses as you transition from Cloud Provisioning and Governance to ITOM Cloud Accelerate.

See ITOM Optimization for more information.

## Important information for upgrading ITOM Optimization to Xanadu

Enhance your application service mapping by installing the App Service Extension app from the ServiceNow® Store.

## New in the Xanadu release

### Cloud Provisioning and Governance Cloud Admin Portal

Explore the Next Experience dashboard pages that are now available on Cloud Admin Portal.

The Cloud Admin Portal link to the user portal now points to Employee Center if you have installed and set up the Cloud Services Catalog application.

## UI changes

### Cloud Admin Portal

You can now use the link to the dashboard pages on the Cloud Admin Portal. You can access these Next Experience dashboard pages on a new tab based on your user role:

- Cloud root cause analysis dashboard
- Cloud operations dashboard
- Cloud tag values dashboard

## Changed in this release

### Cloud Admin Portal

The Cloud Admin Portal link to the user portal now points to Employee Center if you have installed and set up the Cloud Services Catalog application.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Deprecations

Deprecation of Cloud API (CAPI)- based Cloud Discovery on new instances:

- CAPI-based Discovery is deprecated for new instances with Xanadu.
- Contact your administrator to install the latest version of the Discovery and Service Mapping Patterns ServiceNow® Store application to use the Discovery feature.
- For an existing instance, manually migrate to Patterns-based Discovery.
- The **Discover Schedules** tab in the Cloud Admin Portal is going to redirect to Cloud Discovery Workspace.

**Note:**
See Migrate from CAPI to Patterns to learn more about the migration from CAPI to Patterns-based Discovery.

For details, see the Application/Plugin Deprecation Process [KB0867184] article in the Now Support Knowledge Base.

### ITOM Visibility release notes

The ServiceNow® ITOM Visibility application provides a unified, connected view of your entire IT network and the services that it supports. ITOM Visibility was enhanced and updated in the Xanadu release.

## ITOM Visibility highlights for the Xanadu release

- Elevate the Discovery Admin experience with Discovery Admin Workspace. Benefit from a unified workspace for configuring Discovery, tracking progress, and managing errors, with diagnostic tools that provide insights into discovered data.
- Enrich your CMDB with a larger number of configuration items using ITOM Content Service.
- Create application services with CMDB based mapping.
- Avoid dependence on your Kubernetes admin by upgrading Cloud Native Operations Informer pods and modifying Informer execution parameters directly from the instance.
- Enjoy multi-architecture support for docker image in Cloud Native Operations for Visibility.

See IT Operations Management for more information.

**Important:**
Discovery and Service Mapping Patterns is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## Important information for upgrading ITOM Visibility to Xanadu

For an improved Service Mapping experience, install Service Mapping Plus version 1.13.0 from the ServiceNow® Store.

Enhance your application service mapping by installing the App Service Extension app from the ServiceNow® Store.

## New in the Xanadu release

**Use Discovery Admin Workspace features to jumpstart discovery implementation.**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- View discovery trends and tasks and access relevant ITOM Visibility apps and information through Discovery Admin Workspace Home.
- Gain insights into the performance of all your discoveries through the information in the **Schedules** tab.
- Analyze discovery errors and troubleshoot them using information in the **Diagnostics** tab.
- Access on-demand reports and optimize discovery operations using information in the**Insights** tab.

### Discover products with Discovery and Service Mapping Patterns

Discover the following products through Discovery and Service Mapping Patterns:

- Dell EMC Data Domain storage.
- Dell EMC PowerMax storage.
- AWS services in the China region - Available with the Discovery and Service Mapping Patterns November 2024 store release (1.21.0) on the ServiceNow AI Platform Xanadu Patch 3 instance.
- REST-based Fortinet firewall and FortiGate VDOMs - Available with the Discovery and Service Mapping Patterns November 2024 store release (1.21.0).
- Azure Marketplace - Available with the Discovery and Service Mapping Patterns November 2024 store release (1.21.0). The pattern supports the discovery of the following Azure Marketplace products:
  - Virtual Machine
  - SaaS
  - Azure Application

### Oracle Java process discovery

Discover Java processes to comply with Oracle licensing agreements- Use the ITOM Oracle GLAS plugin (1.8.4) November 2024 store version to track Java installations and usage.

### MID Server features for better discovery performance

- Run other applications without storing any credentials on the instance with the Microsoft Azure Key vault.
- MID Server supports log file compression. The new log file handler settings are available as MID Server properties on the instance. The compression mode isn't enabled out of the box.

### Use CMDB based mapping to create new application services

Use Automated Service Suggestions and CMDB data instead of the MID Server, to create new application services.

### Use the latest CNO for Visibility features

Starting in version 3.6.3, benefit from new features in Cloud Native Operations for Visibility.

- Upgrade the CNO for Visibility Informer from the ServiceNow instance.
- Control Informer execution parameters from the instance.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Store instance credentials in the Microsoft Azure Vault when Informer uses the Azure Kubernetes Engine (AKS)
- Enable Informer to connect to the instance using OAuth2.0 authorization

### Enjoy multi-architecture support for docker image

Starting in version 3.9.0 (Informer version 2.3.0), the docker image supports both arm64 and amd64 architectures. Upgrading from the previous image to the new one will not cause any disruptions. However, the new image requires more storage space in your image repository than the previous one.

### Change the Informer's extensibility settings from the instance

Starting in version 3.9.0 (Informer version 2.3.0), update the Informer's extensibility configuration directly from the Instance using the *`Additional resources ConfigMap`* parameter. By providing a JSON map with keys such as `resources`, `mappings`, and `mappings_oob`, you can instruct Cloud Native Operations for Visibility to retrieve additional information. If one of these keys exists and the system finds a change, it patches the ConfigMap and restarts the Informer.

### View the OpenShift version in the Cluster version field on the Kubernetes Cluster CI

Starting in version 3.9.0 (Informer version 2.3.0), see the OpenShift version and the Kubernetes Cluster version in one place. OpenShift operates on top of Kubernetes, so there's an OpenShift version and a Kubernetes Cluster version. By installing the Informer with the **--set openShift=true** flag, the system adds the OpenShift version number to the **cluster_version** field on the Kubernetes Cluster CI in addition to the Kubernetes Cluster version.

### Use Service Fingerprints to refine the selection of application service candidates

Explore unique, classified components of application service candidates provided by Automated Service Suggestions. By supplying specific information such as the product name and description, gain deeper insights into the most suitable candidate to convert to an application service.

## Changed in this release

### Use the enhanced Shazzam probe to collect data

View the extended data collected by the Shazzam probe in the Discovery Admin Workspace **Insights** tab.

### Revised Service Mapping roles

Gain improved visibility of ML-powered candidates in Service Mapping with updated roles:

- service_mapping_admin replaces sm_admin.
- service_mapping_user replaces sm_user.

### Use the enhanced Discovery and Service Mapping Patterns for extended discovery

Note the following new Pattern extensions and improvements:

- Pure Storage FlashArray
- Azure SQL license information
- Google Cloud Platform (GCP) resource inventory discovery

### Scale up your Azure change processing

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Update your CMDB in real time with your Azure cloud resource changes. After upgrading to the enhanced November 2024 Patterns (1.21.0) version, run an Azure cloud discovery on all service accounts to ensure receiving all updates.

**Stay informed about Cloud Discovery patterns updates**

Download and use the Cloud Discovery patterns spreadsheet with the latest up-to-date information on Cloud Discovery patterns, including REST-API permissions.

**Run top-down discovery using Service Mapping integrated with Agent Client Collector**

Top-down Service Mapping and Automated Service Suggestions are supported with Agent Client Collector.

## Deprecations

Starting with the Xanadu release, the Discovery Dashboard is no longer part of the Discovery plugin. Use Discovery Admin Workspace instead.

## Activation information

ITOM Visibility is available with activation of the Discovery (com.snc.discovery) plugin and the Service Mapping (com.snc.service-mapping) plugin, which require an ITOM Visibility subscription. For details, see Request Discovery and Request Service Mapping. For full ITOM Visibility functionality, install the latest ITOM Visibility out-of-band applications from the ServiceNow Store. For cumulative release note information for all released apps, see the ServiceNow Store version history release notes.

## Related ITOM applications and features

**ITOM Health**

The ServiceNow® ITOM Health product includes the ServiceNow® Event Management and ServiceNow® Metric Intelligence applications, which help you track and maintain the health of services in your organization.

Event Management gathers alerts from infrastructure events that both third-party monitoring tools and the ServiceNow® internal agent capture. Event Management uses IT-related information that ServiceNow® Discovery gathers so it can map alerts to configuration items. Based on the collected information, Event Management then provides dashboards that show a consolidated view of all service-impact events.

The Agent Client Collector application enables you to do the following:

- Monitor your service availability.
- Examine the health and performance of your environment.
- Ensure that your infrastructure and its applications are running properly.

Agent Client Collector collects events and metrics. It runs in either a Windows or Linux environment.

**ITOM Optimization**

ITOM Optimization provides automation for the cloud workflows used to manage the cloud resources throughout their life cycle. It enables certified and enterprise-compliant cloud deployment, cost visibility, and other cloud management processes.

**ITOM Licensing**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

ITOM SU Licensing has been rebranded as ITOM/OT SU Licensing. ITOM/OT SU Licensing calculates and displays the usage of ITOM subscriptions based on subscription units. It enables you to access a comprehensive overview of the total number of licenses allocated to applications and configuration items (CIs), while offering an advanced feature set that provides visibility into the specific CIs covered by your licenses. You can view the subscription breakdown for ITOM Health, ITOM Visibility, ITOM Optimization, and ITOM Cloud Accelerate. For more details, see View which CIs have an ITOM license.

### IT Service Management release notes

IT Service Management has new and updated features in the Xanadu release.

### Benchmarks release notes

The ServiceNow® Benchmarks application gives you instant visibility into your key performance indicators (KPIs) and trends. Benchmarks was enhanced and updated in the Xanadu release.

## Benchmarks highlights for the Xanadu release

Experience the all-new KPI in the self-solved deflections category of ITSM Benchmarks to help resolve the digital issues encountered by users on a daily basis.

See Benchmarks for more information.

**Important:**
Benchmarks is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

### Benchmark KPIs

The new Self-solved using AI search QnA and Self-solved using Proactive Engagement for DeX KPIs added to the self-solved deflections are benchmarked for all the cohorts. These new contributing indicators help organizations track the self-solved deflection.

## Activation Information

Benchmarks is a ServiceNow AI Platform feature that is active by default. The new Benchmarks dashboard is automatically installed with Xanadu and is available from the ServiceNow Store.

## Related ServiceNow applications and features

### Performance Analytics (Indicator data sources)

The ServiceNow® Performance Analytics application is an in-platform solution that enables organizations to create management dashboards, report on KPIs and metrics, and answer key business questions to help increase quality and reduce the costs of service delivery.

### Success Dashboard

The ServiceNow® Success Dashboard enables the leadership team and process owners to gain insights into the performance of their ServiceNow® IT Service Management (ITSM) implementation using the KPIs defined by the ServiceNow AI Platform®.

### Continual Improvement Management

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Use the ServiceNow® Continual Improvement Management application to request improvement opportunities and implement phases and tasks to meet performance goals, track progress, and measure success.

#### Strategic Portfolio Management

The ServiceNow® Strategic Portfolio Management application enables you to align work with business goals to deliver products and services in a way that supports your strategic priorities.

### DevOps Change Velocity release notes

The ServiceNow® DevOps Change Velocity application improves visibility into your DevOps data in a single system, automates and accelerates change processes, and helps you gain insights to measure the performance of your DevOps environment. DevOps Change Velocity was enhanced and updated in the Xanadu release.

## DevOps Change Velocity highlights for the Xanadu release

- Leverage DevOps data for change automation by configuring Change Management features from the Service Operations Workspace Admin Center.
- Benefit from accessibility improvements to create a configurable workspace that supports Web Content Accessibility Guidelines (WCAG) 2.1 Level AA conformance.

See DevOps Change Velocity for more information.

## Important information for upgrading DevOps Change Velocity to Xanadu

If you are an upgrading customer, you must run the **ReConfigure Bitbucket Server Repositories for PullRequest** job to re-configure your existing Bitbucket Server or Bitbucket Data Center repositories so that pull request records can be imported. You can navigate to **All > System Definition > Scheduled Jobs** to search for this job and run it.

**Important:**
DevOps Change Velocity is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

#### Change Management in SOW Admin Center

Configure Change Management features from the Service Operations Workspace Admin Center to increase change efficiency, accelerate change approvals, drive data-driven risk analysis, and leverage DevOps data for change automation.

#### OAuth 2.0 authentication for Azure DevOps (ADO)

Use OAuth 2.0 authentication to connect your Azure DevOps tool with DevOps Change Velocity ensuring a more secure authentication method.

#### OAuth 2.0 authentication for Jira Cloud

Use OAuth 2.0 authentication to connect your Jira Cloud tool with DevOps Change Velocity ensuring a more secure authentication method.

#### Bitbucket Cloud tool integration with ServiceNow

Integrate the Bitbucket Cloud coding tool with DevOps Change Velocity to connect, discover, import, and process real-time repository events in DevOps Change Velocity.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

### DevOps Change Workspace UI for simplified creation of custom tool integration with planning, coding and orchestration capabilities

Integrate a new custom tool across planning, coding and orchestration capabilities with basic know-how of ServiceNow using an intuitive DevOps Change Workspace UI. It offers easy navigation to the ServiceNow Platform for defining transformer or adapter rules, or integrate the ability to do so within the Workspace wherever applicable, and embeds necessary documentation links and tooltips to support self-service.

### Import based evidence collection

Improve instance efficiency by skipping step-level pipeline processing for accelerated change management and evidence collection for GitHub Actions and Azure DevOps (ADO) orchestration tools.

## Changed in this release

### Reflow for configurable workspace

DevOps Change Configurable workspace supports reflow, which enables pages and content to be zoomed up to 400% through your browser settings without loss of content or functionality. For more information, see the Accessibility information section that follows.

### DevOps data in change request

View, add, and edit DevOps data in a manually created change request in Service Operations Workspace for a unified change request experience in both DevOps Change Workspace and Service Operations Workspace.

### Enhancements to DevOps Model change

- In-product guidance enables you to leverage DevOps models and easily create DevOps changes without disruption of your change process.
- To make the Change - DevOps – Implement flow of the DevOps model more suitable for DevOps changes, change tasks are no longer automatically created.
- The new Change – DevOps – Update execution state flow in the DevOps model means you no longer have to activate the DevOps Change Request Manual Approval flow to send a callback to the third-party orchestration tool.
- Fast-track your change process by using a new DevOps Simplified change model, which doesn't contain the Assess state. Change approval for this model is based on the DevOps Simplified Model Change policy.

### Branch details for artifacts and packages

Branch details from pipeline executions are now available for artifacts and packages for better tracking.

### Create lists

Option to create customized lists added to the Changes, Tools, and Administration modules in the DevOps Change Workspace.

### Jira Server connection using API key

Connect to your Jira Server using API key authentication rather than basic authentication.

### GitHub Actions reruns

Re-running failed GitHub jobs will now use the existing change request created for the failed jobs instead of creating new change requests.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

### Generalized Docker Container solution to support any orchestration tool

Use the generalized and extensible Docker Container solution to integrate any orchestration tool with DevOps Change Velocity for invoking pipeline actions like change request creation and collecting relevant DevOps data without having to rely on tool specific plugins or extensions.

### Simplified onboarding of planning tools that are not supported in the base system

Integrate planning tools that are not supported in the base system by leveraging transformer rules. GitLab Issues is now available as one of the planning tools and is built leveraging this new approach so you can discover plans, import work items, and configure webhooks for work items (issues) in GitLab.

### Enhanced manual DevOps change creation experience

Add work items data in a manually created DevOps change request in#Service Operations Workspace#for#TSM.

### Default BitBucket branch property

Specify the default Bitbucket branch name that must be used to create an import request in the *sn_devops.bitbucket_default_branch* property.

### Additional scans for DevOps Health Scan Content pack

Additional set of proactive checks focused on problems that tend to occur before or after an upgrade along with identifying configuration issues like plugin and version incompatibilities, or pipelines that chronically fail, have been added.

### Import pull-request records for Bitbucket Server or Bitbucket Data Center

Import pull-request records for Bitbucket Server or Data Center for improved insights and efficiency.

### Change request creation with errors in DevOps data retrieval for Harness pipelines

Enable change request creation even if there is an error in retrieving the DevOps data for a Harness pipeline.

### Branch name filter

Search for build numbers by the branch name while associating DevOps data to a change request in the Service Operations Workspace (SOW) or Classic UI.

### Test summary name in GitHub Actions

The servicenow-devops-test-report custom action in GitHub now includes an optional test-summary-name parameter to specify the test summary results name.

### Token based authentication for Rally

Configure webhooks for Rally using token based authentication instead of using the integration username and password.

### Renamed variables for Docker

The environmental variables in the Generic Docker actions for DevOps Change Velocity have been renamed by removing the CI prefix for better clarity.

### Security scan results

Security scan results on the change record associated to a pipeline execution with a linked package are now displayed in the **Security Summaries** tab.

### Source of commits in SOW

View the source of commits like pipeline execution, branch, repository, and so on for a change request in the DevOps data section of the Service Operations Workspace.

### Track file changes

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The **Track file changes** option is now disabled by default when a repository is configured to prevent any potential security risks.

### Close code value for a change request

Two new properties have been added in DevOps Change Velocity, so that you can specify a close code value for a change request based on the change request completion state when the autoCloseChange parameter is enabled.

### Support for MID Server cluster

Improve load balancing and failover protection by selecting a MID Server cluster when connecting to a tool instance associated with a MID Server cluster. This configuration enables multiple MID Servers with relevant capabilities to be grouped.

### Improved UX for DevOps Change health scans

Run health scans and analyze findings efficiently in the DevOps Change workspace with an intuitive and user-friendly interface.

### Pipeline association for GitHub Actions

When onboarding GitHub Actions pipelines through the App onboarding catalog or the onboarding APIs, now only the selected pipelines are associated with the DevOps app. If no pipeline is selected, all pipelines within the specified repository are associated.

### Tool connection check status

If a tool is marked as Disconnected because of a system-generated failure during an unsuccessful connection check, any subsequent successful check automatically updates the connection status to Connected. If you manually disconnect the tool, the tool status remains Disconnected even if there's a subsequent successful connection check.

### New roles for vulnerability integration

- The sn_vul.app_sec_manager role is added to the DevOps Tool Owner [sn_devops.tool_owner] role when the DevOps Vulnerability Integrations plugin (sn_devops_vul_ints) is installed.
- The sn_vul_veracode.configure_integration role is added to the DevOps Tool Owner [sn_devops.tool_owner] role when the Vulnerability Response Integration with Veracode plugin (sn_vul_veracode) is installed.

## Activation information

Activate DevOps Change Velocity by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Accessibility information

### Accessibility improvements

Accessibility improvements were completed to create a configurable workspace that supports WCAG 2.1 Level AA conformance.

### Reflow

The Configurable Workspace supports reflow, which enables pages and content to be zoomed up to 400% through your browser settings without loss of content or functionality. Additionally, content can be enlarged without scrolling in two dimensions at a width equivalent to 320 CSS pixels or a height equivalent to 256

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

CSS pixels. Page layouts are transformed into a vertical, stacked view automatically when users increase browser zoom to 400%.

This enhancement helps users with low vision or who have trouble seeing web content in a browser due to monitor size, device type, poor lighting, or other situations. Reflow can be turned off with a system property for instances, experiences, and pages. See Reflow for Configurable Workspace for details.

## Related ServiceNow applications and features

### Performance Analytics

ServiceNow® Performance Analytics is an in-platform process optimization solution to create management dashboards, report on KPIs and metrics, and answer key business questions. The application helps improve quality and reduces the costs of service delivery.

### Change Management

The ServiceNow® Change Management application provides a systematic approach to control the life cycle of all changes, facilitating beneficial changes to be made with minimum disruption to IT services.

### Agile Development

The ServiceNow® Agile Development application helps you deliver software projects more efficiently by managing and tracking software development life cycles using an iterative, incremental, and flexible approach.

### Risk Management

The ServiceNow® Governance, Risk, and Compliance Risk Management application helps you continuously monitor and identify high-impact risks, improve your risk-based decision-making, and reduce reaction time effectively. The application also provides structured workflows for the management of risk assessments, risk indicators, and risk issues.

### Digital End-User Experience release notes

The ServiceNow® Digital End-User Experience (DEX) solution is a cloud-based tool providing IT with comprehensive visibility and monitoring for user applications, networks, and devices. The DEX suite includes two products: Application and Device Health, which helps IT resolve device and application issues proactively, and Desktop Assistant, which provides easy access to self-service options. DEX was enhanced and updated in the Xanadu release.

## DEX highlights for the Xanadu release

- Monitor and analyze performance metrics seamlessly through comprehensive visibility of applications, networks, and end-user devices.
- Detect and resolve potential problems before they affect end users through DEX alerts and insights.
- Proactively engage your users and resolve issues they might face.
- Resolve the issues that your users face with actions available in list of predefined issue resolutions called Action library.

See Digital End-User Experience for more information.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

**Important:**
DEX is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## Important information for upgrading Digital End-User Experience to Xanadu

- For information about DEX data migration, see the KB1646364 article in the HI Knowledge Base.
- To upgrade your DEX Desktop Assistant, do the following:
  1. Install the latest version of the Desktop Assistant in your instance.
  2. With admin rights, re-install the Desktop Assistant on your local machine even if you have the latest version.

## New in the Xanadu release

### DEX Insights

See a complete picture of your device performance, user interactions, and network health with DEX data. DEX Insights provide a simplified view with clear insights so you can identify issues and remedies before they slow you down.

### Integration with ServiceNow Proactive Engagement

Keep things running smoothly and avoid interruptions. DEX integration with ServiceNow Proactive Engagement helps make managing your digital experience smoother. It monitors your devices and apps, sends you alerts about potential problems, and guides you through fixing them.

### Desktop Assistant with Now Assist

Troubleshoot and solve problems independently with Desktop Assistant, which gives you direct access to generative AI on a user-friendly interface.

### Actions and Actions Library

Automate and streamline issue resolution within digital experience environments using the Actions and Actions Library in DEX. You can use prebuilt solutions and set up automated actions to resolve issues on your own efficiently.

## UI changes

### UI error handling

Enhanced error handling scenarios have been added on the following pages:

- User or Device details
- Web applications
- Installed applications

### Application users page enhancements

More options have been added to the Status option list, and the last 15-minute option is now a default to improve performance.

### Scalable pagination

You can now choose to see 10, 20, 50, or 100 pages at a time.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Activation information

Install DEX by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Browser requirements

For the web/SaaS application, enable the DEX browser extension for monitoring web/SaaS applications to collect various operational or performance-based metrics on your system. For more information, see Enable DEX browser extension.

## Localization information

Localization is applicable to DEX in all languages supported by the ServiceNow AI Platform.

## Related ServiceNow applications and features

### DEX for Service Desk Agents

As a Service Desk agent, view device metrics from within the platform by navigating to the DEX device health page. You can access the page from the Core UI incident experience or from the Investigate tab Service Operations Workspace (SOW).

### Proactive Engagement

Help prevent problems and self-resolve issues before they affect your performance.

### Now Assist for IT Service Management (ITSM)

From Desktop Assistant, use generative AI to enhance your productivity and efficiency through conversation and proactive experiences.

### Digital Portfolio Management release notes

The ServiceNow® Digital Portfolio Management Workspace enables you to view and manage the full life cycle of your services and applications. The Digital Portfolio Management Workspace was enhanced and updated in the Xanadu release.

## Digital Portfolio Management highlights for the Xanadu release

- Introduced the DPM Admin Center to set up the DPM Workspace. The Admin Center includes workflows to identify and set up business and technical services, business applications, and application services. The DPM Admin Center includes guided steps, prompts, and links to solutions and helpful resources.
- Replaced the custom DPM relationship map with the ServiceNow platform Unified Map to provide a more holistic view of service and application relationships.
- Updated the key performance indicator (KPI) functionality.
  - Added descriptive KPI tooltips to clarify the indicator data.
  - Set the system property **KPI latest score** to true for new and zBoot customers.
- Updated the configuration options for the Needs attention panels.
  - Added problem (PRB) records to the Needs attention attributes.
  - Updated the team logic in the DPM Contacts tab in the Needs attention panel.
- Benefit from accessibility improvements to create a configurable workspace that supports Web Content Accessibility Guidelines (WCAG) 2.1 Level AA conformance.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

See Digital Portfolio Management for more information.

**Important:**
Digital Portfolio Management is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

### Use the Admin Center in Digital Portfolio Management

Use the DPM Admin Center guided walk-through to set up your DPM Workspace. The Admin Center guides you to identify data in your instance that's ready to view in DPM. Use the provided suggestions to set up and configure the DPM Workspace for that instance. For example, if planning data isn't used in the instance, then the DPM Admin Center guides you on how to hide the Plan tab. The DPM Admin Center also provides links to appropriate tables to create or edit services, applications, and portfolios. Here are more tasks a DPM administrator can do with the DPM Admin Center.

- Use workflows to identify and set up solutions (services, service offerings, business applications, and application services). The guided walk-through includes insights into each solution's data readiness for DPM.
- Access the settings pages to configure the DPM Workspace using the provided system properties.
- Configure solution page headers and the General info section of the Info tab.
- Map KPI groups to solutions to view metrics in the DPM Workspace.
- Use links to helpful resources.
- Refer to common question links to aid implementation.
- Follow the prompts for more setup tasks.

### View relationship maps in Digital Portfolio Management

Use the ServiceNow platform Unified Map to see a more holistic and comprehensive view of your service and application relationships. The Unified Map replaces the custom DPM relationship map, but you still access the Unified Map in the context of the DPM Workspace. For more information on the platform map, see Unified Map.

### Update KPIs in Digital Portfolio Management

- Update the description of a KPI indicator that's provided by the base system. The KPI indicators on solution records come from Performance Analytics (PA). In the DPM Workspace, you can select a tooltip on a solution indicator card to see a description that clarifies the indicator data. Even though the descriptions come with the base system, administrators can update the descriptions to accommodate the organization.
- With the June 2024 release and after, the **KPI latest score** system property is set to true for new and zBoot customers.

### Work with Needs attention panels in Digital Portfolio Management

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Added problem (PRB) records to the Needs attention attributes so that you can identify problems on the following solutions.
  - Services and service offerings. Problems are related to the service offering via the service offering record on the form, impacted services related list, and on the affected CIs related list. Problems are then rolled up to the parent service and should be deduplicated at the parent service level.
  - Business applications. Problems are related to the application service via the configuration item field on the form. Problems are then rolled up from the application service to the business application and should be deduplicated at the parent service level.
  - Application services. Problems are related to the application service via the configuration item field on the form.
- Updated the team logic in the DPM Contacts tab for each solution. When you select the Contacts icon ( ) next to the Needs attention panel, the Teams tab includes multiple teams that support the record. The multiple team assignment is an existing platform feature that was added to Service Portfolio Management so the teams can be viewed in the DPM Workspace. For more information on the platform feature, see Teams related list.

## Changed in this release

### Reflow for configurable workspace

The Digital Portfolio Management configurable workspace supports reflow, which enables pages and content to be zoomed up to 400% through your browser settings without loss of content or functionality. For information about how to upgrade, see the Accessibility information that follows.

## Activation information

Install Digital Portfolio Management by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Accessibility information

### Accessibility improvements

Accessibility improvements were completed to create a configurable workspace that supports WCAG 2.1 Level AA conformance.

### Reflow

The Configurable Workspace supports reflow, which enables pages and content to be zoomed up to 400% through your browser settings without loss of content or functionality. Additionally, content can be enlarged without scrolling in two dimensions at a width equivalent to 320 CSS pixels or a height equivalent to 256 CSS pixels. Page layouts are transformed into a vertical, stacked view automatically when users increase browser zoom to 400%.

This enhancement helps users with low vision or who have trouble seeing web content in a browser due to monitor size, device type, poor lighting, or other situations. Reflow can be turned off with a system property for instances, experiences, and pages. See Reflow for Configurable Workspace for details.

## Related ServiceNow applications and features

### Service Portfolio Management

Use the ServiceNow® Service Portfolio Management application to set up and manage your services and offerings, and then organize them in portfolios. In the Digital Portfolio Management application, you can view the health and status of those portfolios and track them in one centralized location.

### Service Builder

As you view service information in Digital Portfolio Management, you can create and edit services and service offerings with quick access to the ServiceNow® Service Builder application.

> **Important:**
> If you use Service Builder and plan to upgrade to the current version of DPM, you must also upgrade to the current version of Service Builder at the same time.

### Performance Analytics

Use ServiceNow® Performance Analytics to create reports on key performance indicators (KPIs) to monitor and analyze metrics.

### Digital Portfolio Management related applications and data sources

Other related ServiceNow applications bring in data from your services, service offerings, business applications, and application services for you to view all of them in your unified workspace view. All the related applications are optional and aren't required to use Digital Portfolio Management. This topic also offers links to Knowledge Base articles with more data source information.

### Incident Management release notes

The ServiceNow® Incident Management application restores normal service operations while minimizing the impact to business operations and maintaining quality. Incident Management was enhanced and updated in the Xanadu release.

## Incident Management highlights for the Xanadu release

Control when an incident record link in the email notifications redirects to the incident record in Service Operations Workspace (SOW).

See Incident Management for more information.

## Changed in this release

### Email notification link redirection behavior

In email notifications, you can now decide where the links to an incident record are redirected. Instead of an incident record automatically opening in the classic UI16 interface in Incident Management, the incident record can be opened in SOW. The incident record link in an email notification opens in SOW only if the following conditions are met:

- The **Redirect SOW Email notification** (*sow_email_notification_redirect*) system property is set to true.
- The user selecting the incident record link has the sn_sow.sow_user role.

The ITSM Notifications Redirection (com.snc.itsm.notifications_redirection) plugin is installed and activated automatically to support this behavior.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

To ensure consistency, the email notification template is updated to send the notification from SOW in the same format as sent from classic UI16 interface. Also, the template theme is updated to match the Next Experience theme.

## Activation information

Incident Management is a ServiceNow AI Platform feature that is active by default.

### Now Assist for IT Service Management (ITSM) release notes

The ServiceNow® Now Assist for IT Service Management (ITSM) application brings generative AI to IT Service Management. Now Assist for IT Service Management (ITSM) was enhanced and updated in the Xanadu release.

## Now Assist for IT Service Management (ITSM) highlights for the Xanadu release

**Xanadu Patch 9**

- Identify the category, subcategory, and configuration item for a given incident automatically using a team of AI agents in the Triage and categorize ITSM incidents agentic workflow.
- Get recommendations to resolve incidents by using a team of AI agents for catalog, knowledge, and past incidents in the Investigate and resolve ITSM incidents agentic workflow.
- Manage Microsoft 365 group members using AI agents in the Manage Microsoft 365 group members agentic workflow.
- Generate the **Risk and impact analysis** and the **Justification** fields using the AI agents in the Generate change request plans agentic workflow.

Xanadu Patch 7: Scale your workflows, enhance productivity, and complete work autonomously using IT Service Management AI agent collection.

Xanadu Patch 3

- Provide change managers with an explanation of the risk rating in a change request by using the Now Assist icon .
- Enable agents to ask questions that are related to an incident in the Now Assist panel.
- Enable agents to generate resolution notes for an incident on demand by using the Now Assist context menu.
- Provide requesters with proactive actionable notifications as part of ITSM Virtual Agent pre-built large language model (LLM) topic conversations.

Xanadu Patch 1

- Enable agents to make a more informed decision quickly and efficiently when they're approving a change by using change request summarization.
- Enable agents to reply to common questions asked in chats by using the Now Assist icon in chat reply recommendations.
- Enable agents to get a better understanding of the chat and incident context by using the Sidebar discussion summarization when they're proposing resolutions to the requesters.

See Now Assist for IT Service Management (ITSM) for more information.

**Important:**
Now Assist for ITSM is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

© 2026 ServiceNow, Inc. All rights reserved.

# New in the Xanadu release

## Xanadu Patch 9

### Using IT Service Management AI agent collection

Use the IT Service Management AI agent collection to boost productivity, and autonomously resolve business tasks.

#### Available agentic workflows

| Agentic workflows | Description |
|---|---|
| Triage and categorize ITSM incidents | Identify the category, subcategory, and configuration item for an incident automatically, and link associated major incidents or known problems. |
| Investigate and resolve ITSM incidents | Get recommendations to resolve an incident based on the incident number. Check for related catalog items, Knowledge articles, and similar resolved incidents to generate resolution steps for the incident. |
| Manage Microsoft 365 group members | Add or remove groups and email distribution lists from the Microsoft 365 group. |

### IT Service Management AI agent collection Generate change request plans agentic workflow

Use the following additional AI agents to handle change requests.

| AI agent | Description |
|---|---|
| Change risk and impact analysis AI agent | Analyzes the potential risk and impact of a change request. |
| Change justification proposal AI agent | Proposes justification for a change request. |

### Generate a Major Incident email content recommendation by using Now Assist for IT Service Management (ITSM)

Draft a communication for a major incident using an email template. You can fill in the template field values with an AI-generated response.

### Generate comments and work notes using the Now Assist context menu

Enable your agents to generate comments and work notes quickly and add them to incidents using the Now Assist panel.

### Incident sentiment and sentiment trend

Make informed decisions on incidents by considering the requester's sentiments and the reasoning behind them.

### Suggested steps generation in Now Assist for IT Service Management (ITSM)

Automatically generate suggested steps to resolve an incident by analyzing the solutions from clusters of similar resolved incidents.

### Summarizing attachments in the Incident summarization skill

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Summarize, analyze, and extract data from attachments that are of type PNG or JPEG using Document Intelligence in the Incident summarization skill.

### Using self service to deflect incidents in a ServiceNow portal by using Now Assist for IT Service Management (ITSM)

Designed to reduce the number of incidents to be resolved by deflecting issues with self-service.

### Customizing a Now Assist for IT Service Management (ITSM) change risk skill

Efficiently explain the risk of a change request by adding custom input fields to the following input tables:

- Change request
- Past similar change request
- Incident caused by change

### Refining a change risk explanation response

Refine the explanation to a change risk by shortening or lengthening a response by using Now Assist for IT Service Management (ITSM).

### Risk Assessment as input to calculate a change risk

Use risk assessment values as an input to explain the risk of a change request.

### Generating an email response by using Now Assist for IT Service Management (ITSM)

Get recommendations for email responses that agents can review and send to users. Agents can also get email template and content edit recommendations from Now Assist for IT Service Management (ITSM).

### Monitoring task status using pre-built LLM topics with Now Assist in ITSM Virtual Agent

Copy and customize a ITSM Virtual Agent core ITSM topic template to track the status of a task by using Now Assist in ITSM Virtual Agent.

### Xanadu Patch 7

### Using IT Service Management AI agent collection

Use IT Service Management AI agent collection to boost productivity, and autonomously resolve business tasks.

**Available AI agents use cases**

| AI agent use case | Description |
|---|---|
| Generate post incident reviews | Enhance IT productivity during major incidents by minimizing the time required to generate post-incident reviews using AI agents. This process helps improve communication and avoid outages. |

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

**Available AI agents use cases (continued)**

| AI agent use case | Description |
|---|---|
| | **Important:** To enable the display of the Generate post incident reviews use case, you must activate the Incident Management - Major Incident Management plugin (com.snc.incident.mim). For more information, see Activate Incident Management - Major Incident Management. |
| Generate change request plans | Enhance IT productivity and help decrease the time to schedule change and manage change risk using AI agents. These AI agents can look up similar changes, generate implementation, back out, and test plans to manage change effectively. |
| Categorize incidents | Autonomously recommend incident categorization using AI agents. The AI agent assigns a category, subcategory, and a configuration item (CI) to incidents based on the incident description. The assigned CI is also based on callers associated with that item. |
| Notify users with Twilio | Send text messages via SMS to recipients manually using AI agents to help improve the time required for subject matter expert response.<br>**Important:** To enable the display of the Notify users with Twilio use case, you must activate the Twilio Spoke plugin (sn_twilio_spoke). For more information, see Twilio Spoke. |

## Xanadu Patch 3

### Risk rating explanation for a change request

Provide your change managers with a better understanding of the risk rating of a change request, including the potential impacts and risks, by generating the risk explanation by using the Now Assist icon. The risk rating explanation can be generated on the change request form and in the Now Assist panel.

### Ask questions about an incident by using the Now Assist panel

Enable your agents to quickly obtain common incident information conversationally within the incident record by asking questions in the Now Assist panel. Topics

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

include the caller's assets, caller's recent incidents, on-call experts, and similar resolved incidents.

**Enhanced incident resolution notes using the Now Assist context menu**

Provide your agents with enhanced resolution notes information in the incident summary, including the root cause and steps taken to resolve the issue, by using the Now Assist context menu.

**Proactive actionable ITSM Virtual Agent notifications**

Provide your agents with proactive actionable notifications as part of ITSM Virtual Agent pre-built Large Language Model (LLM) topic conversations that are designed to help your users complete common IT-related tasks.

**Change request summarization enhancements**

Provide your change managers with an improved change request summary including additional details, such as the affected configuration items (CIs) and impacted services.

**Incident summarization enhancements**

Provide your agents with an improved incident summary by including additional details, such as the service level agreements (SLAs), affected CIs and impacted services, and child incidents.

**Xanadu Patch 1**

**Summarize a change request**

Provide your change managers with a better understanding of the content, intent, and impact of a change request by viewing the change summarization on the change request form and in the Now Assist panel.

**Generating a knowledge article from similar incidents**

Enable your agents to generate a comprehensive knowledge article by leveraging information from a similar set of incidents.

**Generating chat reply recommendations**

Provide your agents with quick answers to common questions that are asked in chats by using the Now Assist icon ✦ in chat reply recommendations.

**Summarizing a Sidebar discussion**

Enable your agents to summarize Sidebar chats and post summaries into the work notes of incidents, changes, requests, problems, and knowledge base tasks (any record type where Sidebar discussions are enabled) by using Sidebar discussion summarization.

## UI changes

### Xanadu Patch 9

**Terminology change**

- The term use case is replaced with the term agentic workflow. For example, the Notify users with Twilio use case is now referred to as the Notify users with Twilio agentic workflow.
- The naming of the AI agents has changed. For example, Twilio SMS texter has been renamed to Twilio SMS texter AI agent.

**New look and feel for the display of incident and change request summarizations**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Get the summary of an incident or a change request by using the new and more intuitive summarization user interface. The new interface is available in Service Operations Workspace and in the Core UI.

## Changed in this release

### Xanadu Patch 9

**System property to display knowledge article templates**

Display Knowledge article templates that you can use to create articles by using a system property. In earlier releases, the templates were displayed by default.

**IT Service Management AI agent collection Triage and categorize ITSM incidents agentic workflow**

The Categorize incidents use case has been renamed to the Triage and categorize ITSM incidents agentic workflow.

The following AI agents have been added to the workflow:

- Link major incident AI agent
- Link incident to problem AI agent

The Incident categorize AI agent has been renamed to Categorize incident AI agent.

**Xanadu Patch 3 Resolution notes generation skill enhancements (for upgrade customers)**

Enhance your existing incident resolution notes generation skill to show the root cause and resolution steps taken. Enable this enhancement by using the toggle switch on the Configure response screen in the Now Assist Admin console.

> **Note:**
> This option is available only when the incident resolution notes generation skill has been activated prior to upgrading.

## Activation information

Install Now Assist for ITSM by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

- **Important:**
  To enable the display of the Generate post incident reviews use case, you must activate the Incident Management - Major Incident Management plugin (com.snc.incident.mim). For more information, see Activate Incident Management - Major Incident Management.

- **Important:**
  To enable the display of the Notify users with Twilio use case, you must activate the Twilio Spoke plugin (sn_twilio_spoke). For more information, see Twilio Spoke.

## Additional requirements

The Now Assist for ITSM application requires an IT Service Management Pro Plus or Enterprise Plus license.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Related ServiceNow applications and features

### Now Assist

Help improve the productivity and efficiency in your organization, deliver better self-service, recommend actions, provide answers, and empower your users to search more effectively.

### Now Assist Admin console

Use the Now Assist Admin console to provide you with quick and easy access to the important information that you need to set up, configure, and monitor Now Assist applications and features.

### Now Assist panel

Use this conversational interface in Service Operations Workspace to summarize a chat, an incident, or resolution notes so that you can get the context of this information more quickly.

### Now Assist skills

Use the Now Assist products to provide generative AI skills to meet the needs of users in different workflows, including case or incident summarization, chat summarization, resolution notes generation, and code generation.

### On-Call Scheduling release notes

The ServiceNow® On-Call Scheduling application helps you verify that dedicated support team members are available to resolve issues when they occur. On-Call Scheduling was enhanced and updated in the Xanadu release.

## On-Call Scheduling highlights for the Xanadu release

- Reduce and resolve gaps in on-call shifts more efficiently with the new 2024 schedule engine.
- Reduce the time required to add, remove, or move members from a shift more efficiently.
- Confirm member continuity with the new schedule engine.

See On-Call Scheduling for more information.

## Changed in this release

### On-Call Scheduling new schedule engine

The new 2024 schedule engine offers a more efficient and improved experience for managing your schedules and shifts. On-Call Scheduling supports an automatic upgrade to the new schedule engine.

### On-Call Scheduling new schedule engine

The new schedule engine introduces the following enhancement:

- Shift support to resolve gaps resulting from member placement.
- Resolve daily rotation gaps, caused by adding or removing members, holiday schedules, or extra time.
- Verifies user continuity based of the last on-call member from the previous schedule.
- Improved performance by reducing the time required to add, remove, or move members.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Activation information

On-Call Scheduling is available with activation of the ServiceNow AI Platform On-Call Scheduling plugin (com.snc.on_call_rotation). For details, see Activate On-Call Scheduling. Activating this plugin activates the following third-party libraries:

- FullCalendar library
- DHTMLX scheduler

**Note:**
The On-Call Scheduling (com.snc.on_call_rotation) plugin is active by default for zBoot customers.

## Related ServiceNow applications and features

### Notify

In addition to emails, you can send on-call escalation notifications as SMS alerts and voice calls. Engage on-call escalation in ServiceNow® Notify conference calls.

### ITSM Mobile Agent

Access the upcoming shifts and time-off requests of team members in the ServiceNow® ITSM Mobile Agent app. Send On-Call Scheduling escalation notifications as mobile push notifications.

### Service Operations Workspace for ITSM

Identify available On-Call Scheduling members of a support group who can be contacted to resolve an issue in ServiceNow® Service Operations Workspace.

### ITSM Mobile Agent release notes

The ServiceNow® ITSM Mobile Agent app delivers base system mobile-first experiences designed for IT agents to triage, act on, and resolve incidents on the go. ITSM Mobile Agent was enhanced and updated in the Xanadu release.

## ITSM Mobile Agent highlights for the Xanadu release

Starting in version 9.0, you can do the following:

- Experience the new data visualizations for the analytics on the My team and Major incidents applets.
- Enable dark theme for active calls on the Collaborate section of the My work applet.

See ITSM Mobile Agent for more information.

**Important:**
ITSM Mobile Agent is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## UI changes

### Data visualizations changes for the analytics section

Starting in version 9.0, experience the new accessible data visualizations for the analytics on the following sections of the applets:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- My team applet: Performance metrics, My team's weekly opened incidents, and My team dashboard.
- Major incidents applet: Major incident dashboard, and Major incidents opened graph.

These changes are available in the base system for both the new or upgrade customers. You can also view mobile analytics in the Platform analytics workspace to configure or create new data visualization. For more information, see Create a mobile analytics preview.

For the upgrade customers who have already customized the analytics sections of the applets, the data visualizations changes are not available by default. You can enable the new analytics section records from the Mobile Agent section of the Mobile App Builder to view the visualized changes.

## Activation information

Install ITSM Mobile Agent by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Accessibility information

**Dark theme**

Starting in version 9.0, enable the dark theme for active calls in the Collaborate section of the My work applet in ITSM Mobile Agent. This option is commonly used to alleviate eye strain and improve readability.

**Data visualization changes**

Starting in version 9.0, accessible data visualizations for the analytics on sections of the applets are available. For more information, see the UI changes section.

### Performance AnalyticsITSM dashboards release notes

The ServiceNow® Performance Analytics ITSM dashboards provide several Platform Analytics solutions that contain preconfigured dashboards. Performance Analytics ITSM dashboards was enhanced and updated in the Xanadu release.

## Performance Analytics ITSM dashboards highlights for the Xanadu release

Experience the enhanced Performance Analytics ITSM dashboards in the Xanadu release.

See Legacy: Performance Analytics ITSM Dashboards for more information.

## New in the Xanadu release

**Next Experience Legacy: IT Executive dashboard**

Get insights into the IT Service Management (ITSM) data using the ITSM Success Dashboard. This dashboard provides metrics for executives and managers to take informed decisions. Agents can use the Service Operations Workspace for ITSM Agent dashboard to get information about their work. These dashboards replace the existing Performance Analytics dashboards.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Related ServiceNow applications and features

### Performance Analytics (Indicator data sources)

Use ServiceNow® Performance Analytics to create reports on key performance indicators (KPIs) to monitor and analyze metrics.

### Success Dashboard

The ServiceNow® Success Dashboard enables the leadership team and process owners to gain insights into the performance of their ServiceNow® IT Service Management (ITSM) implementation using the KPIs defined by the ServiceNow AI Platform®.

### Service Operations Workspace for ITSM

Improve your ITSM agent experience and manage your IT fulfillment volume more efficiently by using ServiceNow® Service Operations Workspace. Manage your schedule and complete training by using ServiceNow® Workforce Optimization for ITSM in the Service Operations Workspace.

### Proactive Engagement release notes

The ServiceNow® Proactive Engagement application helps organizations improve their employee digital experience, productivity, and satisfaction by proactively enabling employees to self-solve digital issues that they experience on a day-to-day basis. Proactive Engagement is a new application in the Xanadu release.

## Proactive Engagement highlights for the Xanadu release

- Proactive Engagement integrates with the ServiceNow® Digital End-User Experience (DEX) solution to proactively detect issues and enable end users to resolve them.
- Configure the DEX metric rule and Proactive Engagement resolution with Engagement settings.
- Use the Proactive Engagement workbench experience for lifecycle management of resolutions.

See Proactive Engagement for more information.

## Proactive Engagement features

### Exploring Proactive Engagement

Use Proactive Engagement to empower employees to self-solve digital experience issues by using the proactive issue detection and resolution capability of Digital End-User Experience.

### Configuring Proactive Engagement resolutions with DEX

Engage employees through ServiceNow® Virtual Agent and configure Engagement settings to define how employees can self-solve digital experience issues.

### Proactive Engagement life-cycle management

View and manage the life cycle of Proactive Engagement resolutions through the workbench.

Explore and utilise the different use cases ServiceNow® has to offer as part of the Proactive Engagement base system.

## Activation information

Install Proactive Engagement by requesting it from the ServiceNow Store. Activate the following plugins:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Proactive Engagement (sn_pren)
- DEX Application and Device Health (sn_dex)
- Glide Virtual Agent (com.glide.cs.chatbot)

Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Related ServiceNow applications and features

### Digital End-User Experience

The ServiceNow® Digital End-User Experience (DEX) solution is a cloud-based tool providing IT with comprehensive visibility and monitoring for user applications, networks, and devices. The DEX suite includes these products: Application & Device Health for IT to proactively resolve device and application issues and Desktop Assistant for easy access to self-service options.

### ITSM Virtual Agent

The ServiceNow® Virtual Agent application enables you to scale your IT organization, where technicians can address more challenging IT-related user requests and incidents. ITSM Virtual Agent was enhanced and updated in the Vancouver release.

### Success Dashboard

The ServiceNow® Success Dashboard enables the leadership team and process owners to gain insights into the performance of their ServiceNow® IT Service Management (ITSM) implementation using the KPIs defined by the ServiceNow AI Platform®.

### Problem Management release notes

The ServiceNow® Problem Management application helps you identify the cause of errors in the IT infrastructure that are reported as occurrences of related incidents. Problem Management was enhanced and updated in the Xanadu release.

## Problem Management highlights for the Xanadu release

- Introduction of Problem Management models to provide support for additional problem and problem task scenarios
- Known error articles are enabled by default for new customers
- Configure email notifications to redirect to Service Operations Workspace instead of the classic UI16 experience
- Re-assess a problem task from Work In Progress

See Problem Management for more information.

## New in the Xanadu release

### Initial support for Problem Management models

Introduction of Problem Management models, beginning with one default problem model (General) and two default problem task models (Root cause analysis and General).

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The default models are equivalent to the base life cycle in the Washington DC release. This initial support allows for the creation of custom models to tailor additional scenarios for specific use cases.

**Note:**

If you are using Service Operations Workspace 5.x and you enable Problem Management models, you will manage problems and problem tasks in the classic UI16 experience, rather than in Service Operations Workspace.

Service Operations Workspace 6.x is based on the Xanadu release and it supports Problem Management models.

## UI changes

### Problem form

The **First reported by** field has been renamed **Origin task** for new customers.

### Prompt when using the Add All button in the Multi-Record Associator

Verify the number of incidents that will be associated with the current problem, helping to prevent associating multiple unintended records.

## Changed in this release

### Re-assess a Problem Task from the Work in Progress state

Additional flexibility for the workflow of a problem task analyst.

### Email notification redirection behavior

When users select the problem record link in their email notifications, they can be redirected to the problem record in Service Operations Workspace instead of the classic UI16 experience. The ITSM Notifications Redirection (com.snc.itsm.notifications_redirection) plugin is installed and activated automatically to support this behavior.

### Known error articles available by default

Problem Knowledge Integration is activated by default for new customers.

### Problem Management Migration Utility

The Xanadu base problem files list is updated so the Problem Management Migration Utility can detect customizations.

## Activation information

Problem Management is a ServiceNow AI Platform feature that is active by default.

### Service Operations Workspace for ITSM release notes

The ServiceNow® Service Operations Workspace application is a configurable workspace that provides a unified experience for multiple IT Service Management and IT Operations Management capabilities. You can configure your agent experience by using the interface of Service Operations Workspace for ITSM. Service Operations Workspace for IT Service Management was enhanced and updated in the Xanadu release.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Service Operations Workspace for ITSM highlights for the Xanadu release

- Use the simplified navigation from Admin Center to manage configurations for incidents, problems, change requests, and the contextual side panel in the record pages in Service Operations Workspace for ITSM. It improves the administrator's experience.
- Migrate your ITSM Agent Workspace features to Service Operations Workspace for ITSM with an on-screen utility.
- Configure the user access for various record pages in Service Operations Workspace for ITSM by using granular roles.
- View the Configuration Item (CI) dependency map for reference fields in an incident record.
- View the VIP field decorator on a caller field in an incident record for VIP users.
- Test the features and workflows for Incident Management in Service Operations Workspace for ITSM with quick start tests.
- Broadcast communication messages as announcements in Major Incident Management.
- Resolve the password reset related incidents by using the **Password reset** UI action on an incident record.
- Identify an interaction record for its precise processing by specifying the values for its **Opened for** and **Short description** fields.
- Enable a service desk agent to reset a user password in Service Operations Workspace for ITSM.
- Get AI-powered search results for these record types: incident, incident task, problem, problem task, change request, change request task, interaction, and request. These AI-powered search results help you to quickly find the solutions you need.
- Manage the life cycle of a problem by using the configurable and dynamic **Overview** tab.
- Use Guided Tours to learn about a concept or process within Service Operations Workspace for ITSM.
- Benefit from accessibility improvements to create a configurable workspace that supports Web Content Accessibility Guidelines (WCAG) 2.1 Level AA conformance.
- Starting in version 6.1 you can do the following:
  - Configure the Interaction Management features from the SOW admin center.
  - Provide users with current resources for learning about SOW admin configuration.
  - View the requester’s device details from the record information card to quickly resolve hardware-related issues.
  - Add one or more approvers to the request or a request item to speed up the process and fulfill the user's request more efficiently.
  - Improve the system performance by configuring the count of number of incident records in the incident list page.
  - Copy the sys ID or the URL of a record from the SOW list page to share with other agents, enabling quicker resolution of the issue.
  - Chat or make calls to communicate with stakeholders using the **Collaborate** option in the contextual sidebar of problem and problem task records.
  - Configure the automatic closure of interaction record from an incident record.
  - Flag the events on the activity stream of a major incident to add the events to the post incident report events timeline.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- View the post incident report information on the **Post incident report** tab with the Incident management granular roles.
- Add related interaction records to an incident record.
- Define, customize, and apply tags to the activities in the activity streams of an incident record.
- Experience a clean UI with collapsible activity stream tiles.
- Resolve incident or support issues faster and more efficiently with response templates.
- Get similarity-based problems and change requests as recommendations by recognizing the similar patterns between the fields of the incident table and the problem or change request table.
- Manage the Standard Change life cycle.
- Explore and filter the Standard Change Catalog.
- Propose mass configuration item updates in Change Management.

See Service Operations Workspace for ITSM for more information.

**Important:**
Service Operations Workspace for ITSM is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## Important information for upgrading Service Operations Workspace to Xanadu

Ensure that the following applications have compatible upgraded versions:

- Service Operations Workspace ITSM Applications application (sn_sow_itsm_cont)
- Service Operations Workspace ITOM Applications application (sn_sow_itom_cont)

### Compatible Service Operations Workspace versions

| Service Operations Workspace for ITSM (sn_sow_itsm_cont) | Service Operations Workspace for ITOM (sn_sow_itom_cont) |
|---|---|
| 1.1.x | 21.0.y |
| 1.2.x | 21.1.y |
| 1.3.x | 21.2.y, 21.5.y, and 21.6.y |
| 2.0.x | 22.0.y |
| 2.1.x | 22.1.y and 22.y.y |
| 3.1.x | 23.y.y |
| 4.x.x | 24.y.y |
| 5.0.x | 24.2.y |
| 5.1.0 | 25.2.0 |
| 6.1.1 | 26.0.12 |

## New in the Xanadu release

### Admin Center changes

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Migrate your ITSM Agent Workspace features to Service Operations Workspace by using the on-screen utility without having to rebuild these features. This migration includes customizations done on ITSM Agent Workspace for various forms, UI actions, and lists.
- Configure the availability and order of the contextual side panel tabs in record pages.
- Configure modern Change Management features from the Service Operations Workspace Admin Center to increase change efficiency, accelerate change approvals, drive data-driven risk analysis, and leverage DevOps data for change automation.
- Configure the visibility settings of the **Overview** tab for each problem record state.
- Configure the visibility settings of the **Overview** tab in the incident record page for tier 1 agents from the Incident record section of Incident Management in Admin Center.
- Configure Service Desk assisted Password Reset to accomplish the following tasks:
  - Assign the password reset service desk role to the user.
  - Create a credential store record to configure access to your credential store server while a user is changing or resetting a password.
  - Configure the verification methods for the service desk process.
  - Configure the password policies.
- Starting in version 6.1, you can do the following actions from the SOW Admin Center:
  - Configure Interaction Management in SOW.
  - Browse through a collection of SOW learning resources to help users understand more about SOW configuration.

### Granular roles

Configure the user access for various record pages in Service Operations Workspace for ITSM by using the following granular roles, and the user's access to these record pages is based on the role assigned.

- Incident: sn_incident_read and sn_incident_write
- Request: sn_request_read, sn_request_write
- Problem: sn_problem_read, sn_problem_write
- Change: sn_change_read and sn_change_write

Because these granular roles inherit the sn_sow.sow_home and sn_sow.sow_list roles, the users with the granular roles can access the Service Operations Workspace for ITSM home and list pages.

**Note:**
When upgrading to Xanadu, the email_composer user role is added to the users along with the respective granular roles. The time to add the role depends on the number of users having the granular roles for write function and impacts the overall instance upgrade time. Adding the email_composer user role ensures that the granular write users have access to the email templates in SOW.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

### Interaction record page enhancements

View the requester's details, their assets, recent interactions, and related links from the Opened for card. This centralized access point provides an agent with a comprehensive overview to efficiently manage the requester's information.

To streamline the workflow and maintain focus on interactions, a modal-based interface for record association is implemented for the interaction record in Service Operations Workspace. This interface simplifies the workflow by automatically suggesting tables that are frequently associated with Interactions, including the change, incident, knowledge, problem, and request. This enhancement is designed to streamline operations and enhance user efficiency.

Starting in version 6.1, view all available metrics of the requester's assets that are collected through the Digital End-User Experience (DEX) architecture from the interaction record.

### Incident record page enhancements

The incident record page has the following enhancements:

- View the Configuration Item (CI) dependency for the following reference fields:
  - Configuration item
  - Service
  - Service Offering
- View the VIP field decorator for a caller field in the **Details** tab and in the **Record information** tab of the contextual side panel for VIP users.
- Search and filter the configuration items (CI) that are based on the configuration class when you add the affected CIs to an incident record.
- When an agent reports a knowledge gap from an incident record, the success message that contains the created knowledge feedback task record link is displayed. You can select the link to open the knowledge feedback task record on a separate tab to provide the information and create an article for the knowledge gap.
- For issues related to Password Reset, you can now select **Password Reset** as the incident category. After this category is set and the incident record is saved, you can resolve the incident by using the Reset password UI action. For more information on Password Reset, see Password Reset in SOW.
- Starting in version 6.1, the incident record has the following enhancements:
  - The activity stream displays the activity information in tiles that are collapsible. By default, the first activity tile, either a work note or comment, is expanded and the consecutive tiles are collapsed. This ensures a clean UI and enables you to expand and view the activity information when required. It ensures a clean UI and enables you to view the activity information when required. To enable this feature, set the **Enable the expandable activity stream tiles** (*enableExpandableActivityStreamTiles*) UX page property to `true`.
  - An internal tag is added to the work notes.
  - You can define, customize, and apply tags to the activity streams. These tags help you filter the activity based on the tags. You can use the **Activity stream property** (*activitystreamprops*) property to define and customize your tags.
  - Add related interaction records to an incident from the Interactions related list of the **Related records** tab.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Resolve cases or support issues faster and more efficiently with response templates. Access the response templates (formerly known as templated snippets) from the contextual side panel of an incident record to quickly copy the reusable messages and provide quick and consistent messages to users, or to display standard chat response messages to the requesters in chat.
- Use the **Opened By** field in the Origin card of the Record information side panel tab of an incident to view the user who created the incident's origin record.
- Use the **Type** field in the Origin card of the Record information side panel tab of an incident to view the channel type of the incident's origin record. For example, if the origin is an interaction record, the type can be Chat.
- If an incident is created from an interaction record, you have the following options:
  - View chat transcript: View the chat history with the caller of the interaction record. This option is available only if the interaction record is of the Chat type and is in Closed complete or Closed Abandoned state.
  - View work notes: View the work notes history of the interaction record.

### Announcements for a major incident

Keep your users informed about an ongoing major incident by broadcasting communication messages about it. Create and configure announcements from the **Communicate** tab of the major incident record. Announcements can appear in an announcement banner or an announcement widget that users can view on their IT service portal.

### Major incident record enhancements

Starting in version 6.1, you can do the following:

- View the information on the **Post incident report** tab using the incident management granular roles such as sn_incident_read and sn_incident_write.
- Flag events on the activity stream of a major incident to include them in the post incident report events timeline.
- Access the Collaborate side panel tab and its features from the incident communication task (ICT) record associated with the major incident record.
- Select or change the SMS templates for the major incident SMS communication to the required end users with the following roles:
  - major_incident_manager
  - sn_incident_write user who has the required communication related roles
  - ITIL user to whom the major incident is assigned

### Automatic closure of an interaction from an incident

Starting in version 6.1, when an incident record created from an interaction record is resolved, the interaction record is automatically set to **Wrap up** or **Closed complete** state. You must set the **Auto close the origin interaction** (*sn_sow_inc.autoclose_origin.interaction*) system property to `true` and the **Close interaction from incident** business rule must be `Active`.

### SOW list page enhancements

Starting in version 6.1, you can do the following:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- View the user who updated the incident record using the **Updated** column on the SOW incident list page.
- Copy the sys ID or the URL of a record from the SOW list page to share with other agents, enabling quicker resolution of the issue.
- Configure the *fuzzyCount* property to display the number of records on the list page.

### Collaboration in Problem Management

Starting in version 6.1, you can chat or make calls to communicate with stakeholders using the **Collaborate** option in the contextual side panel of problem and problem task records.

### Change Management enhancements

Starting in 6.1, you can do the following:

- Find your change model or template when raising new changes by using the enhanced filtering and search capabilities for the Standard Change Catalog.
- Manage the Standard Change life cycle.
- Propose, modify, and retire Standard Change templates.
- Propose mass configuration item (CI) updates.
- Propose changes to single CIs.
- Automate the update and audit trail of CIs, with mass updates and change proposals recording the attributes being changed and (optionally) updating the CMDB automatically.

### Quick start tests for Incident Management in Service Operations Workspace for ITSM

After upgrades and deployments of new applications or integrations, run quick start tests to verify that Incident Management features work as expected. If you customized Incident Management, copy quick start tests and configure them for your customizations. The following quick start tests are added for Incident Management in Service Operations Workspace for ITSM:

- Create problem from incident: Enables you to test the problem creation from an incident by using the Create problem UI option.
- Verify Assign to me button functionality: Enables you to test the incident assignment by using the Assign to me UI option.

### Password Reset in Service Operations Workspace for ITSM

Assist users to quickly access their accounts by enabling them to reset the user password.

### Exploring Recommended Actions for ITSM in Service Operations Workspace

Manually search for AI-powered recommendations that assist in swiftly addressing issues. AI-enhanced search results are available for these record types: incident, incident task, problem, problem task, change request, change request task, interaction, and request.

### Overview tab for problem records

Configure how and what information is displayed in the sections of the dynamic **Overview** tab for each problem state.

### Manage life cycle of problem tasks

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Provide additional flexibility for problem task analysts, including the ability to reassess problem tasks from the Work in Progress state.

### Initial support for problem models

Introduction of Problem Management models, one default problem model (General) and two default problem task models (Root cause analysis and General).

The default models are equivalent to the base life cycle in the Xanadu release. This initial support enables you to create custom models to tailor additional scenarios for specific use cases.

**Note:**

If you're using Service Operations Workspace 5.x and you enable Problem Management models, you manage problems and problem tasks in the classic UI16 experience, rather than in Service Operations Workspace.

Service Operations Workspace 6.x is based on the Xanadu release and it supports Problem Management models.

### Shortcuts for creating fix tasks from a problem

Use the following shortcuts from the **Overview** tab of a problem:

- **Create defect** (part of Agile Development 2.0)
- **Create enhancement** (part of Agile Development 2.0)
- **Create improvement initiative** (part of Continual Improvement Management)

### Guided tours

Learn about Service Operations Workspace for ITSM through a sequence of interactive steps that guide you through a specific concept or process.

Starting in version 6.1, the following guided tours are available:

- Overview of the PAR dashboard
- Overview of the various tabs and actions of an incident record page.
- Generate and download a post incident report for sharing it with all the stakeholders.
- Overview of the various tabs and actions of a problem record page.
- Get tailored recommendations for problems
- Get tailored recommendations for interactions
- Get tailored recommendations for requests

### Add approvers to approve a request

Starting in version 6.1, to expedite the process and effectively meet the user's request, you can add one or more approvers to the request or to a specific request item. This helps to streamline the approval workflow and ensure that the user's needs are fulfilled quickly and efficiently.

## Changed in this release

### Landing page configurations from Admin Center

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

All landing page configurations such as the landing page redirection, donut configurations, and so on are grouped under the **Landing Page Configurations** section of the **Configurations** tab.

### Reordering of modules on the left navigation pane

The left navigation pane modules, such as Inbox and Lists, are reordered for improved access to these modules.

### Role to create a request from interaction and incident records

A user should now have either the itil role or sn_request_write role to create a request from interaction and incident records. Before Xanadu, users needed the interaction_agent role to create the request.

### DevOps data in change request

- View, add, and edit DevOps data in a manually created change request in Service Operations Workspace for ITSM for a unified change request experience in the DevOps Change Workspace and Service Operations Workspace for ITSM.
- Starting in version 6.1, view, add, and edit work items data in a manually created DevOps change request in Service Operations Workspace for ITSM.

### Creating change requests from problem records

You can create additional change requests, because the action is no longer hidden after it has been used once.

### Inline editing in the Problem Tasks tab

Change a field in the problem tasks list instead of opening the record and changing it on the form.

### Sidebar enhancements for incidents

The sidebar will now display recommendations for users who can assist agents in resolving incidents or tasks. A standard set of recommendations are provided to enhance the support workflow.

ITSM Pro provides the customized recommendations using an AI-based algorithm, ensuring that the most appropriate users are suggested to assist with the task.

The group addition feature offers the ability to add entire groups to a conversation. By default, all members of a group will be included in the conversation. For groups with designated on-call members, only those members are added to the conversation, enabling for more focused and efficient communication.

### Reflow for Configurable Workspace

Service Operations Workspace for ITSM configurable workspace supports reflow, which enables pages and content to be zoomed up to 400% through your browser settings without loss of content or functionality. For more information, see the Accessibility information section that follows.

### Email notification redirection behavior in Problem Management

When users select the problem record link in their email notifications, they can be redirected to the problem record in Service Operations Workspace instead of the classic UI16 experience. The ITSM Notifications Redirection (com.snc.itsm.notifications_redirection) plugin is installed and activated automatically to support this behavior.

### Work notes in Compose section

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Starting in version 6.1, the Work notes (Private) is displayed as default in the **Compose** section instead of the **Comments (Customer visible)** section for incident records.

**View the Close icon**

Starting in version 6.1, the “X” symbol of the Close icon is clearly visible on the SOW landing page.

**Complementary landmark for screen reader support**

Starting in version 6.1, the complementary landmark is available on the SOW landing page for the screen reader support.

**View the Problem and Change record information with incident granular roles**

Starting in version 6.1, when a user with incident granular roles (sn_incident_read and sn_incident_write) selects the preview info icon on the problem and change records from the related records section of the **Details** tab on an incident record, a pop up displays a message that they don’t have the permission to view the record.

**View impacted location for proposed major incident candidate**

Starting in version 6.1, you can view the impact locations for a proposed major incident candidate along with promoted major incident.

**Expansion of the compose section with activity stream**

Starting in version 6.1, when a file containing a lengthy name is attached to an incident record, and the activity stream is expanded to view the file name, the compose section also expands on the same level as the activity stream.

**Copy URL action for Incident list page**

Starting in version 6.1, you can copy and share the incident record on the Incident list page with the required stakeholders.

**Arrow orientation in record information panel**

Starting in version 6.1, the arrows next to the links in the Opened for card in the record information panel now point in the right direction, including for right-to-left languages.

**Access to form header links**

Starting in version 6.1, you can now select the form header links irrespective of the size of the browser.

## Activation information

Service Operations Workspace for ITSM is active by default and its default version is 5.0 in Xanadu. When you upgrade from any previous release to Xanadu from ServiceNow Store, Service Operations Workspace for ITSM 5.0 is automatically installed.

## Accessibility information

**Accessibility improvements**

Accessibility improvements were completed to create a configurable workspace that supports WCAG 2.1 Level AA conformance.

**Reflow**

The Configurable Workspace supports reflow, which enables pages and content to be zoomed up to 400% through your browser settings without loss of content or functionality. Additionally, content can be enlarged without scrolling in two dimensions at a width equivalent to 320 CSS pixels or a height equivalent to 256

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

CSS pixels. Page layouts are transformed into a vertical, stacked view automatically when users increase browser zoom to 400%.

This enhancement helps users with low vision or who have trouble seeing web content in a browser due to monitor size, device type, poor lighting, or other situations. Reflow can be turned off with a system property for instances, experiences, and pages. See Reflow for Configurable Workspace for details.

**Resize text**

Starting in version 6.1, text size can be increased to 400% through your browser settings without loss of content or functionality for Incident Management and Password Reset in SOW.

## Related ServiceNow applications and features

### Advanced Work Assignment

Automatically assign interactions to your agents based on their availability.

### Change Management

Control the life cycle of a change and implement the change with minimum disruption to IT services.

### Incident Management

Enable users to identify IT issues and log incidents through the Incident Management system. Efficiently track, classify, and prioritize incidents to work effectively toward their resolution.

### Interaction Management

Respond to an incoming chat, phone, walk-up, or messaging interaction quickly by using an interaction that provides a centralized location for all communication channels.

### Knowledge Management

Provide an agent with knowledge articles that include information such as self-help, troubleshooting, and task resolution.

### Notify

Provide support for SMS and voice channels on the platform to communicate with your team and customers.

### Now Assist for ITSM

Use the ServiceNow® Now Assist for ITSM application to summarize your incident information, generate resolution notes, and generate the chat information for an interaction. You can enable your agents to understand the chat and incident context and to propose quicker resolutions.

### On-Call Scheduling

Identify available on-call members of a support group who can be contacted to resolve an issue.

### Password Reset

The ServiceNow® Password Reset application enforces strong and secure passwords by enabling end users to reset or change their passwords either by using the self-service process or by requesting the assistance of a service desk agent.

### Predictive Intelligence

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Use machine-learning algorithms to provide dynamic and contextual recommendations for resolving an incident.

**Problem Management**

Identify the root cause of recurring incidents or a major incident to help prevent them from happening again.

**Recommended Actions for ITSM in Service Operations Workspace**

Get field recommendations and guidance in the side panel for the incident form in the Service Operations Workspace.

**Request Management**

Initiate a catalog request flow from a different IT Service Management flow, such as an incident flow, by using catalog requests.

**Service Level Management**

Access incident service level agreement (SLA) information on the Service Operations Workspace for ITSM landing page and incident record page.

**ServiceNow for Microsoft Teams**

Enable users to collaborate through the connected experience provided by Service Operations Workspace for ITSM.

**Service Operations Workspace for ITOM**

Configure your operator experience through a unified interface for multiple ServiceNow® IT Operations Management workflows.

**Task Intelligence for ITSM**

Use machine learning to set up, deploy, and track solution-based models to achieve important business outcomes.

**Universal Request**

ServiceNow® Universal Request empowers customers in their journey toward Enterprise Service Management (ESM) or Global Business Services (GBS) by enabling agents to resolve cases seamlessly across the enterprise to provide a better employee experience.

**Walk-up Experience**

Manage walk-up interactions and queues effortlessly by using Service Operations Workspace for ITSM.

**Workforce Optimization for ITSM**

Manage agent schedules by using Workforce Optimization for ITSM Scheduling. Use ServiceNow® Coaching to review and complete assigned trainings.

### Service Portfolio Management release notes

The ServiceNow® Service Portfolio Management application enables you to plan, design, build, and implement your service portfolios. Service Portfolio Management was enhanced and updated in the Xanadu release.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Service Portfolio Management highlights for the Xanadu release

- Updated the availability system property [com.sn.availability.v2] so you can set the time zone for service availability records.
  - Added the ability to change the global time zone for all availability results to reflect that time zone.
  - Added the ability to set the time zone for availability results to reflect a service offering commitment.
  - Updated the availability recalculations to reflect the time zone that you set.
  - Added a read-only time zone field on service availability records.
- Added a **Teams** related link tab to the service offering records so you can assign more than one team to support a service offering (one-to-many relationship).

See Service Portfolio Management for more information.

## New in the Xanadu release

### Set the time zone for availability results in Service Portfolio Management

Set the availability system property [com.snc.availability.v2] to true so you can set the time zone that you want to calculate availability results. The Availability calculations settings page provides you with the choice to calculate availability using the service offering commitment time zone (yes or no). It also provides you with the option to set the global availability time zone by selecting a time zone from a provided list. After you select **Yes** to calculate availability with the commitment time zone, the **Time zone** field on the commitment record is used to calculate the availability results. The **Time zone** field on the availability record is read only. After you opt to set the global time zone, all the availability results will use the time zone that you set as global.

**Note:**
The underlying system properties that govern the global time zone and the commitment time zone are exclusive. You can set the global time zone or set the time zone to reflect a service offering commitment but you can't set both at the same time.

### Assign multiple teams to support a service offering in Service Portfolio Management

Use the added Teams related list in service offerings to assign different group types to support a service offering. The related list functionality is an existing platform feature that was added to the Service Portfolio Management application so you can see the related support teams in the Digital Portfolio Management view. For more information on the platform feature, see Teams related list.

## Activation information

The Service Portfolio Management Core plugin [com.snc.service_portfolio_core] is available by default for IT Service Management licensed customers. For more information, see Activate Service Portfolio Management.

## Related ServiceNow applications and features

### Configuration Management

Service Portfolio Management — Core adds the Service Offering table [service_offering] to the CSDM.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

### Service Catalog

Service Portfolio Management integrates with the ServiceNow® Service Catalog at the service offering level of the application. You can choose services from an existing catalog as well as initiating service catalog additions.

### Service Level Management

Service Level Agreement (SLA) commitment support functionality is added to Service Portfolio Management by integrating with ServiceNow® Service Level Management.

### Service Builder

ServiceNow® Service Builder provides a guided walk-through to help service and portfolio owners create and edit services and service offerings.

### Digital Portfolio Management

Add ServiceNow® Digital Portfolio Management (DPM) from the ServiceNow Store to view all your Service Portfolio Management data in one centralized place. If you transition to the standard service portfolio structure as described in Service Portfolio Management portfolios, then you can use key performance indicator (KPI) groups in DPM to report on services, nodes, and portfolio performance.

## Task Intelligence for ITSM release notes

The ServiceNow® Task Intelligence for ITSM application uses machine learning to set up, deploy, and track solution-based models to achieve important business outcomes. Task Intelligence for ITSM was enhanced and updated in the Xanadu release.

## Task Intelligence for ITSM highlights for the Xanadu release

- Set up and configure a new training similarity model that identifies similarities between the fields of an incident table and a selected training table.
- Set up a similarity model using a similarity template card or the Incident Similarity model to provide recommendations for similar records on incident records and reduce handle time for agents.
- Set up the prediction preferences for a similarity model, train it with your data, and deploy the model to predict similar records.
- Track and monitor the performance of a deployed similarity model.
- Edit, train, and redeploy a similarity model based on the performance results.
- Manage how frequently the models are automatically retrained by setting the training frequency during model configuration.
- Staring in version 7.0.0, you can do the following:
  - Specify the purpose of a similar prediction model and configure the prediction preferences.
  - Set up and configure a new similarity model- **Similar open Change Requests for Incidents** to predict similar change requests based on the fields configured.
  - Set up and configure a new similarity model **Similar open Problems for Incidents** to predict similar problems based on the fields configured.
  - Choose the set of records used for training the similar incident model by selecting the conditions on the training tables and training fields for training the similarity models.

See Task Intelligence for ITSM for more information.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

**Important:**
Task Intelligence for ITSM is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

### Set up a similarity model

Set up and configure a similarity model that learns the patterns of similarity between two types of tables by comparing their fields.

You can use the similarity template card to set up a new similarity model or select the Incident Similarity model available in the base system.

### Metrics of similarity model

View the number of predictions made by a selected similarity model and the number of incidents records that provided predictions.

### Edit and redeploy the model

You can edit, retrain, and redeploy a similarity model to enhance the performance based on the model performance and impact.

## Changed in this release

### Classification model renaming

The classification model available with the base system has been renamed from **ITSM OOTB TI Solution** to **Incident Categorization**.

### Monitoring and Analytics

You can now view the number of records predicted by the similarity models in the Task intelligence analytics page.

### Updated Load Records icon

Starting in version 7.0.0, you can now viw the updated **Load Records** icon on Train the model screen.

## Activation information

Install Task Intelligence for ITSM by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Related ServiceNow applications and features

### Service Operations Workspace for ITSM

ServiceNow® Service Operations Workspace is a configurable workspace that provides a unified experience for multiple IT Service Management and IT Operations Management workflows. Configure your agent experience using the interface of Service Operations Workspace for ITSM.

### Exploring Recommended Actions for ITSM in Service Operations Workspace

ServiceNow® Advanced Recommended actions for ITSM enables you to configure and display relevant actions to agents based on record context. Agents can use these actions to help customers and resolve issues.

### Machine learning solutions for IT Service Management

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Machine learning in IT Service Management enhances business scalability and improves business operations for organizations.

### Vendor Management Workspace release notes

The ServiceNow® Vendor Management Workspace application enables you to monitor the performance of your company's vendors and manage all vendor-related information from one location. Vendor Management Workspace was enhanced and updated in the Xanadu release.

## Vendor Management Workspace highlights for the Xanadu release

- Use new vendor key performance indicators (KPIs) to monitor vendor performance.
- Benefit from accessibility improvements to create a configurable workspace that supports Web Content Accessibility Guidelines (WCAG) 2.1 Level AA conformance.

See Vendor Management Workspace for more information.

**Important:**
Vendor Management Workspace is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

### Updated Vendor KPIs

Use the new vendor KPIs that replace the legacy KPIs in the deprecated Service Offering Metric Data [service_offering_metric_data] table.

## Changed in this release

### Reflow for configurable workspace

Vendor Management Workspace configurable workspace supports reflow, which enables pages and content to be zoomed up to 400% through your browser settings without loss of content or functionality. For information about how to upgrade, see the Accessibility information section that follows.

## Deprecations

Starting with the Xanadu release, the Vendor Success Indicators plugin (com.snc.vendor.insights) is being prepared for future deprecation. It will be hidden and no longer installed on new instances but will continue to be supported. For details, see the Deprecation Process [KB0867184] article in the Now Support Knowledge Base.

## Activation information

Install Vendor Management Workspace by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes. For more information, see Activate Vendor Management Workspace.

## Accessibility information

### Accessibility improvements

Accessibility improvements were completed to create a configurable workspace that supports WCAG 2.1 Level AA conformance.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

### Reflow

The Configurable Workspace supports reflow, which enables pages and content to be zoomed up to 400% through your browser settings without loss of content or functionality. Additionally, content can be enlarged without scrolling in two dimensions at a width equivalent to 320 CSS pixels or a height equivalent to 256 CSS pixels. Page layouts are transformed into a vertical, stacked view automatically when users increase browser zoom to 400%.

This enhancement helps users with low vision or who have trouble seeing web content in a browser due to monitor size, device type, poor lighting, or other situations. Reflow can be turned off with a system property for instances, experiences, and pages. See Reflow for Configurable Workspace for details.

## Related ServiceNow applications and features

### Digital Portfolio Management

Manage and maintain all your services, applications, and products from a single location by using the ServiceNow® Digital Portfolio Management (DPM) application.

### Performance Analytics (Indicator data sources)

Use ServiceNow® Performance Analytics to create reports on Key Performance Indicators (KPIs) to monitor and analyze metrics.

### Risk Management

Use ServiceNow® Risk Management to assess risks that may negatively impact the performance of your vendors.

### Workforce Optimization for ITSM release notes

The ServiceNow® Workforce Optimization for ITSM application enables you to manage and maintain the productivity of your workforce from a single location. Workforce Optimization for ITSM was enhanced and updated in the Xanadu release.

## Workforce Optimization for ITSM highlights for the Xanadu release

- Use the Workforce Optimization for ITSM Admin Console to configure your application.
- Synchronize team calendars and events with Microsoft Outlook.
- Benefit from accessibility improvements to create a configurable workspace that supports Web Content Accessibility Guidelines (WCAG) 2.1 Level AA conformance.

See Workforce Optimization for ITSM for more information.

**Important:**
Workforce Optimization for ITSM is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

### Admin Console Experience

Use the admin console to set up and configure the Workforce Optimization for ITSM application.

### Synchronize the schedule calendar with Microsoft Outlook

**Service Operations Workspace for ITSM**

Improve your ITSM agent experience and manage your IT fulfillment volume more efficiently by using Service Operations Workspace. Manage your schedule and complete training by using Workforce Optimization for ITSM in the Service Operations Workspace.

**Skills Management**

Assess the skills that your organization needs, identify gaps, and plan for the hiring and training of your teams.

**Surveys**

Create, send, and collect responses for basic surveys. If installed, you can also use the Survey widget to set up a survey within the ServiceNow® Service Portal.

### ITSM Success Dashboard release notes

The ServiceNow® ITSM Success Dashboard application provides insights into the IT leadership team and process owners that they can use to measure the performance of their ServiceNow® IT Service Management (ITSM implementation. ITSM Success Dashboard was enhanced and updated in the Xanadu release.

## ITSM Success Dashboard highlights for the Xanadu release

Experience the new KPIs introduced in the self-solved deflections category of ITSM Success Dashboard to help resolve the digital issues encountered by users on a daily basis.

See ITSM Success Dashboard indicators for more information.

**Important:**
ITSM Success Dashboard is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

- The new Self-solved using AI Search QnA and Self-solved using Now Assist Search QnA KPIs are added to the self-solved deflections. These new contributing indicators assist users to resolve their digital issues using AI Search and the Now LLM Service.
- The ITSM Self-solved using Proactive Engagement for DEX indicator is added to self-solve deflection where employees self-solve their digital experience issues by leveraging the proactive issue detection and resolution capability of the ServiceNow® Digital End-user Experience product.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Experience the new KPIs introduced in the On-call dashboard to help track the acknowledged escalations encountered by the users on a daily basis.
- Access all the change success score related metrics categorized under the **Change Success Score** tab in the new Change Management Dashboard.

## Activation information

Install ITSM Success Dashboard by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Related ServiceNow applications and features

The ServiceNow® Benchmarks application provides instant visibility into your key performance indicators (KPIs) and trends, as well as comparative insights relative to the industry averages of your peers and to the industry top performers.

### Performance Analytics (Indicator data sources)

The ServiceNow® Performance Analytics application is an in-platform solution that enables organizations to create management dashboards, report on KPIs and metrics, and answer key business questions to help increase quality and reduce the costs of service delivery.

### HR Success Dashboard indicators

HR Success Dashboard indicators provide performance insights to the HR leadership team and process owners. You can measure the performance of the HR implementation using the different KPIs.

### Release Management release notes

The ServiceNow® Release Management application enables you to manage, plan, schedule, and control all aspects of hardware and software releases so that you can create a defined set of release components. Release Management is deprecated starting with the Xanadu release.

## Release Management highlights for the Xanadu release

The Digital Product Release application is the preferred application to track and manage the release processes of digital products.

See Digital Product Release for more information.

## Deprecations

Starting with the Xanadu release, Release Management v2 is being prepared for future deprecation. It will be hidden and no longer activated on new instances but will continue to be supported. Digital Product Release provides the latest experience for this functionality. For details, see the Deprecation Process [KB0867184] article in the Now Support Knowledge Base.

## Activation information

Release Management is available with activation of the Release Management plugin (com.snc.release_management_v2). For details, see Activate Release Management.

### Manufacturing Commercial Operations release notes

The ServiceNow® Manufacturing Commercial Operations application enables you to manage the end-to-end life cycle of your products, subscriptions, and services. Manufacturing Commercial Operations was enhanced and updated in the Xanadu release.

## Manufacturing Commercial Operations highlights for the Xanadu release

- Capture change requests for orders and order line items with Order Exceptions Case Management for Manufacturing Commercial Operations. Manage and track the progress by creating case tasks for other team members or assign case lines to other agents effectively.
- Enable manufacturers, customers, suppliers, channels, and partners to connect and track services directly between instances without configuring and maintaining custom integrations. Service Exchange for Manufacturing Commercial Operations was enhanced and updated in the Xanadu release.
- Enable Service Exchange for Manufacturing Commercial Operations to help with the following tasks:
  - Enables manufacturers to adopt new features, publish product offerings, and provide uninterrupted service to their customers who haven't upgraded.
  - Assesses entitlements for compatibility before synchronizing them to customers, suppliers, channels, and partners.
  - Supports automated synchronization of configuration data between manufacturers and customer instances. Enables customers, suppliers, channels, and partners to run specific processes before synchronizing tasks with their manufacturers.

See Exploring Manufacturing Commercial Operations for more information.

**Important:**
Manufacturing Commercial Operations is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

### Automate the order exceptions management process with Manufacturing Commercial Operations Exception and Dispute Management

Streamline operational tasks by using the order exceptions case type. Enable greater visibility and traceability into cases and order exceptions by capturing all the change requests for orders and order line items in a consolidated case with case lines. Manage and track the progress by creating case tasks for other team members or assign case lines to other agents.

### Create a sales contract from customer-approved quotes with integration with CM Pro

Automate the process of creating contracts from customer-approved quotes, improve data accuracy, and streamline dispute resolution by allocating responsibilities between parties.

## Activation information

Install Manufacturing applications by requesting them from the ServiceNow Store. For details on installing the applications, see Configuring Manufacturing Commercial Operations. Visit the ServiceNow Store website to view all the available apps and for information about submitting

© 2026 ServiceNow, Inc. All rights reserved.

requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Related ServiceNow applications and features

### Field Service Management

The ServiceNow® Field Service Management application enables you to manage work orders and related tasks, resources, skills, assets, and locations.

### Strategic Portfolio Management

Align work with strategy to deliver products and services in a way that supports your business goals and priorities. ServiceNow® Strategic Portfolio Management (SPM), formerly IT Business Management, enables you to use digital transformation to drive more customer value faster.

### Mobile Platform release notes

The ServiceNow® Mobile Platform enables you to access your ServiceNow instance from anywhere. Mobile Platform was enhanced and updated in the Xanadu release.

## Mobile highlights for the Xanadu release

- Define the visibility of specified areas of the mobile platform based on user attributes, by using user criteria permissions.
- Streamline task collaboration for agent-to-agent chat with the Sidebar experience on the Mobile Platform using a top icon function button instance that points to record screens.
- Provide intelligent and conversational self-service with ServiceNow® Now Assist in ServiceNow® Virtual Agent for Mobile Platform.
- Dynamically auto-fill inputs based on user selections on input form screens.

See Mobile Platform for more information.

## New in the Xanadu release

### Now Assist for Mobile Agent app

Use the power of generative AI in the Mobile Agent app to summarize records and complete tasks more efficiently. Users can create a condensed summary of work order tasks or generate resolution notes.

### User criteria permissions

Control the visibility of different areas of the mobile platform by defining user criteria permissions. User criteria permissions, unlike the user roles permissions, enable you to segment your users into different groups, like location, department, or company. With user criteria permissions, you can change information within a single area of a group to update all users' details associated within that group. For example, a company relocates, and the management requires that users in the new location have access to different mobile content. Admins can update the user criteria permissions, so that this new content is displayed to all users in this group.

### Mobile App Builder

- Support for all Mobile Platform Xanadu features.
- Component recommendations by Now Assist across many records.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## UI changes

### Mobile App Builder enhancements

- Component recommendations by Now Assist, rather than a simple alphabetical list.
- Choose and create cards visually by using Mobile Card Builder integrated within Mobile App Builder.
- Access more records with expanded duplicate functionality that includes card templates, launcher screen, and functions.
- Streamlined creation of list screens with embedded record screens for a simplified user experience.

### Mobile Card Builder enhancements

- Create a card from scratch in Mobile Card Builder.
- Open Mobile Card Builder within the same browser tab as Mobile App Builder to streamline transitions between the tools.
- Cards and card templates functions now contain three predefined button functions in addition to the existing options. The preconfigured functions users can choose are Cancel, Continue, and Log Out actions.

## Changed in this release

### Now Assist for Virtual Agent enhancements

Deliver direct, relevant, and conversational responses to questions using generative AI, including the ability to give feedback to messages generated by AI in Virtual Agent.

### Now Assist in AI Search on Mobile

Provide AI-generated or AI-selected answers to user searches with the ability for users to provide feedback on the relevancy of the curated answers.

### Two new button instances

- Provide users with an additional shortcut to items or actions in record screens with the top icon function button instance, providing support for the agent-to-agent mobile Sidebar experience.
- Add shortcuts to the Indoor Wayfinding experience with the custom map bottom drawer function button instance.

### Mobile client scripting enhancements

Streamline input form screen completion with auto-filled inputs based on one or many user inputs.

### Navigation bar enhancement

Add badging capability to navigation bar tabs, which enables badging on any navigation tab icons.

### Configure mobile apps to use device date/time formats

Set the *useDeviceSettingsForDateTimeFormats* mobile property to `True` to configure the date/time fields in mobile apps to use the date/time format

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

that is used on the mobile device. This feature is available on the 18.2.0 mobile client release version and later.

### Hide the seconds display in date/time fields

Use mobile properties to hide the display of seconds in mobile cards, record screen details pages, or activity streams. This feature is available on the 18.2.0 mobile client release version and later.

### Configure an external authentication browser for iOS apps

Configure an external browser on iOS apps that are used during authentication so external URLs that are opened by the same browser type can maintain sessions and cookies. This feature is available on the 18.3.0 mobile client release version and later.

### Search in a ServiceNow instance with Siri shortcuts

Configure your ServiceNow instance to enable Siri voice search in your mobile app on the instance using global search. This feature is available on the 18.4.0 mobile client release version and later.

### Notification tab enhancements

Use the following enhancements added to the Notification tab within the navigation bar:

- Option to mark all notifications as read, providing the ability to manage your notification entries.
- Highlighted display of critical alerts in the notification area.

### Mobile Publishing enhancements and changes

- Auto-populate instance URLs when new branded app builds are requested and when existing branded apps are updated.
- Support for unlisted iOS branded apps.
- New requirement for iOS Microsoft Intune apps to be registered with Microsoft Entra ID (formerly Azure AD).
- Add deep links when you make new Android branded app requests for both private and public distribution.

## Activation information

ServiceNow Mobile Platform is a ServiceNow AI Platform® feature that is active by default.

## Accessibility information

Accessibility improvements for the ServiceNow Mobile Platform include the following updates:

- Improved the ability to connect your mobile device to a Bluetooth keyboard, especially in the areas of maps and filters. This update improves navigation throughout mobile apps.
- Improved management and layout of banner messages, when multiple messages are displayed simultaneously.

# Now Assist release notes

Now Assist product enhancements and updates in the Xanadu release.

Now Assist brings generative AI capabilities to the ServiceNow AI Platform. With Now Assist, you can improve the productivity and efficiency in your organization, deliver better self-service, recommend actions and provide answers, and empower your users to search more effectively.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

### Now Assist release notes

The ServiceNow® Now Assist experience brings generative AI to your organization. You can improve productivity and efficiency by delivering better self-service, recommending actions, delivering answers, and providing your users with AI Search. Now Assist was enhanced and updated in the Xanadu release.

## Now Assist highlights for the Xanadu release

### Xanadu Patch 10

- Use the Now Assist Readiness Evaluation app to automate the implementation assessment process before implementing Now Assist agentic and generative AI.

### Xanadu Patch 3

- Protect your users from offensive content, prompt injection attacks, and filtered subjects in AI-generated content with Now Assist Guardian.
- Use the native translation capabilities of the Now LLM Service models to speak to users in their preferred languages.
- Troubleshoot Now Assist skills from the Now Assist Admin console to locate the sources of configuration problems.
- Monitor the usage and performance of generative AI features and capabilities offered under Now Assist from the Analytics tab in the Now Assist Admin console.
- Use the multi-language capabilities of Now Assist to generate a Knowledge article for an incident, case, or other supported task type in a language other than English.
- Enable agents to utilize the generative AI capabilities of Now Assist to shorten or elaborate content in a Knowledge article using the context menu feature.
- Now Assist context menu enhancements.

### Xanadu Patch 1

- Support users who speak different languages with multi-language, dynamic translation.
- Make finding tables and lists easier and more efficient by using the navigation platform skill in the Now Assist panel.
- Write with Now Assist to provide chat and email suggestions for agents based on the content of a conversation.
- Enable developers to create their own custom skills by using the Now Assist Skill Kit.
- Generate a Knowledge Base article from a selection of similar cases or incidents to help address related concerns in a single article with Now Assist in Knowledge Management.

See Now Assist for more information.

For more Platform Now Assist feature release notes, see the following topics:

- AI Search release notes
- Document Intelligence release notes
- Generative AI Controller release notes
- Now Assist in Virtual Agent release notes

**Important:**
After purchasing a generative AI product, you can install it from the ServiceNow Store. For details, see the "Activation information" section of these release notes.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Important information for upgrading Now Assist to Xanadu

If you customized UI actions or other items that are associated with Now Assist skills, confirm that your customized code is updated with the new skill releases. Otherwise, certain functions may not work as expected.

If you run into issues when you're upgrading a Now Assist product, see KB1637452: Issues and mitigation for Now Assist (Generative AI) Applications and Plugin updates. You may need to log in to view the article.

## New in the Xanadu release

### Xanadu Patch 10

#### Now Assist Readiness Evaluation

Use the Now Assist Readiness Evaluation app to help you evaluate your organization's readiness to implement agentic and generative AI Now Assist capabilities.

Assessments for agentic AI include:

- IT Service Management (ITSM)
- Customer Service Management (CSM)

Assessments for generative AI include:

- AI Search
- Virtual Agent (VA)
- IT Service Management (ITSM)
- Customer Service Management (CSM)
- HR Service Delivery (HRSD)

Results shown are estimates. You should evaluate results provided by Now Assist Readiness Evaluation for accuracy and appropriateness for your use case.

### Xanadu Patch 3

#### Now Assist Guardian adds guardrails to log, block, and redirect unwanted content

Protect your users from offensive content, certain kinds of prompt injection attacks, and sensitive topics by logging attempts, blocking content, or redirecting to a new Virtual Agent topic.

#### Translation for Now Assist with native translation

Use the native translation capabilities of the Now LLM Service models or to translate user-generated and LLM-generated content into the preferred languages of your users.

#### Troubleshoot a Now Assist skill

Run diagnostics on certain Now Assist skills to identify common configuration errors that help to prevent your skills from working as intended.

#### Analyze Now Assist performance

Use the Now Assist Analytics dashboard to monitor the usage and performance of generative AI features and capabilities offered under Now Assist.

#### Configure and use a retriever with Now Assist Skill Kit

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Augment and add context to your prompts with AI Search results from custom retriever inputs.

### Get prompt assistance with Now Assist Skill Kit

Use prompt assistance to get a jump-start with your prompt development by selecting an example from the prompt library or using Now Assist to generate one.

### Evaluate skill prompts

Evaluate your prompts created within Now Assist Skill Kit using data collections created within Now Assist Data Kit. Evaluations return information on the correctness and faithfulness of the responses from running the custom skill.

### View skill run test history

View the history of your test results to assist your understanding of how changes to the prompt have adjusted the outcome.

### Generate a Knowledge article using multi-language support

Generate a Knowledge article for an incident, case, or other supported task type in languages other than English using the multi-language capabilities of Now Assist.

### Edit an article using the Now Assist context menu

Use generative AI capabilities of Now Assist to shorten or elaborate content within a Knowledge article.

### Use Now Assist Data Kit to add a dataset to the data catalog

Create a data collection and select the sampling data for publication. Once published, the evaluation data is available in Now Assist Skill Kit.

### Now Assist context menu

- Write with Now Assist is now called the Now Assist context menu.
- Explain the assessed and calculated change request risk with the Now Assist context menu in workspaces and UI16.
- Use the **Elaborate** and **Shorten** content editing capabilities of the Now Assist context menu in Knowledge articles.
- Configure the maximum number of content refinement calls using the Now Assist context menu.
- Use the Now Assist context menu recommendations to compose an email and complete the drafts.

## Xanadu Patch 1

### Dynamic theming enables different themes to be applied to chat summarization cards

Support dynamic theming for chat summarization cards.

### Write with Now Assist

Enable your agents to use Write with Now Assist for generative AI-powered text generation and editing assistance. This feature helps to improve and streamline their writing responsibilities.

### Use Now Assist Platform skills

- Use generative AI Platform skills in the Platform workflow starting with the Xanadu release to enhance and streamline your user experience.
- Enter search commands in plain language to retrieve and filter records and tables by using the Navigation skill.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

**Use Now Assist Skill Kit for Generative AI app developers**

Create and activate custom prompts and skills for your Now Assist agent use cases.

**Generate a knowledge article from multiple cases or incidents with Now Assist in Knowledge Management**

Draft Knowledge articles quickly from a configurable workspace or the classic environment based on similar cases or incidents with Now Assist. Knowledge articles can be generated by selecting from a list of similar cases or incidents, case or incident numbers, or even by searching keywords specific to a case or incident.

## UI changes

**Write with Now Assist has been renamed as the Now Assist context menu**

The Now Assist context menu uses generative AI to help agents create and edit written content, which streamlines writing tasks.

**New step in chat summarization guided setup**

You can now use the **Customize output** step to choose between paragraph and bulleted list formats.

**Service Portal and Virtual Agent display Genius Result answer cards in a carousel**

When a search returns multiple Genius Result answers, Service Portal and Virtual Agent display Genius Result answer cards in a carousel instead of a list. The modified UI lets you scroll through multiple Genius Result answers while keeping your search query's regular results more accessible on the results screen.

**Legal disclaimer in Now Assist panel and Now Assist in Virtual Agent**

The following text appears at the top of any Now Assist panel or Now Assist in Virtual Agent conversation: `Answers generated by AI. Review for accuracy.`

## Changed in this release

**Xanadu Patch 3**

**New conditions available in Define Availability step of guided setup for chat reply recommendation**

When activating or editing the chat reply recommendation skill, you can now add conditions to determine who can use the skill.

**Xanadu Patch 1**

**Get started step added to guided setup for resolution note generation**

A step has been added to the guided setup for the resolution notes generation skill to remind you to update any customized code that is associated with the skill after a new release.

## Activation information

Now Assist features are available with activation of any Now Assist plugin from the ServiceNow Store. The following plugins are available:

- Now Assist for Accounts Payable Operations (APO)
- Now Assist for Configuration Management Database (CMDB)
- Now Assist for Creator
- Now Assist for Customer Service Management (CSM)

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Now Assist for Field Service Management (FSM)
- Now Assist for Financial Services Operations (FSO)
- Now Assist for Health and Safety
- Now Assist for HR Service Delivery (HRSD)
- Now Assist for IT Operations Management (ITOM)
- Now Assist for IT Service Management (ITSM)
- Now Assist for Legal Service Delivery (LSD)
- Now Assist for PSDS
- Now Assist for Security Incident Response
- Now Assist for Supplier Lifecycle Operations (SLO)
- Now Assist for Sourcing and Procurement Operations (SPO)
- Now Assist for Strategic Portfolio Management (SPM)
- Now Assist for Telecommunications, Media and Technology (TMT)

For more information, see Install Now Assist plugins.

## Additional requirements

The Next Experience UI Framework must be enabled to use the Now Assist panel.

## Browser requirements

Now Assist supports various browsers, including Google Chrome and Microsoft Edge. Now Assist isn't supported in Microsoft Internet Explorer.

## Localization information

Now Assist supports Dynamic Translation for Xanadu.

## Related ServiceNow applications and features

### Agent Chat

The ServiceNow® Agent Chat provides various features that agents and requesters can use to streamline the agent and end-user chat experience. Agent Chat also provides features that managers can use to monitor and assist agents.

### AI Search

The ServiceNow® AI Search application provides a consumer-grade search engine for Service Portal, Now Mobile®, and Virtual Agent. Intelligent query features help you quickly find the answers that you need.

### Customer Service Management

The ServiceNow® Customer Service Management (CSM) application enables you to provide the service and support that your external customers need. For example, your customers can communicate and get the help through the web, email, chat, telephone, and social media.

### Dynamic Translation

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The ServiceNow® Dynamic Translation application enables you to dynamically translate text entered in an application or in a chat window for a seamless localization experience.

### Field Service Management

The ServiceNow® Field Service Management application enables you to manage work orders and related tasks, resources, skills, assets, and locations. Use this application to dispatch work order tasks and agents to the customer location for performing any kind of field work, such as install, repair, or maintain equipment.

### Generative AI Controller

The ServiceNow® Generative AI Controller lets you integrate third-party large language models (LLMs) with your workflows.

### HR Service Delivery

The ServiceNow® HR Service Delivery application gives your employees the service experience that they deserve. By providing employees with a single place to manage their work needs while shielding them from back-end complexity, you can deliver a great experience to meet the demands of a current-day workforce.

### Knowledge Management

The ServiceNow® Knowledge Management (KM) application enables the sharing of information in the Knowledge Base. A Knowledge Base contains articles that provide users with information such as self-help, troubleshooting, and task resolution.

### ITOM Health

The ServiceNow® ITOM Health product includes the ServiceNow® Event Management and ServiceNow® Metric Intelligence applications, which help you track and maintain the health of services in your organization.

### IT Service Management

The ServiceNow® IT Service Management (ITSM) solution provides scalable workflows to manage and deliver IT services to your users all through a single cloud-based platform. The ITSM solution can help increase your agents' productivity, resolve issues quickly, and improve user satisfaction.

### Security Operations

The Now Assist for Security Operations application permits security analysts to resolve security incidents faster with generative AI skills. Analysts and managers can condense long activity streams on security incidents into concise, easy-to-read summaries and automatically generate closure notes. Now Assist for Security Operations is a new application in the Xanadu release.

### Workflow Studio

ServiceNow® Workflow Studio enables you to integrate workflow authoring, configuring, and monitoring into a single page experience.

### Configurable Workspace UI

ServiceNow® Workspace is a graphical user interface that puts multiple tools on one page, including the tools that agents use to find, research, and resolve issues.

## Generative AI Controller release notes

The ServiceNow® Generative AI Controller application enables you to use generative AI capabilities with third-party large language models (LLM) providers on the ServiceNow AI Platform. You can reduce complexity and enhance the user experience in your organization by generating and summarizing content, analyzing user sentiment, and writing unique prompts. Generative AI Controller was enhanced and updated in the Xanadu release.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Generative AI Controller highlights for the Xanadu release

Xanadu Patch 3

- Review a read-only metadata log table for generative AI requests.
- Use the improved language support for skills and capabilities, including the Dynamic Translation services and native translation by the LLMs.

Xanadu Patch 1

- Updated prompts for capabilities, semantic filtering, and recursive summarization that improve latency and processing for Generative AI Controller capabilities and Now Assist skills.

See Generative AI Controller for more information.

## New in the Xanadu release

### Xanadu Patch 3

#### Metadata log table for generative AI requests

Use the new metadata log table that includes information about the requesting conversation, the capability definition, provided feedback (if any), and error codes.

#### Translation for Now Assist

Support users who speak different languages with new language information in LLM request metadata, better controls for Dynamic Translation, and translated text logging.

### Xanadu Patch 7

**Global Model selection for conversational skills**

Enable Now Assist Admins to choose between GPT4.o and Now Assist LLM model for data routing at a global level. This ensures compliance with any regional restrictions and helpful for APAC users who may face limitations with US-based models, such as GPT-4.0.

## Changed in this release

#### Directions for generative AI updates for Generative AI Controller

The prompts, which are the instructions to the large language model (LLM), for all four capabilities (Generic Prompt, Generate Content, Summarization, and Sentiment Analysis), semantic filtering, and recursive summarization have been updated.

## Activation information

Generative AI Controller is a ServiceNow AI Platform feature that is available with activation of any ServiceNow® Now Assist application. For details, see Installing Generative AI Controller.

## Localization information

Generative AI Controller uses Microsoft Azure OEM for Dynamic Translation in Now Assist for multi-language support. You can enable dynamic translation from the Now Assist Admin console.

## Related ServiceNow applications and features

#### Now Assist

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Now Assist includes the Now Assist Admin console to set up, configure, monitor, and use Now Assist skills on the ServiceNow AI Platform. The Now Assist panel enables users to interact with Now Assist skills in the ServiceNow® Next Experience.

**Agent Chat**

ServiceNow® Agent Chat provides various features that agents and requesters can use to streamline the agent and end-user chat experience. Agent Chat also provides features that managers can use to monitor and assist agents.

**Customer Service Management**

The ServiceNow® Customer Service Management application enables you to provide the service and support that your external customers need. For example, your customers can communicate and get the help through the web, email, chat, telephone, and social media.

**Field Service Management**

ServiceNow® Field Service Management enables you to manage work orders and related tasks, resources, skills, assets, and locations. Use this application to dispatch work order tasks and agents to the customer location for performing any kind of field work, such as installing, repairing, or maintaining equipment.

**Flow Designer**

ServiceNow® Workflow Studio is a ServiceNow AI Platform feature that enables process owners to automate work. Build multi-step flows from reusable components without having to code.

**HR Service Delivery**

The ServiceNow® HR Service Delivery application gives your employees the service experience that they deserve. By providing employees with a single place to manage their work needs while shielding them from back-end complexity, you can deliver a great experience to meet the demands of a modern-day workforce.

**IT Service Management**

The ServiceNow® IT Service Management (ITSM) solution provides scalable workflows to manage and deliver IT services to your users all through a single cloud-based platform. The ITSM solution can help increase your agents' productivity, resolve issues quickly, and improve user satisfaction.

**Workspace**

ServiceNow® Workspace is a graphical user interface that puts multiple tools on one page, including the tools that agents must find, research, and use to resolve issues.

### Now Assist AI agents release notes

The ServiceNow® Now Assist AI agents application provides solutions that can perceive the environment, make decisions, and proactively take actions to achieve specific goals without need for constant human oversight. Now Assist AI agents is a new application in the Xanadu release.

## Now Assist AI agents highlights for the Xanadu release

Xanadu Patch 10

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Create ACLs for AI agents and agentic workflows to customize who can discover and trigger AI agents and agentic workflows.
- Add secure methods for AI agent and agentic workflow operations and apply appropriate ACLs to ensure that they can only be accessed and run by authorized users.
- Security implementation with access control lists (ACLs) for agentic workflows and AI agents is mandatory.

Xanadu EA

- Define agentic workflows with an execution plan to achieve various tasks.
- Use the Now Assist panel to communicate with the agent during an issue resolution.
- Clone existing AI agents and use cases to save time and avoid manual configuration.
- Enable Now Assist Guardian to automatically identify and block offensive messages.
- View the usage and performance of your AI agents with the AI agent analytics dashboard.
- Enable multiple conversations for AI agents on the Now Assist panel.

See Now Assist AI agents for more information.

For the Platform Now Assist release notes, see Now Assist release notes.

**Important:**
AI Agent Studio is available in ServiceNow Store. For details, see the "Activation information" section of these release notes.

## Now Assist AI agents features

### Xanadu Patch 10

#### Configure ACLs for AI agents and agentic workflows

Configure the access control lists (ACLs) for who can discover and trigger AI agents and agentic workflows in their guided setups in the AI Agent Studio. You can determine whether an AI agent or agentic workflow behaves as a dynamic user or as an AI user. You can also specify if an AI agent or agentic workflow can be available to only authenticated users or publicly available.

### Xanadu EA

#### Create an AI agent

Create AI agents accomplish discrete tasks to use in a use case:

- Create AI agents to gather data, make decisions, and complete tasks that would otherwise need to be done by a human.
- Add one of the following tools or information sources for the AI agent to execute:
  - Catalog item
  - Conversational topic
  - Flow action
  - Now Assist skill
  - Record operation
  - Script
  - Search retrieval

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Subflow
- Web search

### Create an agentic workflow

Create a use case with an execution plan to solve complex tasks with Now Assist. You can also do the following tasks:

- Clone an existing use case to avoid manual configuration.
- Create triggers when creating a use case that calls the AI agent when a condition or objective is observed.
- Test a use case before execution.
- Resolve record-based cases with AI agents.

### Enable Now Assist Guardian in AI agents

Enable Now Assist Guardian in AI agents to automatically identify and block offensive messages that are sent by human agents.

### Multiple conversations in Now Assist AI agents

Enable live agents to interact with multiple AI agent conversations through the Now Assist panel.

### AI Agent Analytics dashboard

Analyze the performance, efficiency gain, and usage of AI agents through preconfigured dashboards.

## UI changes

Xanadu Patch 5

- Use cases are now called agentic workflows.

## Activation information

Now Assist in AI agents is available with activation of any Now Assist plugin from the ServiceNow Store. For more information about the prerequisites for using Now Assist, see Install Now Assist AI agents.

## Additional requirements

You must first install the supported Now Assist version of ServiceNow to be able to use the Now Assist AI agents. For more information, see Install Now Assist AI agents.

Enable the Next Experience UI Framework before you can use the Now Assist panel.

## Browser requirements

Now Assist AI agents supports various browsers, including Google Chrome and Microsoft Edge. Now Assist AI agents isn't supported in Internet Explorer.

## Accessibility information

### Voice Input for Now Assist AI agents

Administrators can enable an optional voice input setting for the Now Assist panel in the Now Assist Admin console. This feature gives users a voice-to-text input

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

option to access the Now Assist skills in the panel in any supported language. For more information, see Enable voice input for Now Assist panel.

Once enabled, the Enable voice input for the Now Assist panel option will be available in individual user accessibility preferences. See Configure Next Experience accessibility preferences for more information.

Voice-to-text input can help users with mobility impairments access generative AI skills without using a keyboard. This feature can also be useful to blind or low-vision users, neurodivergent users, non-native language speakers, or mobile users on the go, such as field service agents.

## Localization information

Now Assist AI agents is built on the GPT-4o-based framework and supports localization as per the GPT-4o model.

## Related ServiceNow applications and features

### Now Assist panel

With the ServiceNow® Now Assist panel, you can get assistance from generative AI experiences to solve customer issues faster. Use this conversational interface to summarize a chat, case, or incident, get help, or generate resolution notes so that you can get the context of this information more quickly.

### Generative AI Controller

The ServiceNow® Generative AI Controller lets you integrate third-party large language models (LLMs) with your workflows.

### AI Search

The ServiceNow® AI Search application provides a consumer-grade search engine for Service Portal, Now Mobile, and Virtual Agent. Intelligent query features help you quickly find the answers you need.

### Now Assist Skill Kit

Use the ServiceNow® Now Assist Skill Kit to create and publish custom prompts and skills for Now Assist. Creating custom skills and prompts enables you to have greater flexibility with Now Assist's generative AI capabilities.

### Now Assist in AI Search release notes

The ServiceNow® Now Assist in AI Search application combines the power of search with the Now LLM Service agentic AI model to provide actionable AI-generated or AI-selected answers in user searches. Now Assist in AI Search was enhanced and updated in the Xanadu release.

## Now Assist in AI Search highlights for the Xanadu release

- Improve incident deflection for portal users by configuring record producers to display actionable and relevant Genius Results suggestions during submission of cases, incidents, problems, and similar tasks.

See Now Assist in AI Search for more information.

**Important:**
Now Assist in AI Search is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## New in the Xanadu release

### Xanadu Patch 7

#### AI Search Genius Results widget for record producers

Administrators can configure the AI Search Genius Results widget on record producers to enhance the user experience when creating an incident. The widget displays actionable Genius Result suggestions relevant to the user's incident description. Users can select from these Genius Result suggestions to address their own issues, or can continue with their incident submission if none of the suggestions resolve their problem.

## Changed in this release

#### Now Assist Q&A Genius Results

The Now Assist Q&A Genius Results feature is in maintenance mode. This feature will have no new enhancements but will have continued support. Similar and improved functionality is available in the newer Now Assist Multi-Content Response Genius Results feature. For more details on this feature, see Now Assist Multi-Content Response Genius Results.

#### Now Assist Actions Genius Results

The Now Assist Actions Genius Results feature is in maintenance mode. This feature will have no new enhancements but will have continued support. Similar and improved functionality is available in the newer Now Assist Multi-Content Response Genius Results feature. For more details on this feature, see Now Assist Multi-Content Response Genius Results.

## Activation information

Now Assist in AI Search is installed when you install any of the following licensed applications from the ServiceNow Store.

•

Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Localization information

Now Assist in AI Search supports Dynamic Translation in Now Assist Genius Results. For details, see Dynamic Translation for Now Assist Q&A Genius Results and Dynamic Translation for Now Assist Actions Genius Results.

## Related ServiceNow applications and features

#### Now Assist

ServiceNow Now Assist uses agentic AI that is designed to enhance user productivity and efficiency through conversation and proactive experiences.

#### AI Search

The ServiceNow AI Search application provides a consumer-grade search engine for ServiceNow Service Portal, ServiceNow Now Mobile®, and ServiceNow Virtual Agent. Intelligent query features help you quickly find the answers you need.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

### Now Assist for Creator release notes

The ServiceNow® Now Assist for Creator application includes generative AI skills that can make developing on the ServiceNow AI Platform more efficient. Now Assist for Creator was enhanced and updated in the Xanadu release.

## Now Assist for Creator highlights for the Xanadu release

### Xanadu Patch 3

- Generate appropriate data pill values for supported flow triggers and action inputs.
- Generate a playbook with out-of-the-box activities from text, an image or both.
- Generate a UI experience with natural language description.

### Xanadu Patch 1

- Preview and modify your text directions before generating your playbook outline with Now Assist.
- Show annotations of what text directions were used to generate actions, flow logic, and subflows during flow generation.

See Now Assist for Creator for more information.

**Important:**
Now Assist for Creator is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

### Xanadu Patch 3

#### Add visualization to any dashboard

You can add a generated data visualization to any dashboard you can edit. Previously, you could add a visualization only to a dashboard that was open when you opened the Now Assist panel.

#### Generate a playbook from an image

Generate a playbook with out-of-the-box activities from text, an image, or both.

#### Generate a UI experience

Generate a UI experience using natural language description.

#### Edit code with Now Assist

Edit code by telling Now Assist how to improve the code. You can refactor code, add comments, validation rules, error handling, and rename variables.

#### Generate data pill values during flow generation

Generate appropriate data pill values for supported flow triggers and action inputs.

#### Use Now Assist to create spokes and actions

Build custom spokes for the required third-party application by using its API documentation. Kickstart spoke creation by copying and pasting the required API documentation snippet in Workflow Studio. This feature is useful when the required third-party application doesn't have an OpenAPI specification or Postman collection. To use the feature, activate the spoke generation skill in the Now Assist for Creator feature.

#### Modify generated data visualizations

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

After you generate a data visualization, you can go on through an iterative conversation to modify the visualization.

### Reference specific tables with hash tags during flow generation

Enter a hash tag character in the flow directions to refer to a specific table by name. Use auto-complete to select a table name from the options that match your partial entry.

### Support more chart types for generating data visualizations

The Analytics Generation data visualization generation skill now supports dial, gauge, horizontal bar, area, column, scatter, spline, and step charts, in addition to the original chart types.

### Edit in ServiceNow Studio after generating an application

Use Now Assist for App Generation in ServiceNow Studio, which offers an advanced application development environment.

### Preview an application before generating

Visually preview an application in a new tab before generating to review for accuracy and reduce the amount of corrective work.

### Update applications that have already been generated

Augment existing applications with new application objects, such as tables, roles, ACLs, and record producers.

### Create new tables by extending existing tables

Create new tables for an application created with app generation by extending existing tables, such as the task table.

### Edit existing applications without having the admin role

Non-admin users with the delegated developer role can edit applications.

### Use Now Assist to call Microsoft Active Directory v2 actions

Install Now Assist for Conversational Spokes plugin and start utilizing the conversational ability of Disable User, Enable User, and Look up User actions. You can call these actions from a conversational interface like Now Assist.

### Xanadu Patch 1

### Get Playbook recommendations

Get suggestions on which activities to replace placeholder activities with.

### Re-prompt and preview while generating a playbook

Preview and modify your prompt before generating your playbook outline.

### Show annotations of the text directions used by flow generation

Show annotations of the text directions used for each item added by flow generation. Receive feedback about how your directions map to specific actions, flow logic, and subflows.

### Data visualization generation

Generate Platform Analytics charts through conversations.

## UI changes

### Xanadu Patch 3

### Now Assist for app generation opens from ServiceNow Studio

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Now Assist for app generation can only be used when launching the Now Assist panel from within ServiceNow Studio.

### Xanadu Patch 1

#### Enhanced visibility of apps created by Now Assist

The App Engine Studio App Inventory page now clearly distinguishes apps created with Now Assist in the following ways:

- A transition animation from the Now Assist Panel into AES eases navigation after the application has been generated.
- A banner prompts users to review the generated items on landing in AES.
- Metadata records are tagged with labels and other UI highlights to indicate that they were generated by AI.
- Metadata records have a **Review** button to identify records that must be reviewed.
- App submission changes help inform users that they should be reviewing prior to deployment.

## Activation information

Install Now Assist for Creator by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Related ServiceNow applications and features

#### App Engine Studio

ServiceNow® App Engine Studio (AES) is a development tool for creators of varying skill levels to build applications that meet the immediate needs of your organization.

#### Integration Hub

Automate integration tasks using ServiceNow components for ServiceNow® Workflow Studio, or develop custom integrations. A separate subscription is required.

#### Integration Hub available spokes

Activate spokes to enhance your Workflow Studio experience with integration-specific content. Use prebuilt flows and actions to automate your integrations or create your own integration automation.

#### MID Server

The Management, Instrumentation, and Discovery (MID) Server is a Java application that runs as a Windows service or UNIX daemon on a server in your local network. The ServiceNow® MID Server enables communication and the movement of data between a ServiceNow instance and external applications, data sources, and services.

#### Now Assist

Use AI recommendations to select the next component in your flow. The system generates recommendations based on the current position in the flow and the flow component names listed before.

#### Process Automation Designer

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

ServiceNow® Playbooks enables process owners to author cross-enterprise workflows and create a single, unified process. You can also use Playbooks to provide end users with a simplified, task-oriented view of your process.

**Robotic Process Automation (RPA) Hub**

Use the ServiceNow® Robotic Process Automation (RPA) Hub to enable end-to-end automation for your organization. With a combination of UI interactions, element-based automations, and APIs that interact between the various business applications, you can emulate user actions and eliminate mundane and repetitive human activities.

### Now Assist for Customer Service Management (CSM) release notes

The ServiceNow® Now Assist for CSM application brings generative AI to Customer Service Management. You can improve productivity and efficiency by delivering better self-service, recommending actions, and delivering answers. Now Assist for CSM was enhanced and updated in the Xanadu release.

## Now Assist for CSM highlights for the Xanadu release

Xanadu Patch 10: Enable security in Now Assist for CSM and AI agents and agentic workflows by enforcing access control lists (ACLs) and user identity-based permissions.

Xanadu Patch 9

- Use case resolution steps to generate recommended actions based on the data clusters from previously closed cases.
- Use enhanced AI agents and new standalone AI agents for more specific tasks. For example, the Duplicate identifier AI agent identifies the duplicate interactions and cases from the customers and then consolidates the information.

Xanadu Patch 7: Improve agent productivity by managing long running cases with the Triage cases AI agent use case.

- Enhance customer conversations by receiving relevant contextual recommendations in real time.
- Help improve productivity and decrease errors by the automatic generation of emails that can be verified and sent by the agent.
- Consolidate information from multiple similar cases and bring it all together into a knowledge base article.
- Summarize records to make it easier to hand off calls between agents and help improve customer satisfaction.

See Now Assist for Customer Service Management (CSM) for more information.

**Important:**
Now Assist for Customer Service Management (CSM) is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

### Xanadu Patch 10

**Triage cases agentic workflow security directives**

Implement security on AI agents and agentic workflows through ACLs and user identities.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

### Now Assist for CSM Gen AI security directives

Implement security in Now Assist for CSM skills through ACLs and user identities.

Xanadu Patch 9

### Suggested steps in Recommended Actions

Use Recommended Actions to generate suggested resolution steps for cases. You can increase agent productivity by outlining the next best actions for unfamiliar cases and automatically providing logical next steps.

### Triage cases agentic workflows enhancements

Added new standalone AI agents to check duplicate cases and split some existing standalone AI agents to focus on more specific tasks. The AI agents available are the Triage cases planner AI agent, Context validator and analyzer agent, Duplicate identifier AI agent, Informational queries AI agent, Transactional queries AI agent, Case creation AI agent, Entity extraction AI agent, Document verification AI agent, and Email response AI agent.

Xanadu Patch 7

### Triage cases AI agents use case

Use the Triage cases AI agents use case to improve agent productivity through faster assessment.

**Available AI agents use case**

| AI agent use case | Description |
|---|---|
| Triage cases | Use AI agents to handle all routine cases coming in through email and other offline channels, so that it improves customer satisfaction and reduces resolution times. |

### Summarizing sidebar conversations

Use Now Assist for CSM to summarize sidebar discussions between agents, requesters, and subject matter experts.

### Real-time chat reply recommendations

Use generative AI to provide the agent with relevant contextual recommendations from sources such as knowledge bases, FAQs, similar cases, chats, and calls before they respond to the customer. Agents can also write a chat response with the help of generative AI. This feature helps agents stay focused on conversations with customers instead of doing manual tasks.

### Generative AI-powered email reply recommendations

Get recommendations for email responses that can be reviewed and sent by agents. Agents can also edit email replies recommendation with the help of generative AI.

### Multilingual support for Now Assist for CSM skills

Large language model (LLM) now supports the following languages across all skills in Now Assist for CSM: German, French, Japanese, Dutch, and French Canadian, Spanish, Brazilian Portuguese, and Italian.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Changed in this release

### Enhancement in post-call summarization

- You can now review a call that has been handed off from one live agent to another agent, and then provide a summary of the key topics that are covered during the conversation.
- Support for outbound calls from agents to the customers.
- Generate a call summary when the real-time transcript is not available.

### Knowledge generation from multiple cases

You can now select and gather insights and data from multiple similar cases to draft an article by using Now Assist for CSM.

### Enhancements in chat summarization

Multiple Language Support via Digital technology (DT) support and a new step in the guided flow that allows the customization of how and when the skill capability will be available in the admin console.

### Enhancements in Email recommendation

Get recommendations for email responses when starting new emails, forwarding messages, or finalizing drafts. Help improve agent productivity by reducing the time taken to compose email and improve relevance of email reply recommendations. Also, get template recommendations while composing an email by leveraging AI search.

### Enhancement in Resolution notes generation

Generate resolution notes and then shorten or elaborate the content using the Now Assist context menu in the resolution notes field of the case form, in both Core UI (UI16) and Workspace.

### Enhancements in Knowledge generation

Revise the content in existing knowledge articles by using the Now Assist icon, which is accessible as an inline capability, and create and refine knowledge articles. You can also generate knowledge articles in multiple languages.

### Xanadu Patch 7 Case summarization enhancement

Extended the capabilities of the case summarization feature so it can now be used on custom tables.

## Activation information

Now Assist features are available with activation of the Now Assist for CSM plugin. For more information, see Install Now Assist plugins.

Starting with Vancouver Patch 4, Now Assist for CSM is supported.

Starting with Xanadu Patch 7, Customer Service Management AI agent collection is supported.

## Additional requirements

The Now Assist for CSM application requires a Customer Service Management Pro Plus or Enterprise Plus license.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Related ServiceNow applications and features

### Now Assist

Help improve the productivity and efficiency in your organization, deliver better self-service, recommend actions, provide answers, and empower your users to search more effectively.

### Now Assist Admin console

Use the Now Assist Admin console to provide you with quick and easy access to the important information that you need to set up, configure, and monitor Now Assist applications and features.

### Now Assist panel

Use this conversational interface in CSM Configurable Workspace to summarize a chat, a case, or resolution notes so that you can get the context of this information more quickly.

### Now Assist skills

Use the Now Assist products to provide generative AI skills to meet the needs of users in different workflows, including case or incident summarization, chat summarization, resolution notes generation, and code generation.

### Now Assist for Field Service Management (FSM) release notes

The ServiceNow® Now Assist for FSM application brings generative AI to Field Service Management. Now Assist for FSM is a new application in the Xanadu release.

## Now Assist for FSM highlights for the Xanadu release

- Create knowledge articles from work order task information using generative AI.
- Summarize Sidebar discussions using generative AI.

See Now Assist for Field Service Management (FSM) for more information.

**Important:**
Now Assist for Field Service Management (FSM) is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

### Xanadu Patch 3

**Now Assist context menu for KB creation**

Use the enhanced Now Assist context menu to rewrite knowledge articles with generative AI. Opt to shorten or expand upon the existing content within articles.

### Multilingual support for Now Assist for FSM skills

Generate knowledge articles in multiple languages for work order tasks using the new multilingual support in Now Assist for FSM skills.

### Xanadu Patch 1

### KB Generation

Generate knowledge articles from work order tasks so agents can resolve known issues faster.

### Sidebar summarization

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Summarize Sidebar discussions from the platform and the Mobile Agent application.

## Activation information

Now Assist features are available with activation of the Now Assist for FSM plugin. For more information, see Install Now Assist plugins.

## Additional requirements

The Now Assist for FSM application requires Field Service Management.

## Related ServiceNow applications and features

**Now Assist**

Improve the productivity and efficiency in your organization, deliver better self-service, recommend actions, provide answers, and empower your users to search more effectively.

**Now Assist Admin console**

Use the Now Assist Admin console to provide you with quick and easy access to the important information that you need to set up, configure, and monitor Now Assist applications and features.

**Now Assist skills**

Use the Now Assist products to provide generative AI skills to meet the needs of users in different workflows, including work order task summarization and knowledge base article generation.

### Now Assist for Financial Services Operations (FSO) release notes

The ServiceNow® Now Assist for Financial Services Operations (FSO) application brings generative AI to Financial Services Operations. By creating summaries of the card disputes and insurance claims from the case records, agents can quickly view the key details. Now Assist for FSO is a new application in the Xanadu release.

## Now Assist for FSO highlights for the Xanadu release

Xanadu Patch 10

Implement security in Now Assist for FSO skills with access control lists (ACLs).

Early Availability

Enable agents to review card dispute and insurance claim cases more effectively by using the case summarization skill to generate an overview of key details.

See Now Assist for Financial Services Operations (FSO) for more information.

**Important:**
Now Assist for FSO is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## Now Assist for FSO features

**Xanadu Patch 10**

**ACL security implementation**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Now Assist for FSO can be configured to enable security implementation to execute generative AI skills through ACLs and user identities. Some predefined ACLs are provided for case summarization.

**Early Availability**

**Case summarization skill**

Designed to save time for your agents by allowing them to condense a record to a short summary (when configured). Now Assist for FSO includes the customized skills that can be configured to use for specific card dispute and insurance claim use cases.

**Now Assist panel**

Enable your agents to access Now Assist skills in a panel that is available in Financial Services Workspace. After configuration, agents can summarize the viewed record or a specific case number in Now Assist panel.

**Now Assist Admin console**

Use the Now Assist Admin console to activate and configure the capabilities and individual skills. For example, you can designate which roles have access to a skill, or whether the skill is available in Financial Services Workspace, the Now Assist panel, or both.

**Skill availability restricted by user role**

Specify the roles that can access the case summarization skill.

## UI changes

**Now Assist icon in Next Experience Unified Navigation**

You can now use the Now Assist icon in the Next Experience UI Framework to open the Now Assist panel.

## Activation information

Install Now Assist for FSO by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Additional requirements

The Now Assist for FSO application requires a Financial Services Operations Professional Plus or Enterprise Plus license.

## Related ServiceNow applications and features

**Now Assist**

ServiceNow® Now Assist uses generative AI that is designed to enhance user productivity and efficiency through conversation and proactive experiences.

**Now Assist skills**

Use the Now Assist generative AI skills to enable the needs of users in different workflows, such as case summarization.

**Now Assist case or incident summarization**

The Now Assist case summarization skill is designed to support quick learning of case or incident details.

© 2026 ServiceNow, Inc. All rights reserved.

### Now Assist for Enterprise Architecture (EA) release notes

The ServiceNow® Now Assist for Enterprise Architecture (EA) application introduces generative AI skills into the Enterprise Architecture Workspace. You can summarize Architectural Decision Records (ADR) in the Enterprise Architecture Workspace. Now Assist for Enterprise Architecture (EA) is a new application in the Xanadu release.

## Now Assist for Enterprise Architecture (EA) highlights for the Xanadu release

Xanadu Patch 10: Implement security in Now Assist AI agents with access control lists (ACLs).

Xanadu Patch 7: Generate and summarize Enterprise Modeling and Visualization diagrams for business applications hierarchy, using the Enterprise Architecture Diagrammer AI agent.

- Generate a summary of Architectural Decision Records (ADR) in the Enterprise Architecture Workspace.
- Request a business application or a digital integration using Now Assist in ServiceNow® Virtual Agent.

See Now Assist for Enterprise Architecture (EA) for more information.

**Important:**
Now Assist for Enterprise Architecture (EA) is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## Now Assist for Enterprise Architecture (EA) features

### Implement access control lists for security in AI agents

Enable security implementation to execute AI agents and agentic workflows through access control lists (ACLs) and user identities.

ACLs provide you with the capability to run AI agents and agentic workflow executions either as a dynamic user or an AI user.

To learn about ACLs for Now Assist for Enterprise Architecture (EA) agents and skills, see Configure Now Assist for Enterprise Architecture (EA) and Enterprise Architecture AI agent generate enterprise architecture diagram agentic workflow.

**Xanadu Patch 7** **Using Enterprise Architecture Diagramming AI agent**

Use the Enterprise Architecture Diagrammer AI agent to create Enterprise Modeling and Visualization diagrams for business applications hierarchy and summarize them.

**Xanadu Early Availability** **Now Assist for Enterprise Architecture (EA)**

- Use the ServiceNow® Now Assist for Enterprise Architecture (EA) application to summarize Architectural Decision Records (ADR) in the Enterprise Architecture Workspace. Use the Architectural Decision Records (ADR) to explain your infrastructure. ADR is a type of artifact that helps you to understand the background of a specific architectural decision.
- Register a business application and a digital integration with an interactive generative AI experience using the Now Assist in Virtual Agent. For more information, see Now Assist for Enterprise Architecture (EA).

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Activation information

Now Assist features are available with activation of the Now Assist for Enterprise Architecture (EA) plugin. The Now Assist for Enterprise Architecture (EA) application requires an Enterprise Architecture Pro plus license. For more information, see Install Now Assist plugins.

## Related ServiceNow applications and features

### Now Assist

Help improve productivity and efficiency in your organization, deliver better self-service, recommend actions, provide answers, and empower your users to search more effectively.

### Now Assist Admin console

The Now Assist Admin console provides you with quick and easy access to the important information that you must set up, configure, and monitor in Now Assist applications and features.

### Now Assist panel

Use the Now Assist panel to interact with and get assistance from generative AI.

### Now Assist skills

Now Assist products provide generative AI skills that are tailored to meet the needs of users in different workflows, including content summarization in Docs.

### Now Assist for Financial Services Operations (FSO) release notes

The ServiceNow® Now Assist for Financial Services Operations (FSO) application brings generative AI to Financial Services Operations. By creating summaries of the card disputes and insurance claims from the case records, agents can quickly view the key details. Now Assist for FSO is a new application in the Xanadu release.

## Now Assist for FSO highlights for the Xanadu release

Xanadu Patch 10

Implement security in Now Assist for FSO skills with access control lists (ACLs).

Early Availability

Enable agents to review card dispute and insurance claim cases more effectively by using the case summarization skill to generate an overview of key details.

See Now Assist for Financial Services Operations (FSO) for more information.

**Important:**
Now Assist for FSO is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## Now Assist for FSO features

### Xanadu Patch 10

#### ACL security implementation

Now Assist for FSO can be configured to enable security implementation to execute generative AI skills through ACLs and user identities. Some predefined ACLs are provided for case summarization.

### Early Availability

#### Case summarization skill

Designed to save time for your agents by allowing them to condense a record to a short summary (when configured). Now Assist for FSO includes the customized skills that can be configured to use for specific card dispute and insurance claim use cases.

#### Now Assist panel

Enable your agents to access Now Assist skills in a panel that is available in Financial Services Workspace. After configuration, agents can summarize the viewed record or a specific case number in Now Assist panel.

#### Now Assist Admin console

Use the Now Assist Admin console to activate and configure the capabilities and individual skills. For example, you can designate which roles have access to a skill, or whether the skill is available in Financial Services Workspace, the Now Assist panel, or both.

#### Skill availability restricted by user role

Specify the roles that can access the case summarization skill.

## UI changes

#### Now Assist icon in Next Experience Unified Navigation

You can now use the Now Assist icon in the Next Experience UI Framework to open the Now Assist panel.

## Activation information

Install Now Assist for FSO by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Additional requirements

The Now Assist for FSO application requires a Financial Services Operations Professional Plus or Enterprise Plus license.

## Related ServiceNow applications and features

#### Now Assist

ServiceNow® Now Assist uses generative AI that is designed to enhance user productivity and efficiency through conversation and proactive experiences.

#### Now Assist skills

Use the Now Assist generative AI skills to enable the needs of users in different workflows, such as case summarization.

#### Now Assist case or incident summarization

The Now Assist case summarization skill is designed to support quick learning of case or incident details.

### Now Assist for Hardware Asset Management (HAM) release notes

The ServiceNow® Now Assist for Hardware Asset Management (HAM) application brings agentic AI to Hardware Asset Management. Now Assist for Hardware Asset Management (HAM) is a new application in the Xanadu release.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Now Assist for Hardware Asset Management (HAM) highlights for the Xanadu release

Xanadu Patch 10 - Configure Access Control Lists (ACLs) for AI Agents and agentic workflows.

Xanadu Patch 9 - Automate and streamline your hardware asset request process by using an agentic workflow.

See Now Assist for Hardware Asset Management (HAM) for more information.

**Important:**
Now Assist for Hardware Asset Management (HAM) is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## Important information for upgrading Now Assist for Hardware Asset Management (HAM) to Xanadu

Only users with the procurement_user role can access the Help manage hardware asset requests agentic workflow including the following AI agents:

- Hardware asset management sourcing AI agent
- Transfer order creation AI agent
- Purchase order creation AI agent

## Now Assist for Hardware Asset Management (HAM) features

### Xanadu Patch 10

#### Configure ACLs for AI agents and agentic workflows

Configure the Access Control Lists for who can discover and trigger AI agents and agentic workflows in their guided setups in AI Agent Studio. You can determine whether an AI agent or agentic workflow behaves as a dynamic user or as an AI user. You can also specify if an AI agent or agentic workflow can be available to all authenticated users or publicly available.

### Xanadu Patch 9

#### Optimize hardware asset sourcing using the suite of AI agents

Automate your hardware asset sourcing by using AI agents in the Help manage hardware asset requests agentic workflow. These AI agents can efficiently handle tasks such as automatically consuming assets from local stock, creating transfer orders, and generating purchase orders. By automating complex and repetitive tasks in the hardware asset request process, AI agents help to reduce manual intervention significantly, speed up request resolution, enhance the productivity of asset managers, and improve operational efficiency.

## Activation information

Install Now Assist for Hardware Asset Management (HAM) by requesting it from the ServiceNow Store.

**Note:**
To take full advantage of the Now Assist for HAM features, you should upgrade to Xanadu Patch 10 and install the Now Assist for Hardware Asset Management (HAM) store application.

Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Additional requirements

The Now Assist for Hardware Asset Management (HAM) application requires the Hardware Asset Management Pro plus license.

## Related ServiceNow applications and features

**Now Assist**

Help improve the productivity and efficiency in your organization, deliver better self-service, recommend actions, provide answers, and empower your users to search more effectively.

**Now Assist Admin console**

Use the Now Assist Admin console for quick and effortless access to the important information that you need to set up, configure, and monitor Now Assist applications and features.

**Now Assist panel**

Use this conversational interface in ServiceNow® Service Operations Workspace to summarize a chat, an incident, or resolution notes so that you can get the context of this information more quickly.

**Now Assist skills**

Use the ServiceNow® Now Assist products to provide generative AI skills to meet the needs of users in different workflows, including case or incident summarization, chat summarization, resolution notes generation, and code generation.

### Now Assist for IT Operations Management (ITOM) release notes

The ServiceNow® Now Assist for ITOM application brings generative AI to IT Operations Management. You can access alert simplifications created by Now Assist using generative AI in both Service Operations Workspace and Express List.

## Now Assist for ITOM highlights for the Xanadu release

Xanadu Patch 10

- Get deeper impact analysis in the Analyze alert impact agentic workflow with five new AI agents.
- Enhance security for Now Assist AI agents with Access Control Lists (ACLs).

Xanadu Patch 9

- Investigate alerts and get the context that you need to respond efficiently using the Analyze alert impact agentic workflow.
- Automatically perform initial alert triage and analysis tasks such as assigning alerts, analyzing alert history, and summarizing past incidents, with the Triage and analyze alert agentic workflow.

Xanadu Patch 1

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Optimize alert resolution with Now Assist AI-driven investigation of past related incidents.
- Generate an alert group description in Express List using Now Assist.
- Launch an alert analysis from the Now Assist panel.

See Now Assist for IT Operations Management (ITOM) for more information.

**Important:**
Now Assist for ITOM is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

### Xanadu Patch 10

#### Configure the Dynatrace analysis AI agent

Set up the Dynatrace analysis AI agent in the Analyze alert impact agentic workflow to investigate Dynatrace alerts. With Dynatrace, the agentic workflow now supports three observability tools, including Kentik and New Relic, helping you investigate and respond to a wider range of alerts.

#### Expand the Analyze alert impact agentic workflow with four new AIOps agents

Get a fuller view of alert impact with four new AIOps agents in the Analyze alert impact agentic workflow. Along with observability data, the agentic workflow now includes information from within ServiceNow to help surface business impact and related issues. Activate the AIOps agents to include them in the agentic workflow.

#### Add access control lists for security in AI agents

Enable security settings to run AI agents and agentic workflows using ACLs and user identities. You can configure and manage the ACLs in AI Agent Studio.

### Xanadu Patch 9

#### Analyze alert impact agentic workflow

Analyze the impact of alerts and identify possible causes with the Analyze alert impact agentic workflow. The workflow interacts with observability tools, such as Kentik and New Relic, to surface alert details and provide insights.

#### Triage and analyze alerts agentic workflow

Automatically assign, acknowledge, and summarize alerts, determine significance through history analysis, and analyze related incidents. Initiate multiple parallel processes to triage and analyze different alerts.

### Xanadu Patch 1

#### Speed up alert resolution with a Now Assist analysis of past related incidents

Enhance efficiency and reduce downtime with a Now Assist analysis of past incidents on the same or related CIs. Now Assist investigates historical data to identify past incidents related to the current alert and reports their frequency and criticality levels. It also provides a summary of effective strategies used to resolve them. In addition, Now Assist offers contact information for individuals or teams who have resolved similar incidents in the past and could assist when needed.

#### Generate an alert group description in Express List using Now Assist

Use Now Assist to generate a description of an alert group in Express List that encompasses all the alerts within the group. The generated description replaces the original description of the group.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

#### Launch an alert analysis from the Now Assist panel

Analyze an alert from the Now Assist panel. The alert analysis displays directly in the Now Assist panel for convenient review.

## Removed in this release

- Starting with version 2.0.1 of AI Agents for Observability, the sn_obs_aia.admin role, previously required to configure AI agents in the Analyze alert impact agentic workflow, has been removed. Users must now have the credential_admin and connection_admin roles instead.
- Starting with version 2.0.1 of AI Agents for Observability, the prompt `How severe is this alert?` no longer appears in the Analyze alert impact agentic workflow.

## Activation information

Install Now Assist for ITOM by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Additional requirements

Now Assist for ITOM is supported on Vancouver Patch 7 and later releases.

## Related ServiceNow applications and features

#### Event Management

The ServiceNow® Event Management application helps you identify health issues across the datacenter on a single management console. It provides alert aggregation and root cause analysis (RCA) for discovered services, application services, and automated alert groups.

#### Service Operations Workspace

ServiceNow® Service Operations Workspace is a configurable workspace that provides a unified experience for multiple IT Operations Management workflows.

#### Now Assist

ServiceNow® Now Assist uses generative AI that is designed to enhance user productivity and efficiency through conversation and proactive experiences.

#### Now Assist Admin console

The Now Assist Admin console provides you with quick and easy access to the important information that you must set up, configure, and monitor Now Assist applications and features.

### AIOps LEAP release notes

The ServiceNow® AIOps LEAP application uses AI driven insights to create standard and dynamic playbooks for quick incident resolution management. AIOps LEAP is a new application in the Xanadu release.

## AIOps LEAP highlights for the Xanadu release

- Automation feedback and tracking for automation opportunities
- Pin Automation Opportunities for ease of analysis
- Customize filters for Automation Opportunities and published playbooks.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Customize columns on the Automation Opportunities and published playbooks pages.
- Use published LEAP in SOW to resolve a new incident quickly.
- Use a value dashboard for performance analysis and enhancement.

See AIOps Learning Enhanced Automation Playbook (LEAP) for more information.

**Important:**
AIOps LEAP is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## AIOps LEAP features

### Incident clustering and comprehensive summaries

AIOps LEAP smartly categorizes IT incidents based on short descriptions and assignment groups. It uses historical data to get a deeper understanding of issues and summarizes them into actionable resolutions. AIOps LEAP consolidates information from different incidents to help with decision making and serves as a repository of knowledge.

### Group incidents to create automation opportunities

AIOps LEAP uses the ServiceNow® GAF (Group Action Framework) plugin to organize and group incidents based on specific parameters. These groups are clusters or automation opportunities. They are created by analyzing incident data such as work notes and resolution notes. AIOps LEAP uses these automation opportunities to generate resolution steps to help solve similar future incidents.

### Automation recommendations and playbook generation

AIOps LEAP identifies frequent issues and offers automation recommendations to address them. It streamlines and optimizes operational processes by creating actionable playbooks based on historical data and resolution workflows. Additionally, it builds a knowledge base by documenting workflows and solutions through detailed resolution steps, enabling further analysis, learning, and continuous improvement. These resolution steps can be shared across teams to facilitate collaboration and enhance operational efficiency, even without formal playbook creation. Thus, automated playbook generation is a valuable output of the AIOps LEAP platform.

## New in the Xanadu release

### Enhanced opportunities page

Enhancements & Design changes to load all opportunities and enable to select all cards.

## UI changes

### Pin automation opportunities

You can pin the automation opportunities required for ease of access and research.

### Automation feedback and tracking

You can provide your feedback on the available resolution steps and playbooks. Each activity on the automation activity is tracked and recorded.

### Filters for automation opportunities and playbooks

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

You can customize filters on the automation opportunity dashboard to filter them according your requirement for analysis. These filters are retained even when the page is refreshed.

## AIOps LEAP Activation information

Install AIOps LEAP by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Use one of the following steps to activate *AIOps LEAP*.

### Activate AIOps LEAP

| Activate from | Steps |
|---|---|
| Workspaces | 1. Select **Workspaces** on top, select *AIOps LEAP*.<br>2. Select **Now Assist Admin Workspace**, select **Activate**. |
| Now Assist Admin | 1. Select **Admin** > **Now Assist Admin** > **Now Assist Skills**<br>2. In the navigation pane, select **ITOM**.<br>3. Select **Activate** *AIOps LEAP*. |

## Additional requirements

You should have the following dependencies installed:

- Now Assist for Platform
- Now Assist for Creator (optional)

## Related ServiceNow applications and features

### Now Assist for IT Operations Management (ITOM)

The ServiceNow® Now Assist for IT Operations Management (ITOM) application uses generative AI to provide alert analyses in Event Management. Alert analysis include a human-readable brief of the alert and technical information to help you investigate the alert more effectively.

### Now Assist for IT Service Management (ITSM) release notes

The ServiceNow® Now Assist for IT Service Management (ITSM) application brings generative AI to IT Service Management. Now Assist for IT Service Management (ITSM) was enhanced and updated in the Xanadu release.

## Now Assist for IT Service Management (ITSM) highlights for the Xanadu release

### Xanadu Patch 9

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Identify the category, subcategory, and configuration item for a given incident automatically using a team of AI agents in the Triage and categorize ITSM incidents agentic workflow.
- Get recommendations to resolve incidents by using a team of AI agents for catalog, knowledge, and past incidents in the Investigate and resolve ITSM incidents agentic workflow.
- Manage Microsoft 365 group members using AI agents in the Manage Microsoft 365 group members agentic workflow.
- Generate the **Risk and impact analysis** and the **Justification** fields using the AI agents in the Generate change request plans agentic workflow.

Xanadu Patch 7: Scale your workflows, enhance productivity, and complete work autonomously using IT Service Management AI agent collection.

Xanadu Patch 3

- Provide change managers with an explanation of the risk rating in a change request by using the Now Assist icon .
- Enable agents to ask questions that are related to an incident in the Now Assist panel.
- Enable agents to generate resolution notes for an incident on demand by using the Now Assist context menu.
- Provide requesters with proactive actionable notifications as part of ITSM Virtual Agent pre-built large language model (LLM) topic conversations.

Xanadu Patch 1

- Enable agents to make a more informed decision quickly and efficiently when they're approving a change by using change request summarization.
- Enable agents to reply to common questions asked in chats by using the Now Assist icon in chat reply recommendations.
- Enable agents to get a better understanding of the chat and incident context by using the Sidebar discussion summarization when they're proposing resolutions to the requesters.

See Now Assist for IT Service Management (ITSM) for more information.

**Important:**
Now Assist for ITSM is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

### Xanadu Patch 9

#### Using IT Service Management AI agent collection

Use the IT Service Management AI agent collection to boost productivity, and autonomously resolve business tasks.

**Available agentic workflows**

| Agentic workflows | Description |
|---|---|
| Triage and categorize ITSM incidents | Identify the category, subcategory, and configuration item for an incident automatically, and link associated major incidents or known problems. |

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

**Available agentic workflows (continued)**

| Agentic workflows | Description |
|---|---|
| Investigate and resolve ITSM incidents | Get recommendations to resolve an incident based on the incident number. Check for related catalog items, Knowledge articles, and similar resolved incidents to generate resolution steps for the incident. |
| Manage Microsoft 365 group members | Add or remove groups and email distribution lists from the Microsoft 365 group. |

### IT Service Management AI agent collection Generate change request plans agentic workflow

Use the following additional AI agents to handle change requests.

| AI agent | Description |
|---|---|
| Change risk and impact analysis AI agent | Analyzes the potential risk and impact of a change request. |
| Change justification proposal AI agent | Proposes justification for a change request. |

### Generate a Major Incident email content recommendation by using Now Assist for IT Service Management (ITSM)

Draft a communication for a major incident using an email template. You can fill in the template field values with an AI-generated response.

### Generate comments and work notes using the Now Assist context menu

Enable your agents to generate comments and work notes quickly and add them to incidents using the Now Assist panel.

### Incident sentiment and sentiment trend

Make informed decisions on incidents by considering the requester's sentiments and the reasoning behind them.

### Suggested steps generation in Now Assist for IT Service Management (ITSM)

Automatically generate suggested steps to resolve an incident by analyzing the solutions from clusters of similar resolved incidents.

### Summarizing attachments in the Incident summarization skill

Summarize, analyze, and extract data from attachments that are of type PNG or JPEG using Document Intelligence in the Incident summarization skill.

### Using self service to deflect incidents in a ServiceNow portal by using Now Assist for IT Service Management (ITSM)

Designed to reduce the number of incidents to be resolved by deflecting issues with self-service.

### Customizing a Now Assist for IT Service Management (ITSM) change risk skill

Efficiently explain the risk of a change request by adding custom input fields to the following input tables:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Change request
- Past similar change request
- Incident caused by change

### Refining a change risk explanation response

Refine the explanation to a change risk by shortening or lengthening a response by using Now Assist for IT Service Management (ITSM).

### Risk Assessment as input to calculate a change risk

Use risk assessment values as an input to explain the risk of a change request.

### Generating an email response by using Now Assist for IT Service Management (ITSM)

Get recommendations for email responses that agents can review and send to users. Agents can also get email template and content edit recommendations from Now Assist for IT Service Management (ITSM).

### Monitoring task status using pre-built LLM topics with Now Assist in ITSM Virtual Agent

Copy and customize a ITSM Virtual Agent core ITSM topic template to track the status of a task by using Now Assist in ITSM Virtual Agent.

### Xanadu Patch 7

### Using IT Service Management AI agent collection

Use IT Service Management AI agent collection to boost productivity, and autonomously resolve business tasks.

**Available AI agents use cases**

| AI agent use case | Description |
|---|---|
| Generate post incident reviews | Enhance IT productivity during major incidents by minimizing the time required to generate post-incident reviews using AI agents. This process helps improve communication and avoid outages.<br><br>**Important:** To enable the display of the Generate post incident reviews use case, you must activate the Incident Management - Major Incident Management plugin (com.snc.incident.mim). For more information, see Activate Incident Management - Major Incident Management. |
| Generate change request plans | Enhance IT productivity and help decrease the time to schedule change and manage change risk using AI agents. These AI agents can look up similar changes, generate implementation, back out, and test plans to manage change effectively. |

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

**Available AI agents use cases (continued)**

| AI agent use case | Description |
|---|---|
| Categorize incidents | Autonomously recommend incident categorization using AI agents.<br>The AI agent assigns a category, subcategory, and a configuration item (CI) to incidents based on the incident description. The assigned CI is also based on callers associated with that item. |
| Notify users with Twilio | Send text messages via SMS to recipients manually using AI agents to help improve the time required for subject matter expert response.<br><br>**Important:**<br>To enable the display of the Notify users with Twilio use case, you must activate the Twilio Spoke plugin (sn_twilio_spoke). For more information, see Twilio Spoke. |

## Xanadu Patch 3

### Risk rating explanation for a change request

Provide your change managers with a better understanding of the risk rating of a change request, including the potential impacts and risks, by generating the risk explanation by using the Now Assist icon. The risk rating explanation can be generated on the change request form and in the Now Assist panel.

### Ask questions about an incident by using the Now Assist panel

Enable your agents to quickly obtain common incident information conversationally within the incident record by asking questions in the Now Assist panel. Topics include the caller's assets, caller's recent incidents, on-call experts, and similar resolved incidents.

### Enhanced incident resolution notes using the Now Assist context menu

Provide your agents with enhanced resolution notes information in the incident summary, including the root cause and steps taken to resolve the issue, by using the Now Assist context menu.

### Proactive actionable ITSM Virtual Agent notifications

Provide your agents with proactive actionable notifications as part of ITSM Virtual Agent pre-built Large Language Model (LLM) topic conversations that are designed to help your users complete common IT-related tasks.

### Change request summarization enhancements

Provide your change managers with an improved change request summary including additional details, such as the affected configuration items (CIs) and impacted services.

### Incident summarization enhancements

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Provide your agents with an improved incident summary by including additional details, such as the service level agreements (SLAs), affected CIs and impacted services, and child incidents.

### Xanadu Patch 1

#### Summarize a change request

Provide your change managers with a better understanding of the content, intent, and impact of a change request by viewing the change summarization on the change request form and in the Now Assist panel.

#### Generating a knowledge article from similar incidents

Enable your agents to generate a comprehensive knowledge article by leveraging information from a similar set of incidents.

#### Generating chat reply recommendations

Provide your agents with quick answers to common questions that are asked in chats by using the Now Assist icon in chat reply recommendations.

#### Summarizing a Sidebar discussion

Enable your agents to summarize Sidebar chats and post summaries into the work notes of incidents, changes, requests, problems, and knowledge base tasks (any record type where Sidebar discussions are enabled) by using Sidebar discussion summarization.

## UI changes

### Xanadu Patch 9

#### Terminology change

- The term use case is replaced with the term agentic workflow. For example, the Notify users with Twilio use case is now referred to as the Notify users with Twilio agentic workflow.
- The naming of the AI agents has changed. For example, Twilio SMS texter has been renamed to Twilio SMS texter AI agent.

#### New look and feel for the display of incident and change request summarizations

Get the summary of an incident or a change request by using the new and more intuitive summarization user interface. The new interface is available in Service Operations Workspace and in the Core UI.

## Changed in this release

### Xanadu Patch 9

#### System property to display knowledge article templates

Display Knowledge article templates that you can use to create articles by using a system property. In earlier releases, the templates were displayed by default.

#### IT Service Management AI agent collection Triage and categorize ITSM incidents agentic workflow

The Categorize incidents use case has been renamed to the Triage and categorize ITSM incidents agentic workflow.

The following AI agents have been added to the workflow:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Link major incident AI agent
- Link incident to problem AI agent

The Incident categorize AI agent has been renamed to Categorize incident AI agent.

**Xanadu Patch 3 Resolution notes generation skill enhancements (for upgrade customers)**

Enhance your existing incident resolution notes generation skill to show the root cause and resolution steps taken. Enable this enhancement by using the toggle switch on the Configure response screen in the Now Assist Admin console.

**Note:**
This option is available only when the incident resolution notes generation skill has been activated prior to upgrading.

## Activation information

Install Now Assist for ITSM by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

- **Important:**
  To enable the display of the Generate post incident reviews use case, you must activate the Incident Management - Major Incident Management plugin (com.snc.incident.mim). For more information, see Activate Incident Management - Major Incident Management.

- **Important:**
  To enable the display of the Notify users with Twilio use case, you must activate the Twilio Spoke plugin (sn_twilio_spoke). For more information, see Twilio Spoke.

## Additional requirements

The Now Assist for ITSM application requires an IT Service Management Pro Plus or Enterprise Plus license.

## Related ServiceNow applications and features

**Now Assist**

Help improve the productivity and efficiency in your organization, deliver better self-service, recommend actions, provide answers, and empower your users to search more effectively.

**Now Assist Admin console**

Use the Now Assist Admin console to provide you with quick and easy access to the important information that you need to set up, configure, and monitor Now Assist applications and features.

**Now Assist panel**

Use this conversational interface in Service Operations Workspace to summarize a chat, an incident, or resolution notes so that you can get the context of this information more quickly.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

### Now Assist skills

Use the Now Assist products to provide generative AI skills to meet the needs of users in different workflows, including case or incident summarization, chat summarization, resolution notes generation, and code generation.

### Now Assist for Security Operations release notes

The ServiceNow® Now Assist for Security Operations application permits security analysts to resolve security incidents faster with intelligent workflows and generative AI skills. Now Assist for Security Operations is a new application in the Xanadu release.

## Now Assist for Security Operations highlights for the Xanadu release

Xanadu Patch 9

- Help your analysts to gain insight into security incident record metrics with an agentic workflow. Chat with AI agents in natural language from the Now Assist panel.
- With the initial release of Now Assist for Vulnerability Response, help your vulnerability managers and analysts to assess your exposure to vulnerabilities and analyze metrics for remediation targets. Chat with AI agents in natural language from the Now Assist panel.
- Help your analysts to resolve security incidents by chatting with AI agents in the Now Assist panel where the AI agent provides a resolution plan.

Xanadu (prior to Patch 9)

- Expedite triaging of security incidents with long activity streams by reviewing work notes and contextual information quickly in a concise, easy-to-read format.
- Preview security incident details, their potential impact, and any key actions already taken with security incident summaries using generative AI.
- Automatically generate closure notes for security incidents using generative AI.
- Generate recommended actions to resolve security incidents.
- Generate a post-incident analysis.
- Access summaries and closure notes from the Now Assist panel, security incident records, or from the Security Incident Response Workspace.

See Now Assist for Security Incident Response for more information.

**Important:**
Now Assist Security Operations is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## Important information for upgrading Now Assist for Security Incident Response and Now Assist for Vulnerability Response to Xanadu

For more information about required applications for Now Assist for Vulnerability Response, see Supporting information for Now Assist for Vulnerability Response. For more information about required applications for Now Assist for Security Incident Response, see Supporting information for Now Assist for Security Incident Response.

The AI Search application must be enabled so that the Recommended Actions skill works for security incidents. To verify AI Search is enabled on your instance, navigate to **All** > **AI Search** > **AI Search Status**. Contact support if the page indicates AI Search is not enabled.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Activation information

Install Now Assist for Security Operations by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

### Now Assist for Strategic Portfolio Management (SPM) release notes

The ServiceNow® Now Assist for Strategic Portfolio Management (SPM) application introduces generative AI skills into Strategic Portfolio Management. You can summarize feedback or content in Docs, create stories for epics, generate concise project summaries, create demands through conversations, and quickly gain insights into projects. Now Assist for Strategic Portfolio Management (SPM) is updated in the Xanadu release.

## Now Assist for SPM highlights for the Xanadu release

Yokohama Patch 1: Use Now Assist for SPM AI agents to help optimize workflows, improve productivity, and automate your tasks.

- Summarize multiple feedback records with the multi-feedback summarization skill to extract insights from feedback.
- Copy a generated summary and then use it to create a planning or non-planning item.
- Get assistance from Now Assist for writing content in Now Assist Docs. Generate a summary of the selected content by using the Now Assist skill and shorten or elaborate the content as needed.
- Enable the email project summary skill to receive project updates via email.
- Generate a summary of the complete content in Now Assist in Docs using the Gen AI docs skill and save time on manual content analysis.

See Now Assist for Strategic Portfolio Management (SPM) for more information.

## New in the Xanadu release

**Xanadu Patch 7 Using AI agent agentic workflows in Now Assist for Strategic Portfolio Management (SPM)**

Use Now Assist for SPM AI agents to help enhance project efficiency by monitoring your tasks autonomously.

#### Available AI agents use case

| AI agent use case | Description |
|---|---|
| Monitor project tasks | Track project tasks with AI agents to detect important updates such as delayed end dates, status turning red, or state updates. AI agents can help project managers to enhance productivity by delivering real-time visibility into key task changes, enabling proactive decision-making. |

**Summarize multiple feedback records**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Summarize multiple feedback records through generative AI and save time by not having to do manual feedback analysis. You can generate a short summary for one or multiple feedback records at once and use it to make informed decisions on your product.

**Generate a summary in Now Assist in Docs**

Use Now Assist in Docs to create a concise summary of the selected text and quickly gain relevant information.

**Schedule the project summary emails with Email project summary skill**

Generate a comprehensive summary of the entire content in Docs by using the Gen AI Docs skill and reduce the time spent on manually analyzing all the information. The Gen AI Docs skill name is Project Gen AI Docs in Project Workspace, Planning item Gen AI Docs in Strategic Planning, and EAP Teams Gen AI Docs in Enterprise Agile Planning.

**Generate the summary for selected or complete content with Planning item doc summarization skill in Strategic Planning**

Set up automated emails by using the email project summary skill to stay updated on the project progress. The email is shared on a weekly, bi-weekly, or monthly cadence.

## Activation information

Now Assist features are available with activation of the Now Assist for Strategic Portfolio Management (SPM) plugin. For more information, see Install Now Assist plugins.

## Additional requirements

The Now Assist for SPM application requires a Strategic Portfolio Management (SPM) Pro plus license. Now Assist for SPM is supported from Xanadu patch 3 release.

## Related ServiceNow applications and features

**Now Assist**

Improve the productivity and efficiency in your organization, deliver better self-service, recommend actions, provide answers, and empower your users to search more effectively.

**Now Assist Admin console**

The Now Assist Admin console provides you with quick and easy access to the important information that you need to set up, configure, and monitor Now Assist applications and features.

**Now Assist skills**

Now Assist products provide generative AI skills that are tailored to meet the needs of users in different workflows, including case or incident summarization, chat summarization, resolution notes generation, and code generation.

### Now Assist for Source-to-Pay Operations release notes

The ServiceNow® Now Assist for Source-to-Pay Operations application includes generative AI skills that can make developing on the ServiceNow AI Platform more efficient. Now Assist for Source-to-Pay Operations was enhanced and updated in the Xanadu release.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Now Assist for Source-to-Pay Operations highlights for the Xanadu release

- Now Assist for Sourcing and Procurement Operations (SPO) supports summarization of procurement-related records, providing real-time progress updates and action items. Available summarization skills include:
  - Sourcing request summarization
  - Purchase requisition summarization
  - Procurement case summarization
- Now Assist for Supplier Lifecycle Operations (SLO) supports summarization for the details of supply-related records to keep the supplier managers and fulfillers informed about their progress and action items.
- Now Assist for APO supports record summarization for invoice and inquiry cases.

See Now Assist for Source-to-Pay Operations for more information.

**Important:**
Now Assist for Source-to-Pay Operations is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

### Now Assist for Sourcing and Procurement Operations (SPO)

With ServiceNow® Now Assist for Sourcing and Procurement Operations (SPO), fulfillers can easily summarize procurement-related records, providing real-time progress updates and action items. Available summarization skills include

- Sourcing request summarization
- Purchase requisition summarization
- Procurement case summarization

If you're entitled to Source-to-Pay Operations Pro SKU and Sourcing and Procurement Operations Pro SKU, you can install this application.

### Request the generative AI capabilities by using the Now Assist for SPO Virtual Agent

Requesters can leverage contextual generative AI using the Now Assist for SPO Virtual Agent to complete self-service tasks, such as purchasing products or tracking the status of purchase requisitions, sourcing requests, or procurement cases.

### Now Assist for Supplier Lifecycle Operations (SLO)

With ServiceNow® Now Assist for SLO, supplier managers and fulfillers can summarize the details of supply-related records to keep them informed about their progress and action items.

### Now Assist for Accounts Payable Operations (APO)

With ServiceNow® Now Assist for APO application, AP fulfillers can easily summarize invoice case and inquiry case-related records, providing real-time progress updates and action items.

## Activation information

Install Now Assist for Source-to-Pay Operations by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about

© 2026 ServiceNow, Inc. All rights reserved.

submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

### Now Assist for Telecommunications, Media and Technology (TMT) release notes

The ServiceNow® Now Assist for TMT application brings generative AI to Proactive Service Experience Workflows. Improve productivity and efficiency by delivering better self-service, recommending actions, and delivering answers. Now Assist for TMT is a new application in the Xanadu release.

## Now Assist for TMT highlights for the Xanadu release

Xanadu Patch 9

- Monitor engagement health score and provide a trend analysis.
- Monitor risks on a predefined schedule and provide common resolutions.

Xanadu Patch 7: Proactively identify service problems, diagnose, test, and resolve customer issues autonomously using Now Assist for TMT AI agent collection.

- Summarize service problem cases, generate resolution notes, and create test summaries for service-related issues by using Generative AI.
- Determine when the skills for the case summarization and the resolution notes generation are available by adding conditions to the fields on the case record.
- Restrict the availability of the case summarization and resolution notes generation skills by user role.
- Create a template-driven service problem case summarization based on the case state: new, in progress, or resolved.

See Now Assist for Telecommunications, Media and Technology (TMT) for more information.

**Important:**
Now Assist for Telecommunications, Media and Technology (TMT) is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## Now Assist for TMT features

**Xanadu Patch 9**

**Monitor engagement health**

Monitor the health score of all engagements, create trend charts, and generate risk signals when a decline is detected.

**Analyze risk signals and recommend solutions**

Retrieve unaddressed risk signals and identify appropriate success plays based on a back-end decision table.

**Xanadu Patch 7**

**Using Telecommunications, Media, and Technology AI agent collection**

Use Now Assist for TMT AI agents to troubleshoot and autonomously resolve customer issues.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

**Available AI agents use case**

| AI agent use case | Description |
|---|---|
| Test and repair telecom service issues | Use AI agents to handle task requests that require troubleshooting, diagnosis, and resolution of a case task. |

**Xanadu Patch 1**

**Service Problem Case summarization skill**

Designed to save agents time by condensing the service problem case record to a short summary.

**Resolution notes generation skill**

Enable your agents to generate the resolution information for a service problem case, propose the resolution to the customer, and add the information to the service problem case record through the resolution summarization skill.

**Test summarization skill**

Identify the root cause of a problem diagnosed during the test run by generating a clear and concise root-cause analysis of the service issue through the test summarization skill.

**Now Assist Panel**

Enable your agents to access Now Assist skills in a panel available on CSM/FSM Configurable Workspace. Now Assist is aware of context, so it can summarize the currently viewed record or conversation, or you can specify a case number.

**Now Assist Admin console**

Activate and configure capabilities and individual skills on the Now Assist Admin console. For example, you can designate which roles have access to a skill, or whether the skill is available in CSM/FSM Configurable Workspace, the Now Assist panel, or both.

**Add conditions to skill availability**

Determine when the skills for the case and the resolution notes summarization are available by adding conditions to the fields on the service problem case record.

**Restrict skill availability by user role**

Specify the roles that can access the case summarization and resolution notes summarization skills.

**Minimum text requirement for case summarization**

Enable the case summarization skill for cases that have the minimum amount of information in the case activity stream.

## Activation information

Now Assist features are available with activation of the Now Assist for TMT plugin. For more information, see Install Now Assist plugins.

## Additional requirements

The Now Assist for TMT application requires a Proactive Service Experience Workflows Pro Plus or Enterprise Plus license.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Related ServiceNow applications and features

### Now Assist

ServiceNow® Now Assist uses generative AI to enhance user productivity and efficiency through conversation and proactive experiences.

### Now Assist Admin console

Use the ServiceNow® Now Assist Admin console to provide you with quick and effortless access to the important information that you need to set up, configure, and monitor Now Assist applications and features.

### Now Assist panel

Use this conversational interface in CSM/FSM Configurable Workspace to summarize a chat, a case, or resolution notes so that you can convey the context of this information more quickly.

### Now Assist skills

Use the Now Assist products to provide generative AI skills to meet the needs of users in different workflows, including case or incident summarization, chat summarization, resolution notes generation, and code generation.

### Now Assist in Virtual Agent release notes

The ServiceNow® Now Assist in Virtual Agent application uses generative AI skills in your conversational experiences. Now Assist in Virtual Agent uses large language models (LLMs) to create a natural-language conversational experience that can improve the success of your self-service workflows. Now Assist in Virtual Agent was enhanced and updated in the Xanadu release.

## Now Assist in Virtual Agent highlights for the Xanadu release

### Xanadu Patch 9

- Use enhanced chat to provide users with a conversational experience within a resizable and movable chat window that includes the ability to have multiple active conversations. Enhanced chat enables users to choose their way of engaging with Now Assist on their ServiceNow portals from a variety of entry points. Enhanced chat includes synthesized responses after entering a search query into a portal's search bar. If Now Assist in AI Search is turned on, enhanced chat also offers an optional full-page experience where your users can enter into a full-page chat experience after entering a search query into a portal's search bar. Enhanced chat also offers an updated, modern look and feel along with chat controls to resize and move the chat window.
- View an expanded list of inline citations for both standard and enhanced chat. New inline citations for external content and people searches are available.
- View and work with suggested actions after completing an action in Now Assist in Virtual Agent.
- Stream responses for Now Assist LLM - enhanced chat conversations.
- Upload or drag documents and images into a standard or enhanced chat.
- Automatically switch to the user's detected language in enhanced chat conversations when language detection is turned on.
- Enable pinning a chat window on a portal by using the *sn_nowassist_va.enhanced_chat_pin_enabled.<portal-url>* system property.

### Xanadu Patch 7

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Stream responses for Now Assist LLM chat conversations.

### Xanadu Patch 3

- Run actions from a conversation.
- Run subflows from a conversation.
- Use an updated Virtual Agent Designer list-based home page that includes conversational subflows and actions.
- Use language detection and engage in small talk within LLM conversations.
- Link primary assistants with secondary assistants to use search sources from secondary assistants.
- Use language detection and engage in small talk within LLM conversations.
- Receive a synthesized response for Now Assist in Virtual Agent users.

### Xanadu Patch 1

- Enhancements to the Now Assist in Virtual Agent admin guided setup.

See Now Assist in Virtual Agent for more information.

## New in the Xanadu release

### Xanadu Patch 9

#### Use enhanced chat

Enhanced chat is a conversational support experience within a resizable and moveable window that also includes the ability to have multiple active conversations and superior search capabilities. Using enhanced chat's full-page experience further intertwines chat and search capabilities by redirecting users into a full-page chat after entering a query into a portal's search bar.

#### View inline citations

View the expanded list of inline citations for standard and enhanced chat:

- Catalog
- Topic, subflows, or actions
- Q&A Knowledge Base articles
- External content connections

**Note:**
External content connections now include the following connection types:

- Microsoft SharePoint
- Confluence
- Atlassian Jira Cloud
- Google Drive
- Microsoft Teams
- Predefined web sources
- ServiceNow® documentation
- Slack

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- People

> **Note:**
> If Knowledge Graph is turned on, you can view information about a person. The people information in the Virtual Agent response typically includes their title, department, location, and email address. The people popover shows additional information.

### Use suggested actions

View suggested actions that were related to your prior conversation and that you consider doing next. After completing a conversational catalog request, conversational subflow, or Virtual Agent topic, two suggested actions appear after a `Here's what you can do next` header.

### Stream enhanced chat responses

Stream LLM response messages as they're generated instead of the response text appearing all at once to end users. Responses stream in either one letter or one word at a time.

### Use language detection to automatically switch the conversational language for enhanced chat conversations

Automatically switch the conversational language to the user's detected language during LLM enhanced chat conversations when language detection is turned on. This automatic switch can occur when a user enters an utterance at the start of a new conversation or within the portal home page's search field.

### Recognize the Boolean user input control during dynamic translation

Recognize the Boolean user input control in chat conversations during dynamic translation.

### Adjust Shorten responses toggle to impact Show more option in chat

For bot text responses, adjust the **Shorten responses** toggle in Virtual Agent Designer to turn off the **Show more** option on the user side. When **Shorten responses** is turned off, the **Show more** option does not appear in the chat to the user and the full answer is displayed rather than a truncated response.

### Configuring Now Assist in Virtual Agent

In addition to configuring Now Assist in Virtual Agent assistants, admins can configure the default Now Assist panel assistants. Options may vary for Now Assist panel assistants.

#### Create an assistant

- If multiple assistants are created, users can chat simultaneously with multiple assistants. Conversations are independent from each other.
- Turn on or off Now Assist panel (agent or creator) assistant. Contact support to configure Now Assist panel assistants.

#### Assign Now Assist skills to an assistant

- Now Assist Topic skill must be turned on at the assistant level for document uploads to be activated when managing the chat experience. For more information, see Manage an assistant chat experience.
- Create and manage agentic workflows in Now Assist AI Agents Studio and assign the workflows to the assistant.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Display your assistant on a portal or channel

- Display Now Assist in Virtual Agent enhanced chat, with or without the full-page experience, on your portal or mobile app. This dynamic window includes the ability to have multiple active conversations and search capabilities. To use enhanced chat, portals and mobile apps require AI Search to be enabled. For more information on the prerequisites, see Portal prerequisites for enhanced chat and Mobile app prerequisites for enhanced chat.

Manage an assistant chat experience

- Upload documents to Now Assist in Virtual Agent standard chat or enhanced chat experience. The Now Assist topics skill must be enabled in Now Assist skills. For more information on file formats, see Upload documents in Now Assist in Virtual Agent.

Review assistant settings

- Document uploads appear as active if it's turned on when managing the chat experience.

### Upload documents in Now Assist in Virtual Agent

Upload or drag and drop files to Now Assist in Virtual Agent (standard chat or enhanced chat). The assistant analyzes and understands the content of the files, and a user can ask questions about the content of the files or get a summary.

### Now Assist in Virtual Agent system properties

Enable suggested actions in Now Assist in Virtual Agent so that users are offered options for what they can do after completing a prior action. Suggested actions is applicable to standard and enhanced chat, mobile, and Microsoft Teams.

## Xanadu Patch 7

### Stream chat responses

Stream LLM response messages as they’re generated instead of the response text appearing all at once to end users. Responses stream in either one letter or one word at a time.

## Xanadu Patch 3

### Use Now Assist to call Microsoft Active Directory v2 actions

Install Now Assist for Conversational Spokes plugin and start utilizing the conversational ability of the Look up User spoke action. You can call this action from a conversational interface like Now Assist.

### Run an action from a conversation

Run a Workflow Studio action from a Now Assist conversation. Create and configure the conversational action from Workflow Studio. View and edit conversational actions within Virtual Agent Designer.

### Run a subflow from a conversation

Run a Workflow Studio subflow from a Now Assist conversation. Create and configure the conversational skill from Workflow Studio. View and edit conversational subflows within Virtual Agent Designer.

### AI generated topic description message within topic migration

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

A `Topic description generated by Now Assist` message now appears near the **Topic Description** field during the topic migration's Review descriptions step.

### Small talk for LLM conversations

Use small talk in LLM conversations for greetings and farewells along with gratitude and complaint statements. A Semantic Filtering Framework (SFF) detects small talk and generates an appropriate response.

### Language detection for LLM conversations

Use language detection for your LLM conversations to improve your user's experience.

### Virtual Agent Designer home page

A new list-based Virtual Agent Designer home page appears for users who have activated Now Assist in Virtual Agent and the Agent assist Topics skill. The card-based UI is still available for those users who use only NLU/keyword or Virtual Agent Lite.

### Virtual Agent Designer user input controls

Updates to LLM user inputs include:

- Use the Validation toggle in the Advanced section of User Inputs to confirm user input values by scripts.
- Use the Allow slot filling toggle on User Inputs to switch between static (single field) and dynamic (define with scripts or data pill picker) detail description modes.
- Get a message that a mandatory field cannot be skipped when you attempt to skip a user input with conditions not set to be skippable.

### Configuring Now Assist in Virtual Agent

Updates to the admin guided setup include:

- Enhance functionality and efficiency of your Virtual Agent by linking primary assistants to secondary assistants, enabling a primary assistant to use search sources from secondary assistants.
- View the relationship between primary and secondary assistants within a map view.
- Select portals and mobile applications to display Virtual Agents.
- Create conversational subflows and actions by launching Workflow Studio to make conversational subflows and actions available to the assistant.

### Synthesized response

For Now Assist in Virtual Agent users, a synthesized response can appear. A synthesized response includes a brief summary of the requested information and search results along with Genius Results. Mid-topic switching can occur during a conversation with synthesized response. Users can continue with their original request or switch the conversation's focus.

### New system properties

The following system property was added to increase flexibility of the search results and response:

- *`sn_nowassist_va.synthesized_autostart_items`*: When synthesized response only returns a singular action, configure whether to directly launch into that action. By default, whenever synthesized response returns a

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

single Virtual Agent topic, that action is auto-launched. The following actions can be configured to auto-launch:

- Synthesized response returns a single conversational catalog item.
- Synthesized response returns a single Virtual Agent topic, along with Knowledge Base information.
- Synthesized response returns a single conversational catalog item, along with Knowledge Base information.

### Xanadu Patch 1

#### Delete virtual agents

Delete a Virtual Agent from the assistants list.

#### Support virtual agents on a portal

Allow public availability of an LLM-based Virtual Agent on a portal.

#### Display a virtual agent in a channel

Integrate your preferred messaging channels to display your Virtual Agent.

#### Install proactive triggers

Install Proactive Triggers from within the Review page.

#### Support notifications in virtual agents

Support actionable and non-actionable notifications for LLM conversations in Virtual Agent.

## UI changes

### Xanadu Patch 9

#### UI chat updates

- The summary card in a Now Assist in Virtual Agent conversation was updated to a more modern look and feel.
- The default chat widget button for enhanced chat and standard chat now differs on the portal.
- An Ask Now Assist header now appears with suggested searches in a drop-down on the portal's search bar.
- The Boolean choice, static choice, and dynamic choice controls were updated to a more modern look and feel for requesters.

### Xanadu Patch 3

#### UI chat updates

- The New `messages below` button in Virtual Agent was replaced with a simplified down-arrow indicator.
- The New `messages above` button was deprecated because Virtual Agent now auto-scrolls to the top of the oldest new message.
- Input text bar was updated to a more modern look and feel.
- The start a new conversation icon was updated.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Changed in this release

### Xanadu Patch 9

**Standard chat**

The existing Now Assist in Virtual Agent LLM conversational behavior received a terminology update and is now referred to as standard chat.

## Activation information

Now Assist features are available with activation of any Now Assist plugin from the ServiceNow Store. The following plugins are available:

- Now Assist for Accounts Payable Operations (APO)
- Now Assist for Configuration Management Database (CMDB)
- Now Assist for Creator
- Now Assist for Customer Service Management (CSM)
- Now Assist for Field Service Management (FSM)
- Now Assist for Financial Services Operations (FSO)
- Now Assist for Health and Safety
- Now Assist for HR Service Delivery (HRSD)
- Now Assist for IT Operations Management (ITOM)
- Now Assist for IT Service Management (ITSM)
- Now Assist for Legal Service Delivery (LSD)
- Now Assist for PSDS
- Now Assist for Security Incident Response
- Now Assist for Supplier Lifecycle Operations (SLO)
- Now Assist for Sourcing and Procurement Operations (SPO)
- Now Assist for Strategic Portfolio Management (SPM)
- Now Assist for Telecommunications, Media and Technology (TMT)

For more information, see Configuring Now Assist in Virtual Agent.

## Additional requirements

Now Assist in Virtual Agent requires a license for Virtual Agent and at least one Now Assist product.

## Browser requirements

Now Assist in Virtual Agent supports various browsers, including Google Chrome and Microsoft Edge. For more information, see Browser support.

## Localization information

Dynamic Translation is supported in Now Assist Virtual Agent conversations. For details, see Enable translation for Now Assist applications and Localization options for Virtual Agent.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Related ServiceNow applications and features

### Now Assist

ServiceNow® Now Assist uses generative AI that is designed to enhance user productivity and efficiency through conversation and proactive experiences.

### Now Assist in AI Search

The Now Assist in AI Search ServiceNow® Store application combines the power of search with the Now LLM Service generative AI model to answer questions in user searches with actionable AI-generated summaries of relevant Knowledge articles.

### Virtual Agent

Unlock your enterprise productivity with ServiceNow® Virtual Agent. Increase deflections by empowering your employees and customers to serve themselves using a friendly messaging interface, featuring prebuilt conversations powered by artificial intelligence.

### Workflow Studio

Consolidate workflow authoring, configuring, and monitoring into a single page experience. Create and manage playbooks, flows, actions, decision tables, and integrations from one design environment.

### Operational Technology release notes

Operational Technology has new and updated features in the Xanadu release.

### Industrial Process Manager release notes

The ServiceNow® Industrial Process Manager application enables your teams to map and visualize the industrial equipment models and associated production processes at individual facilities. Industrial Process Manager was enhanced and updated in the Xanadu release.

## Industrial Process Manager highlights for the Xanadu release

- Organize your Operational Technology (OT) device data by capturing the mapped equipment model entity for an OT device.
- View the relationships between devices and other configuration items (CIs) with the Unified Map experience in the Industrial Workspace.
- Add Operational Technology (OT) devices to an equipment model entity by using the IP address.
- Change the **Entity name** and **Parent** fields of an equipment model entity to keep your equipment model entity information up to date after you create it.

See Industrial Process Manager for more information.

**Important:**
Industrial Process Manager is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## Important information for upgrading Industrial Process Manager to Xanadu

The Industrial Process Manager application now has a dependency with the Operational Technology Service Management applications, which include Operational Technology Incident Management and Operational Technology Change Management. To install Industrial Process Manager on your instance, one of the following SKUs is required:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Operational Technology Visibility SKU
- Operational Technology Service Management SKU
- Any custom SKU that entitles Industrial Process Manager

## New in the Xanadu release

### Capture the mapped equipment model entity for your OT devices

Organize your OT device data efficiently by adding the primary equipment model entity for your OT devices. You can also automatically update the primary equipment model entity for your existing devices.

### Use the Unified Map experience in the Industrial Workspace

View the relationships between OT devices and other CIs with the Unified Map experience. You can also view related items, such as OT incidents and change requests.

### Map discovery detected devices using the Automated Mapping Across Zone-based IP Network Groups (AMAZING) feature

Map Discovery detected devices that have an IP address on their Network Adapter record using the AMAZING feature.

### Add OT devices to an equipment model entity by IP address

When you manually add OT devices to the Mapped OT Devices related list in the Equipment Model Manager on the Industrial Workspace, you can add an OT device by its IP address.

### Update the entity name or parent of an equipment model entity

Update the **Entity name** or **Parent** fields in an equipment model entity record as needed to help keep your equipment model information up to date.

## UI changes

### Mapped equipment model entity column

The Mapped equipment model entity column was added to the Industrial Workspace list views for OT devices.

### Mapped OT Devices list

The Mapped OT Devices list is now available in the Industrial Workspace list view so you can view the mapping between an equipment model entity and an OT device.

### ISA Hierarchy search bar

A search bar was added to the ISA Hierarchy in the Industrial Workspace so you can search for equipment model entity names.

### View OT Unified Map button

The **View OT Unified Map** button was added to the equipment model entity record in the Industrial Workspace to access the Unified Map.

### View OT Unified Map button

The **View OT Unified Map** button was added to OT incident records, OT change request records, and remediation task records to access the Unified Map associated with the opened record.

### Industrial Process Health icon

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The Industrial Process Health icon ( ) was added to OT incident records, OT change request records, and remediation task records to access the Unified Map in the record side panel.

### Parent field changed to Parent entity in the Equipment Model Entity record

The **Parent** field is changed to **Parent entity** in the Equipment Model Entity record on the ServiceNow AI Platform.

## Activation information

Install Industrial Process Manager by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

**Note:**
Industrial Process Manager is automatically installed with Operational Technology Incident Management and Operational Technology Change Management.

## Related ServiceNow applications and features

### Operational Technology Manager

The ServiceNow Operational Technology Manager enables you to aggregate OT device data from multiple sources so that you can build the foundational data relationships used in the Industrial solution.

### Operational Technology Change Management release notes

The ServiceNow® Operational Technology Change Management application enables engineers to implement changes to Operational Technology (OT) devices and production processes. Operational Technology Change Management was enhanced and updated in the Xanadu release.

## Operational Technology Change Management highlights for the Xanadu release

- In an OT change request record in the Industrial Workspace, use new related lists to create an OT incident record related to the OT change request, or link an existing OT incident record to the OT change request.
- Organize your OT change requests with the updated OT change record on the Industrial Workspace .

See Operational Technology Change Management for more information.

## Changed in this release

### Updated layout of the OT change record on the Industrial Workspace

The OT change record in the Industrial Workspace was updated so that all existing related lists are included under the **Related Records** tab.

## UI changes

### Incidents Fixed by Change related list

The Incidents Fixed by Change related list was added to the OT change request record in the Industrial Workspace. You can use this related list to create an OT

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

incident or link an existing OT incident that has been fixed by the OT change request.

#### Incidents Caused by Change related list

The Incidents Caused by Change related list was added to the OT change request record in the Industrial Workspace. You can use this related list to create an OT incident or link an existing OT incident that is needed because of the OT change request.

## Activation information

Install Operational Technology Change Management by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

**Note:**
Operational Technology Change Management now includes the Industrial Process Manager, and can be used with or without Operational Technology Manager.

## Related ServiceNow applications and features

#### IT Service Management

When integrated with Operational Technology Change Management, the ServiceNow IT Service Management application enables engineers to resolve OT device and production process issues.

#### Industrial Process Manager

Use the ServiceNow® Industrial Process Manager application to create the ISA-95 Equipment Model data foundation that is required for the ServiceNow Industrial solution, enabling you to create your own version of the equipment models in each of your industrial solution sites.

### Operational Technology Incident Management release notes

The ServiceNow® Operational Technology Incident Management application enables engineers to resolve Operational Technology (OT) device and production process issues. Operational Technology Incident Management was enhanced and updated in the Xanadu release.

## Operational Technology Incident Management highlights for the Xanadu release

- Relate an OT incident to an OT change request by creating the incident from the change record in the Industrial Workspace.
- Organize your OT incidents with the updated OT incident record on the Industrial Workspace.

See Operational Technology Incident Management for more information.

**Important:**
Operational Technology Incident Management is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

#### Create an OT incident from an OT change request

Create an OT incident related to an OT change request directly from the OT change record in the Industrial Workspace.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Changed in this release

### Updated layout of the OT incident record on the Industrial Workspace

The OT incident record in the Industrial Workspace was updated to include all existing related lists under the **Related Records** tab.

## Removed in this release

The **Opened** column was removed from the lists under the OT Incident module in the Industrial Workspace list view.

## Activation information

Install Operational Technology Incident Management by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

**Note:**
Operational Technology Incident Management now includes the Industrial Process Manager, and can be used with or without Operational Technology Manager.

## Related ServiceNow applications and features

### IT Service Management

When integrated with Operational Technology Incident Management, the ServiceNow IT Service Management application enables engineers to resolve OT device and production process issues.

### Industrial Process Manager

Use the ServiceNow® Industrial Process Manager application to create the ISA-95 Equipment Model data foundation that is required for the ServiceNow® Industrial solution, enabling you to create your own version of the equipment models in each of your industrial solution sites.

### Operational Technology Manager release notes

The ServiceNow® Operational Technology Manager application enables you to aggregate Operational Technology (OT) device data from multiple sources so that you can build the foundational data relationships in the Industrial solution. Operational Technology Manager was enhanced and updated in the Xanadu release.

## Operational Technology Manager highlights for the Xanadu release

- Track your OT device data with the new Operational Technology Visibility dashboard.
- Group OT devices using CMDB groups to support non-CMDB tables that must be converted from IT to OT.
- Compare sites by key metrics in the Industrial Workspace using the OT Progress Scorecard.
- Track tasks related to your OT system on the OT Action-Oriented Landing Page in the Industrial Workspace.
- Map IP addresses to OT devices through the SyncIPAddressToOT scheduled job.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Use the Configuration Management Database (CMDB) OT class model updates and UI enhancements.
- Use the updates and UI enhancements for the Pre-import OT Worksheet Entry Review (POWER) tool to help import and classify your OT device data.

See Operational Technology Manager for more information.

**Important:**
Operational Technology Manager is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

### Operational Technology Visibility dashboard

Track your OT data across different sites with the Operational Technology Visibility dashboard available in the Industrial Workspace.

### Automatic conversion of IT to OT devices using CMDB groups

Use CMDB groups to group IT configuration items (CIs) based on additional information, such as software installed, so that you can convert the CIs to OT devices.

### Mapped equipment model entity for your OT devices

Identify the equipment model entity that your OT devices are mapped to in the Industrial Workspace and help group your device data by equipment model entity.

### Important actions configuration on the OT Action-Oriented Landing Page

Configure the OT Action-Oriented Landing Page by using the **Sort items** field for your important actions.

### OT Action-Oriented Landing Page

Track critical tasks related to your OT network on the OT Action-Oriented Landing Page in the Industrial Workspace. This landing page provides a big-picture view of your site and business unit data, and it calls out important actions that the signed-in user must prioritize.

### Operational Technology Progress Scorecard

Compare your sites by their key metrics with the OT Progress Scorecard in the Industrial Workspace. To access the OT Progress Scorecard, you must have the OT Progress Scorecard viewer (ot_progress_scorecard_viewer) role.

### Redirection to different pages in the Industrial Workspace

Get redirected to different pages in Industrial Workspace depending on your assigned roles with the new homepage destination rules. This redirection helps you gain access to the data that you need.

### Map IP addresses to OT devices through the SyncIPAddressToOT scheduled job

Use the `SyncIPAddressToOT` scheduled job to update and synchronize the IP address information for all the available OT devices. The scheduled job acquires the IP address information from the IP address [cmdb_ci_ip_address] table and adds it to the **IP address** field of the Configuration Item (CI).

### CMDB OT class model updates

Utilize an enhanced OT user experience and make additional configurations with the following CMDB OT class model updates:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Product Instance Identifier was added as an identifier for the OT Identification Rule.
- The OT backup management model was added to help you store multiple backups against a configuration item.
- Firmware Installation [cmdb_firmware_install], Key Value [cmdb_key_value], and Software Instance [cmdb_software_instance] tables were added as a related entry for OT classes.
- The **ire_criterion_attribute** attribute was added to the OT Entity [cmdb_ot_entity] table to act as a criterion attribute for an OT entity-related entry.
- Optional conditions to filter the records during identification and reconciliation were added to the OT identification rules.
- The OT Class Mapping Template [ot_class_mapping_template] table was introduced to capture class mappings used for Service Graph Connectors.
- Required conditions were added under **Advanced Configuration** that must be met for lookup identification rules.
- Industrial printer (industrial_printer) was added as an OT device type.
- The Quality Inspection Control System [cmdb_ci_ot_qics] class represents the control systems that assist in quality and inspection functions. This new class is a child class of the OT Control System [cmdb_ci_ot_control] class.
- The Backup Storage Information [cmdb_backup_storage_information] class helps manage backups of your OT device data.
- The OT System Service [cmdb_ci_ot_system_service] class can model OT systems and their related software, hardware, and communication network components, such as a Distributed Control System (DCS).
- You can now bulk-validate NIDS records from the list view instead of validating each NIDS record individually.

### Pre-import OT Worksheet Entry Review (POWER) tool

Use distributed Microsoft Excel spreadsheets to import OT devices for better manageability of your OT system and its devices. The POWER tool includes the following new features:

- Firmware Installation records can be created when a firmware version is available.
- OT entity update issues can be resolved through the Service Graph Connector for Microsoft Excel.
- The new Industrial Core [com.sn_ot_core] plugin is required for class mapping when using the Service Graph Connector for Microsoft Excel.
- Supports the import and classification of the Quality Inspection Control System [cmdb_ci_ot_qics] class. If you manually create an OT device in the SG-OT Excel Staging Table, the Quality Inspection Control System class is an option in the **What is the type of OT device?** task.
- Supports capturing the Backup Storage Information [cmdb_backup_storage_information] class attributes on the staging table, staging table form, and the ETL.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Maps the **Status** field in a staging table record to the **Life Cycle Stage** and **Life Cycle Status** fields on a configuration item (CI) record. The **Status** field no longer maps to the **Install Status** field on a CI record.
- Creates assets in the Industrial product model category for OT class devices. This enables compatibility with the Enterprise Asset Management product for full lifecycle management of OT class devices.

## UI changes

### Request chart in the OT Action-Oriented Landing Page

A chart for OT requests was added to the OT Action-Oriented Landing Page so you can track your requests in the Industrial Workspace.

### Sort items field in the OT Action-Oriented Landing Page

The **Sort items** field was added to the OT Action-Oriented Landing Page under the **Important Actions** section.

### Mapped Equipment Model Entity column

The Mapped Equipment Model Entity column was added to the Industrial Workspace and ServiceNow AI Platform list views for OT devices. Use this column to identify the equipment model entity an OT device is mapped to.

### Dashboard Library button

The Dashboard Library icon ( ) was added to the Industrial Workspace and contains the available dashboards for Operational Technology, including the Operational Technology Visibility dashboard.

### Site filter on the Operational Technology Visibility dashboard

A site filter was added to the Operational Technology Visibility in the Industrial Workspace so you can filter the displayed data by a chosen site.

### New home page in the Industrial Workspace

The OT Action-Oriented Landing Page is the new the home page of the Industrial Workspace.

## Changed in this release

### OT Devices tab data

The following data available in the **OT Devices** tab of the OT Manager dashboard has been moved to the Operational Technology Visibility dashboard.

- New OT devices discovered
- Inactive OT devices
- OT Devices overview
  - Total CMDB OT devices
  - Unclassed OT devices
  - Unassigned OT devices
  - Unmapped OT devices
- OT devices by category
  - Supervisory systems
  - Control systems

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

  - Field devices
  - Computers and servers
  - Network Gear
  - Industrial IoT
- OT devices by Purdue level
- OT devices by type (Top Level)
- OT devices by manufacturer (Top Level)
- OT devices by criticality

## Removed in this release

- The **New** button has been removed from the **All OT Devices** list view and its corresponding list views.
- The **New** button has been removed from the Equipment Model Entities related list in the Quality Inspection Control System [cmdb_ci_ot_qics] form.

## Deprecations

- The OT Manager dashboard is no longer available in the Industrial Workspace.
- Starting with the Yokohama release, Service Graph Connector for Microsoft Defender for IoT (On-premises Management Console) is being prepared for future deprecation. It will be hidden and no longer activated on new instances but will continue to be supported.

## Activation information

Install Operational Technology Manager by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Related ServiceNow applications and features

### CMDB CI Class Models

The Operational Technology Manager application automatically installs the latest version of the Operational Technology (OT) extension classes, available in the CMDB CI Class Models application in the ServiceNow Store.

### Operational Technology Request Management release notes

The ServiceNow® Operational Technology Request Management application lets you access the Operational Technology (OT) Service Catalog to request OT catalog items and fulfill them based on the defined flows. OT workers can then create and submit an OT request from a catalog item, which helps provide a consistent experience and facilitates cross-functional requests. Operational Technology Request Management is a new feature in the Xanadu release.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Operational Technology Request Management highlights for the Xanadu release

- Manage multiple catalog requests efficiently with a single view in the Industrial Workspace.
- Encourage transparency, expedite request processes, and minimize delays with automatic notifications and approvals.
- Maintain the products and services menu that you can use to create and update catalog requests.

See Operational Technology Request Management for more information.

## Operational Technology Request Management features

### Create catalog items for your OT Service Catalog

Create a catalog item for the OT Service Catalog using the catalog builder so that other users can submit OT requests that are categorized by catalog item.

### Create fulfillment flows that can fulfill an OT request

Create a fulfillment flow that catalog items follow to fulfill an OT request. Fulfillment flows for catalog items in the OT Service Catalog include catalog tasks.

### Create an OT request

Once Operational Technology Request Management is configured, create OT requests in the Industrial Workspace to address a product or service needed for an OT device or incident.

### Manage your OT requests and catalog tasks in the Industrial Workspace

View and access OT requests and catalog tasks in the Industrial Workspace list view under the **OT Request** and the **OT Task** modules respectively.

## Activation information

Operational Technology Request Management is included with the Industrial Workspace Common. No additional plugins are needed.

## Related ServiceNow applications and features

### Request Management

Request Management enables catalog items to be requested and fulfilled based on defined flows.

### IT Service Management

The ServiceNow IT Service Management application enables engineers to resolve OT device and production process issues.

### Industrial Process Manager

Use the ServiceNow® Industrial Process Manager application to create the ISA-95 Equipment Model data foundation that is required for the ServiceNow® Industrial solution, enabling you to create your own version of the equipment models in each of your industrial solution sites.

### Operational Technology Vulnerability Response release notes

The ServiceNow® Operational Technology Vulnerability Response application enables you to prioritize Operational Technology (OT) vulnerabilities at a site level. Operational Technology Vulnerability Response was enhanced and updated in the Xanadu release.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Operational Technology Vulnerability Response highlights for the Xanadu release

- Assess the vulnerabilities for the firmware of the OT assets with Hardware Vulnerability Assessment.
- View solutions or details of a vulnerable item (VIT) with enhanced UI options.
- Manage your vulnerable items and Operational Technology Vulnerability Response data with the enhanced OTVR (PA) dashboard in the Industrial Workspace.
- View the risk score of your OT devices at each level of the equipment model with the OT Vulnerability Risk Rollup dashboard.
- Change the Operational Technology Vulnerability Response (OT VR) assignment group field for multiple site records at once.
- Use the Common Security Advisory Framework (CSAF) with multiple vendor support when importing solutions from Aggregators or Trusted Providers.
- Manage remediation tasks more efficiently with the OT Vulnerability Remediation Owner (sn_otvr.remediation_owner) role.
- Mitigate controls using the Libraries module in the Industrial Workspace.
- Use the enhanced OTVR (PA) dashboard.

See Operational Technology Vulnerability Response for more information.

**Important:**
Operational Technology Vulnerability Response is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

### Hardware Vulnerability Assessment menu in the Industrial Workspace

Automatically and periodically assess the OT device firmware vulnerabilities that are in your inventory and create vulnerable items against the impacted assets (CI).

### Risk scores on the OT Vulnerability Risk Rollup dashboard

View a table of risk scores for your OT devices at each level of the equipment model with the OT Vulnerability Risk Rollup dashboard.

### Enhanced OTVR (PA) dashboard experience

View and manage all of your OT vulnerability data and data visualizations in a centralized location with the enhanced OTVR (PA) dashboard, which is accessible on the Dashboard Library page.

### OT Vulnerability Remediation Owner (sn_otvr.remediation_owner) role

Assign the OT Vulnerability Remediation Owner (sn_otvr.remediation_owner) role to users who primarily work on an assigned remediation task and can create change tasks when needed. The OT Vulnerability Remediation Owner role contains the following roles:

- cmdb_ot_isa_viewer
- cmdb_ot_viewer
- sn_vul.close_vi_vg
- sn_vul.remediation_owner

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

### Automatically set a start time for a remediation task based on the ISA maintenance schedule

Start a remediation task automatically based on the ISA maintenance schedule. After you create the remediation task, it's picked up during the next scheduled maintenance.

### Common Security Advisory Framework (CSAF) supported for Operational Technology Vulnerability Response

Use the Common Security Advisory Framework (CSAF) with multiple vendor support when importing solutions from Aggregators or Trusted Providers.

### OTVR (PA) dashboard Guided Setup

Use the OTVR (PA) dashboard Guided Setup under the Operational Technology Vulnerability Response section in the Industrial Workspace Guided Setup to configure data collection and review indicator sources.

### Change the Operational Technology Vulnerability Response (OT VR) assignment group field in a bulk edit

Use the bulk edit feature to update the **OT VR assignment group** field in multiple site records at once.

### Use compensating controls for Operational Technology

Use compensating controls for OT to reduce vulnerability risks that can't be patched immediately. Compensating controls help mitigate risks.

## UI changes

### Dashboard Library icon

The Dashboard Library icon (  ) was added to the Industrial Workspace and contains the available dashboards for Operational Technology, including the OTVR (PA) dashboard.

### Site filter on the OTVR (PA) dashboard and the OT Vulnerability Risk Rollup dashboard

A site filter was added to both the OTVR (PA) dashboard and the OT Vulnerability Risk Rollup dashboard in the Industrial Workspace so you can filter the displayed data by a chosen site.

### Vulnerability Solutions section in the List menu of Industrial Workspace

A new Vulnerability Solutions section was added in the List menu (  ) of the Industrial Workspace. In the Solutions section, you can view the solutions for the enlisted VITs.

### Overview tab for a vulnerable item

The **Overview** tab in a VIT provides important information about the VIT, such as State, Risk Rating, Risk Score, Associated Vulnerability, and more.

### Libraries module in the Industrial Workspace

You can use the Library module in the Industrial Workspace to perform the following functions:

- Enable compensating controls
- Associate compensating control to a Common Vulnerability and Exposure (CVE)
- Disable risk reduction on a CVE

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

These functions help reduce the risk posed by vulnerabilities that can't be addressed immediately. The Libraries module includes the **CVEs** list and the **Compensating Controls** list.

### Vulnerable items by state chart in the OT Vulnerabilities tab on the OTVR (PA) dashboard

The **Vulnerable items by state** chart in the **OT Vulnerabilities** tab is organized sequentially by state.

### OTVR (PA) dashboard updates

The OTVR (PA) dashboard was updated with the following features:

- You can now view data in the OT VIs Met Remediation Target and the OT VI Mean Time to Remediate (MTTR) widgets by the following time frames:
  - The last month
  - The last 3 months
  - The last 6 months
  - The last year
  - All time
- The OT Remediation Tasks and OT Critical Remediation Tasks Near Due widgets were moved under the **Remediation** tab.
- The OT Unassigned Vulnerable Items widget was moved under the **Overview** tab.
- You can select the OT Vulnerable Items (VI) widget under the **Overview** tab to open a list of vulnerable items.
- The OT Vulnerable Items (VI) and OT Vulnerable Configuration Items (CI) widgets show an OT class-level breakdown.

### Support for Exception Management for remediation tasks in the Industrial Workspace

Use Exception Management for remediation tasks to defer vulnerable items. You can defer a remediation task by selecting the **Request Exception** button in a remediation record in the Industrial Workspace.

## Changed in this release

### OT Vulnerabilities tab data

The following data that was available in the **OT Vulnerabilities** tab of the OT Manager dashboard has been moved to the OTVR (PA) dashboard:

- Total OT Vulnerable Items
- New OT Vulnerable Items
- OT Unassigned Vulnerable Items
- OT Vulnerable Items by State
- OT Vulnerable Items by Risk Rating

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Deprecations

- The **OT Vulnerabilities** tab is no longer available on the OT Manager dashboard in the Industrial Workspace.
- Starting with the Xanadu release, **Vulnerability Response Integration with Microsoft Defender for IoT (On-premises Management Console)** integration is being prepared for future deprecation. It will be hidden and no longer activated on new instances but will continue to be supported.

## Activation information

Install Operational Technology Vulnerability Response by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Related ServiceNow applications and features

### CMDB CI Class Models

The CMDB CI Class Models store app adds class models that extend the CMDB class hierarchy, including class descriptions, identification rules, identifier entries, and dependent relationships.

### Vulnerability Response

When integrated with Operational Technology Vulnerability Response, the ServiceNow® Vulnerability Response application aids you in prioritizing and resolving OT vulnerabilities based on process criticality.

### Operational Technology Manager

ServiceNow® Operational Technology Manager enables you to aggregate OT device data from multiple sources so that you can build the foundational data relationships used in the Industrial solution.

### Industrial Process Manager

Use the ServiceNow® Industrial Process Manager application to create the ISA-95 Equipment Model data foundation that is required for the ServiceNow® Industrial solution, enabling you to create your own version of the equipment models in each of your industrial solution sites.

### Service Graph Connector for Microsoft Defender for IoT (Azure) release notes

The ServiceNow® Service Graph Connector for Microsoft Defender for IoT (Azure) application automates the import of devices and sensor appliances. Service Graph Connector for Microsoft Defender for IoT (Azure) was enhanced and updated in the Xanadu release.

## Service Graph Connector for Microsoft Defender for IoT (Azure) highlights for the Xanadu release

Ensure that your Operational Technology (OT) devices are categorized under the Industrial product model category with the enhanced Service Graph Connector for Microsoft Defender for IoT (Azure) application.

See Service Graph Connector for Microsoft Defender for IoT (Azure) for more information.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

**Important:**
Service Graph Connector for Microsoft Defender for IoT (Azure) is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

### Categorize your OT devices into the industrial product model category

The enhanced Service Graph Connector for Microsoft Defender for IoT (Azure) creates assets in the Industrial product model category for OT class devices. This enables compatibility with the Enterprise Asset Management product for full lifecycle management of OT class devices.

## Activation information

Install Service Graph Connector for Microsoft Defender for IoT (Azure) by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Related ServiceNow applications and features

### CMDB CI Class Models

Operational Technology classes are imported with the Configuration Management Database (CMDB) configuration item (CI) classes.

### Operational Technology Manager

Integrate Claroty CTD with the ServiceNow Operational Technology Manager application to import detected devices and Claroty CTD sites, including sensors and NIDS appliances.

### Service Graph Connector Integration for Claroty CTD release notes

The ServiceNow® Service Graph Connector Integration for Claroty CTD application automates the import of detected devices and Claroty CTD sites. Service Graph Connector Integration for Claroty CTD was enhanced and updated in the Xanadu release.

## Service Graph Connector Integration for Claroty CTD highlights for the Xanadu release

- View the class mappings available for the Service Graph Connector using the new Class Mappings menu
- Filter out empty rack slots to help avoid importing blank rack slots into the ServiceNow. Configuration Management Database (CMDB).
- Use the Firmware Installation [cmdb_firmware_install] table to capture the firmware version.
- Avoid OT entity update issues by using the new ire_criterion_attribute attribute on the OT Entity [cmdb_ot_entity] table.
- Clean the serial record entries from the Source [sys_object_source] table using a fix script.
- Ensure that your Operational Technology (OT) devices are categorized under the Industrial product model category with the enhanced Service Graph Connector Integration for Claroty CTD application.

See Service Graph Connector Integration for Claroty CTD for more information.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

**Important:**
Service Graph Connector Integration for Claroty CTD is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

### View the class mappings available for the Service Graph Connector

Use the **Claroty CTD SGC Class Mappings** table to view the available class mappings and targeted CMDB classes.

### Avoid importing empty rack slots

During import, empty rack slots are removed to avoid importing them into the CMDB.

### Capture firmware version of devices

Use the Firmware Installation [cmdb_firmware_install] table to capture the firmware version of your Service Graph Connector Integration for Claroty CTD devices.

### Use the ire_criterion_attribute in the OT Entity [cmdb_ot_entity] table

The ire_criterion_attribute acts as a criterion attribute for an OT entity-related entry and helps avoid entity update issues.

### Clean up serial number data

Clean up the serial number [cmdb_serial_number] records imported into the Source [sys_object_source] table from the Service Graph Connector Integration for Claroty CTD with a fixed script. This script establishes that a null pointer exception doesn't occur when the serial number and MAC address are the same. The script runs automatically when the plugin is upgraded.

### Categorize your OT devices into the industrial product model category

The enhanced Service Graph Connector Integration for Claroty CTD creates assets in the Industrial product model category for OT class devices. This enables compatibility with the Enterprise Asset Management product for full lifecycle management of OT class devices.

## Activation information

Install Service Graph Connector Integration for Claroty CTD by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

**Note:**
Claroty CTD v5.1 is also supported for the Service Graph Connector Integration for Claroty CTD application.

## Related ServiceNow applications and features

### CMDB CI Class Models

Operational Technology classes are imported with the Configuration Management Database (CMDB) configuration item (CI) classes.

### Operational Technology Manager

Integrate Claroty CTD with the ServiceNow Operational Technology Manager application to import detected devices and Claroty CTD sites, including sensors and NIDS appliances.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

### Vulnerability Response Integration with Claroty CTD release notes

The ServiceNow® Vulnerability Response Integration with Claroty CTD application uses data that was imported from Claroty CTD to enable a risk-based action with the production process context. Vulnerability Response Integration with Claroty CTD was enhanced and updated in the Xanadu release.

## Vulnerability Response Integration with Claroty CTD highlights for the Xanadu release

Identify and import vulnerabilities by using additional filter properties.

See Vulnerability Response Integration with Claroty CTD for more information.

**Important:**
Vulnerability Response Integration with Claroty CTD is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## Important information for upgrading Vulnerability Response Integration with Claroty CTD to Xanadu

Claroty CTD v5.1 is also supported for the Vulnerability Response Integration with Claroty CTD application.

## New in the Xanadu release

### Enhanced filters for the Vulnerability Response Integration with Claroty CTD to support Claroty CTD v5.1

Identify and import vulnerabilities according to your requirements by using the additional filter properties that have been added in Claroty CTD. The filter properties are based on a Common Vulnerability Scoring System (CVSS) V3 score and Exploit Prediction Scoring System (EPSS) score that is available in Claroty CTD v5.1.

## Changed in this release

### Updates made for Claroty CTD v5.1

The following updates were made to support Claroty CTD v5.1:

- There's no limit now on the number of Common Vulnerabilities and Exposures (CVEs) that you can import.
- The **Minimum CVSS Score** field was replaced with the **CVSS V3 Score** field.

## Activation information

Install Vulnerability Response Integration with Claroty CTD by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Related ServiceNow applications and features

### CMDB CI Class Models

The ServiceNow®CMDB CI Class Models store application adds class models that extend the CMDB class hierarchy, including the class descriptions, identification rules, identifier entries, and dependent relationships.

### Vulnerability Response

When integrated with the Operational Technology Vulnerability Response application, the Vulnerability Response application aids you in prioritizing and resolving OT vulnerabilities that are based on process criticality.

### Industrial Process Manager

Use the ServiceNow® Industrial Process Manager application to create the ISA-95 Equipment Model data foundation that is required for the ServiceNow® Industrial solution, enabling you to create your own version of the equipment models in each of your industrial sites.

### Service Graph Connector Integration for Claroty CTD

Use the ServiceNow®Service Graph Connector Integration for Claroty CTD with the ServiceNow® Operational Technology Manager application to import sites, detected devices by each site, connections (or baselines), and installed programs to the Configuration Management Database (CMDB).

## Vulnerability Response Integration with Microsoft Defender for IoT (Azure) release notes

The ServiceNow® Vulnerability Response Integration with Microsoft Defender for IoT (Azure) application uses data imported from Microsoft Defender for IoT (Azure) to enable risk-based action with the production process context. Vulnerability Response Integration with Microsoft Defender for IoT (Azure) is a new application in the Xanadu release.

## Vulnerability Response Integration with Microsoft Defender for IoT (Azure) highlights for the Xanadu release

- Import CVEs associated with OT devices from Microsoft Defender for IoT (Azure) and create vulnerable items (VITs) to provide a single view of OT devices vulnerability data with production process context.
- Run imports of vulnerabilities automatically on your own schedule.
- Using assignment rules for VITs can be automatically routed for remediation to local site-based teams to take risk-based action.

See Vulnerability Response Integration with Microsoft Defender for IoT (Azure) for more information.

**Important:**
Vulnerability Response Integration with Microsoft Defender for IoT (Azure) is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## Vulnerability Response Integration with Microsoft Defender for IoT (Azure) features

### Vulnerability Response Integration with Microsoft Defender for IoT (Azure)

Use the Vulnerability Response Integration with Microsoft Defender for IoT (Azure) application with the Operational Technology Vulnerability Response application to track, prioritize, and resolve vulnerabilities on OT devices used in the production process.

## Related ServiceNow applications and features

### CMDB CI Class Models

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The Operational Technology Manager application automatically installs the latest version of the Operational Technology (OT) extension classes, available in the CMDB CI Class Models application in the ServiceNow Store.

**Vulnerability Response**

When integrated with the Operational Technology Vulnerability Response application, the Vulnerability Response application aids you in prioritizing and resolving OT vulnerabilities based on process criticality.

**Industrial Process Manager**

Use the ServiceNow® Industrial Process Manager application to create the ISA-95 Equipment Model data foundation that is required for the ServiceNow® Industrial solution, enabling you to create your own version of the equipment models in each of your industrial solution sites.

**Service Graph Connector for Microsoft Defender for IoT (Azure)**

When integrated with the ServiceNow® Operational Technology Manager application, the Service Graph Connector for Microsoft Defender for IoT (Azure) automates the import of OT devices and sensor appliances.

### Platform Analytics release notes

Platform Analytics has new and updated features in the Xanadu release.

### Analytics, Intelligence, and Reporting release notes

The ServiceNow Analytics, Intelligence, and Reporting application presents analytics on Core UI dashboards through reports and Performance Analytics widgets and enables you to explore Performance Analytics indicators on the Analytics Hub. Analytics, Intelligence, and Reporting was enhanced and updated in the Xanadu release.

## Analytics, Intelligence, and Reporting highlights for the Xanadu release

- Core UI Reporting and Dashboards functionality deprecated in the Xanadu release
- Several enhancements made for accessibility

## Important information for upgrading Analytics, Intelligence, and Reporting to Xanadu

If you are upgrading, you can use the Platform Analytics Migration Center to take advantage of a single set of visualizations and unified filters for all data sources.

## Deprecations

- Core UI Reporting functionality is deprecated in favor of Data visualizations in Platform Analytics for new instances and instances that have migrated to the Platform Analytics experience.
- Core UI Dashboards functionality is deprecated in favor of Dashboards in Platform Analytics for new instances and instances that have migrated to the Platform Analytics experience.

## Activation information

Analytics, Intelligence, and Reporting functionality is a ServiceNow AI Platform feature that is active by default. Some data sources, such as indicators, may require a subscription.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Accessibility information

Reflow is supported for low-vision users. The following changes have been made to provide this support:

- At 400% zoom, legends move to the bottom of the screen.
- At 400% zoom, zoom is enabled by default on bubble visualizations.
- At 400% or higher zoom, tooltips fit inside the screen.
- Tooltips are shown when hovering over data points on bar and time series visualizations.
- On gauge visualizations, range labels are shown as legends.

## Related ServiceNow applications and features

### Platform Analytics Migration Center

The Platform Analytics Migration Center provides a single set of visualizations and unified filters for all data sources.

### Platform Analytics experience

The Platform Analytics experience is a unified interface for visualizing data from multiple data sources.

### Performance Analytics release notes

The ServiceNow® Performance Analytics application is an in-platform process optimization solution. It enables organizations to set, track, and analyze progress toward goals. Performance Analytics was enhanced and updated in the Xanadu release.

## Performance Analytics highlights for the Xanadu release

- Track critical process metrics and trends.
- Measure process health and behavior against organizational targets.
- Identify process patterns and potential bottlenecks before they occur.
- Continually visualize historical and real-time process statistics in role-based dashboards. The dashboards enable individual stakeholders to make informed decisions.

See Performance Analytics (Indicator data sources) for more information.

## UI changes

### Performance Analytics not in navigation after migration

On new instances and after migrating to Platform Analytics on upgraded instances, Performance Analytics does not appear in the navigation menu. Instead, all Performance Analytics functionality is listed under Platform Analytics Administration.

### Publish to Analytics Hub checkbox

On indicator forms, the **Publish to Analytics Hub** checkbox has been renamed **Save to library** because this option controls publication not only to the Core UI Analytics Hub but also to the list of KPIs in the Platform Analytics library and to KPI Details.

**Note:**
This change was also made because Analytics Hub is being deprecated.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

#### Clarification of terms KPI and indicator

Throughout the product, the term KPI to refer to a Performance Analytics indicator has been replaced with the term "indicator," for consistency. However, the feature names KPI Composer, KPI Details, and KPI Signals remain unchanged.

## Deprecations

- Performance Analytics widgets are not available on new instances. Use Platform Analytics data visualizations with indicator data sources instead. Users with the admin and pa_admin roles will still be able to use Performance Analytics widgets for Service Portal.
- The Analytics Hub is not available on new instances or instances that have fully migrated to Platform Analytics. Use KPI Details instead.
- The Performance Analytics admin console is deprecated on new instances. For upgrading customers, the console is available but does not show data from the new Platform Analytics artifacts.

## Activation information

Complimentary Performance Analytics for Incident Management is active by default. You cannot create indicators or breakdowns with this application.

The full features of Performance Analytics are available with a subscription. Activate the Performance Analytics plugin that matches your subscription. For details, see Activating your Performance Analytics subscription.

## Related ServiceNow applications and features

#### Platform Analytics experience

Distribute and consume Performance Analytics indicators (KPIs) through data visualizations and dashboards with optional filters. Explore KPIs and receive insights into significant events in the data.

#### Platform Analytics experience release notes

The ServiceNow® Platform Analytics experience provides a single center for consuming the data from all Platform Analytics products. The Platform Analytics experience was enhanced and updated in the Xanadu release.

## Platform Analytics highlights for the Xanadu release

- Modernize and simplify the consumption of analytics by activating the Platform Analytics experience.
- Surface meaningful insights from your analytics data to empower the direct decision making of viewers.

See Platform Analytics experience for more information.

## Important information for upgrading Platform Analytics to Xanadu

New customers: The Platform Analytics experience is automatically available on the ServiceNow AI Platform. It offers an intuitive interface to help you better understand and utilize your data.

Upgrading customers: If you are currently using Core UI responsive dashboards, you will continue to have access without any disruption. Consider transitioning to the Platform Analytics experience to take full advantage of the new capabilities.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## New in the Xanadu release

### Create a Process Mining project from dashboard insights

With a single click, create a Process Mining project from the list of suggestions in the Insights panel on a dashboard. Suggestions are available when an issue is identified that might be improved through Process Mining.

### Control data source availability by role

Restrict the ability to create data visualizations for a data source to roles that you specify.

## UI changes

### Color icons for selecting a color

While configuring a data visualization, when you want to select a single color for the chart, you can now select from a set of color icons instead of only the color list. If you instead select from the list of colors, each list item has an icon of that color. You can choose a single color for any data visualization type except gauge and pie or donut.

### Performance Analytics not in navigation after migration

On new instances and after migrating to Platform Analytics on upgraded instances, Performance Analytics does not appear in the navigation menu. Instead, all Performance Analytics functionality is listed under Platform Analytics Administration.

### Clarification of terms KPI and indicator

Throughout the product, the term KPI to refer to a Performance Analytics indicator has been replaced with the term "indicator," for consistency. However, the feature names KPI Composer, KPI Details, and KPI Signals remain unchanged.

## Changed in this release

### Analysis cache for indicators on data visualizations

You can now cache indicator data as well as table data.

### Prefetching cached data

Cached data with an expiration time of 8 hours or more is refreshed automatically within the 30 minutes before it would expire. You therefore don't have to wait for the dashboard or visualization to load new data the first time you view it for the day.

### Unloading Platform Analytics dashboards to update sets simplified

Unload Platform Analytics inline dashboards to update sets with one click.

### Migration improvements

Migration to the Platform Analytics Experience has added full migration of the following items in the Xanadu release:

- V1 Pivot reports and pivot reports with multiple columns
- Indicator scorecards with custom order and label names
- Top X elements for Performance Analytics widgets for time series breakdowns
- Custom URL on-click behavior
- Act as filter capability
- Unconfigured reports, Performance Analytics widgets, and interactive filters: These objects are migrated to empty data visualizations and filter elements.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Cascading filters
- Dashboard background colors
- Chart interactions: drilling down from chart to chart

### Migration Center Improvements

- If you have migrated in an earlier version, previously unsupported visualizations are migrated on upgrade.
- Improved migration log UX.

### Platform Analytics creation rights for specific scoped apps

Using the ServiceNow AI Platform delegated development capability, a non-admin user can get the rights to create Platform Analytics objects for a specific scoped app.

### Insights card grouping

When multiple insights of the same type are generated, they are aggregated into a single card.

Trend and target or threshold insights are also shown on a single card.

### Insight notifications in data visualizations

If an insight is generated regarding the data source used in a data visualization, an alert appears in that visualization. This feature applies to data visualizations on both an in-line dashboard with insights activated and a UI Builder page.

### Project does not need to be specified for process mining insights

If you have process mining insights activated, you no longer have to specify per dashboard which process mining projects to check for insights. All relevant projects are checked automatically.

### Insight notifications in data visualizations

If an insight is generated regarding the data source used in a data visualization, an alert appears in that visualization. This feature applies both to data visualizations on an in-line dashboard with insights activated and to individual data visualizations on a UI Builder page.

### Auto sizing of single score visualizations

The new Auto size option for single score visualizations fits the visualization dynamically into the available space, depending on targets or other information displayed in it.

### Global filters apply to advanced dashboards

When opened, advanced dashboards are automatically filtered by the values of the global filter passed from the source page.

### Saved data visualization on dashboard can be unlinked from library

If you have a shared data visualization on a dashboard that you can edit, you can unlink the local copy on the dashboard from the library and edit it without special roles and without impacting other dashboards.

### Simple list follows filters

A simple list on a dashboard can follow filters on that dashboard. You can also add borders to a simple list.

## Deprecations

- Reporting is not available on new instances. Use Platform Analytics data visualizations with table data sources instead. Users with admin and report_admin roles will still be able to use Reporting for Service Portal.
- Performance Analytics widgets are not available for new customers. Use Platform Analytics data visualizations with indicator data sources instead. Users with the admin and pa_admin roles will still be able to use Performance Analytics widgets for Service Portal.
- Responsive dashboards are not available for new customers. Create dashboards in Platform Analytics instead.
- Interactive filters are not available for new customers. Create filters in Platform Analytics instead.
- The Analytics Hub is not available for new customers. Use KPI Details instead.
- For new customers, interactive analysis is available only for Core UI lists.
- In-form analytics are deprecated on new instances and after migrating to Platform Analytics. The feature does not apply to Platform Analytics artifacts.
- The Performance Analytics admin console is deprecated on new instances and after migrating to Platform Analytics. The feature does not apply to Platform Analytics artifacts.
- Dependency assessment is deprecated on new instances and after migrating to Platform Analytics. The feature does not apply to Platform Analytics artifacts.

## Activation information

Platform Analytics is a ServiceNow AI Platform feature that is active by default. Some data sources, such as indicators, may require a subscription.

## Accessibility information

Reflow is supported for low-vision users. The following changes were made to provide this support:

- The view mode of the Platform Analytics dashboard editor and the Visualization designer support reflow.
- All charts: At 400% zoom, if the legend is originally in any position other than the top or the bottom, it is moved to the bottom.
- Bubble chart: XY zoom is enabled by default during reflow at 400% zoom.
- Donut and pie charts: Range labels are shown as legends by default at 400% zoom.
- Gauge chart: Range labels can be shown as a legend instead. At 400% zoom, this option is enabled automatically.
- GeoMap: Zoom controls are persistent during reflow at 200%+ zoom.
- Pivot Table: Row headers and footers and the first column unfreeze by default during reflow at 400% zoom.
- Time Series and bar charts: New configuration option to show the specific data point in the tooltip instead of all data points. A single data point is shown by default during reflow at 400% zoom. Also, these charts do not show points with no data.
- Date filters: During reflow, the date picker is not available in the configuration panel. Instead, you can select the start and end date and time from the Select a date range menu. Also, all components are stacked vertically.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Multi-select filters: Checkbox groups with a horizontal layout reflow to a vertical layout when zoomed.
- True/false filters: Popovers and the Clear, Cancel, and Apply buttons are removed during reflow at 400% zoom.

Other accessibility changes include:

- Data tables can be shown for all relevant visualizations, to aid screen readers. These data tables break down the proportion of values by percentage.
- All charts: The “More options” menu now includes the chart title.
- Indicator Scorecard: Keyboard navigation to expand and collapse rows and speech output are now supported.

## Related ServiceNow applications and features

### Performance Analytics (Indicator data sources)

The ServiceNow® Performance Analytics application is an in-platform process optimization solution. It enables organizations to set, track, and analyze progress toward goals. Performance Analytics provides the indicator data sources which Platform Analytics data visualizations can display.

### Process Mining

Process Mining helps analysts and process owners quickly analyze and optimize their business processes. Use Process Mining with Platform Analytics insights to optimize your indicator data sources.

### User Experience Analytics

This application provides dashboard views for monitoring usage analytics of your Next Experience web applications as well as Virtual Agent, ServiceNow mobile, and Service Portal applications. User Experience Analytics provides a data source which data visualizations can display.

### Process Mining Release Notes

The ServiceNow® Process Mining application enables analysts and process owners to view their business processes, analyze them, and make decisions that improve processes. Process Mining is enhanced and updated in the Xanadu release.

## Process Mining highlights for the Xanadu release

- Process Mining evaluation version available
- Process Mining graph enhanced with perspectives
- Finding Builder introduced
- Additional use case analysis included in a project automatically
- **Show records** action available on Process Mining graph dashboard (Star diagram)

See Process Mining for more information.

**Important:**
Process Mining is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## New in the Xanadu release

### Process Mining evaluation version available

Try sample mining and limited features on the Incident table without an entitlement so you can decide whether the advanced features are beneficial to your organization.

### Process Mining graph enhanced with perspectives

Filter the Process Mining graph by the activity definitions you want to view at a particular time.

### Understanding the root cause of inefficiency made easier

Generate a summary of all work notes to see the history of the inefficiency rather than having to read each individual work note separately.

### Configure finding definitions

Configure and view automated and rule-based finding definitions efficiently using a comprehensive guided setup.

### Include additional use case analysis in a project automatically

Set Approval analysis or SLA breach analysis automatically for applicable processes when creating a project so you don't need to make this selection manually.

### Variation analysis introduced in Summary and Insights page

Analyze various routes the records in the process took based on parameters like mostly traversed, more steps, and so on. This information is accessible on the Summary and Insights page.

### Customize the outline of the process mining graph dashboard

Customize the orientation of the outline of the process graph set for the current project workbench for nodes within the graph. For example, when using a vertically oriented widget, you might prefer the graph and star diagram to be displayed in a vertical layout rather than a horizontal one.

### Inflow and outflow analysis: node star diagram

View the records for any node or arc from the map dashboard.

### Option to filter out incoming or outgoing arcs

View only incoming or only outgoing arcs to see the inflow/outflow of work for a particular process with respect to other related processes on the graph.

## Activation information

Process Mining is available with activation of the sn_po plugin.

### Public Sector Digital Services release notes

The ServiceNow® Public Sector Digital Services application enables government agencies to provide citizens, businesses, and other agencies with important services such as public records, licenses, permits, and social services. Public Sector Digital Services was enhanced and updated in the Xanadu release.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Public Sector Digital Services highlights for the Xanadu release

- Added enhancements to License and Permit Playbook, including updates to the Intake stage for applicants on the constituent Government Service Portal, and added functionality for specifying license details and license endorsements on the agent playbook.
- Added enhancements to Social Benefits Playbook, including updates to the Intake and Decision stage, and updates to the process playbook for applicants on the Government Service Portal.
- Redact sensitive content or data from PDF documents in the Information Request Playbook.
- Auto-generate case summaries and case resolution notes for cases in the Social Benefits Playbook by using the Now Assist for Public Sector Digital Services (PSDS) application.

See Public Sector Digital Services for more information.

**Important:**
Public Sector Digital Services is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## Important information for upgrading Public Sector Digital Services to Xanadu

After the upgrade, certain public sector menus and menu items in CSM Configurable Workspace revert to their original CSM label names. You can relabel these items for public sector use by updating the UX List Categories for Customer and Service Organizations. For more details on relabeling, navigate to **All** > **Constituent Service** > **Administration** > **Guided Setup**, and select **Configurable Workspace for Public Sector Digital Services** > **Customize Workspace Labels Manually**.

## New in the Xanadu release

### Agent updates to License and Permit Playbook

Specify the license details and add license endorsements directly from the workspace in License and Permit Playbook.

### Guided Constituent Experience for License and Permit Playbook

Streamline how you communicate with your constituents with easy appointment booking. You can also simplify complex license and permit applications with the save and resume and guided data entry functionality in License and Permit Playbook as part of the playbooks-on-portal experience.

### Document redaction for Information Request Playbook

Redact sensitive content, data, or entire documents within the document management tool in the Information Request Playbook. You can either highlight bodies of text, or search for strings of text and designate them to be redacted. This functionality is only available to information request case agents for documents in the Published or Draft state. New versions of the same document are generated each time that text is redacted or unredacted.

### Now Assist for Public Sector Digital Services (PSDS)

Condense case records into short summaries by using the case summarization skill in the Now Assist for PSDS application. Agents can use the resolution summarization skill to generate resolution information for a case, propose the resolution to the customer, and add the information to the case record. The Now Assist for PSDS application brings generative AI case summarization and resolution notes generation to Public Sector Digital Services.

## Changed in this release

### Constituent Service Dashboard Migration to Platform Analytics

The Constituent Service Dashboard has been migrated to Next Experience Platform Analytics. Next Experience is a ServiceNow AI Platform® feature that is active by default when the user loads or upgrades to the Xanadu release. The dashboard migration to Next Experience enables continuous visualization of historical and real-time process statistics in role-based dashboards, which enable individual stakeholders to make informed decisions. The new dashboard can be accessed by navigating to **All** > **Platform Analytics** > **Library** > **Dashboards**.

### Enhancements to Social Benefits Playbook

Use the enhanced Social Benefits Playbook to view an updated constituent card with more detailed information about the primary applicant. Cancel draft cases, bypass the initial eligibility screening, and skip playbook activities by using the updated process playbook in the Government Service Portal.

## Activation information

Install Public Sector Digital Services applications by requesting them from the ServiceNow Store. For details on installing the applications, see Configuring Public Sector Digital Services. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Related ServiceNow applications and features

### Customer Service Management

The ServiceNow® Customer Service Management application enables customer service organizations and service operations to collaborate and resolve customer problems.

### CSM Configurable Workspace

The CSM Configurable Workspace application provides government agents with the tools to research information, respond to questions from the public, and resolve cases.

### Now Assist

The ServiceNow® Now Assist application uses generative AI that is designed to enhance user productivity and efficiency through conversation and proactive experiences.

### Retail Operations release notes

The ServiceNow® Retail Operations application empowers frontline managers and associates to seamlessly manage day-to-day store operations by automating tasks, resolving issues quickly with self-service, and freeing up time to better serve customers. Retail Operations is a new application in the Xanadu release.

## Retail Operations highlights for the Xanadu release

- Streamline the connection between headquarters and retail organizations with increased visibility and ability for teams in these retail organizations to complete tasks.
- Improve retail organization worker experience with self-service tools like a knowledge base.
- Reduce duplication of individual requests by providing visibility through a central portal with access to retail organizations' cases.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Optimize efficiency by enabling retail organization teams to request help directly from headquarters when needed through cases, live chat, phone calls, and more.
- Increase customer satisfaction by reporting customer issues in-store.

See Exploring Retail Core for more information.

**Important:**
Retail Operations is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## Retail Operations features

### Retail data model

Optimize retail operations by modeling the hierarchical structure of your retail organization.

### Retail case type

Use the retail case type to manage in-store issues effectively.

### Store support portal

Use the Store Support Portal for retail to utilize self-service tools.

## Activation information

Install Retail Operations by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Related ServiceNow applications and features

### Customer Service Management

The ServiceNow Customer Service Management (CSM) application provides the foundation for the Retail Operations application. You can leverage the functionality of the ServiceNow® Customer Service Management (CSM) application to provide support to customers as well as retail sites, and customize it to benefit your retail organization most effectively.

### Field Service Management

The Field Service Management application aligns with Retail Operations by providing some capabilities, such as work orders, for use within each specific retail location that uses the Retail Operations application, enabling greater flexibility with how to leverage the support request use cases of your retail organization. For field service use cases that involve dispatching and technicians, please leverage Field Service Management.

### Sales Customer Relationship Management release notes

ServiceNow® Sales Customer Relationship Management is a set of new and updated applications and features in the Xanadu release. These applications enable you to manage the product sales life cycle in your organization, including leads, pre-sales opportunities, sales quote generation, order capture, order fulfillment, and post-sales order changes and renewals.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

**Note:**
Sales Customer Relationship Management includes workflows for Customer Lifecycle Operations (Customer Life Cycle Management) and Customer Contracts and Entitlements. Agents can use the Order Operations Case Management application to display order cases and order case line items in CSM Configurable Workspace. The Case lines and workflows application provides the ability to reference multiple line items on a case record. For details on these features in the Xanadu release, see the following release notes:

- Data management for CSM release notes (Customer Life Cycle Management)
- Customer Contracts and Entitlements release notes (Customer Contracts and Entitlements)
- Case management for CSM release notes (Order Operations Case Management and Case lines and workflow application)

### Lead Management release notes

The ServiceNow® Lead Management application enables your sales development representatives to create and manage leads. Leads are individuals or organizations that have shown interest in a product or service and require nurturing to be qualified for a potential opportunity for sale. Lead Management is a new application in the Xanadu release.

## Lead Management highlights for the Xanadu release

- Create leads on the ServiceNow AI Platform by capturing the interest of prospective customers through various channels, such as website forms, social media, or events.
- Track the progress of your leads through different stages of the sales cycle.
- Understand your lead's needs and requirements through questionnaires, and recommend and capture the product offerings through lead line items.
- Visualize and navigate your leads by using a Kanban board that shows a card-based view of your leads and their stages.
- Create and assign tasks, send emails, or schedule appointments with leads.
- Qualify and convert leads to potential customer records and opportunities.

See Lead Management for more information.

**Important:**
Lead Management is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## Lead Management features

**Create a lead**

Create and manage your leads for potential sales opportunities.

**Needs analysis using lead workspace**

Understand your lead's needs through questionnaires, and recommend and capture the product offering through lead line items.

**Manage leads using Kanban view**

Quickly assess the status of your various leads by navigating and visualizing these leads across different stages with the help of a Kanban board that shows a card-based view of your leads.

**Nurture leads and track lead activities**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Compose emails, create tasks, and schedule appointments to nurture leads by tracking the interest and need analyses of your leads.

### Convert leads to opportunities

Qualify leads by creating opportunities for new and existing contacts.

## Activation information

Install Lead Management by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Related ServiceNow applications and features

### Customer Service Management

The Opportunity Management application uses the ServiceNow® Customer Service Management account, consumer, and product inventory data model. Customer service agents have full visibility into opportunities that have been created using Opportunity Management.

### Opportunity Management

The ServiceNow® Opportunity Management application provides your sales agents and account executives with product recommendations for customers based on a needs analysis. You can seamlessly convert sales opportunities to quotes when the customer is ready.

### Product Catalog Management

The Product Catalog Management feature in Sales Customer Relationship Management enables your catalog administrators to create products catalogs with categories that enable agents to navigate easily and find products and services to add to opportunities.

### Opportunity Management release notes

The ServiceNow® Opportunity Management application enables your sales agents and account executives to create and manage opportunities that identify and track the potential sales for your customers. Opportunity Management was enhanced and updated in the Xanadu release.

## Opportunity Management highlights for the Xanadu release

- Collaborate with your internal and external stakeholders by using the sidebar and Microsoft Teams integration on an opportunity.
- Create quotes for the selected line items in an opportunity record by using the new UI action.

See Opportunity Management for more information.

**Important:**
Opportunity Management is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

### Use the Sidebar integration with Microsoft Teams

Collaborate on an opportunity with your sales managers and solution consultants, or product and legal teams by using the sidebar integrated with Microsoft Teams

© 2026 ServiceNow, Inc. All rights reserved.

to close the deal or opportunity. Additionally, you can communicate with the stakeholders through messages, emojis, and attachments.

> **Note:**
> To use this feature, you must upgrade your ServiceNow AI Platform to Xanadu. To learn more, see Upgrade to the Xanadu release.

### Create quotes from opportunity line items

Create quotes by selecting individual line items within an opportunity record.

### Location-based transactions for Opportunity Management

- Enable agents to specify a customer location in the product catalog and display only the eligible products for that location when they're adding products to opportunities.
- Copy products (line items) to other customer locations within the same opportunity.

### Sync quote and opportunity

- Establish a synhronisation between quote and opportunity to ensure that values across Opportunity-Quote, and Opportunity Line items-Quote Line items are consistent. This synchronisation allows changes to automatically copy into the opportunity record.
- Track revenue from an opportunity accurately by keeping opportunities and quotes in synchronisation.

### Subscription revenue metrics

Provide system-calculated recurring and one-time revenue amounts for product and service subscriptions for opportunities. These amounts help sales agents and managers to gain visibility into revenue metrics and recurring revenue dynamics.

## Deprecations

The following fields are deprecated in the **Details** tab on Opportunity record.

- Total Monthly Recurring Price
- Total Annual Recurring Price
- ARR
- Budget Type

The following fields are depracated in the **Details** tab on Opportunity Line Items record.

- Estimated Unit Price
- Estimated Total Price
- Total Recurring Price

## Activation information

Install Opportunity Management by requesting it from ServiceNow Store.

## Related ServiceNow applications and features

### Customer Service Management

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The Opportunity Management application uses the ServiceNow® Customer Service Management account, consumer, and product inventory data model. Customer service agents have full visibility into opportunities that have been created using Opportunity Management.

**Quote Management**

The ServiceNow® Quote Management application enables your sales agents to generate and manage sales quotes for your customers. You can seamlessly convert sales opportunities to quotes when the customer is ready.

**Product Catalog Management**

The Product Catalog Management feature in Sales Customer Relationship Management enables your catalog administrators to create products catalogs with categories that enable agents to navigate and find products and services to add to opportunities.

**Pricing Management**

The Pricing Management feature in Sales Customer Relationship Management enables your pricing administrators to set the pricing for products and services that are used in the various Sales Customer Relationship Management applications.

### Order Management release notes

The ServiceNow® Order Management application enables you to capture, manage, and fulfill product and service orders from enterprise customers. Order Management was enhanced and updated in the Xanadu release.

## Order Management highlights for the Xanadu release

- Sales agreements associated with the account are automatically applied and the catalog is filtered to display the agreement's products and prices.
- Admins can set planned task due dates in Jeopardy Management, which are calculated based on business hours during weekdays.
- Order agents can associate product specifications to a product offer at any level of a product offer hierarchy.
- Admins can update product inventory records in a batch when there are changes to product specifications.
- Order agents create orders tailored to each customer location from the product catalog.
- Agents can use the Order Operations Case Management application to create cases for customer orders, unifying order tracking and resolution solutions.

See Order management for more information.

## Important information for upgrading Order Management to Xanadu

Features introduced in the Xanadu release aren't supported in earlier releases of Order Management.

If you're upgrading from Order Management for Telecommunications and Media version 6.0 or earlier:

- Starting with the#Washington DC release, the#Monthly Recurring Charges#(MRC) and the #Non-Recurring Charges#(NRC) for product offerings and product attribute characteristics are no longer stored in the product offering data model. Instead, the MRC and NRC are stored in the Pricing data model in price lists and price list lines. If you want to upgrade your pricing information to use price lists after upgrading to#Washington DC, see the#Price Management

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Plugin (com.sn_csm_pricing) uptake for Telecommunications, Media, and Technology customers upgrading to Washington [KB1585863] article in the Now Support Knowledge Base.

- After upgrading to the#Xanadu release, a fix script runs automatically to deactivate certain telecommunications list records that are no longer needed to resume the capture of an unfinished order. For more information on these records and using the former order capture process, see the#Deprecating Telco List for Order Capture [KB1586538] article in the Now Support Knowledge Base.

If you're an upgrade customer who uses the **contract start date** and **contract end date** fields and has records, you can migrate those records to the latest data model by running the *`Migrate data from deprecated contract fields to new fields on Order and Order Lines`* scheduled job. This scheduled job must be manually executed by navigating to **System Definitions** > **Scheduled Jobs**. For more information on scheduled jobs, see Scheduled jobs.

## New in the Xanadu release

### Add sales agreements to orders

When an agent creates an order, the sales agreement associated with the account is automatically applied and the catalog is filtered with the agreement products and prices.

### Add business hours to Jeopardy Management tasks

Admins can set planned task due dates, which are calculated based on business hours during weekdays in Jeopardy Management.

### Update specification versions

Admins can perform a batch version update to a product inventory's specification version.

### Add covered products to an order

Agents can create covered products and modifications as part of an order capture to establish coverage relationships. They can also create change orders that remove sold products or install base items as covered products from entitlements and contracts.

**Order to Cash Operations**

- Order Operations Case Management: Use the Order Operations Case Management application (com.sn_order_case) to create order cases that reference multiple line items, including orders and order lines. Agents can use these cases to process order-related services such as order changes, inquiries, and disputes.
- Case lines and workflows: Use the Case lines and workflows application (com.sn_case_line) to reference multiple line items on a case record, including orders or order lines, invoices or invoices lines, contracts, and sold products.

## Changed in this release

### Add a sales agreement

When an agent creates an order, the latest sales agreement associated with the account is automatically applied and the catalog is filtered to display the agreement's products and prices.

### Update product locations at the order line level

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Agents can create orders by location, which enables them to tailor orders for a customer location and streamline the ordering process by managing orders that have multiple locations.

## Activation information

Install Order Management by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Related ServiceNow applications and features

### Customer Service Management

The Configuration Management Database (CMDB) application creates required configuration items and activates base items for the services and resources that are delivered to customers. It helps to assure that service begins when an order has been fulfilled.

### CSM Inventory Data Model

The Customer Service Management application uses the account, consumer, and product inventory data model. Customer service agents have full visibility into products and services that have been delivered to customers using Order Management

### CSM Catalog Administrators

The Product Catalog Management application enables your catalog administrators to create products catalogs that agents use to find and add products and services to orders.

### Pricing Management

The Pricing Management application enables your pricing administrators to set prices for products and services that are used in orders. Pricing administrators also set the controls that enable your sales agents to adjust product pricing in orders.

### Quote Management

The Quote Management application enables your sales agents and account executives to generate and manage sales quotes for your customers. You can convert sales quotes to orders when the customer is ready.

### Flow Designer Actions

Workflow Studio components enable you to invoke flows or subflows that are designed as part of a workflow, such as an orchestration workflow. The components also enable you to find the output or execution status of the flows or subflows.

### Configure Field Service Management

The Customer Service with Field Service Management plugin (com.snc.csm_fsm_integration) integrates the Customer Service Management and Field Service Management applications to enable you to view account and contact information on work orders and work order tasks in the application.

### Product Catalog Management and Pricing Management release notes

The Sales Customer Relationship Management applications include Product Catalog Management and Pricing Management features for creating and managing the product offerings, catalogs, pricing, and discounting strategies used in your organization. These foundational features were enhanced and updated in the Xanadu release.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Product Catalog Management and Pricing Management highlights for the Xanadu release

- Enable sales agents and managers to create opportunities, quotes, and orders for service or installation locations.
- Use a configurable pricing plan that defines the sequence in which pricing rules and calculations, such as list price and various adjustments are applied.
- Enable sales agents to create sales agreements with configurable product offerings.
- Sell the right products and reduce the risk of order errors by setting rules that enable only eligible products from the product catalog to be added to quotes and orders.
- Fulfill complex orders for bundled product offers that reference product specifications or product specification hierarchies.
- Streamline the quote and order process for your agents by setting the default product configurations displayed in the product configurator.

See Product Catalog Management and Pricing Management for more information.

## Important information for upgrading Product Catalog Management and Pricing Management to Xanadu

If you're using the extension point *sn_csm_pricing.PricingAdjustmentsExtensionPoint* for pricing adjustments, change the default pricing plan (introduced in the November 2024 release) after upgrading. The pricing plan steps for the Configuration Component Price Adjustment and Standard Price Adjustment matrices are not applicable. As pricing admin or manager, remove the steps for these matrices from the default pricing plan.

1. Navigate to **All** > **Pricing** > **Pricing Plans**.
2. Select the published Default Pricing Plan.
3. Select **Copy**.
4. In the pricing plan copy, go to the Pricing Plan steps related list.
5. Select the rows for the Apply configuration component adjustments step (Sequence 50) and the Apply contextual adjustments step (Sequence 60) and select **Delete** in the Actions on selected rows menu.
6. Select **Update**.
7. Publish the pricing plan copy.

## New in the Xanadu release

### Product Catalog Management features

#### Location-based transactions

Enable agents to specify a service location in the product catalog UI and display only the eligible products for that location when they're adding products to opportunities, quotes, and orders. Agents can create line items for the specified location, as well as copy line items to multiple service or installation locations in the same opportunity, quote, or order. Set up eligibility rules to filter the product catalog, catalog categories, or product offerings by service location.

#### Control cascading quantity values in child product offerings

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Control how quantity values on top-level product offerings are cascaded to child lines.

### Product offer eligibility

Use business rules to filter the product catalog, product categories, and product offerings dynamically, displaying only eligible product offerings for a customer in the product catalog. Define the business rules using product eligibility matrices. If you're using sales agreements, the product catalog displays only the eligible product offers set in the sales agreement.

The November 2024 release provides the following:

- Version 2 of product eligibility matrices: Supports eligibility rules based on transaction line attributes along with document header attributes.
- System-defined context variables for service locations: Service City, Service State, Service Country, and Service Zip context variables are available to specify service locations in the product eligibility and pricing matrices.

### Product offer bundling with product specifications

Support bundling of offers that have an associated product specification or specification hierarchy. For example, you can create a product offer that has an associated product specification and indicate whether to inherit the characteristics from the child specifications in addition to the parent specification.

**Pricing Management features**

### Configurable pricing plan

Define the sequence of steps in which pricing rules and calculations are applied. The November 2024 release provides a default pricing plan. You can customize the default plan by copying it and then adding new steps, modifying existing steps, changing the sequence of steps, and adding conditions for running an existing step.

### Subscription revenue metrics

View system-calculated recurring revenue amounts for product and service subscriptions in opportunities and quotes. These amounts help sales agents and sales managers assess the financial value of monthly and annual subscriptions.

### Sales Agreement price lists

If you're using the Sales Agreement feature, a published sales agreement price list is generated automatically when a sales agent creates a sales agreement from a completed quote. The sales agreement price list reflects the final unit price for each product captured in the sales agreement and is valid for the start and end dates specified for the agreement. To learn more about sales agreements, see Sales Agreement Management.

The November 2024 release supports hierarchical price lists and multiple price lists for a sales agreement. Hierarchical price lists enable agents to negotiate different pricing for an offer depending on whether it is sold in the context of a bundle or parent offer or as a standalone product. If multiple price lists exist for a sales agreement, the default price list used is based on currency and the sales agreement. Agents can select from different options, products, and characteristics within a configurable bundle or product, which determines what is available as part of the sales agreement and resulting order.

## UI changes

### Context Rule Management navigation changes

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

In the CSM Configurable Workspace, you can access the product eligibility matrices from the List view and navigate to **Rules** > **Eligibility Rules** or **Context Rule Management** > **Rule Matrices** to select the appropriate matrix for controlling product eligibility.

## Changed in this release

### Product Catalog Management changes

#### Product catalog hierarchy visualization

Toggle the view to show the specification hierarchy along with the offer hierarchy or show just the offer hierarchy using the Catalog Hierarchy tab for a product offering.

### Configuration UI changes

- Sorting of product entities: Product catalog categories and categories are now displayed in alphabetic order. Characteristic options and child offers in the configuration UI are also displayed in alphabetical order, unless product catalog admins set a different display order when defining the associated product offerings.
- Configurable products for sales agreements: Agents can select from the different options for products and characteristics within a configurable bundle or product. These selections determine what product offerings are available as part of the sales agreement when creating orders from sales agreements.
- Improved the display and aggregation of alerts, error, and information messages in the Configuration UI to provide more context. Added visual indicators that indicate when a configuration is incomplete.

#### Configuration State Model API Framework enhancements

Use the configuration state model to control various features in the product configurator. For example, you can define different default product configurations displayed to your agents, based on context, such as role or sales channel. You can also control the quantity values that agents can enter on a configuration node or optionally define info messages that are triggered for specific conditions that you set.

### Pricing Management changes

#### Changing a published price list

Starting with the Xanadu release, you can change only the **Description** and price list **End date** fields in a published price list. You can continue to add price list lines.

#### Copy a price list

Duplicate a published price list, its price list lines, and any related attribute adjustments and decision tables, without having to re-create the price list and its price list lines. For example, you can copy a published price list and its price list lines and use the price list copy for another account or location.

#### Cost book enhancements

Create multiple cost books for a given currency and set a default cost book for a given currency. You can also do the following:

- Copy a cost book.
- Manage the default cost books used and set cost book validation rules by using the Cost Book Defaulting Matrix.
- Customize the default cost book logic called by other SOM applications by using the DefaultCostBookExtensionPoint extension point.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

### Matrix rule validations

Use predefined validation rules or create your own rules to validate the context variables, such as mandatory inputs, in pricing and product eligibility rule matrices. Each validation definition has a script that identifies the context variables to be validated and the corresponding error or warning messages that are displayed in the matrix decision table, depending on the validation results.

**Name change for Pricing Matrix Management application**

Starting with the Xanadu release, the Pricing Matrix Management application is renamed as the Product and Pricing Rules application (sn_csm_price_mtrx plugin). The application includes the product catalog eligibility matrices introduced in this release as well as the pricing matrices.

## Activation information

The Product Catalog Management and Pricing Management features are included with each store application and don't need activation. Depending on your entitlements, you can install the Product and Pricing Rules application for pricing and product eligibility matrices and the Product Configurator feature from the ServiceNow Store.

### Quote Management release notes

The ServiceNow® Quote Management application enables your sales agents to generate and manage sales quotes for your customers. Quote Management was enhanced and updated in the Xanadu release.

## Quote Management highlights for the Xanadu release

- Add covered products to a quote.
- Synchronize quote information with an opportunity to help ensure that the information is accurate and complete.
- Create sales agreements that contain configurable and bundled products and services.
- Add location-based product eligibility, which enables products to be filtered in the catalog based on location.

See Quote Management for more information.

**Important:**
Quote Management is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

### Sales agreement in quotes include product bundles

Add a sales agreement to a quote that contains configurable product bundles with the ability to choose from available child offers and optional characteristics.

### Location function filters products and creates line items

Location-based quoting is a new feature where line items can be created for different service or installation locations and agents can copy line items from one location to another. Agents can also filter products in the catalog by location.

### Add covered products to a quote

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

As an agent, add covered products to quote line items. Covered products include entitlements, service agreements, and warranties. Adding a covered product to a quote enables you to add start and end dates for the agreements.

### Synchronize a quote with an opportunity

As an agent, synchronize quote information to an opportunity. As quote information changes, use this function to update the opportunity with information from the quote to keep records accurate.

## Deprecations

The following table columns are deprecated from Quote Management.

**Deprecations for Quote Management**

| Table name | Column name |
|---|---|
| sn_quote_mgmt_core_quote_line_item | cumulative_monthly_recurring_price, cumulative_annual_recurring_price |
| sn_quote_mgmt_core_quote | total_monthly_recurring_price, total_annual_recurring_price, total_recurring_price |

## Activation information

Install Quote Management by requesting it from the ServiceNow Store.

## Related ServiceNow applications and features

### Customer Service Management

The Quote Management application uses the ServiceNow® Customer Service Management account, consumer, and product inventory data model. Customer service agents have full visibility into the quotes created using Quote Management.

### Opportunity Management

The ServiceNow® Opportunity Management application gives your sales agents and account executives with product recommendations for customers based on a needs analysis. You can seamlessly convert sales opportunities to quotes when the customer is ready.

### Product Catalog Management

The Product Catalog Management feature in the Sales Customer Relationship Management application enables your catalog administrators to create product catalogs with pricing that enables agents to find and add products and services to sales quotes.

### Pricing Management

The Pricing Management feature in Sales Customer Relationship Management enables your pricing administrators to set the pricing for products and services that are used in quotes. Pricing administrators also set the controls that enable your sales agents to adjust the pricing for complex product offers in quotes.

### Order Management

Order and fulfillment agents can use ServiceNow® Order Management to fulfill customer orders created from the Quote Management application.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

### Sales Agreement Management release notes

The ServiceNow® Sales Agreement Management application enables you to capture the scope and conditions from a quote for future sales transactions over a specified period between a buyer and a seller. Sales Agreement Management is a new application in the Xanadu release.

## Sales Agreement Management highlights for the Xanadu release

Create sales agreements from quotes to capture the agreed scope and prices for future sales transactions between a buyer and a seller.

See Sales Agreement Management for more information.

**Important:**
Sales Agreement Management is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## Sales Agreement Management features

### Sales Agreement Management application

Create sales agreements from quotes to capture the scope and conditions for future sales transactions between a buyer and a seller. A sales agreement contains information such as details about the buyer and seller, the validity period of the agreement, and the quantities and pricing of the products and services.

## Related ServiceNow applications and features

### Customer Service Management

The Sales Agreement Management application uses the ServiceNow® Customer Service Management account, consumer, and product inventory data model. Customer service agents have full visibility into quotes created using Quote Management.

### Opportunity Management

The ServiceNow® Opportunity Management application provides your sales agents and account executives with product recommendations for customers based on a needs analysis. You can seamlessly convert sales opportunities to quotes when the customer is ready.

### Product Catalog Management

The Product Catalog Management feature in Sales Customer Relationship Management enables your catalog administrators to create product catalogs with pricing that enable agents to find and add products and services to sales quotes.

### Pricing Management

The Pricing Management feature in Sales Customer Relationship Management enables your pricing administrators to set pricing for products and services that are used in quotes. Pricing administrators also set the controls that enable your sales agents to adjust pricing for complex product offers in quotes.

### Order Management

Order and fulfillment agents can use ServiceNow® Order Management to fulfill customer orders created from the Sales Agreement Management application.

### Security Operations release notes

Security Operations has new and updated features in the Xanadu release.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

### Application Vulnerability Response release notes

The ServiceNow® Application Vulnerability Response application brings security and IT together to enable you to remediate your most critical vulnerabilities more quickly and efficiently. Application Vulnerability Response is included as part of the ServiceNow® Vulnerability Response application. Application Vulnerability Response was enhanced and updated in the Xanadu release.

## Application Vulnerability Response highlights for the Xanadu release

- Reevaluate the risk score, assignments, remediation target date, exceptions, and remediation task for a specific set of application vulnerable items in the Vulnerability Manager Workspace.
- Integrate with supported third-party scanners to import vulnerability data.
- Compare application vulnerability-related data and determine if application vulnerabilities are found in an application.
- Prioritize, remediate, and manage application vulnerable items (AVI)s. Each application vulnerability represents a vulnerability entry in the CWE or third-party libraries.
- Identify the components used in your organization's applications and determine your potential exposure to risks associated with using open-source software from Software Bill of Materials (SBOM) files that you upload into your instance.

See Application Vulnerability Response for more information.

**Important:**
Vulnerability Response is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## Important information for upgrading Application Vulnerability Response to Xanadu

- For information about the new features of Vulnerability Response, see Vulnerability Response release notes.
- For more information about the released versions of the Application Vulnerability Response application as well as the third-party and ServiceNow applications that are compatible with the Xanadu release, see the Vulnerability Response Compatibility Matrix and Release Schema Changes [KB0856498] article in the Now Support Knowledge Base.

## New in the Xanadu release

### Customize the calculation of Age and Age closed parameters of a application vulnerable item

Starting with v24.0.6 of Vulnerability Response, the Age and Age Closed durations of am Application Vulnerable item can be configured to be calculated from the date in the Created, Opened, or First Found fields.

### Open the search results in the Vulnerability Manager Workspace or IT Remediation Workspace rather than the Classic UI

Starting with v24.0.6 of Vulnerability Response, automatically open your search results in the Vulnerability Manager Workspace or IT Remediation Workspace rather than the Classic UI, by adjusting the application scope in the unified navigation bar to Vulnerability Manager Workspace or IT Remediation Workspace respectively. These application scopes are available to you based on your assigned role.

### Vulnerability Manager Workspace access to the sn_vul.app_read_all role

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Starting with v24.0.6 of Vulnerability Response, as a user with the sn_vul.app_read_all role, you can view the application vulnerable items in the Vulnerability Manager Workspace.

**IT Remediation Workspace access to the sn_vul.app_read_assigned role**

Starting with v24.0.6 of Vulnerability Response, as a user with the sn_vul.app_read_assigned role, you can view the application vulnerable items assigned to you and your assignment groups in the IT Remediation Workspace and remediate them.

**Navigate to the List page in the Vulnerability Manager Workspace or IT Remediation Workspace by selecting the links from the All menu**

Starting with v24.0.6 of Vulnerability Response, when you enable the 'sn_vul_cmn_ws.navigate_to_workspace' system property, selecting predefined filter links in the Application Vulnerability Response module from the 'All' menu will automatically open these links in the List page in the Vulnerability Manager Workspace or IT Remediation Workspace based on your role.

**Hide the record count on the lists in the Vulnerability Manager Workspace and IT Remediation Workspace**

Starting with v24.0.6 of Vulnerability Response, you can hide the record count on the lists in the List page in the Vulnerability Manager Workspace and IT Remediation Workspace, by adding the table names to the *`glide.ui.list.seismic.omit.count`* system property.

**Enable automatic refresh for the Home page dashboard in the Vulnerability Manager Workspace**

Starting with v24.0.6 of Vulnerability Response, when creating and editing filters in the Application Vulnerabilities tab on the Home page of the Vulnerability Manager Workspace, you can configure the widgets to refresh automatically. Otherwise, you can manually refresh the widgets by selecting the **Refresh** button on the Application Vulnerabilities tab.

**Re-evaluating remediation properties for all records in the Vulnerability Manager Workspace**

Starting with v24.0.6 of Vulnerability Response, you can evaluate the remediation properties for all the Application Vulnerable Items from the Application Vulnerable Items list by selecting the **All items** in the **Record selection** field of the Re-evaluate remediation properties modal in the Vulnerability Manager Workspace.

**New Properties module**

Starting with v24.0.6 of Application Vulnerability Response, a new **Properties** module has been added to the navigation menu under the **Administration** section. This module enables direct modification of the values, offering a user-friendly method to manage and update system properties directly from the interface.

**View, classify, and assign software license information you upload with your SBOM files**

Use the License administration module in the SBOM Workspace to help you determine your over-all license compliance and risk exposure to the open-source and vendor-supplied software components you use in your application development.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- View all the licenses that are used in your organization in the License administration module.
- Classify existing licenses as: "Permitted", "Restricted", "Banned", or "Unclassified", and create new licenses.
- For unassigned or missing licenses, you can manually assign licenses to components used by your applications.

### Closed application vulnerable items in the SBOM Workspace reopen automatically

A **Closed** application vulnerable item (AVIT) for a component with an associated vulnerability is reopened automatically and visible in the SBOM Workspace if the following conditions are met:

- The Reopen AVITs if detected (sn_sbom_resp.reopen_avits_if_detected) system property is activated. This system property is activated by default.
- The AVIT with the associated vulnerability is detected again by a third-party integration's vulnerability scans or the component with the vulnerability is part of a subsequent SBOM upload.
- The substate of the **Closed** AVIT is not one of the following: **Mitigation Control in Place**, **Not Affected**, or **False Positive**. AVITs with these substates are not reopened by the system property.

Deactivate the system property only if you do not want **Closed** AVITs to reopen automatically.

### Reevaluate the remediation properties for application vulnerable items in the Vulnerability Manager Workspace

Select the application vulnerable items conditionally for reevaluating the following remediation properties in the Vulnerability Manager Workspace:

- Assignments
- Remediation tasks
- Remediation target date
- Exceptions (Vulnerability Response v24.0.6)
- Risk score

### Software Bill of Materials enhancements for CycloneDX SBOM files

The following enhancements were made to support SBOM files in CycloneDX format:

Import additional information in CycloneDX SBOM files with the (*sn_sbom_core.collect_properties*) property. This property is deactivated by default. Activate the property to import information that is generally not supported. Any information imported from these properties is uploaded to the SBOM Component Property [sn_sbom_comp_property] table for the following:

- Uploaded SBOM files
- Metadata
- Individual vulnerabilities
- Components

View imported component data for declared and concluded licenses for SBOM files in versions 1.4 and later of CycloneDX in two new license fields:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- **Declared**
- **Concluded**

SBOM parsing support is enhanced for the following CycloneDX versions and component types:

- Version 1.5: Platform, Data, Device driver, Machine Learning model
- Version 1.6: Cryptographic

### Enhancements to SBOM Response for PaCE

The Policy as Code Engine (PaCE) application is available for SBOM Response.

- Determine if components are stale or abandoned with the *Run PaCE policies for SBOM Response* scheduled job. The scheduled job is deactivated by default.
- View components that are identified as stale or abandoned as Non - `compliant` in the PaCE interface that is available in the SBOM Workspace.

### Upload SBOM files to the ServiceNow AI Platform® from your GitHub repositories

Determine if SBOM files generated in your CI/CD (continuous integration and continuous delivery/deployment) pipelines have been successfully queued in your ServiceNow AI Platform instance.

- Protect your environments from potentially harmful components during software development cycles with GitHub Actions that you initiate from your GitHub environment.
- Obtain any required GitHub Actions for SBOM upload in the GitHub Marketplace.

### Enhancements to Bill of Materials records for the Veracode Vulnerability Integration

**Veracode** is mapped to the **Source** field for records in the Bill of Materials [sn_sbom_doc] table for the Veracode SBOM files that you upload.

### Remediation Task Rules for Container Vulnerability Response

Define and group container vulnerable items automatically based on the remediation task rules.

### GitHub Secrets Scanning

Ingest secrets detected in your organization's code along with the application security testing results, enabling ease of accessibility for developers to mitigate these results.

### Enhanced processing performance of scheduled job

The *Rollup application vulnerable item values to vulnerability and group* scheduled job is enhanced to create background jobs with multithreading capabilities. This upgrade involves segmenting the job into several smaller child jobs, which are executed either in parallel or concurrently. This modification enables processing of multiple records simultaneously, thus significantly speeding up the overall task.

### Quick Start Tests for Application Vulnerability Response

After upgrades and deployments of new applications or integrations, run quick start tests to verify that Application Vulnerability Response works as expected. If you customized Application Vulnerability Response, copy the quick start tests and configure them for your customizations.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

#### Set the Veracode integration to update SCA findings

You can select the scan that takes precedence for the final updates for SCA findings data imported from Veracode. On the Veracode configuration page, 'Default' is the set value until you change it. You must select the Include SCA findings check box and choose one from the list:

- Agent – the agent scan results make the final updates to SCA finding
- Upload – the upload scan results make the final updates to SCA finding
- Default – the last scan processed, either the agent or upload scan, makes the final updates to SCA findings

**Note:**
If you do not select the Include SCA findings check box on the configuration page, the scan you selected from the list is not used, and the last scan that is processed makes the final updates.

#### Add and delete support for applications in Veracode imported from the ServiceNow AI Platform

Set the value for the [sn-vul-veracode.app-mark-unseen-apps-inactive] system property to 'true' to prevent errors if the Platform requests applications already deleted by Veracode. If this property is set to 'true' (activated), the successful import of the Application List Integration marks any unseen applications in the Platform as 'inactive'.

### Application Penetration testing enhancements

New workspace that permits you to use the penetration testing workflow in the Next Experience UI. Alignment of penetration testing for mobile application security with the recognized standards of the Mobile Application Security Verification Standard (MASVS) via a questionnaire in the penetration testing workflow.

## Removed in this release

The **Close** button has been removed for a remediation task in the classic UI, Vulnerability Manager Workspace, and IT Remediation Workspace.

## Activation information

Install Application Vulnerability Response by requesting it from the ServiceNow Store. Application Vulnerability Response is included as a part of the Vulnerability Response application. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

### Configuration Compliance release notes

The ServiceNow® Configuration Compliance application enables you to prioritize and remediate the most critical configuration-related vulnerabilities in your environment quickly and efficiently. Configuration Compliance was enhanced and updated in the Xanadu release.

## Configuration Compliance highlights for the Xanadu release

- Reevaluate the risk score, assignments, remediation target date, exceptions, and remediation task for a set of test results in Vulnerability Manager Workspace.
- View the percentage of CI compliance and test results compliance on a Test Group in Vulnerability Manager Workspace.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

See Configuration Compliance for more information.

**Important:**
Configuration Compliance is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

### Identify Wiz Resource Types for import

Identify the Resource Types (assets) reported by Wiz in your environment on the Wiz Integration Resource Type configuration page in your ServiceNow AI Platform instance that you want to import.

The Resource Types that you select apply to all the primary Wiz vulnerability and compliance integrations except the Wiz Container Vulnerability Integration.

### Wiz Backfill Integrations

Retrieve and process data stored on the Wiz Missing Assets [sn_vul_wiz_missing_asset] table for missing assets that were not processed by the primary compliance integrations with specialized Wiz Backfill Integrations.

- Test Results Backfill Integration
- Host Test Results Backfill Integration
- Issues Backfill Integration

The Wiz Backfill Integrations are activated by default.

### Wiz Host Test Result Vulnerability Integration

Import test results associated with the resource type, `VIRTUAL MACHINE` with the Wiz Host Test Result Vulnerability Integration. This integration is activated by default.

### New Properties module

Starting with v15.1 of Configuration Compliance, a new **Properties** module has been added to the navigation menu under the **Administration** section. This module enables direct modification of the values, offering a user-friendly method to manage and update system properties directly from the interface.

### Customize the calculation of Age and Age closed durations of a test result

Starting with v15.1 of Configuration Compliance, the Age and Age Closed durations of a test result can be configured to be calculated from the date in the Created, Opened, or First Found fields.

### Associating a Qualys Test with its Test Group

You can associate a Qualys Test with its Test Group by enabling the **sn_vulc.add_policy_as_key** system property. This helps you to identify the Test Group to which a Test Result belongs to and differentiate Test records with the same Test id that are associated with different Test Groups.

### Calculate the remediation target date of a remediation task with respect to the Last Opened date

Starting with v15.1 of Configuration Compliance, you can customize the calculation of the remediation target date of a remediation task to be calculated with respect to the Last Opened date.

### Open the search results in the Vulnerability Manager Workspace or IT Remediation Workspace rather than the Classic UI

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Starting with v24.0.6 of Vulnerability Response, automatically open your search results in the Vulnerability Manager Workspace or IT Remediation Workspace rather than the Classic UI, by adjusting the application scope in the unified navigation bar to Vulnerability Manager Workspace or IT Remediation Workspace respectively. These application scopes are available to you based on your assigned role.

### Vulnerability Manager Workspace access to the sn_vulc.read role

Starting with v24.0.6 of Vulnerability Response, as a user with the sn_vulc.read role, you can view the test results in the Vulnerability Manager Workspace.

### Navigate to the List page in the Vulnerability Manager Workspace or IT Remediation Workspace by selecting the links from the All menu

Starting with v24.0.6 of Vulnerability Response, when you enable the 'sn_vul_cmn_ws.navigate_to_workspace' system property, selecting predefined filter links in the Configuration Compliance module from the 'All' menu will automatically open these links in the List page in the Vulnerability Manager Workspace or IT Remediation Workspace based on your role.

### Hide the record count on the lists in the Vulnerability Manager Workspace and IT Remediation Workspace

Starting with v24.0.6 of Vulnerability Response, you can hide the record count on the lists in the List page of the Vulnerability Manager Workspace and IT Remediation Workspace by adding the table names to the *glide.ui.list.seismic.omit.count* system property.

### Enable automatic refresh for the Home page dashboard in the Vulnerability Manager Workspace

Starting with v24.0.6 of Vulnerability Response, when creating and editing filters on the Configuration Test Results tab on the Home page of the Vulnerability Manager Workspace, you can configure the widgets to refresh automatically. Otherwise, you can manually refresh the widgets by selecting the **Refresh** button on the Configuration Test Results tab.

### Re-evaluating remediation properties for all records in the Vulnerability Manager Workspace

Starting with v24.0.6 of Vulnerability Response, you can evaluate the remediation properties for all the test results from the Configuration Test Results list by selecting the **All items** in the **Record selection** field of the Re-evaluate remediation properties modal in the Vulnerability Manager Workspace.

### Re-evaluate remediation properties for test results in the Vulnerability Manager Workspace

Select the test results conditionally for reevaluating the following remediation properties in Vulnerability Manager Workspace:

- Assignments
- Remediation tasks
- Remediation target date
- Exceptions (Vulnerability Response v24.0.6)
- Risk score

### Using bulk edit for test results in the Vulnerability Manager Workspace

Perform the following tasks on multiple test results simultaneously or a remediation task in Vulnerability Manager Workspace:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Assign test results to an assignment group for remediation.
- Request an exception in bulk.
- Mark test results as false positive in bulk.

### Populating additional information for the test results

The Age, Age closed, Closed date, Active, and Last open date columns have been added in the test results table.

The test results that aren't in the Closed state are marked as *true* in the **Active** field. The **Active** field replaces the **Result** and **State** fields in the filter conditions of the default-saved filters across the All menu, Configuration Compliance Overview, Unified, Cybersecurity Executive, and Health dashboards.

### CI compliance and test results compliance on a Test Group in the Vulnerability Manager Workspace

View the percentage of CI compliance and test results compliance on a Test Group in Vulnerability Manager Workspace.

### Enabling or disabling the test results import for a Qualys test group in the Vulnerability Manager Workspace

Enable or disable the import of test results for a Qualys test group in Vulnerability Manager Workspace.

### Updating Rollup weights section in the roll up calculators

Other than the script format, an alternative approach of adding the weights in the Rollup Weights section for the rollup calculators has been introduced.

### Percentage test result compliance in the Discovered Items table

The percentage of test results compliance of a CI is populated in the % Test Results Compliance column of the Discovered Item. To populate this value in the % Test Results Compliance column, set `calcTRComplianceForCI` to `true` in the *`Update remediation metrics`* scheduled job.

### Quick Start Tests for Configuration Compliance

After upgrades and deployments of new applications or integrations, run quick start tests to verify that Configuration Compliance works as expected. If you customized Configuration Compliance, copy the quick start tests and configure them for your customizations.

## UI changes

### Renamed the Is deprecated field in the Test Group form

The **Is deprecated** field in the Test Group form is renamed to **Is imported**.

### Renamed the Mark Deprecated button to Disable imports in the Test Group form

The **Mark Deprecated** button in the Test Group form is renamed to **Disable Imports**.

### Test Group mapping with Tests for Tenable and Microsoft Defender integrations

The test groups are mapped with the Tests associated with the Tenable and Microsoft Defender integrations.

### View the test result compliance percentage of a CI in the Discovered Items list

The percentage of the test results that are compliant with the tests associated with a Configuration Item (CI) is populated in the % Test Results Compliance column of the Discovered Item list. To populate this value in the % Test Results Compliance

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

column, set the `calcTRComplianceForCI` parameter to `true` in the *`Update remediation metrics`* scheduled job.

## Changed in this release

### Test result and remediation task state transitions

Enhancements to policy audits for Security Posture Control verify that retired assets are not evaluated by activated policies. If the state of an asset transitions from **Retired** back to **Active**, it is included in the next policy evaluation.

### Non-zero risk score for passed test results

The risk score is calculated for passed test results to determine how much risk is mitigated.

### Deprecated the privilege to delete a test result for the Admin role

As an admin with the sn_vulc.admin role, you can't delete a test result. This privilege is now given to the sn_vulc.delete granular role.

### Updates to the Risk Score calculation for a Remediation Task

The average risk score of all the test results in a Remediation Task is considered for the risk score calculation of a Remediation task.

## Removed in this release

- The **Reason** field in the Resolve modal has been removed for a remediation task in the classic UI, Vulnerability Manager Workspace, and IT Remediation Workspace.
- The **Close** button has been removed for a remediation task, in the classic UI, Vulnerability Manager Workspace, and IT Remediation Workspace.

### Container Vulnerability Response release notes

The ServiceNow® Container Vulnerability Response application brings security and IT together to enable you to remediate your most critical vulnerabilities more quickly and efficiently. Container Vulnerability Response was enhanced and updated in the Xanadu release.

## Container Vulnerability Response highlights for the Xanadu release

- Reevaluate the risk score, assignments, remediation target date, exceptions, and remediation task for a specific set of container vulnerable items in Vulnerability Manager Workspace.

See Container Vulnerability Response for more information.

**Important:**
Container Vulnerability Response is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

### New Properties module

Starting with v2.11.3 of Container Vulnerability Response, a new **Properties** module has been added to the navigation menu under the **Administration** section. This module enables direct modification of the values, offering a user-friendly method to manage and update system properties directly from the interface.

### Create auto-close rules for Container Vulnerability Response

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Starting with v2.11.3 of Container Vulnerability Response, define auto-close rules with advanced conditions to automatically close older or stale CVITs based on defined filter criteria on container vulnerabilities.

**Customize the calculation of Age and Age closed parameters of a container vulnerable item**

Starting with v2.11.3 of Container Vulnerability Response, the Age and Age Closed durations of a Container Vulnerable Item can be configured to be calculated from the date in the Created, Opened, or First Found fields.

**Open the search results in the Vulnerability Manager Workspace or IT Remediation Workspace rather than the Classic UI**

Starting with v24.0.6 of Vulnerability Response, automatically open your search results in the Vulnerability Manager Workspace or IT Remediation Workspace rather than the Classic UI, by adjusting the application scope in the unified navigation bar to Vulnerability Manager Workspace or IT Remediation Workspace respectively. These application scopes are available to you based on your assigned role.

**Vulnerability Manager Workspace access to the sn_vul_container.read_all role**

Starting with v24.0.6 of Vulnerability Response, as a user with the sn_vul_container.read_all role, you can view the container vulnerable items in the Vulnerability Manager Workspace.

**IT Remediation Workspace access to the sn_vul_container.read_assigned role**

Starting with v24.0.6 of Vulnerability Response, as a user with the sn_vul_container.read_assigned role, you can view the container vulnerable items assigned to you and your assignment groups in the IT Remediation Workspace and remediate them.

**Navigate to the List page in the Vulnerability Manager Workspace or IT Remediation Workspace by selecting the links from the All menu**

Starting with v24.0.6 of Vulnerability Response, when you enable the 'sn_vul_cmn_ws.navigate_to_workspace' system property, selecting predefined filter links in the Container Vulnerability Response module from the 'All' menu will automatically open these links in the List page in the Vulnerability Manager Workspace or IT Remediation Workspace based on your role.

**Hide the record count on the lists in the Vulnerability Manager Workspace and IT Remediation Workspace**

Starting with v24.0.6 of Vulnerability Response, you can hide the record count on the lists in the List page of the Vulnerability Manager Workspace and IT Remediation Workspace, by adding the table names to the *glide.ui.list.seismic.omit.count* system property.

**Enable automatic refresh for the Home page dashboard in the Vulnerability Manager Workspace**

Starting with v24.0.6 of Vulnerability Response, when creating and editing filters on the Container Vulnerabilities tab on the Home page of the Vulnerability Manager Workspace, you can configure the widgets to automatically refresh. Otherwise, you can manually refresh the widgets by selecting the **Refresh** button on the Container Vulnerabilities tab.

**Re-evaluating remediation properties for all records in the Vulnerability Manager Workspace**

Starting with v24.0.6 of Vulnerability Response, you can evaluate the remediation properties for all the Container Vulnerable Items from the Container Vulnerable Items list by selecting the **All items** in the **Record selection** field of the Re-evaluate remediation properties modal in the Vulnerability Manager Workspace.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

### Re-evaluate the remediation properties for container vulnerable items in the Vulnerability Manager Workspace

Select the container vulnerable items conditionally for reevaluating the following remediation properties in Vulnerability Manager Workspace:

- Assignments
- Remediation tasks
- Remediation target date
- Exceptions (Vulnerability Response v24.0.6)
- Risk score

### Enhanced processing performance of scheduled job

The *`Rollup container vulnerable item values to vulnerability and group`* scheduled job is enhanced to create background jobs with multithreading capabilities. This upgrade involves segmenting the job into several smaller child jobs, which are executed either in parallel or concurrently. This modification enables processing of multiple records simultaneously, thus significantly speeding up the overall task.

### for Container Vulnerability Response

After upgrades and deployments of new applications or integrations, run quick start tests to verify that Container Vulnerability Response works as expected. If you customized Container Vulnerability Response, copy the quick start tests and configure them for your customizations.

### Vulnerability Response Prisma Registry Integration

Now you can ingest the static image findings obtained from the Prisma registry scan into the ServiceNow Container Vulnerability Response.

## Changed in this release

### Deprecated the privilege to delete a container vulnerable item for the Admin role

As an admin with the sn_vul.vulnerability_admin role, you can't delete a container vulnerable item. This privilege is now given to the sn_vul.delete granular role.

## Removed in this release

The **Close** button has been removed for a remediation task in the classic UI, Vulnerability Manager Workspace, and IT Remediation Workspace.

### Now Assist for Security Operations release notes

The ServiceNow® Now Assist for Security Operations application permits security analysts to resolve security incidents faster with intelligent workflows and generative AI skills. Now Assist for Security Operations is a new application in the Xanadu release.

## Now Assist for Security Operations highlights for the Xanadu release

Xanadu Patch 9

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Help your analysts to gain insight into security incident record metrics with an agentic workflow. Chat with AI agents in natural language from the Now Assist panel.
- With the initial release of Now Assist for Vulnerability Response, help your vulnerability managers and analysts to assess your exposure to vulnerabilities and analyze metrics for remediation targets. Chat with AI agents in natural language from the Now Assist panel.
- Help your analysts to resolve security incidents by chatting with AI agents in the Now Assist panel where the AI agent provides a resolution plan.

Xanadu (prior to Patch 9)

- Expedite triaging of security incidents with long activity streams by reviewing work notes and contextual information quickly in a concise, easy-to-read format.
- Preview security incident details, their potential impact, and any key actions already taken with security incident summaries using generative AI.
- Automatically generate closure notes for security incidents using generative AI.
- Generate recommended actions to resolve security incidents.
- Generate a post-incident analysis.
- Access summaries and closure notes from the Now Assist panel, security incident records, or from the Security Incident Response Workspace.

See Now Assist for Security Incident Response for more information.

**Important:**
Now Assist Security Operations is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## Important information for upgrading Now Assist for Security Incident Response and Now Assist for Vulnerability Response to Xanadu

For more information about required applications for Now Assist for Vulnerability Response, see Supporting information for Now Assist for Vulnerability Response. For more information about required applications for Now Assist for Security Incident Response, see Supporting information for Now Assist for Security Incident Response.

The AI Search application must be enabled so that the Recommended Actions skill works for security incidents. To verify AI Search is enabled on your instance, navigate to **All** > **AI Search** > **AI Search Status**. Contact support if the page indicates AI Search is not enabled.

## Activation information

Install Now Assist for Security Operations by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

### Security Incident Response release notes

The ServiceNow® Security Incident Response (SIR) application helps your organization connect security and IT teams, respond faster and efficiently to threats, and view your organization's security posture. Security Incident Response was enhanced and updated in the Xanadu release.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Security Incident Response highlights for the Xanadu release

- Define and calculate the risk score of security incidents through the Risk Score Calculator, which is based on user-defined criteria. The risk score is auto-calculated for the security incident records.
- Track the handover of important work items between shifts through the Shift Handover application.
- Automatically create dedicated Slack channels for Incident Managers to engage with Incident Responders to manage major security incidents with the MSIM Slack integration.
- Facilitate the ability of the Incident Manager to provide a summary of a major security incident to their Legal teams by using the MSIM Legal Request playbook. The Legal team can use that summary when filing an 8K or 10K form to comply with regulatory bodies such as the SEC when disclosing security breaches.
- Share mobile-friendly MSIM Executive Status Reports generated in email format. You can also share the Executive Status Reports with users outside your ServiceNow® instance, including third-party vendors, other entities, or email distribution lists.

**Important:**
Security Incident Response is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

### Security Incident Response integration with AWS Security Hub

Security Incident Response supports the AWS Security Hub findings integration. This enables you to ingest AWS Security Hub findings and automatically create security incidents in Security Incident Response.

Security Incident Response supports a bidirectional exchange of data with AWS Security Hub. SIR ingests findings from AWS Security Hub to create aggregated security incidents. Simultaneously, any change in a security incident is also updated on the related AWS Security Hub findings.

### Internet Content Adaption Protocol (ICAP) integration for DLP IR

Internet Content Adaption Protocol (ICAP) integration helps you to track the usage and movement of sensitive data on various platforms.

- Configure and schedule DLP alerts ingestion from the specified Amazon S3 buckets which includes the capability to perform the delta imports to ensure only new or modified data is ingested.
- Display the ingested alerts in the DLP workspace by providing the key details on each alert such as the match content, alert severity, and relevant metadata.
- Download associated evidence files directly from the DLP workspace for further investigation or review.
- Enable users to apply automatic responses based on predefined criteria such as alert escalation, notifications, or enforcement policies.
- Remediate response actions such as blocking or quarantining sensitive data, or sending out alerts to stakeholders.
- Customize and define the severity mapping between ICAP DLP incidents with ServiceNow incidents.

### Playbook for zero-day vulnerability

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Get step-by-step procedure to address and mitigate zero-day threats—vulnerabilities in the software that are unknown to the vendor, leaving systems exposed to attacks.

**Configure Shift Handover Templates**

Provide detailed communication of critical information, tasks, and updates between outgoing and incoming personnel for a seamless transition between shifts by using the Shift Handover feature. Improve operational continuity, reduce errors, and increase overall efficiency in the workplace.

**Configure Slack chat connector for major security incidents**

View and filter collaboration chat activities on Slack to more efficiently collaborate to resolve major security incidents.

**Playbook for Legal Request**

Get step-by-step guidance on how you can inform the legal team about the latest summary of a major security incident so they can notify the SEC in the 4-day time frame that is required for material breaches.

**Add Zscaler Internet Access URL category lists**

Enable Zscaler approvers to add observables to the list of required approvals or remove them when the Require Approval option is selected.

**Configure how an automatic event is created** and **MISP event data**

Add security tags during automatic MISP profile configuration.

**Mapping DLP incident status with Netskope**

Provide the mappings between the DLP Incident status in your ServiceNow instance and the Netskope Object status.

**Define the new Risk Score Calculator Rules**

The Risk score configuration in the Security Incident Response workspace has been enhanced with the following capabilities:

- Set up a Risk Score Calculator from either script or condition builders.
- Apply multiple conditions while setting up rule-based scoring.
- Apply weightage to each scoring line. Weights should add up to 100.
- For rule-based scoring, select table fields and values for setting up a condition.
- Capture conditions and scoring via scripts.
- Manually execute risk score calculators to recalculate after making changes.

**Managing MSIM status reports**

Share mobile-friendly Executive Status Reports with users outside your ServiceNow instance, including third-party vendors, other entities, or email distribution lists.

## UI changes

**Configure how an automatic event is created**

- A new **Security tags** field in automatic MISP profile configuration determines which observables with the security tags will not be attached to the automatic event created using the profile.
- Introduced local and global tags in Automatic MISP profile configuration to add the selected tags to the newly created automatic MISP event.

| CrowdStrike Falcon Host integration | Workflow is migrated to the Flow Designer in following sections:<br>• Get started with the CrowdStrike Falcon Host integration<br>• Security Operations CrowdStrike Falcon Host - Publish to Watchlist Flow |

### Review and assign your DLP incidents

Providing a closure code when closing a DLP incident from the DLP IR analyst workspace is now mandatory.

### DLP Incident Response Administration

Adding users and groups is now accomplished through related lists rather than adding users from the respective configurations in the following Administration modules:

- DLP Default Configuration
- DLP Assignment Rules
- DLP Response Due Date Rules
- DLP Incident Assessment
- DLP User Instructions Templates
- DLP Record Level Restrictions
- DLP Field Level Restrictions

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

### Install and configure the Netskope DLP integration for Data Loss Prevention

The Netskope integration now supports DLP incident ingestion.

### Data Loss Prevention Incident Response Incident Management

View the forensic details of DLP Incidents in both the DLP IR Analyst workspace and DLP End user workspace.

### Download evidence files

The Netskope integration supports downloading the evidence file directly on demand.

## Activation information

Install Security Incident Response by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

### Security Operations common functionality

When any of the plugins for the main Security Operations applications (Security Incident Response, Vulnerability Response, Threat Intelligence, or Configuration Compliance) are activated, the Security Support Common plugin is activated.

## Related ServiceNow applications and features

### Vulnerability Response

Vulnerability Response is part of the Security Operations application suite. Together, these applications connect security to your IT department, increase the speed and efficiency of your response, and give you a definitive view of your security posture.

### Threat Intelligence

The ServiceNow® Threat Intelligence application enables you to find indicators of compromise (IoC) and enrich security incidents with threat intelligence data.

### Security Posture Control release notes

The ServiceNow® Security Posture Control application provides cybersecurity teams with visibility into security tool coverage gaps and deviations from security tool configuration for their enterprise assets. Security Posture Control was enhanced and updated in the Xanadu release.

## Security Posture Control highlights for the Xanadu release

- Use the policies included with the application or custom policies that you create to monitor your assets for overall security tool coverage, compliance with internal configuration standards, critical combinations of security gaps and vulnerabilities, and possible internet exposure.
- Search for assets based on queries that you create for data from a wide variety of supported API integrations (service graph connectors) or ServiceNow products.
- Create custom insights and monitor important metrics from a dashboard. Report on your overall security posture to IT, IT and security managers, and other key stakeholders.
- Identify priority vulnerabilities and drive resolution through insights from Security Posture Control in Vulnerability Response risk calculators and remediation target rules.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Gain insight into which threats to your assets are mitigated by available mitigation controls based on how various security tools are configured with Mitigation Controls Monitoring.
- Automate remediation workflows for security gaps by publishing findings from Security Posture Control policies in the ServiceNow® Configuration Compliance application.

See Security Posture Control for more information.

**Important:**
Security Posture Control is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## Important information for upgrading Security Posture Control to Xanadu

For a complete list of the applications that are required to implement Security Posture Control, see Install Security Posture Control.

## New in the Xanadu release

### Mitigation Controls Monitoring with Security Posture Control

From within the Security Posture Control workspace, detect mitigation controls of various types as described by MITRE on all on-premise and cloud enterprise assets. Gain insight into which threats to your assets are mitigated by available mitigation controls based on how various security tools are configured.

- Activate mitigation control policies that are included with the application that identify MITRE mitigations on your assets.
- Identify your assets that have Web Application Firewall (WAF) protection with supported tools that include F5 BIG-IP. Automatically map a WAF mitigation to vulnerable items by analyzing the policy signatures in the firewall and the Common Vulnerabilities and Exposures (CVE) information.
- Identify exploit mitigation controls from endpoint protection or Endpoint Detection and Response (EDR) tools like CrowdStrike and Microsoft Defender. Automatically map the EDR exploit mitigation controls to relevant vulnerable items by analyzing the vulnerability information and the EDR mitigation control configuration.
- Populate vulnerable items with relevant attributes that can be used in your Vulnerability Response risk calculator rules.
- Import agent information from the SentinelOne product into your ServiceNow AI Platform® with the Service Graph Connector for Sentinel One.
- Import asset data from the Splunk product into your ServiceNow AI Platform® with the Service Graph Connector for Splunk.

### Enhancements to custom insights in the Security Posture Control Workspace

The name of the Custom insights module has been changed to the Configured insights module in the Security Posture Control Workspace.

You must assign groups to organize your reports by categories when you create custom insight records. Groups determine where your data visualizations are displayed on the dashboard in the Configured insights module according to the criteria you set.

### Enhancements to the Condition policy builder in the Policies and findings module

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Select **With aggregated data** for **Connection** to ensure that your policy matches assets that have slight variations in reported data. The following properties for policies for hardware assets are supported as they're reported by different sources:

- Host name
- FQDN
- OS
- OS Version
- OS Domain
- OS Service Pack

### Test result and remediation task state transitions

Enhancements to policy audits ensure that retired assets are not evaluated by activated policies. If the state of an asset transitions from **Retired** back to **Active**, it is included in the next policy evaluation.

## Activation information

Install Security Posture Control by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

### Threat Intelligence Security Center release notes

The ServiceNow® Threat Intelligence Security Center (TISC) application empowers your organization to connect security and IT teams so you can respond faster and more efficiently to threats.

## Threat Intelligence Security Center highlights for the Xanadu release

- Visualize node connections between entities like observables, IOCs, and threat actors, and link cases or canvases to enrich analysis.
- Enable continuous monitoring and real-time alerts based on intelligence from TISC with CrowdStrike Falcon EDR integration.
- Block malicious IPs, URLs, and domains using External Dynamic List (EDL) capabilities with Threat Intelligence data and Palo Alto Networks integration.
- Manage the analyst actions through automation flows.
- Conduct research on threats to support the reactive and proactive needs of security teams.
- Create and track threat investigations using Case Management.

See Threat Intelligence Security Center for more information.

## New in the Xanadu release

All observables, indicators, and entities now supports MITRE technique associations.

### Roll up of MITRE technique associations

MITRE techniques can now be rolled up from artifacts at a case level both manually and automatically.

### Palo Alto Networks integration

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Integration with Palo Alto is now available to manage External Dynamic Lists (EDLs) directly from TISC.

**CrowdStrike Falcon EDR integration**

Integration with CrowdStrike Falcon EDR is now available for continuous monitoring and real-time alerting based on TISC intelligence.

**Working with Investigation Canvases**

Introduced a new Investigation Canvas for deeper and interactive case analysis.

**View details in Relationship Graph**

Enhanced the user experience on relationship visualizations.

**Bulk import Taxonomies**

Supports bulk taxonomy values upload.

**TISC API References**

Creating observables in TISC is now available through the implementation of TISC API 2.0.

**Defining Expiration Rules**

Define expiration policies at a more granular level by creating expiration rules for data source and record type combinations.

**Working with Webhooks**

Initiate trigger-based notifications by using Webhooks.

**Working with automated flows**

Automate analyst actions through sample automation flows.

**Add observables to TISC Case**

Add security incident and observables directly to a TISC case in the Security Incident Response Workspace.

**MITRE ATT&CK Technique Extraction Rules**

Capture automatically extracted MITRE techniques to the intelligence records such as observables, indicators, and all STIX entities.

## Changed in this release

**TISC Library Repository**

New aliases can now be added directly from the form views of the threat intelligence library.

## UI changes

**View related info from TISC**

In the Security Incident Response Workspace, the **TISC Context** tab now shows the related information for selected observables.

**Custom Threat Score Calculator in TISC**

The Customer Threat Score Calculator automatically defines threat score criteria for security incidents based on user-defined criteria.

## Activation information

Install Threat Intelligence Security Center by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

### Security Operations common functionality

When any of the plugins for the main Security Operations applications (Security Incident Response, Vulnerability Response, Threat Intelligence, or Configuration Compliance) are activated, the Security Support Common plugin is activated.

## Related ServiceNow applications and features

### Vulnerability Response

Vulnerability Response is part of the Security Operations application suite. Together, these applications connect security to your IT department, increase the speed and efficiency of your response, and provide you with an overview of your security posture.

### Threat Intelligence

The ServiceNow® Threat Intelligence application displays indicators of compromise (IoC) and enables you to enrich security incidents with threat intelligence data.

### Vulnerability Response integrations release notes

Third-party integrations with the ServiceNow® Vulnerability Response application help enrich your vulnerability data. The ServiceNow applications and third-party integrations that are compatible with the Vulnerability Response application were enhanced and updated in the Xanadu release.

**Important:**
Applications that are supported by the Vulnerability Response application are available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## Important information for upgrading Vulnerability Response to Xanadu

- For more information about the released versions of the Vulnerability Response application as well as the third-party and ServiceNow applications that are compatible with the Xanadu release, see the Vulnerability Response Compatibility Matrix and Release Schema Changes [KB0856498] article in the Now Support Knowledge Base.
- For information about the new features of Vulnerability Response, see Vulnerability Response release notes.

## New in the Xanadu release

### Scan vulnerabilities on running hosts

Starting with v3.0.3 of Vulnerability Response Integration with Palo Alto Networks Prisma Cloud Compute, you can scan vulnerabilities on running hosts. The Prisma Host APIs enable retrieval of comprehensive vulnerability information for a specific host and enable assignment and remediation workflows

### Populating the CPE information for a Tenable TPE

The newly added Softwares column in the Third-Party Vulnerability Entries table populates the Common Platform Enumerations (CPEs) information for the Tenable plugins.

© 2026 ServiceNow, Inc. All rights reserved.

### Vulnerability Response release notes

The ServiceNow® Vulnerability Response application brings security and IT together to enable you to remediate your most critical vulnerabilities more quickly and efficiently. Vulnerability Response was enhanced and updated in the Xanadu release.

## Vulnerability Response highlights for the Xanadu release

- Reevaluate the risk score, assignments, remediation target date, exceptions, and remediation task for a set of vulnerable items in the Vulnerability Manager Workspace.
- Reassess the vulnerable item records from the workspace.
- Navigate to the Exposure Assessment page in the Vulnerability Manager Workspace or Vulnerability Assessment Workspace from the All menu with the Vulnerability Response Pro or Enterprise subscription.
- View risk rating-related changes in the Work notes section.
- Access information on how an item's risk score is adjusted according to modifications in the vulnerability calculators.

See Vulnerability Response for more information about Vulnerability Response. See the Vulnerability Response Compatibility Matrix and Release Schema Changes Knowledge Base article for more information about released Security Operations applications and their version compatibility.

**Important:**
Vulnerability Response is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

### Identify Wiz Resource Types for import

Identify the Resource Types (assets) that are reported by Wiz that you want to import with the Wiz Integration Resource Type configuration page in your ServiceNow AI Platform instance.

The Resource Types that you select apply to all the primary Wiz vulnerability and compliance integrations except the Wiz Container Vulnerability Integration. See the Wiz Vulnerability Response Integrations for more information about the vulnerability and compliance integrations.

### Wiz Backfill Integrations

Retrieve and process data stored on the Wiz Missing Assets [sn_vul_wiz_missing_asset] table for assets that were not processed by the primary Host Vulnerability Integration with a specialized Wiz Backfill Integration.

The Host Vulnerability Backfill Integration is activated by default.

**Note:**
The Wiz Asset Integration and the Wiz Container Vulnerability Integration do not have backfill integrations. The Wiz Asset Integration can discover assets and create and update discovered item records on the Discovered item [sn_sec_cmn_src_ci] table. The Wiz Container Vulnerability Integration imports and processes discovered container image records.

### Create solutions from scanners

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Starting with v24.0.6 of Vulnerability Response, solution records can now be configured to be created from scanners such as Tenable, Qualys, and Microsoft Threat and Vulnerability Management (MS TVM). These solutions are set as preferred in the absence of options from software vendors.

### Activate or deactivate CVEs for exposure assessment

Starting with version 4.0.1 of Vulnerability Exposure Assessment, if a Common Vulnerability Entry (CVE) has not been updated or had vulnerable items (VITs) created in the past 30 days, the exposure assessment record for that CVE is automatically marked as inactive. However, you can manually activate or deactivate these records. Additionally, the scheduled job *`Check potential vulnerability`* exposure regularly scans for such CVEs to designate them as inactive. If there is an update, it marks them as active.

### Split detections from Tenable and Microsoft TVM scanners

Starting with v24.0.6 of Vulnerability Response, you can split the detections from Tenable and Microsoft Threat and Vulnerability Management (MS TVM) scanners, enabling the creation of a unique vulnerable item (VIT) for each detected vulnerability instance. This split enables the assignment of VITs to various remediation teams, enhancing the management and tracking of vulnerabilities.

### New Properties module

Starting with v24.0.6 of Vulnerability Response, a new **Properties** module has been added to the navigation menu under the **Administration** section. This module enables direct modification of the values, offering a user-friendly method to manage and update system properties directly from the interface.

### Deletion of classification rules and application on discovered items

Starting with v24.0.6 of Vulnerability Response, if a classification rule is deleted or deactivated, it's no longer applied to the discovered item and the data in the **Classification** and **Classification_type** fields get cleared.

### Exceptions for CI creation

Starting with v24.0.6 of Vulnerability Response, if Identification and Reconciliation engine (IRE) encounters exceptions that prevent the creation of configuration items (CIs), the specifics of these exceptions are recorded in the Additional Information field.

### View configuration item history

Starting with v24.0.6 of Vulnerability Response, you can view the updates to a CI in the Discovered Item table. Information including the previous CI, the updated CI, and the user who made the changes is documented in the Audit History related list.

### Customize the calculation of Age and Age closed values of a vulnerable item

Starting with v24.0.6 of Vulnerability Response, the Age and Age Closed durations of a Vulnerable Item can be configured to be calculated from the date in the Created, Opened, or First Found fields.

### Open the search results in the Vulnerability Manager Workspace or IT Remediation Workspace rather than the Classic UI

Starting with v24.0.6 of Vulnerability Response, automatically open your search results in the Vulnerability Manager Workspace or IT Remediation Workspace rather than the Classic UI, by adjusting the application scope in the unified navigation bar to Vulnerability Manager Workspace or IT Remediation Workspace respectively. These application scopes are available to you based on your assigned role.

### Vulnerability Manager Workspace access to the sn_vul.read_all role

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Starting with v24.0.6 of Vulnerability Response, as a user with the sn_vul.read_all role, you can view the host vulnerable items in the Vulnerability Manager Workspace.

### IT Remediation Workspace access to the sn_vul.read_assigned role

Starting with v24.0.6 of Vulnerability Response, as a user with the sn_vul.read_assigned role, you can view the host vulnerable items assigned to you and your assignment groups in the IT Remediation Workspace and remediate them.

### Navigate to the List page in the Vulnerability Manager Workspace or IT Remediation Workspace by selecting the links from the All menu

Starting with v24.0.6 of Vulnerability Response, when you enable the 'sn_vul_cmn_ws.navigate_to_workspace' system property, selecting predefined filter links in the Vulnerability Response module from the 'All' menu will automatically open these links in the List page in the Vulnerability Manager Workspace or IT Remediation Workspace based on your role.

### Hide the record count on the Host Vulnerable Items list in the Vulnerability Manager Workspace and IT Remediation Workspace

Starting with v24.0.6 of Vulnerability Response, you can hide the record count on the lists in the List page of the Vulnerability Manager Workspace and IT Remediation Workspace by adding the table names to the *glide.ui.list.seismic.omit.count* system property.

### Enable automatic refresh for the Home page dashboard in the Vulnerability Manager Workspace

Starting with v24.0.6 of Vulnerability Response, when creating and editing filters in the Host Vulnerabilities tab on the Home page of the Vulnerability Manager Workspace, you can configure the widgets to refresh automatically. Otherwise, you can manually refresh the widgets by selecting the **Refresh** button on the Host Vulnerabilities tab.

### Re-evaluating remediation properties for all records in the Vulnerability Manager Workspace

Starting with v24.0.6 of Vulnerability Response, you can evaluate the remediation properties for all the Vulnerable Items from the Host Vulnerable Items list by selecting the **All items** option in the **Record selection** field of the Re-evaluate remediation properties modal in the Vulnerability Manager Workspace.

### Reevaluate the remediation properties for vulnerable items in the Vulnerability Manager Workspace

Select the vulnerable items conditionally for reevaluating the following remediation properties in the Vulnerability Manager Workspace:

- Assignments
- Remediation tasks
- Remediation target date
- Exceptions (Vulnerability Response v24.0.6)
- Risk score

### Navigate to the Exposure Assessment page in workspaces from the All menu

With the Vulnerability Response Pro or Enterprise subscription, you're redirected to the Exposure Assessment page in the Vulnerability Manager Workspace or Vulnerability Assessment Workspace based on your role, on selecting the Exposure Assessment link in the All menu.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

### Common Security Advisory Framework (CSAF) scanner mapping is optional

The Scanner mapping field is now optional for the following Common Security Advisory Framework (CSAF) import methods:

- File import
- Advisories
- CSAF URL

### Multiple vendors supported for CSAF through Rolie feed

Import vulnerability solutions from CSAF aggregators or trusted providers via URL import supporting Resource-Oriented Lightweight Information Exchange (ROLIE) feed. These vulnerability solutions are automatically mapped to the correct vendor and vulnerable items (VITs) based on the Common Vulnerabilities and Exposures (CVEs).

### Enhanced processing performance of scheduled job

The *`Rollup vulnerable item values to vulnerability and group`* scheduled job is enhanced to create background jobs with multithreading capabilities. This upgrade involves segmenting the job into several smaller child jobs, which are executed either in parallel or concurrently. This modification enables processing of multiple records simultaneously, thus significantly speeding up the overall task.

### Workflow deprecation and replacement by flow designer

The following workflows have been deprecated and replaced by the flow designer:

- Exception Rule State Approval
- Remediation Task State Approval
- Vulnerability Response - Scan Vulnerability
- Vulnerable Item State Approval
- Vulnerability Response - Scan Vulnerable Item

.

### Risk score updates in the Notes section

Access information on how an item's risk score is adjusted according to modifications in the vulnerability calculators. These details are available in the Notes section and include:

- Calculator group name
- Calculator name
- Field values along with their weightage and impact on the risk score
- Final risk score

### Vulnerability Crisis Management (VCM) is available as a separate subscription in the store

Starting with v1.0.1 of Vulnerability Crisis Management, the application is available as a separate subscription in the store. You can access Vulnerability Crisis Management from the Vulnerability Assessment workspace only if you have fine-grained entitlement or have installed the application from the store. Previously, Vulnerability Crisis Management was included with the Vulnerability Emergency Response plugin.

### Vulnerability Exposure Response is renamed as Vulnerability Exposure Assessment

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Starting with v3.2.2, the Vulnerability Emergency Response plugin has been renamed as Vulnerability Exposure Assessment.

## Changed in this release

### Deprecated the privilege to delete a vulnerable item for the Admin role

As a vulnerability admin [sn_vul.vulnerability_admin], you can't delete a vulnerable item. This privilege is now given to the sn_vul.delete granular role.

### Deprecated the privilege to delete source records for the sn_vul.admin and sn_vul.admin_solutions roles

The privilege to delete the source records has been deprecated for the sn_vul.admin and sn_vul.admin_solutions roles. This privilege is given to the sn_vul_cmn.delete granular role.

## Removed in this release

The **Close** button has been removed for a remediation task in the Classic UI, Vulnerability Manager Workspace, and IT Remediation Workspace.

### ServiceNow AI Platform administration release notes

ServiceNow AI Platform® administration product enhancements and updates in the Xanadu release.

Use ServiceNow AI Platform administration features to address the business needs of your organization. Administration features are active by default on all instances.

### Advanced AI Search Management Tools release notes

The ServiceNow® Advanced AI Search Management Tools application helps AI Search administrators analyze search query traffic trends, review indexed record and configuration settings, and preview search query results. Advanced AI Search Management Tools was enhanced and updated in the Xanadu release.

## Advanced AI Search Management Tools highlights for the Xanadu release

- Analyze search trends from the preceding six months using the AI Search Analytics dashboard's **Date range** interactive filter.
- Understand your mobile search traffic with support for the Mobile Platform search application in the AI Search Analytics dashboard's **Search application** interactive filter.

See Platform Analytics Solution for Advanced AI Search Management Tools for more information.

**Important:**
Advanced AI Search Management Tools is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

### AI Search Analytics dashboard

The **Search application** interactive filter now supports the Mobile Platform search application.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Changed in this release

### AI Search Analytics dashboard

The **Date range** interactive filter now allows you to access data from the last 180 days, rather than the last 90 days.

## Activation information

Install Advanced AI Search Management Tools by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Additional requirements

You must have the User Experience Analytics API application installed from the ServiceNow Store in order to use Advanced AI Search Management Tools.

## Related ServiceNow applications and features

### AI Search

The ServiceNow AI Search application provides a consumer-grade search engine for ServiceNow Service Portal, ServiceNow Now Mobile®, and ServiceNow Virtual Agent. Intelligent query features help you quickly find the answers you need.

#### AI Search release notes

The ServiceNow® AI Search application provides a consumer-grade search experience for ServiceNow AI Platform® users. AI Search was enhanced and updated in the Xanadu release.

## AI Search highlights for the Xanadu release

Xanadu Patch 3:

- Expand search recall by indexing content from knowledge blocks.

Xanadu:

- Surface information across multiple CMDB tables with NLQ Genius Results.
- Increase search precision for Japanese phrases that include nakaguro (中黒, middle dot) characters.
- Scroll through multiple Genius Result answer cards in a carousel to select the most actionable answer for your question.

See AI Search for more information.

## Important information for upgrading AI Search to Xanadu

Xanadu Patch 3:

- After you upgrade to Xanadu Patch 3 from an earlier release, make knowledge block content searchable by reindexing all your indexed sources that include knowledge articles. For details on reindexing, see Perform a full table index or reindex for a single AI Search indexed source or Perform a full table index or reindex for multiple AI Search indexed sources.

Xanadu:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

After you upgrade to Xanadu from an earlier release, perform the following steps to add the Dashboards, data visualizations, and KPIs navigation tabs to global search results in AI Search for Next Experience:

1. Update the AI Search for Next Experience ServiceNow Store application to version 4 or later. For update instructions, see Install an update to a ServiceNow Store application.
2. Commit the update set provided in the AI Search for Next Experience 4.0 PAR tables update sets (KB1644544) article in the Now Support Knowledge Base. To learn more about update sets, see System update sets.

## New in the Xanadu release

### (Xanadu Patch 9) Improve semantic search with third-party embedding models

Use custom and third-party embedding models supported by the AI Search RAG application to generate more accurate and relevant semantic search results.

### (Xanadu Patch 3) Knowledge block content indexing

When you index knowledge articles for search, AI Search now includes content from knowledge blocks to improve search recall.

### NLQ Genius Results support searching for multiple CMDB tables

When your search includes terms that could match multiple CMDB tables, NLQ Genius Result answers display a drop-down list of potential CMDB table matches for each affected term. Use these drop-down lists to select the CMDB tables that you want to surface information for.

### Middle dot support for Japanese

Increase search precision for Japanese phrases that include nakaguro (##, middle dot) characters. When indexing Japanese text or searching in Japanese, AI Search preserves individual terms separated by a nakaguro instead of merging them into a single term.

## UI changes

### Service Portal and Virtual Agent display Genius Result answer cards in a carousel

When a search returns multiple Genius Result answers, Service Portal and Virtual Agent display Genius Result answer cards in a carousel instead of a list. The modified UI lets you scroll through multiple Genius Result answers while keeping your search query's regular results more accessible on the results screen.

## Changed in this release

### Facets display refinement filters in the search user's language

When displaying reference field values as facet refinement filters, AI Search uses field value translations for the search user's language if available. If no translations are available for the user's language, AI Search uses translations for the system language.

### Late binding security implementation preserves correct click rank search signals

When late binding security removes inaccessible results, click rank search signals correctly reflect the final result ordering.

## Deprecations

Starting with the Now Assist in AI Search 8.0 release, the External Content Q&A Genius Results feature is being prepared for future deprecation. It will continue to be supported until it is

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

deprecated. For details, see the Deprecation Process [KB0867184] article in the Now Support Knowledge Base.

## Activation information

AI Search is a ServiceNow AI Platform feature that is active by default.

## Browser requirements

AI Search doesn't support Internet Explorer.

## Localization information

AI Search supports international languages. For details of language support by feature, see Internationalization support for AI Search.

## Related ServiceNow applications and features

### Advanced AI Search Management Tools

The Advanced AI Search Management Tools application adds new functionality to AI Search:

- Administrators can review dashboards with metrics, trends, and reports relating to AI Search usage and configuration.
- Administrators can test searches with the Search Preview UI to understand users' search results.
- Administrators with High Security access can bypass search source and content security filters in the Search Preview UI to see how these filters affect users' search results.

### Now Assist in AI Search

The Now Assist in AI Search application combines the power of search with the Now LLM Service agentic AI model to answer questions in user searches with actionable AI-generated answers from relevant Knowledge articles.

### Knowledge Management

Administrators can activate the ServiceNow® Knowledge Management Advanced plugin to install the FAQ [kb_template_faq] table. AI Search can return records in this table as Q&A Genius Result answers for common user search questions.

### Application Manager release notes

The ServiceNow® Application Manager application provides admins the ability to install, update, and manage licensed applications and plugins for their instance. Application Manager was enhanced and updated in the Xanadu release.

## Application Manager highlights for the Xanadu release

- Use the improved search bar with added recommendations to locate your results.
- The search bar displays a message if your result isn't available in the tab you have selected.

See Application Manager for more information.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## UI changes

### Search results tab recommendations

A message is displayed when using the search bar if your application or plugin doesn't display under the currently selected tab. The message recommends selecting a different tab to locate your search results.

## Activation information

Application Manager is a ServiceNow AI Platform feature that is active by default.

### Clone Admin Console release notes

The ServiceNow® Clone Admin Console application relies on the existing clone engine. It provides a unified admin experience and enhanced visibility for cloning data between instances. Clone Admin Console was enhanced and updated in the Xanadu release.

## Clone Admin Console highlights for the Xanadu release

- Use a new backup when you’re backing up the Clone Admin Console to make the backup go more quickly.
- View the Clone preserver guidance added to the Create a clone form to understand how to use Clone preservers.
- Clone related queries now go through ACLs. Custom clone flows should be tested.

See Clone Admin Console for more information.

**Important:**
Clone Admin Console is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

### Target instance modal

Request a clone to copy the data from a production instance to a non-production instance or to copy the data between non-production instances. You can request a clone without leaving the form by using the **add an instance** option in the **clone request target instance** field.

### Using the same backup from another clone

Use the backup from another clone when you're selecting a backup option for a faster backup process. If the backup no longer exists, it triggers an on-demand backup instead.

### Clone storage

Legacy clones and new clones are stored separately. Clones that you request via the Clone Admin Console are stored on a new table and displayed within the new console.#Legacy clones aren't shown in the Clone Admin Console. Clones that you initiate via the legacy Request Clone page are stored on the legacy Clone History table.

## UI changes

### Creating a new clone preserver

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

On the Create New Clone Data Preserver page, a message now notifies you of the Clone Duration Impact when you are using preservers. The message also instructs you to consider using conditions to preserve only the data that you need.

### Scheduling calendar time slots

On the Clone Request page, available time slots were added to the Scheduling Calendar.

### Clone Duration time

The clone duration timestamps now display properly.

### Date and Timestamps

The date and timestamps for clones are now in the system date and time format.

### Clone completion progress bar

The clone completion progress bar on the clone status page has been updated with accuracy improvements.

### Clone restore progress

The clone restore progress bar on the clone status page has been updated to include granular percentages.

## Related ServiceNow applications and features

### System Clone

Use the ServiceNow® System Clone application to copy everything in a database from one instance to another.

### Core ServiceNow AI Platform release notes

The ServiceNow® Core ServiceNow AI Platform provides features and functionalities to applications and other parts of the ServiceNow AI Platform. The Core ServiceNow AI Platform was enhanced and updated in the Xanadu release.

## Core ServiceNow AI Platform highlights for the Xanadu release

- Use ECMAScript 2021 (ES12) features in any server-side script.
- The TinyMCE upgrade from V4 to V6.8.2 includes enhanced formatting options and editing, as well as extended functions to enable users to format their content to better suit their needs.
- Capture multiple attributes and their values in a single column instead of adding new columns to a table.
- Experience the new Automatic Jobs Scheduling feature with rollback and configuration retrieval abilities for events processing.

See Administer the ServiceNow AI Platform for more information.

**Important:**
Log Export Service is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

### Dynamic schema for storing attributes

Create and store structured groups of attributes and their values in a dynamic attribute store field.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

### Use ECMAScript 2021 (ES12) features in any server-side script

Use the latest JavaScript features supported with ECMAScript 2021 (ES12) mode in individual scripts in applications that use ES5 Standards mode or Compatibility mode. From a script's record, select **Turn on ECMAScript 2021 (ES12) mode**.

### Automated jobs scheduling and manual scaling of jobs

Starting with the Xanadu release, you can opt for automated job scheduling using queue registration. Select a queue in the new event form. As an admin, you can also manually define the number of jobs running at a queue level by scaling it either up or down as required in the Queue Details form.

### Migrate existing sys event applications to Message Processing Framework

Migrate your existing sys event queues to Message Processing Framework. You can also roll back a queue back to its previous configurations.

### Geo point functions

Convert longitude and latitude columns to a geo point field. Convert a geo point field or any valid numeric values or columns into longitude and latitude columns or values.

### System Events and Scheduled Jobs enhancements

Try the new **Active Jobs** tile in the System Events dashboard that states the number of jobs associated for a queue in processing framework. You can also review the details of the completed jobs by using the new **Stuck Jobs** and **Permanent Error Jobs** tiles on the Scheduled Jobs dashboard.

## Changed in this release

### TinyMCE upgrade

The HTML editor field now uses upgraded version of TinyMCE. TinyMCE has been upgraded from v4 to v6.8.2. This upgrade provides enhanced table functions as well as enhanced formatting and editing features like accordion, addition of custom styles through dictionary attributes, enable/disable text menubar, enhanced power paste. These enhancements enable users to format content to better suit their needs. Add the supported plugins to the system property **glide.ui.html.editor.enabled_plugins** and add the supported toolbar options to the system property **glide.ui.html.editor.toolbar** to configure the editor according to your needs. The upgrade includes changes in plugin names, toolbar names and new system properties to support configurations for the new version.

### Business calendar enhancements

Business calendar enhancements include the ability to create business calendar spans and their names (accessible across both global and scoped applications), add a new calendar field called **Calendar type**, and differentiate more easily between similar calendar names.

### Send REST Request - Inbound test step supports mutual authentication

Use mutual authentication with the **Send REST Request - Inbound** test step by selecting an X.509 certificate.

### Apply ACLs to GraphQL API paths

Specify which level of a GraphQL API to apply ACLs to with the **Path ACL Depth** field.

### REST and SOAP API analytics dashboards migrated to Platform Analytics experience

The REST and SOAP API analytics dashboards have been migrated from Core UI to the Platform Analytics experience. Access the dashboards from **All** > **System Web**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

**Services** > **Analytics Usage Overview**. After upgrading, the Core UI dashboards are still available from **All** > **System Web Services**.

**Control access for HTTP headers in CORS requests**

Configure whether to allow credentials in requests with the **Access-Control-Allow-Credentials** field and which HTTP headers to allow in requests with the **Access-Control-Allow-Headers** field.

**Deactivate CORS rules**

Turn a CORS rule [sys_cors_rule] on or off with the **Active** field.

**Rhino update for the JavaScript engine on the platform**

Rhino was updated to improve the performance of the JavaScript engine on the platform.

**Web requests from integration users update the Last login and Last login time fields on user records**

By default, the Last login and Last login time fields in a user record [sys_user] are updated when an integration user sends a web request to an instance. To turn off this functionality, set both the *glide.basicauth.update_last_login_time* and the *glide.oauth.update_last_login_time* system properties to false.

## Deprecations

- The System Performance Dashboard is deprecated as of the Xanadu release. Impact Instance Observer offers a powerful solution for enhancing system performance. Contact your account manager to discover more.
- Starting with the Xanadu release, Application Insights is being prepared for future deprecation. It will be hidden and no longer available in the ServiceNow Store but will continue to be supported. Instead, Impact Instance Observer offers a powerful solution for enhancing system performance. Contact your account manager to discover more. For details, see the Deprecation Process [KB0867184] article in the Now Support Knowledge Base.

## Activation information

ServiceNow AI Platform is a ServiceNow AI Platform feature that is active by default.

## Accessibility information

### TinyMCE Upgrade

Tiny MCE is an open-source rich text editor used in the HTML editor field. The upgrade of TinyMCE from v.4 to v.6.8.2 provides the following accessibility improvements:

- **Keyboard**:
  - The color picker slider is now accessible using both keyboards and screen readers.
  - There is also now a check mark to indicate the color selected by the user.
  - The close dialog buttons in the modal dialogs are now accessible.
  - The keyboard focus indicator is now clearly visible in the font color selection menu items.
- **Screen reader**:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- The selected value of drop-down menus like **Font** and **Font-size** is now announced by the screen reader.

- **Low vision**:
  - The script editor and the HTML editor tool bar is now dark theme compatible.

#### Admin Center and Adoption Blueprints accessibility enhancements

Accessibility issues have been fixed for the following personas as part of Xanadu in Admin Center and Adoption Blueprints:

- persona_low_vision
- persona_no_vision
- persona_color
- persona_auditory
- persona_speech
- persona_cognitive
- persona_physical

### Data Management release notes

The ServiceNow® Data Management capabilities enable you to manage the growth of data in your instance. The Data Management capabilities were enhanced and updated in the Xanadu release.

## Data Management highlights for the Xanadu release

- Define and access all the data management rules for a table from the data management policy page.
- Create multiple archive rules for a table.
- Access and configure the destroy rules for deleting archived records from the data management policy page.
- Delete older records at scale with improved performance using the table cleaner.
- View a summary of storage consumption on your instance.

See Data Management for more information.

## Important information for upgrading Data Management to Xanadu

A data management policy record is automatically created for each table that is configured with an archive rule or a table cleaner rule prior to the upgrade.

## New in the Xanadu release

### Data Management policies

Access a holistic view of the data management rules that you configured for a table.

### Support for multiple archive rules on one table

Create multiple archive rules for a single table using a data management policy.

### Table cleaner performance improvements

Automatically delete older records more efficiently using the table cleaner.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

### Data Management usage dashboard

View a summary of storage consumption on your instance and monitor the top 10 tables consuming the most data on your instance.

## Activation information

Data Management is a ServiceNow AI Platform feature that is active by default.

## Related ServiceNow applications and features

### Table administration

Learn about working with large amounts of data using tables and records on the ServiceNow AI Platform.

### Dynamic Translation release notes

The ServiceNow® Dynamic Translation application enables translation of user-generated text by using the translation service providers configured in Dynamic Translation. Dynamic Translation was enhanced and updated in the Xanadu release.

## Dynamic Translation highlights for the Xanadu release

- Using Exclusion Framework, prevent certain words such as product names from being machine translated.
- The IBM Watson Translator Service Spoke has been withdrawn and is no longer available.
- The Microsoft Azure Translator service increased the maximum length of a translation request from 10,000 characters to 50,000 characters.

See Dynamic Translation for more information.

**Important:**

IBM has announced deprecation of the IBM Watson Translator service. With the Xanadu release, this integration is no longer available in the ServiceNow® Store.

## New in the Xanadu release

### Exclusion Framework in Dynamic Translation

Exclusion Framework enables you to prevent machine translation of certain words and terms. You can specify words, such as official product names, that you want to shield from the translation process. You can also input regex to prevent translation of patterns such as sys ids.

### The flows used by default Translator Configurations are upgraded to v4

With the Xanadu Patch 3 release, the flows used by default translator configurations are automatically upgraded to v4. If you want to use v4 flows and APIs with customized translator configurations, you must migrate them manually. The previous v3 is still supported.

## Changed in this release

### Character maximum has increased for MS translation requests

For users of the Microsoft Azure Translator service: the maximum character limit for a translation request has increased to 50,000. The maximum character limit for a detection request remains 50,000.

## Deprecations

With the Xanadu release, the IBM Watson Translator Service integration is no longer available in the ServiceNow® Store. For more information, see https://cloud.ibm.com/docs/language-translator?topic=language-translator-release-notes.

## Activation information

Dynamic Translation is a ServiceNow AI Platform feature that is available with activation of the Dynamic Translation plugin (com.glide.dynamic_translation). For details, see Activate Dynamic Translation.

## Related ServiceNow applications and features

### Localization Framework

The Localization Framework application standardizes and enhances the translation process of artifacts across the platform through configurable workflows.

### Integration Hub

Localization Framework uses ServiceNow® Integration Hub spokes to connect to translation service providers.

### External Content Connectors release notes

The ServiceNow® External Content Connectors application enables AI Search applications to search content and metadata from supported external source systems, such as Atlassian Confluence Cloud and Microsoft SharePoint Online. External Content Connectors was enhanced and updated in the Xanadu release.

## External Content Connectors highlights for the Xanadu release

- Expand your search by indexing searchable content and user permissions from your Atlassian Jira Cloud, Google Drive, Microsoft Teams, and Slack source systems.
- Make web content locally searchable by indexing pages from predefined public web sites or from the ServiceNow product documentation site.
- Know when your external content connectors are approaching their crawl limits with new warning messages.
- Expand the range of information available to Virtual Agent users by adding external content search results to Now Assist in Virtual Agent conversations.
- Improve recall for external content searches with support for semantic vector indexing of crawled content.

See External Content Connectors for more information.

**Important:**
External Content Connectors is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## Important information for upgrading External Content Connectors to Xanadu

Beginning with version 2 of the External Content Connectors application, external content connectors implement semantic vector indexing for crawled items. When you upgrade to a version that supports semantic vector indexing, your existing connectors will reindex all previously retrieved items the next time they're visited by a crawl, even if those items' content is

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

unchanged. To force semantic vector indexing of your external content items as soon as possible after upgrading, cancel any running crawls, then restart the canceled crawls manually.

## New in the Xanadu release

### Xanadu Patch 9

**Atlassian Jira Cloud external content connector**

Retrieve searchable content and user permissions from projects in your Atlassian Jira Cloud source system.

**Google Drive external content connector**

Retrieve searchable content and user permissions from shared drives in your Google Drive source system.

**Microsoft Teams external content connector**

Retrieve searchable content and user permissions from teams in your Microsoft Teams source system.

**Predefined web sources external content connector**

Retrieve searchable content from pages and subdomains in predefined public web sites.

**ServiceNow product documentation external content connectors**

Retrieve searchable content from the ServiceNow product documentation site.

**Slack external content connector**

Retrieve searchable content and user permissions from public channels in your Slack source system.

**Warning messages for indexed document counts**

When an external content connector's indexed document count exceeds 800,000, a warning message appears in the connector's UI to indicate that it's approaching the indexing limit of 1,000,000 documents.

**Add external content search results to Now Assist in Virtual Agent conversations**

Expand the range of information available to Virtual Agent users by adding external content search results to Now Assist in Virtual Agent conversations.

### Xanadu Patch 7

**Semantic vector indexing for crawled content**

Improve recall for external content searches with support for semantic vector indexing of crawled content. Semantic vector indexing is supported for all external content connectors.

## UI changes

**New UI for creating external content connectors**

On the External Content Admin Home page, you now select **New** instead of **Create** to create a new connector. Next, you select the appropriates source system type on the Choose source page. Finally, you fill in required values on the Connector details page.

## Activation information

Install External Content Connectors by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting

© 2026 ServiceNow, Inc. All rights reserved.

requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Related ServiceNow applications and features

### AI Search

Configure search applications to display results indexed by your external content connectors.

### Localization Framework release notes

The ServiceNow® Localization Framework application enables you to translate artifacts across the platform through configurable workflows. Localization Framework was enhanced and updated in the Xanadu release.

## Localization Framework highlights for the Xanadu release

The Localization Insights dashboard is available in the Next Experience UI.

See Localization Framework for more information.

## UI changes

### Localization Insights dashboard

The Localization Insights dashboard is available in the Next Experience UI. For more information see Localization Insights dashboard.

## Activation information

Localization Framework is a ServiceNow AI Platform feature that is available with activation of the Localization Framework installer (com.glide.localization_framework.installer). For details, see Activate Localization Framework.

## Related ServiceNow applications and features

### Dynamic Translation

Enable live translation of user-generated text across the instance to increase productivity and cross-language support for agents.

### Notifications release notes

The ServiceNow® Notifications application enables you to create, manage, and send custom notifications in workflows for important events, actions, and alerts. Notifications was enhanced and updated in the Xanadu release.

## Notifications highlights for the Xanadu release

- Redact sensitive data from customer-initiated inbound emails.
- Support for international characters in the email addresses.
- Filter by category in system notifications and search for custom notifications.
- Optimize SMTP sender job to enhance outbound email delivery.
- Modify email retry logic for a better delivery experience according to RFC 5321.

See Notifications for more information.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## New in the Xanadu release

### Sensitive data redaction

Redact sensitive data for inbound emails.

### International characters support

Support added for International characters in the email addresses.

## UI changes

### Search button

A search button has been added for custom notifications within the notification preferences.

### Category filter

A category filter for system notifications has been added to the notification preferences.

### Inbound actions

An additional check box has been added to enable redaction of sensitive data.

## Changed in this release

### New search and category filter in notification preferences

Notification preferences now include the ability to search within custom notifications and filter by category in system notifications.

### Email unsubscribe

Unsubscribe from emails using the unsubscribe capability in the email header.

### Language preferences

Honor sys_user language preferences set by users for email translations.

## Activation information

Notifications is a ServiceNow AI Platform feature that is active by default.

## Accessibility information

Screen reader support has been extended to the aria labels in the notification preferences and the advanced preferences. The support provides an explanation for button actions, such as the toggle button.

### Subscription Management release notes

The ServiceNow® Subscription Management application enables you to manage your subscriptions proactively and monitor subscription usage on your instances. Subscription Management was enhanced and updated in the Xanadu release.

## Subscription Management highlights for the Xanadu release

- Gain visibility and control of your product subscriptions.
- Maximize subscription usage and make informed decisions about future purchases by monitoring your subscriptions.
- Avoid unexpected costs by tracking subscription usage and allocations over time.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

See Subscription Management for more information.

**Important:**
Subscription Management is available in the ServiceNow Store.

## Important information for upgrading Subscription Management to Xanadu

Subscription Management version 3.2 is active by default on all instances of the Xanadu release. Update to Subscription Management version 4.0 or later to use the latest features. For more information about updating Subscription Management, see Update an application or plugin.

## New in the Xanadu release

### Monitor Now Assist usage

View an account-level summary of your Now Assist entitlements and track Now Assist usage across all your instances.

### Monitor Now Assist creators

View an account-level summary of your Creator Plus entitlements and track allocations across all your instances.

### Monitor cloud capacity

Monitor cloud capacity and track storage capacity across all the instances associated with your account.

### Subscription allocation counts according to active users

View the total number of active users in a product subscription. Only active users count toward the subscription allocation totals that appear throughout Subscription Management.

### Allocate subscriptions to all recommended groups

Select all recommended groups when allocating subscriptions.

### Recommended subscription reasoning

Determine why a subscription is recommended by Subscription Management when mapping custom tables or custom applications.

## Changed in this release

### Allocation charts reflect only active users

The Allocation summary and Allocation history charts on the subscription details page reflect only subscriptions allocated to active users for each month following the upgrade.

## Removed in this release

- The Custom tables chart has been removed from the subscription details page.

## Activation information

Subscription Management is a ServiceNow AI Platform feature that is active by default. Updates for Subscription Management are available through the *https://store.servicenow.com/sn_appstore_store.do#!/store/home*. For cumulative release notes information for applications available on the ServiceNow AI Platform, see ServiceNow Store release notes.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

### Upgrade Center release notes

The ServiceNow® Upgrade Center application helps you plan and manage your upgrades. Upgrade Center was enhanced and updated in the Xanadu release.

## Upgrade Center highlights for the Xanadu release

- Explore the different release versions available to you in the Upgrade Preview module.
- Gain insights about the upgrade experience without actually upgrading your instance.
- Monitor the status of any ongoing upgrade and view the summary of your latest upgrade in the Upgrade Monitor module.
- View all your past upgrades in the Upgrade History module.
- Accelerate your upgrades using the Upgrade Plan feature.

See Upgrade Center for more information.

## New in the Xanadu release

### UI messages to manage upgrade risk

New UI messages were added to manage metadata records based on the severity of the files.

### Default skipped rules

Reduce upgrade processing time with the new default skipped rules to auto-retain high-friction causing configuration metadata types.

## Activation information

Upgrade Center is a ServiceNow AI Platform feature that is active by default.

### ServiceNow AI Platform capabilities release notes

ServiceNow AI Platform® capabilities were enhancements and updates in the Xanadu release.

Expand the services your system of action delivers with ServiceNow AI Platform capabilities. Activate and configure these optional features to create custom business logic, manage and secure data, and build alternate user interfaces.

### Advanced Work Assignment release notes

The ServiceNow® Advanced Work Assignment (AWA) application automatically assigns work items to your agents based on their availability, capacity, and optionally, the skills. Advanced Work Assignment was enhanced and updated in the Xanadu release.

## Advanced Work Assignment highlights for the Xanadu release

- Enable Advanced Work Assignment integration with third-party providers with the External Routing feature.
- Migrate the Advanced Work Assignment dashboards to Next Experience.
- Defined the External Routing Test Tools plugin (com.glide.awa.external.test_tools) with a simple external routing ATF-based test implementation.

See Advanced Work Assignment for more information.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## New in the Xanadu release

### External routing overview

Use the updated Admin UI to enable the integration of Advanced Work Assignment with third-party contact-center-as-a-service (CCaaS) providers with the External Routing functionality.

### Migrating Advanced Work Assignment Dashboards

Migrate the AWA dashboards - Interactions, Messaging, Task, and Operations dashboards - to Next Experience.

### Define external routing test implementation

Defined the External Routing Test Tools plugin (com.glide.awa.external.test_tools) with a simplified external-routing-provider ATF-based sample implementation to receive and process REST calls about external events.

Align the payloads generated by the demo data for the sample implementation to process and use the ATF-based tool to verify any modified components.

## UI changes

### Enable external routing for queues

The external Boolean UI visibility is available in the Advanced Work Assignment - External Routing Support plugin (com.glide.awa.external), so that users who have the external queue configured pre- Xanadu can view the field post upgrade to Xanadu.

## Activation information

Advanced Work Assignment is a ServiceNow AI Platform feature that is available with activation of the Glide Advanced Work Assignment plugin (com.glide.awa). For details, see Activate Advanced Work Assignment.

To use the External routing functionality on your instance, you must activate the External Routing Support plugin (com.glide.awa-external).

## Browser requirements

Advanced Work Assignment doesn't support mobile devices, Internet Explorer, or Microsoft Edge. Instead, use Microsoft Edge -Chromium or one of the other supported browsers that are listed in Browser support.

## Related ServiceNow applications and features

### Now Assist

ServiceNow® Now Assist uses generative AI that is designed to enhance user productivity and efficiency through conversation and proactive experiences.

### Workspace

The ServiceNow® Workspace application provides agents, case managers, help desk professionals, and managers with tools to help answer customer questions and to resolve customer problems.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

### Assessments and Surveys release notes

The ServiceNow® Assessments and Surveys application enables you to create, send, and collect responses for surveys. Assessments and Surveys was enhanced and updated in the Xanadu release

## Assessments and Surveys highlights for the Xanadu release

- View the user responses only for active questions.

See Exploring Assessments and Surveys for more information.

## Important information for upgrading Assessments and Surveys to Xanadu

Update the Automated Test Framework (ATF) tests, if you're upgrading to Xanadu from any version prior to Utah. In the Utah release, all the buttons on the assessments or surveys cards have been removed. To run ATF tests successfully, the Click the Take Survey button step must be replaced with the Click the Survey card step for all tests that have this step.

## New in the Xanadu release

### Improved Survey Response Behavior

To ensure consistency between the platform and portal, user responses to inactive survey questions are no longer viewable. Previously:

- On the platform, while taking the survey/assessment, both active and inactive questions were visible.
- On the portal, only active questions were visible.

This update aligns platform and portal behavior. Only responses to active survey questions are accessible through the View User Response button on the assessment instance form, even if the user had answered them while the question was active. However, the responses will still be retained in the respective tables (the response data will not be deleted from the instance). On the response form, only active questions will be displayed

### Quick start tests for Assessments and Surveys

After upgrades and deployments of new applications or integrations, run quick start tests to verify that Assessments and Surveys works as expected. If you customized Assessments and Surveys, copy the quick start tests and configure them for your customizations.

For more information, see Quick start tests for Assessments and Surveys.

## Activation information

Assessments and Surveys is a ServiceNow AI Platform feature that is active by default.

## Related ServiceNow applications and features

### Employee Center

After an assessment is assigned to users, the assigned assessment appears on the ServiceNow® Employee Center, where users can take the assessment.

### Now Mobile app

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Use the ServiceNow® Now Mobile app to take an assessment that is assigned to you.

### Configuration Management Database (CMDB) release notes

The ServiceNow® CMDB application stores data about the infrastructure of your organization. CMDB was enhanced and updated in the Xanadu release.

## CMDB highlights for the Xanadu release

- Access changes to the CMDB Editor and CMDB Admin user roles:
  - Starting with Xanadu Patch 9, the sn_cmdb_editor and sn_cmdb_admin user roles no longer have create, update, or delete access to records in the Configuration Item [cmdb_ci] class.
  - Starting with Xanadu Patch 10, you can configure the sn_cmdb_admin and the sn_cmdb_editor user roles with the necessary permissions to perform some CMDB Workspace tasks by manually running a scheduled job.
- Configuring and using CMDB Health has been streamlined by useful analytic data having been simplified and some concepts such as overall health scores having been removed.
- New filtering options for the Coverage charts on the CMDB 360 dashboard help you better manage the performance associated with calculating those charts, while limiting analysis to only those classes that you're interested in.
- Limit the performance impact of CSDM and the CMDB Data Foundations Dashboards by configuring performance settings for some metrics to limit their performance impact, such as triggering the system to automatically deactivate metrics such as *`CIs Processed via IRE`* and *`Business Application with Application Service Relationship`*.
- The CMDB Health Dashboard is now implemented with the Next Experience user interface in the CMDB Workspace.
- The ServiceNow® Now Assist for CMDB application brings generative AI to CMDB. Now Assist for CMDB is a new application in the Xanadu release. The ServiceNow® Now Assist for Service Graph Connectors (SGC) application brings in generative AI capabilities to resolve issues within Service Graph Connector. Now Assist for SGC is a new application in the Xanadu release..

See Configuration Management for more information.

## Important information for upgrading CMDB to Xanadu

- Before the upgrade to Xanadu, the 'Updated CIs' and 'Updated application services' trend lines in the Recent CI activity and Recent application services activities tiles on the Management view in CMDB Workspace, might not have accurately reflected on changes in your system. After upgrading to Xanadu and to versions 5.5, 6.2, or 7.2 of CMDB Workspace, those trend lines will reflect on the more accurate detection of updated CIs and updated application services.
- CMDB Health:

  If either the *`CMDB Health Dashboard - Relationship Compliance Processor`* or *`CMDB Health Dashboard - Relationship Score Calculation`* dashboard job is active, that job is deactivated during the upgrade to Xanadu. After the upgrade is complete, you can reactivate those jobs to resume health reports for CI relationships. The active state of all other CMDB Health dashboard jobs is retained.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Any failure threshold for a KPI or metric that is greater than 100,000, is set to 100,000 during upgrade. This upper limit is enforced to avoid excessive processing when a large number of CIs are failing the specified metric tests.

- Bookmarks for the CI dashboard no longer work after an upgrade to Xanadu. A `Page not found` error message appears. To see CMDB Health reports for a CI, open the CI form in CMDB Workspace.
- The legacy Application Service Dashboard on Core UI isn't supported in the Xanadu release. After upgrading, you can still access that legacy dashboard by using a previously created bookmark. You can also instead access the Application Services dashboard in CMDB Workspace from the Application services tile in the Insights view in CMDB Workspace.
- The CMDB Integrations Dashboard on Core UI isn't supported in the Xanadu release. After upgrading, you can still access that legacy dashboard by using a previously-created bookmark.
- All records that exist in the CMDB Health Result [cmdb_health_result] table before an update to Xanadu Patch 5, are deleted during the upgrade.

To access a legacy dashboard on an upgraded instance, navigate to **All** > **Self-Service** > **Dashboards** and then search for the dashboard.

## New in the Xanadu release

### CMDB Workspace v7.6 :

- Access a centralized location with a comprehensive view of CI details by using the new CI form in CMDB Workspace. The form shows the attributes (key attributes are highlighted on a Summary page), tags, resources, activities, relationships, related services, health state, performance indicators, and CMDB 360 data that is associated with the CI. While viewing, you can also modify many of those CI details. For information about all the details on a CI form, see Manage CI details in CI Form .
- Access the Data Certification dashboard in CMDB Workspace. The Data Certification dashboard provides the insights about the data certification activities and progress, policies and tasks, reports about certification instances, charts that show the aging certification tasks, and group and individual workloads. For more information, see Data Certification Dashboard .
- Create or manage a shared preset . Save Unified Map filter settings as shared presets that any user on the team can access. This task requires the sn_cmdb_admin, sm_admin, or admin role.
- Access Unified Map from the main navigation panel . Access Unified Map from the main navigation panel by navigating to **All** > **CMDB Workspace** > **Unified Map**.
- Archival and destroy processes of certification policy related records, are now separated from those processes for records of all other policy types. This separation facilitates the extension of the retention period of certification policy records, as follows:

  - The table cleanup rule for table CMDB Data Management Policy Executions [cmdb_data_management_policy_execution], which is stored in the Auto Flushes [sys_auto_flush] table, now excludes certification policy execution records from recurring cleanups.

    Retaining certification policy execution records instead of deleting them after 7 days is useful in situations where those records are needed for audits and are

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

also useful for the Data Certification Dashboard, which is populated by these records.

- The Archive CMDB Data Management Tasks archive rule, that applied to all CMDB Data Manager policy execution records, now excludes certification policy records. At each archive run, this archive rule is configured to also automatically archive its related records in table CMDB Data Management Certification Task To Document [sn_cmdb_ws_dm_certification_task_to_document] (Archive Related Records).
- The archive rule, Archive Certification Instances, is added to specifically archive certification policy execution records from the CMDB Data Management Policy Execution [cmdb_data_management_policy_execution] table. This new archive rule is configured to archive certification policy execution records 2 years after creation, and to destroy those records 7 years after they are archived.
- The archive rule, Archive Certification tasks, is added to specifically archive certification task records from the CMDB Data Management Task [cmdb_data_management_task table].
- The archival of related records in table CMDB Data Management Certification Task To Document [sn_cmdb_ws_dm_certification_task_to_document] is now moved as an Archive Related Records entry from the Archive CMDB Data Management Tasks archive rule to the new Archive Certification tasks archive rule.

### CMDB Health Dashboard

The CMDB Health Dashboard is now built using UI Builder components and is fully integrated into the CMDB Workspace. When you select either of its views, it opens in CMDB Workspace. The CMDB Health Dashboard has a modernized look and feel of the Next Experience user interface

CI health is now reported on CI forms within the CI Health tile in CMDB Workspace.

### CSDM and the CMDB Data Foundations Dashboards

Starting with version 4.0, the CSDM and the CMDB Data Foundations Dashboards store app is built using UI Builder components. You can also now access the CSDM Data Foundations Dashboard from Management tools in the Management view in CMDB Workspace.

### CMDB Integrations Dashboard in the Next Experience user interface

The CMDB Integrations Dashboard has a modernized look and feel with the Next Experience user interface. Starting with Xanadu release, the CMDB Integrations Dashboard is automatically migrated to the Next Experience user interface. For more information on the Next Experience user interface, see Next Experience UI.

The ServiceNow® Now Assist for CMDB application brings generative AI to CMDB. The Now Assist for CMDB application provides the following skills:

- CI summarization: Shows CI details such as discovery and class, and tallies of records that are related to the CI such as incidents, alerts, and security vulnerabilities, directly on CI forms.
- Manage duplicate CIs: Guides you step-by-step through the process of reviewing de-duplication tasks, and then creating and running de-duplication templates to remediate tasks that you choose. As you respond to choices presented by the manage duplicate CIs skill, you receive clear guidance for what should be your next step in the remediation process. This skill also provides root cause analysis to help you prevent future generation of duplicate CIs.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The ServiceNow® Now Assist for Service Graph Connectors (SGC) application brings in generative AI capabilities to resolve issues within Service Graph Connectors. The Now Assist for SGC application provides the Service Graph Connector diagnosis skill. This skill enables you to troubleshoot issues in a failed import set associated with a Service Graph Connector.

### Quick start tests for CMDB

After upgrades and deployments of new applications or integrations, run quick start tests to verify that CMDB works as expected. If you customized CMDB, copy the quick start tests and configure them for your customizations.

## UI changes

### Relationship Health Dashboard

The Relationship Health tab is no longer available on the CMDB Health Dashboard. Instead, you must access the Relationship Health Dashboard from the CMDB Workspace Home page by selecting the **Relationship Health Dashboard** link in the Quick links section.

Aggregated relationship metrics appear as pie charts on the dashboard.

### Setting up and configuring CMDB Health

The **CMDB Health settings** button on the CMDB Health Dashboard replaces the CMDB Health Dashboard jobs tab for configuring CMDB Health-related system properties, scheduled jobs, and KPIs and metrics.

### CI health reporting

- The CI Health tile on CI forms has been expanded to include widgets with health scores of KPIs and metrics, as calculated by CMDB Health for the CI.
- The CI dashboard has been removed and the **Open in CMDB Workspace** button on CI forms replaces the **Dashboard** button to access CI health reporting in CMDB Workspace. This new button is available only to users with the sn_cmdb_user role.

## Changed in this release

### Access changes for the sn_cmdb_editor and sn_cmdb_admin user roles

- Starting with Xanadu Patch 9 (zbooted or upgraded), access has been reduced for the sn_cmdb_editor (CMDB Editor) and the sn_cmdb_admin (CMDB Admin) user roles which are used in CMDB Workspace. The sn_cmdb_editor and sn_cmdb_admin user roles no longer have create, update, or delete access to records in the Configuration Item [cmdb_ci] class.

- Starting with Xanadu Patch 10 (zbooted or upgraded), you must manually run the scheduled job '*Remove CMDB Roles from ITIL roles and Add CUD access to sn_cmdb_admin/sn_cmdb_editor roles* to configure the sn_cmdb_admin and the sn_cmdb_editor user roles with the permissions that are necessary for performing some CMDB Workspace tasks.

  This scheduled job modifies user roles as follows:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Updates the itil user role to no longer contain the sn_cmdb_editor user role, and updates the itil_admin user role to no longer contain the sn_cmdb_admin user role.
- If those permissions don't exist, updates the sn_cmdb_admin and the sn_cmdb_editor user roles with create, update, and delete access to the Configuration Item [cmdb_ci] class. For more information about the 'Remove CMDB Roles from ITIL roles and Add CUD access to sn_cmdb_admin/ sn_cmdb_editor roles' scheduled job, see Remove sn_cmdb_admin from itil_admin and sn_cmdb_editor from itil, and then add create/update/delete access to cmdb_ci table for sn_cmdb_admin / sn_cmdb_editor [KB2290506].

### CMDB Health

- Configuring and using CMDB Health is simplified by the removal of some concepts such as overall health scores.
- Sections on the CMDB Health Dashboard reporting on compliant CIs are clearly separated from report sections for non-compliant CIs that require your attention.
- Failure thresholds for KPIs and metrics enforce an upper limit of 100,000 to avoid excessive processing when a large number of CIs fail the specified metric tests.
- The CMDB Health Dashboard still shows non-compliance data that was gathered even if the process is stopped due to excessive failures so you can fix the specific failures already detected.
- CI health reporting is integrated into CI forms in CMDB Workspace.

### CMDB Workspace store app

- CMDB 360:
  - Manage performance by filtering the data included in Coverage charts in the CMDB 360 dashboard in CMDB Workspace by principal class setting or by whether tables are within the CMDB hierarchy.
  - Manage the scope of data processed by CMDB 360 by setting a maximum threshold for the number of multisource records per class and tracking those classes that exceed that threshold in a table so that those classes are excluded from future CMDB 360 calculations. You can override this exclusion to include selected classes even if they exceed the threshold.
- Data Certification

  When reviewing Data Certification tasks in CMDB Workspace, use a single click to select all the records associated with a task, to certify or fail the certification in bulk.

- CI timeline in CMDB Workspace

  When a CI timeline on the CI details pane in CMDB Workspace fails to load, the error message that appears now includes a link that you can select to go to the CI timeline in the base system.

### CSDM and the CMDB Data Foundations Dashboards

- Limit the performance impact of some of the CMDB and CSDM metrics such as the *`CIs Processed via IRE`* and *`Business Application with Application Service Relationship`* by adjusting the settings for triggering the system to automatically deactivate those metrics.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Identify current and non-current metric data by viewing the *Updated* column in the list views of CMDB.
- Access the CSDM Data Foundations dashboard from the Management view in CMDB Workspace.

### Select a parent class in an IRE identification rule

Avoid the unnecessary creation of a duplicate CI by setting the **Search On Table** field in an identification rule to one of the parent classes of the current class. When Identification and Reconciliation (IRE) identifies a CI in a parent class that matches a CI in the payload, IRE updates that CI with the details from the payload without creating a duplicate CI.

### Improved migration and ongoing sync of CSDM life-cycle data

The one-time operation aligns CSDM life-cycle values in asset and CI tables. After the initial alignment, business rules can run on regular schedules to ensure that life-cycle values for the asset, CI, and IBI tables remain aligned. Using standard life-cycle values significantly improves data accuracy to help optimize value for many ServiceNow AI Platform applications.

### Application Services dashboard

Internal queries on the Application Services dashboard that filters for application services now checks not only for all the records in the Application Service [cmdb_ci_service_auto] class, but for those records in which the value of *Service classification* is **Application Service**.

## Removed in this release

- CMDB Health:
  - The CMDB Health Dashboard on Core UI isn't included in new Xanadu instances. On upgraded instances, this dashboard is available but no longer supported.
  - The CI dashboard isn't included in new Xanadu instances. On upgraded instances, this dashboard is available but no longer supported.
  - The following widgets have been removed from the CI Health tile in the CMDB Workspace: Incomplete Attributes vs Total Attributes, Non-compliant relationships vs Total Relationships, and Stale relationships vs Total Relationships widgets.
  - The concept of the overall health score has been removed and no longer appears in any of the CMDB Health dashboards or views.
  - The concept of weighted averages and scorecards thresholds, which specify the ranges of health states, has been removed.
  - The bar charts for metrics in the main CMDB Health Dashboard have been removed, as well as the tiles for top 10 incident, alert, and change generators.
  - The *CMDB Health Dashboard - Top Task Generating CIs Calculation* scheduled job has been removed.
- CSDM and the CMDB Data Foundations Dashboards:
  - When drilling down into the CIs Not Processed Via IRE in the Data Management Practices metric group, the **Show Records** button isn't supported.
  - When drilling down into the Orphan CIs metric, only a list view of orphan CIs appears without any Performance Analytics details.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Deprecations

- Starting with the Xanadu release, the Data Certification plugin (com.snc.certification_v2) is being prepared for future deprecation. It will be hidden and no longer activated on new instances but will continue to be supported. The CMDB Workspace store app provides the latest experience for this functionality. For details, see the Deprecation Process [KB0867184] article in the Now Support knowledge base.
- ServiceNow hosted Service Graph Connector for ExtraHop is now deprecated and no longer supported or available for new activation. Service Graph Connector for ExtraHop provides the latest experience for this functionality. For details, see the Deprecation Process [KB0867184] article in the Now Support Knowledge Base.

## Activation information

CMDB is a ServiceNow AI Platform feature that is active by default.

## Related ServiceNow applications and features

### Common Service Data Model (CSDM)

Common Service Data Model (CSDM) provides prescriptive guidelines for service modeling within CMDB and is the standard for all ServiceNow products that use the CMDB. CSDM provides a framework for mapping data from your IT services and other products to the CMDB. Following the CSDM framework helps ensure that the required data for your ServiceNow application maps correctly to the appropriate CMDB tables.

### Service Graph Connectors

Use predefined ServiceNow® Service Graph connectors to import data from third-party applications, such as Microsoft SCCM, into your CMDB. In addition, you can use the IntegrationHub ETL store app to create and manage custom ETL transform maps so that you can integrate third-party data into the CMDB without compromising its integrity.

### CMDB Workspace

Use the CMDB Workspace store app to search, explore, and gain insights into the CMDB. The CMDB Workspace is a store app that provides a central place for working with the CMDB. In the CMDB Workspace, you can examine health and recent activity related to CMDB, and access various CMDB dashboards and tools to support tasks in your organization.

### Document Services release notes

The ServiceNow® Document Services application provides a broad range of services related to document management, such as creating, maintaining, and converting documents, as well as integrating with third parties like Microsoft SharePoint. Document Services was enhanced and updated in the Xanadu release.

## Document Services highlights for the Xanadu release

- Extend collaboration and improve user experience with the integration of Document Management with external cloud providers, such as Microsoft OneDrive, Google Drive, and Microsoft SharePoint.
- Increase collaboration with management of Google Docs files on Google Drive.
- Control sensitive information with data redaction within a document.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

See Document Services for more information.

**Important:**
Multi Provider Document Services Framework is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

### Document Management integration with external content provider

Collaborate on documents in Microsoft OneDrive, Microsoft SharePoint, or Google Drive.

### Redaction of sensitive data

Redact sensitive information within a document for configurable workspaces.

## Changed in this release

### Google Docs files on Google Drive

Manage Google Docs files on Google Drive using Multi Provider Document Services Framework.

### Document viewer support for hyperlinks, attachments, and digital signature

Document Viewer now supports using hyperlinks, downloading of PDF attachments, and viewing of digital signatures.

### Accessibility feature for DOCX to PDF conversion

Accessibility support added for DOCX to PDF conversion. PDF accessibility tags are now available to help non-sighted users who rely on screen readers to navigate, understand, and interact with converted PDF documents.

## Activation information

Document Services is a ServiceNow AI Platform feature that is active by default.

Document Management is available with activation of the Document Management plugin (com.snc.platform_document_management). For details, see Activate Document Management.

Multi Provider Document Services Framework Install Multi Provider Document Services Framework by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Accessibility information

Accessibility support has been added for document conversion from DOCX to PDF. PDF accessibility tags are now available to help users who rely on screen readers to navigate, understand, and interact with converted PDF documents.

### Hermes Messaging Service release notes

The ServiceNow® Hermes Messaging Service application enables you to integrate your Apache Kafka environment with your ServiceNow® instance. Hermes Messaging Service was enhanced and updated in the Xanadu release.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Hermes Messaging Service highlights for the Xanadu release

- Publish events from your ServiceNow instance to your Apache Kafka environment and consume high volumes of Apache Kafka events from your external systems with low latency.
- Effectively process spikes and bursts in message volume from external systems to minimize performance impacts on your instance.
- Manage the health and performance of message delivery using Hermes diagnostic tools.

See Hermes Messaging Service for more information.

## New in the Xanadu release

### Monitor Hermes data usage

Monitor data usage by application and track data usage by topic using the Hermes Usage Dashboard.

## Changed in this release

### Monitor topics in multiple cluster sets

View messages from multiple cluster sets by selecting a service group in the Hermes Topic Inspector module.

### Test connectivity to multiple cluster sets

Verify that your instance can send messages to and receive messages from multiple cluster sets by selecting a service group in the Hermes Diagnostics module.

## Activation information

Hermes Messaging Service is a ServiceNow AI Platform feature that is available with activation of the ServiceNow Stream Connect Installer (com.glide.hub.stream_connect.installer) plugin or installation of the Log Export Service application. For details, see Hermes Messaging Service activation.

## Related ServiceNow applications and features

### Using Stream Connect for Apache Kafka

Produce Apache Kafka messages from your ServiceNow instance using Workflow Studio, and then consume the messages in an external application. You can also produce Apache Kafka messages from an external application and then consume the messages in your ServiceNow instance using a variety of consumers with Stream Connect.

### Log Export Service (LES)

Export log data securely to your external data lake for reporting, auditing, or regulatory purposes using Hermes Messaging Service with Log Export Service.

### Instance Data Replication

Improve the performance and processing efficiency of Instance Data Replication by upgrading the replication sets that you created prior to the Washington DC release to use Hermes Messaging Service.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

### Knowledge Management release notes

The ServiceNow® Knowledge Management application enables you to share knowledge articles that provide users with information for self-help, troubleshooting, and task resolution. Knowledge Management was enhanced and updated in the Xanadu release.

## Knowledge Management highlights for the Xanadu release

- Improve article formatting thanks to the knowledge article editor using the upgraded version of TinyMCE, which provides multiple enhancements such as Power Paste, Anchor, and Insert Accordion.
- Enhance the creation and management of knowledge base through features in the Knowledge Management advanced plugin such as article versioning, article subscriptions, article templates, and an article quality index.
- Get optimized, personalized, and relevant search results by using AI Search for Knowledge Base articles on the Knowledge Management Service Portal homepage.
- Address concerns from related cases in a single article by using Now Assist in Knowledge Management to generate a knowledge base article from a selection of similar cases.
- Select content in a knowledge article and shorten or elaborate it using the generative AI capabilities of Now Assist.

See Knowledge Management for more information.

## New in the Xanadu release

### New report on Knowledge Management dashboard

Make timely decisions on articles expiring in the next 90 days through a report on the Knowledge Management dashboard and determine whether to retire or republish them.

### Now Assist in Knowledge article generation from multiple cases

Quickly draft knowledge articles from your workspace or classic environment based on similar cases with  Now Assist. Knowledge articles can be generated by selecting a list of similar cases or case numbers or even by searching keywords specific to a case.

### Generate a Knowledge article using multi-language support

Generate articles for an incident, case, or other supported task type in a language other than English by setting up language options for knowledge article generation in Now Assist.

### Edit an article using the Now Assist context menu

Rewrite selected parts of a Knowledge article based on context by deploying the Now Assist context menu.

## Changed in this release

### Enable AI Search on the Knowledge Management Service Portal

Displays AI-powered search results for a selected article through AI Search.

### Default advanced plugin installation

Article versioning, article subscriptions, article templates, and an article quality index are available through the Knowledge Management advanced plugin, which is installed by default for new customers. If you are an existing customer, you have the option to activate it.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Activation information

Knowledge Management is a ServiceNow AI Platform feature that is active by default.

## Related ServiceNow applications and features

### CSM Configurable Workspace

ServiceNow® CSM Configurable Workspace and ServiceNow® CSM Agent Workspace enable customer service agents to read knowledge articles attached to their cases and gain additional information that helps them resolve cases more efficiently.

### Field Service Management

Enable field service agents to read knowledge articles that are attached to their work order tasks while they're offline through the Now Mobile Agent app. For more information, see Access the information you need using the Now Mobile Agent application.

### Communities

Harvest knowledge information from posts on a Community site. Create structured knowledge articles from unstructured discussions around a question.

### Problem Management

Create structured knowledge articles from information generated from a problem form that could be useful to solve similar issues.

### Incident Management

Resolve issues by searching for knowledge articles from an incident. Flag issues with articles, edit articles from incidents, and report knowledge gaps while resolving an incident. Formalize tacit knowledge by creating articles from an incident using article templates.

### Employee Service Management

Use knowledge blocks with HR Knowledge Management to simplify both HR knowledge authoring for writers and knowledge consumption for readers. Enable an HR agent to identify cases that have insufficient knowledge coverage and to report knowledge gaps using the Demand Insights for HR Cases dashboard. For more information, see Demand Insights for HR Cases dashboard.

### MID Server release notes

The ServiceNow® MID Server application enables communication and data transfers between a ServiceNow instance and external applications, data sources, and services. MID Server was enhanced and updated in the Xanadu release.

## MID Server highlights for the Xanadu release

- Run other applications without storing any credentials on the instance with the Azure Key vault.
- MID Server supports log file compression.

See MID Server for more information.

## Important information for upgrading MID Server to Xanadu

For the latest MID Server system requirements, see MID Server system requirements. The minimum JRE version supported is 11.0.9 and the recommended version is 11.0.16.1.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

If you have installed your own JRE, the upgrade process takes the following actions to verify that the MID Server uses a supported JRE:

- If a MID Server is using an unsupported version of the JRE when it upgrades, the upgrade process displays a warning message with the minimum and recommended JRE version.
- If a supported JRE is running on the MID Server host, the upgraded MID Server uses that version.

All MID Server host machines require access to the download site at `install.service-now.com` to enable auto-upgrades. For additional details, read how the system manages MID Server upgrades.

Only one Windows MID Server service is permitted according to executable path. Upgraded Windows MID Servers that have multiple services pointing to the same installation folder can't start. See MID Server fails to start for more information.

For more information about MID Server upgrades, see the following topics:

- MID Server pre-upgrade check: Describes how the AutoUpgrade monitor tests the ability of the MID Server to upgrade on your system before the actual upgrade.
- Upgrade the MID Server manually: Describes how to upgrade your MID Servers manually.

## New in the Xanadu release

### MID Server support for Azure Key vault

The MID Server integration with the Azure Key vault enables Orchestration, Discovery, and Service Mapping to run without storing any credentials on the instance.

## Changed in this release

### MID Server log enhancement

MID Server supports log file compression. The new log file handler settings are available as MID Server properties on the instance. The compression mode is not enabled in the base system.

## Activation information

MID Server is a ServiceNow AI Platform feature that is active by default.

## Related ServiceNow applications and features

### Discovery

Discovery uses the MID Server to launch probes and patterns that return information to the CMDB about devices and applications running in your environment. Discovery schedules select appropriate MID Servers based on their configured capabilities and assigned IP ranges.

### Orchestration

Orchestration uses the MID Server to do work on internal and external systems. Orchestration selects MID Servers based on their capabilities and the applications that they're allowed to use.

### Service Mapping

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Service Mapping uses the MID Server to launch patterns that return information about business services running in your environment.

#### Event Management

Event Management uses the MID Server to receive and process events, collect data for root cause analysis (RCA), and collect SNMP traps.

#### Cloud Management

Cloud Management uses the MID Server to collect and process VMware events.

#### Operational Intelligence

Operational Intelligence uses MID Server clusters to capture operational metrics data from external data sources and analyze them for anomalies.

#### Health Log Analytics

Health Log Analytics uses the MID Server to collect log data streaming into your instance and helps you identify the root cause of issues.

### Notify release notes

The ServiceNow® Notify application provides support for SMS and voice channels on the ServiceNow AI Platform® to communicate with customers. Notify was enhanced and updated in the Xanadu release.

## Notify highlights for the Xanadu release

Provides the flexibility to delete or retain Twilio messaging records when Twilio is disconnected from a ServiceNow instance.

See Notify for more information.

## Changed in this release

#### Notify Twilio Direct driver

When the Twilio messaging service is disconnected from a ServiceNow instance, you can choose to delete the messaging records according to your data management and security retention policies or retain the records for future reference. For more details, see the Behaviour of Default Messaging Service when connecting to Twilio from ServiceNow instance [KB1644265] article in the Now Support Knowledge Base.

## Activation information

Notify is a ServiceNow AI Platform feature that is available with activation of the Notify (com.snc.notify) plugin. For details, see Notify.

## Related ServiceNow applications and features

#### Notify connector for Microsoft Teams

The Notify connector for Microsoft Teams enables you to manage and initiate a Microsoft Teams meeting directly from any record such as an incident or a task.

### Password Reset release notes

The ServiceNow® Password Reset application helps your end users reset and change their passwords either using self-service or with the help of a service desk agent. Password Reset was enhanced and updated in the Xanadu release.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Password Reset highlights for the Xanadu release

Control the duration of the validity of the Password Reset URL provided in a notification email.

See Password Reset for more information.

## Changed in this release

### Enhancing Password Reset Security URL

Control the expiration duration of a password reset URL by setting the `glide.pwd_reset.onetime.token.validity` property. By default, the URL is valid for one hour.

## Activation information

Password Reset is a ServiceNow AI Platform feature that is active by default.

### Service Catalog release notes

The ServiceNow® Service Catalog application provides a requester view of the available services and products offered by the departments within your organization. Service Catalog was enhanced and updated in the Xanadu release.

## Service Catalog highlights for the Xanadu release

- Fill a catalog item form inline in the Virtual Agent conversation.
- Let users experience the support of Zero Trust Access (ZTA) security model for Service Catalog.
- Experience the faster loading of popular catalog items in the Popular Items widgets.

See Service Catalog for more information.

## New in the Xanadu release

### Added inline render type support of catalog item in Virtual Agent

Fill a catalog item form inline in the Virtual Agent powered by Natural Language Understanding (NLU).

For example, while requesting a catalog item that's marked inline render type, the requester can fill the item and its options within the Virtual Agent conversation.

## Activation information

Service Catalog is a ServiceNow AI Platform feature that is active by default.

## Related ServiceNow applications and features

### Now Assist in Catalog Builder

Use ServiceNow® Now Assist in Catalog Builder to create catalog items of your choice in Catalog Builder by giving text inputs.

### Catalog Conversational Coverage

ServiceNow® Catalog Conversational Coverage provides a dashboard to view a high-level overview of the conversational and non-conversational catalog items.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

#### Employee Center

ServiceNow Employee Center portal is a standard multi-department, dynamic portal for service delivery, and employee engagement.

#### Zero Trust Access

Zero Trust Access (ZTA) is a security model that assumes that no user or device is trusted by default.

### Skills Management release notes

The ServiceNow® Skills Management application enables you to assess the skills that your organization needs, identify any gaps, and implement effective hiring or training plans for your teams. Skills Management was enhanced and updated in the Xanadu release.

## Skills Management highlights for the Xanadu release

- Analyze the skills dashboard by using the intuitive Next Experience UI.
- Use multi-lingual capabilities in Skills Management so that you can translate the skill names and their descriptions in your preferred language.

See Skills Management for more information.

## Important information for upgrading Skills Management to Xanadu

The skills dashboard is automatically migrated to the Next Experience UI in the Xanadu release. When you upgrade, you can automatically access the Skills dashboard in the Next Experience UI.

## New in the Xanadu release

#### Using the Skills Management dashboard in the Next Experience user interface

Analyze the trends to assess the skill gaps in your organization by using the Next Experience user interface.

#### Multi-lingual capabilities in Skills Management

Translate the skill names and the descriptions by using the following fields that support the translated text data type in the Skill [cmn_skill] table:

- **Display Skill Name**: Auto-populates the corresponding value in the **Name** field.
- **Description**

## UI changes

#### Analyze skills by using the Next Experience skills dashboard

Analyze the skills for your team by using the Next Experience user interface. For more information on the Next Experience user interface, see Next Experience UI.

## Activation information

Skills Management is available with the activation of the Skills Management (com.snc.skills_management) plugin. For details, see Activating Skills Management.

## Related ServiceNow applications and features

#### Coaching

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Use ServiceNow® Coaching to monitor the performance of your teams and coach your employees to enhance their skill set.

#### Workforce Optimization for ITSM

By using Workforce Optimization for ITSM, you can efficiently manage the skills and schedules of your teams, route work assignments to your team, and monitor their performance.

### ServiceNow AI Platform security release notes

ServiceNow AI Platform® security product enhancements and updates in the Xanadu release.

Use the ServiceNow AI Platform® security to secure the instance, encrypt your data, authenticate users, and view your current compliance levels based on application security standards.

### Authentication release notes

The ServiceNow® Authentication application supports many authentication mechanisms that enable you to validate the identity of users. Authentication was enhanced and updated in the Xanadu release.

## Authentication highlights for the Xanadu release

- Use the FIDO2 authenticator, passkeys, biometric authenticators, and hardware security keys as multi-factor authentication (MFA) factors without requiring an authenticator app setup.

See Authentication for more information.

## Changed in this release

#### Multi-factor Authentication (MFA)

Use the FIDO2 authenticator, passkeys, biometric authenticators, and hardware security keys as multi-factor authentication (MFA) factors without requiring an authenticator app setup.

## Deprecations

- The MultiSSO v1 plugin is deprecated. Upgrade to MutliSSO v2 from MultiSSO v1. For more information on how to upgrade to MultiSSO v2, refer to the knowledge article MultiSSO v2 upgrade instructions [KB9756504] in the Now Support Knowledge Base.
- The SAML 1.1 and SAML 1.1 Single Sign-On - Update 1 plugin is deprecated. The SAML-based identity providers (IdP) have already migrated to SAML 2.0. To use SAML 2.0, you must activate the MultiSSO v2 plugin and configure your identity provider.
- The OpenID SSO plugin is deprecated. To use OpenID Connect (OIDC), you must activate the MultiSSO v2 and configure your OIDC-based identity provider.

## Activation information

Authentication is a ServiceNow AI Platform product that is active by default.

## Related ServiceNow applications and features

#### Platform Security

Platform Security is built into all levels of the ServiceNow AI Platform. Implement the security features that are appropriate for your organization. Manage failed logins and encrypted password protection, access control rules, and audit logs.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

### Encryption Key Management release notes

The ServiceNow® Encryption Key Management application protects your data by using encryption, tightly controlled key access, National Institute of Standards and Technology (NIST) 800-57-based key life-cycle management, and FIPS 140-2-L3 key protection. Encryption Key Management was enhanced and updated in the release.

## Encryption Key Management highlights for the Xanadu release

- Start using Code Signing's improved activation process. You can use the new Code Signing UI page for a faster, streamlined activation.
- Administer Column Level Encryption with new Column Level Encryption APIs, roles, and administration features. Column Level Encryption logging has been enhanced for improved readability.
- Download all encrypted attachments as a zip file by using the new **Download All** button.

See Key Management Framework for more information.

## New in the Xanadu release

### New plugin available for Code Signing roles and administrative features

Activate the plugin to access the new roles and administration features. The new plugin creates signature migration jobs, new code signing roles, and a new code signing administration page.

## Changed in this release

### Changes to Code Signing requirements

As a part of improving security around Root of Trust, signing of script and attachments records can only be done on your trusted non-production instance or using the standalone signing tool. The exception is notarization, which can still be performed in the protected production instance.

### Enhancement requests for the Code Signing Standalone signing tool

Updates to Code Signing enable your administrators to work with keystores, signature records, and records to be signed outside of the local system.

### Improved activation process for Code Signing

Activate Code signing with a new UI page that is designed to streamline the activation process.

### Download All Button for Multiple Attachments is available when Edge Encryption is enabled

By using the download all functionality, you can now download multiple documents into a zip file when you also enable Edge Encryption.

### Edge Encryption jRobin dashboards have been migrated to NEXT Experience

View troubleshooting and performance on dashboards that were migrated from the deprecated jRobin framework. These dashboards display the same information that was available in previous versions.

### Column Level Encryption Enterprise is installable by administrators after purchase

After purchasing Column Level Encryption Enterprise, your administrator can typically activate the product without needing technical assistance.

### Support for full string UTF-8 in Column Level Encryption

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

CLE supports encryption and decryption of the full range of UTF-8 characters, including emoji.

### Improved readability for Column Level Encryption logging

With the improved system, node, application, and audit logging, your administrators can analyze and troubleshoot their CLE or CLEE implementation.

## Activation information

The Platform Encryption subscription bundle is a group commercial entitlement that includes Column Level Encryption Enterprise, Cloud Encryption, and Database Encryption.

Column Level Encryption Enterprise is the unlimited license of Column Level Encryption. The Enterprise plugin is available with the activation of the com.glide.now.platform.encryption plugin. For details, see Encryption and Key Management subscription bundle.

## Related ServiceNow applications and features

### Encryption and Key Management

Encryption is a cryptographic procedure that converts plain text into cipher text, which helps prevent anyone but the intended recipient from reading that data.

### Key Management Framework

The Key Management Framework lets you fully customize and manage how cryptographic operations are performed on your instance.

### Code Signing

Code Signing creates digital signatures for the data, which are later checked to confirm the authenticity and integrity of the data. Code Signing is a module licensed as a component of Vault.

### Edge Encryption

Edge Encryption encrypts sensitive data on your company premises before sending it over the internet to your instance (encrypted in flight), where it remains encrypted at rest.

### Cloud Encryption with Key Management

Cloud Encryption offers encrypted storage for the database using block encryption, with enhanced key management. Cloud Encryption is available with the Platform Encryption subscription bundle.

### Identity release notes

The ServiceNow® Identity application supports identity mechanisms that enable you to validate the identity of users. Identity was enhanced and updated in the Xanadu release.

## Identity highlights for the Xanadu release

- Use the Access Simulator module under the ServiceNow® Access Analyzer V3 tool to simulate the user access and understand the implications of providing additional access to the users.
- Use the enhanced System for Cross-domain Identity Management (SCIM) API endpoints for CRUD operations.
- Access Analyzer extends support of Query operation (Query Match & Query range) for Evaluate access, Compare user access, and Simulate access features.

See Identity for more information.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## New in the Xanadu release

### Access Insights

Use the Access Insights module in the ServiceNow® Access Analyzer V4 tool to get access insights about role or group entitlements assinged to the user at a peer-level (same organization, department, and Manager), while comparing the user access.

> **Important:**
> Access Insights (Access Analyzer V4) is available in the ServiceNow Store. For more information, visit ServiceNow Store.

### SCIM

Use the System for Cross-domain Identity Management (SCIM) API endpoints to create, read, update, and delete operations on users and groups using the SCIM protocol.

## Activation information

Identity is a ServiceNow AI Platform product that is active by default.

## Related ServiceNow applications and features

### Secure your instance

Platform Security is built into all levels of the ServiceNow AI Platform. Implement the security features that are appropriate for your organization. Manage failed logins and encrypted password protection, access control rules, and audit logs.

### Security Center release notes

The ServiceNow® Security Center application is composed of multiple distinct tools designed to help you improve your security posture and strengthen your compliance with ServiceNow curated security recommendations. Security Center was enhanced and updated in the Xanadu release.

## Security Center highlights for the Xanadu release

- Receive prompt notifications for user behaviors that you specify with the Security Event Notifications tool.
- Monitor the security health of all your instances and take rapid action using the new Security posture dashboards.
- Be prepared for potential future security announcements from ServiceNow with Security Banner Announcement capabilities.
- Schedule security scans with the updated Auditor Suite to monitor access control configurations in the Security Scanner tool.
- Use the improved Security Center version 2.0 hardening tool to minimize data exposure within your instance.

See Security Best Practices, Customer Actions, and Hardening settings baseline versions, Security Event Notifications, and Data Classification for more information.

## New in the Xanadu release

### Security Event Notifications

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Receive prompt notifications on user behaviors that you specify with the Security Event Notifications tool. Users that you choose receive email notifications when a policy is triggered, enabling you to promptly remediate issues.

### Security Posture Dashboards

Monitor the security health of all your instances with the Security posture dashboards. The single instance dashboard provides graphical widgets for key security key process indicators (KPIs). The multi-instance dashboard, only available on production instances, shows the same KPIs for all instances in a table format. The dashboards can be cloned and then fully customized.

### Security banner announcements

Prepare for potential future security announcements from ServiceNow using the Security Banner Announcements. This feature enables ServiceNow to trigger new banners in customer instances that are visible to system administrators. These messages inform them of new and urgent potential security issues and include a link to more details.

### Data Classification

Monitor your sensitive data with the Data Classification metrics in the Security Metrics tool. Updates to the tool include two new metrics. Classifiable Data metrics displays the amount of data that is available for classification and what portion has been already classified. The Classified Data metrics displays the breakdown of the classified data across your classification labels.

### Security Center version 2.0 introduces a new set of hardening settings

Security Center version 2.0, introduced in the November store release, includes several new hardening settings, updates to existing ones, and the removal of some unnecessary settings. The new hardening settings come with recommended configurations to restrict access control lists (ACLs) for human resources apps, minimizing data exposure and enforcing the principle of least privilege. Additional settings help configure service portal widgets to reduce sensitive data exposure in tables, enforce strict code signing, and set role-based restrictions on apps. Several technical configuration names and descriptions have been updated for clarity, and outdated hardening settings have been removed.

### Improved Security Center architecture

The Security Center has been redesigned to help admins understand what tasks they can accomplish with Security Center and to pick the right tools for their tasks.

## Changed in this release

### Scan checks

Schedule security scans with the updated Auditor Suite to monitor access control configurations in the Security Scanner tool. The Auditor Scan suite has been streamlined to contain only access control checks and renamed to Access Control Auditor Suite. The updated access control checks generate a smaller, more focused number of findings that reflect potential security vulnerabilities according to ServiceNow security experts.

### Legacy workflows have been converted to Flow Designer workflows

Legacy base system Workflows have been converted to modern Flow Designer workflows to standardize ServiceNow flows onto the modern technology. The updated low-code flows are designed to be more scalable and make updating and troubleshooting easier.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Deprecations

Beginning with the ServiceNow AI Platform Xanadu release, ServiceNow will end support for Instance Security Center.

For details, see the Deprecation Process article (KB 0867184) in the Now Support Knowledge Base.

## Activation information

Security Center v1.5 is installed by default with the Xanadu family release. Version 1.6 provides significant enhancements. To get Security Center v1,6, visit the ServiceNow store.

### Access Management release notes

The ServiceNow® Access Management includes access control lists (ACLs), security attributes, contextual security manager, data filtration, and many more controls. These tools provide finer control and improved security for managing data access. Access Management was enhanced and updated in the Xanadu release.

## Access Management highlights for the Xanadu release

- Fine-tune your access control with the new Deny-Unless ACL and query operators.
- Enhance ACL security with a new default denial behavior.
- Identify and fix empty or misconfigured ACLs with new ACL creation rules.

See Access Control List Rules for more information.

## Changed in this release

**Deny-Unless condition for ACLs**

A new decision type field helps administrators define the conditions that give or deny users access to data. It enables more granular decision-making while defining the right access strategy on the platform.

**Enhanced ACL Security**

If an ACL is misconfigured or empty, you can deny access to data by default, enhancing the overall security of the platform.

**ACL Query Behavior**

Fine-tune your access control by dictating rules for querying data with the introduction of new operators: query match and query range.

**>Explicit Roles behavior adjustment**

When the system property `glide.security.explicit_roles.do_not_fix` is true, the **snc_internal** role is no longer added in memory or to the User Roles [sys_user_has_role] table.

## Activation information

Access Management is a ServiceNow AI Platform feature that is active by default.

### Data Privacy release notes

The ServiceNow® Data Privacy application enables you to classify sensitive data, remove personally identifiable information (PII) from user data in a production instance, and anonymize

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

data in production and non-production instances. Data Privacy was enhanced and updated in the Xanadu release.

### Data Privacy highlights for the Xanadu release

- Navigate an improved Data Privacy and Data Discovery UI in Next Experience dashboards.
- Discover and anonymize sensitive data as it's entered with the real-time anonymization policy.
- Anonymize and discover journal fields with expanded support and an increased data pattern regular expression limit of up to 1000 characters.

See Platform Privacy for more information.

### Important information for upgrading Data Privacy to Xanadu

Licensing changes enable you to install Data Discovery, Data Discovery APIs, Data Anonymization, and Data Privacy APIs without an entitlement, but you must have an entitlement to run a job.

### New in the Xanadu release

#### Child job execution

Run child parallel jobs to optimize the duration of your job executions.

#### Encrypt with column level encryption (CLE)

As a security admin, view whether the discovery field is encrypted or can be encrypted.

### UI changes

#### Next Experience dashboards

Data Discovery and Data Privacy Dashboards now use the Next Experience dashboards.

### Changed in this release

#### Discover and anonymize journal fields

Journal fields are now supported for Data Discovery and Data Anonymization with Workspace UI.

#### Data pattern regular expression length increased

The data pattern regular expression length limit is increased to 1000 characters.

#### New base system data patterns

New base system data patterns are supported. See Default data patterns for more information.

#### Indicators for Security Center dependencies

Indicators for missing Security Center dependencies have been added.

## ServiceNow AI Platform user interface release notes

ServiceNow AI Platform® user interface product enhancements and updates in the Xanadu release.

These release notes describe product enhancements for core platform functionality in user interfaces, such as lists and forms.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

### Next Experience release notes

The ServiceNow® Next Experience application delivers an intuitive, personalized experience that enables your organization to drive productivity, improve engagement, and inspire learning with the ServiceNow AI Platform®. Next Experience was enhanced and updated in the Xanadu release.

## Next Experience highlights for the Xanadu release

- Choose from multiple themes created with Theme Builder and apply them to your instance.
- A new keyboard shortcut enables you to access the OpenFrame UI.
- A new "User experience" user preference group has been added for the Turn off Next Experience, Enable analytics, and Current start page preferences.
- A new client interaction table displays UI load times for identifying and investigating performance anomalies.

See Next Experience UI for more information.

**Important:**
Theme Builder is available in the ServiceNow Store. For details, see the "Activation Information" section of these release notes.

## New in the Xanadu release

### Next Experience keyboard shortcuts

Use a new keyboard shortcut to reduce the time required to open the OpenFrame window.

### User experience user preference group added

A new "User experience" user preference group has been added for the Turn off Next Experience, Enable analytics, and Current start page preferences.

### Pin your notifications menu

Pin your notifications menu for quick access to important updates.

### View Next Experience performance metrics

View performance metrics for any Next Experience page.

### Preserve your custom Next Experience theme during a clone

Cloning is optimized to preserve your Next Experience and Theme Builder themes. This helps ensure that the themes are not overwritten during the cloning process.

## Changed in this release

### Select a theme in Next Experience

If multiple core themes have been created using Theme Builder, then those themes and their alternate color palettes are displayed in the Theme user preference group.

## Activation information

Next Experience is a ServiceNow AI Platform feature that is active by default when the user loads or upgrades to the Xanadu release. An opt-out system property can be created prior to upgrade if there are known problems with turning on Next Experience on an instance.

Install Theme Builder by requesting it from the ServiceNow Store.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Browser requirements

Xanadu no longer supports Internet Explorer 11. You can't log in through that browser. The iOS version of Firefox is also not supported.

## Accessibility information

### Next Experience keyboard shortcuts

In addition to the 40 keyboard shortcuts available, there is a new keyboard shortcut to reduce the time required opening the OpenFrame window. This shortcut allows agents to dial and answer the phone from the platform.

### Workspace release notes

The ServiceNow® Workspace application provides agents, case manager, help desk professionals, and managers with tools to answer customer questions and resolve customer problems. Workspace was enhanced and updated in the Xanadu release.

## Workspace highlights for the Xanadu release

- Add email addresses to recipient fields with more flexibility, including the ability to use international characters, edit email recipient pills, and view concise error messages for invalid or blocked addresses.
- Categorize and filter records in the Activity Stream.
- Help users access relevant reference search results by applying pre-filtered and removable query parameters to reference lists.

See Workspace UI for more information.

## New in the Xanadu release

### International characters supported in email addresses

Enter international characters for email addresses without running into errors.

Enable international characters for your users according to RFC6530 standards or disable them by changing a system property and performing additional configurations.

### Email client plugin system properties

Ensure your agents leverage the latest functionality in the email client by using updated plugin (*glide.ui.email.composer.enabled_plugins*) and toolbar (*glide.ui.email.composer.toolbar*) system properties offered by default for Tiny MCE v6.

### Tags for Activity Stream records

Use tags to categorize and filter records shown in the Activity Stream.

As admins, you can enable, add, customize, and edit tags for your users' Activity Stream records.

### Reference searches with queries

Help users access relevant reference search results by applying pre-filtered and removable query parameters to reference lists. These query parameters act as an addition to fixed queries that cannot be removed by end users.

### Client scripts for field decorators

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Add field decorators to field types using client scripts.

**Pre-filter records on the multi-record associator**

Pre-filter records with typeahead on the multi-record associator using scripts.

**Use a keyboard shortcut to insert response templates**

Enter the keyboard shortcut `/r` and a keyword to insert a response template directly into an email body.

**Configure response templates for email composer**

You can enable or disable response templates for agents with a system property.

## UI changes

**Show and hide the email header**

Collapse and expand all recipient fields in the email header by selecting the chevron icon ( ).

**Edit email addresses**

Edit an email address directly from the email address' pill instead of removing the email address and reentering it.

**Invalid email address alerts**

When you enter an invalid email address, an exclamation icon ( ) appears within the email address' pill and the **Send email** button is inactive.

When you enter a blocked email address, a blocked icon ( ) appears within the email address' pill and the **Send email** button is inactive.

Once you enter more than one invalid email address, you receive a single alert as a list of invalid and blocked email addresses.

**Manage email drafts from the full email composer**

Use the **Manage drafts** button in the full email composer to view, edit, and delete drafts.

**Manage email drafts from the mini email composer**

Manage email drafts from the mini email composer by selecting the **View drafts** icon ( ) in the email footer and an action from the menu that opens.

**Add email templates, response templates, and quick messages from the mini email composer**

Add email templates, response templates, and quick messages from the mini email composer with the **Apply templates** icon ( ) in the email footer.

**Date and time selection**

The calendar for selecting a month and year appears as a list with a text box for entering a time.

**Back to Group button for list experiences**

The **Back to Group** button navigates you back to the previous grouped list.

## Activation information

Workspace is a ServiceNow AI Platform feature that is active by default.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

### Service Portal release notes

The ServiceNow® Service Portal application enables you to build mobile-friendly self-service experiences for your customers and employees with an easy-to-use, modular portal framework. Service Portal was enhanced and updated in the Xanadu release.

## Service Portal highlights for the Xanadu release

Deactivate a portal and optionally redirect users to an alternate portal.

See Service Portal for more information.

## New in the Xanadu release

### Deactivate portals

Turn off access to a portal that you don't want users to visit and redirect them to another portal.

## Changed in this release

### Show the current user in the team members list of the User Profile widget

Indicate whether to include the logged-in user in the team members list when viewing another team member's user profile from the User Profile widget.

### Additional multi-factor authentication options

Log in to portals using a biometric authenticator or hardware security key with multi-factor authentication (MFA).

## Activation information

Service Portal is a ServiceNow AI Platform feature that is active by default.

## Browser requirements

The Xanadu release doesn't support Internet Explorer 11.

The iOS version of Firefox doesn’t support Service Portal pages.

For more information about Service Portal browser support, see Browser support.

## Related ServiceNow applications and features

### Sitemap Generator

Define and automatically generate XML sitemaps to improve the search engine optimization (SEO) of your public portal pages.

### AI Search

The ServiceNow AI Search application provides modern search capabilities for Service Portal, Now Mobile, and Virtual Agent.

### User Experience Analytics

After you enable User Experience Analytics for Service Portal, you can view detailed key performance indicator (KPI) data on a dashboard and on list views.

### Authentication

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Validate the identity of users who access an instance and allow them to use features that match their role or job function. You can allow portal users to log in without a password by enabling PIV/CAC card authentication.

### Theme Builder release notes

The ServiceNow® Theme Builder application enables you to tailor the visual experience for your users, helping to update the look and feel to be more like your brand. Theme Builder was enhanced and updated in the Xanadu release.

## Theme Builder highlights for the Xanadu release

- Achieve your branding and styling needs by offering multiple themes and alternate color palettes to your users.
- Add a dark alternate color palette to your newly created themes and edit to refine your theme.
- As of Theme Builder version 4.1, receive notifications about updates directly from the Theme Builder application.
- As of Theme Builder version 4.1, organize your themes by priority, purpose, or other criteria, by using the drag-and-drop feature in the List view. With this feature, you can publish and order the themes that are displayed in the Next Experience Theme user preference.

See Working with themes in Next Experience for more information.

**Important:**
Theme Builder is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

### Publish multiple themes with Theme Builder

Publish multiple themes with their alternate color palettes to your web instance. Set a default theme for your users.

### Add a dark alternate color palette

Add a dark alternate color palette to your Theme Builder theme. You can edit this alternate color palette to further enhance your brand style.

### Set the presentation order of your themes in Next Experience

Define the presentation order of the themes that are displayed in the ServiceNow® Next Experience user preferences.

### Select from multiple themes in Next Experience user preferences

View multiple themes and their alternate color palettes in Next Experience user preferences.

### Set the presentation order of your Theme Builder themes

As of Theme Builder version 4.1, you can control the order in which the themes created with Theme Builder appear in Next Experience user preferences by using the List view within the Manager page.

### Remove Global Style overrides

As of Theme Builder version 4.1, you can remove any overrides that you made to Global Styles and return to your initial values by using the Remove Override button.

### Use drag-and-drop to publish and unpublish your themes

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

As of Theme Builder version 4.1, use the drag-and-drop feature in the List view to publish and unpublish your themes for your web instance.

**Adjust a component to meet accessibility standards**

As of Theme Builder version 4.1, the Accessibility Inspector now displays the total number of accessibility errors in your theme and lists the specific components with contrast issues. See the Accessibility section for details.

## UI changes

**Manage web and mobile themes independently**

Manage your web and mobile theming experiences separately by using the updated Manager view.

**Manager view now displays each theme and all associated color palettes in one place**

Each core theme and all associated alternate color palettes are now located within one theme card.

## Removed in this release

- Removed the **Apply** button used to apply your theme to web and mobile instances. To publish your theme, use the **Publish** option from the theme card overflow menu. For more information about publishing themes, see Publish your themes with Theme Builder.

## Activation information

Install Theme Builder by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

**Note:**
As of Theme Builder version 4.1, you see when a new Theme Builder update is available from within the Editor page view.

## Accessibility information

Accessibility improvements for Theme Builder include the following updates:

- Added a dark alternate color palette that makes the display easier for your eyes and less disturbing in low-light settings is available for creation. For more information, see Add an alternate color palette.
- Updated modal when you publish a theme group for your web instance. A warning appears if there's an accessibility error within the base theme or the theme's alternate color palettes. A link within the modal navigates you to the correct theme or alternate color palette with accessibility errors.
- Improved Accessibility Inspector detects and guides you through fixing accessibility issues in your theme. This tool includes the total number of violations and a list of specific components with accessibility issues. For more information, see Adjust a component to meet accessibility standards.
- Updated reflow feature ensures the content within the Component Editor view automatically adjusts when the screen size is reduced. This improvement eliminates the need for horizontal scrolling.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Related ServiceNow applications and features

### Build apps using App Engine Studio

Use ServiceNow® App Engine Studio for developing rich web applications to store information, automate business processes, and solve business problems.

### ServiceNow® UI Builder

Use ServiceNow® UI Builder to build pages for workspaces generated with App Engine Studio or custom web experiences using Next Experience Components and custom web components.

### Adoption Services release notes

The ServiceNow® Adoption Services is a suite of solutions, both products and features, that provide user support and critical information at the anticipated time of need. Adoption Services was enhanced and updated in the Xanadu release.

## Adoption Services highlights for the Xanadu release

- Experience the new UI and features available in the Guided Setup builder powered by Playbooks.
- Use the new Guided Setup player process, which is powered by Playbooks and provides a more streamlined experience and enhanced UI.

See Adoption services for more information.

**Important:**
Adoption Services is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## UI changes

### Configuration setup type

The configuration setup type page to choose from a basic, recommended, or custom setup type is removed from the Guided Setup player.

### Get Started

The **Continue** button is changed to **Get Started** in the Guided Setup player.

### Category drop-down

The Category drop-down list is updated in the header of the Guided Setup player.

### Mark as complete

The **Continue** button is changed to **Mark as complete** on the Setup department page, the Web client branding page, and the Theme engine page in the Guided Setup player.

### Skip button

The **Skip** button is only enabled in the Guided Setup player for tasks that aren't required.

## Changed in this release

Use the new Guided Setup player process backend powered by the Playbooks backend. App development team admins that create Guided Setups for their products now have all capabilities that are part of the Playbooks. This change

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

creates a similar Guided Setup player experience with new visual enhancements to the UI.

#### Create a guided setup

Use the new capabilities offered with the Playbooks (PAD) backend to define the activities that PAD can support in addition to the existing activities of the Guided Setup builder. For example, you can use Conditional Flow, which would be introduced in the Guided Setup flow.

## Activation information

Adoption Services is a ServiceNow AI Platform feature that is active by default.

### Source-to-Pay Operations release notes

Source-to-Pay Operations has new and updated features in the Xanadu release.

### Accounts Payable Operations release notes

The ServiceNow® Accounts Payable Operations application enables Accounts Payable specialists and tax specialists to validate the taxes provided by suppliers and ensure tax compliance. The Accounts Payable Operations was enhanced and updated in the Xanadu release.

## Accounts Payable Operations highlights for the Xanadu release

- Provides support for tax compliance.
- Enables tax managers or tax specialists to create, edit, and update tax types and tax codes.
- Validate supplier taxes and ensure tax regulatory compliance with added tax-related exceptions.
- Check for invoices configured with Tax variance tolerance rules through the exception engine.
- Allocate invoice cost across various business functions using the invoice cost allocation feature, which increases the accuracy of financial reporting and informs strategic decision-making.

**Important:**
Accounts Payable Operations is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## Important information for upgrading Accounts Payable Operations to Xanadu

If you are upgrading from a previous release, you must configure the reference field in the Tax Code [sn_fin_tax_code] table. The exception engine validates the invoice using the tax code and raises exceptions if necessary.

## New in the Xanadu release

#### Tolerance Rules and Variances for invoices

- The *`tax tolerance`* rule, which defines the variance limit set on the tax amount variance in an invoice.
- The *`under tax amount`* variance exception, which is raised when the supplier-provided tax amount is less than the system-calculated tax amount.
- The *`over tax amount`* variance exception, which is raised when the supplier-provided tax amount is greater than the system-calculated tax amount.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

### Playbook for updating the invoice primary data

- Add tax lines to invoice lines through a playbook activity.
- Apply the new tax lines to single or multiple invoice lines.

### Tax calculations

As a tax owner or tax manager, add tax lines and tax codes.

The Invoice cost allocation feature allocates invoice costs across various business functions, which increases the accuracy of financial reporting, and informs strategic decision-making.

In the cost center-based approval rule for invoices, costs can be allocated to multiple cost centers, enabling cost center owners to approve the invoice only for the amount allocated to their cost center.

The ServiceNow® Now Assist for APO application guides APO fulfillers to generate a case summary and quickly understand the case context by using the case summarization skill.

## Changed in this release

### APO landing page

Task owners can view and handle invoice tasks more efficiently using task filters, widgets and bar charts in the Accounts Payable Operations workspace.

### Accounts Payable Operations integration framework

Updated invoice integration using tax fields enables you to process invoices more quickly.

## Activation information

Install Accounts Payable Operations by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Localization information

Accounts Payable Operations supports multiple languages. The current DocIntel model is trained to extract invoices in the English language only. If you want to process an invoice in the multiple languages supported by DocIntel, you must train the DocIntel model.

### Sourcing and Procurement Operations release notes

The ServiceNow® Sourcing and Procurement Operations application provides your employees with generative AI through ServiceNow® Now Assist in Virtual Agent, to streamline how they can shop for the goods and services that they need at work. Sourcing and Procurement Operations was enhanced and updated in the Xanadu release.

## Sourcing and Procurement Operations highlights for the Xanadu release

- Summarize procurement records using Now Assist for SPO and use generative AI to perform common tasks via the Now Assist for SPOVirtual Agent.
- Use AI-powered search across internal and external supplier products, and streamlined checkout for third-party items.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Configure conditions for automatic and manual PR merging.
- Use AI-powered search across internal and external supplier products, and streamlined checkout for third-party items in Shopping Hub.
- Add users to watchlists for real-time notifications and visibility on sourcing and purchasing processes.
- Introduce editable fields for purchase requisitions and purchase orders, improving flexibility in managing orders.
- Develop a standardized approach for calculating supplier response close dates for sourcing requests and negotiation events.
- Manage a catalog of goods and services that your employees can use to order the items that they need for their jobs.
- Provide transparency into the procurement process with regular updates.
- Automate the end-to-end procurement process workflows, from sourcing through requisitioning, to order fulfillment, receipt, and payment.
- Enable procurement specialists to source, negotiate, procure goods and services for an organization, and work on procurement tasks.

See Sourcing and Procurement Operations for more information.

**Important:**
Sourcing and Procurement Operations is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

### Now Assist for Sourcing and Procurement Operations (SPO)

With Now Assist for Sourcing and Procurement Operations (SPO), fulfillers can easily summarize procurement-related records, providing real-time progress updates and action items. Available summarization skills include:

- Sourcing request summarization
- Purchase requisition summarization
- Procurement case summarization

If you're entitled to Source-to-Pay Operations Pro SKU and Sourcing and Procurement Operations Pro SKU, you can install this application.

### Request the generative AI capabilities by using the Now Assist for SPO Virtual Agent

Requesters can leverage contextual generative AI using the Now Assist for SPO Virtual Agent to complete self-service tasks, such as purchasing products or tracking the status of purchase requisitions, sourcing requests, or procurement cases.

### Log in to Shopping Hub for the first time

Specify a default delivery address when logging in to Shopping Hub for the first time after initial setup to ensure supplier products display correctly.

### Complete sourcing checkout

Add users to the watch list on sourcing requests and purchase requisitions:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Provide visibility into state changes of purchase requisitions and sourcing requests to the users who aren't submitters or business owners.
- Configure the number of users allowed to be added to the watch list.
- Enable fulfillers to add users to the watch list at any stage of the request life cycle.
- Configure notifications to include watch list users regarding updates on the request.

### Edit a purchase requisition line

Fulfillers can use the enhanced **Edit a purchase** option to edit the service date, delivery date, delivery address, and quantity on purchase requisition lines and purchase order lines. For more information, see Edit a purchase order line.

### Purchasing from punchout or third-party suppliers

Shoppers can search for all the products, including those from external suppliers, directly within Shopping Hub. The configuration of the Search API, Order API, and Product Details API determines whether shoppers can complete their purchases directly in Shopping Hub or are redirected to external supplier websites. Products from third-party suppliers with configured Order API and Product details API can be viewed, added to cart, and purchased from within Shopping Hub. For suppliers without this configuration, a notification appears, redirecting shoppers to the supplier's external site to add items to the cart and place the order. The shopper is subsequently redirected to Shopping Hub where they can continue with the checkout process. For more information, see Configure punchout for third-party site purchases.

### Configure punchout for third-party site purchases

Set up cXML and API connections through a configuration framework to enable your shoppers to use AI search within Shopping Hub, enabling them to browse both third-party and native catalog items.

### Process visibility

Render end-to-end process visibility in Shopping Hub so that your shoppers have transparency into the procurement process after they submit a request. You can also configure this feature to meet your own business processes. For example, you can use a default content and configuration framework to modify and edit your own content.

- Configure end-to-end process visibility through a configuration framework that enables administrators to define and modify steps, and the work that is within each step. You can also sequence and change labels to promote flexibility and alignment with your business processes.
- Provide your shoppers with the following end-to-end visibility on sourcing requests, purchase requisitions, and purchase orders in Shopping Hub:
  - Progress of the requests and expected completion timelines.
  - Step dependencies and progress of the sequential and concurrent steps.
  - Completed, current, and future steps, enabling oversight of the status of the work within steps.
  - Sequencing of work, such as approvals, cases, and tasks.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Enhanced communication for your shoppers so that they can message task assignees and task assigners directly from within the platform. You can track this communication through audit trails.
- Record of your shoppers' page navigation between My Purchases List and Details view pages on Shopping Hub.

## Changed in this release

### SPO list page

All playbooks in SPO have been standardized to deliver a consistent look and feel, enhancing the overall user experience.

### Configure conditions for merging purchase requisitions

Set the conditions for merging purchase requisitions (PRs). Procurement administrators can define which fields must match for PR merges, ensuring flexibility to align with specific business processes.

### Add a sourcing request to a negotiation event

Introduced a unified logic for calculating supplier response close dates when adding sourcing requests to new or existing negotiation events. This ensures consistency in date calculations, regardless of whether the dates are system-generated or manually defined by procurement fulfillers.

### Sourcing and Procurement Operations integration with third-party sourcing solutions

Enhanced the Source-to-Pay Integration Framework for integrations with third-party sourcing tools. You can now support negotiation-event-based integrations that consist of multiple sourcing requests.

Enhanced the purchase order cancellation flow when it's updated from the purchase order outbound table.

### Inbound staging tables for Sourcing and Procurement Operations

Made the following updates related to inbound staging tables:

- Introduced the following staging table and transform map:
  - **Staging table**: Spend Shipment Import inbound [sn_spend_intg_imp_shipment]
  - **Transform map**: Spend Shipment Import
- Transferred attachments from the Enterprise Resource Planning (ERP) system staging table to the main Purchase Order table. These attachments are also visible on the purchase order.

### Source-to-Pay integration framework

Updated some fields and processes in the Source-to-Pay Integration Framework to build connection points and to work with other ERP systems, including the following fields and processes:

- Turned off the buttons to update purchase order when the integration status in the staging table is New or In Process.
- Disallowed purchase order lines to be created when purchase orders haven't been brought in yet from the ERP system. Added a scheduled job to retry adding purchase order lines after a purchase order is created.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Added missing columns and removed some columns in some staging and primary tables such as the outbound receipt, purchasing group primary and staging, cost center staging, and Fx currency tables. Updated the transform map logic for some of these tables to render these columns.
- Created the ERP plant address mapping staging table.

## Deprecations

- SAP ECC and SAP4HANA are deprecated and no longer supported or available for new activation. Source-to-Pay Integration with SAP ECC and SAP S4 HANA provides the latest experience for this functionality.
- The SPO classic dashboards are now deprecated and no longer supported or available for new activation. The following Next Experience dashboards provide the latest experience for this functionality:
  - Procurement Buyer Dashboard
  - Procurement Strategy & Ops Dashboard
  - Procurement Team Performance Dashboard
  - Procurement Case Management Dashboard
- The classic ShoppingHub [com.snc.sn_shop] portal is now deprecated and no longer supported or available for new activation. The new Shopping Hub [com.snc.sn_spend_uib] portal provides the latest UIB-enabled experience for this functionality.

## Activation information

Install Sourcing and Procurement Operations by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

### Supplier Lifecycle Operations release notes

The ServiceNow® Supplier Lifecycle Operations application enables you to quickly onboard and collaborate with suppliers, manage supplier relationships, monitor risk, compliance, and performance across the supplier life cycle. Supplier Lifecycle Operations was enhanced and updated in the Xanadu release.

## Supplier Lifecycle Operations highlights for the Xanadu release

- View the summarized details of supply-related records to keep the supplier managers and fulfillers informed about their progress and action items.
- Manage supplier relationship and performance to optimize the value and quality of the products and services delivered by suppliers.
- Exchange supplier data accurately with external ERP systems using additional fields in the inbound and outbound tables.
- View supplier details such as supplier products, contracts, purchase orders, and invoices directly from the Source-to-Pay Workspace and the Supplier Collaboration Portal.
- Support for many-to-many (M2M) mapping between supplier contact and suppliers: A single supplier contact can be the contact for multiple suppliers, if the suppliers share a parent-subsidiary relationship. M2M mapping between supplier contact and suppliers is available from the Xanadu December 2024 release onwards.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

See Supplier Lifecycle Operations for more information.

**Note:**

You can experience a longer upgrade time if you're upgrading from Vancouver or an older release to Washington DC or any latest release. This delay is due to a mandatory script that runs for restructuring the Supplier Task [sn_slm_task] table and the duration of upgrade depends on the number of records in this table.

**Important:**
Supplier Lifecycle Operations is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

### Now Assist for Supplier Lifecycle Operations (SLO)

With the Now Assist for Supplier Lifecycle Operations (SLO) application, supplier managers and fulfillers can summarize the details of supply-related records to keep them informed about their progress and action items.

### Supplier Relationship and Performance Management

- Manage supplier relationship and performance to optimize the value and quality of the products and services delivered by suppliers.
- Establish clear expectations and criteria for measuring supplier performance, monitor and assess their performance against those criteria, provide feedback and recognition, and implement corrective actions and improvement plans when needed.

### Supplier Lifecycle Operations integration framework

Exchange supplier data with any third-party ERP system using enhanced transform maps and inbound and outbound integration tables.

### View supplier details in the Source-to-Pay Workspace

- View supplier details such as contracts and supplier products in the Related Links section on the **About** tab of the Source-to-Pay Workspace supplier page.
- View supplier details such as purchase orders and invoices on the **Related work** tab of the Source-to-Pay Workspace supplier page.

### View supplier details in the Supplier Collaboration Portal

View supplier details in the following tiles in the My active items widget:

- Contracts
- Supplier Products
- Purchase Orders
- Invoices

**Note:**
These new tiles are displayed if you have installed the Sourcing and Purchasing Automation (com.snc.sn_pr) and Source-to-Pay Common Architecture (com.snc.sn_shop) plugins.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Deprecations

### Source-to-Pay Workspace

Starting with the Washington DC release, Supplier Manager Workspace is being prepared for future deprecation. It will be hidden and no longer be activated on new instances but will continue to be supported. Source-to-Pay Workspace provides the latest experience for this functionality.

## Activation information

Install Supplier Lifecycle Operations by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

### Strategic Portfolio Management release notes

Strategic Portfolio Management (formerly IT Business Management) has new and updated features in the Xanadu release.

### Collaborative Work Management release notes

The ServiceNow® Collaborative Work Management (CWM) application is an industry agnostic application that provides a central hub to plan, visualize, and collaborate on work with team members across the organization. CWM was enhanced and updated in the Xanadu release.

## Collaborative Work Management highlights for the Xanadu release

- Reduce manual effort by creating Boards and Docs from templates.
- Save Board display preferences and switch between Board views based on the audience and purpose.
- Track and manage all your assigned work from a single view called My Work.
- Create automations on the Assigned to column or other custom columns of type **People**.
- Save time and avoid manual copying of information with the ability to duplicate CWM Boards and Docs.

See Collaborative Work Management for more information.

**Important:**
Collaborative Work Management is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

### Templates in CWM for Boards and Docs

With templates in CWM, you get a predefined format for Boards and Docs, which you can use as-is or customize to suit your workflow. You can use templates for new Boards and Docs or apply them to existing ones. You can also save an existing Board or Doc in its current format as templates.

Template Center provides a centralized space where you can manage all templates for Boards and Docs.

### Board views in CWM

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Create and customize Board display preferences such as column display and order, sorting, and filters based on the audience and purpose.

- Save Board display preferences as personal or shared views.
- Create shared views for the team so that all the team members consuming the data have the same experience.
- Create multiple views for the same Board so that you can display data in a way that is fit for your audience.
- Quickly switch between views to avoid manually updating display preferences each time the audience is changed.
- Update the view preferences anytime to adapt to changing processes.

### Export a CWM Board to CSV or Microsoft Excel

Extract data of the tasks on a CWM Board into a CSV or Microsoft Excel file so that you can use it to obtain insights, share with stakeholders, and prepare for analysis or presentations.

The exported CSV or Excel file doesn't retain the hierarchy of the CWM tasks from the List view.

### Export a Doc in CWM to a PDF file

Export pages of CWM Docs as PDF files so that you can share documentation across emails to multiple teams or to stakeholders who don’t have access to CWM.

### My Work in CWM

Manage all your assigned work such as CWM tasks, project tasks, RIDAC items, Agile stories, and demand tasks from a consolidated dashboard view with My Work.

- Track overall progress on all work that's assigned to you and quickly identify tasks that are high priority or overdue using different widgets and visualizations in the **Overview** tab.
- View all assigned tasks in a list view from the **List** tab. From this view, you can also navigate to the source item. If a Risk is assigned to you, you can navigate directly to the relevant RIDAC page in Project Workspace for more details.
- Filter the dashboard to show only specific tasks or from a specific date range.

### Duplicate a Board in CWM

Save time by duplicating an existing Board to copy all the task and collaborator details without having to copy the information manually.

- The copied Board is added to the same Space as the original Board.
- The states of all the copied tasks are reset to default in the Board.
- Any custom columns in the original Board are copied to the new Board.

### Duplicate a Doc in CWM

Save time by duplicating an existing Doc to copy all its pages and content without having to copy the information manually. The copied Doc is added to the same Space as the original Doc.

### Add People column users in Board automations

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Board automations to notify and send an email can now include users and groups from the columns of the CWM task. For example, you can create an automation to notify the task assignee whenever a task priority is updated. The users are dynamically picked from the **Assigned to** column of the task. Similarly, a custom column of the type **People** can be used to create such automation.

## Changed in this release

### Share a Space in CWM and manage sharing permissions

While sharing a space with other collaborators, you can now search users and groups by email along with their name. This feature helps you choose the right collaborator in cases where individual users or groups have the same name.

## Activation information

Install Collaborative Work Management by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Related ServiceNow applications and features

### Strategic Planning

Prioritize, roadmap, and track work when using traditional, agile, or hybrid methodologies with ServiceNow® Strategic Planning. Align strategy to execution by defining and tracking goals across your organization. Strategic Planning is available with an SPM Professional license.

### Portfolio Planning

Enhance management of your traditional project and product delivery approach with ServiceNow® Portfolio Planning. Effectively plan, track, and manage work for projects and demands using a centralized workspace. Portfolio Planning is available with an SPM Standard license.

### Goal Framework release notes

The ServiceNow® Goal Framework application enables your business to create goals, set targets for them, and evaluate the progress of the goals and targets to accomplish your organizational plans and drive business outcomes. Goal Framework was enhanced and updated in the Xanadu release.

## Goal Framework highlights for the Xanadu release

Use the enhanced Goal Framework tables for managing your goals and targets.

See Goal Framework for more information.

**Important:**
Goal Framework is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

### Baseline reference on Target form

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The **Baseline reference** field has been added to the Target form. You can use this field to compare future target performance to the actual value achieved either in the last year or before the target was created.

## Changed in this release

### Changes to Target form

- The following fields on the Target form have been renamed:
  - **Review frequency** to **Check-in frequency**
  - **Base value** to **Start value**
  - **Target value** to **Final target value**
  - **Actual value** to **Actuals to date**
  - **Review due date** to **Check-in due date**
- The *Fortnightly* option in the **Check-in frequency** field is no longer supported.

### Goal Framework tables

The maximum number of characters allowed in the **Name** field has been increased from 80 to 255 for the Strategic Plan [sn_gf_strategic_plan], Strategic Priority [sn_gf_strategy], Goal [sn_gf_goal], and Target [sn_gf_goal_target] tables.

## Activation information

Install Goal Framework by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Related ServiceNow applications and features

### Goal management in Strategic Planning

Use the Goal Framework application in the ServiceNow® Strategic Planning application to create goals, set targets for them, and evaluate the progress of the goals and targets to accomplish your organizational plans and drive business outcomes.

### Goal Framework for SPM

Use the ServiceNow® Goal Framework for Strategic Portfolio Management (SPM) application to automate the actual value of your targets for the goals that are defined using Goal Framework. The Goal Framework for SPM application is an extension to the Goal Framework application.

### Project Portfolio Management

ServiceNow® Project Portfolio Management provides a simplified, team-oriented approach to managing project portfolios and IT development by combining several individual applications. In combination with the Goal Framework application, you can create a goal relationship with the Project and Demand work items and the Program strategic item.

### Goal Framework for SPM release notes

The ServiceNow® Goal Framework for Strategic Portfolio Management (SPM) application enables you to automate the actual value of your targets for goals that are defined using the

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

ServiceNow® Goal Framework application. Goal Framework for SPM was enhanced and updated in the Xanadu release.

## Goal Framework for SPM highlights for the Xanadu release

Use the enhanced target breakdown feature to update actuals and track the progress of your targets in daily, weekly, monthly, quarterly, or yearly intervals.

See Goal Framework for SPM for more information.

**Important:**
Goal Framework for SPM is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## Important information for upgrading Goal Framework for SPM to Xanadu

After upgrading to Goal Framework for SPM v2.3.0, run the **Migrate BreakdownInterval To Checkinfrequency** scheduled job. This scheduled job migrates the existing values in the **Review frequency** and **Breakdown interval** fields to the **Check-in frequency** field in the target records. For more information on how these values are migrated for targets with different values, see Target breakdowns migration.

## New in the Xanadu release

### Enhanced target breakdowns

Create Daily, Weekly, or Monthly target breakdowns according to how often you want to update and track the progress of the target. The target breakdowns are created based on the value selected in the **Check-in frequency** field. For example, if you select **Monthly** in the **Check-in frequency** field for a target spanning a year, then 12 monthly target breakdowns are created.

## UI changes

### Changes to Target form

On the Target form, the **Cumulative target** field has been replaced with **Target value distribution field**. The field has two values that describe the target distribution: *Spread linearly across the time period (cumulative)* and *Split equally across the time period (non-cumulative)*.

## Changed in this release

### Changes to Target form

On the Target form, the **Breakdown interval** and **Cumulative target** fields have been removed, and the **Review frequency** field has been renamed to **Check-in frequency**.

## Activation information

Install Goal Framework for SPM by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Related ServiceNow applications and features

### Strategic Planning

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Use the Goal Framework for SPM application in the ServiceNow® Strategic Planning application to visualize the progress of your targets graphically and update the target actuals with ease.

#### Goal Framework

The ServiceNow® Goal Framework application helps you create goals, set targets for them, and evaluate the progress of the goals and targets to accomplish your organizational plans and drive business outcomes.

The Goal Framework for SPM application is an extension to the Goal Framework application. When you install Goal Framework for SPM, you get all the features of Goal Framework along with the target automation feature.

### Microsoft Azure DevOps Integration for Agile Development release notes

The ServiceNow® Microsoft Azure DevOps Integration for Agile Development application enables bidirectional synchronization of records between Azure DevOps and Agile Development 2.0. This application was enhanced and updated in the Xanadu release.

## Microsoft Azure DevOps Integration for Agile Development highlights for the Xanadu release

- View and import data from available Microsoft Azure DevOps projects to Agile Development.
- Avoid duplicating record update entries with the help of bidirectional synchronization of records.
- Plan, track, and update your tasks from a single application.

See Microsoft Azure DevOps Integration for Agile Development for more information.

**Important:**
Microsoft Azure DevOps Integration for Agile Development is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

#### OAuth authentication for integration setup

Enhance security for integrations using OAuth authentication while setting up the integration between Azure DevOps and Agile Development 2.0.

## Activation information

Install Microsoft Azure DevOps Integration for Agile Development by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Related ServiceNow applications and features

#### Agile Development 2.0

ServiceNow Agile Development 2.0 provides an Agile software development environment for product-based or project-based efforts using the Scrum framework. Implement a pure Agile approach over the entire life cycle of a product or a hybrid approach using Agile methods within a traditional project structure.

© 2026 ServiceNow, Inc. All rights reserved.

### Now Assist for Strategic Portfolio Management (SPM) release notes

The ServiceNow® Now Assist for Strategic Portfolio Management (SPM) application introduces generative AI skills into Strategic Portfolio Management. You can summarize feedback or content in Docs, create stories for epics, generate concise project summaries, create demands through conversations, and quickly gain insights into projects. Now Assist for Strategic Portfolio Management (SPM) is updated in the Xanadu release.

## Now Assist for SPM highlights for the Xanadu release

Yokohama Patch 1: Use Now Assist for SPM AI agents to help optimize workflows, improve productivity, and automate your tasks.

- Summarize multiple feedback records with the multi-feedback summarization skill to extract insights from feedback.
- Copy a generated summary and then use it to create a planning or non-planning item.
- Get assistance from Now Assist for writing content in Now Assist Docs. Generate a summary of the selected content by using the Now Assist skill and shorten or elaborate the content as needed.
- Enable the email project summary skill to receive project updates via email.
- Generate a summary of the complete content in Now Assist in Docs using the Gen AI docs skill and save time on manual content analysis.

See Now Assist for Strategic Portfolio Management (SPM) for more information.

## New in the Xanadu release

**Xanadu Patch 7 Using AI agent agentic workflows in Now Assist for Strategic Portfolio Management (SPM)**

Use Now Assist for SPM AI agents to help enhance project efficiency by monitoring your tasks autonomously.

#### Available AI agents use case

| AI agent use case | Description |
|---|---|
| Monitor project tasks | Track project tasks with AI agents to detect important updates such as delayed end dates, status turning red, or state updates. AI agents can help project managers to enhance productivity by delivering real-time visibility into key task changes, enabling proactive decision-making. |

**Summarize multiple feedback records**

Summarize multiple feedback records through generative AI and save time by not having to do manual feedback analysis. You can generate a short summary for one or multiple feedback records at once and use it to make informed decisions on your product.

**Generate a summary in Now Assist in Docs**

Use Now Assist in Docs to create a concise summary of the selected text and quickly gain relevant information.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

### Schedule the project summary emails with Email project summary skill

Generate a comprehensive summary of the entire content in Docs by using the Gen AI Docs skill and reduce the time spent on manually analyzing all the information. The Gen AI Docs skill name is Project Gen AI Docs in Project Workspace, Planning item Gen AI Docs in Strategic Planning, and EAP Teams Gen AI Docs in Enterprise Agile Planning.

### Generate the summary for selected or complete content with Planning item doc summarization skill in Strategic Planning

Set up automated emails by using the email project summary skill to stay updated on the project progress. The email is shared on a weekly, bi-weekly, or monthly cadence.

## Activation information

Now Assist features are available with activation of the Now Assist for Strategic Portfolio Management (SPM) plugin. For more information, see Install Now Assist plugins.

## Additional requirements

The Now Assist for SPM application requires a Strategic Portfolio Management (SPM) Pro plus license. Now Assist for SPM is supported from Xanadu patch 3 release.

## Related ServiceNow applications and features

### Now Assist

Improve the productivity and efficiency in your organization, deliver better self-service, recommend actions, provide answers, and empower your users to search more effectively.

### Now Assist Admin console

The Now Assist Admin console provides you with quick and easy access to the important information that you need to set up, configure, and monitor Now Assist applications and features.

### Now Assist skills

Now Assist products provide generative AI skills that are tailored to meet the needs of users in different workflows, including case or incident summarization, chat summarization, resolution notes generation, and code generation.

#### Portfolio Planning release notes

The ServiceNow® Portfolio Planning application helps you enhance traditional product and portfolio management by visualizing the alignment of work with organizational objectives. Portfolio Planning was enhanced and updated in the Xanadu release.

## Portfolio Planning highlights for the Xanadu release

- Show or hide the features of your portfolio plan so you share only the most important data with your stakeholders.
- Filter the planning items and roadmap bars with multivalue fields, such as tags, business applications, and business capabilities.
- Create scenarios to simulate changes to the portfolio plan, compare scenarios for visualizing trade-off decisions, and approve a scenario to revise the live plan.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Prioritize and roadmap the program [pm_program] items for your organization at a high level by building portfolio plans using the Project Program lens.
- Migrate the budget of your planning items to Next Experience, and as a portfolio manager, compare, allocate, manage, and approve the budget.
- View the cost plans, expense lines, budget, and financial baselines of sub-projects at the parent project level. View the financial performance of a project using the rolled-up planned and actuals costs in the widgets of parent projects.
- Select a primary attribute to populate resource criteria automatically from the resource assignments of the prioritized planning items, and view the team's capacity in the Capacity Planning screen.

See Portfolio Planning for more information.

**Important:**
Portfolio Planning is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

### Show or hide features for your portfolio plan

As a portfolio manager, show or hide the features, such as Prioritization and Roadmap, of your portfolio plan. This capability helps you share only the portfolio plan data that matters to your stakeholders and restrict access to the other data.

### Planning enhancements

- Filter planning items in the Prioritization page and roadmap bars in the Roadmap page with multivalue fields, such as tags, business applications, and business capabilities.
- As a portfolio plan viewer, you can copy a portfolio plan that you don't have edit access to and edit the plan as needed. For more information, see Copy a portfolio plan.

### Optimize planning using scenario planning

- Create scenarios in a simulated environment and adjust the prioritization and timelines of planning items.
- Check the alignment of planning items with goals to verify the delivery of strategic outcomes.
- Visualize trade-off decisions between scenarios by comparing scenarios side by side.
- Approve the best scenario as the live portfolio plan for execution and making informed decisions.

### Export a roadmap or free-form roadmap to PowerPoint

Export a roadmap or free-form roadmap from a portfolio plan into a Microsoft PowerPoint file to share data and collaborate with your business stakeholders. The predefined template helps you generate reports for your roadmap, including roadmap milestones, item milestones, vertical lines, and horizontal lanes.

You can export a roadmap for the maximum tenure of lanes a year at a time. You can also choose between Compact mode, which exports 25 horizontal lanes per slide,

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

or Default mode, which exports 15 horizontal lanes per slide, when exporting your roadmap.

You can select the data that you want to be exported into the report by editing the predefined templates or creating your own branded template. For more information, see Create a Microsoft PowerPoint template.

### Plan at a high level using the Project Program lens

Plan at a high level by building portfolio plans for program [pm_program] items using the Project Program lens. Prioritize the programs and track them using roadmaps.

### Docs for planning items in Portfolio Planning

- Store the information of key artifacts and other details of planning items, such as Demands, Projects, and Epics, directly from within the workspace.
- Create multiple rich-text documents at each planning item level.
  - Help avoid data loss and parallel editing with real-time collaboration.
  - Tag team members to their action items.
  - Insert media and URLs.

### Financials in Portfolio Planning

- Migrate the existing budget for planning items from the classic UI to Next Experience using the **Migrate Budget** option.
- As a portfolio manager, allocate and manage the budget of your planning items using the Budget vs cost view.
- As a project manager, compare a budget to the captured costs of your planning items and reforecast the planned costs to meet the approved budget.
- Compare financial baselines to view simple financials and budgets.
- View the cost plans, expense lines, and financial baselines of sub-projects using the Financial view of a parent project.
- Widgets in the Cost view of parent projects display the rolled-up value of the planned costs, expense lines, budget, and variance.
- Create custom labor cost types and map them with a unique sys_id to generate labor costs.

## UI changes

### Planning UI changes

- The **Copy portfolio plan** option in the Portfolio actions menu has been renamed to **Duplicate portfolio plan**.
- The **Create copy** option in the Row context menu of planning items has been renamed to **Duplicate**.

### Roadmap UI changes

The **Copy roadmap** option in the Roadmap actions menu has been renamed to **Duplicate roadmap**.

### Financials UI changes

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- New **Budget vs. cost** toggle for project managers and product managers to view a comparison of budget and captured costs.
- New **Budget allocation** toggle for portfolio managers to manage the project budget.
- New **Approve budget** button in the budget allocation view for portfolio managers to approve budget changes.
- New grid view to enter and view the budget information at a fiscal period, quarterly, or yearly, and the total breakdowns by Expense Type or Cost Type.
- New **Project/Demand** column in the Cost view to show the mapping of cost plans to projects and sub-projects.

### Capacity Planning UI changes

- New Resource criteria screen.
- New **Auto-select** and **Manual-select** options to select the attributes on the Resource criteria screen.
- New **Prioritized Work Item** category in the bottom tray of the Capacity Planning screen.

## Activation information

Install Portfolio Planning by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Related ServiceNow applications and features

### Strategic Planning

Prioritize, roadmap, and track work when using traditional, agile, or hybrid methodologies with ServiceNow® Strategic Planning. Align strategy to execution by defining and tracking goals across your organization.

### Export to PowerPoint for Strategic Portfolio Management

Edit the predefined templates or create your own branded template with ServiceNow Export to PowerPoint for Strategic Portfolio Management to export roadmap data into the report.

### Project Portfolio Management release notes

The ServiceNow® Project Portfolio Management application enables you to create and manage a wide range of planning items ranging from a few small tasks to large portfolios of projects. Project Portfolio Management was enhanced and updated in the Xanadu release.

## Project Portfolio Management highlights for the Xanadu release

View the New Analytics Time sheet, Analytics User manager, and Analytics Project manager dashboards for time sheet and time card users in Next Experience.

See Project Portfolio Management for more information.

## New in the Xanadu release

### Time Card Management

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Starting with the Xanadu release, new customers can directly access the Analytics Time sheet, Analytics User manager, and Analytics Project manager dashboards in Next Experience.

## UI changes

### Project Portfolio Management

- Renamed **Time Sheet Dashboard** to **Analytics Time sheet**.
- Renamed **User Manager Dashboard** to **Analytics User manager**.
- Renamed **Project Manager Dashboard** to **Analytics Project manager**.

## Changed in this release

### Project Portfolio Management

The new ServiceNow® Project Workspace application provides a more efficient, streamlined way for you to work. For information about how to upgrade, see Project Workspace. Project Portfolio Management is still supported in this release.

## Deprecation information

### Allocation workbench

Allocation workbench is deprecated starting with the Xanadu release. It will be hidden and no longer available for installation but will continue to be supported. For details, see the Deprecation Process [KB0867184] knowledge article in the Now Support Knowledge Base.

Resource managers are encouraged to use Resource Management Workspace to allocate, approve, and manage resource assignments.

### Strategic Planning

Starting with the Xanadu release, Timeline Visualization/CIO Roadmap (com.snc.timeline_visualization) is being prepared for future deprecation. It will be hidden and no longer available for activation but will continue to be supported. For details, see the Deprecation Process [KB0867184] knowledge article in the Now Support Knowledge Base. For the latest experience for this functionality, migrate to the Strategic Planning (SPM Pro) or Portfolio Planning (SPM Standard) application.

### Project Workspace

Starting with the Xanadu release, Classic Project Workspace is being prepared for future deprecation. It will be hidden and no longer available for installation but will continue to be supported. For details, see the Deprecation Process [KB0867184] knowledge article in the Now Support Knowledge Base.

## Activation information

Project Portfolio Management is a ServiceNow AI Platform feature that is active by default.

## Related ServiceNow applications and features

### Project Workspace

See the Project Workspace documentation for more details about using ServiceNow® Workspace in Next Experience.

### Project Workspace release notes

The ServiceNow® Project Workspace application provides an intuitive user experience that enables project managers to plan and manage their projects. Project Workspace was enhanced and updated in the Xanadu release.

## Project Workspace highlights for the Xanadu release

- Migrate your project budget to Next Experience.
- As a Portfolio Manager, allocate, manage, and approve project budgets.
- Compare financial baselines to view simple financials and budget.
- View and track the actuals of each resource assignment with the actuals toggle.

See Project Workspace for more information.

## New in the Xanadu release

### Now Assist in Project Workspace

- Generate a concise summary of selected text on the Docs component using Now Assist.
- Summarize, elaborate, and shorten the selected content on the Docs component using the Project Gen AI Docs skill.
- Set up automated emails using the Email project summary skill to stay updated on project progress. Schedule the day and frequency for the skill to send the generated emails.
- Generate a quick summary on the complete content of the document with Project Gen AI Docs skill and save time on manual content analysis.

### Managing projects with Project Workspace

- Migrate the budget of your projects from Classic UI to Next Experience.
- Allocate and approve the budget of a project using Financials in Next Experience.

### Resource planning with Project Workspace

- Follow the assigned schedule for allocation when a resource has a schedule.
- Allocate users or groups based on the selected effort type when creating an assignment.
- Display allocations inline with the selected effort type.

### Project details page enhancements

- Add stakeholders, extend or confirm a resource plan, and add new resource allocations daily.
- View a status report for the programs and save the project as a template with the **Save as New Template** option.
- Create an Agile phase or a Test phase from the Agile or Hybrid execution type.
- Create or add existing stories to a project, as well as add new epics.
- View the project or project task details from the side panel.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Use the **Open task in new tab** icon ( ) to open a project in a different tab.
- Use the **Full details** link to add work notes and attachments, as well as view related lists of a project or task.

### Financials in Project Workspace

- Migrate existing project budgets from Classic UI to Next Experience using the migrate budget option.
- As a Portfolio Manager, allocate and manage the budget of your projects using the Budget vs cost view.
- As a Project Manager, view the comparison of budgets to captured costs for your planning items.
- Compare financial baselines to view simple financials and budget.
- View the cost plans, expense lines, financial baselines of the subprojects using the Financial view of the parent project.
- Widgets in the Cost view of the parent projects display the rolled up value of the planned costs, expense lines, budget, and variance.
- Create custom labor cost types and map them with unique sys_id to generate labor costs.

### Status reporting in Project Workspace

- Create an overview of the current project status, highlighting key metrics such as health, schedule, scope, cost, and resources, offering a clear snapshot of progress.
- Create a new report with or without using a template. A status report captures important details such as milestones, risks, issues, decisions, actions, and change requests, ensuring comprehensive tracking.
- Use dynamic data tokens, such as Planned End Date, Status Date, and Actual Cost, which automatically pull and update relevant data, making the report accurate and up-to-date.
- Leverage the Docs component to fully customize and configure status reports. Edit and update status reports directly within the Docs component, ensuring they remain accurate and up to date.

## UI changes

### Project Workspace UI changes

- A new **Show actuals** toggle is added in the settings side panel to view actuals in the allocation heatmap.
- A new **Open task in new tab** icon ( ) is added to open the project details in a different window.
- A new **Filter** icon is added to filter projects on the Project Workspace homepage.
- A new **Refresh** icon is added to reload projects on the Project Workspace homepage.
- The **New Project** button is replaced with the **New** button on the Project Workspace homepage.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- A new **Grid view** icon is added to view projects in card format.
- A new **List view** icon is added to view the projects in a list format.
- The **Save as New template** option is added in the more actions menu to save the project as a template.
- The **Copy project** option is renamed to **Duplicate project**.

#### Financials UI changes

- A new **Budget vs. cost** toggle is added for Project Managers to view the comparison between budgets and captured costs.
- A new **Budget allocation** toggle is added for Portfolio Managers to manage a project budget.
- A new **Approve budget** button is added in the budget allocation view for Portfolio Managers to approve budget changes.
- New grid view to enter and view the project budget information at fiscal period, quarter, yearly; and total breakdowns by Expense Type or Cost Type.
- New **Project/Demand** column in the Cost view to show mapping of cost plans to projects and subprojects.

## Deprecations

Starting with Xanadu release, Classic Project Workspace is being prepared for future deprecation. It will be hidden and no longer available for installation but will continue to be supported. For details, see the Deprecation Process [KB0867184] article in the Now Support Knowledge Base.

## Activation information

Install Project Workspace by requesting it from the ServiceNow Store. Starting with the Xanadu release, installing the PPM Standard plugin (com.snc.financial_planning_pmo) also installs the Project Workspace application.

## Related ServiceNow applications and features

#### Portfolio Management

Use a simplified, team-oriented approach to Project Management and IT development by combining several individual applications.

### Resource Management Workspace release notes

The ServiceNow® Resource Management Workspace application provides resource managers with a more efficient way to work with a dedicated workspace to view and manage resource assignments. Resource Management Workspace was enhanced and updated in the Xanadu release.

## Resource Management Workspace highlights for the Xanadu release

- Create resource assignments from Resource Management Workspace.
- Create a resource board by filtering tasks to view assigned resources and manage their allocations based on the priority of the work.
- Split an assigned resource assignment to divide and assign the work to another resource to handle resource allocations.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Identify allocation and status changes to the resource assignment using the new iconography.
- Group resources from a resource board based on Primary Group, Primary Role, Primary Skill, Owner, or Parent Item.

See Resource Management Workspace for more information.

**Important:**
Resource Management Workspace is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

### Resource Management Workspace

View updates to any approved task by using the new iconography. Use the Group By feature to group resources on a board.

### Create a resource card in Resource Management Workspace

Create resource cards in Resource Management Workspace to filter and view resources by primary attributes or project item of work. Use the **Unassigned tasks** toggle to create a custom filter and view the unassigned tasks in the bottom tray.

### Create resource assignments and operation resource assignments in Resource Management Workspace

Resource Managers and Project Managers can directly create resource assignments and operational resource assignments from the resource board view to allocate, and approve the efforts.

### Manage unassigned and assigned tasks

Assign the unassigned tasks from the bottom tray and approve the assigned tasks from the top tray.

### Split resource a assignment, Reassign or unassign the assigned tasks

Split a resource assignment to create a duplicate assignment from a specific date. Resource managers can assign this split work to other resources with the same primary attributes. Reassign the assigned tasks from the primary resource to another resource who has the same primary attributes to manage the primary resource's work load, resource time offs, or to allocate operational work.

## UI changes

### Resource Management Workspace Resource Management Workspace

- New row context menu **Split** option to split work.
- Rephrased the existing **Unassign task** row context menu to **Unassign**.
- Rephrased the existing **Reassign task** row context menu to **Reassign**.
- New options to create resource assignment and operational resource assignment.
- New iconography to identify a status change for the approved tasks.
- New Group by drop-down menu to group the resources based on the available attributes.

## Changed in this release

### Resource Management Workspace

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The new Resource Management Workspace provides a more efficient, streamlined way for you to work. For information about how to upgrade, see Resource Management Workspace. Resource Management classic is still supported in this release.

## Activation information

Install the Resource Management Workspace application by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Related ServiceNow applications and features

### Capacity Planning

Capacity Planning gives you insights about resource availability, allocation details, availability, and operational work assignments. Resource Managers can use this information to approve requested resource assignments and allocate work.

### Scaled Agile Framework (SAFe) release notes

The ServiceNow® Scaled Agile Framework (SAFe) applications help you to manage strategic and operational work all from one place by using lean and agile principles. Various SAFe applications are planned for deprecation in the Xanadu release.

## Deprecations

The following SAFe-related plugins are planned for deprecation and can no longer be deployed for new activation. However, existing users can continue to use them.

- Essential SAFe (com.snc.sdlc.safe)
- Portfolio SAFe (com.snc.sdlc.portfolio_safe)
- Performance Analytics Content Pack for Essential SAFe (com.sn_safe_dashboards)
- Work Progress Status for SAFe (com.sn_safe_progress)
- Agile - Scaled Agile Framework - Unified Backlog (com.snc.sdlc.safe.multi_task)
- Read-only roles for SAFe

For more information on the deprecation process and its impact, see the Application/Plugin Deprecation Process [KB0867184] article in the Now Support Knowledge Base.

As an alternative, you can use the Enterprise Agile Planning (EAP) capability within the Strategic Planning application, which provides SAFe features with flexible team and work hierarchy configurations. With an interactive workspace experience, EAP helps you to streamline communication and collaboration between your teams. For more information, see Enterprise Agile Planning.

### Strategic Planning release notes

The ServiceNow® Strategic Planning application helps you accomplish end-to-end planning using a single workspace. Strategic Planning was enhanced and updated in the Xanadu release.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Strategic Planning highlights for the Xanadu release

- Show or hide the features of your portfolio plan so you share only the most important data with your stakeholders.
- Update actuals and track the progress of your targets in daily, weekly, monthly, quarterly, or yearly intervals with the enhanced target breakdown feature.
- Filter the planning items and roadmap bars with multi-value fields, such as tags, business applications, and business capabilities.
- Create rich-text documents to store and manage artifact information for planning items and Agile teams in EAP.
- Create scenarios to simulate changes to the portfolio plan, compare scenarios for visualizing trade-off decisions, and approve a scenario to revise the live plan.
- View the cost plans, expense lines, budget, and financial baselines of sub-projects at the parent project level. View the financial performance of a project using the rolled-up planned and actuals costs in the widgets of parent projects.
- Select a primary attribute to populate resource criteria automatically from the resource assignments of the prioritized planning items, and view the team's capacity in the Capacity Planning screen.

See Strategic Planning for more information.

**Important:**
Strategic Planning is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## Important information for upgrading Strategic Planning to Xanadu

After upgrading to Strategic Planning v4.3.2, run the **Migrate BreakdownInterval To Checkinfrequency** scheduled job. This scheduled job migrates the existing values in the **Review frequency** and **Breakdown interval** fields to the **Check-in frequency** field in the target records. For more information on how these values are migrated for targets with different values, see Target breakdowns migration.

## New in the Xanadu release

### Show or hide features for your portfolio plan

As a portfolio manager, show or hide the features, such as Goals, Scoring, Prioritization, and Roadmap, of your portfolio plan. This capability helps you share only the portfolio plan data that matters to your stakeholders and restrict access to the other data.

### Goal management enhancements

- Create daily, weekly, or monthly target breakdowns according to how often you want to update and track the progress of the target. The target breakdowns are created based on the value selected in the **Check-in frequency** field. For example, if you select **Monthly** in the **Check-in frequency** field for a target spanning a year, then 12 monthly target breakdowns are created.
- Updating actuals for a target has been simplified with an enhanced UI:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

  - In the Check-in actuals window on the **Progress** tab of the target's side panel, update the actual value of any time period or breakdown.
  - In the **Progress** tab of the target's side panel, view the trend of the target's progress in a line or bar graph. You can also edit the planned target and view the check-in history of the target actuals.
- When creating a target, the **Target breakdown details** section of the Target modal shows the planned target values for each target breakdown in a tabular format, which helps you visualize the final target value spread across the target's time period.
- On the Target form, use the **Baseline reference** field to compare future target performance with the actual value that was achieved in the last year or before the target was created.
- Add targets to a new goal using the **Save and add target** option on the Goal modal. Also, you can use the **Save and add new target** option to add more targets for the goal.
- Run the **Create Goals Demo Data with Target Breakdowns** scheduled job to create demo data with goals and target breakdowns. For more information on this scheduled job, see Create goals demo data with target breakdowns.
- Create a copy of a goal or target using the **Duplicate** option from the row context menu icon ( ⋮ ). For more information, see Create a copy of a goal or target.
- Activity stream is enabled for the targets and goals in the full details record page.

### Planning enhancements

- Filter planning items in the Prioritization page and roadmap bars in the Roadmap page with multi-value fields, such as tags, business applications, and business capabilities.
- In the Child items related list of an EAP planning item, view child items associated with the epic in EAP.
- When you view a portfolio plan, you can copy a portfolio plan that you don't have edit access to and edit the plan as needed. For more information, see Copy a portfolio plan.

### Now Assist in Strategic Planning

- Generate a summary of selected text on Docs using the Planning item Gen AI Docs skill. You can summarize, elaborate, and shorten the selected content on Docs.
- Summarize a large volume of feedback using the multi feedback summarization skill on the Feedback page.
- Create a demand within the Employee Service Management (ESC) portal using the Now Assist conversational catalog creation capability.
- Summarize the complete content of a document with the Planning item Gen AI Docs skill to help save time on manual content analysis.

### Collaborate using Docs in EAP

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Store the information of key artifacts and other details of planning items, such as Epics, Capabilities, and Features, directly from within the workspace.
- Manage team-level documentation for Agile team, ART, Solution Train, and Portfolio.
- Create multiple rich-text documents at each planning item level or Agile team level.
  - Help avoid data loss and parallel editing with real-time collaboration.
  - Tag team members to their action items.
  - Insert media and URLs.

### Docs for planning items in Strategic Planning

- Store the information of key artifacts and other details of planning items, such as Demands, Projects, and Epics, directly from within the workspace.
- Create multiple rich-text documents at each planning item level.
  - Help avoid data loss and parallel editing with real-time collaboration.
  - Tag team members to their action items.
  - Insert media and URLs.

### Migrating from SAFe to EAP

Transition from Scaled Agile Framework (SAFe) applications, such as Essential SAFe and Portfolio SAFe, to EAP. Use the Guided Setup module in the Strategic Planning application to execute your migration step by step.

This migration is intended to be one-time only. Initiating the migration again later while continuing to use SAFe applications with EAP won't carry any changes made to the SAFe records that are already migrated.

### Override the default planning calendar for Agile Teams

For Agile Teams and Agile release trains (ARTs), the **Override planning calendar** field enables team members to change their planning calendar. The updated calendar is automatically applied to any child teams and takes effect at the beginning of the next iteration.

### Persistence of personalization settings for the EAP PI planning board

Personalization of the settings made in the PI planning board for a team type are applied across the workspace according to user, team type, and work item type. For example, settings applied to one ART, such as enabling the Dependencies toggle, Team backlog lane, or compact cards, are applied to all ARTs in the workspace for a user.

### Optimize planning using scenario planning

- Create scenarios in a simulated environment and adjust the prioritization and timelines of planning items.
- Check the alignment of planning items with goals to verify the delivery of strategic outcomes.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Visualize the differences between goal alignment and trade-off decisions between scenarios by comparing scenarios side by side.
- Approve the best scenario as the live portfolio plan for execution and making informed decisions.

### Export goals and targets data to Excel or CSV

Export goals and targets from your portfolio plan into a Microsoft Excel or CSV file to share the data and collaborate with your business stakeholders.

### Export a roadmap or free-form roadmap to PowerPoint

Export a roadmap or free-form roadmap from a portfolio plan into a Microsoft PowerPoint file to share data and collaborate with your business stakeholders. The predefined template helps you generate reports for your roadmap, including roadmap milestones, item milestones, vertical lines, and horizontal lanes.

You can export a roadmap for the maximum tenure of lanes a year at a time. You can also choose between Compact mode, which exports 25 horizontal lanes per slide, or Default mode, which exports 15 horizontal lanes per slide, when exporting your roadmap.

You can select the data that you want to be exported into the report by editing the predefined templates or creating your own branded template. For more information, see Create a Microsoft PowerPoint template.

### Plan at a high level using the Project Program lens

Plan at a high level by building portfolio plans for program [pm_program] items using the Project Program lens. Score and prioritize the programs and track them using roadmaps.

### Feedback enhancements

- Manage the feedback filter card directly from the feedback homepage by sorting, pinning, sharing, updating, or deleting it.
- Allow access to specific users or groups when sharing the feedback filter card, and review the users who have access to it.

## Financials in Strategic Planning

- Migrate the existing planning items budget from the classic UI to Next Experience using the **Migrate Budget** option.
- As a portfolio manager, allocate and manage the budget of your planning items using the Budget vs cost view.
- As a project manager, compare a budget to the captured costs of your planning items and reforecast the planned costs to meet the approved budget.
- Compare financial baselines to view simple financials and budget.
- View the cost plans, expense lines, and financial baselines of sub-projects using the Financial view of a parent project.
- Widgets in the Cost view of parent projects display the rolled-up value of the planned costs, expense lines, budget, and variance.
- Create custom labor cost types and map them with a unique sys_id to generate labor costs.

## Capacity Planning in Strategic Planning

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Select a primary attribute to auto-select the resource criteria based on the planning items in the portfolio.
- Automatically generate resource capacity using a scheduled job at your desired cadence.
- View only prioritized planning items in the bottom tray of the Capacity Planning screen.
- View the total capacity, estimate, and available efforts of a resource using the heatmap view.

## UI changes

### Product feedback UI changes

- The **Share with members or group** field has been removed from the Feedback filter form.
- The **Share** option on the feedback filter card has been removed.
- The Product Feedback icon name is changed to Feedback.
- The most recently created records in Feedback and product idea are displayed on the top.

### EAP reports and dashboards

Improved widget placement in the ART and the Team dashboard pages, which enables you to view more data with less scrolling.

### Goals UI changes

- The **List** tab and **Hierarchy** tab have been moved under the **Goals and targets** tab for a better UI experience while switching between the List and Hierarchy views on the Goals page.
- On the Target form, the **Breakdown interval** and **Cumulative target** fields have been removed. Also, the *Fortnightly* option has been removed from the **Check-in frequency** field.
- On the Target form, the **Cumulative target** field has been replaced with **Target value distribution field**. The field has two values to describe the target distribution: *Spread linearly across the time period (cumulative)* and *Split equally across the time period (non-cumulative)*.
- On the Target form, the following fields form have been renamed:
  - **Review frequency** to **Check-in frequency**
  - **Base value** to **Start value**
  - **Target value** to **Final target value**
  - **Actual value** to **Actuals to date**
  - **Review due date** to **Check-in due date**
- Horizontal lines have been added on the List view to differentiate one set of goals and targets from another.
- Vertical lines have been added on the List view to differentiate the target breakdowns with the goals and targets columns.
- The maximum number of characters allowed in the **Name** field has increased from 80 to 255 for the Goal [sn_gf_goal] and Target [sn_gf_goal_target] tables.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

### Planning UI changes

- The **Copy portfolio plan** option in the Portfolio actions menu has been renamed to **Duplicate portfolio plan**.
- The **Create copy** option in the Row context menu of planning items has been renamed to **Duplicate**.

### Roadmap UI changes

The **Copy roadmap** option in the Roadmap actions menu has been renamed to **Duplicate roadmap**.

### Financials UI changes

- New **Budget vs. cost** toggle for project managers and product managers to view a comparison of budget and captured costs.
- New **Budget allocation** toggle for portfolio managers to manage a project budget.
- New **Approve budget** button in the budget allocation view for portfolio managers to approve budget changes.
- New grid view to enter and view the budget information at a fiscal period, quarterly, or yearly, and the total breakdowns by Expense Type or Cost Type.
- New **Project/Demand** column in the Cost view to show the mapping of cost plans to projects and sub-projects.

### Capacity Planning UI changes

- New Resource criteria screen.
- New **Auto-select** and **Manual-select** options to select the attributes on the Resource criteria screen.
- New **Prioritized Work Item** category in the bottom tray of the Capacity Planning screen.

## Changed in this release

### Break down work from a parent work item

Create child work items directly from the parent record page.

- The **Child items** tab on the work item record page is replaced with the tabs of each associated child item. For example, the full details page of an Epic shows separate tabs for its child work items, capabilities, features, and stories, based on the EAP configuration.
- New button is added to each tab to create work items directly from the parent work item record page.

### Enhancements to the PI planning board in EAP

The PI planning board displays all work assigned to the current Agile structure level as well as its child teams.

### Feedback

The Product Feedback application name is changed to Feedback.

## Activation information

Install Strategic Planning by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Related ServiceNow applications and features

### Export to PowerPoint for Strategic Portfolio Management

Edit the predefined templates or create your own branded template with ServiceNow Export to PowerPoint for Strategic Portfolio Management to export roadmap data into the report.

### Telecommunications, Media, and Technology release notes

ServiceNow® Telecommunications, Media, and Technology has new and updated applications and features in the Xanadu release.

## Telecommunications products and applications

The Telecommunications industry solution includes the following applications:

- Telecommunications Service Management connects your entire telecommunications operations, from network to customer, with one platform to deliver proactive care and maximize the availability and quality of service. It includes the following applications:
  - Service Exchange
  - Proactive Service Experience Workflows
  - Account Lifecycle Events
- Order Management for Telecommunications, Media, and Technology. See Sales Customer Relationship Management release notes.
- Telecommunications Network Inventory

The Technology industry solution includes the following applications:

- Technology Service Management connects your entire technology operations, from network to customer, with one platform to deliver proactive care and maximize the availability and quality of service. It includes the following applications:
  - Service Exchange
  - Proactive Service Experience Workflows
  - Account Lifecycle Events
- Order Management for Telecommunications, Media, and Technology. See Sales Customer Relationship Management release notes.

### Service Exchange release notes

The ServiceNow® Service Exchange application enables providers and consumers to connect and track services directly between instances without having to configure and maintain custom integrations. Service Exchange was enhanced and updated in the Xanadu release.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Service Exchange highlights for the Xanadu release

- Enable providers to adopt new features and provide uninterrupted service to their consumers who have not upgraded.
- Assess entitlements for compatibility before syncing them to consumers.
- Enable consumers to run specific processes such as approvals before synchronizing tasks with their providers.
- Support automated synchronization of configuration data between provider and consumer instances.

See Service Exchange for more information.

**Important:**
Service Exchange is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## Important information for upgrading Service Exchange to Xanadu

- Service Exchange 2.x.x that is being released with the Xanadu release does not support migration of the Service Exchange (Legacy) versions. If you are using a Service Exchange (Legacy) version, before you upgrade to the Xanadu release, you must follow instructions in the Service Exchange for Providers (Legacy) - Migration Utility (KB1499823) article in the Now Support Knowledge Base to migrate your configuration data.
- If you are upgrading from version 1.x.x of Service Exchange, follow the steps listed in Upgrade Guide - Service Exchange for Providers and Consumers application (v2.x.x release - KB1700387) to migrate your Service Exchange applications.
- Due to the introduction of mismatched version support, new entitlements cannot be activated until both the consumers and providers upgrade to the Xanadu release. Older active entitlements will continue to work but new ones cannot be activated.

## New in the Xanadu release

### Service Exchange mismatched version support

Providers and consumers can run different versions of the Service Exchange applications without affecting their ability to exchange data. Providers can adopt new features without coordinating their application upgrades with their consumers.

### Configuration revisions

Providers can develop and deploy new versions or revisions of entitlements with updated functionality to compatible consumers without affecting consumers who have not updated their application. Consumers can therefore use older revisions of entitlements including remote task definitions, remote record producers, and foundation data sync offerings while deploying new revisions.

### Consumer pre-flows

Consumers can control data synchronization with their providers by associating a flow with a Service Exchange remote record producer and run consumer-defined processes, such as approvals, before a task is synchronized to their provider.

### Integration with Sales Customer Relationship Management

Providers can enable customers to quickly order entitled Sales Customer Relationship Management product offerings from their service catalog by publishing them as remote record producers on consumer instances.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Deprecations

- Service Exchange (legacy) application is now deprecated and no longer supported or available for new activation. The Service Exchange for Consumers application provides the latest experience for this functionality.
- Service Exchange for Providers (legacy) application is now deprecated and no longer supported or available for new activation. The Service Exchange for Providers application provides the latest experience for this functionality.

See KB1499823 for details on migrating from the legacy version.

## Activation information

Install Service Exchange by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Related ServiceNow applications and features

### Sales Customer Relationship Management

The Sales Customer Relationship Management applications enable you to manage the product sales life cycle in your organization, including pre-sales opportunities, sales quote generation, order capture, order fulfillment, and post-sales engagement.

### Proactive Service Experience Workflows release notes

The ServiceNow® Proactive Service Experience Workflows helps your technical support teams identify your impacted customers, communicate directly with them, escalate a case if needed, and auto-generate cases for faster issue resolution. Proactive Service Experience Workflows was enhanced and updated in the Xanadu release.

## Proactive Service Experience Workflows highlights for the Xanadu release

- Enable customer service agents to efficiently identify and resolve customer service problems using the Customer Service Problem Management application.
- Enable the operations team to manage and monitor operational data through a centralized analytical dashboard.

See Proactive Service Experience Workflows for more information.

**Important:**
Proactive Service Experience Workflows is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

### Customer Service Problem Management

Manage the entire process of reviewing, diagnosing, and providing a resolution for service problem cases with Customer Service Problem Management.

### Proactive Service Experience Workflows Account 360 Analytics

Better understand your customers, the services sold, and the progress of ongoing customer account tasks through a centralized dashboard.

## Related ServiceNow applications and features

### Field Service Management

The ServiceNow® Field Service Management application helps organizations manage work tasks performed on location. Match tasks to agents based on skills, geographic territory assignments, and available inventory. Agents can record details on assigned tasks like completion status, travel time to jobs, and time spent.

### Incident Management

ServiceNow® Incident Management restores normal service operation while minimizing impact to business operations and maintaining quality. Any user can record an incident and track it through the entire incident life cycle until service is restored and the issue is resolved.

### Change Management

The ServiceNow® Change Management application provides a systematic approach to control the life cycle of all changes, facilitating beneficial changes to be made with minimum disruption to the business operations.

### Process Mining

ServiceNow® Process Mining helps analysts and process owners quickly analyze and optimize their business processes. Create automated business process flows from your data that enable you to monitor and more quickly discover inefficiencies in your processes.

### Account Lifecycle Events release notes

The ServiceNow® Account Lifecycle Events application helps you streamline your onboarding process, define and track objectives and outcomes, identify and mitigate risks, and increase renewal rates. Account Lifecycle Events was enhanced and updated in the Xanadu release.

## Account Lifecycle Events highlights for the Xanadu release

- Improve customer experience with process-based playbooks for onboarding cases.
- View onboarding cases and case tasks on the Customer Service Portal.
- Improve data capture and validation with the Data Import Builder and Data Validation Assist features.
- Define and measure business outcomes with documented success plans to promote value.
- Create customer engagements and monitor their health and evaluate progress.

See Account Lifecycle Events for more information.

**Important:**
Account Lifecycle Events is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## New in the Xanadu release

### Account onboarding playbook

Manage your account onboarding with the Account Lifecycle Events playbook, which contains activity definitions for onboarding workflows that include key details

© 2026 ServiceNow, Inc. All rights reserved.

such as onboarding status and progress, and shares clear instructions on when tasks should be delivered to various stakeholders.

#### Account onboarding home page

Monitor onboarding cases assigned to you, including case tasks, data capture tasks, and associated risks.

#### Data import and validation

- Upload and process multiple files to the staging table simultaneously.
- Use the Data Import Builder to configure data sources and transform maps for importing data.
- Perform field and record level data validations in the Data Validation Assist table. Additionally, 8 pre-configured field level validations are also available with the base system.

#### Recommended actions for account onboarding

Provide guidance and recommended actions to the user based on the context of the current record so agents can take appropriate actions as required. Additionally, agents can use guided decision trees to navigate and troubleshoot the onboarding process.

#### View account onboarding cases in the Consumer Service Portal

View Account Lifecycle Events onboarding case records or case task records on the CSM portal to see details of the Account Lifecycle Events onboarding journey.

#### Improve adoption and reduce attrition with Customer Success

Use the Customer Success feature to engage with your customers, mitigate risks by running success plays, and identify opportunities for expansion and renewals.

- Monitor your success portfolio on the Success landing page. View the status of your current engagements, upcoming renewals, and new engagements.
- View engagement details including success initiatives, success blueprint, and monitor your success cases.
- Create success plays and success blueprints to define manual or automated activities using the workflow launcher.

## Activation information

Install Account Lifecycle Events by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

## Related ServiceNow applications and features

#### Customer Service Management

The Customer Service Management (CSM) application enables you to automate your onboarding and case monitoring processes and provides service agents with visibility into the customer systems and tools that they need to deliver proactive services to your customers.

#### Now Assist for Telecommunications, Media and Technology (TMT) release notes

The ServiceNow® Now Assist for TMT application brings generative AI to Proactive Service Experience Workflows. Improve productivity and efficiency by delivering better self-service,

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

recommending actions, and delivering answers. Now Assist for TMT is a new application in the Xanadu release.

## Now Assist for TMT highlights for the Xanadu release

Xanadu Patch 9

- Monitor engagement health score and provide a trend analysis.
- Monitor risks on a predefined schedule and provide common resolutions.

Xanadu Patch 7: Proactively identify service problems, diagnose, test, and resolve customer issues autonomously using Now Assist for TMT AI agent collection.

- Summarize service problem cases, generate resolution notes, and create test summaries for service-related issues by using Generative AI.
- Determine when the skills for the case summarization and the resolution notes generation are available by adding conditions to the fields on the case record.
- Restrict the availability of the case summarization and resolution notes generation skills by user role.
- Create a template-driven service problem case summarization based on the case state: new, in progress, or resolved.

See Now Assist for Telecommunications, Media and Technology (TMT) for more information.

**Important:**
Now Assist for Telecommunications, Media and Technology (TMT) is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## Now Assist for TMT features

### Xanadu Patch 9

#### Monitor engagement health

Monitor the health score of all engagements, create trend charts, and generate risk signals when a decline is detected.

#### Analyze risk signals and recommend solutions

Retrieve unaddressed risk signals and identify appropriate success plays based on a back-end decision table.

### Xanadu Patch 7

#### Using Telecommunications, Media, and Technology AI agent collection

Use Now Assist for TMT AI agents to troubleshoot and autonomously resolve customer issues.

**Available AI agents use case**

| AI agent use case | Description |
|---|---|
| Test and repair telecom service issues | Use AI agents to handle task requests that require troubleshooting, diagnosis, and resolution of a case task. |

### Xanadu Patch 1

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

**Service Problem Case summarization skill**

Designed to save agents time by condensing the service problem case record to a short summary.

**Resolution notes generation skill**

Enable your agents to generate the resolution information for a service problem case, propose the resolution to the customer, and add the information to the service problem case record through the resolution summarization skill.

**Test summarization skill**

Identify the root cause of a problem diagnosed during the test run by generating a clear and concise root-cause analysis of the service issue through the test summarization skill.

**Now Assist Panel**

Enable your agents to access Now Assist skills in a panel available on CSM/FSM Configurable Workspace. Now Assist is aware of context, so it can summarize the currently viewed record or conversation, or you can specify a case number.

**Now Assist Admin console**

Activate and configure capabilities and individual skills on the Now Assist Admin console. For example, you can designate which roles have access to a skill, or whether the skill is available in CSM/FSM Configurable Workspace, the Now Assist panel, or both.

**Add conditions to skill availability**

Determine when the skills for the case and the resolution notes summarization are available by adding conditions to the fields on the service problem case record.

**Restrict skill availability by user role**

Specify the roles that can access the case summarization and resolution notes summarization skills.

**Minimum text requirement for case summarization**

Enable the case summarization skill for cases that have the minimum amount of information in the case activity stream.

## Activation information

Now Assist features are available with activation of the Now Assist for TMT plugin. For more information, see Install Now Assist plugins.

## Additional requirements

The Now Assist for TMT application requires a Proactive Service Experience Workflows Pro Plus or Enterprise Plus license.

## Related ServiceNow applications and features

**Now Assist**

ServiceNow® Now Assist uses generative AI to enhance user productivity and efficiency through conversation and proactive experiences.

**Now Assist Admin console**

Use the ServiceNow® Now Assist Admin console to provide you with quick and effortless access to the important information that you need to set up, configure, and monitor Now Assist applications and features.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

### Now Assist panel

Use this conversational interface in CSM/FSM Configurable Workspace to summarize a chat, a case, or resolution notes so that you can convey the context of this information more quickly.

### Now Assist skills

Use the Now Assist products to provide generative AI skills to meet the needs of users in different workflows, including case or incident summarization, chat summarization, resolution notes generation, and code generation.

### Telecommunications Network Inventory release notes

The ServiceNow® Telecommunications Network Inventory application enables a network planner to model the physical, logical, or virtual network and perform design and assign services based on those network models. Telecommunications Network Inventory was enhanced and updated in the Xanadu release.

## Telecommunications Network Inventory highlights for the Xanadu release

- Provide a visualization of the circuit and its underlying connection elements with revisions and protection paths on a dedicated canvas.
- Get enhanced rack and cabinet visualization capabilities, including viewing, editing, and updating features, along with new KPIs for better capacity planning and prioritization.
- Archive current configurations while operationalizing a planned revision and compare them with original connections to detect changes.
- Export equipment models and templates along with related hardware to an Excel data source, and import them to another ServiceNow instance.
- TMF conformance for TMF 639 Resource Inventory API.

See Telecommunications Network Inventory for more information.

**Important:**
Telecommunications Network Inventory is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## Important information for upgrading Telecommunications Network Inventory to Xanadu

If you are an existing user of previous releases, both legacy and new product models will be available in the Network Inventory Workspace menu after upgrading to Xanadu. To rectify this issue, you must migrate your legacy product model data to the new product model tables in your current instance. For more details about the procedure, see KB1695167.

## New in the Xanadu release

### Visualization of a rack or cabinet

Gain visibility of your data centers infrastructure through advanced rack and cabinet insights. Edit a rack or cabinet to add, reserve, move, and remove any equipment. This enables you to create equipment from the rack or cabinet view.

### Revise a configuration item

Perform a comparative validation between the revision and the original connections to identify any changes between them.

### Import Models and Templates

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Import the models and templates from an external system via XLS template.

### Visualization of circuits

Provide a visualization of the circuit and its underlying connection elements on a dedicated window. View the revisions and protection paths of a logical connection, and selectively collapse expanded layers instead of collapsing the entire structure.

### Create a cable record by using design and assign

Instantiate cables and associated strands using a cable template.

### Modify a network topology record using design and assign

Modify a network topology for adding or removing the nodes and edges by using a new change model.

### Create capacity function

Identify and prioritize the capacity function by using the category and order attributes. Access the capacity management forms from the Workspace lists view.

### Network Inventory Workspace

View your and your team's work in the new landing page.

## UI changes

### Revise a configuration item

The Validate Revision button is implemented within the revised CI to facilitate comparison with the modified CI (Configuration Item) and revision history tracking of the modified CI.

### Export hierarchy of models and templates

The Export button is added to export the hierarchy and all related records of a model or inventory template.

### Optimizing rack and cabinet usage

Create equipment, edit rack or cabinet, calculate capacity, and perform other actions from the new rack or cabinet visualization.

### Visualization of circuits

The View connection button is introduced to replace the tab-based experience of the circuit diagram in the logical connection record, allowing the diagram to open in a dedicated window.

### Network Inventory Workspace

The Map widget is removed from the Workspace landing page. The Usage metric widget is moved from the Workspace landing page to the Inventory management view.

## Changed in this release

### Visualization of a rack or cabinet

The new rack visualization provides new power, weight, and capacity metrics.

### Creating your inventory models

The legacy product model tables are deprecated and they are migrated to Enterprise product model app.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Activation information

The Telecommunications Network Inventory application is a ServiceNow AI Platform feature that is available with activation of the Network Inventory Advanced plugin (sn_ni_adv). For details, see Install Telecommunications Network Inventory.

## Related ServiceNow applications and features

### Configuration Management Database (CMDB)

With the Configuration Management Database (CMDB) application, build logical representations of assets, services, and the relationships between them that comprises the infrastructure of your organization. Details about these components are stored in the CMDB, which you can use to monitor the following infrastructure, helping promote integrity, stability, and continuous service operation.

### Field Service Management for Telecommunication release notes

The ServiceNow Field Service Management for Telecommunication application enables you to manage the field service workflow for the telecommunication industry. Field Service Management for Telecommunication is a new application in the Xanadu release.

## Field Service Management for Telecommunication highlights for the Xanadu release

Create and manage the appointments for the telecommunication field services.

See Field Service Management for Telecommunications for more information.

**Important:**
Field Service Management for Telecommunication is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

## Field Service Management for Telecommunication features

### Managing the appointments for telecommunication services

Create, reschedule, get, list, and cancel appointments from your system for the connectivity-related field services. You can book an appointment on an existing work order in the Field Service Management application from an external system using Appointment Open APIs.

## Activation information

Telecommunications appointment booking feature is available with activation of the Telecommunications Open API (com.sn_tmf_api), Appointment Booking (com.snc.appointment_booking), Field Service Management (com.snc.work_management), Field Service Management for Telecommunications (com.sn_fsmt), and Telecommunications, Media and Technology Core (com.sn_tmt_core) applications. Install these applications by requesting them from the ServiceNow Store.

## Related ServiceNow applications and features

### Field Service Management

The ServiceNow® Field Service Management application enables you to manage work orders and related tasks, resources, skills, assets, and locations. Use this application to dispatch work order tasks and agents to the customer location for performing any kind of field work, such as install, repair, or maintain equipment.

## Release notes summaries for Xanadu features

Consolidated release notes information for new and updated Xanadu features.

## Learn about specific themes for multiple Xanadu products

In the Xanadu family, ServiceNow® features and products were introduced or updated. Every new or updated feature and product has its own individual release notes topic, which includes information such as upgrade tasks, new features, changed features, browser requirements, and other specifications. These product-specific release notes are listed in Features and changes by product.

To help users look over different classes of information at a glance, each release notes section has its own summary topic. For example, the aggregates all browser requirements for features that were introduced or updated in Xanadu.

### Highlights for all Xanadu features and products

Cumulative release notes summary on highlights of Xanadu features and products.

Review the product highlights to learn what's new in Xanadu.

| Application or feature | Details |
|---|---|
| AI Search | Xanadu Patch 3:<br>• Expand search recall by indexing content from knowledge blocks.<br><br>Xanadu:<br>• Surface information across multiple CMDB tables with NLQ Genius Results.<br>• Increase search precision for Japanese phrases that include nakaguro (中黒, middle dot) characters.<br>• Scroll through multiple Genius Result answer cards in a carousel to select the most actionable answer for your question.<br><br>See AI Search for more information. |
| AIOps LEAP | • Automation feedback and tracking for automation opportunities<br>• Pin Automation Opportunities for ease of analysis<br>• Customize filters for Automation Opportunities and published playbooks.<br>• Customize columns on the Automation Opportunities and published playbooks pages.<br>• Use published LEAP in SOW to resolve a new incident quickly.<br>• Use a value dashboard for performance analysis and enhancement.<br><br>See AIOps Learning Enhanced Automation Playbook (LEAP) for more information. |

| Application or feature | Details |
| --- | --- |
| | See Exploring Workforce Optimization for Customer Service for more information. |
| Workforce Optimization for ITSM | • Use the Workforce Optimization for ITSM Admin Console to configure your application.<br>• Synchronize team calendars and events with Microsoft Outlook.<br>• Benefit from accessibility improvements to create a configurable workspace that supports Web Content Accessibility Guidelines (WCAG) 2.1 Level AA conformance.<br>See Workforce Optimization for ITSM for more information. |
| Workspace | • Add email addresses to recipient fields with more flexibility, including the ability to use international characters, edit email recipient pills, and view concise error messages for invalid or blocked addresses.<br>• Categorize and filter records in the Activity Stream.<br>• Help users access relevant reference search results by applying pre-filtered and removable query parameters to reference lists.<br>See Workspace UI for more information. |
| Zero Copy Connector for ERP | • In Xanadu Patch 3, enabled ODATA integration.<br>• In Xanadu Patch 3, added a monitor to track transactions and their progress.<br>• In Xanadu Patch 1, changed the name of the application from ERP Canvas to ERP Data Hub.<br>• In Xanadu Patch 1, updated the UI to clarify instructions and labels.<br>See ERP Data Hub for more information. |

### Upgrade information for all Xanadu features and products

Cumulative release notes summary on upgrade information for Xanadu features and products.

Before you upgrade to Xanadu, review the upgrade information for any products you may have. Some products require you to complete specific tasks before you upgrade.

| Application or feature | Details |
| --- | --- |
| AI Search | Xanadu Patch 3:<br>• After you upgrade to Xanadu Patch 3 from an earlier release, make knowledge block content searchable by reindexing all your indexed sources that include knowledge articles. For details on reindexing, |

| Application or feature | Details |
| --- | --- |
| | see Perform a full table index or reindex for a single AI Search indexed source or Perform a full table index or reindex for multiple AI Search indexed sources.<br><br>Xanadu:<br><br>After you upgrade to Xanadu from an earlier release, perform the following steps to add the Dashboards, data visualizations, and KPIs navigation tabs to global search results in AI Search for Next Experience:<br><br>1. Update the AI Search for Next Experience ServiceNow Store application to version 4 or later. For update instructions, see Install an update to a ServiceNow Store application.<br>2. Commit the update set provided in the AI Search for Next Experience 4.0 PAR tables update sets (KB1644544) article in the Now Support Knowledge Base. To learn more about update sets, see System update sets. |
| Accounts Payable Operations | If you are upgrading from a previous release, you must configure the reference field in the Tax Code [sn_fin_tax_code] table. The exception engine validates the invoice using the tax code and raises exceptions if necessary. |
| Analytics, Intelligence, and Reporting | If you are upgrading, you can use the Platform Analytics Migration Center to take advantage of a single set of visualizations and unified filters for all data sources. |
| App Engine Studio | Due to a new process for assigning groups in App Engine Management Center (AEMC), ensure you have the same version of the Application Intake plugin installed on each of your instances. |
| Application Vulnerability Response | • For information about the new features of Vulnerability Response, see Vulnerability Response release notes.<br>• For more information about the released versions of the Application Vulnerability Response application as well as the third-party and ServiceNow applications that are compatible with the Xanadu release, see the Vulnerability Response Compatibility Matrix and Release Schema Changes [KB0856498] article in the Now Support Knowledge Base. |
| Assessments and Surveys | Update the Automated Test Framework (ATF) tests, if you're upgrading to Xanadu from any version prior to Utah. In the Utah release, all the buttons on the assessments or surveys cards have been removed. To run ATF tests successfully, the Click the Take Survey button step must be replaced with the Click the Survey card step for all tests that have this step. |
| Business Continuity Management | The relationship tables introduced in the plan records are generated by the *`Update BCP dependencies snapshot`* scheduled job. |

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

| Application or feature | Details |
| --- | --- |
| | After upgrading to the Xanadu release, you can view these tables only after the scheduled job has run or by manually selecting the **Update dependencies** button. |
| Case management for CSM | The customer service manager role [sn_customerservice_manager] includes the approver user role [approver_user]. The approver user role replaces the approval admin role [approval_admin]. Users with the customer service manager role can approve the approval requests that are assigned to them. |
| Cloud Cost Management 8.0.0 | On upgrading to Cloud Cost Management 8.0 version, the new Tag Category **AI Service** is available for Amazon Web Services (AWS), Microsoft Azure, and Google Cloud Platform (GCP) service providers. Because Cloud Cost Management executes the Billing Download job only from the current month onwards, the spend on AI services will be included only for the current month. If you want to view the billing details for the months prior to the current month, you must manually execute the Billing Download job. Once the Billing Download job is executed successfully, you can view the spend data of your AI services. |
| Configuration Management Database (CMDB) | • Before the upgrade to Xanadu, the 'Updated CIs' and 'Updated application services' trend lines in the Recent CI activity and Recent application services activities tiles on the Management view in CMDB Workspace, might not have accurately reflected on changes in your system. After upgrading to Xanadu and to versions 5.5, 6.2, or 7.2 of CMDB Workspace, those trend lines will reflect on the more accurate detection of updated CIs and updated application services.<br>• CMDB Health:<br>If either the *CMDB Health Dashboard - Relationship Compliance Processor* or *CMDB Health Dashboard - Relationship Score Calculation* dashboard job is active, that job is deactivated during the upgrade to Xanadu. After the upgrade is complete, you can reactivate those jobs to resume health reports for CI relationships. The active state of all other CMDB Health dashboard jobs is retained.<br>Any failure threshold for a KPI or metric that is greater than 100,000, is set to 100,000 during upgrade. This upper limit is enforced to avoid excessive processing when a large number of CIs are failing the specified metric tests.<br>• Bookmarks for the CI dashboard no longer work after an upgrade to Xanadu. A `Page not found` error message appears. To see CMDB Health reports for a CI, open the CI form in CMDB Workspace.<br>• The legacy Application Service Dashboard on Core UI isn't supported in the Xanadu release. After upgrading, you can still access that legacy dashboard by using a previously created bookmark. You can also instead access the Application Services |

| Application or feature | Details |
| --- | --- |
| | dashboard in CMDB Workspace from the Application services tile in the Insights view in CMDB Workspace.<br>• The CMDB Integrations Dashboard on Core UI isn't supported in the Xanadu release. After upgrading, you can still access that legacy dashboard by using a previously-created bookmark.<br>• All records that exist in the CMDB Health Result [cmdb_health_result] table before an update to Xanadu Patch 5, are deleted during the upgrade.<br><br>To access a legacy dashboard on an upgraded instance, navigate to **All** > **Self-Service** > **Dashboards** and then search for the dashboard. |
| Data Management | A data management policy record is automatically created for each table that is configured with an archive rule or a table cleaner rule prior to the upgrade. |
| Data Privacy | Licensing changes enable you to install Data Discovery, Data Discovery APIs, Data Anonymization, and Data Privacy APIs without an entitlement, but you must have an entitlement to run a job. |
| Decision tables in Workflow Studio | Workflow Studio is automatically installed on your instance. However, Workflow Studio is a ServiceNow Store application, so to get the latest features, you must update your version manually to the most recent version. As of Washington DC Patch 3, updating Workflow Studio automatically updates all its application dependencies such as Workflow Studio, playbook, and Decision Builder. You can no longer see or update the individual application dependencies of Workflow Studio from the ServiceNow Store or the list of plugins. |
| DevOps Change Velocity | If you are an upgrading customer, you must run the **ReConfigure Bitbucket Server Repositories for PullRequest** job to re-configure your existing Bitbucket Server or Bitbucket Data Center repositories so that pull request records can be imported. You can navigate to **All > System Definition > Scheduled Jobs** to search for this job and run it. |
| Digital End-User Experience | • For information about DEX data migration, see the KB1646364 article in the HI Knowledge Base.<br>• To upgrade your DEX Desktop Assistant, do the following:<br>**1.** Install the latest version of the Desktop Assistant in your instance.<br>**2.** With admin rights, re-install the Desktop Assistant on your local machine even if you have the latest version. |
| External Content Connectors | Beginning with version 2 of the External Content Connectors application, external content connectors implement semantic vector indexing for crawled items. When you upgrade to a version that supports semantic vector indexing, your existing connectors will reindex all previously retrieved items the next time they're visited by a crawl, even if those items' content is unchanged. To force semantic |

| Application or feature | Details |
| --- | --- |
| | vector indexing of your external content items as soon as possible after upgrading, cancel any running crawls, then restart the canceled crawls manually. |
| Field Service Management | Effective March 1, 2025, Google has designated the Places API, Directions API, and Distance Matrix API as Legacy services. The newer versions of these services are Places API (New) and Routes API. You can't enable or generate new API keys for these legacy services. However, you can continue using these services with the existing API keys. If you need to create a new Google API key after March 1, 2025, you must enable the new APIs from Google Console and upgrade to Xanadu Patch 9 version or higher to ensure compatibility. |
| Flows, subflows, and actions in Workflow Studio | After upgrading, users who previously had the fd_read_operations role will now see only basic execution details such as the run state and duration. This restriction prevents users with this role from seeing sensitive information in execution details. To provide read access to all execution details such as input configuration and runtime values, grant the user the new role fd_read_operations_all. |
| Goal Framework for SPM | After upgrading to Goal Framework for SPM v2.3.0, run the **Migrate BreakdownInterval To Checkinfrequency** scheduled job. This scheduled job migrates the existing values in the **Review frequency** and **Breakdown interval** fields to the **Check-in frequency** field in the target records. For more information on how these values are migrated for targets with different values, see Target breakdowns migration. |
| Hardware Asset Management 11.0.0 | After upgrading to Xanadu, you can view both the Core UI Performance Analytics dashboards and the Next Experience Platform Analytics dashboards for Hardware Asset Management.<br>**Note:**<br>While migrating the Core UI Performance Analytics dashboards to the Next Experience Platform Analytics dashboards, auto-migration is disabled by default to avoid duplicate dashboards. |
| ITOM AIOps | Enhance your application service mapping by installing the App Service Extension app from the ServiceNow® Store. |
| ITOM Optimization | Enhance your application service mapping by installing the App Service Extension app from the ServiceNow® Store. |
| ITOM Visibility | For an improved Service Mapping experience, install Service Mapping Plus version 1.13.0 from the ServiceNow® Store.<br>Enhance your application service mapping by installing the App Service Extension app from the ServiceNow® Store. |
| Industrial Process Manager | The Industrial Process Manager application now has a dependency with the Operational Technology Service Management applications, |

| | • Hardware asset management sourcing AI agent<br>• Transfer order creation AI agent<br>• Purchase order creation AI agent |
| Now Assist for Security Operations | For more information about required applications for Now Assist for Vulnerability Response, see Supporting information for Now Assist for Vulnerability Response. For more information about required applications for Now Assist for Security Incident Response, see Supporting information for Now Assist for Security Incident Response.<br><br>The AI Search application must be enabled so that the Recommended Actions skill works for security incidents. To verify AI Search is enabled on your instance, navigate to **All** > **AI Search** > **AI Search Status**. Contact support if the page indicates AI Search is not enabled. |
| Order Management | Features introduced in the Xanadu release aren't supported in earlier releases of Order Management.<br><br>If you're upgrading from Order Management for Telecommunications and Media version 6.0 or earlier:<br>• Starting with the#Washington DC release, the#Monthly Recurring Charges#(MRC) and the#Non-Recurring Charges#(NRC) for product offerings and product attribute characteristics are no longer stored in the product offering data model. Instead, the MRC and NRC are stored in the Pricing data model in price lists and price list lines. If you want to upgrade your pricing information to use price lists after upgrading to#Washington DC, see the#Price Management Plugin (com.sn_csm_pricing) uptake for Telecommunications, Media, and Technology customers upgrading to Washington [KB1585863] article in the Now Support Knowledge Base.<br>• After upgrading to the#Xanadu release, a fix script runs automatically to deactivate certain telecommunications list records that are no longer needed to resume the capture of an unfinished order. For more information on these records and using the former order capture process, see the#Deprecating Telco List for Order Capture [KB1586538] article in the Now Support Knowledge Base.<br><br>If you're an upgrade customer who uses the **contract start date** and **contract end date** fields and has records, you can migrate those records to the latest data model by running the *`Migrate data from deprecated contract fields to new fields on Order and Order Lines`* scheduled job. This scheduled job must be manually executed by navigating to **System Definitions** > **Scheduled Jobs**. For more information on scheduled jobs, see Scheduled jobs. |
| Platform Analytics experience | New customers: The Platform Analytics experience is automatically available on the ServiceNow AI Platform. It offers an intuitive interface to help you better understand and utilize your data. |

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

| Application or feature | Details |
| --- | --- |
| | Upgrading customers: If you are currently using Core UI responsive dashboards, you will continue to have access without any disruption. Consider transitioning to the Platform Analytics experience to take full advantage of the new capabilities. |
| Playbooks in Workflow Studio | After you upgrade to Xanadu, update the Playbooks and Workflow Studio applications in the ServiceNow Store. |
| Product Catalog Management and Pricing Management | If you're using the extension point *sn_csm_pricing.PricingAdjustmentsExtensionPoint* for pricing adjustments, change the default pricing plan (introduced in the November 2024 release) after upgrading. The pricing plan steps for the Configuration Component Price Adjustment and Standard Price Adjustment matrices are not applicable. As pricing admin or manager, remove the steps for these matrices from the default pricing plan.<br>**1.** Navigate to **All** > **Pricing** > **Pricing Plans**.<br>**2.** Select the published Default Pricing Plan.<br>**3.** Select **Copy**.<br>**4.** In the pricing plan copy, go to the Pricing Plan steps related list.<br>**5.** Select the rows for the Apply configuration component adjustments step (Sequence 50) and the Apply contextual adjustments step (Sequence 60) and select **Delete** in the Actions on selected rows menu.<br>**6.** Select **Update**.<br>**7.** Publish the pricing plan copy. |
| Public Sector Digital Services | After the upgrade, certain public sector menus and menu items in CSM Configurable Workspace revert to their original CSM label names. You can relabel these items for public sector use by updating the UX List Categories for Customer and Service Organizations. For more details on relabeling, navigate to **All** > **Constituent Service** > **Administration** > **Guided Setup**, and select **Configurable Workspace for Public Sector Digital Services** > **Customize Workspace Labels Manually**. |
| RPA Hub | Upgrade any of these currently installed Microsoft Software Installers (MSIs) by downloading the RPA applications:<br>• RPA Desktop Design Studio<br>• Attended Robot<br>• Unattended Robot<br>• Unattended Robot Login Agent<br>For more information, see Download the RPA applications from RPA Hub.<br>The following upgrade information is applicable only when you're upgrading from San Diego or Tokyo to Xanadu. |

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

| Application or feature | Details |
| --- | --- |
| | Based on the number of records in the application file table, you could experience a potential delay while upgrading the RPA Hub applications from Tokyo or earlier releases to Xanadu.<br><br>Before upgrading RPA Hub to Xanadu, you must set the value of the *glide.rollback.blacklist.TableParentChange.change* system property to **false**. If this property doesn't exist in the System Property [sys_properties] table, add the property and set its value to false. For more information on how to add a property, see Add a system property.<br><br>After you upgrade to Xanadu, the bot process definitions change to the new structure, which is the bot process configuration.<br><br>Although the bot process configuration doesn't replace the bot process completely, most fields are moved from the bot process to the bot process configuration. If you upgrade to Xanadu without updating the system property value, the tables don't extend the Application File table. To update the table changes manually, see the Restructuring RPA Hub tables to sys_metadata in Utah and beyond release article in the Now Support knowledge base. |
| Security Posture Control | For a complete list of the applications that are required to implement Security Posture Control, see Install Security Posture Control. |
| Service Exchange | • Service Exchange 2.x.x that is being released with the Xanadu release does not support migration of the Service Exchange (Legacy) versions. If you are using a Service Exchange (Legacy) version, before you upgrade to the Xanadu release, you must follow instructions in the Service Exchange for Providers (Legacy) - Migration Utility (KB1499823) article in the Now Support Knowledge Base to migrate your configuration data.<br>• If you are upgrading from version 1.x.x of Service Exchange, follow the steps listed in Upgrade Guide - Service Exchange for Providers and Consumers application (v2.x.x release - KB1700387) to migrate your Service Exchange applications.<br>• Due to the introduction of mismatched version support, new entitlements cannot be activated until both the consumers and providers upgrade to the Xanadu release. Older active entitlements will continue to work but new ones cannot be activated. |
| Service Operations Workspace for ITSM | Ensure that the following applications have compatible upgraded versions:<br>• Service Operations Workspace ITSM Applications application (sn_sow_itsm_cont)<br>• Service Operations Workspace ITOM Applications application (sn_sow_itom_cont) |

© 2026 ServiceNow, Inc. All rights reserved.

| Application or feature | Details |
| --- | --- |
| Subscription Management | Subscription Management version 3.2 is active by default on all instances of the Xanadu release. Update to Subscription Management version 4.0 or later to use the latest features. For more information about updating Subscription Management, see Update an application or plugin. |
| Telecommunications Network Inventory | If you are an existing user of previous releases, both legacy and new product models will be available in the Network Inventory Workspace menu after upgrading to Xanadu. To rectify this issue, you must migrate your legacy product model data to the new product model tables in your current instance. For more details about the procedure, see KB1695167. |
| Third-party Risk Management | If you are a VRM user upgrading to TPRM, when upgrading to Vancouver or later from an earlier release, you must run each upgrade sequentially to ensure that fix scripts run correctly. This means upgrading from Utah to Vancouver, Vancouver to Washington DC, and so on. If the scripts do not run in the correct order, it can result in data inconsistencies, broken functionalities, and conflicts.<br><br>For more information on upgrading from VRM to TPRM, see Third-party Risk Management upgrade information. |
| Vulnerability Response Integration with Claroty CTD | Claroty CTD v5.1 is also supported for the Vulnerability Response Integration with Claroty CTD application. |
| Vulnerability Response integrations | • For more information about the released versions of the Vulnerability Response application as well as the third-party and ServiceNow applications that are compatible with the Xanadu release, see the Vulnerability Response Compatibility Matrix and Release Schema Changes [KB0856498] article in the Now Support Knowledge Base.<br>• For information about the new features of Vulnerability Response, see Vulnerability Response release notes. |
| Workflow Studio | As of Washington DC patch 3, updating Workflow Studio automatically updates all of its application dependencies such as ServiceNow® Workflow Studio, Playbook, and ServiceNow® Decision Builder. You can no longer see or update the individual application dependencies of Workflow Studio from the ServiceNow® Store or the list of plugins. |

### New features and products in Xanadu

Cumulative release notes summary on new Xanadu features and products.

New products were introduced in Xanadu, and additional features were added to existing products.

| | The **Search application** interactive filter now supports the Mobile Platform search application. |
| Advanced Risk | **Create multidimensional entities**<br>Create multidimensional entities by combining two or more entities from different entity classes using the Composite Entity Management application. You can create multidimensional entity classes with a composite entity structure, such as Company \| Department \| Business Process. After defining the composite entity class, you can create composite entity that operates as a standalone entity. This feature enables you to manage risk and compliance workflows at the composite entity level, providing visibility into the combined risk and compliance posture.<br>**Note:**<br>Composite entity classes can be created in both the classic UI and the Risk Workspace. The creation of composite entities is supported only in Risk Workspace.<br>**Assess multiple risks and controls simultaneously**<br>Create a risk assessment project to perform bulk assessments on multiple risks and controls, enabling assessors to evaluate them in a single project. This approach reduces time and effort, confirms consistency across multiple assessments, and provides a more comprehensive view of risks and controls within the same project. You can scope multiple risks related to the assessable entity within the project and perform assessments.<br>**Note:**<br>Assessment of multiple risks and controls is supported only in Risk Workspace.<br>**Addition of new roles**<br>The following roles related to risk assessment project were added:<br>• Risk assessment project reader [sn_risk_advanced.risk_asmt_project_reader]: Provides read only access to the risk assessment projects.<br>• Risk assessment project user [sn_risk_advanced.risk_asmt_project_user]: Provides the ability to create risk assessment projects and update or delete only the projects created by the user.<br>• Risk assessment project manager [sn_risk_advanced.risk_asmt_project_manager]: Provides the ability to create, update, and delete any risk assessment projects. |

This separation facilitates the extension of the retention period of certification policy records, as follows:<br>○ The table cleanup rule for table CMDB Data Management Policy Executions [cmdb_data_management_policy_execution], which is stored in the Auto Flushes [sys_auto_flush] table, now excludes certification policy execution records from recurring cleanups.<br>Retaining certification policy execution records instead of deleting them after 7 days is useful in situations where those records are needed for audits and are also useful for the Data Certification Dashboard, which is populated by these records.<br>○ The Archive CMDB Data Management Tasks archive rule, that applied to all CMDB Data Manager policy execution records, now excludes certification policy records. At each archive run, this archive rule is configured to also automatically archive its related records in table CMDB Data Management Certification Task To Document [sn_cmdb_ws_dm_certification_task_to_document] (Archive Related Records).<br>○ The archive rule, Archive Certification Instances, is added to specifically archive certification policy execution records from the CMDB Data Management Policy Execution [cmdb_data_management_policy_execution] table. This new archive rule is configured to archive certification policy execution records 2 years after creation, and to destroy those records 7 years after they are archived.<br>○ The archive rule, Archive Certification tasks, is added to specifically archive certification task records from the CMDB Data Management Task [cmdb_data_management_task table].<br>○ The archival of related records in table CMDB Data Management Certification Task To Document [sn_cmdb_ws_dm_certification_task_to_document] is now moved as an Archive Related Records entry from the Archive CMDB Data Management Tasks archive rule to the new Archive Certification tasks archive rule. |

| Enterprise Architecture (formerly Application Portfolio Management) | **Exploring Enterprise Modeling and Visualization in the EA Workspace**<br>Use the Enterprise Modeling and Visualization functionality in Enterprise Architecture Workspace to create diagrams for your applications hierarchy. You can associate the diagrams with architectural artifacts and plan the future state modeling of your IT with alignment to the business. Creating modeling diagrams can you help your stakeholders to understand the complexities of the organization. Perform the following tasks using the Enterprise Modeling and Visualization:<br>• Create and update modeling diagrams using the General, Enterprise Architecture, and ArchiMate shapes.<br>• Create diagrams from the Business Application view using the Create diagram menu option.<br>• Create diagrams for Business hierarchy map and Business capability maps from the Enterprise Modeling and Visualization page.<br>• Apply colors to business capability shapes in the capability hierarchy map.<br>• Add related records to a shape. Add CI relationship or Reference type relationship.<br>• Synchronize shapes, relationships, and entire diagrams to the repository.<br>• Select an architectural category while creating a diagram.<br>• Share your diagrams with the other users or groups and define their access levels for the diagram.<br>• Leverage a workflow to get approval for the diagrams, and to enable committing the diagram to the database.<br>• Configure access for Enterprise Modeling and Visualization menu items for roles, users, and groups.<br>• Initiate modeling in the Enterprise Modeling and Visualization directly from any Unified map.<br>**Technology Portfolio**<br>The Technology Portfolio section has been restructured and new features have been added. The section now contains the following pages:<br>• TRM catalog<br>• Technical debt<br>• TPM lifecycles<br>• TPM risk<br>• Technology portfolio audit |

### Xanadu Patch 3

#### Risk rating explanation for a change request

Provide your change managers with a better understanding of the risk rating of a change request, including the potential impacts and risks, by generating the risk explanation by using the Now Assist icon. The risk rating explanation can be generated on the change request form and in the Now Assist panel.

#### Ask questions about an incident by using the Now Assist panel

Enable your agents to quickly obtain common incident information conversationally within the incident record by asking questions in the Now Assist panel. Topics include the caller's assets, caller's recent incidents, on-call experts, and similar resolved incidents.

#### Enhanced incident resolution notes using the Now Assist context menu

Provide your agents with enhanced resolution notes information in the incident summary, including the root cause and steps taken to resolve the issue, by using the Now Assist context menu.

#### Proactive actionable ITSM Virtual Agent notifications

Provide your agents with proactive actionable notifications as part of ITSM Virtual Agent pre-built Large Language Model (LLM) topic conversations that are designed to help your users complete common IT-related tasks.

| | • Enable agents to specify a customer location in the product catalog and display only the eligible products for that location when they're adding products to opportunities.<br>• Copy products (line items) to other customer locations within the same opportunity.<br><br>**Sync quote and opportunity**<br><br>• Establish a synhronisation between quote and opportunity to ensure that values across Opportunity-Quote, and Opportunity Line items-Quote Line items are consistent. This synchronisation allows changes to automatically copy into the opportunity record.<br>• Track revenue from an opportunity accurately by keeping opportunities and quotes in synchronisation.<br><br>**Subscription revenue metrics**<br><br>Provide system-calculated recurring and one-time revenue amounts for product and service subscriptions for opportunities. These amounts help sales agents and managers to gain visibility into revenue metrics and recurring revenue dynamics. |
| Opportunity Marketplace | **Explore Opportunity Marketplace (OPM)**<br><br>Opportunity Marketplace originally had a single opportunity type, Internal jobs. In the Xanadu release there are three additional opportunity types Projects, Gigs, and Volunteer. These opportunity types differ from traditional opportunities in that they’re temporary for a fixed duration. The duration can be short-term or long-term, but not permanent.<br><br>**Introduced the opportunity owner persona**<br><br>The Opportunity owner is the leader or host of the opportunity. Owners can create and publish opportunities to the marketplace for employees to view and apply to. Additionally, Opportunity owners can manage and view status updates to their opportunities from the **Opportunities you own** dashboard.<br><br>Owners use the detail pages to review and select applicants. Applicants are employees who have applied for an opportunity. The applicant review experience includes match scores based on how well an employee meets the skills and criteria specified for the role.<br><br>**Enhanced opportunities browsing**<br><br>Employees can search and browse opportunities that match their preferences and skills from the **Other opportunities** page.<br><br>**Enhanced detail views of opportunities and roles** |

| | ensure that the user's needs are fulfilled quickly and efficiently. |
| Service Portal | **Deactivate portals**<br>Turn off access to a portal that you don't want users to visit and redirect them to another portal. |
| Service Portfolio Management | **Set the time zone for availability results in Service Portfolio Management**<br>Set the availability system property [com.snc.availability.v2] to true so you can set the time zone that you want to calculate availability results. The Availability calculations settings page provides you with the choice to calculate availability using the service offering commitment time zone (yes or no). It also provides you with the option to set the global availability time zone by selecting a time zone from a provided list. After you select **Yes** to calculate availability with the commitment time zone, the **Time zone** field on the commitment record is used to calculate the availability results. The **Time zone** field on the availability record is read only. After you opt to set the global time zone, all the availability results will use the time zone that you set as global.<br>**Note:**<br>The underlying system properties that govern the global time zone and the commitment time zone are exclusive. You can set the global time zone or set the time zone to reflect a service offering commitment but you can't set both at the same time.<br>**Assign multiple teams to support a service offering in Service Portfolio Management**<br>Use the added Teams related list in service offerings to assign different group types to support a service offering. The related list functionality is an existing platform feature that was added to the Service Portfolio Management application so you can see the related support teams in the Digital Portfolio Management view. For more information on the platform feature, see Teams related list. |
| Service Reliability Management | **Service Reliability Management and Service Level Objective Management**<br>Explore the Service Reliability Management and Service Level Objective Management pages in the Service Operations Workspace. |

| | Fulfillers can use the enhanced **Edit a purchase** option to edit the service date, delivery date, delivery address, and quantity on purchase requisition lines and purchase order lines. For more information, see Edit a purchase order line. |
| | **Purchasing from punchout or third-party suppliers** |
| | Shoppers can search for all the products, including those from external suppliers, directly within Shopping Hub. The configuration of the Search API, Order API, and Product Details API determines whether shoppers can complete their purchases directly in Shopping Hub or are redirected to external supplier websites. Products from third-party suppliers with configured Order API and Product details API can be viewed, added to cart, and purchased from within Shopping Hub. For suppliers without this configuration, a notification appears, redirecting shoppers to the supplier's external site to add items to the cart and place the order. The shopper is subsequently redirected to Shopping Hub where they can continue with the checkout process. For more information, see Configure punchout for third-party site purchases. |
| | **Configure punchout for third-party site purchases** |
| | Set up cXML and API connections through a configuration framework to enable your shoppers to use AI search within Shopping Hub, enabling them to browse both third-party and native catalog items. |
| | **Process visibility** |
| | Render end-to-end process visibility in Shopping Hub so that your shoppers have transparency into the procurement process after they submit a request. You can also configure this feature to meet your own business processes. For example, you can use a default content and configuration framework to modify and edit your own content.<br>• Configure end-to-end process visibility through a configuration framework that enables administrators to define and modify steps, and the work that is within each step. You can also sequence and change labels to promote flexibility and alignment with your business processes.<br>• Provide your shoppers with the following end-to-end visibility on sourcing requests, purchase requisitions, and purchase orders in Shopping Hub:<br>  ○ Progress of the requests and expected completion timelines.<br>  ○ Step dependencies and progress of the sequential and concurrent steps.<br>  ○ Completed, current, and future steps, enabling oversight of the status of the work within steps. |

| Application or feature | Details |
| --- | --- |
| | **Changed scoped classes in the ServiceNow store** |

| Application | App version | Class | Methods |
| --- | --- | --- | --- |
| Lead to Cash Core | V1.3.1 | LeadtoCashCore - Scoped | The LeadtoCashCore script include is enhanced to support reconfiguration use cases:<br>• createInstance() - Returns `_state` identifying whether the entity record is in an active or inactive state.<br>• delta() - `additionalParams` now supports the ability to ignore attributes to compare in source and dirtyJSONs.<br>• effect() - `additionalParams` now supports the ability to provide context variable keys instead of dictionary field names. Additionally, effect() returns the `_state` parameter identifying whether the entity record is in an active or inactive state. |
| Lead to Cash Core | V2.0.0 | LeadtoCashCore - Scoped | `commitInstance()` now returns the dataObject object which displays the status of an asynchronous transaction for users to review and submit the transaction for further fulfillment. |

| Access Management | **Deny-Unless condition for ACLs** |

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

| Application or feature | Details |
| --- | --- |
| | A new decision type field helps administrators define the conditions that give or deny users access to data. It enables more granular decision-making while defining the right access strategy on the platform.<br>**Enhanced ACL Security**<br>If an ACL is misconfigured or empty, you can deny access to data by default, enhancing the overall security of the platform.<br>**ACL Query Behavior**<br>Fine-tune your access control by dictating rules for querying data with the introduction of new operators: query match and query range.<br>**>Explicit Roles behavior adjustment**<br>When the system property `glide.security.explicit_roles.do_not_fix` is true, the **snc_internal** role is no longer added in memory or to the User Roles [sys_user_has_role] table. |
| Accounts Payable Operations | **APO landing page**<br>Task owners can view and handle invoice tasks more efficiently using task filters, widgets and bar charts in the Accounts Payable Operations workspace.<br>**Accounts Payable Operations integration framework**<br>Updated invoice integration using tax fields enables you to process invoices more quickly. |
| Adoption Services | Use the new Guided Setup player process backend powered by the Playbooks backend. App development team admins that create Guided Setups for their products now have all capabilities that are part of the Playbooks. This change creates a similar Guided Setup player experience with new visual enhancements to the UI.<br>**Create a guided setup**<br>Use the new capabilities offered with the Playbooks (PAD) backend to define the activities that PAD can support in addition to the existing activities of the Guided Setup builder. For example, you can use Conditional Flow, which would be introduced in the Guided Setup flow. |
| Advanced AI Search Management Tools | **AI Search Analytics dashboard**<br>The **Date range** interactive filter now allows you to access data from the last 180 days, rather than the last 90 days. |
| Agent Client Collector | **Use the updated Windows event check**<br>Starting in version 3.12.0, the Windows event check `os.windows.check-event-log` has been renamed `os.windows.check-event-log-count` and has enhanced data gathering capabilities. |

| Application or feature | Details |
| --- | --- |
| | **Updated plugin dependency**<br>Starting in version 4.1.0, the Service Error Management plugin is dependent on the ACC-F scoped app. The plugin gets installed automatically when the customer installs the ACC-F scoped app from the ServiceNow store.<br>**New allow list parameter for checks running in shell execution mode**<br>Starting in version 4.1.0, when running a check in with execution mode (*Exec Mode*) set to **shell**, add the *allow_shell* parameter and set it to **true** for the allow list entry corresponding to the check. |
| Agent Workspace for HR Case Management | **Reflow for configurable workspace**<br>The Agent Workspace for HR Case Management configurable workspace supports reflow, which enables pages and content to be zoomed up to 400% through your browser settings without loss of content or functionality. For information about how to upgrade, see the #unique_256_Connect_42_hr-aws-rn-accessibility that follows. |
| Agent experience for CSM | **Email enhancements**<br>The Compose Email modeless dialog includes the following enhancements:<br>• A collapsible header that includes the **To**, **Cc**, **Bcc**, and **Subject** fields.<br>• Icons in the footer that enable you to discard the current email draft, apply a template, view a list of recent email drafts, and add attachments.<br>• Compose Email modeless dialog that you can open to see the last saved email draft. |
| Audit Management | **Domain separation and Audit Management**<br>Changes are made to the domain assignment process to manage data segregation by the Managed Service Providers related to the objects in Audit Management and Advanced Audit.<br>**Role change for users approving workflows**<br>Approvers for an engagement and audit plan can also use the Audit approver (sn_audit.approver) role as a lite operator role to approve audit workflows. |
| Authentication | **Multi-factor Authentication (MFA)**<br>Use the FIDO2 authenticator, passkeys, biometric authenticators, and hardware security keys as multi-factor authentication (MFA) factors without requiring an authenticator app setup. |

| Application or feature | Details |
| --- | --- |
| Business Continuity Management | **Element definitions and variables**<br>You can now add a Windows server asset in the Windows server element definition or a Linux server asset in the Linux server element definition. However, you can't add the Windows server asset or the Linux server asset in the filter of the Hardware element definition. |
| Case management for CSM | **Case type selector configuration**<br>Configure the Product Service select version of the case type selector to hide the product filter.<br>**Roles included with the customer service manager role**<br>The customer service manager role [sn_customerservice_manager] includes the approver user role [approver_user]. For upgrade customers, the approver user role replaces the approval admin role [approval_admin]. Users with the customer service manager role can approve the approval requests that are assigned to them.<br>**Process Mining**<br>Added different variants of the two enhanced types of base system opportunities that you can use on a project to identify and address common inefficiencies in customer operations:<br>• Rule-based finding definitions: Execute one or more finding rule chains in sequence according to the definitions. The records that match the logic of these specifications are classified as a match for improvement opportunities.<br>• Automated finding definitions: Show improvement opportunities by using the default patterns that are already available for selection. |
| Collaborative Work Management | **Share a Space in CWM and manage sharing permissions**<br>While sharing a space with other collaborators, you can now search users and groups by email along with their name. This feature helps you choose the right collaborator in cases where individual users or groups have the same name. |
| Compliance Case Management | A new graphical chart enables your compliance case managers to monitor and access their compliance cases by the subtype classification. |
| Configuration Compliance | **Test result and remediation task state transitions**<br>Enhancements to policy audits for Security Posture Control verify that retired assets are not evaluated by activated policies. If the state of an asset transitions from |

| Application or feature | Details |
| --- | --- |
| | **Retired** back to **Active**, it is included in the next policy evaluation.<br>**Non-zero risk score for passed test results**<br>The risk score is calculated for passed test results to determine how much risk is mitigated.<br>**Deprecated the privilege to delete a test result for the Admin role**<br>As an admin with the sn_vulc.admin role, you can't delete a test result. This privilege is now given to the sn_vulc.delete granular role.<br>**Updates to the Risk Score calculation for a Remediation Task**<br>The average risk score of all the test results in a Remediation Task is considered for the risk score calculation of a Remediation task. |
| Configuration Management Database (CMDB) | **Access changes for the sn_cmdb_editor and sn_cmdb_admin user roles**<br>• Starting with Xanadu Patch 9 (zbooted or upgraded), access has been reduced for the sn_cmdb_editor (CMDB Editor) and the sn_cmdb_admin (CMDB Admin) user roles which are used in CMDB Workspace. The sn_cmdb_editor and sn_cmdb_admin user roles no longer have create, update, or delete access to records in the Configuration Item [cmdb_ci] class.<br>• Starting with Xanadu Patch 10 (zbooted or upgraded), you must manually run the scheduled job '*Remove CMDB Roles from ITIL roles and Add CUD access to sn_cmdb_admin/ sn_cmdb_editor roles* to configure the sn_cmdb_admin and the sn_cmdb_editor user roles with the permissions that are necessary for performing some CMDB Workspace tasks.<br>This scheduled job modifies user roles as follows:<br>○ Updates the itil user role to no longer contain the sn_cmdb_editor user role, and updates the itil_admin user role to no longer contain the sn_cmdb_admin user role.<br>○ If those permissions don't exist, updates the sn_cmdb_admin and the sn_cmdb_editor user roles with create, update, and delete access to the Configuration Item [cmdb_ci] class. For more information about the 'Remove CMDB Roles from ITIL roles and Add CUD access to sn_cmdb_admin/ sn_cmdb_editor roles' scheduled job, see Remove sn_cmdb_admin from itil_admin and sn_cmdb_editor from itil, and then add create/update/delete access to cmdb_ci table for sn_cmdb_admin / sn_cmdb_editor [KB2290506]. |

| Application or feature | Details |
| --- | --- |
| | • Limit the performance impact of some of the CMDB and CSDM metrics such as the *CIs Processed via IRE* and *Business Application with Application Service Relationship* by adjusting the settings for triggering the system to automatically deactivate those metrics.<br>• Identify current and non-current metric data by viewing the *Updated* column in the list views of CMDB.<br>• Access the CSDM Data Foundations dashboard from the Management view in CMDB Workspace.<br><br>**Select a parent class in an IRE identification rule**<br>Avoid the unnecessary creation of a duplicate CI by setting the **Search On Table** field in an identification rule to one of the parent classes of the current class. When Identification and Reconciliation (IRE) identifies a CI in a parent class that matches a CI in the payload, IRE updates that CI with the details from the payload without creating a duplicate CI.<br><br>**Improved migration and ongoing sync of CSDM life-cycle data**<br>The one-time operation aligns CSDM life-cycle values in asset and CI tables. After the initial alignment, business rules can run on regular schedules to ensure that life-cycle values for the asset, CI, and IBI tables remain aligned. Using standard life-cycle values significantly improves data accuracy to help optimize value for many ServiceNow AI Platform applications.<br><br>**Application Services dashboard**<br>Internal queries on the Application Services dashboard that filters for application services now checks not only for all the records in the Application Service [cmdb_ci_service_auto] class, but for those records in which the value of *Service classification* is **Application Service**. |
| Container Vulnerability Response | **Deprecated the privilege to delete a container vulnerable item for the Admin role**<br>As an admin with the sn_vul.vulnerability_admin role, you can't delete a container vulnerable item. This privilege is now given to the sn_vul.delete granular role. |
| Continuous Authorization and Monitoring | **Role changes for Continuous Authorization and Monitoring Workspace users**<br>Reader (sn_irm_cont_auth.reader), Authorization Official (sn_irm_cont_auth.authorization_official), and Executive Reader (sn_irm_cont_auth.executive_read) can now access Continuous Authorization and Monitoring Workspace.<br><br>**OSCAL Catalog model export** |
