### Review and assign your DLP incidents

Providing a closure code when closing a DLP incident from the DLP IR analyst workspace is now mandatory.

### DLP Incident Response Administration

Adding users and groups is now accomplished through related lists rather than adding users from the respective configurations in the following Administration modules:

- DLP Default Configuration
- DLP Assignment Rules
- DLP Response Due Date Rules
- DLP Incident Assessment
- DLP User Instructions Templates
- DLP Record Level Restrictions
- DLP Field Level Restrictions

### Install and configure the Netskope DLP integration for Data Loss Prevention

The Netskope integration now supports DLP incident ingestion.

### Data Loss Prevention Incident Response Incident Management

View the forensic details of DLP Incidents in both the DLP IR Analyst workspace and DLP End user workspace.

| Application or feature | Details |
| --- | --- |
| | The privilege to delete the source records has been deprecated for the sn_vul.admin and sn_vul.admin_solutions roles. This privilege is given to the sn_vul_cmn.delete granular role. |
| Vulnerability Response Integration with Claroty CTD | **Updates made for Claroty CTD v5.1**<br>The following updates were made to support Claroty CTD v5.1:<br>• There's no limit now on the number of Common Vulnerabilities and Exposures (CVEs) that you can import.<br>• The **Minimum CVSS Score** field was replaced with the **CVSS V3 Score** field. |
| Workflow Studio | **Update Workflow Studio and all its dependencies**<br>As of Washington DC patch 3, updating Workflow Studio automatically updates all of its application dependencies such as Workflow Studio, Playbook, and Decision Builder. You can no longer see or update the individual application dependencies of Workflow Studio from the ServiceNow Store or the list of plugins. |
| Workforce Optimization for Customer Service CSM | **Reflow for Configurable Workspace**<br>Dispatcher Workspace and Workforce Optimization for Field Service support reflow that enables pages and content to be zoomed up to 400% through your browser settings without loss of content or functionality. For more information, see the Accessibility information section that follows. |
| Workforce Optimization for ITSM | **Reflow for configurable workspace**<br>Workforce Optimization for ITSM configurable workspace supports reflow, which enables pages and content to be zoomed up to 400% through your browser settings without loss of content or functionality. For information about how to upgrade, see the Accessibility information section that follows.<br>**Renaming a published schedule**<br>You can edit the name of a schedule after it is published. |

### Removed features and products in Xanadu

Cumulative release notes summary on features that were removed from Xanadu features and products.

Some features were removed as part of Xanadu product updates.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

| Application or feature | Details |
| --- | --- |
| Application Vulnerability Response | The **Close** button has been removed for a remediation task in the classic UI, Vulnerability Manager Workspace, and IT Remediation Workspace. |
| Configuration Compliance | • The **Reason** field in the Resolve modal has been removed for a remediation task in the classic UI, Vulnerability Manager Workspace, and IT Remediation Workspace.<br>• The **Close** button has been removed for a remediation task, in the classic UI, Vulnerability Manager Workspace, and IT Remediation Workspace. |
| Configuration Management Database (CMDB) | • CMDB Health:<br>  ○ The CMDB Health Dashboard on Core UI isn't included in new Xanadu instances. On upgraded instances, this dashboard is available but no longer supported.<br>  ○ The CI dashboard isn't included in new Xanadu instances. On upgraded instances, this dashboard is available but no longer supported.<br>  ○ The following widgets have been removed from the CI Health tile in the CMDB Workspace: Incomplete Attributes vs Total Attributes, Non-compliant relationships vs Total Relationships, and Stale relationships vs Total Relationships widgets.<br>  ○ The concept of the overall health score has been removed and no longer appears in any of the CMDB Health dashboards or views.<br>  ○ The concept of weighted averages and scorecards thresholds, which specify the ranges of health states, has been removed.<br>  ○ The bar charts for metrics in the main CMDB Health Dashboard have been removed, as well as the tiles for top 10 incident, alert, and change generators.<br>  ○ The *`CMDB Health Dashboard - Top Task Generating CIs Calculation`* scheduled job has been removed.<br>• CSDM and the CMDB Data Foundations Dashboards:<br>  ○ When drilling down into the CIs Not Processed Via IRE in the Data Management Practices metric group, the **Show Records** button isn't supported.<br>  ○ When drilling down into the Orphan CIs metric, only a list view of orphan CIs appears without any Performance Analytics details. |
| Container Vulnerability Response | The **Close** button has been removed for a remediation task in the classic UI, Vulnerability Manager Workspace, and IT Remediation Workspace. |

| Application or feature | Details |
| --- | --- |
| Continuous Authorization and Monitoring | • The Authorization Official (AO) (sn_irm_cont_auth.authorization_official) role no longer contains the sn_audit.user and sn_compliance.user roles. The AO role can only read and approve an authorization package.<br>• The Information System Security Officer (sn_irm_cont_auth.info_system_sec_officer) role no longer contains the sn_audit.user role.<br>• The Reader (sn_irm_cont_auth.reader) role no longer contains the sn_audit.user role. |
| Document Intelligence | Starting in the Xanadu release, the Platform Document Intelligence Usage dashboard is no longer supported or available through the Document Intelligence application. Performance metrics are available in the Document Intelligence Admin experience. For more information, see Document Intelligence monitoring dashboard. |
| Employee Center | The Content Publishing and Content Experiences demo portals have been removed. |
| Event Management | The Event Management Mobile application is no longer available. |
| Field Service Management | The Field Service dashboard is removed from the Emergency Exposure Management application. |
| Financial Services Card Operations | • Moved the reason code for Late Presentment from the processing error decision question to the authorization category.<br>• Updated the 12.1 chargeback rules to 11.3, aligning with VROL's latest release revision 24.2.<br>• Removed the **is_parcelado** column from the dispute intake table, in alignment with VROL's latest release revision 24.2. |
| Flows, subflows, and actions in Workflow Studio | • Removed the system property com.snc.process_flow.reporting.iteration.lastn that was used to specify the number of loop iterations that a flow would generate execution details for. To report on all iterations of a loop, create a flow execution settings record for the flow instead. For more information about flow execution settings, see Flow execution settings.<br>• The user preference for flow authors to include draft actions in the list of available actions has been removed. To see a custom action during flow design, publish the action. For more information, see Create an action in Workflow Studio. |

| Application or feature | Details |
| --- | --- |
| Integration Hub | • The Legacy Usage Overview dashboard is deprecated. This feature is no longer deployed, enhanced, or supported. For details, see the Deprecation Process [KB0867184] article in the Now Support Knowledge Base. |
| Next Experience Developer (NED) Tools | • The Actions tab has been removed from the Next Experience Inspector. |
| Now Assist for IT Operations Management (ITOM) | • Starting with version 2.0.1 of AI Agents for Observability, the sn_obs_aia.admin role, previously required to configure AI agents in the Analyze alert impact agentic workflow, has been removed. Users must now have the credential_admin and connection_admin roles instead.<br>• Starting with version 2.0.1 of AI Agents for Observability, the prompt `How severe is this alert?` no longer appears in the Analyze alert impact agentic workflow. |
| Operational Technology Incident Management | The **Opened** column was removed from the lists under the OT Incident module in the Industrial Workspace list view. |
| Operational Technology Manager | • The **New** button has been removed from the **All OT Devices** list view and its corresponding list views.<br>• The **New** button has been removed from the Equipment Model Entities related list in the Quality Inspection Control System [cmdb_ci_ot_qics] form. |
| Playbooks in Workflow Studio | Use the Questionnaire activity instead of the Collect User Data activity. |
| RPA Hub | The credential set related list was removed from the bot process form in RPA Hub. |
| ServiceNow SDK | • The `scopeId` parameter was removed from the `now-sdk convert` command, which supported converting global applications. Only scoped applications can be converted.<br>• The `mode` parameter was removed from the `now-sdk fetch` and `now-sdk deploy` commands. A complete fetch or deploy are always executed. |
| Skills Intelligence | The Skills onboarding feature is removed and is replaced with Skill imports playbook experience. For customers who already have their data in Skills onboarding, download all the skills in the Ready for review state and re-upload them using the new import process. For more information, see . |

| Application or feature | Details |
| --- | --- |
| Software Asset Management | The following legacy dashboards are no longer available for new Xanadu users who have activated the Software Asset Management Professional (com.snc.samp) plugin or upgraded to Xanadu without activating the Software Asset Management Professional (com.snc.samp) plugin prior to Xanadu.<br>• Office 365 and Adobe Cloud dashboard<br>• Software Asset Analytics dashboard<br>• Software Publisher Analytics dashboard<br>• SaaS Overview dashboard<br>• Software Asset Management dashboard<br>• Engineering License Overview dashboard<br>• Normalization and Content Service dashboard<br>• Software Asset Management Foundation dashboard<br>• Overlapping Software dashboard<br>**Note:** If you activated the Software Asset Management Professional (com.snc.samp) plugin prior to Xanadu but didn't activate the Workspace plugin (com.sn_sam_workspace), you have access to the legacy dashboards. If you activate the Workspace plugin, you aren't able to access the legacy dashboards from the **Software Asset** navigation menu in your instance. You can, however, access the legacy dashboards from the **Dashboards** navigation menu. |
| Subscription Management | • The Custom tables chart has been removed from the subscription details page. |
| Theme Builder | • Removed the **Apply** button used to apply your theme to web and mobile instances. To publish your theme, use the **Publish** option from the theme card overflow menu. For more information about publishing themes, see Publish your themes with Theme Builder. |
| Vulnerability Response | The **Close** button has been removed for a remediation task in the Classic UI, Vulnerability Manager Workspace, and IT Remediation Workspace. |

### Deprecation information for all Xanadu features and products

Cumulative release notes summary on deprecation information for Xanadu features and products.

For information about deprecated plugins in Xanadu, refer to Plugin informationPlugin information for all features and productsPlugin information

| Application or feature | Details |
| --- | --- |
| AI Search | Starting with the Now Assist in AI Search 8.0 release, the External Content Q&A Genius Results feature is being prepared for future deprecation. It will continue to be supported until it is deprecated. For details, see the Deprecation Process [KB0867184] article in the Now Support Knowledge Base. |
| Advanced Risk | • The Risk portal has been deprecated, and a navigation link has been added to access the new Risk portal. |
| Agent experience for CSM | Starting with the Xanadu release, CSM Agent Workspace is no longer deployed, enhanced, or supported. For details, see the Deprecation Process [KB0867184] article in the Now Support knowledge base. CSM Configurable Workspace provides the latest experience for this functionality. |
| Analytics, Intelligence, and Reporting | • Core UI Reporting functionality is deprecated in favor of Data visualizations in Platform Analytics for new instances and instances that have migrated to the Platform Analytics experience.<br>• Core UI Dashboards functionality is deprecated in favor of Dashboards in Platform Analytics for new instances and instances that have migrated to the Platform Analytics experience. |
| Authentication | • The MultiSSO v1 plugin is deprecated. Upgrade to MutliSSO v2 from MultiSSO v1. For more information on how to upgrade to MultiSSO v2, refer to the knowledge article MultiSSO v2 upgrade instructions [KB9756504] in the Now Support Knowledge Base.<br>• The SAML 1.1 and SAML 1.1 Single Sign-On - Update 1 plugin is deprecated. The SAML-based identity providers (IdP) have already migrated to SAML 2.0. To use SAML 2.0, you must activate the MultiSSO v2 plugin and configure your identity provider.<br>• The OpenID SSO plugin is deprecated. To use OpenID Connect (OIDC), you must activate the MultiSSO v2 and configure your OIDC-based identity provider. |
| Business Continuity Management | • The BCM Classic Workspace isn’t compatible with the new features and enhancements that were introduced with the Xanadu release. Any issues and errors encountered with its continued use aren't supported. To avoid any disruptions, transition to the BCM Configurable Workspace.<br>**Note:** Although the BCM Classic Workspace is still available through the URLs after its deprecation, it doesn't appear in the navigation menu. |

| Application or feature | Details |
| --- | --- |
| Case and Knowledge Management | Starting with the Xanadu release, HR Document Templates is being prepared for deprecation. HR Document Templates is hidden and is no longer installed on new instances but will continue to be supported. For details, see the Deprecation Process [KB0867184] article in the Now Support Knowledge Base. You can use the ServiceNow Document Templates application instead of HR Document templates. |
| Case management for CSM | Starting with the Xanadu release, CSM Agent Workspace is no longer deployed, enhanced, or supported. For details, see the Deprecation Process [KB0867184] article in the Now Support knowledge base. CSM Configurable Workspace provides the latest experience for this functionality. |
| Cloud Cost Management 8.0.0 | Starting with the Xanadu release, note the following deprecations:<br>• The Core UI interface for the Cloud Cost Management application is no longer deployed, enhanced, or supported. For continued access and functionality, transition to the Cloud Cost Management Workspace. For more information, see Cloud Cost Management Workspace.<br>• The Cloud Spend Dashboard is no longer deployed, enhanced, or supported. The Asset Executive Workspace provides this functionality. For more information, see Visibility into Cloud Cost Management KPIs using the Asset Management Executive Dashboard.<br>• The Cloud Insights Billing application, which supports the Cloud Provisioning and Governance product with limited functionality, is being prepared for future deprecation. It will not be available on ServiceNow Store for download and installation but will continue to be supported.<br>For details, see the Deprecation Process [KB0867184] article in the Now Support Knowledge Base. |
| Configuration Management Database (CMDB) | • Starting with the Xanadu release, the Data Certification plugin (com.snc.certification_v2) is being prepared for future deprecation. It will be hidden and no longer activated on new instances but will continue to be supported. The CMDB Workspace store app provides the latest experience for this functionality. For details, see the Deprecation Process [KB0867184] article in the Now Support knowledge base.<br>• ServiceNow hosted Service Graph Connector for ExtraHop is now deprecated and no longer supported or available for new activation. Service Graph Connector for ExtraHop provides the latest experience for this functionality. For details, see the Deprecation Process [KB0867184] article in the Now Support Knowledge Base. |

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

| Application or feature | Details |
| --- | --- |
| Core ServiceNow AI Platform | • The System Performance Dashboard is deprecated as of the Xanadu release. Impact Instance Observer offers a powerful solution for enhancing system performance. Contact your account manager to discover more.<br>• Starting with the Xanadu release, Application Insights is being prepared for future deprecation. It will be hidden and no longer available in the ServiceNow Store but will continue to be supported. Instead, Impact Instance Observer offers a powerful solution for enhancing system performance. Contact your account manager to discover more. For details, see the Deprecation Process [KB0867184] article in the Now Support Knowledge Base. |
| Dynamic Translation | With the Xanadu release, the IBM Watson Translator Service integration is no longer available in the ServiceNow® Store. For more information, see https://cloud.ibm.com/docs/language-translator?topic=language-translator-release-notes. |
| Enterprise Architecture (formerly Application Portfolio Management) | Starting with the Xanadu release, some modules are deprecated from Enterprise Architecture (formerly known as Application Portfolio Management). The navigation links to the deprecated modules are removed from the **All** menu. If you're an existing customer, you can continue to use these navigation links. However, if you're a new activation customer, navigation to these modules using the navigation links from the **All** menu won't be available. All the deprecated modules are available within the Enterprise Architecture Workspace. You're encouraged to use the Enterprise Architecture Workspace to leverage those features and functionalities. | Notifications | Screen reader support has been extended to the aria labels in the notification preferences and the advanced preferences. The support provides an explanation for button actions, such as the toggle button. |
| Now Assist AI agents | **Voice Input for Now Assist AI agents**<br>Administrators can enable an optional voice input setting for the Now Assist panel in the Now Assist Admin console. This feature gives users a voice-to-text input option to access the Now Assist skills in the panel in any supported language. For more information, see Enable voice input for Now Assist panel.<br>Once enabled, the Enable voice input for the Now Assist panel option will be available in individual user accessibility preferences. See Configure Next Experience accessibility preferences for more information.<br>Voice-to-text input can help users with mobility impairments access generative AI skills without using a keyboard. This feature can also be useful to blind or low-vision users, neurodivergent users, non-native language speakers, or mobile users on the go, such as field service agents. |
| Operational Resilience | Improved screen reader and translation support by adding ARIA button labels, tooltips, and alt text to the Operational Resilience Workspace. This support provides an explanation for button actions and identifies tooltip text to be translated. |
| Platform Analytics experience | Reflow is supported for low-vision users. The following changes were made to provide this support:<br>• The view mode of the Platform Analytics dashboard editor and the Visualization designer support reflow.<br>• All charts: At 400% zoom, if the legend is originally in any position other than the top or the bottom, it is moved to the bottom.<br>• Bubble chart: XY zoom is enabled by default during reflow at 400% zoom. |

| --- | --- |
| | • Donut and pie charts: Range labels are shown as legends by default at 400% zoom.<br>• Gauge chart: Range labels can be shown as a legend instead. At 400% zoom, this option is enabled automatically.<br>• GeoMap: Zoom controls are persistent during reflow at 200%+ zoom.<br>• Pivot Table: Row headers and footers and the first column unfreeze by default during reflow at 400% zoom.<br>• Time Series and bar charts: New configuration option to show the specific data point in the tooltip instead of all data points. A single data point is shown by default during reflow at 400% zoom. Also, these charts do not show points with no data.<br>• Date filters: During reflow, the date picker is not available in the configuration panel. Instead, you can select the start and end date and time from the Select a date range menu. Also, all components are stacked vertically.<br>• Multi-select filters: Checkbox groups with a horizontal layout reflow to a vertical layout when zoomed.<br>• True/false filters: Popovers and the Clear, Cancel, and Apply buttons are removed during reflow at 400% zoom.<br><br>Other accessibility changes include:<br>• Data tables can be shown for all relevant visualizations, to aid screen readers. These data tables break down the proportion of values by percentage.<br>• All charts: The “More options” menu now includes the chart title.<br>• Indicator Scorecard: Keyboard navigation to expand and collapse rows and speech output are now supported. |

| | property for instances, experiences, and pages. See Reflow for Configurable Workspace for details.<br>**Resize text**<br>Starting in version 6.1, text size can be increased to 400% through your browser settings without loss of content or functionality for Incident Management and Password Reset in SOW. |
| Theme Builder | Accessibility improvements for Theme Builder include the following updates:<br>• Added a dark alternate color palette that makes the display easier for your eyes and less disturbing in low-light settings is available for creation. For more information, see Add an alternate color palette.<br>• Updated modal when you publish a theme group for your web instance. A warning appears if there's an accessibility error within the base theme or the theme's alternate color palettes. A link within the modal navigates you to the correct theme or alternate color palette with accessibility errors.<br>• Improved Accessibility Inspector detects and guides you through fixing accessibility issues in your theme. This tool includes the total number of violations and a list of specific components with accessibility issues. For more information, see Adjust a component to meet accessibility standards.<br>• Updated reflow feature ensures the content within the Component Editor view automatically adjusts when the screen size is reduced. This improvement eliminates the need for horizontal scrolling. |
| Third-party Risk Management | Accessibility improvements for the Third-party Risk Management application include the following updates.<br>• Keyboard focus: Improved visual accessibility in the Third-party portal by increasing contrast between the focus border and white background.<br>• Screen reader support has been extended to announce the following:<br>○ Completed status after all questions have been completed in a section of an external questionnaire in the Third-party portal.<br>○ Correct labels and other relevant information for controls, images, card regions, menu items, and links in the Vendor Management Workspace. |
| Vendor Management Workspace | **Accessibility improvements**<br>Accessibility improvements were completed to create a configurable workspace that supports WCAG 2.1 Level AA conformance.<br>**Reflow**<br>The Configurable Workspace supports reflow, which enables pages and content to be zoomed up to 400% through your browser settings without loss of content |

### Product localization information in Xanadu

Cumulative release notes summary on new Xanadu features and products.

Some products may have specific localization requirements or behavior in Xanadu.

| Application or feature | Details |
| --- | --- |
| AI Search | AI Search supports international languages. For details of language support by feature, see Internationalization support for AI Search. |
| Accounts Payable Operations | Accounts Payable Operations supports multiple languages. The current DocIntel model is trained to extract invoices in the English language only. If you want to process an invoice in the multiple languages supported by DocIntel, you must train the DocIntel model. |
| Decision tables in Workflow Studio | The Localization Framework is integrated in decision tables. However, because editing in Excel doesn't support localization, you cannot use this feature in any instance that doesn't use English. |
| Digital End-User Experience | Localization is applicable to DEX in all languages supported by the ServiceNow AI Platform. |
| Document Intelligence | **Chinese and Japanese language support**<br>Process documents in additional languages with added support for Simplified Chinese and Japanese. |
| Generative AI Controller | Generative AI Controller uses Microsoft Azure OEM for Dynamic Translation in Now Assist for multi-language support. You can enable dynamic translation from the Now Assist Admin console. |
| Health Log Analytics | The current available languages for Health Log Analytics are US English, UK English, French, German, Italian, Japanese, and Spanish. The default language is US English. |
| Now Assist | Now Assist supports Dynamic Translation for Xanadu. |
| Now Assist AI agents | Now Assist AI agents is built on the GPT-4o-based framework and supports localization as per the GPT-4o model. |

| Application or feature | Details |
|---|---|
| Now Assist in AI Search | Now Assist in AI Search supports Dynamic Translation in Now Assist Genius Results. For details, see Dynamic Translation for Now Assist Q&A Genius Results and Dynamic Translation for Now Assist Actions Genius Results. |
| Now Assist in Virtual Agent | Dynamic Translation is supported in Now Assist Virtual Agent conversations. For details, see Enable translation for Now Assist applications and Localization options for Virtual Agent. |
| Playbooks in Workflow Studio | Playbook generation with images is not available in the APAC region. |
| RPA Hub | RPA Hub supports international languages. For more information, see Internationalization support for RPA Hub. |
| Virtual Agent | The ServiceNow® Localization Framework is integrated in Virtual Agent. |

## Changes to plugins in the Xanadu release

This table lists the existing plugins that were deprecated, planned for deprecation, renamed, or changed in some way.

- Planned for deprecation: In preparation for the future deprecation. The application is being prepared for future deprecation. The plugin will be hidden and no longer available for activation but will continue to be supported. For details, see the Deprecation Process [KB0867184] article in the Now Support knowledge base.
- Deprecated: The application is no longer deployed, enhanced, or supported. For details, see the Deprecation Process [KB0867184] article in the Now Support knowledge base.
- Maintenance mode: The application will have no new enhancements or activations but will have continued support.

### Deprecated plugins

This table lists the existing plugins that were deprecated in Xanadu and Washington DC that weren't previously listed as planned for deprecation.

| Plugin | Status | Description | Details |
|---|---|---|---|
| HR Agent Workspace<br><br>[com.sn_hr_agent_workspace] | Deprecated in Xanadu | Use the HR Service Delivery Agent Workspace to interact with employees, respond to inquiries, and resolve issues quickly. | Install and configure the HRSD Configurable Agent Workspace for Case Management. For guidance, see Agent Workspace for HR Case Management |

## Changes to plugins from Vancouver to Xanadu

Before you upgrade from Vancouver to Washington DC, read the release notes for information about new plugins and existing plugins that were deprecated, renamed, or changed in some way.

## Vancouver and Washington DC plugin changes

See Vancouver plugin changes for more information.

See Washington DC plugin changes for more information.

### Deprecated plugins from Vancouver to Xanadu

This table lists the existing plugins that were deprecated in Vancouver, Washington DC, or Xanadu.

| Plugin | Status | Description | Details |
| --- | --- | --- | --- |
| Badge Reader Integration for Walk-up Experience (Removed from com.snc.badge_reader) | Deprecated in Washington DC | Improve Walk-up Experience user satisfaction by using the Badge Reader Integration application at your on-site walk-up queue locations. | Review the guidance for building a customer badge reader client. |
| Central Dispatch [com.snc.central_dispatch] | Deprecated in Washington DC | Provides both a list and calendar view of unassigned tasks. | Install and configure the Dispatcher Workspace plugin (com.snc.uib.fsm_dispatcher_works |
| Cloud Discovery setup using classic Cloud Discovery | Deprecated in Xanadu | Enables you to set up Cloud Discovery for performing cloud discovery and using Cloud Provisioning and Governance for managing discovered cloud resources. | Install Cloud Operations Workspace (COW) on the ServiceNow Store. |
| Cloud Native Operations [sn_k8s] | Deprecated in Washington DC | Use Cloud Native Operations to perform continuous discovery and monitoring of the Kubernetes platforms. | Install the Agent Client Collector for Visibility (ACC-V) application from the ServiceNow Store and review the Agent Client Collector for |

## Personalized PRB release notes for upgrades to Xanadu

If you are thinking about upgrading to the Xanadu family, problem (PRB) fixes can be an important factor in your upgrade plans. Compare the lists of fixed problems across various Xanadu upgrade scenarios to help you decide which release version to upgrade to.

### Generate cumulative PRB release notes

To create personalized release notes for your upgrade, use the **Filter by** feature to select your current release version and your target version. The table will filter to show you the personalized release notes for the selected upgrade scenario. You can view the cumulative PRB release notes by downloading the CSV file.

**Warning:**
The personalized PRB release notes now include security PRB fixes. You can filter on the PRB tables by security category, or you can search for the text "Security bug."

### Fixed problems in upgrades to Xanadu

Only available target release versions are listed in the personalized release notes generator. For further information on a PRB, documentation updates, or fixes included for a specific release version, you can also browse the standard release notes topics on the ServiceNow Product Documentation website.

**Important:**
Be sure to upgrade to the latest release version that includes all of the PRB fixes you are interested in.

| Current version | Target version | Download |
|---|---|---|
| | | |

## Available patches and hotfixes

The Xanadu family includes patches and hotfixes.

**Important:**
For more information about how to upgrade an instance, see ServiceNow Upgrades.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

For more information about the release cycle, see the ServiceNow Release Cycle.

**Note:**
This ServiceNow AI Platform major family release is now available in ServiceNow's Regulated Market environments. For more information about services available in isolated environments, see KB0743854.

## Q2 2026 Patching Program Targets

Targets are subject to change prior to patching. Target versions change only if absolutely necessary.

| Releases | Patch target option | Release notes |
|---|---|---|
| Zurich | Zurich Patch 7a | Zurich |
| Yokohama | Yokohama Patch 12 Hotfix 1a | Yokohama |
| Xanadu | Xanadu Patch 11 Hotfix 1a | Xanadu |

## Ancillary software releases

For information about latest Password Reset Windows Application, ODBC driver, and all other ancillary software available for download from the ServiceNow Store, see ServiceNow Store release notes.

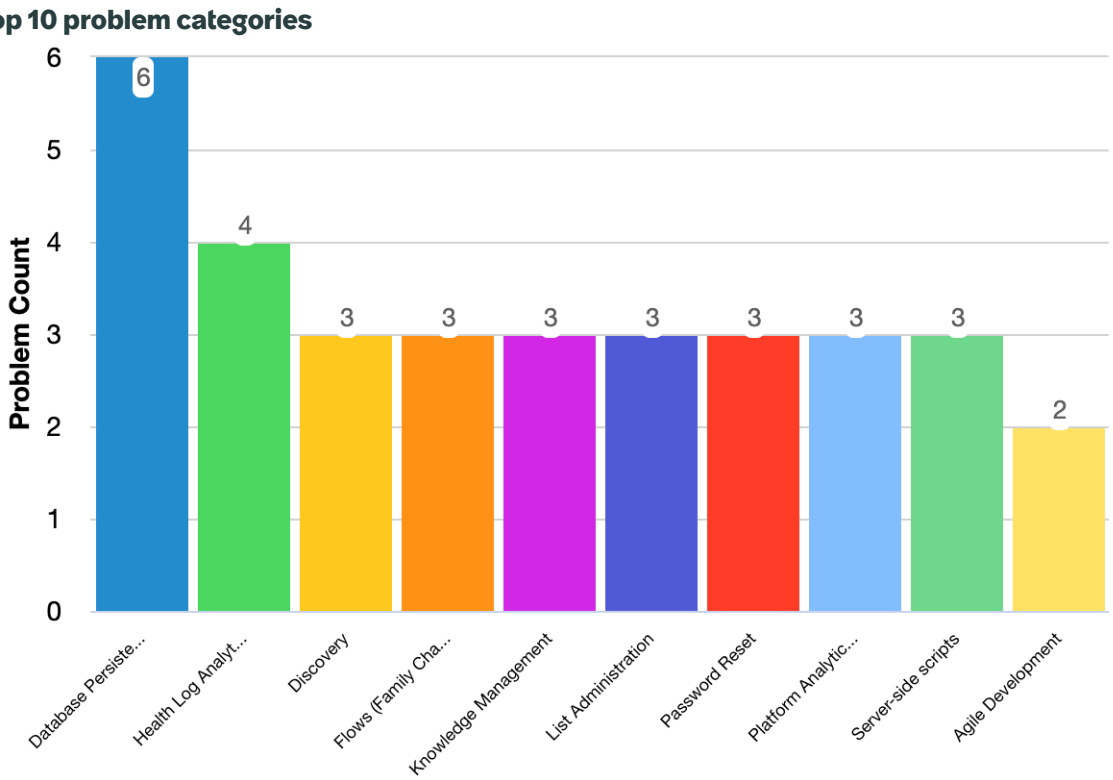
## Xanadu Patch 11

The Xanadu Patch 11 release contains important problem fixes.

**Xanadu Patch 11 was released on December 11, 2025.**

- Build date: 12-07-2025_2348
- Build tag: glide-xanadu-07-02-2024__patch11-11-27-2025

**Important:**
For more information about how to upgrade an instance, see ServiceNow Upgrades.



For more information about the release cycle, see the ServiceNow Release Cycle.

**Note:**
This ServiceNow AI Platform major family release is now available in ServiceNow's Regulated Market environments. For more information about services available in isolated environments, see KB0743854.

For a downloadable, sortable version of the fixed problems in this release, click here.

## Overview

Xanadu Patch 11 includes 99 problem fixes in various categories. The chart below shows the top 10 problem categories included in this patch.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Security-related fixes

Xanadu Patch 11 includes fixes for security-related problems that affected certain ServiceNow® applications and the ServiceNow AI Platform®. We recommend that customers upgrade to this release for the most secure and up-to-date features. For more details on security problems fixed in Xanadu Patch 11, refer to KB2646306.

## Changes in Xanadu Patch 11

### Sensitive data filters

The Discovery Sensitive Data Filters [discovery_sensitive_data_filter] table provides a way to help prevent sensitive information from being exposed in the Configuration Management Database (CMDB) by applying redaction rules during data collection.

## Notable fixes

The following problems and their fixes are ordered by potential impact to customers, starting with the most significant fixes.

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| Discovery<br><br>PRB1927941<br><br>KB2434137 | Discovery patterns failed prematurely, causing Discovery failure | An example is during 'Windows OS - Server' pattern Discovery, running the Cluster pattern library throws consecutive errors, which should be expected, but the pattern engine failed the pattern instead. | Refer to the listed KB article for details. |
| Flows (Family Channel)<br><br>PRB1938123 | Flows using base instance actions related to the plugin 'Customer Service Spoke' fail after upgrading to Yokohama | The flows in question are base instance actions related to 'Customer Service Spoke': Add Work Note to Task and Add Comment To Task. | |
| Service Portal<br><br>PRB1839297<br><br>KB1925168 | A SPEntry page error 'Execute operation on script include 'SPEntryPage'' from scope occurs | Switching the scope and refreshing the page gives the error, 'Execute operation on script include 'SPEntryPage' from scope 'Knowledge Management - Service Portal' was denied'. | 1. Log in to a Xanadu instance.<br>2. Create the glide.entry. first.page .script system property.<br>3. Give it the value: new SPEntryPage(). getFirst PageURL().<br>4. Make 'Knowledge Management - Service Portal' as the current scope.<br>5. Refresh the browser page.<br>6. Notice the error, 'Execute operation on script include 'SPEntryPage' from scope 'Knowledge Management |

## Xanadu Patch 10

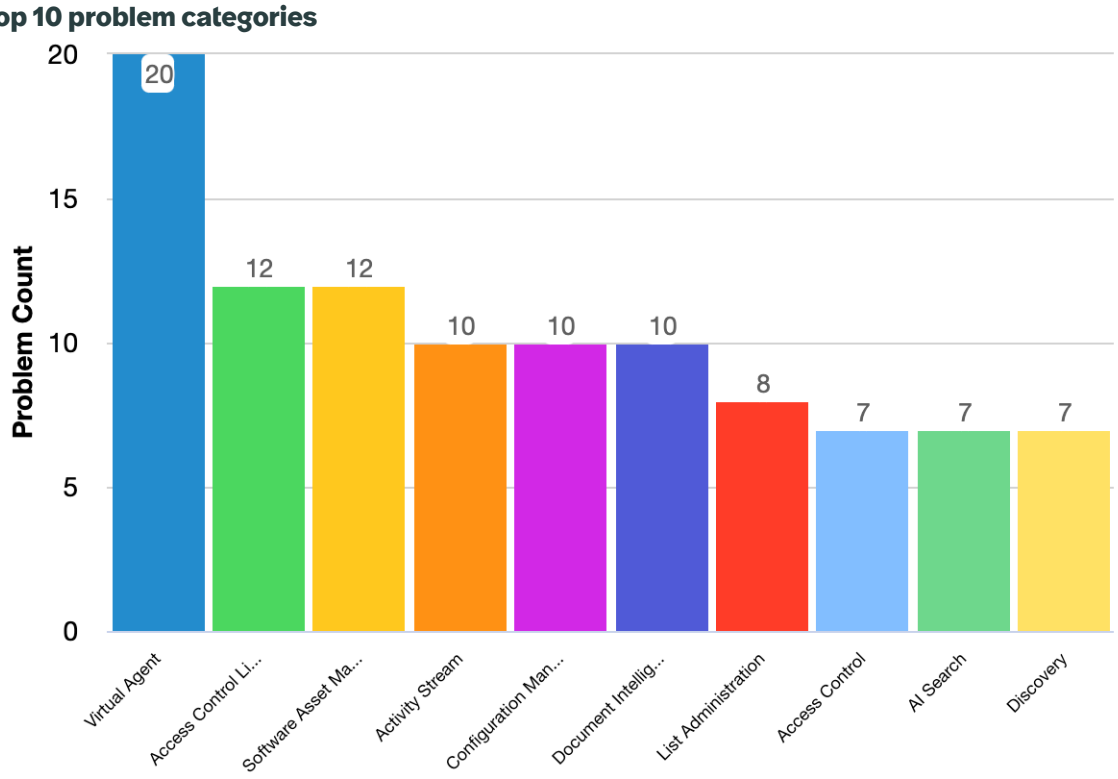
The Xanadu Patch 10 release contains important problem fixes.

**Xanadu Patch 10 was released on August 21, 2025.**

- Build date: 08-21-2025_1913
- Build tag: glide-xanadu-07-02-2024__patch10-08-08-2025

**Important:**
For more information about how to upgrade an instance, see ServiceNow Upgrades.

For more information about the release cycle, see the ServiceNow Release Cycle.



**Note:**
This ServiceNow AI Platform major family release is now available in ServiceNow's Regulated Market environments. For more information about services available in isolated environments, see KB0743854.

For a downloadable, sortable version of the fixed problems in this release, click here.

## Overview

Xanadu Patch 10 includes 348problem fixes in various categories. The chart below shows the top 10 problem categories included in this patch.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Security-related fixes

Xanadu Patch 10 includes fixes for security-related problems that affected certain ServiceNow® applications and the ServiceNow AI Platform®. We recommend that customers upgrade to this release for the most secure and up-to-date features. For more details on security problems fixed in Xanadu Patch 10, refer to KB2428218.

## Changes in Xanadu Patch 10

### Identity Type

Use the Identity Type to define the correct identity type while creating a user. You can select **Human**, **Machine**, or **AI Agent** based on the user identity.

The Web service access (WSA) only checkbox is automatically enabled for Machine identities and read-only for Human or AI Agent identities. You can mark Identity Type as **Machine** for creating WSA accounts.

## Notable fixes

The following problems and their fixes are ordered by potential impact to customers, starting with the most significant fixes.

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| Activity stream<br><br>PRB1893483 | No activity displays in UI16 when a blank journal event is added | After upgrading to Yokohama, some records display 'No Activity' on the platform view. A null pointer exception displays. | Refer to the listed KB article for details. |

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| KB2185849 | to the activity stream | | |
| Agent Chat<br><br>PRB1900981<br><br>KB2226265 | Inbox audio is delayed when the 'Workspace' tab is inactive or out of focus before receiving the first work item | When the work item assigned, audio isn't heard. Audio is heard only after switching back to the workspace. The agent may not get notified at the time of assignment due to this issue, and the work item may expired by the time agent is back on the workspace tab. | Refer to the listed KB article for details. |
| Database Persistence - Data Management<br><br>PRB1837739 | 'Physical Table Stats Gatherer' runs long due to an influx of query with hash 2136542706 | The job runs for more than one hour. Each query takes around 239 ms but since the number of times it's being called is high, the overall job takes a longer time. | |
| MID Server<br><br>PRB1912171<br><br>KB2266697 | Yokohama MID Server upgrades do not upgrade all jar files in lib | Yokohama MID Server upgrades don't upgrade all jar files in lib, causing NoClassDefFoundError for various classes, and MID Server to go down. | |
| Next Experience Unified Navigation<br><br>PRB1908169<br><br>KB2252998 | An exact match for an experience with an invalid routeConfigId doesn't navigate | A new issue was found which results in Zing search results aren't opening properly within a workspace. | Refer to the listed KB article for details. |
| UI Form Administration<br><br>PRB1863573 | A 'Scope tag not permitted' error is thrown when the UXC Generative AI plugin is active | The scoped UI macros are added to the UI16 form by the 'UXC Generative AI' plugin clash with scoping rules, causing a 'Scope tag not permitted' error to be thrown. Visually, users notice related lists and others macros not loading on the form. | 1. Navigate to sysapproval_approver.list.<br>2. Open any record still in the 'Requested' state.<br>3. Right-click on the header and configure the form layout.<br>4. Add the 'Test Formatter Approval Scoped' formatter to the layout after the 'Approval Summary' formatter.<br>5. Configure the form.<br>6. Add 1 related list to better see a broken page when reproducing. |

## Overview

Xanadu Patch 9 includes 406 problem fixes in various categories. The chart below shows the top 10 problem categories included in this patch.

## Security-related fixes

Xanadu Patch 9 includes fixes for security-related problems that affected certain ServiceNow® applications and the ServiceNow AI Platform®. We recommend that customers upgrade to this release for the most secure and up-to-date features. For more details on security problems fixed in Xanadu Patch 9, refer to KB2189031.

## Changes in Xanadu Patch 9

### Activate indexing of catalog variable content on Catalog Item records

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Activate indexing of searchable content from variables on Catalog Item records. Configure the set of Catalog Items eligible for catalog variable indexing and the set of variables to index.

**AI Search system properties**

*glide.ais.ingestion.catalog_variables_filter_query*

*glide.ais.ingestion.ignore_catalog_variables_read_roles*

*glide.ais.ingestion.index_catalog_variables*

**Variable types supported by AI Search indexing**

Service Catalog variable types indexed from Catalog Items

**Field Service Management release notes**

Google Maps APIs for Field Service CapabilitiesUpgrade to the new Places API (new) and Routes API for Field Service Capabilities.Effective March 1, 2025, Google has designated the Places API, Directions API, and Distance Matrix API as Legacy services. The newer versions of these services are Places API (New) and Routes API.: You can't enable or generate new API keys for these legacy services. However, you can continue using these services with the existing API keys. Enable the new APIs from Google Console to continue using the API services without any issues.If you create a new Google API key after March 1, 2025, enable the new APIs from Google Console to use these services with the new API keys.For more information see, KB2111488, KB2112054, and Changes to Google Maps Platform automatic volume discounts, monthly credit, and services transitioning to Legacy status.

**QueryRangeACLAuditor**

This patch includes the May Maintenance update script in the form of a script include (QueryRangeACLAuditor). This script is not triggered automatically and must be run after a patch upgrade. More details on running the QueryRangeACLAuditor and its functionality can be found in KB2046494.

## Notable fixes

The following problems and their fixes are ordered by potential impact to customers, starting with the most significant fixes.

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| Form Builder<br><br>PRB1820975<br><br>KB1987480 | A form isn't saved on a cross scope in ServiceNow studio | There's an error in the networking calls. | Refer to the listed KB article for details. |
| Integration Hub<br><br>PRB1834445 | GCF Data Egress recorder should support 0 byte inputs | GCFDataEgressRecorder will throw an error with an Invalid event value when an event with 0 bytes is recorded, creating an error in the log. | Post to the instance on an endpoint.<br><br>Notice that this will return an 204 (no content) response a zero byte response. |

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| MID Server<br><br>PRB1870465<br><br>KB2022624 | ECCSender does not use the correct character set when reading XML queue files | ECCSender uses the default file encoding/ character set when reading XML queue files from a disk. This results in incorrect characters in the response for some special characters. ECCSender should use UTF-8 when reading these files, as XML queue files on disk are always UTF-8. | Refer to the listed KB article for details. |
| Related Lists<br><br>PRB1887019<br><br>KB2122691 | Users can't edit from a related list on a reference field configured to be read-only in the dictionary | Users are no longer able to add existing related records via the 'Edit' function on a related list when the reference field on the target table is marked as read-only. This behavior was previously functioning as expected. The issue has been verified in multiple relationships. Removing the 'read-only' attribute from the reference field restores expected functionality, confirming the change in behavior post-upgrade. | Refer to the listed KB article for details. |
| System Import Sets<br><br>PRB1850436<br><br>KB2115235 | There's unexpected column creation when importing an Excel file with Japanese headers | When importing a file with Japanese headers, a new 'u_xxx' column is created, even though the u_email column already exists. This issue also occurs in Washington DC. | Refer to the listed KB article for details. |

## All other fixes

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| Access Control | Addition of Query ACLs in Access Control | This change adds new Query ACLs on certain table(s) and field(s) | |

For a downloadable, sortable version of the fixed problems in this release, click here.

## Overview

Xanadu Patch 8 includes 147 problem fixes in various categories. The chart below shows the top 10 problem categories included in this patch.

## Security-related fixes

Xanadu Patch 8 includes fixes for security-related problems that affected certain ServiceNow® applications and the ServiceNow AI Platform®. We recommend that customers upgrade to this release for the most secure and up-to-date features. For more details on security problems fixed in Xanadu Patch 8, refer to KB2045962.

## Changes in Xanadu Patch 8

### Create a marketplace engagement method

Progressive push

Using contractor ranking, incrementally pushes request to marketplace participants in numerical order based on specified wait duration.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

If the contractor does not respond or accept within a specified time frame, the request is shared automatically to the next ranked candidate. This process continues sequentially down the ranking list until it is shared with all contractors.

**Add a contractor to Marketplace participants post-push**

Use the Add Contractor button to add an eligible contractor to the list of marketplace participants once a work order task has already been pushed to Marketplace.

## Notable fixes

The following problems and their fixes are ordered by potential impact to customers, starting with the most significant fixes.

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| Database Persistence - Data Access<br><br>PRB1649391 | Database views using TPC with function fields generate errors | | |
| MID Server<br><br>PRB1870465<br><br>KB2022624 | ECCSender does not use the correct character set when reading XML queue files | ECCSender uses the default file encoding/ character set when reading XML queue files from a disk. This results in incorrect characters in the response for some special characters. ECCSender should use UTF-8 when reading these files, as XML queue files on disk are always UTF-8. | Refer to the listed KB article for details. |
| Playbooks (Family Channel)<br><br>PRB1839341<br><br>KB1891818 | Update Set with Playbook change failed to install | The invalid preview error, 'Could not find a record in sys_pd_snapshot for column snapshot referenced in this update' occurs when moving changes to related to Playbook via update set from one instance to another. | Refer to the listed KB article for details. |
| Third-party Software<br><br>PRB1793365 | Commons-beanutils hits BEANUTILS-509, causing severe default thread contention, | In a few cases, this caused a node to completely hang indefinitely because all the threads were attempting to enter a | |

| Activity Stream<br><br>PRB1807673 | Activity stream size limits aren't applied to a response | During activity stream performance testing, the activity stream load time was tested with variable number of events: 250, 500, 1000, 2000, 5000, 10000, 20000. Each activity stream has even number of comments, emails, attachments, field changes and relations. Knowing that default limit is 2000 for each event type, the expectation was that response time and response size should grow till 10000 events (2000 events for each of five event types). Users expect to receive 10k events for activity stream with 20k events. However, all 20k events are returned, causing high response time. In a case with 20k events, the response time is ~13-14 seconds. Large users have even bigger response times, considering that response time grows linearly with increasing number of events. | |
| Activity Stream<br><br>PRB1834000 | Reaper query needs an index to perform optimally | When the reaper query runs, it does not use an index to find the expired records. | |
| Activity Stream<br><br>PRB1858896 | Posts generated by Agentic AI or Now Assist should be posted as an 'AI' user vs ServiceNow | This is a product update. | |

| List Administration<br><br>PRB1795127 | Selecting an already selected item in the list menu causes the list to render incompletely | The list renders now-loader. | 1. Select an existing experience or create a new one.<br>2. Add a new page from List Page Template.<br>3. Once the **Preview** button in UIB is enabled, select the **Preview** button to open the page in a new tab.<br>4. In the List menu, select a list item to open the list.<br>5. Once the list finishes rendering, select the same list item again.<br><br>Notice that this time, the list renders now-loader instead. |
| List Filters<br><br>PRB1751177 | Inconsistency in Presentational list filters | There is an inconsistency between the data shown and the filter applied for empty values. In one scenario, there is inconsistency while applying filters on the string column and the number column. If the filter text value is empty, the **Apply** button is disabled for the string column, but still enabled for the number column. Selecting **Apply** still retains the older filter. In another scenario, there is also an inconsistency between the data shown and the filter applied for empty values. Fields, which are empty in a table, are being shown as 0 in the presentational list based on the data type. When they are filtered, they should be considered empty or should be considered as 0 if it is shown as zero. | |
| Mobile Platform | InputFormScreen doesn't work when the | An InputFormScreen with Fetch Type = Prefetch/OnDemand | 1. Open the mobile (requestor) app.<br>2. Log in to an instance. |

For a downloadable, sortable version of the fixed problems in this release, click here.

## Overview

Xanadu Patch 7 includes 164 problem fixes in various categories. The chart below shows the top 10 problem categories included in this patch.

**Top 10 problem categories**

## Security-related fixes

Xanadu Patch 7 includes fixes for security-related problems that affected certain ServiceNow® applications and the ServiceNow AI Platform®. We recommend that customers upgrade to this release for the most secure and up-to-date features. For more details on security problems fixed in Xanadu Patch 7, refer to KB1925102.

## Notable fixes

The following problems and their fixes are ordered by potential impact to customers, starting with the most significant fixes.

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| Approvals<br><br>PRB1845668<br><br>KB1810362 | Multi-Level approval skips steps due to race conditions | Overlapping transactions on the sc_req_item table cause race conditions, allowing approval steps to be skipped. | Refer to the listed KB article for details. |
| List Administration | In Vancouver, changing | When a user changes the rows per page | Refer to the listed KB article for details. |

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| | GraphQL is slow due to the Table Cleaner being throttled, causing heavy replication lag | on sys_activity shards. Using Instant Alter added an index, and as a result, all records were replicated with the load causing replication lag. When replication lag is detected, Table Cleaners are throttled, which can exacerbate the amount of data that is being replicated and cause timeouts. Timeouts are caused by the Table Cleaner running synchronously in the Activity Stream load request. | |
| Advanced Work Assignment<br><br>PRB1857820 | Agent Outside Workspaces that use OpenFrame soft phone are set to an 'Offline' presence state within a minute after the agent moves to an available state | If an agent isn't also on a workspace, the presence reverts to 'Offline' within about a minute. Since the agent is using OpenFrame to manage capacity, it shouldn't automatically revert to 'Offline'. The issue occurs after an Xanadu upgrade. | |
| Agent Chat<br><br>PRB1846351 | Audio notifications don't play intermittently when the browser has 'Allow All Auto-Play' configured | On a Safari browser, when the user doesn't allow the Auto-Play for the ServiceNow site, audio notifications intermittently don't play for an agent. This is applicable for inbox and conversation notifications. For example, if an agent doesn't hear an audio notification for an incoming inbox notification, it's possible the following conversation's audio alert to play or not play. Once audio notifications begin to play, proceeding audio notifications usually | 1. In a Safari browser, as an agent, open Service Operations Workspace.<br>2. Change the status to 'Available'.<br>3. Using a Chrome browser, impersonate a requester.<br>4. Turn off audio notifications in the web client.<br>5. Initiate a chat and attempt to connect to a live agent.<br>6. In the Safari browser, as an agent, accept the incoming work item.<br>The audio notification plays.<br>7. From the Chrome browser, as a requester, send a message to ensure an audio notification plays on the agent's side. |

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| Special Handling Notes<br><br>PRB1836082 | Simplify 'Refresh SHN' conditionals for readability and backportability | In Xanadu, if users set the Special Handling Notes (SHN) property 'Display special handling notes only once per session' to false, then the SHN pop-up window isn't displayed at all each time a user accesses a record. However, in Xanadu, once the property is set to false, the SHN pop-up window isn't displayed at all each time a user accesses a record. According to the documentation, the SHN pop-up window should be displayed each time a user accesses a record. | 1. Ensure that the plugin 'Special Handling Notes' (com.sn_shn) is activated.<br>2. Ensure to upgrade the Store apps to the latest versions.<br>3. Create 'Special Handling Notes' (sn_shn_notes) for the 'Incident' table.<br>4. Specify a condition, such as 'Short description', that contains something.<br>5. Open the SHN 'Properties' page and set the property 'Display special handling notes only once per session' to false.<br>6. Open an 'Incident' record which matches the condition in Service Operations Workspace or CSM Workspace.<br><br>Notice that the 'Special Handling Notes' pop-up window isn't displayed at all each time a user accesses the record in either workspace. |
| Survey Management<br><br>PRB1847800 | Inactive metrics aren't displayed on the user response form | | 1. Open any instance on or after Xanadu.<br>2. Create a survey.<br>3. Assign the survey to a user.<br>4. Take the survey.<br>5. Submit it.<br><br>After submitting, when users view a user response form, users are able to see all the questions along with their response.<br>6. Mark a few questions as inactive.<br>7. Open the view user response form.<br><br>Expected behavior: Inactive metrics should also be shown in the response form.<br><br>Actual behavior: Inactive metrics aren't displayed now even though the responses were there. |

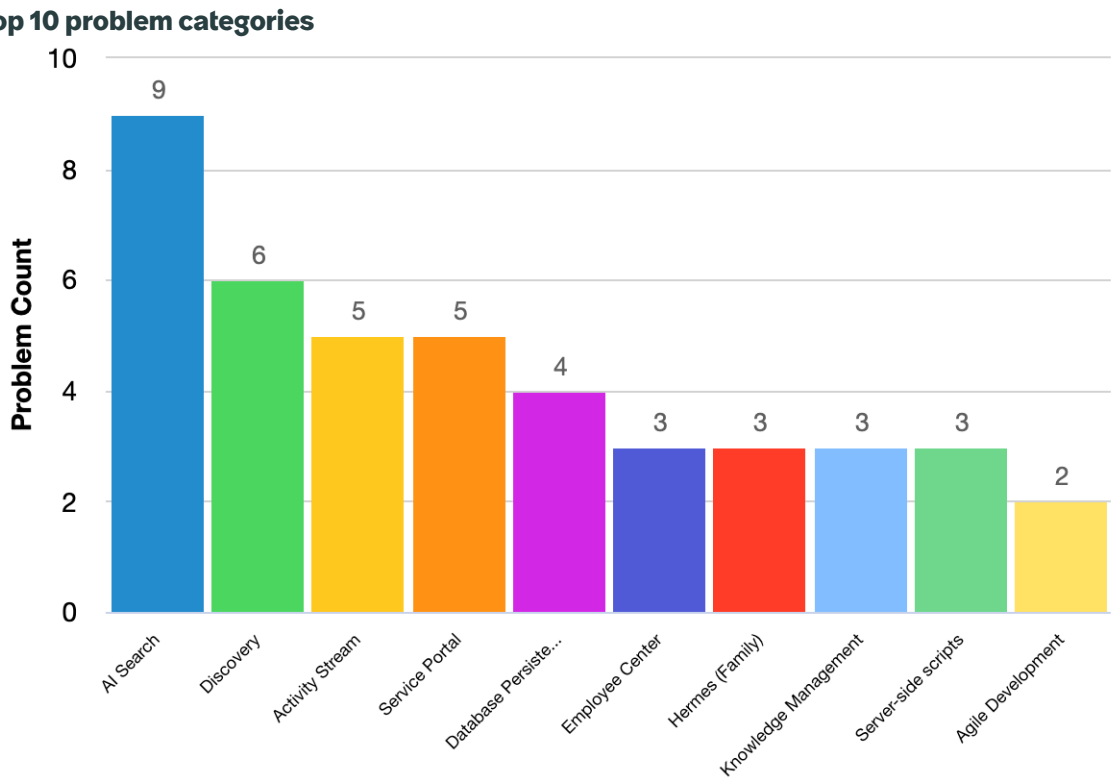
## Xanadu Patch 6

The Xanadu Patch 6 release contains important problem fixes.

**Xanadu Patch 6 was released on February 13, 2025.**

- Build date: 02-11-2025_1128
- Build tag: glide-xanadu-07-02-2024__patch6-01-29-2025

**Important:**
For more information about how to upgrade an instance, see ServiceNow Upgrades.



For more information about the release cycle, see the ServiceNow Release Cycle.

**Note:**
This ServiceNow AI Platform major family release is now available in ServiceNow's Regulated Market environments. For more information about services available in isolated environments, see KB0743854.

For a downloadable, sortable version of the fixed problems in this release, click here.

## Overview

Xanadu Patch 6 includes 151 problem fixes in various categories. The chart below shows the top 10 problem categories included in this patch.

## Security-related fixes

Xanadu Patch 6 includes fixes for security-related problems that affected certain ServiceNow® applications and the ServiceNow AI Platform®. We recommend that customers upgrade to this release for the most secure and up-to-date features. For more details on security problems fixed in Xanadu Patch 6, refer to KB1821996.

## Changes in Xanadu Patch 6

### Hyperautomation and low-code

The External Content Connectors ServiceNow® Store application enables AI Search applications to search content and metadata from supported external data repositories, such as Atlassian Confluence Cloud and Microsoft SharePoint Online

## Notable fixes

The following problems and their fixes are ordered by potential impact to customers, starting with the most significant fixes.

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| AI Search<br><br>PRB1825963<br><br>KB1763961 | Index KBB throws an exception about journal peekahead | An error is thrown: 'IngestService: Unable to index Glide Record [9b85baaa3bf 11a10c4589c 8c24e45a2b] u_kb_template_ topic_category. fa8191f6fb059 e507863f46b5 eefdc1d : Cannot invoke "java.util.Map.get(Object)" because "journalElement ToValuesMap" is null java.lang. NullPointerException: Cannot invoke "java.util.Map. get(Object)" because "journalElement ToValuesMap" is null...' | Refer to the listed KB article for details. |
| AI Search<br><br>PRB1836358<br><br>KB1790348 | A race condition causes an incorrect deleteMultiple() query to be generated on the v_search_genius_result and sys_variable_value tables | When the AI Search Genius Result is requested and processed in a multi-threaded, high-concurrency environment, such as when multiple users simultaneously perform search functions on a portal or virtual assistant (VA), a thread safety issue arises. This issue may cause an incorrect deleteMultiple() query to be generated, potentially leading | Refer to the listed KB article for details. |

## All other fixes

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| Activity Stream<br><br>PRB1775777 | g_form.setValue() doesn't work as expected on Workspace when applied to the **Comments** field | The g_form.setValue can be used to update a field on an record form. Sometimes it is used to update a field with a value captured via the g_form.getValue(). This behavior works without issue in the native UI. However, when trying to apply this same action to the Workspace view, it doesn't work under certain circumstances. | 1. Create a UI action on HR Workspace.<br>2. Navigate to HR Workspace.<br>3. Select any sn_hr_er_case record from the HR workspace.<br>4. Add text to the **Comments** field.<br>5. Select **Add signature**.<br><br>Expected behavior: The **Comment** field should be populated with both the current text and the message 'This is a test'.<br><br>Actual behavior: The **Comment** field doesn't change. |
| Activity Stream<br><br>PRB1832633 | 'Assignment group' changes are hidden in an activity stream on HR Agent Workspace, which is intermittently different to native | An activity stream in the workspace for the 'Case' table is intermittently missing the 'Assignment group' field change. Native has the change reflecting in 'Additional comments'. | 1. Open an incident.<br>2. Set the 'Assignment groups' and **Assigned to** field.<br>3. Save the record.<br>4. Check the activity stream for the missing 'Assignment group' in the audit event.<br>5. Repeat steps 2 through 4 several times.<br><br>Expected behavior: The activity stream should be the same in both workspace and native.<br><br>Actual behavior: The 'Assigned Group' field change is missing intermittently in the HR agent workspace activity. |
| Activity Stream<br><br>PRB1834293 | Activity stream activity events with empty **event_created_by** field values cause the activity stream screen on mobile to crash | | |

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| Activity Stream<br><br>PRB1837845 | A 'File Attachment' type field isn't added in the activity log in Workspace | A 'File Attachment' type field isn't added in the activity log in Workspace when attaching from a field. It's a ZZ_YY prefix problem. | 1. Create a new file attachment type field for some record type.<br>2. Ensure that the field is visible in some view.<br>3. Attach an image to an existing record via the **New file attachment** field.<br>4. View the activity stream for the existing record in any workspace.<br><br>Expected behavior: The image appears in the workspace activity stream.<br><br>Actual behavior: The image doesn't appear in the workspace activity stream. |
| Activity Stream<br><br>PRB1843720 | The activity log captures changes but aren't displaying them as the newest entry in Workspace | For a field with name and label of length more than 40 characters, any changes made to the field aren't reflected in the activity stream as a new entry. | 1. Create a new field name and label of length of more than 40 characters.<br>2. Add the newly created field in the Service Operations Workspace (SOW) view and configure the activity stream filter to display that field in SOW.<br>3. Open SOW.<br>4. Try updating the value in the field.<br>5. **Save**.<br><br>Expected Behavior: The field change should be added as a entry in activity stream.<br><br>Actual Behavior: The change doesn't reflect in the workspace activity stream but reflects in the UI16 activity stream. Instead, the field change appears to overwrite the first initial field change record. If users follow the steps with a field name and label of less than 40 characters, the change would reflect in both workspace and UI16 activity stream. |
| Agile Development<br><br>PRB1789584 | DEFN1003811 calculates worker subscription roles differently for SMV1 versus SMV2 | DEFN1003811 ends up producing different results if SMv1 vs SMv2 are installed. The root cause is that the filter to detect the worker subscriptions doesn't match the naming in production and thus | |

## Xanadu Patch 5 Hotfix 2

The Xanadu Patch 5 Hotfix 2 release contains fixes to these problems.

**Build information:**

Build date: 03-02-2025_0728

Build tag: glide-xanadu-07-02-2024__patch5-hotfix2-02-27-2025

**Important:**
For more information about how to upgrade an instance, see ServiceNow Upgrades.

For more information about the release cycle, see the ServiceNow Release Cycle.

**Note:**
This ServiceNow AI Platform major family release is now available in ServiceNow's Regulated Market environments. For more information about services available in isolated environments, see KB0743854.

## Fixed problem

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| Activity Stream<br><br>PRB1858894 | Application Programming Interface (API), ServiceNow AI Platform, and GraphQL is slow due to the Table Cleaner being throttled causing heavy replication lag | API, ServiceNow AI Platform, and GraphQL calls are slow specifically because of the Table Cleaner on sys_activity shards. Using Instant Alter added an index, and as a result, all records were replicated with the load causing replication lag. When replication lag is detected, Table Cleaners are throttled, which can exacerbate the amount of data that is being replicated and cause timeouts. Timeouts are caused by the Table Cleaner running synchronously in the Activity Stream load request. | |

## Fixes included

Unless any exceptions are noted, you can safely upgrade to this release version from any of the versions listed below. These prior versions contain PRB fixes that are also included with this release. Be sure to upgrade to the latest listed patch that includes all of the PRB fixes you are interested in.

## Xanadu Patch 5 Hotfix 1

The Xanadu Patch 5 Hotfix 1 release contains fixes to these problems.

**Build information:**

Build date: 01-24-2025_0005

Build tag: glide-xanadu-07-02-2024__patch5-hotfix1-01-21-2025

**Important:**
For more information about how to upgrade an instance, see ServiceNow Upgrades.

For more information about the release cycle, see the ServiceNow Release Cycle.

**Note:**
This ServiceNow AI Platform major family release is now available in ServiceNow's Regulated Market environments. For more information about services available in isolated environments, see KB0743854.

## Fixed problem

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| Antivirus Scanning<br><br>PRB1835660 | The antivirus job updates all columns instead of only the 'State' column | The antivirus job updates all columns in some scenarios. It should only update the state column when attachment.setState(advice) is called. However a forceUpdate is occurs, which ultimately updates the entire row, including the state data. Additionally, when the old table name and table sys_id are updated, the attached file is moved to the previous table. | 1. Log in to a Washington DC instance.<br>2. Navigate to **All** > **Self service** > **Service catalog** > **Select Mobiles** > **Add to cart**.<br>3. Upload a 10MB file.<br>4. Select **Order now**.<br>5. Navigate to sys_attachment.list.<br><br>Expected behavior: The table name should be sc_req_item on the available 'State'.<br><br>Actual behavior: The antivirus job updates all columns instead of only the 'State' column. |

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| Stream Connect Core<br><br>PRB1845639 | Kafka Consumer stops consuming messages once it receives a 'null' message from Producer | When a 'null' message error is observed from the source, the Kafka stream no longer consumes the messages. | |

## Fixes included

- Xanadu Patch 5
- Xanadu Patch 4
- Xanadu Patch 3
- Xanadu Patch 2
- Xanadu Patch 1
- Xanadu security and notable fixes
- All other Xanadu fixes

## Xanadu Patch 5

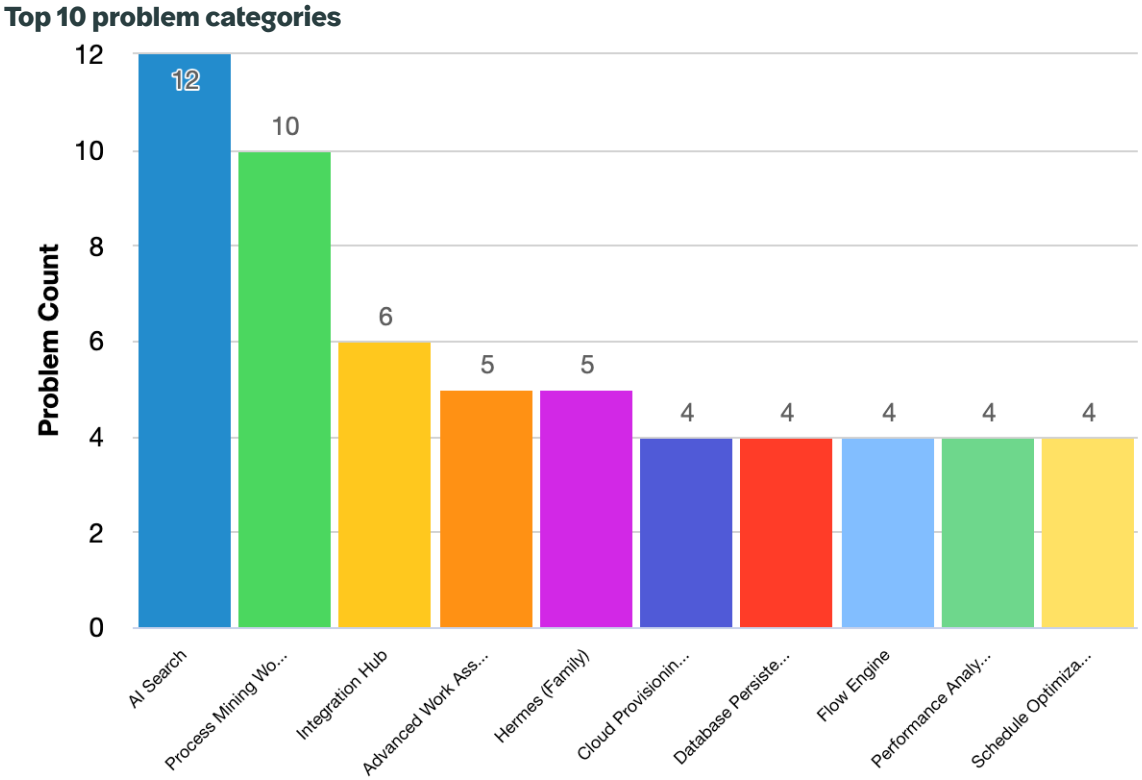
The Xanadu Patch 5 release contains important problem fixes.

**Xanadu Patch 5 was released on January 10, 2025.**

- Build date: 12-31-2024_0455
- Build tag: glide-xanadu-07-02-2024__patch5-12-24-2024_

**Important:**
For more information about how to upgrade an instance, see ServiceNow Upgrades.

For more information about the release cycle, see the ServiceNow Release Cycle.



**Note:**
This ServiceNow AI Platform major family release is now available in ServiceNow's Regulated Market environments. For more information about services available in isolated environments, see KB0743854.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Security-related fixes

Xanadu Patch 5 includes fixes for security-related problems that affected certain ServiceNow® applications and the ServiceNow AI Platform®. We recommend that customers upgrade to this release for the most secure and up-to-date features. For more details on security problems fixed in Xanadu Patch 5, refer to KB1724046.

## Notable fixes

The following problems and their fixes are ordered by potential impact to customers, starting with the most significant fixes.

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| Code Signing<br><br>PRB1783883<br><br>KB1710348 | LoggerConfiguration access privileges doesn't allow creation of a source record for Log Export Service | Despite an upgrade, when a user tries to create a LES source record, they get the message: 'Execute operation on script include 'LoggerConfiguration' from scope 'Log Export Service' was denied. The application 'Log Export Service' must declare a cross scope access privilege. Please contact the application admin to | Refer to the listed KB article for details. |

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| | | update their access requests. Error MessageSomething went wrong with the configuration setup. Please try again later by setting active to true and updating the record'. | |
| Flow Engine<br><br>PRB1813296 | A subflow reference input comes in as a JSON instead of a reference | Whenever a group record is passed via flow to sub-flow, it displays an error as 'Skipping approvals due to invalid rule: ApprovesRejectsAnyG'. Passing a record to a subflow isn't constant and is coming through as a JSON. This isn't just isolated to ApprovalRules. | |
| Process Mining Workspace<br><br>PRB1813626 | Remove the protection policy from the left navigation modules/menu | Since the left navigation module 'Process Mining' has a read-only policy applied, users aren't able to modify. The user wants to make the menu to be visible to only their admin users. | |
| System Import Sets<br><br>PRB1804838<br><br>KB1705523 | New fields with double byte characters aren't created automatically on loading data | If the loading file or data source contains headers that don't match the fields in the import set table, when loading data, new fields are created. Since the Xanadu release, new fields aren't created when headers contain double byte characters, and a warning message is logged in the import log. This occurs even if com.glide.use_column_name_optimizer property is 'true'. | Refer to the listed KB article for details. |
| Time Card Management | The widget 'timesheet-week-breakdown' | In the Time Sheet portal, the widget timesheet-week-breakdown doesn't | 1. Navigate to a base instance.<br>2. Impersonate an admin user. |

© 2026 ServiceNow, Inc. All rights reserved.

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| PRB1809013 | doesn't display hours on the Time Sheet portal | display hours when a non-numbered task is added to a time sheet. This issue was noticed in Xanadu. | **3.** Open the Time Sheet portal.<br>**4.** Navigate to **Admin** > **Other** > **Add to Time Sheet**.<br>**5.** Enter a number of hours for any day.<br>**6.** View the number of hours daily breakdown.<br>Observe that there are no hours displayed.<br>**7.** Add a numbered task to the time sheet.<br>**8.** Add hours to the same day as a non-numbered task.<br>Notice the number of hours in the daily breakdown, and that the hours are displaying correctly. |
| Visual Task Boards<br>PRB1765065 | ChecklistItemResponder is too slow to efficiently scale normal usage of the platform, resulting in backlog in the record watcher queue | ChecklistItemDAO has the functions canRead/ canDelete that triggers base instance ACLs. | Trigger the ChecklistItemResponder with a check list that has 50+ items. |

## All other fixes

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| [Deprecated] Process Mining Guided Project Setup<br>PRB1790547 | When creating a project, added breakdowns aren't displayed | | **1.** Navigate to the 'Set objectives' page to create a project.<br>**2.** Navigate to the 'Scope Your Analysis' page.<br>**3.** Add breakdowns.<br>Expected behavior: Breakdowns should be displayed.<br>Actual behavior: Observe that the added breakdowns aren't displayed on the breakdowns page. It doesn't |

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| | | | display even after refreshing from the breakdown page. |
| Adaptive Authentication<br><br>PRB1657050 | The 'Trusted Mobile Device' filter should also be used in the Post Authentication context | After creating a policy in the Post Authentication context with allowed IP ranges and Mobile App conditions, a user with a trusted, registered device should be able to log into the instance from the Now Mobile App. Currently, the login fails when the user uses a registered device with an IP that isn't allowed. The 'Trusted Mobile Device' filter can be used pre-authentication, but should also be supported post-authentication. | 1. Search for 'Post Authentication context' with the application navigator.<br>2. Navigate to the **Post Authentication context** module.<br>3. Create a policy in the Post Authentication context with allowed IP ranges and Trusted Mobile App conditions.<br>4. Enable Adaptive Authentication and Device Trust on the instance.<br>5. Select **User Profile.**<br>6. Select **UI action.**<br>7. Register a trusted mobile device.<br>8. Notice that it displays a QR code to register the device.<br>9. Open the NowMobile app.<br>10. Register the device by scanning the QR code.<br>11. Log into the instance from the Now Mobile app after registering the device.<br><br>Expected behavior: The user should be able to login to the instance, as the user has registered the device, and post-authentication policies should pass and allow the user to log into the instance.<br><br>Actual behavior: The user login fails from the registered device from an IP that is not allowed when the 'Trusted Mobile' filter is used in post-authentication. |
| Advanced Work Assignment<br><br>PRB1823277 | Move external QueueID from the 'External Routing' plugin to the main AWA plugin | The **ExternalQueueID** field should be present in the main AWA plugin, but isn't. | |
| Advanced Work Assignment<br><br>PRB1823284 | There's 'Fix ErrorMessages' in UpdateSegment when | Users see an error: 'Script execution error: Script Identifier: null.null.script, Error Description: undefined is not a function., Script | Refer to the listed KB article for details. |

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| KB1743632 | 'confirmed on' is passed | ES Level: 0 Evaluator: com.glide.script.RhinoEcmaError: undefined is not a function.' | |
| Advanced Work Assignment<br><br>PRB1824092 | Work items aren't counting towards the capacity recalculation total when they are matched with an agent but not yet offered | This can lead to an agent being assigned extra work during the next assignment round due to having an artificially low workload. | 1. On a multi-node instance, set up a scenario with an AWA service channel and has a max capacity of 2.<br>2. Create a large backlog of new interactions to route to this channel.<br>3. Write a business rule to add a 10 second delay before awa_work_item updates that set the **assigned_to** field.<br>4. As the agent, go online and accept the 2 work items as they are offered.<br>5. Close one interaction.<br>6. Wait a few seconds, then close the other interaction.<br><br>Expected behavior: Exactly 2 more work items appear in the inbox.<br><br>Actual behavior: The agent may be offered 3 work items. |
| Advanced Work Assignment<br><br>PRB1831774 | If the form is customized before the external routing plugin is enabled, an external field doesn't get added to a 'Queue' form | | 1. Enable the 'Agent chat' plugin.<br>2. Add the **external_id** field to the queue.<br>3. Now enable the 'External routing' plugin.<br><br>The **External** field doesn't get added to the 'Queue' form. |
| Agent Chat<br><br>PRB1802338 | Auto-flush on the 'Conversation' table (sys_cs_conversation) causes issues with displaying the conversation history for agents in the chat window | The agent should still be able to view conversations that were not deleted or were created after the auto flush was run. | |

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| Agent Chat<br><br>PRB1831019 | The API call to fetch the skill configuration of the WWNA component should be done if Now Assist is enabled | | 1. Access an instance without Now Assist capabilities enabled.<br>2. Open Agent Chat.<br><br>Expected behavior: The extra call should not occur.<br><br>Actual behavior: There is a network call to render the Now Assist Context Menu (NACM), formally known as WWNA, component that is not necessary. |
| AI Search<br><br>PRB1766750 | UX should respect timeouts on asynchronous Genius results | The UI doesn't short circuit and display 'request timed out' or something similar. This may cause issues if the asynchronous LLM request fails for some reason and doesn't send back a response. It causes the page to continuously display a loading effect. | |
| AI Search<br><br>PRB1785906 | The list value is not indexed | | |
| AI Search<br><br>PRB1792826 | The search preview link doesn't take into account 'New Condition' from an indexed source | | 1. Add two conditions in an indexed source (new criteria).<br>2. Open a search source that uses that indexed source.<br>3. Select the 'Preview' link.<br><br>Observe that the search source conditions aren't combined correctly with the indexed source conditions. |
| AI Search<br><br>PRB1794353 | v_search_genius_result becomes unreadable after opening a v_search_genius_result ACL | AI Search stops rendering Genius Results after opening a v_search_genius_result record. A Null Pointer Exception (NPE) is observed in the system logs. | 1. Search with an AI Search search application and confirm the observation of Genius results.<br>2. Open the 'Access Controls' table (sys_security_acl).<br>3. Search for any v_search_genius_result ACL and click into it.<br>4. Search again. |

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| | | | Observe that the Genius results are no longer rendering. |
| AI Search<br><br>PRB1801325 | Second tier feedback for negative feedback on Genius Results is not always presented | | 1. Provision a Xanadu instance with AI Search enabled for /sp.<br>2. Execute a search that triggers a Catalog Item Genius Result, preferably two in the carousel.<br>3. As quickly as possible, select the thumbs down on the first Genius Result.<br>4. Notice that it shows the thank you message without displaying the options to describe why the feedback is negative.<br>5. Select the other result in the carousel, select the thumbs down, and notice that it works as expected. |
| AI Search<br><br>PRB1802473<br><br>KB1704430 | Tab counts change for all the tabs when users select from 'All' to another tab | Tab counts also change on pagination. | Refer to the listed KB article for details. |
| AI Search<br><br>PRB1805031 | The Global Search icon is incorrectly colored when a dark banner is used | | 1. Provision an instance with Zing search enabled.<br>2. Create a theme using Theme Builder.<br>3. Change the primary color to black.<br>4. Select **Experience Preview - Unified Navigation App**.<br>5. Reduce the browser window width to display the search icon (instead of the search bar).<br><br>Notice that the search icon isn't styled according to the other elements (and isn't visible). |
| AI Search<br><br>PRB1820883 | User context boost does not work for sys_user.country and sys_user.location.state | | 1. Navigate to a search profile.<br>2. Create a location boost rule.<br>3. Add a positive boost action based on user context.<br>4. Select **sys_user.country**. |

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| | | | **5.** Make sure that the sys_user record has the proper fields set.<br>**6.** Save the rule.<br>**7.** Publish the profile.<br>**8.** Search from any portal.<br><br>Observe that the search result is not boosted as per user context. |
| AI Search<br><br>PRB1830291 | The 'AsyncEmbeddingIngestionStatusHandler' connection is not updated when the AI Search connection URL is updated | | |
| AI Search<br><br>PRB1832346 | Selecting search results adds a parameter 'SearchTerm', which leads to a 404 error | With AI Search enabled, searching on the portal leads to a 404 page not found error. This happens when search results that happen to be external links are presented in the search results. When a search result is clicked, an additional parameter is added to the URL: '&searchTerm='. This additional parameter causes the 404 error. | **1.** Navigate to a Xanadu instance.<br>**2.** Add an external link to the AI Search source.<br>**3.** Navigate to /esc portal.<br>**4.** Search for the external link term.<br>**5.** Select the top search result.<br>**6.** Observe that the external link is added to URL.<br><br>Expected behavior: The user lands on the external link.<br><br>Actual behavior: The user lands on a 404 page not found error. |
| AI Search<br><br>PRB1835345 | Users are unable to kick off ingestion when the index source has a semantic index configuration on one of its child tables | | **1.** Open a catalog index source.<br>**2.** Create a semantic index configuration.<br>**3.** Add a new component field mapping for the **Name** field with the source 'pc_hardware_cat_item'.<br>**4.** Start ingestion.<br><br>Observe that ingestion does not start and there are errors in the log. |

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| AI Search<br><br>PRB1837962 | When a query is performed in 'OR' mode, the pagination breaks | 0 results are returned. | 1. Change the property 'glide.ais.query.search_operator' to 'OR'.<br>2. Perform a search on Service Portal that returns more than 12 results.<br>3. Select the **Next page** arrow button.<br><br>Observe that there's no matches. |
| Analytics Data API<br><br>PRB1778742 | Some breakdown elements filters aren't applied to the widget | | 1. Install a PPM Standard plugin along with its demo data.<br>2. Run the data collector jobs.<br>3. Open Portfolio Analytics.<br>4. Open the 'Summary' tab.<br>5. Open the Portfolio Manager filter and apply a user.<br><br>Expected behavior: The filter should be applied to all the widgets on the page.<br><br>Actual behavior: The filter isn't applied for the first row widgets. |
| Analytics Export API<br><br>PRB1813585 | Add support for https/ snowk8s in Highcharts and glide-whtp | | |
| API Usage Analytics Dashboard<br><br>PRB1830743 | There's a duplicate transfer-encoding header | The issue occurs for custom API/tables, with the x_ in the URI. An error is listed in the logs. | |
| Application Install Engine<br><br>PRB1822879 | In the case of a combination of hosted plugins with app customization, the existing higher version host app store plugin object isn't used | | |

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| Asynchronous Message Bus (AMB)<br><br>PRB1822973 | Record watcher (RW) exceptions out when it encounters an invalid record and fails to execute responders, which can cause flows to stall | This is seen so far in case of indirect responders when trying to get indirectly watched records. During this, when the RW encounters an invalid sys_id, IllegalArgumentException is thrown. This causes RW to not execute any responders matching that condition and can cause flows to be stuck in case there is a flow responder watching the same condition. | 1. Create an indirect responder on a task table with the condition ref_problem.stateISNOTEMPTY.<br>2. Set the sys_id of a change_request record to be –1.<br>3. Update the state of a sc_task record.<br><br>Observe that the issue is triggered. |
| Audit History<br><br>PRB1793551 | A null object returned by HistoryChangeListIterator should be handled | For an impersonated user, and only on certain records of a table, a calendar displays as empty. For other records of the same table, the calendar was populated as expected. | 1. In any audit-enabled table, add a custom column.<br>2. Open any record.<br>3. Update the custom column field value along with one or more other fields.<br>4. Delete the column from the table.<br>5. Impersonate a user and navigate to the record.<br>6. Open **History** > **Calendar**.<br><br>Notice the calendar is empty. |
| Audit History<br><br>PRB1837362 | NoBroadcast() logs are consumed by Log Export Service (LES) topics | In Xanadu, the persistence layer was updated to optimize database connection pool management, and new calls to Log.xxxNoBroadcast were introduced within the critical section. The expectation was that these calls would remain isolated and would not interact with the database. However, due to a downstream issue in the LogExportService Hermes API logic, database calls were inadvertently made during the same Log | 1. Install the LES application,<br>2. Create a source with 'Table' as the node table.<br>3. Verify that NoBroadcast() logs are also consumed. |

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| | | API calls, resulting in a deadlock. | |
| Capacity and Reservations Management<br><br>PRB1824649 | Capacity metrics data is cleared when running the capacity scheduled job in the case of buckets | Additionally, appointment booking through the platform is creating duplicate capacity usage. | 1. Log in as admin and run the scheduled job 'Compute Capacity Demand Metrics Data'.<br>2. Log in as an Field Service Management (FSM) territory planner.<br>3. Navigate to CSM or FSM configurable workspace.<br><br>On the homepage capacity dashboard, 'Field Service Territory Capacity Analytics' under the 'Capacity gap analysis' for territory, the assigned capacity data should be accurate and not all zeros. |
| Change Management<br><br>PRB1801143 | There's a URL truncation issue in change request copies | There's a URL truncation issue in change request copies due to large fields in the com.snc.change_request.copy.attributes property, leading to a missing **chg_model** field if it is in the end of the list. | 1. Edit the change properties for 'com.snc.change_request.copy.attributes'.<br>2. Add 'justification,implementation_plan' to the list.<br>3. Move the **chg_model** field to the end of the list.<br>4. Create an emergency change.<br>5. Populate the **Description**, **Justification** and **Implementation Plan** with lots of information.<br>6. Save the record. |
| CMDB to CSDM Data Synchronization<br><br>PRB1822499<br><br>KB1710540 | Life Cycle Control records are missing for a CMDB base table to allow the use of the 'End of Operation' stage | | Refer to the listed KB article for details. |
| Condition Builder<br><br>PRB1776650 | Unable to dot-walk into a reference field when configuring report conditions | Unable to dot-walk into a reference field when configuring report conditions since the Washington DC upgrade uses JAWS | |

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| Database Persistence - Data Scale<br><br>PRB1749770 | The size of tuple values received from the server should be limited | As a result of the size of these values, there's out of memory error restarts on surf far nodes. | |
| Database Persistence - Data Scale<br><br>PRB1788274<br><br>KB1720975 | There's incorrect results when a statement is closed while another statement is executing | | Refer to the listed KB article for details. |
| Database Persistence - Data Scale<br><br>PRB1793961 | Use Log.infoNoBroadcast in RowList and RowBlock | Log.infoNoBroadcast is used in RowBlock, which could potentially trigger database queries. It is always executed as a nested query (i.e., another query is still being executed and fetched). This could potentially affect the enclosing query. | |
| Database Persistence<br><br>PRB1773095 | Links break in variable set records when the page is translated to a non-English language | The links in a variable set record don't work when the **Title** field isn't translated in a non-English language. | 1. Activate the Japanese language plugin (com.snc.i18n.japanese).<br>2. Make sure the language is set to English.<br>3. Navigate to sc_cat_item table.<br>4. Create a catalog item.<br>5. In the 'Variable Sets' related list, select **New**.<br>6. Create a variable set (for example, a single-row variable set).<br>7. Fill in the **Title** (for example, Language test) and other mandatory fields, then submit.<br>8. Navigate back to the catalog item record.<br>9. Scroll down to 'Variable Sets' related list. |

## Fixed problem

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| AI Search<br><br>PRB1836358<br><br>KB1790348 | A race condition causes an incorrect deleteMultiple() query to be generated on the v_search_genius_result and sys_variable_value tables | When the AI Search Genius Result is requested and processed in a multi-threaded, high-concurrency environment, such as when multiple users simultaneously perform search functions on a portal or Virtual Agent (VA), a thread safety issue arises. This issue may cause an incorrect deleteMultiple() query to be generated, potentially leading to the deletion of excessive records from the sys_variable_value table. This may result in unexpected outcomes for various components including the Integration Hub, Service Catalog items, and workflows due to the absence of these critical records. | Refer to the listed KB article for details. |

## Fixes included

Unless any exceptions are noted, you can safely upgrade to this release version from any of the versions listed below. These prior versions contain PRB fixes that are also included with this release. Be sure to upgrade to the latest listed patch that includes all of the PRB fixes you are interested in.

## Xanadu Patch 4b Hotfix 1

The Xanadu Patch 4b Hotfix 1 release contains fixes to these problems.

**Build information:**

Build date: 02-23-2025_2130

Build tag: glide-xanadu-07-02-2024__patch4b-hotfix1-02-20-2025

**Important:**
For more information about how to upgrade an instance, see ServiceNow Upgrades.

For more information about the release cycle, see the ServiceNow Release Cycle.

**Note:**
This ServiceNow AI Platform major family release is now available in ServiceNow's Regulated Market environments. For more information about services available in isolated environments, see KB0743854.

## Fixed problem

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| Workflow Contexts<br><br>PRB1820829 | A fix causes a query to be executed when module access is requested | A SQL query against sys_kmf_crypto_module is run whenever access to a module is checked with CallerPolicyAccessManager .isModuleAccessible. For a field with a Column Level Encryption (CLE) configuration, this API is called one or more times for each canRead\|canWrite\| canCreate call that is made. When canRead is called multiple times for each form load, the query is run many times when loading a single record. | |

## Fixes included

- Xanadu Patch 4b
- Xanadu Patch 4
- Xanadu Patch 3
- Xanadu Patch 2
- Xanadu Patch 1
- Xanadu security and notable fixes
- All other Xanadu fixes

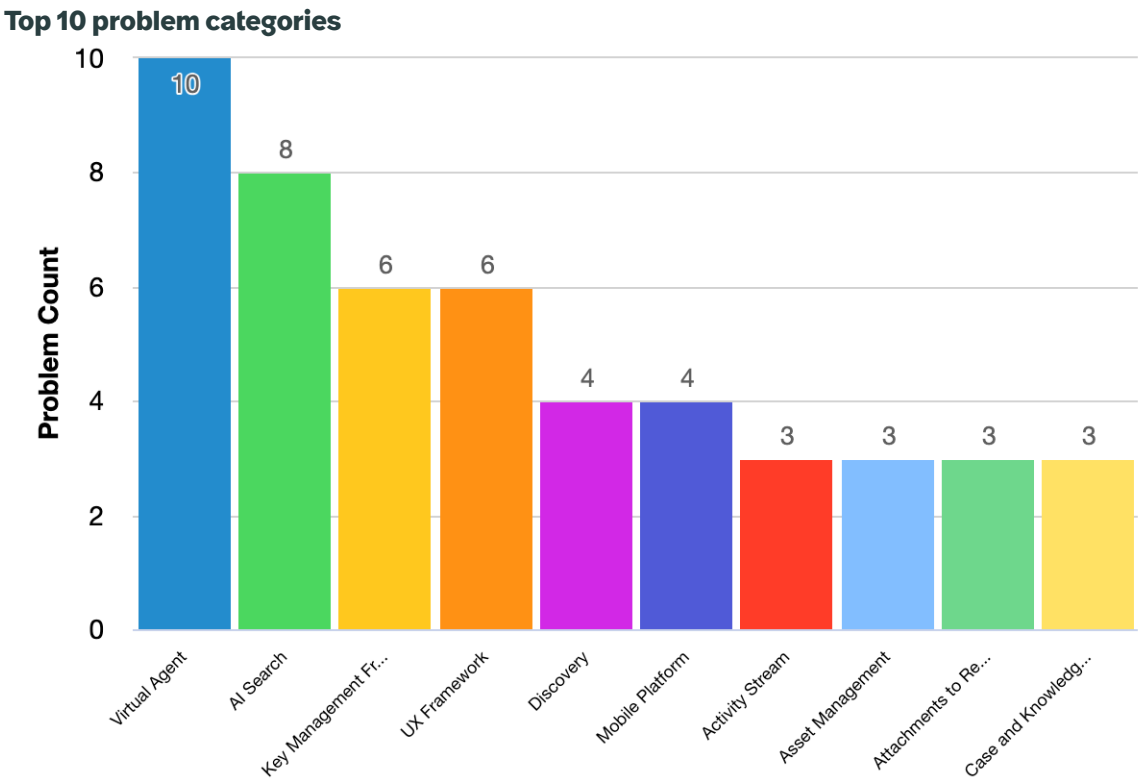
## Xanadu Patch 4

The Xanadu Patch 4 release contains important problem fixes.

**Xanadu Patch 4 was released on December 05, 2024.**

- Build date: 12-02-2024_1408
- Build tag: glide-xanadu-07-02-2024__patch4-11-22-2024

**Important:**
For more information about how to upgrade an instance, see ServiceNow Upgrades.



For more information about the release cycle, see the ServiceNow Release Cycle.

**Note:**
This ServiceNow AI Platform major family release is now available in ServiceNow's Regulated Market environments. For more information about services available in isolated environments, see KB0743854.

For a downloadable, sortable version of the fixed problems in this release, click here.

## Overview

Xanadu Patch 4 includes 170 problem fixes in various categories. The chart below shows the top 10 problem categories included in this patch.

## Security-related fixes

Xanadu Patch 4 includes fixes for security-related problems that affected certain ServiceNow® applications and the ServiceNow AI Platform®. We recommend that customers upgrade to this release for the most secure and up-to-date features. For more details on security problems fixed in Xanadu Patch 4, refer to KB1710163.

## Changes in Xanadu Patch 4

### Upgrade legacy replication sets in Instance Data Replication

Complete the upgrade by activating the V2 consumer replication set with or without data integrity checks.

## Notable fixes

The following problems and their fixes are ordered by potential impact to customers, starting with the most significant fixes.

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| Attachments to Records<br><br>PRB1823698<br><br>KB1709552 | Out Of Memory (OOM) caused by the misuse of BufferedInputStream when creating attachments | Attachments created from previously prepared TMP files are read with BufferedInputStream and have an internal buffer of 512M. | Refer to the listed KB article for details. |
| Database Persistence - Data Access<br><br>PRB1818225<br><br>KB1705517 | Using 'order by' on a single field with a limit clause produces error messages | Users are experiencing Syntax Error or Access Rule Violation messages when they use an 'order by' function on a single field with a limit clause. This error occurs in the within the CMDB workspaces and CMDB hierarchy when viewing tables in the list view. This also occurs if the ordered list displays no data yet indicates a valid, non-zero row count. | Refer to the listed KB article for details. |
| Flows (Family Channel)<br><br>PRB1813141<br><br>KB1706138 | fd_data does not read the object from the **Create Task** action | After upgrading from Vancouver with the v1 flow engine to Washington DC or Xanadu with the v2 flow engine, any inline script with fd_data does not read the object from the **Create and Update Task** action, resulting in failure and an error thrown. | Refer to the listed KB article for details. |

| Problem | Short description | Description | Steps to reproduce |
| --- | --- | --- | --- |
| Predictive Intelligence<br><br>PRB1777777<br><br>KB1702121 | Similarity calculation from Predictive Intelligence slows down the instance | An issue with Predictive Intelligence similarity calculation slows down alert record loading. | 1. Change the property evt_mgmt.similarity_use_ml to true.<br>2. Open an alert record through Express List Records.<br><br>Notice that it takes a few minutes to open.<br><br>3. Change the property evt_mgmt.similarity_use_ml to false.<br>4. Refresh the alert record.<br><br>Notice that the alerts query takes an average of 35,655 milliseconds. |
| Rollback Contexts<br><br>PRB1772992<br><br>KB1648911 | The 'Shadow' table chunk delete has performance issues | The time taken for deleting shadow records can be derived from the logs. When users delete data from the 'Shadow and snapshot' table, a log statement is printed. First, 'Shadow' table records are deleted, then the 'Snapshot' table. Time between log statements would be the time taken to delete shadow records. It takes more than one minute to delete records from a 'Shadow' table. | Refer to the listed KB article for details. |
| Web UX Runtime<br><br>PRB1776097<br><br>KB1709413 | Chats close automatically on the workspace after they are opened within a few seconds | This issue was introduced in Washington DC. Chats are closed automatically in the workspace after they are opened within a few seconds. Shortly after the chat window is opened, it is then closed, and the chat state is set to 'Closed Complete'. | Refer to the listed KB article for details. |

## All other fixes

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| Activity Stream<br><br>PRB1778010 | The SysActivityRule should filter its query on the fields that workspace can only see | The SysAuditRule does not need to pull all of the fields changes. It only needs to pull the fields that the front end can filter on. | |
| Activity Stream<br><br>PRB1796571 | 'Archive Destroy Run' is excessively slow when deleting activities due to the overhead incurred by publishing AMB messages | After upgrading to Washington DC, 'Archive Destroy Run's may take longer than in previous releases due to slowness incurred by publishing messages to the AMB channel for related activities. | |
| Activity Stream<br><br>PRB1816292 | An attachment is not visible in the activity stream in workspaces | When an attachment is added to a Record Producer, it can't be found in the Activity Stream. | 1. Add a variable with Type = 'Attachment' to a Record Producer (for example, create a case for CSM Outlook).<br>2. Open the record producer in Service Portal.<br>3. Attach a file to the field created in step 1 and submit.<br>4. Navigate to CSM and FSM Configurable workspace and search for the item created after submitting.<br>5. Check the Activity Stream.<br><br>Expected behavior: The attachment should be visible in the Activity Stream in workspace.<br><br>Actual behavior: The attachment is not visible in Activity Stream in workspace. |
| Advanced Work Assignment<br><br>PRB1820154 | An assignment API fails with Genesys | An assignment request API intermittently fails because of server time differences between Genesys and ServiceNow. | |

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| Agent Chat<br><br>PRB1789973 | Empty **Short description** and **Description** fields when an incident is created from Quick Action, and the user has to load demo data from the Agent chat plugin to generate these fields | After upgrading to Xanadu, the **Short description** and **Description** fields are empty when an incident is created from the Quick Action function. The user has to load the demo data from the Agent chat group to generate the short description and description for the incident. | **1.** Log in to the instance.<br>**2.** Initiate the chat between the Requester and Agent 3.<br>**3.** Navigate to **Quick Action** > **Create incident** from the Agent window.<br><br>Notice that it will create an incident.<br>**4.** Open the incident.<br><br>Notice that the short description and description is missing in that incident, when it should have the short description and description for incident created from a Quick Action.<br>**5.** Load the demo data for Agent chat group.<br>**6.** Open the incident again.<br><br>Notice that the incident created from Quick action now has the short description and description. |
| Agent Chat<br><br>PRB1823530 | Input text is occasionally truncated in 'now-textarea' | Characters are truncated when typing quickly as an agent. | **1.** Set up Agent Chat and accept a chat as an agent in Agent Chat.<br>**2.** Type quickly in the input text area<br><br>Observe that characters are truncated. |
| Agent Chat<br><br>PRB1830383 | Recommendation text is not inserted into a chat window | | **1.** Log in to an instance as an admin.<br>**2.** Initiate a chat with a live agent.<br>**3.** Log in as an agent on other browser and accept the chat.<br>**4.** Select the Sparkle icon.<br>**5.** In the recommendation dialog, select **Insert**.<br><br>Expected behavior: Inserted text should be inserted.<br><br>Actual behavior: Inserted text is not shown in the chat area. |
| AI Search<br><br>PRB1735195 | The range facet and facet with compound table.column set in the facet | A function doesn't parse table.column correctly and results in a bucket match to zero. The facet is then filtered out. | |

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| | fields is filtered out when one of the tables is late-binding | | |
| AI Search<br><br>PRB1738123 | AisUtils doesn't refresh its search connection (HaApiClient) after the search connections are updated | Errors display: 'ScriptableAisUtil: Exception during dump AI search document request: com.glide.ais.error .SearchRuntimeException: NOW-AI_SEARCH-SEARCH_QUERY_ERROR: Additional information - No more read-only connections to try for search...' | 1. Set up AI Search (AIS) to use one connection.<br>2. Background write any script that uses 'new sn_ais.AisUtil()'.<br>3. Change the AIS Connection to a different endpoint.<br>4. Ensure that the AIS backend at the original endpoint is no longer a valid endpoint (shutdown the original AIS).<br>5. Re-run the same script using 'new sn_ais.AisUtil()'.<br><br>Observe that the script fails attempting to connect to the old connection. |
| AI Search<br><br>PRB1811885 | A risk intelligence report (RIR) doesn't boost for a language match | The AI search log shows that it's matching the language to the session, but the dump shows differently. | 1. Create a RIR action that boosts kb_knowledge.language matches with the user context language.<br>2. Search.<br><br>Expected behavior: Documents are boosted based on the language.<br><br>Actual behavior: No document is boosted. |
| AI Search<br><br>PRB1818535 | Placeholder (Search) is missing in the **Global search** field on first login | | |
| AI Search<br><br>PRB1821606 | Incorrect semantic ingestion state | Records are stuck in an indexing state. | 1. Search indexed sources.<br>2. Navigate to ais_datasource.<br>3. Open the records of Skill, Knowledge Base, and Catalog.<br>4. Navigate to the **Indexing History** tab.<br><br>Notice that a few records are struck in an indexing state. |
| AI Search | Filtering search results isn't supported | | |

| Problem | Short description | Description | Steps to reproduce |
| --- | --- | --- | --- |
| PRB1823539 | in NASK, although it's supported by the RAGRetrieval API | | |
| AI Search<br><br>PRB1824858 | Query rewrite calls aren't being made | | |
| Analytics Center<br><br>PRB1781561 | The user observes a 'Data visualization 404 bad request' message | A 'Bad Request 400' is generated when shifting between 'Data Visualization' and 'Dashboard' tabs. | **1.** Log in to an instance.<br>**2.** Navigate to CSM/FSM Workspace.<br>**3.** Navigate to 'Data Visualization' then to 'Dashboards' and again back to 'Data Visualization'. |
| Analytics Data API<br><br>PRB1769933 | A bar chart displays different values for the same applied 'group by' | This is an issue with the dot-walking 'group by'. | **1.** Navigate to a migrated dashboard.<br>**2.** Navigate to the 'Total Targeted Defects Waiting to be Fixed' visualization.<br><br>Expected behavior: The visualization should display the same data in both dashboards when the same 'group by' is applied.<br><br>Actual behavior: The same visualization displays different results in the Core UI dashboard when the same 'group by' is applied. |
| Analytics Data API<br><br>PRB1808453 | Sorting does not work for value and element order | Values are not sorted by descending and ascending order in Time Series Visualization. | **1.** Create a new dashboard.<br>**2.** Add visualization to it.<br>**3.** Select **Time Series Visualization**.<br>**4.** Add a data source as an indicator.<br>**a.** Use 'group by' as 'priority'.<br>**b.** Sort by the element order and descending.<br><br>Notice that the elements are not sorted by descending order.<br><br>**5.** Add another time series visualization to the dashboard. |

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| | | | **a.** Select the data source as incident.<br>**b.** Use 'group by' as 'priority'.<br>**6.** Sort by value and descending/ ascending order.<br><br>Notice the values are not getting sorted by descending and ascending order. |
| Application Manager<br><br>PRB1770423 | There is different behavior in a product page versus an app page (update/ installed) for applications | There can be a version mismatch from the UI between the 'New App' manager page and classics app manger. | |
| Asset Management<br><br>PRB1789417 | Asset and CI synchronization might not work properly on domain separated instances in the Washington DC release due to the scoped cache mechanism | In domain separated instances, if users have different asset-ci field mappings for different domains, Asset and CI synchronization won't work properly because the currently scoped cache isn't supported for domain separation. Sometimes users observe that the **Asset** and **CI** fields are synchronized for different fields, depending on the first user's domain that generate the cache. | |
| Asset Management<br><br>PRB1791993 | There are hundreds of errors daily in the system logs reading 'Cannot call sendRedirect() after the response has been committed' | When a Return on Transfer Order Line is performed, the system does not redirect to the newly created Return Transfer Order. The system logs show numerous errors reading 'Cannot call sendRedirect() after the response has been committed'. | |
| Attachments to Records | Android file type attachments with extension '.aab' cannot | Files with the extension '.aab' cannot be attached to any record after upgrading to Xanadu. Attachment | |

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| PRB1823018 | be uploaded to or downloaded from the App Store | fails with a MIME type related error 'File type not permitted or mime type does not match the file content'. | |
| Authentication<br><br>PRB1791895 | When an explicit role plugin is installed and the property 'glide.security.explicit_roles.do_not_fix'= true, SSO login fails if the post auth policy requires an snc_internal role | | 1. Install an explicit role plugin.<br>2. Set the property 'glide.security.explicit_roles.do_not_fix'= true.<br>3. Set up SSO.<br>4. Set up a post auth policy which requires that a login user has the snc_internal role.<br><br>Expected behavior: Login succeeds.<br><br>Actual behavior: Login fails in post-auth role policy check. |
| Automated Test Framework (ATF)<br><br>PRB1788452 | ATF Field State Validation doesn't work via Service Operations Workspace | The Field State Validation ATF Step to check if fields are not visible does not work in Service Operations Workspace. The ATF Test results in failure showing that a field shout not be visible, but it is visible. | |
| Automated Test Framework (ATF)<br><br>PRB1793151 | Screenshots are blank when certain characters appear in Service Portal HTML | context.drawImage() is unable to properly parse the end of a comment that goes for multiple lines and includes extra dashes. Standalone commas in an element's attributes also prevent rendering of the document image. | 1. Create a Service Portal widget (sp_widget).<br>2. Add a comment to the body HTML template with extra dashes and new lines, or add a comma character inside an element's attributes.<br>3. Add the widget to an sp_instance in an sp_column, and add that column to an sp_page.<br>4. Create an ATF test with the 'Open Service Portal Page' step that opens the sp_page from step 3 in any portal.<br>5. Run the test with GlideScreenshot capturing the full page.<br><br>Expected behavior: The screenshot is captured successfully |

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| | Washington DC to Xanadu | | |
| Configuration Management Database (CMDB)<br><br>PRB1672625<br><br>KB1364738 | Choices for the **Life Cycle Stage** and **Life Cycle Stage Status** fields are not translated | In list view, both translations do not work. In form view, **Life Cycle Stage** translations do not work. | Refer to the listed KB article for details. |
| Configuration Management Database (CMDB)<br><br>PRB1824939 | Change the health dashboard failure threshold max value to 10M | This is a product update. | |
| Continual Improvement Management<br><br>PRB1816181 | Add 'dex-notify-svc' service within glide.services .rest.allowed_services | This is a product update. | |
| Database Persistence - Data Access<br><br>PRB1785305 | If an optimization is performed, SqlJoinOptimizer silently drops CTE statements | This impacts anything that extends ASqlOptimizer. | |
| Database Persistence - Data Access<br><br>PRB1826425 | An Application Menu Module (sys_app_module) with a space character causes a display failure in the Filter Navigator | An Application Menu Module (sys_app_module) may not be visible in the Filter Navigator if there is a whitespace character (non-null value) in the **Query** field. | |
| Database Persistence - Data Management<br><br>PRB1772039 | Archiving 1000 records takes approximately four minutes, which is two minutes more than in Washington DC | With this current rate, it takes ~17 hours to archive 1M records. In BT1, sdlc_test_result table is loaded with ~50 million records everyday. If users want to archive this table, then this would be a BT1 blocker. | 1. Create 1M or 100K records in an instance.<br>2. Keep the archive chunk_size as '1000' in sys_properties.<br>3. Create an archive rule and trigger the 'Archive' job.<br>4. Verify the 'Archive' job's execution time. |

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| | | | Expected behavior: 1000 records archiving shouldn't take much time, since 1000 records archiving takes approximately two minutes in the Washington DC release.<br><br>Actual behavior: 1000 records archiving takes about four minutes. |
| Database Persistence - Data Scale<br><br>PRB1782312 | API calls using sysparm_offset +sysparm_limit parameters run the query without a defined 'Order by', causing results to not return consistently in RaptorDB | API calls using sysparm_offset +sysparm_limit parameters will run the query without a defined 'Order by'. This will not return the results consistently in RaptorDB, as it did in MariaDB. MariaDB returned results in the same order, even if the 'order by' is not defined, but its randomness caused a return of inconsistent results. | 1. Run a Rest API call with sysparm_offset+ sysparm_limit parameter on a table with a high amount of records.<br>2. Compare the number of duplicate sys_ids pulled in Maria compared to PG.<br><br>Notice that PG will have more duplicates than MariaDB. |
| Database Persistence - Data Scale<br><br>PRB1784967<br><br>KB1706117 | A NullPointException (NPE) was thrown while invoking the getAvailableConnection | An NPE occassionally occurs during the AHA 3.0 switchover. The failure to load the scripts database is because the return value of com.glide.db.pool. DBConnectionPool. getDBConnection(int) is null. | Refer to the listed KB article for details. |
| Database Persistence - Data Scale<br><br>PRB1815761 | Running app nodes should continue to run even after other databases become RW | Running app nodes should continue to run even after DB1 (primary) becomes RW if the intended primary is set to DB2. | |
| Database Persistence<br><br>PRB1813934 | Restricting queries to a primary-only configuration isn't honored by Glide | | |

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| Discovery<br><br>PRB1786484 | RunningProcess.removeAll marks redundant update processes as absent | When ADM fetches running process information, if a process is no longer active on the host, the cmdb_running_process record is marked as absent. With the current behavior, if the same ADM payload is processed again, the system marks the same running process as absent. | 1. Run discovery on host.<br><br>Notice that running processes are populated.<br><br>2. Turn off one of the running process on the host and rerun discovery.<br><br>Notice that the event 'running.process.absent' is logged.<br><br>3. Run discovery again.<br><br>Notice that the event is logged with the same data. |
| Discovery<br><br>PRB1804276<br><br>KB1702685 | Discovery Application Dependency Mapping (ADM) Process Classifiers put incorrect Configuration Items (CI) in the probe ecc_queue outputs, leading to data from the application only to be updated in the computer CI | When the ADM probe is runs, matching process classifiers will trigger probes specific to applications. The code involved in specifying the CI to put in the probe output is in the script include Application DependencyMapping, which puts the parent computer CI in instead of the application CI. As a result, the computer CI becomes updated and overwritten rather than the application CI, and the application CI is not updated. | 1. Open NGINX on a Linux server to use as an example.<br>2. Open a Vancouver instance.<br>3. Discover a host to create a NGINX CI is created.<br>4. Upgrade the instance to Washington DC.<br>5. Clear out the version value from the existing application CI.<br>6. Discover the Linux host.<br><br>Notice that the example version is not repopulated in the NGINX CI. |
| Discovery<br><br>PRB1817735 | Shazzam should always use 'glide.discovery.shazzam.always.simplify.ranges' and this should be true | This property should be set to true, or it shouldn't check for this property and always use simplify ranges. | |
| Discovery<br><br>PRB1817799 | Starting a Discovery takes a while when there's a sizable global exclusion IP address list and inclusion list | Discovery and Shazzam Sensor processing takes a long time when there is a sizable global exclusion IP address and inclusion list. | 1. Open a Washington DC instance.<br>2. Add 430K IP addresses to the global exclusion list.<br>3. Create a Discovery schedule with the inclusion list of 50k IP addresses.<br>4. Start Discovery.<br><br>Notice a long runtime. |

**Note:**
This ServiceNow AI Platform major family release is now available in ServiceNow's Regulated Market environments. For more information about services available in isolated environments, see KB0743854.

For a downloadable, sortable version of the fixed problems in this release, click here.

## Overview

Xanadu Patch 3 includes 298 problem fixes in various categories. The chart below shows the top 10 problem categories included in this patch.

## Security-related fixes

Xanadu Patch 3 includes fixes for security-related problems that affected certain ServiceNow® applications and the ServiceNow AI Platform®. We recommend that customers upgrade to this release for the most secure and up-to-date features. For more details on security problems fixed in Xanadu Patch 3, refer to KB1706274.

## Changes in Xanadu Patch 3

### Available system properties

**com.snc.pa.xmr.processes.limit**

The maximum number of KPI Signals Configurations (pa_xmr_processes) that can be evaluated by the KPI Signals Insight Job. After this number of processes have been evaluated, the remaining processes are ignored.

- Type: Integer
- Default: 1000
- Maximum: 10,000

## Notable fixes

The following problems and their fixes are ordered by potential impact to customers, starting with the most significant fixes.

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| AI Search<br><br>PRB1709322<br><br>KB1645499 | Text seen when using AI Search can't be translated | The text '[number] results for [keyword]' can't be translated. | Refer to the listed KB article for details. |
| AI Search<br><br>PRB1808466<br><br>KB1704590 | AI Search yields 'No results found' message on the Now Mobile app, but works as expected in the Service Portal | Using AI Search on the Now Mobile app does not render results and displays errors in the logs, but using AI Search in the Service Portal works as expected. | Refer to the listed KB article for details. |
| History Set<br><br>PRB1806563 | Duplicate comments are observed intermittently even after enabling the fix for DEF0528864 | With the fix for DEF0528864, the history set loader flow was modified to utilize the system property glide.history_set.pull_journal_entries_from_journal_table. However, there are new instances of intermittent duplication issues, even with this property enabled. In these cases, duplicate records in the sys_history_line table originate from the sys_journal_field table. | |

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| List Administration<br><br>PRB1797758<br><br>KB1705540 | When scrolling horizontally in any table in list view, field names do not scroll | When scrolling horizontally, the field names on the top are frozen in place but the values change. | Refer to the listed KB article for details. |
| Next Experience Unified Navigation<br><br>PRB1799023 | Menu can show fewer items when a business rule is configured to restrict a query | The user observes that the Next Experience header is missing menus (for example, 'All', 'Favorites', 'History'). This can occur if there are business rules against the 'sys_app_application' or 'sys_app_module' tables with the type 'Query'. It can also result from bad domain-specific caching in relation to the menus. | |
| Service Portal<br><br>PRB1809948<br><br>KB1703663 | Using the auto-fill function in an Edge browser triggers a search of all reference fields in the Service Portal catalog form | Starting from Edge browser 129.0.2792.52+, when the user fills the personal information with the auto-fill function on the service catalog form in the Service Portal, it triggers a search of all reference fields in the form. Sometimes this causes the form to freeze, and it must be reloaded to proceed. | **1.** Enable the auto-fill function on Edge browser 129.0.2792.52+.<br>**2.** Open a service catalog with multiple reference fields in Service Portal.<br>**3.** Select one of the fields and fill the personal information by auto fill.<br><br>Expected behavior: Only fields that are related to personal information are populated.<br><br>Actual behavior: Fields related to personal information are populated, but all the reference fields on the form were in focus and triggered the searches of the fields. |

## All other fixes

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| Activity Stream | Components using the now-trigger-library for a keyboard | Components should deregister if using now-trigger-library so that the reference to the | |

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| Virtual Agent<br><br>PRB1820812 | Skill discovery with Now Assist creator does not work | | 1. Provision an instance with Now Assist for Creator 26.2.0 installed.<br>2. Enable 'Data visualization skill' from 'Now assist skill for creator' under Now Assist feature (**All** > **Now Assist admin** > **Now Assist features** > **Creator**)<br>3. Enable 'Now Assist Panel' under Settings (**All** > **Now Assist admin** > **Settings** > **Now Assist panel**)<br>4. Navigate to NAP and send an utterance (for example, 'number of open incidents by category').<br><br>Observe that skill discovery does not work. |
| Virtual Agent Web Client<br><br>PRB1819654 | Some catalogs on Surf are not rendered correctly and have broken images | Cards are stretched and have broken images. | 1. Navigate to Now Assist Virtual Agent on ESC portal.<br>2. Type 'I want to buy a laptop'.<br><br>Expected behavior: The cards in the synthesized response should be rendered correctly and have respective images.<br><br>Actual behavior: The cards in the synthesized response are stretched and have broken images. |
| Virtual Agent Web Client<br><br>PRB1820457 | Now Assist Virtual Agent (NAVA) doesn't auto-scroll to the top of a message | Since vaLegacyScrollingEnabled is set to false, the page should be auto-scrolled to the top of a Virtual Agent message. Instead it is scrolled to the bottom. | 1. Provision an instance with NAVA enabled and vaLegacyScrollingEnabled set to false.<br>2. Send an utterance that results in a longer response (for example, 'How does ESPP work?').<br><br>Observe that NAVA auto-scrolls to bottom instead of the top of the long response. |
| Work Order Management<br><br>PRB1782808 | Manual update does not update the travel time | Travel back to home doesn't show at the end of the day when the 'Show travel time' home indicator is turned on in the settings. | 1. In Dynamic scheduling Config, navigate to any task filter and modify it immediately assign the tasks if some task is unassigned in the system.<br>2. Assign any task manually for an agent<br><br>Observe that travel time is populated correctly. |

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| | | | **3.** Un-assign the task and save.<br>Dynamic scheduling picks up the task and assigns it to an agent.<br>Notice that the travel time doesn't match the DS travel time, and it sets to default travel time. |
| Work Order Management<br>PRB1806645 | The user observes an error while training due to a missing ACL | There is a missing ACL that grants read access to the platform_ml_read role for wm_task table. | **1.** Log in as admin.<br>**2.** Navigate **All** > **Process Mining** > **All Projects** and open an existing project.<br>**3.** Create a copy of the project and select **Generate models**.<br>Observe that model generation fails. |

## Fixes included

Unless any exceptions are noted, you can safely upgrade to this release version from any of the versions listed below. These prior versions contain PRB fixes that are also included with this release. Be sure to upgrade to the latest listed patch that includes all of the PRB fixes you are interested in.

- Xanadu Patch 2 Hotfix 1
- Xanadu Patch 2
- Xanadu Patch 1 Hotfix 3
- Xanadu Patch 1
- Xanadu security and notable fixes
- All other Xanadu fixes

## Xanadu Patch 2 Hotfix 2

The Xanadu Patch 2 Hotfix 2 release contains fixes to these problems.

**Build information:**

Build date: 11-23-2024_0851

Build tag: glide-xanadu-07-02-2024__patch2-hotfix2-11-20-2024

**Important:**
For more information about how to upgrade an instance, see ServiceNow Upgrades.

For more information about the release cycle, see the ServiceNow Release Cycle.

**Note:**
This ServiceNow AI Platform major family release is now available in ServiceNow's Regulated Market environments. For more information about services available in isolated environments, see KB0743854.

## Fixed problem

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| Haraka (Glide)<br><br>PRB1824231<br><br>KB1709920 | sys_kagami_query engine has an error on the column decision_last_msg | Queries are not routing to postgreSQL after upgrading to Xanadu. Queries with 'group by' are attempting to route to Haraka, but are failing due to a syntax error. | Refer to the listed KB article for details. |

## Fixes included

Unless any exceptions are noted, you can safely upgrade to this release version from any of the versions listed below. These prior versions contain PRB fixes that are also included with this release. Be sure to upgrade to the latest listed patch that includes all of the PRB fixes you are interested in.

- Xanadu Patch 2 Hotfix 1
- Xanadu Patch 2
- Xanadu Patch 1
- Xanadu security and notable fixes
- All other Xanadu fixes

## Xanadu Patch 2

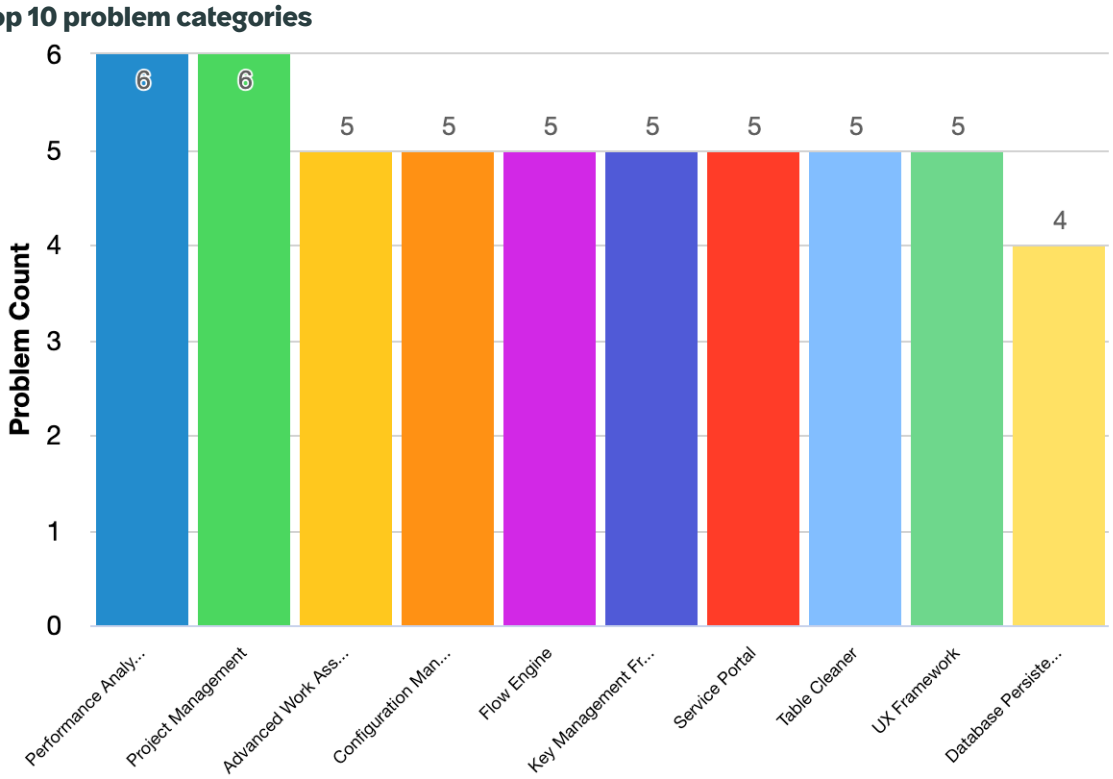
The Xanadu Patch 2 release contains important problem fixes.

**Xanadu Patch 2 was released on October 10, 2024.**

- Build date: 10-06-2024_2304
- Build tag: glide-xanadu-07-02-2024__patch2-09-25-2024

**Important:**
For more information about how to upgrade an instance, see ServiceNow Upgrades.

For more information about the release cycle, see the ServiceNow Release Cycle.



**Note:**
This ServiceNow AI Platform major family release is now available in ServiceNow's Regulated Market environments. For more information about services available in isolated environments, see KB0743854.

For a downloadable, sortable version of the fixed problems in this release, click here.

## Overview

Xanadu Patch 2 includes 249 problem fixes in various categories. The chart below shows the top 10 problem categories included in this patch.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

If your organization is using FSM questionnaires, do not upgrade to Xanadu Patch 2. Plan your future upgrade for a release that includes the fix for PRB1811012.

## Security-related fixes

Xanadu Patch 2 includes fixes for security-related problems that affected certain ServiceNow® applications and the ServiceNow AI Platform®. We recommend that customers upgrade to this release for the most secure and up-to-date features. For more details on security problems fixed in Xanadu Patch 2, refer to KB1703800.

## Changes in Xanadu Patch 2

### Platform Analytics Migration Center

You can disable the **Start Moving** and **Activate** Platform Analytics experience options. Create the system property `com.glide.par.coreui.migration.enabled` and set it to `False`. If you set the property to `False` before you migrate any content, both options are disabled. If you set the property to false after you migrate your content, only the **Activate** button is disabled.

If you want to start the migration and view what artifacts are in compatibility mode, and resolve any issues, set the property to `False` after you run the migration to prevent activation of Platform Analytics experience. If you want to prevent the migration process, set the property to `False` first.

For more information, see Add a system property.

### System properties for Proactive analytics

The maximum number of KPI Signals Configurations (pa_xmr_processes) that can be evaluated by the KPI Signals Insight Job. After this number of processes have been evaluated, the remaining processes are ignored.

## Notable fixes

The following problems and their fixes are ordered by potential impact to customers, starting with the most significant fixes.

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| Activity Stream<br><br>PRB1757236<br><br>KB1700513 | The workspace activity stream displays the 'From' email as the actual user who has sent the email | The 'From' of the entry displays 'From: [userId]@snc'. | Refer to the listed KB article for details. |
| Flow Engine<br><br>PRB1752255 | Flow stage changes aren't updating after using the **Do the following in parallel** action | The issue is also confirmed in Washington DC. | |
| Key Management Framework (KMF)<br><br>PRB1740666 | Some certificates aren't regenerated when certificates are missing and keys are present | If an instance only has an active key pair (for Instance Asymmetric Encryption Key (IAEK) and Instance Signature Key (ISK)) but certificates corresponding to it don't exist, certificates corresponding to IAEK and ISK should be regenerated, but aren't. | |
| List Administration<br><br>PRB1770231 | A list doesn't load when a fixed filter is null and a live list is enabled | The 'List' screen hangs when applying a filter. | |
| MID Server<br><br>PRB1791369<br><br>KB1703297 | There's a MID server issue and a pop-up warning when two MID servers use the same username and password combination | The user observes a warning and a MID server issue. | Refer to the listed KB article for details. |

## All other fixes

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| Advanced Work Assignment<br><br>PRB1793780 | A post-chat survey related list is hidden for external queues | | 1. Enable the related list chat survey on queues.<br>2. Create an internal queue (external boolean = false).<br><br>The chat survey related list can be seen as a tab to setup post chat surveys.<br>3. Create an external queue(external boolean = true).<br><br>Expected behavior: The post chat survey should be available to setup for external queues as well.<br><br>Actual behavior: The chat survey related list is hidden and post chat survey can't be setup. |
| Advanced Work Assignment<br><br>PRB1794843 | Events are 'cancelled' instead of 'completed' when the requester ends the conversation with the Chat Agent | | Scenario 1:<br>1. The requester starts a conversation.<br>2. Agent 1 accepts the work item.<br>3. The requester ends the conversation.<br><br>Scenario 2:<br>1. The requester starts a conversation.<br>2. Agent 1 accepts the work item.<br>3. Agent 1 transfers the work item to Agent 2.<br>4. The requester ends conversation before Agent 2 accepts the transferred work item. |
| Advanced Work Assignment<br><br>PRB1799796 | Unable to transfer an interaction to an agent that doesn't belong to a group | | 1. Add awa_external_user roles to Agent 1 and Agent 2.<br>2. Add only Agent 1 to a user group.<br>3. Start a conversation.<br>4. Assign it to Agent 1.<br>5. Transfer the interaction to Agent 2 from the Agent 1 workspace. |

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| | | | Notice that Agent 2 does not appear in the list of agents eligible for transfer. |
| Advanced Work Assignment<br><br>PRB1800365 | An external queue agent availability count displays '0' | The external queue agent count should be represented appropriately or the count parameter should be remove during the transfer initiation. | |
| Application Install Engine<br><br>PRB1792512 | Translations are loaded repeatedly when loading conditional content for sn_vul | | Install or upgrade sn_vul with customization. |
| Archive Rules<br><br>PRB1789753 | Table Cleaner rule for sys_archive_run impacts the restoration of records older than one year | The Table Cleaner rule for sys_archive_run impacts customers that have data archived more than one year ago, and have a need to restore some of those records. | 1. Provision an instance with records archived over one year ago where sys_archive_log is large (10ths/100ths of millions records).<br>2. Restore a record that has related records and has been archived one year ago by selecting **Restore Record and Related Records**.<br><br>Observe that the UI freezes and the transaction is canceled after five minutes. The parent record gets restored, the related record does not. |
| Asynchronous Message Bus (AMB)<br><br>PRB1794574 | Memory leak in the AMBSessionMessageQueue | A message from a removed session stays in the AMBSessionMessageQueue. | 1. Publish messages to a channel that has redelivery turned on.<br>2. Turn off the redelivery.<br>3. Disconnect the client.<br>4. Reconnect the client.<br><br>Notice that the redelivery continues. |
| Azure Active Directory User Mapping<br><br>PRB1797579 | EC in teams/ unfurling flows are failing due to an authentication error | | |

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| Case and Knowledge Management for HR Service Delivery<br><br>PRB1798836 | The placeholder text 'Type your Work notes (Private) here' isn't generated in the resolution notes in UI16 after clearing AI generated notes | | 1. Open an HR case that isn't closed on UI16.<br>2. Change the state of the case from 'work in progress' to 'complete'.<br>3. Verify that the pop up 'Add resolution notes' is displayed.<br>4. Delete the AI-generated resolution notes.<br><br>Expected behavior: The placeholder text 'Type your Work notes (Private) here' is visible upon deleting the AI generated notes.<br><br>Actual behavior: The placeholder text 'Type your Work notes (Private) here' isn't generated upon clearing the AI generated notes. |
| Change Management<br><br>PRB1788129 | Opt-in mechanism for Change-HAM integration | This is a product update. | |
| Change Management<br><br>PRB1797542 | The **Proposed change** field becomes empty when a mass update CI Class is read-only | | 1. Navigate to Service Operations Workspace (SOW).<br>2. Create a normal change (either with a change model or not) with a configuration item and assignment group = 'Service Desk'.<br>3. Save.<br>4. Navigate to the 'Details' tab.<br>5. Navigate to the 'Impact' section.<br>6. Verify the mass update CI class is visible on the form.<br>7. Enable the checkbox for mass update CI class.<br>8. Populate the CI class and proposed change.<br>9. Select **Request approval**.<br><br>The **Proposed change** field becomes empty on SOW. |
| CMDB Identification | DbBatchProcessor doesn't handle resource | When there are invalid SQL statements, DbBatchProcessor | |

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| and Reconciliation<br><br>PRB1791634 | cleanup properly, resulting in high memory contention on the node | doesn't close the statement batcher. This results in high memory contention. | |
| CMDB Query Builder<br><br>PRB1796164<br><br>KB1701193 | Query Builder queries with the 'AND' node have different result structures/the data is split over multiple result records | A fix was applied to the performance of QB queries with the 'AND' node by avoiding multiplexing data in the results of such queries. However, this might break the way users consume the results in their systems. | Refer to the listed KB article for details. |
| Condition Builder<br><br>PRB1795084 | Selecting 'AND' doesn't populate a catalog item when selecting variables/ questions from a field's dot walk | On first load, the catalog item appears, but selecting 'AND' doesn't display the item name. Selecting 'OR' works. Expected behavior is that selecting 'AND' should populate the catalog item when selecting variables/question from a field. | |
| Configuration Management Database (CMDB)<br><br>PRB1790374<br><br>KB1698757 | The de-duplication template doesn't honor the 'Only allow updates from duplicate CIs when the main CI value is null' option | The main CI attributes are updated with the values of the duplicate CI. | Refer to the listed KB article for details. |
| Contracts Core<br><br>PRB1798652 | Files are deleted after a week due to a scheduler job | | **1.** Open any TPC or NDA contract.<br>**2.** Try uploading a supporting file.<br><br>After the upload, observe that a new record is created in sys_attachment_cleaner_entry. The platform is providing a schedule job to run every weekend to fetch all the sys_attachment_cleaner_entry records and delete the attachment referenced inside this record. Eventually, the uploaded attachment for the support document is deleted after 5 days |

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| | | | (since the scheduler only deletes the sys_attachment_cleaner_entry records, which are of at least 5 days old). |
| Core Platform<br><br>PRB1761876 | A QuotaManager null point exception is printed in the logs multiple times | If a caller requests active transactions, they might get one with a null sys_ID. An error displays in the logs: 'QuotaManager: Exception during quota processing: : java.lang.NullPointerException:... | 1. Navigate to syslog.list.<br>2. Query on a message that contains QuotaManager.<br><br>Expected behavior: There are no errors printed in the logs.<br><br>Actual behavior: The logs contain multiple records with an error message. |
| Customer Service Management for Field Service Management<br><br>PRB1798276<br><br>KB1700946 | Field Service Management work order task map pages don't load for the latest Google Maps Javascript API versions | Map pages for 'View task location' fail to load due to an incompatibility between the latest Google Maps API versions and the Google Maps base instance integration plugin. | Refer to the listed KB article for details. |
| Database Persistence - Data Management<br><br>PRB1756534 | Enabling shadow tables for compaction | | 1. Create a shadow table.<br>2. Call the TableCompactor.compact(tableName) API.<br><br>Notice the message that appears, 'The compaction is not enabled for table:+ tableName'.<br><br>3. Enable shadow tables for compaction.<br>4. Create a shadow table.<br>5. Call the TableCompactor.compact(tableName) API.<br><br>Notice that the message 'Created sys_trigger compaction qualification job with sys_id:' appears, indicating the shadow table successfully qualified for compaction now. |
| Database Persistence - Data Management | The **Payload** field value isn't deleted for offload retry records | | 1. Create 300 records.<br>2. Update the batch_size to 50 and update the offload retry to 5 minutes.<br>3. Offload the records. |

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| Word Document APIs<br><br>PRB1805330 | There's test failures for the renderDocument API on Xanadu | | |
| Work Order Management<br><br>PRB1784924 | Updates made to the wm_task.state label in the platform aren't reflected in 'My Map' | Changes in the wm_task state labels aren't reflected in 'My Map' because state labels were hardcoded in Java. | |

## Fixes included

Unless any exceptions are noted, you can safely upgrade to this release version from any of the versions listed below. These prior versions contain PRB fixes that are also included with this release. Be sure to upgrade to the latest listed patch that includes all of the PRB fixes you are interested in.

- Xanadu Patch 1 Hotfix 2a
- Xanadu Patch 1 Hotfix 2
- Xanadu Patch 1 Hotfix 1
- Xanadu Patch 1
- Xanadu security and notable fixes
- All other Xanadu fixes

## Xanadu Patch 1 Hotfix 3b

The Xanadu Patch 1 Hotfix 3b release contains fixes to these problems.

**Build information:**

Build date: 11-25-2024_0807

Build tag: glide-xanadu-07-02-2024__patch1-hotfix3b-11-14-2024

**Important:**
For more information about how to upgrade an instance, see ServiceNow Upgrades.

For more information about the release cycle, see the ServiceNow Release Cycle.

**Note:**
This ServiceNow AI Platform major family release is now available in ServiceNow's Regulated Market environments. For more information about services available in isolated environments, see KB0743854.

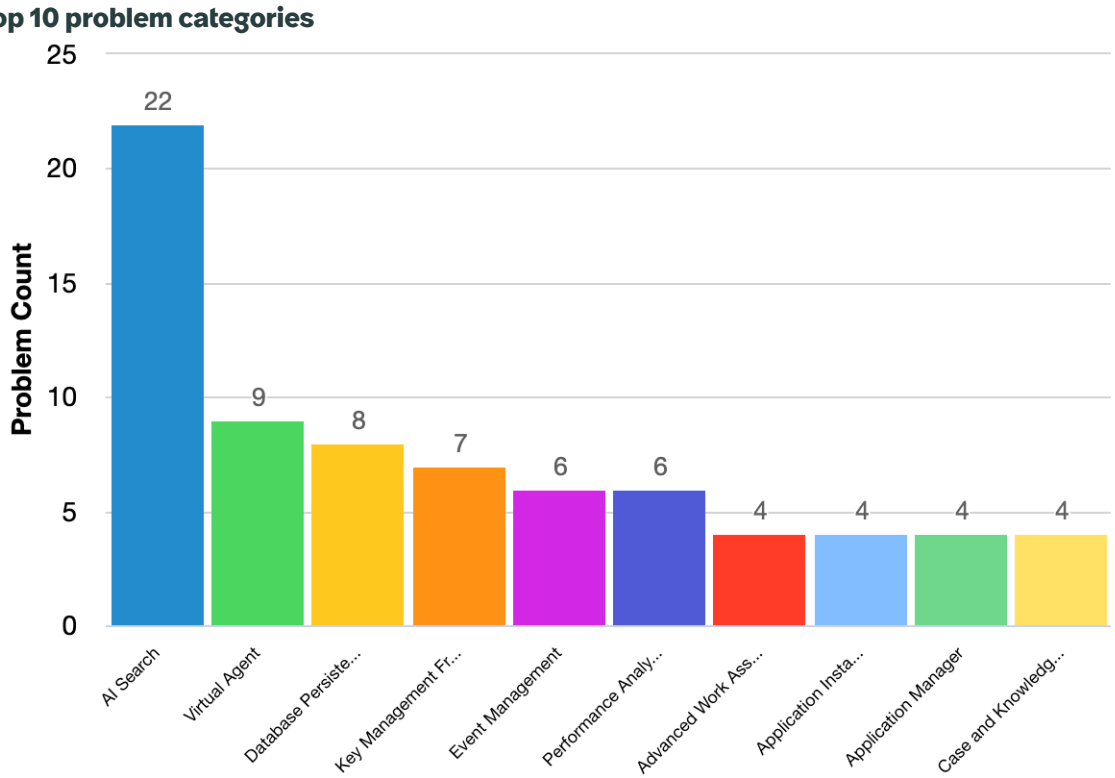
**Xanadu Patch 1 was released on September 10, 2024.**

- Build date: 09-01-2024_1853
- Build tag: glide-xanadu-07-02-2024__patch1-08-24-2024

**Important:**
For more information about how to upgrade an instance, see ServiceNow Upgrades.



For more information about the release cycle, see the ServiceNow Release Cycle.

**Note:**
This ServiceNow AI Platform major family release is now available in ServiceNow's Regulated Market environments. For more information about services available in isolated environments, see KB0743854.

For a downloadable, sortable version of the fixed problems in this release, click here.

## Overview

Xanadu Patch 1 includes 255 problem fixes in various categories. The chart below shows the top 10 problem categories included in this patch.

## Security-related fixes

Xanadu Patch 1 includes fixes for security-related problems that affected certain ServiceNow® applications and the ServiceNow AI Platform®. We recommend that customers upgrade to this release for the most secure and up-to-date features. For more details on security problems fixed in Xanadu Patch 1, refer to KB1700380.

## Changes in Xanadu Patch 1

### Connect to a Git provider using OAuth 2.0 with the ServiceNow IDE

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Set up an OAuth 2.0 application registry and credentials to connect to your Git provider from the ServiceNow IDE.

**Configure OAuth 2.0 credentials to connect to a Git provider with the ServiceNow IDE**

Connect to a Git domain using OAuth 2.0 credentials to manage applications in source control from the ServiceNow IDE.

**Configure an OAuth 2.0 application registry for the ServiceNow IDE**

Configure how the client ID and secret are sent to the OAuth 2.0 provider associated with your Git provider.

**ServiceNow SDK release notes**

Create and convert commands include project-type and template parameters

**Considerations for switching JavaScript modes**

Switching the JavaScript mode for an application or script might change the behavior of existing scripts.

## Notable fixes

The following problems and their fixes are ordered by potential impact to customers, starting with the most significant fixes.

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| AI Search<br>PRB1778235<br>KB1647662 | There's an 'Invalid or unexpected token' error message on a browser console when accessing any page on a portal after upgrading to a Washington DC version | The issue can be seen on any portal, like 'SP' or 'ESC, as well as an empty testing page. There shouldn't be an error message on the browser console. | |
| AI Search<br>PRB1779119<br>KB1650596 | After upgrading to Washington DC, the user sees a red banner ACL message when viewing incidents or case tasks | The user observes an error with the banner, 'Part of the query on live_message has been ignored because of read security rules on live_message.chat_message', or 'Part of the query on live_message has been ignored because of read security rules on live_message.state'. | |
| AI Search<br>PRB1779636 | Carousel and regular search results do not appear intermittently | The carousel gets stuck in a loading state when a search query is performed. | Refer to the listed KB article for details. |

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| KB1651332 | | | |
| Application Manager<br><br>PRB1781787<br><br>KB1695712 | Dependencies are not loading on Now Assist for Creator | The dependency processor repeatedly adds the same dependency for further processing, causing the list to grow continuously in an infinite loop. | Refer to the listed KB article for details. |
| Authentication<br><br>PRB1782128 | Error messages reading 'CSRF validation failed' are logged even though the validation property is false | After upgrading to Washington DC errors related to failed CSRF validation appear in the syslog table. | |
| Database Persistence - Data Access<br><br>PRB1717895<br><br>KB1629327 | The 'OR' logical operator in a related list condition query behaves as the 'AND' operator | When reporting over a table, using a related list condition with the 'OR' logical operator, it seems to have the same effect as using 'AND'. | Refer to the listed KB article for details. |

## All other fixes

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| Access Control List (ACL) Rules<br><br>PRB1787441 | Empty ACL modal shows up even when the script contains a valid script | When trying to save an ACL with no roles, conditions or security attribute, but only a script the 'Empty ACL' modal shows up preventing from saving that valid ACL. This will happen when the script contains a `//` style comment on its first line. | |

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| Advanced Work Assignment<br><br>PRB1781366 | The 'AWA send external routing event' subflow is in a 'Draft' state | The subflow should be in a 'Published' state. | 1. Open **Flow designer** > **Subflows**.<br>2. Notice that 'AWA send external routing event' is in a 'Draft' state. It should be 'Published'. |
| Advanced Work Assignment<br><br>PRB1789902 | The scriptable API ExternalAWAService.pushEvent is not working when called from a scoped application to push custom events. | | |
| Advanced Work Assignment<br><br>PRB1793955 | The user can't create a record in awa_queue from application scope | On a base instance, only read application access is provided on awa_queue. This prevents the record creation in awa_queue from other than global scope. | |
| Agent Chat<br><br>PRB1788201 | Resolve copy-paste and debounce issues for chat input text area in Agent Chat and sidebar | There are two issues. The **Send** button enables after a 250s delay. On sending a message which is typed extremely fast, the message is cut off. | 1. Initiate an agent chat.<br>2. Type some text in the text area. |
| Agent Chat<br><br>PRB1797451 | The textAreaRef doesn't get instantiated correctly on hook-insert, so the 'Enter' key and **Send** button in the input area don't work | The issue is intermittent. | 1. Create a chat as a requester.<br>2. As an agent, before the entire chat renders, select the input text area.<br>3. Type something quickly and hit the 'Enter' key.<br><br>Expected behavior: Hitting the 'Enter' key or selecting the **Send** button sends the messages.<br><br>Actual behavior: Hitting the 'Enter' key creates new lines and selecting the **Send** button does nothing. |
| Agile Development<br><br>PRB1795981 | True up Now assist for SPM | This is a product update. | |

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| | | | Notice that roles are not updated on changing user impersonation for a data broker. |
| AI Search<br><br>PRB1774826 | AIS update event queue writable property gets disabled with GenAI semantic tables indexing | Because GenAI table indexing is really slow, if ais_index queued events happen to be more than 1M this can also happen during ais_index.init. | **1.** Create a 1M event in ais_index queue.<br>**2.** Kb_knowledge DPR ingestion in progress with 10k+ documents.<br><br>Expected: glide.ais.update_event _queue_writable property is not disabled and eventually event processing lag gets caught up.<br><br>Actual behavior: glide.ais.update_event_queue_writable is disabled and unnecessary alerts and cases are created on user instances. |
| AI Search<br><br>PRB1779590 | UX issue in GR section | The user observes the message: 'No content to display. Please add components to carousel'. | |
| AI Search<br><br>PRB1779622 | 'Attachment' is not translated in the suggested search popover | | **1.** Install a language.<br>**2.** Add an attachment to a KB.<br>**3.** Publish the KB.<br>**4.** Search in service portal suggestion box to see attachment.<br><br>Observe that 'Attachment' is not translated. |
| AI Search<br><br>PRB1780839 | Incorrect values are logged for triggered Genius Results (GR) in an async case | When the async mode is 'GR_ONLY', 'GR Placeholders' are returned for every async GR that is executing when returning the initial search response. These placeholders end up in the searchAnalyticsPayload on that response, which is used to log the initial SEARCH_EVENT. As part of the logging of that SEARCH_EVENT signal, those placeholder GRs are then logged to the | |

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| | | triggered GRs table. However, there's no guarantee any of them actually resulting in valid GRs, and if they do, there's no guarantee they were shown to the user. | |
| AI Search<br><br>PRB1783414 | Modify SAC cloning script so it can be called from admin console scope | This is a product update. | |
| AI Search<br><br>PRB1785294 | Suggestions for recently viewed results (PERSONAL_CLICK suggestions) with external URLs don't navigate correctly in portal | | 1. Open Service Portal on an AI Search-enabled instance.<br>2. Search for 'Change Password'.<br>3. Select the regular (non-Genius) search result for 'Change Password'.<br><br>Observe that it brings the user to a page outside of the portal (for example, $pwd_change_error.do).<br>4. Run the scheduled job to process the queued click signals, to get 'Recently Viewed' suggestions.<br>5. Return to the portal home or search page, and type 'Change' in the search box.<br>6. Select the **Recently Viewed** suggestion that says 'Catalog Item' underneath it.<br><br>Expected behavior: The user should be taken to the same URL used when selecting the regular search result.<br><br>Actual behavior: The user is taken to the generic portal form page. |
| AI Search<br><br>PRB1785913 | Collapse Section, Filters, Hide filters are not translated in sn-search-facets | | 1. On track/xnowassist, enable AIS.<br>2. Turn on System Localization translation prefix.<br>3. Search '***'.<br>4. Navigate to Incidents or any other tabs. |

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| | | | Filters and Hide filters are not tagged with a translation prefix. Hover over the **+** expand sign, see **Collapse Section** doesn't have translation prefix. |
| AI Search<br><br>PRB1786056 | The carousel Genius Result position isn't added to the signal | When a term that triggers the carousel is searched for, and an action is taken on the carousel, the Genius Result position is not added to the signal. | 1. Navigate to the Next Experience homepage.<br>2. Search for a term that triggers a carousel with more than one result.<br>3. Provide feedback or do an action like a request for one of the items from the multiple items on the carousel.<br><br>The carousel Genius Result position should be added to the signal, but isn't. |
| AI Search<br><br>PRB1786362 | AI Search on the Natural Language Understanding (NLU) portal doesn't work during platform and schema upgrade | | |
| AI Search<br><br>PRB1787268 | Query Locale on search preview UI is not working | Search results are not displayed in the correct language. | 1. Navigate to Search Preview UI (New).<br>2. Select **Search Profile** from the list options.<br>3. Change the Query Locale to Spanish under the 'Users' tab.<br>4. Perform a search for a term (for example, iPad).<br><br>Notice that the search result language is still in English. |
| AI Search<br><br>PRB1788062 | Search is down for some time when upgrading from Vancouver to Xanadu | An error is seen: 'AISearchService: Error is thrown from searchQueryService.search() : : java.lang.NullPointerException: Cannot invoke 'com.glide.db.meta.Table.getTableHierarchy()' because 'result' is null: com.glide.ais.configuration.Datasource.loadSemanticSearchMappings(Datasource.java:351) com.glide.ais.configuration.Datasource.loadFromDB(Datasource.java:250)'. | 1. On a Vancouver instance, provision an instance with Now Assist ITSM installed.<br>2. Attach Now Assist actions and Now Assist Q&A to the Service Portal Search profile.<br>3. Perform queries on the portal.<br>4. Upgrade Glide to Xanadu.<br><br>Notice that the regular search is down during the upgrade. |

| Problem | Short description | Description | Steps to reproduce |
| --- | --- | --- | --- |
| AI Search<br><br>PRB1788078 | sys_search_event doesn't include grConfig in gr_results for Genius Result feedback and clicks | | 1. Select **Feedback** or the **Genius Result** action.<br>2. Wait for the search event to be flushed from the sys_signal_event_queue.<br><br>Observe that the entry in sys_search_event.gr_results has an empty 'grConfig' value. |
| AI Search<br><br>PRB1789527 | Dense passage retrieval ingestion should continue to support property sn_ais_assist.dpr_enabled to be enabled or disabled | In the August 2024 release, dense passage retrieval ingestion became a core feature of the Now Assist Creator. The property sn_ais_assist.dpr_enabled moved to the glide family and renamed glide.ais.dpr_enabled, causing a regression for users with the June 2024 or earlier versions of Now Assist for AI Search. Instances with DPR ingestion disabled should remain disabled after an upgrade unless the user enables it manually. | 1. Install Now Assist for AI Search on Washington or older release.<br>2. Disable DPR ingestion with hidden property 'sn_ais_assist.dpr_enabled' to 'false'.<br>3. Upgrade to Xanadu EA version.<br><br>Notice that DPR ingestion is enabled. |
| AI Search<br><br>PRB1789837 | Attachments aren't indexed | The sys_event for an attachment is present and processes without an issue, but nothing is in the index when queried. The attachment to AI Search backend isn't being sent. | 1. Enable attachment indexing from an indexed source.<br>2. Attach an attachment to a knowledge record.<br><br>Observe that a sysevent for the attachment/record is processed, but there is nothing in the index. |
| AI Search<br><br>PRB1793717 | The Natural Language Query (NLQ) 'Switch' table and 'Show' table doesn't emit feedback from sn-search-top-results | | In Washington DC, select any non-feedback button on an NLQ result.<br><br>Observe that no feedback is returned through the network calls tab, and that no genius result event was logged in the search's sys_search_event. |

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| AI Search<br><br>PRB1795072 | Requesting dot-walked translated text fields in the Search API causes a null point error (NPE) | | 1. Add a dot walked translated text field to an indexed source.<br>2. Re-index the data source.<br>3. Call the Scriptable Search API without dot-walked translated text field in the requested fields.<br><br>Observe that it's functional.<br>4. Call the Scriptable Search API with dot-walked translated text field in the requested fields.<br><br>Observe the empty response and the NPE in the logs. |
| Analytics Data API<br><br>PRB1788888 | Data broker calls fail after an upgrade | The Analytics Data API needs to sanitize the request coming from data brokers, and remove placeholder values. | 1. Create a UI Builder (UIB) page.<br>2. Add a data visualization data broker (table).<br>3. Fill out the properties of the broker so that the response is a correct data visualization response.<br>4. Save the page.<br>5. Navigate to the page definition.<br>6. In the **Data** field, remove the useDataCache property value from the data broker.<br>7. Navigate back to UIB and refresh the page.<br>8. Open the data broker.<br><br>Expected behavior: The response is the same as in step 3.<br><br>Actual behavior: There's an error. |
| Antivirus Scanning<br><br>PRB1734157 | Update com.glide.snap.uw to snap-v2 for the release of Glide | The virus scan isn't working when attaching a file to the **File Attachment** field. | |
| Application Install Engine<br><br>PRB1753470 | App customizations still have sys_claim after being reverted to base instance | App customizations still have sys_claim after being reverted back to base instance, even after the app customizations are installed when using app customization v1 in | 1. Install base app v2 in instance 1.<br>2. Revert a customized file to base app v2.<br>3. Publish app customization v2.<br>4. Install app v2 and app customization v2 in instance 2. |

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| | | instance 1 and instance 2. | Expected behavior: Sys_claim is removed.<br><br>Actual behavior: Sys_claim is not removed. |
| Application Install Engine<br><br>PRB1782930 | Plugin dependency incorrectly classified as app dependency for base instance plugins | The wrong type of plugin dependency is identified in the logs. | 1. Install a base instance plugin with a plugin dependency<br>2. Check the logs<br><br>Expected behavior: Observe 'Registering plugin dependency from %s to %s' .<br><br>Actual behavior: The wrong type of plugin dependency is identified: 'Registering app dependency from %s to %s'. |
| Application Install Engine<br><br>PRB1786797 | Batch Install doesn't handle circular dependencies for non-app V2 apps | The BatchInstallDependencyMap.java class doesn't handle circular dependencies when the app being installed isn't a V2 app. The shouldEvaluateDependencies method incorrectly returns true when a circular dependency is encountered. When loading a non-V2 app and there's a dependency pair that's already seen, shouldEvaluateDependencies returns true because it checks the list of V2 plugins visited, which is empty because it's not a V2 app. | 1. Open a Washington DC instance.<br>2. Attempt to batch install App Engine Studio.<br><br>Observe that the progress bar doesn't go beyond 0%, and eventually a StackOverflow message appears. |
| Application Install Engine<br><br>PRB1786807 | Conditional applications weren't installed via new app management | | 1. Provision a new Washington DC instance.<br>2. Navigate to Store.<br>3. Request the 'Healthcare and Life Sciences Service Management Core' application.<br>4. Complete the installation of 'Healthcare and Life Sciences Service Management Core' V 8.0.0 on the instance via system applications. |

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| | | | **5.** Navigate to system applications.<br>**6.** Verify sn_cwf_wrkspc install's status.<br><br>Expected behavior: sn_cwf_wrkspc should be installed or CSM/FSM Configurable Workspace is available in the instance.<br><br>Actual behavior: sn_cwf_wrkspc isn't installed or CSM/FSM Configurable Workspace isn't accessible in the instance. |
| Application Manager<br><br>PRB1780803<br><br>KB1649374 | Remote app table entries are populated with 'undefined' in the 'sys_code' column | Installer copies sys_code values from sys_remote_app table to sys_store_app table and used it for all app installations. However, it didn't account for records which have 'undefined' legacy values. As a result, the existing records with 'undefined' values causes failure to load conditional content in the plugin. | Refer to the listed KB article for details. |
| Appointment Booking<br><br>PRB1789260 | Personal events on a technician calendar are ignored when booking an appointment for an appointment booking user | There's also an error in the CSM/CSP portal when booking/ rescheduling an appointment as an appointment booking user. | **1.** Create a personal event for an agent.<br>**2.** Ensure that only that agent is available in the group, so that DS check availability and events for that user alone.<br>**3.** Log in as a user in the CSM portal.<br>**4.** Book an appointment.<br><br>Expected behavior: An appointment slot shouldn't be visible when an agent is on timeoff, or when booked for an appointment for any other available slot. The appointment should be booked with no error thrown.<br><br>Actual behavior: Appointment booking/ reschedule doesn't honor the time where a technician is on timeoff and displays slots. Also, users observe an error message on the screen. |

| Record Watcher<br><br>PRB1788115 | In rare cases, ResponderRegistryCleanupThread can remove all persisted responders from the memory when the database returns null on an exception | RW Cleaner Thread wakes up every 10 seconds and does some cleanup tasks. As part of this, it tries to remove all orphaned persisted responders from memory. It gets all persisted responders from the database and compares them with what's in the memory. It removes those which are in memory but not in DB. In this case, because of an exception from the DB query, the database layer has returned null. The cleaner code understood this as there are no responders in database and removed all of them from memory, which has caused RW to not call the responder on a matching condition. | **1.** Set glide.record_watcher.debug.extra to true.<br>**2.** Ensure that 'sys_rw_action' contains a few entries. If not, create them.<br>**3.** Shorten the interval glide.record_watcher.cleaner.orphaned_persisted_responders.cleanup_interval to 10 (seconds) for testing (so the breakpoint below 1 can be hit more often).<br>**4.** Put a debug pointer at getPersistedRespondersFromDatabase before the actual query.<br>**5.** When breakpoint hits, shut down the DB.<br>**6.** Resume the program.<br>**7.** Check the logs.<br><br>Expected behavior: Responders are kept in the memory.<br><br>Actual behavior: A log message like 'removing persisted watchers for tables: [list of all tables in memory]'. |
| Request Management<br><br>PRB1781853 | Catalog task related records issues | When the user has the sn_request_read and sn_request_write roles, they cannot see records in the 'Related | **1.** Log in with the sn_request_read and sn_request_write roles.<br>**2.** Navigate to the SOW list view page. |

## Fixes included

Unless any exceptions are noted, you can safely upgrade to this release version from any of the versions listed below. These prior versions contain PRB fixes that are also included with this release. Be sure to upgrade to the latest listed patch that includes all of the PRB fixes you are interested in.

- Xanadu EA Hotfix 1
- Xanadu security and notable fixes
- All other Xanadu fixes

## Xanadu EA Hotfix 1

The Xanadu EA Hotfix 1 release contains fixes to these problems.

**Build information:**

Build date: 08-27-2024_1527

Build tag: glide-xanadu-07-02-2024__patch0-hotfix1-08-26-2024

**Important:**
For more information about how to upgrade an instance, see ServiceNow Upgrades.

For more information about the release cycle, see the ServiceNow Release Cycle.

**Note:**
This ServiceNow AI Platform major family release is now available in ServiceNow's Regulated Market environments. For more information about services available in isolated environments, see KB0743854.

## Fixed problem

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| Agent Chat<br><br>PRB1797451 | The textAreaRef doesn't get instantiated correctly on hook-insert, so the 'Enter' key and **Send** button in the input area don't work | The issue is intermittent. | **1.** Create a chat as a requester.<br>**2.** As an agent, before the entire chat renders, select the input text area.<br>**3.** Type something quickly and hit the 'Enter' key.<br><br>Expected behavior: Hitting the 'Enter' key or selecting the **Send** button sends the messages. |

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| | | | Actual behavior: Hitting the 'Enter' key creates new lines and selecting the **Send** button does nothing. |
| Agent Chat<br><br>PRB1788201 | Resolve copy-paste and debounce issues for chat input texta area in Agent Chat and sidebar | There are two issues. The **Send** button enables after a 250s delay. On sending a message which is typed extremely fast, the message is cut off. | **1.** Initiate an agent chat.<br>**2.** Type some text in the text area. |
| Horizon Component Library<br><br>PRB1782771 | Copy-paste isn't working as expected in the chat text area | This is reproducible both in Agent Chat and sidebar. | **1.** Create a sidebar discussion or start a live agent conversation.<br>**2.** Send a message: 'abcd'.<br>**3.** Try to copy and paste an incident number into the chat text area.<br><br>Expected behavior: Copied text should be pasted in the text area.<br><br>Actual behavior: Pasted text is replaced by the last chat message. |

## Fixes included

Unless any exceptions are noted, you can safely upgrade to this release version from any of the versions listed below. These prior versions contain PRB fixes that are also included with this release. Be sure to upgrade to the latest listed patch that includes all of the PRB fixes you are interested in.

- Xanadu security and notable fixes
- All other Xanadu fixes

## Xanadu security and notable fixes

The Xanadu release contains important problem fixes.

**Xanadu was released on August 1, 2024.**

- Build date: 07-27-2024_1019
- Build tag: glide-xanadu-07-02-2024__patch0-07-16-2024

**Important:**
For more information about how to upgrade an instance, see ServiceNow Upgrades.

For more information about the release cycle, see the ServiceNow Release Cycle.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

**Note:**
This ServiceNow AI Platform major family release is now available in ServiceNow's Regulated Market environments. For more information about services available in isolated environments, see KB0743854.

For a downloadable, sortable version of the fixed problems in this release, click here.

## Security-related fixes

Xanadu includes fixes for security-related problems that affected certain ServiceNow® applications and the ServiceNow AI Platform®. We recommend that customers upgrade to this release for the most secure and up-to-date features. For more details on security problems fixed in Xanadu, refer to KB1650904.

## Notable fixes

The following problems and their fixes are ordered by potential impact to customers, starting with the most significant fixes.

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| Access Control<br><br>PRB1641097<br><br>KB1432102 | The user can't delete an ACL of sys_attachment with a table name condition while deleting a type=attachment type field | The error message 'file.delete.failed' is generated when attempting to upload an attachment and there are no customized delete ACLs on the sys_attachment. | Refer to the listed KB article for details. |
| Access Control<br><br>PRB1703976 | Users are unable to add a user to a group after elevating them to a role when the system property 'glide.ui.schedule_slushbucket _save_for_group_roles' is set to true | When the system property 'glide.ui.schedule_slushbucket _save_for_group_roles' is set to true, a user can't add users to groups if it's required that the user elevate to a role. The background job that's created doesn't add the user to the group. | |
| Access Control<br><br>PRB1736031<br><br>KB1630133 | Problems with caching 'system' security attributes | In some cases, especially after the user's session is idle for some time, the user might lose access to some resources, protected by the ACLs with UserIsAuthenticated security attribute. | Refer to the listed KB article for details. |

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| Activity Stream<br><br>PRB1675128<br><br>KB1641686 | In the workspace activity stream, the email **From** field displays the sys_id | The sys_id appears in the workspace in the **From** field when an email is attached to an interaction and is displayed in the activity stream. | Refer to the listed KB article for details. |
| Activity Stream<br><br>PRB1736995<br><br>KB1642093 | The activity stream renders differently on a workspace and UI16 with tags | When the activity stream is built with a workspace, it takes the latest user for the mod count. UI16 uses the oldest update and uses its user for the mod count. The issue is that when tags are added, they're added to the same user update (sys_mod_count). The update displays as the original user in UI1 and a different user in a workspace. | Refer to the listed KB article for details. |
| Activity Stream<br><br>PRB1761952 | The cursor jumps to the bottom of the text with Service Operations Workspace (SOW) activity stream in the 'Comments' section | Within SOW, when working on an incident and entering text in the 'Comments' section, the cursor intermittently moves to the bottom of the text. | **1.** From SOW, open an incident.<br>**2.** Apply a template with text in the 'Comments' section.<br>**3.** Begin typing anywhere above the bottom of the text.<br><br>Observe that randomly the cursor jumps to the bottom. The issue can be reproduced intermittently. |
| Activity Stream<br><br>PRB1780340<br><br>KB1649222 | Post-Washington DC upgrade, GlideRecord for [sys_email] updates all fields | The transaction should display that only the relevant information on the sys_email record was updated, but extraneous fields are also updated. | Refer to the listed KB article for details. |
| Agent Assist<br><br>PRB1680218<br><br>KB1433227 | The **Copy to clipboard** action isn't created for a table configuration with the searcher 'Response' templates | The issue with the action not copying occurs because all existing records for 'Copy to clipboard' populate the **current_table** field. This field controls which table action is generated. If it is left | Refer to the listed KB article for details. |

| Problem | Short description | Description | Steps to reproduce |
|---|---|---|---|
| | Collector Visibility (ACC-V) | records. The event is triggered by the 'RunningProcessReconciler' script include, as part of Discovery sensors, and Agent Client Collector Visibility checks. It is then processed by the tcmdb_ci_appl CIs as a 'Absent' status, which potentially involves looping through a lot of records. Where there is a big ACC-V implementation, this is triggered for each agent install every 8 hours by default, which leads to many of these events. These events use the general event queue and the 'Events Process 0' job, which leads to backlogged event processing where all other events have to wait for these events to clear before running. | In a busy instance, observe that these will account for a large proportion of any backlog, if events processing is backlogged. Impactful events such as this would normally have their own queue and events process job to avoid impacting the default queue and 'Events Process 0' job. |
| Document Intelligence Unified Backend<br><br>PRB1743818<br><br>KB1646495 | DocIntel tasks fail | The docintel jobs failed at 50% with an error: 'NSE0014:Failed to initialize pipeline : No columns to parse from file' and 'nse0014:Failed to initialize pipeline : NSE0003:Failed to get pipeline json to have dataset path information'. | Refer to the listed KB article for details. |

| Software Asset Management<br><br>PRB1741844<br><br>KB1637537 | Reconciliation in Software Asset Management doesn't work after upgrading to Washington DC | The **Publisher** field of the 'Run Reconciliation' UI page doesn't retrieve any value. | Refer to the listed KB article for details. |
| Software Asset Reconciliation<br><br>PRB1715795<br><br>KB1585469 | If on entitlements the software model has license_under_management = false, allocations shouldn't be processed | License metric results (LMR) aren't created for entitlements on software models that aren't under management ('license_under_management' = false). However, the code is processing allocations on these entitlements. This causes downstream issues attempting to create a 'rights used by' for the allocated device/user when an LMR doesn't exist. The error arises as a downstream effect. | 1. Create an allocation on a 'per device' entitlement.<br>2. Make the entitlement software model LUM = false.<br>3. Run recon.<br><br>The recon status is 'partially completed'. In the progress summary logs, there's the failure: 'TypeError: Cannot read property "null" from undefined'. There might be a record in 'samp_licenses_required_by' with a blank LMR and 'allocated not in use' > 0. |
| Syntax Editor<br><br>PRB1725418<br><br>KB1588249 | Auto-complete options are missing | Auto-complete isn't displaying all the completion options expected for g_form and other variables. | Refer to the listed KB article for details. |
| System Events<br><br>PRB1738452 | Glide.policy.events.debug isn't updating, causing the event queue to not process events | This issue pertains to the event queue's failure to process events as expected. Despite the measures taken to delete child entities and re-establish the parent entity, there's no observable decrease in the event queue. | |

## All Other Fixes

To view a list of all other PRBs fixed in Xanadu, refer to All other Xanadu fixes.

## All other Xanadu fixes

The Xanadu release contains important problem fixes.

**Xanadu was released on August 01, 2024.**

- Build date: 07-27-2024_1019
- Build tag: glide-xanadu-07-02-2024__patch0-07-16-2024

**Important:**
For more information about how to upgrade an instance, see ServiceNow Upgrades.

For more information about the release cycle, see the ServiceNow Release Cycle.

**Note:**
This ServiceNow AI Platform major family release is now available in ServiceNow's Regulated Market environments. For more information about services available in isolated environments, see KB0743854.

For a downloadable, sortable version of the fixed problems in this release, click here

## All other fixes

| Problem category | Problem | Short description |
|---|---|---|
| Access Control | PRB1685081 | The business rule 'Check group member privilege' is present when it should have been removed |
| Access Control | PRB1592670 | The 'Session invalidator' job runs and invalidates an older session, causing instance unavailability |
| Access Control | PRB1717869 | The ACL 'asmt_assessable_record' [read] uses the ITIL role instead of the ITSM/ CMDB fine-grained roles or using a combined condition |
| Access Control | PRB1718132 | Conditions don't work on a read 'ui_page' type ACL rule |

| Problem category | Problem | Short description |
|---|---|---|
| Access Control | PRB1718210 | snc_access_control generates many 'Session invalidator -<USER>' entries on the sys_trigger table |
| Access Control | PRB1728431 | sys_security_acl_role records are created after installing the 'Explicit roles' plugin that has empty sys_scope and sys_package fields |
| Access Control | PRB1735671 | A user can't view variables on reports with Business Stakeholder/ITSM roles |
| Access Control List (ACL) Rules | PRB1713026 | tableLevelACLAllow throws an error for a few tables on an instance |
| Access Control List (ACL) Rules | PRB1729095 | An ACL name is overwritten with an asterisk (*) on the load of an ACL form when glide.ui.choices.show_missing is false |
| Activity Stream | PRB1755658 | Downloading attachments from an activity pane in Agent Workspace kills the browsing tab in Chrome, Firefox, Edge |
| Activity Stream | PRB1748492 | The journal tile in now-activity-stream-connected doesn't pick up the correct language after language preference gets changed |
| Activity Stream | PRB1709271 | The user is unable to select email hyperlinks in the Activity Stream of Service Operations Workspace (SOW) |
| Activity Stream | PRB1743075 | After Washington DC upgrade, the work notes show extra line breaks |
| Activity Stream | PRB1736287 | If multiple templates are applied, the activity stream composer and form field fail to sync |
| Activity Stream | PRB1694567 | An error message appears in the logs when a task is created on configurable workspaces |

| Problem category | Problem | Short description |
|---|---|---|
| Activity Stream | PRB1725845 | Text in the 'Comment' section clears on entering text in the required 'Work notes' section |
| Activity Stream | PRB1763824 | A space/line break is observed in UI15's activity stream for emails |
| Activity Stream | PRB1734763 | When @ mentioning someone, removing the first word results in a 400 error on workspace |
| Activity Stream | PRB1738631 | Posting plain text comments and work notes doesn't clear compose text on a case and task |
| Activity Stream | PRB1754987 | The background color of work notes is not yellow when the Next Experience UI is disabled |
| Activity Stream | PRB1697171 | Email details links are not read correctly by the screen reader |
| Activity Stream | PRB1722795 | glide.ui.html.editor. contextmenu=false doesn't work for HTML fields on an activity stream |
| Activity Stream | PRB1726314 | Scrolling should be fixed to not display all the Document Object Model (DOM) elements |
| Activity Stream | PRB1733485 | Emails created from an activity stream using 'Reply All' and 'Reply' don't work as expected on UI16 |
| Activity Stream | PRB1736171 | When a record is accessed in the workspace during activity stream processing , 'SEVERE *** ERROR *** Unparseable date:' displays |
| Activity Stream | PRB1739271 | Email content loses its formatting when long text is used within a table row in Vancouver |

| Problem category | Problem | Short description |
|---|---|---|
| Activity Stream | PRB1757111 | The user preference for the side by side compose settings aren't saved when creating new records |
| Activity Stream | PRB1760804 | The user avatar is not visible for attachment activity entries on configurable workspaces |
| Activity Stream | PRB1733920 | User preference for the 'Compose' settings is not saved when creating records |
| Activity Stream | PRB1763981 | Activity Streams need a maximum length to guard against tables with excessive audit relations |
| Advanced Work Assignment | PRB1735889 | Avoid duplicate awa/work_item message accumulation on resubscribe |
| Advanced Work Assignment | PRB1735007 | AWA assigns multiple cases, exceeding the maximum Agent capacity |
| Advanced Work Assignment | PRB1745788 | isLiveAgentAvailable isn't working for domain-separated instances when the requestor and the agent are in different domains |
| Advanced Work Assignment | PRB1707250 | Slow query from the AWA work item repository 'getWorkItemsForAgent' |
| Advanced Work Assignment | PRB1702695 | A utilization condition interferes with queue routing decisions |
| Advanced Work Assignment | PRB1712555 | The Advanced Work Assignment (AWA) group queue's priority table is out of synchronization |
| Advanced Work Assignment | PRB1720565 | For the interactions that are closed with the state set as 'closed abandoned' due to a transfer fail, the state reason isn't populated |
| Advanced Work Assignment | PRB1727244 | Live updates that happen after saving a form but before snFormDataConnected retrieval completes aren't factored into the form after the save completes |

| Problem category | Problem | Short description |
|---|---|---|
| AI Search | PRB1748983 | Sorting a list doesn't work in Service Portal |
| AI Search | PRB1758639 | When using a screen reader, the focus indicator does not advance past the first entry when attempting to scroll through the list of recent searches |
| AI Search Assist | PRB1732784 | Attachments in the search results break the AI Search Assist widget's pagination (Up/Down arrows) |
| AI Search Assist | PRB1734491 | An external URL isn't displayed for a content item using AI Search Assist |
| AI Search Assist | PRB1765456 | How-To template articles do not render body content in the 'Create incident' contextual search in Employee Center |
| AI Search Glide | PRB1578586 | User criteria late binding and early binding contradict access when the category level is not available |
| AI Search Glide | PRB1594303 | Incremental updates aren't working for dot-walked reference fields |
| Analytics Hub | PRB1718540 | In Analytics Hub, there's an issue displaying a week's numbers in the French language |
| Analytics Hub | PRB1739877 | The pa_admin role cannot add a comment to the Analytics Hub |
| Analytics Hub | PRB1763326 | In Performance Analytics, the 'Cancel' (x) icon in the search isn't aligned correctly |
| Application Install Engine | PRB1768085 | Overriding glide.cache.hard_references can cause the dependency cache to be garbage collected when upgrading to Washington DC |
| Application Install Engine | PRB1695862 | sys_ui_view and sys_ui_form records are not deleted when the change is published to AppRepo from Source and the app is installed on the Target |

| Problem category | Problem | Short description |
|---|---|---|
| Application Install Engine | PRB1716980 | UI form sections in app packages delete the default view instead of deleting the targeted view |
| Application Install Engine | PRB1723518 | A portal taxonomy record's **Active** field is set to false when users install EC Pro |
| Application Install Engine | PRB1735394 | When the App Operation Queue Health Monitor (scheduled job) is missing or inactive the Application Operation Queue doesn't execute |
| Application Install Engine | PRB1740567 | Installing a global application results in a skip to review for a record with no claim in the package, but a base claim exists on the instance |
| Application Install Engine | PRB1743934 | Activating plugins using the new application manager logs as 'system', whereas the old manager logs as the user who activated the plugin |
| Application Manager | PRB1719552 | AppClient displays a 'pending' state even when the application successfully installs |
| Application Manager | PRB1681825 | The user observes a '404 page not found' error after closing a pop-up from the repair modal |
| Application Manager | PRB1723206 | sn_appclient.apps_last_sync_time property changes are being tracked in update sets |
| Application Manager | PRB1728977 | Buttons on an application manager page don't show text with theme builder in Next experience |
| Application Manager | PRB1737218 | When using Application Manager to review application updates, an error occurs when trying to review the list of Customized Files for a customized application |
| Application Manager | PRB1736510 | An admin user isn't able to install a framework app when app updates of only framework apps are shipped from store |

| Problem category | Problem | Short description |
|---|---|---|
| Application Manager | PRB1719299 | When installing an application with a large number of dependencies, the batch installer returns '414 URI too long' |
| Application Manager | PRB1722187 | Studio Git is switching branches and not automatically discarding ACL changes as expected based on the rights of the developer |
| Application Manager | PRB1734718 | The search results for already installed applications are incorrect |
| Application Manager | PRB1754629 | The 'Proceed to Update' option does not appear, even though there are app updates under some products |
| Application Manager | PRB1756440 | The 'Attachment' script include had accessibility changed from 'All Application Scopes' to 'This Application Scope Only' |
| Application Navigator | PRB1716876 | '*** ERROR *** NavigatorHistory No such column: ui_type' appears when the sys_ui_navigator_history table doesn't have the 'ui_type' column |
| Application Navigator | PRB1750960 | It is difficult for screen-reader and keyboard-only users to navigate a page when the 'All' menu is pinned |
| Application Portfolio Management | PRB1729500 | In the new Application Manager, the 'Install Details' pop-up can have the 'Demo Data' check box checked by default |
| Application Portfolio Management | PRB1715173 | Application Portfolio Management (APM) Performance Analytics issue |
| Application Portfolio Management | PRB1715689 | Application services associated with SDLC components are not shown in TPM lifecycles view |
| Application Portfolio Management | PRB1720559 | The sn_apm_generate_assessments page isn't adjusted to support the 'Dark' mode properly |

| Problem category | Problem | Short description |
|---|---|---|
| Application Scoping | PRB1667466 | Business Logic Flaws in Application Scoping |
| Application Scoping | PRB1687716 | Users can edit metadata in private scopes since the sys_store_app license change |
| Appointment Booking | PRB1740485 | Availability API throws an error when selecting a calender icon from a walk-up record producer |
| Appointment Booking | PRB1756203 | Month and day are not translated in the appointment booking modal |
| Appointment Booking | PRB1758818 | Appointment tasks aren't assigned immediately after booking |
| Appointment Booking | PRB1773412 | When submitting a record producer with an appointment booking configuration, 'Appointment window is no longer available. Please select another appointment' displays |
| Approvals | PRB1729612 | There's a performance issue when querying a sc_req_item when the request is deleted for a **Stage** field |
| Archive Rules | PRB1762255 | Archived approvals aren't displaying because of a broken ACL |
| Archive Rules | PRB1732196 | The RefCopyJob doesn't complete if the table doesn't have records |
| Archive Rules | PRB1693969 | Glide.db.archiving .max_consumer_workers is not immediately honored when it decreases |
| Assessments | PRB1770524 | An ACL isn't functioning correctly because of a syntax issue |
| Assessments | PRB1733138 | When the assessment response in grouped and attestation is minimized the dependent fields are not displayed when it is expanded back |

| Problem category | Problem | Short description |
|---|---|---|
| Assessments | PRB1748845 | Assessment is submitted with mandatory fields when submitted through Printer Friendly Version |
| Asset Management | PRB1723307 | SAM Foundation code is present in the 'Base Asset Management' business rule |
| Asset Management | PRB1757504 | Some thumbnail attachments for pc_hardware_cat_item get ZZ_YYZZ_YY prefix in attachment table |
| Asset Management | PRB1701884 | The original transfer order stays 'Work In Progress' even though 'Transfer Order Return' is initiated and completed |
| Asset Management | PRB1714849 | On Asset Workspace, the important actions count is incorrect in domain-separated instances that have domain visibilities |
| Asset Management | PRB1717913 | UI actions under the Asset Management application use the ITIL role instead of the ITSM fine-grained roles |
| Asset Management | PRB1738355 | The Vendor Management Workspace **Renew** button is not functional |
| Asset Management | PRB1742587 | CIs created without a manufacturer and model link to 'Unknown' models, but models with a manufacturer entered may get used, adding that to the model name |
| Asset Management | PRB1757082 | The **Requested For** field on a 'Reclaim Asset' catalog item is not set to required |
| Asynchronous Message Bus (AMB) | PRB1738465 | AMB cluster synchronizer can fail to start when it encounters an invalid channel name |
| ATG - Glide Interfaces | PRB1762735 | Italian stopwords are not removed from the 'Visualization' tab when training a workflow clustering definition |
| ATG - Glide Interfaces | PRB1735703 | Update 'Fix ITSM Predictor Results' fix script to make it more generic to set |

| Problem category | Problem | Short description |
|---|---|---|
| | | finalOutputValue as per predictedOutput value type |
| Attachments to Records | PRB1733053 | The 'Remove' and 'Rename' options aren't available on an Employee Document Management (EDM) attachment |
| Attachments to Records | PRB1737426 | Unable to attach .ics file extension to records |
| Attachments to Records | PRB1739760 | Loading an XML attachment in an XMLDocument2 object via GlideScriptableInputStream does not work as expected |
| Attachments to Records | PRB1761911 | There's an issue with encryption when attachments are copied from a task to a requested item |
| Audit History | PRB1740373 | Deleting records on old sys_audit shards results in inserts into the current sys_audit tables and leads to disk growth |
| Authentication | PRB1718457 | The login component in UI builder doesn't redirect the user to Single Sign On |
| Authentication | PRB1742755 | Security Assertion Markup Language (SAML) single sign-on (SSO) log in fails for MultiSSOv1 during an upgrade to Washington DC |
| Authentication | PRB1713173 | There's a user mismatch error that occurs due to a camelcase difference between the user_name in sys_user and the received user_name in the OpenID Connect (OIDC) response claim |
| Authentication | PRB1726569 | glide.basicauth.update _last_login_time, which sets the last log in time of users, also updates sys_updated_on, sys_updated_by, and sys_mod_count |
| Authentication | PRB1732623 | IMAP access tokens are expiring during an upgrade |

| Problem category | Problem | Short description |
|---|---|---|
| Authentication | PRB1751459 | Some messages displayed on the password change screen are not translated into Japanese |
| Authentication | PRB1756765 | The Now Login widget does not show the language picker |
| Automated Test Framework (ATF) | PRB1717536 | Setting a value in the select2 element fails on a Service Portal page |
| Automated Test Framework (ATF) | PRB1760564 | Missing test data in the parameterized test will fail the suite and leave it in a 'Running' state |
| Automated Test Framework (ATF) | PRB1761012 | When a child transaction is terminated by memory watcher, the root tracker remains running |
| Automated Test Framework (ATF) | PRB1729292 | An embedded list that's present in a form causes a test with 'Validate Related List Visibility' to fail |
| Automated Test Framework (ATF) | PRB1710308 | A large snapshot causes a test to succeed |
| Cache | PRB1709933 | Cache synchronization doesn't work on restarted nodes for catalogs that get updated after the node restart timestamp |
| Cache | PRB1709834 | The cached scriptable API still queries for inputs during decision table evaluation |
| Cache | PRB1724751 | sys_choice causes cache issues when the number element values are large |
| Cache | PRB1741630 | Role cache has stale entries in a scenario where one node caches a non-existing role and another node imports that role via XML |
| Cache | PRB1744271 | If attempting to populate a large map from the database takes longer than 5 seconds, another thread could enter and attempt to do the same thing, causing multiple threads |

| Problem category | Problem | Short description |
|---|---|---|
| Configuration Management Database (CMDB) | PRB1749921 | When a CI is inserted, its life cycle values are set to the default value instead of being derived from legacy values |
| Configuration Management Database (CMDB) | PRB1750915 | Incorrect behavior in base instance client script 'Clear begin and end' |
| Configuration Management Database (CMDB) | PRB1754392 | Record.java queries items from sys_dictionary, which are available in the table descriptor cache |
| Configuration Management Database (CMDB) | PRB1754547 | The 'Sort by' list on the CMDB Query Builder page only sorts as descending |
| Configuration Management Database (CMDB) | PRB1757075 | While adding new life cycle mapping, the UI does not let the user select 'None' as a subfield value |
| Configuration Management Database (CMDB) | PRB1757510 | As per CSDM, CI relationships from business application to the application service should be 'Consumes::Consumed By', but when a user creates an application service in CSDM, it shows 'Consumed by :: Consumes' |
| Configuration Management Database (CMDB) | PRB1761907 | Domains should be validated before persisting into the cmdb_health_processor status table |
| Configuration Management Database (CMDB) | PRB1773826 | onBefore and onAfter scripts don't work when initialized from setRun() and when the data source is null |
| Configuration Management Database (CMDB) | PRB1736182 | Multi-source code updates records with the same sys_updated_on through multiple DB updates |
| Connect Chat | PRB1692098 | An influx of queries on live_group_member causes a high CPU load on a DB server |
| Contextual Search | PRB1747453 | The article navigation shows as 'HOME/ Null' in Washington DC |

| Problem category | Problem | Short description |
|---|---|---|
| Contextual Search | PRB1731850 | The 'Related Search' results header overlaps with the search results |
| Contextual Search | PRB1746563 | Login events are created for users when 'Search As' is initiated |
| Continual Improvement Management | PRB1718946 | The script include 'CIMUtil' uses the ITIL role instead of the ITSM/CMDB fine-grained roles or using a combined condition |
| Continual Improvement Management | PRB1753753 | Common Information Model (CIM) Indicators don't respect glide.system.locale |
| Contractor Management | PRB1729666 | Questionnaire image upload error for contractors on mobile app |
| Core Platform | PRB1707194 | xmlstats.do and/or PortScanGlideServiceStatusProvider hits port 80 on service endpoints beginning with https |
| Core Platform | PRB1425002 | Reference fields that are referencing a Date/Time field get converted to GMT when a record is saved |
| Core Platform | PRB1644827 | There's errors when committing an update set that creates a child table with a **Function** field |
| Core Platform | PRB1758692 | NativeRecordMutex should not consider domains during 'get' or 'release' |
| Core Platform | PRB1594189 | Decompiling JavaScript to pass compiled functions, as strings can lead to high memory churn |
| Core Platform | PRB1696571 | A node's scheduler changes to 'any' from 'specified' after node restart |
| Core Platform | PRB1704668 | A node log is missing the SessionID and txID in the localhost log, causing an incorrect date format |

| Problem category | Problem | Short description |
|---|---|---|
| Core Platform | PRB1705439 | Non-thread safe operation |
| Core Platform | PRB1763492 | The expression cache size increases to up to 1GB due to some scheduled jobs that are calling script includes with large sized JSON data to process |
| Core Platform | PRB1642006 | A list doesn't sort by rating properly when adding filter conditions for knowledge articles |
| Core Platform | PRB1718789 | The 'Show Log Entries' UI action isn't displaying the corresponding log |
| Core Platform | PRB1735417 | GlideJellyContext's parser cache (fParserStack) may retain a lot of states |
| Core Platform | PRB1741869 | Delegation clean-up should not have an end date if the delegation is already ended |
| Core Platform | PRB1744149 | The Security Assertion Markup Language (SAML) transform map has a gs.log statement |
| Core Platform | PRB1754999 | '_log_table' is included twice in the 'sys_outbound_http_log' message exported by Log Export Service |
| Core Platform | PRB1760524 | The IP normalization job fails if there are any blank values in the field being normalized |
| Crew Operations | PRB1758968 | Error when changing the crew leader 'Access to API 'setWorkflow' from scope 'sn_fsm_crew' has been refused due to the API's cross-scope access policy' |
| Crew Operations | PRB1763496 | Reassigning the crew leader to a different crew member results in a crew with 2 duplicated crew leaders in the Dispatcher Workspace |

| Problem category | Problem | Short description |
|---|---|---|
| Crew Operations for Dispatcher Workspace | PRB1764931 | When the user sets the **Needs crew** field to false and saves, duplicate WOT cards appear in the calendar of the Dispatcher Workspace |
| Critical Security Update Manager (Family Release) | PRB1733701 | The 'Enable 3DES Deprecation' link is broken in **Security Center** > **Critical Updates** |
| Currency Administration | PRB1746302 | When updating a record via GlideRecord, the reference amount updates are based on the latest currency rate even if the input/session amount has not changed |
| Customer Operations for Customer Service Management | PRB1749397 | Unexpected behavior while configuring the form layout for the customer_account table in the default view, but not for other views |
| Customer Operations for Customer Service Management | PRB1711621 | There's an issue with the 'Primary Contact' association in the 'sn_customerservice_m2m_asset_contact' table |
| Data Archiving | PRB1743164 | Record estimate times out upon selecting a recalculate estimate in the archive destroy rule |
| Database Indexes | PRB1694114 | Creating a unique index on sys_user(sys_id, active) can lead to data loss in sys_user table |
| Database Indexes | PRB1699808 | Allow the creation of indexes with online setting in an 'Enterprise edition' database |
| Database Persistence | PRB1732151 | Using TableDescriptor.isValid or GlideRecord.isValid to check if a string is a table fills up the Table Descriptor Cache with things that are not tables causing an Out of Memory (OOM) error |
| Database Persistence | PRB1760592 | Prepared queries are not formed correctly on Rotation Tables |

| Problem category | Problem | Short description |
|---|---|---|
| Database Persistence | PRB1714908 | GlideAggregate queries against table rotations generate incorrect results |
| Database Persistence | PRB1739880 | Ignore forcePrimaryKeyOrdering for 'TS' queries |
| Database Persistence | PRB1514936 | Union replacement isn't adding the table alias in the 'ORDER BY' value, causing the platform to not apply the union replacement |
| Database Persistence | PRB1643974 | A general data exception error detected by the database occurs when a report uses a 'more than' condition on the **Date** field |
| Database Persistence | PRB1749083 | On migration, an automatic activation of the 'Low connection' mode should be turned off |
| Database Persistence | PRB1757110 | On a Glide upgrade from Vancouver to Washington, there's an error |
| Database Persistence | PRB1670286 | A query does not direct the user to the gateway database for tables with long table names |
| Database Persistence | PRB1688148 | StorageColumnResetter causes table locking when deleting columns while it inserts null data |
| Database Persistence | PRB1736307 | GlideRecord methods jsFunction_updateMultiple and jsFunction_deleteMultiple should guard against query conditions with invalid field names |
| Database Persistence | PRB1742990 | Typo observed in the deleteDuplicates fix script |
| Database Persistence | PRB1747247 | Use DropTmpTablesJob to clean orphaned update staging tables |

| Problem category | Problem | Short description |
|---|---|---|
| Database Persistence - Data Access | PRB1763146 | If GlideFilter has a new query (NQ) to add multiple conditions, it generates different JavaScript from the same encoded query |
| Database Persistence - Data Access | PRB1647519 | Localhost logs do not print 'MySQL thread id' in local host logs |
| Database Persistence - Data Access | PRB1777345 | Out of memory (OOM) Error due to domain separation plugin installation |
| Database Persistence - Data Access | PRB1734995 | Nodes are restarted due to an out of memory error |
| Database Persistence - Data Access | PRB1730026 | '0' should be returned on a record addJoinQuery for an email to a case |
| Database Persistence - Data Access | PRB1744977 | Creating a function field through sys_dictionary incorrectly creates a storage alias metadata for the field |
| Database Persistence - Data Access | PRB1751743 | Parsing the FromItem type '[SubSelect]' isn't supported |
| Database Persistence - Data Access | PRB1766707 | Reference fields to child tables of third-party contract (TPC) hierarchies with names prefixed with 'ref_' produce an invalid SQL |
| Database Persistence - Data Access | PRB1781863 | If a column is stored in the CMDB partition, the RLQuery related list condition isn't working |
| Database Persistence - Data Management | PRB1723302 | ArchiveJob incorrectly updates record_estimate upon exception |
| Database Persistence - Data Management | PRB1737526 | The 'Update' UI action for the sys_dm_delete table does not work correctly if the user has set the Date Format (in the user table) to yyyy-MM-dd. |

| Problem category | Problem | Short description |
|---|---|---|
| Scheduled Jobs | PRB1723650 | Scheduled jobs are stuck in a running state due to connection issues or node restarts and should be reset |
| Scheduled Jobs | PRB1709703 | Post-clone, multiple text index jobs are executed even though there's should only be one of these per instance running at a time |
| Scheduled Jobs | PRB1729518 | The 'Restrict non-admin on Run-As field' business rule on a sys_auto error message isn't visible to the user |
| Scheduled Jobs | PRB1734625 | Business Calendars with a floating timezone are not taking into account DST |
| Scheduled Jobs | PRB1708724 | The 'Archive' job schedules 1 'Re-Archiver' job every hour, so if one job runs long, it causes scheduler contention |
| Scheduled Jobs | PRB1771051 | Jobs are executed twice during a rescheduler restart |
| Scheduled Jobs | PRB1782901 | High cardinality of the 'Job classification' column can prevent scheduled jobs from being processed due to a StackOverflowError in SchedulerThread |
| Schedules | PRB1717977 | The on-call calendar doesn't display correctly when a shift starts from 8:30:00 to 08:29:59 the next day |
| Schedules | PRB1724036 | In System Scheduler, the 'Show Schedule' page is completely hardcoded |
| Schedules | PRB1746190 | Schedule entries (cmn_schedule_span) that are not marked as 'ALL DAY' change time zones in read-only mode |
| Schedules | PRB1758236 | The node restarts when inputting a particular date in the **To** and **Repeat until** fields |

| Problem category | Problem | Short description |
|---|---|---|
| Script Includes | PRB1731369 | Setting a default value for a reference field fails when invoking a script include |
| Secondary Database Management | PRB1754273 | There's gateway password decryption failures due to a premature attempt to use Key Management Framework (KMF) |
| Seismic Framework | PRB1751888 | Cache busting doesn't occur on pages routed through the UxPageProcessor |
| Seismic Framework | PRB1752772 | The instance redirects to /welcome.do or /session_timeout.do before authenticating via SSO when the user selects any instance-specific link |
| Seismic Framework | PRB1783295 | There's an empty Service Operations Workspace incident form after upgrading from Vancouver to Washington |
| Server-side scripts | PRB1777353 | There's an issue compiling a script using a map iterator in a 'for' loop |
| Server-side scripts | PRB1714731 | After a Vancouver upgrade from Utah, GlideRecord.getElement().getDisplayValue() doesn't honor the user locale preferences |
| Server-side scripts | PRB1754391 | Scope.isIVSScope() is incorrectly marking internal Servicenow scopes as ISV scopes |
| Server-side scripts | PRB1653850 | A script debugger throws an error when referencing the 'this' object |
| Server-side scripts | PRB1692959 | Number.prototype.toLocaleString fails, as it treats the first argument as the base |
| Server-side scripts | PRB1715580 | GlideRecord API improperly passes an integer addOrCondition() value as a decimal |
| Server-side scripts | PRB1717170 | Installing a third party dependency in a module and requiring it in a script results in a JVM crash |

**Browser support for each UI version (continued)**

| Browser | Next Experience | Workspace | Core UI | Service Portal |
|---|---|---|---|---|
| | | | | Latest version of Android and Chrome |
| Phone Mobile* | Not supported | Not supported | Not supported | Latest version of iOS and Safari<br><br>Latest version of Android and Chrome |

*Mobile phone browsers do not support the desktop version of the UI. Instead, mobile browsers use the mobile UI.

### Firefox

The iOS version of Firefox does not support ServiceNow Community or other Service Portal pages.

## Accessibility and conformance

View a summary of accessibility updates and improvements completed for the Xanadu family release. Learn which Voluntary Product Accessibility Template (VPAT) was used to create Accessibility Conformance Reports (ACRs) for ServiceNow® products and where to access them.

### Release Highlights

Key features in the Xanadu Release include:

**Next Experience and Configurable Workspace Improvements**

- Leverage upgraded components in Configurable Workspaces and Next Experience to strengthen WCAG 2.1 Level AA conformance and provide a more inclusive experience for all users.
- Accelerate usability of the Platform for those who experience low vision or use Assistive Technology (AT) through increased zoom capabilities, implementing Reflow (400% zoom), improving the contrast of text and images, adding alternative text to images, and refining the labeling of controls.
- Accessibility enhancements to the following Configurable Workspaces:
  - Workforce Optimization for Customer Service
  - Field Service Management Dispatcher Workspace
  - Workforce Optimization for Field Service Workspace
  - Agent Workspace for HR Case Management
  - Service Operations Workspace for IT Service Management
  - IT Service Management Digital Portfolio Management
  - Workforce Optimization for IT Service Management
  - IT Service Management DevOps Change Velocity

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

**New features and other improvements**

- **Document Services** - Accessibility support for document conversion from DOCX to PDF. New PDF accessibility tags define the document's structure and provide a logical reading order, making it easier for users to navigate, understand, and interact with converted PDF documents.
- **TinyMCE Upgrade** - Upgrades to TinyMCE from v5 to v6.8.2, providing improved formatting options and editing, as well as extended functions for users to format their content.
- Resolved potential limitations that could hinder AT users from accessing content, navigating applications, or using certain features. These improvements are aimed at helping users who rely on a keyboard or other AT devices.

### Product Accessibility

A Voluntary Product Accessibility Template (VPAT) is a globally recognized reporting format used to evaluate the accessibility of a product or service. ServiceNow uses the international version of the VPAT to create Accessibility Conformance Reports (ACRs). ACRs are available for the currently supported ServiceNow releases.

For a full list of available accessibility conformance reports, see Accessibility conformance reports.

| Learn about ServiceNow products, tools, and resources that can improve your upgrade experience. | Learn about how upgrades are applied to ServiceNow® Store applications. |

## ServiceNow upgrades

The upgrade process moves your instance to a new ServiceNow release version. Understand the difference between upgrading and patching, release definitions, rollback and backup options, and how to test your non-production and production instance upgrades.

Before you begin the upgrade process, read the Xanadu release notes and review the upgrade and migration tasks for your applications and features.

System upgrades can be significant projects. Each ServiceNow feature release includes major additions, and you should always consider the impact of new functionality on an instance. Upgrading implements enhancements to all features that are part of the base system or are already active, unless the feature is customized on your instance. For a list of all available plugins and whether they are active by default on the base system, see List of Xanadu plugins.

Careful preparation and knowledge of the available software, tools, and resources can contribute to a successful upgrade. In addition to the materials provided by ServiceNow, it is important to understand how your ServiceNow instance is currently operating and the performance level of key business functionality. Set the expectation with IT and business users that time must be dedicated to preparing for, implementing, and testing ServiceNow upgrades.

If you have any issues during the upgrade process, contact Customer Service and Support. Customer Service and Support is available 24 hours a day, 7 days a week to assist you with any questions or issues.

For additional help with upgrades, ServiceNow also offers various Production Readiness Services. These services specifically address challenges with instance upgradability,

manageability, scalability, and performance. The reviews are performed by a ServiceNow certified professional consultant, who provide recommendations to align customer configurations with ServiceNow best practices. Contact your ServiceNow sales representative for more details.

## Upgrade and update durations in Xanadu

The upgrade process takes a significantly shorter time for both updates and upgrades. (An update occurs when an instance moves from one patch or hotfix to another within the same release family. An upgrade occurs when an instance moves from one release family to another). As always, test your upgrades, but don't assume from the much faster completion time that the update or upgrade wasn't successful.

## Supported upgrades

You can upgrade directly to the latest release family. If multiple software versions are involved in your upgrade, be sure to consult the release notes for each version between your current version and the target version. For more information about release terminology and availability phases, see the ServiceNow Release Cycle [KB0547244] article in the Now Support Knowledge Base.

## Upgrades vs. updates

ServiceNow organizes its releases into families. A family is a set of releases that are named after a major city, such as Xanadu. Families also contain patches and hotfixes. For example, the following releases are both part of the Orlando family:

- Orlando Patch 4
- Orlando Patch 3 Hotfix 2

Upgrading is the act of moving to a release that is in a different family than your current release. For example, a move from London Patch 7 to Orlando Patch 3 is an upgrade because London and Orlando are different families.

Updating is the act of moving from one patch or hotfix to another within the same release family. For example, a move from Orlando Patch 1 to Orlando Patch 3 is a update because both versions are part of the Orlando family.

In both cases, the target release is Orlando Patch 3. It is the difference between your current and target release family that determines whether you are upgrading or updating.

## Features, patches, and hotfixes

Each release family contains features, patches, and hotfixes.

A feature provides a complete solution that customers can implement to add value to their organization. New features are generally only available as part of a feature release. Features are supported with patches and hotfixes.

| Type | Scope |
| --- | --- |
| Feature | • Introduces new features<br>• Includes all available fixes to existing functionality<br>• Is production-oriented; quality and stability are of the highest priority throughout the lifecycle |

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

| Type | Scope |
| --- | --- |
| Patch | • Supports existing functionality with a collection of problem fixes<br>• Generally does not include new features |
| Hotfix | • Supports existing functionality with a specific problem fix for a feature release<br>• May or may not include any previous fixes for a given release<br>• Does not include new features |

For more information about release terminology and availability phases, see the ServiceNow Release Cycle [KB0547244] article in the Now Support Knowledge Base.

## Rollbacks and backups

When you plan an upgrade, remember that ServiceNow does not provide a universal rollback option. Rollbacks are available for updates (for example, Xanadu patch-to-patch and Xanadu patch-to-hotfix). The rollback window is 10 days by default. You can customize this window by modifying the *glide.rollback.expiration_days* property. To request a rollback, contact Customer Service and Support.

Avoid restoring a production instance from backup, when possible, due to downtime and data loss. When a problem cannot be solved using other methods, restoring a production instance from backup is a final option. ServiceNow can restore an instance to any point in time, regardless of when a backup is completed. Customer Service and Support provides support 24 hours a day, 7 days a week for assistance with critical post-upgrade issues.

**Note:**
ServiceNow does not perform on-demand backups. Instances are automatically backed up daily during non-peak business hours on schedules defined by ServiceNow. The timing of existing backup schedules is not adjusted.

## Testing throughout upgrades

Testing is an integral portion that occurs after each instance is upgraded. After you upgrade an instance, test and validate it.

This instance naming convention assumes that you have three ServiceNow instances. If you have three instances, upgrade your instances in this order:

1. Development
2. Test
3. Production

If you have more or less than three instances, or if you are using Team Development, these instance labels will be different. In general, upgrade your instances furthest from production towards your production instance.

| Instance | Type of testing required |
| --- | --- |
| Development | Conduct smoke tests. |

| Instance | Type of testing required |
| --- | --- |
| Test | • Use the ServiceNow Automated Test Framework to assist you in testing your non-production instances.<br>• You can use Automated Test Framework quick start tests and product testing suites to help you jump start your testing before and after upgrades. For a list of available tests and activation information, see Quick start tests.<br>• For extra testing coverage, you can also conduct user acceptance testing (UAT) on your non-production instances. |
| Production | Conduct UAT.<br>**Note:** The Automated Test Framework is intended for use on non-production instances. On your production instance, conduct UAT only. |

If you encounter any post-upgrade issues, document the issue's conditions, steps to reproduce the issue, and your customizations. Contact Customer Service and Support to open an incident for each issue, and provide this information accordingly. Customer Service and Support is available 24 hours a day, 7 days a week to assist you with any questions or issues.

## Pre- and post-upgrade tasks for various products

In preparation for your upgrade, review the upgrade and migration tasks for various applications and features. Plan to complete these tasks, when applicable, before or after the upgrade is complete.

### Prepare your instance for a smoother upgrade

Before you upgrade to Xanadu, review these pre- and post-upgrade tasks and complete the tasks as needed.

### Upgrade and migration tasks

**Important:** For any changes in the upgrade procedure for self-hosted customers, see KB0563844 for details.

| Product | Release notes | Family |
|---|---|---|
| AI Control Tower | Not applicable. | Australia |
| AI Desktop Actions | Upgrade the currently installed *AI Desktop Actions* Software Installers (MSIs) by downloading and installing the newer version of the application. Make sure to close the current execution and close the desktop app before staring the installation for upgrade. For more information, see Download installer. | Australia |
| Application Manager | *Application Manager* is active by default on instances on the *Australia* release. Upgrade your instance to *Australia* patch 4 or later to use the latest features. For information about upgrading your *ServiceNow AI Platform* instance, see Prepare your upgrade. | Australia |
| Application Vulnerability Response | • If you are currently using *Application Vulnerability Response*, and you do not intend to upgrade to *Unified Security Exposure Management (USEM)*, install a version below v30.x of *Application Vulnerability Response* and for upgrades to supported third-party integration applications.<br>• For information about the new features of *Vulnerability Response*, see the Vulnerability Response release notes.<br>• For more information about the released versions of the *Application Vulnerability Response* application as well as the third-party and *ServiceNow* applications that are compatible with the *Australia* release, see the Vulnerability Response Compatibility Matrix and Release Schema Changes [KB0856498] article in the Now Support Knowledge Base. | Australia |
| Asset Audit Response | The *Australia* release introduces enhanced protections for read#only fields across the *ServiceNow AI Platform*®. These changes include a new “read_only_option” field with granular control levels, including “strict_read_only” and “client_script_modifiable". The changes occur in the back end and maintain backward#compatible behavior. This update helps strengthen your instance security while preserving the flexibility you need. Refer to KB2718122 for additional technical details on how to identify affected fields and adjust their settings. For more information about granular read-only security options, see Configuring read-only security options. | Australia |

If this property doesn't exist in the System Property [sys_properties] table, add the property and set its value to false. For more information on how to add a property, see Add a system property.<br><br>After you upgrade to *Australia*, the bot process definitions change to the new structure, which is the bot process configuration.<br><br>Although the bot process configuration doesn't replace the bot process completely, most fields are moved from the bot process to the bot process configuration. If you upgrade to *Australia* without updating the system property value, the tables don't extend the Application File [sys_metadata] table. To update the table changes manually, see the Restructuring RPA Hub tables to sys_metadata in Utah and beyond release [KB1223629] article in the *Now Support Knowledge Base*. | |
| ReleaseOps | If you have customized the *ReleaseOps* sample playbooks, the runbook task playbook activity will not automatically populate when you upgrade to *Australia*. | Australia |
| SQL API | *ServiceNow* provided customers with a free SOAP-based ODBC client. If you have an active *RaptorDB Professional* entitlement, you can migrate to the REST-based *SQL API* client by completing the required configuration on both the server and client sides. For more information, see Configure. | Australia |
| Service Exchange (formerly Service Bridge) | **Important:**<br>Do not upgrade your *ServiceNow*® instance to the *Australia* release if you rely on *Service Exchange*. A known RPS issue prevents *Service Exchange* from functioning correctly. Proceed with the upgrade only after *Australia* Patch 1 becomes available. | Australia |

| | • ServiceNow Vault<br>• Data Discovery<br>• Data Privacy<br>• Zero Trust Access<br>• Field Encryption<br>• Code Signing<br>• Log Export Service (LES) | |
| Source-to-Pay Operations Integrations | **Important:** Due to a performance issue identified with the upgrade fix script, the sourcing fix script has been modified. This script will no longer execute automatically during the upgrade process. Instead, it is now delivered as an on-demand job. Administrators must manually execute this job outside of business hours after the upgrade is complete. | Australia |
| Subscription Management | *Subscription Management* version 6.1 is active by default on all instances of the *Australia* release. Update to *Subscription Management* version 6.1 or later to use the latest features. For more information about updating *Subscription Management*, see Update an app or plugin. | Australia |
| Third-party Risk Management | If you're a *VRM* user upgrading to *TPRM* and upgrading to *Australia* from an earlier release, you must run each upgrade sequentially to ensure that fix scripts run correctly. For example, you must upgrade from *Xanadu* to *Yokohama*, *Yokohama* to *Zurich*, and so on. If the scripts don't run in the correct order, you can get data inconsistencies, broken functionalities, and conflicts.<br><br>After upgrading to version 21.0.x, you can enable the *Smart Assessment Engine* (*SAE*) by setting the *Smart Assessment Engine* enabled (**sn_vdr_risk_asmt.sae_enabled**) property. After setting this property, *Smart Assessment Engine* (*SAE*) becomes the default assessment engine and replaces the legacy experience. The transition isn't reversible.<br><br>**Warning:**<br>Set this property in your non-production instances and conduct thorough testing before changing your production instances. Failure to do so may result in unexpected issues. | Australia |

| Product | Release notes | Family |
|---|---|---|
| | ○ Removes existing **Genius result answer type** field values.<br>○ Migrates **Genius result logic** field values to the new *AI Search* **request processor** and *AI Search* **response processor** fields as appropriate.<br>• After you upgrade your instance to *Washington DC*, *AI Search* retains the value that you previously set for the **Boolean search operator to use when a search query includes multiple terms** (*glide.ais.query.search_operator*) system property. To gain the benefits of the new enhanced query mode for multi-term searches, set this system property's value to *AND then OR 2+ key terms*. For details on *AI Search* system properties, see AI Search system properties.<br>• Starting in *Washington DC*, the User [sys_user] table defaults to sorting indexed records by their sys_created_on dates instead of sorting them by their sys_updated_on dates. This change requires reindexing of the User table indexed source for *AI Search*, which can be time-consuming. When you upgrade to *Washington DC* from a previous family release, *AI Search* does not automatically reindex the User table indexed source. If you need to be able to search the latest configuration for user records, you can manually reindex the User table indexed source, which may take some time. Otherwise, *AI Search* will reindex individual User table records as they're updated until all records have been reindexed. | |
| Automated Test Framework | Copy and customize quick start tests provided by the *ServiceNow AI Platform*® to validate that your instance works after you make any configuration changes. For example, if you apply an upgrade or develop an application.<br><br>The tests can produce a pass result only when you run them on a base system without any customizations and with the default demo data that is provided with the application or feature plugin. To apply a quick start test to your instance-specific data, copy the quick start test and add your custom data. For more information, see Available quick start tests by application or feature. | Washington DC |
| Business Continuity Management | After upgrading to the *Washington DC* release, you must note the following important information for the existing business impact analyses, business continuity plans, and events:<br>• For business impact analyses, the Source column in the dependency assessment is renamed to Primary source and the **BCM** source is renamed to **Manual** for manually added dependencies following an upgrade. When you select the | Washington DC |

|---|---|---|
| | **Update dependencies** button, the system adds the *CMDB* dependencies.<br>• For business continuity plans, the Source column is renamed to Primary source following an upgrade. When you select the **Update dependencies** button, the system adds the *CMDB* and BIA dependencies. To maintain compatibility with the previous releases, the *BCM* administrator can configure the sources and keep only the BIA upstream dependency and BIA downstream dependencies as the sources in the updated configuration.<br>• For events and exercises, when you select the **Update dependencies** button, the system adds the *CMDB*, BIA, and Business Continuity Planning (BCP) dependencies after an upgrade. To maintain compatibility with the previous releases, the *BCM* administrator can configure the sources and keep only the BIA upstream dependency and BIA downstream dependencies as the sources in the updated configuration. | |
| Configuration Management Database (CMDB) | • The column *product_instance_id* has been added to the base Configuration Item [cmdb_ci] table to support the new product instance identifier (PID), which enables the lookup and linking of any pre-existing related assets, CIs, and Install Base Items (IBI). For more information about the impact of that change during upgrade and how to minimize that impact, see the Upgrade impact of CMDB_CI schema changes for Washington release [KB1534035] knowledge base article.<br>• If you enable CMDB 360 for the first time after upgrading to the *Washington DC* release, to enable the capture of CMDB 360 data for CIs from non-CMDB classes (classes not derived from the Configuration Item [cmdb_ci] class) you must set the *glide.identification_engine.multisource_non_cmdb_ci_enabled* system property to true.<br>• If you have been using the legacy Data Certification application on Core UI, then any associated definitions won't be available in the new implementation of Data Certification in CMDB Workspace. After upgrading to the *Washington DC* release and to CMDB Workspace version 6.0, you can convert definitions created in the legacy Data Certification application into draft Data Manager Certification policies in CMDB Workspace. For more information, see . | Washington DC |
| Core ServiceNow AI Platform | Previously, if a transaction was canceled, certain auditable operations were not being recorded. This behavior of missing audit records is because the platform executes some operations between the record change and is canceled before audit creation. But now, audits are created immediately after the record is changed, reducing the chance of a canceled | Washington DC |

| | *Planning* Workspace, see Comparing Portfolio Planning with Strategic Planning. | |
| Predictive Intelligence | If you're upgrading to *Washington DC*, you won't be able to create new regression solutions. If you have existing solutions, they will still be supported and you will be able to train and modify them, but you won't be able to create new ones.<br><br>The changes to the similarity and clustering solutions apply to all instances that are on *Washington DC*. | Washington DC |
| Proactive Service Experience Workflows | Customers who prefer not to receive trouble ticket notifications can disable the business rules related to the incident and case tables. To learn more about how to disable the business rules for trouble ticket notification, see Deactivate trouble ticket notification. | Washington DC |
| Product Catalog Management and Pricing Management | If you used attribute characteristics in the Standard Price Adjustment matrix in the initial release of the *Sales Customer Relationship Management* applications, and you're upgrading to the May 2024 release of *Sales Customer Relationship Management* applications, you must run a scheduled job that corrects the format of the automatically generated **Code** values. Run the **Schedule job to modify code field on characteristic records that contain special characters** on demand job to replace any character that is not a letter (a-z, A-Z), a number (0-9), an underscore (_), or a dollar sign ($) with an underscore (_). This job corrects the **Code** value so that it doesn't start or end with an underscore, doesn't begin with a digit, and contains no consecutive underscores. | Washington DC |
| Public Sector Digital Services | After the upgrade, certain public sector menus and menu items in the *CSM Configurable Workspace* revert to their original *CSM* label names. You can relabel these items for public sector use by updating the UX List Categories for Customer and Service Organizations. For more details on relabeling, navigate to **All** > **Constituent Service** > **Administration** > **Guided Setup**, and select **Configurable Workspace for Public Sector Digital Services** > **Customize Workspace Labels Manually**. | Washington DC |
| Robotic Process Automation (RPA) Hub | Ensure that you upgrade any of the following currently installed Microsoft Software Installers (MSIs) by downloading the RPA applications:<br>• *RPA Desktop Design Studio*<br>• *Attended Robot* | Washington DC |

</td><td></td></tr>
<tr><td>Service Portal</td><td>
After upgrading, you must specify the tables from which guest users can access data for any public widgets that accept the table input parameter. By default in the Washington DC release, public widgets that accept the table input parameter can't access and return data from any tables for guest users. If you added the glide.service_portal.widget.table_allow_list or glide.service_portal.widget.allow_list system properties before upgrading, the values of these properties will be migrated to the Public Table Allow List for widgets after upgrading. For more information, see Configure widget security.<br><br>
Additionally, field-level read ACLs are enforced for filter conditions in Simple List widget instances by default. A new system property, glide.service_portal.enable_acls_for_encoded_query_in_list, enforces these ACLs regardless of whether the Enforce field-level Read ACLs on Filter query terms option is selected for Simple List widget instances. To use the Enforce field-level Read ACLs on Filter query terms option, change the value of

|---|---|---|
| | *Cloud Cost Management* executes the Billing Download job only from the current month onwards, the spend on AI services will be included only for the current month. If you want to view the billing details for the months prior to the current month, you must manually execute the Billing Download job. Once the Billing Download job is executed successfully, you can view the spend data of your AI services. | |
| Configuration Management Database (CMDB) | • Before the upgrade to *Xanadu*, the 'Updated CIs' and 'Updated application services' trend lines in the Recent CI activity and Recent application services activities tiles on the Management view in *CMDB* Workspace, might not have accurately reflected on changes in your system. After upgrading to *Xanadu* and to versions 5.5, 6.2, or 7.2 of *CMDB* Workspace, those trend lines will reflect on the more accurate detection of updated CIs and updated application services.<br>• *CMDB* Health:<br>If either the *CMDB Health Dashboard - Relationship Compliance Processor* or *CMDB Health Dashboard - Relationship Score Calculation* dashboard job is active, that job is deactivated during the upgrade to *Xanadu*. After the upgrade is complete, you can reactivate those jobs to resume health reports for CI relationships. The active state of all other *CMDB* Health dashboard jobs is retained.<br>Any failure threshold for a KPI or metric that is greater than 100,000, is set to 100,000 during upgrade. This upper limit is enforced to avoid excessive processing when a large number of CIs are failing the specified metric tests.<br>• Bookmarks for the CI dashboard no longer work after an upgrade to *Xanadu*. A `Page not found` error message appears. To see *CMDB* Health reports for a CI, open the CI form in *CMDB* Workspace.<br>• The legacy Application Service Dashboard on *Core UI* isn't supported in the *Xanadu* release. After upgrading, you can still access that legacy dashboard by using a previously created bookmark. You can also instead access the Application Services dashboard in *CMDB* Workspace from the Application services tile in the Insights view in *CMDB* Workspace.<br>• The *CMDB* Integrations Dashboard on *Core UI* isn't supported in the *Xanadu* release. After upgrading, you can | Xanadu |

|---|---|---|
| | still access that legacy dashboard by using a previously-created bookmark.<br>• All records that exist in the CMDB Health Result [cmdb_health_result] table before an update to *Xanadu* Patch 5, are deleted during the upgrade.<br><br>To access a legacy dashboard on an upgraded instance, navigate to **All** > **Self-Service** > **Dashboards** and then search for the dashboard. | |
| Data Management | A data management policy record is automatically created for each table that is configured with an archive rule or a table cleaner rule prior to the upgrade. | Xanadu |
| Data Privacy | Licensing changes enable you to install *Data Discovery*, *Data Discovery* APIs, Data Anonymization, and *Data Privacy* APIs without an entitlement, but you must have an entitlement to run a job. | Xanadu |
| Decision tables in Workflow Studio | *Workflow Studio* is automatically installed on your instance. However, *Workflow Studio* is a *ServiceNow Store* application, so to get the latest features, you must update your version manually to the most recent version. As of Washington DC Patch 3, updating *Workflow Studio* automatically updates all its application dependencies such as *Workflow Studio*, *playbook*, and *Decision Builder*. You can no longer see or update the individual application dependencies of *Workflow Studio* from the *ServiceNow Store* or the list of plugins. | Xanadu |
| DevOps Change Velocity | If you are an upgrading customer, you must run the **ReConfigure Bitbucket Server Repositories for PullRequest** job to re-configure your existing Bitbucket Server or Bitbucket Data Center repositories so that pull request records can be imported. You can navigate to **All > System Definition > Scheduled Jobs** to search for this job and run it. | Xanadu |
| External Content Connectors | Beginning with version 2 of the External Content Connectors application, external content connectors implement semantic vector indexing for crawled items. When you upgrade to a version that supports semantic vector indexing, your existing connectors will reindex all previously retrieved items the next time they're visited by a crawl, even if those items' content is unchanged. To force semantic vector indexing of your external content items as soon as possible after upgrading, cancel any running crawls, then restart the canceled crawls manually. | Xanadu |

| Product | Release notes | Family |
|---|---|---|
| Field Service Management | Effective March 1, 2025, Google has designated the Places API, Directions API, and Distance Matrix API as Legacy services. The newer versions of these services are Places API (New) and Routes API. You can't enable or generate new API keys for these legacy services. However, you can continue using these services with the existing API keys. If you need to create a new Google API key after March 1, 2025, you must enable the new APIs from Google Console and upgrade to Xanadu Patch 9 version or higher to ensure compatibility. | Xanadu |
| Flows, subflows, and actions in Workflow Studio | After upgrading, users who previously had the fd_read_operations role will now see only basic execution details such as the run state and duration. This restriction prevents users with this role from seeing sensitive information in execution details. To provide read access to all execution details such as input configuration and runtime values, grant the user the new role fd_read_operations_all. | Xanadu |
| Goal Framework for SPM | After upgrading to *Goal Framework for SPM* v2.3.0, run the **Migrate BreakdownInterval To Checkinfrequency** scheduled job. This scheduled job migrates the existing values in the **Review frequency** and **Breakdown interval** fields to the **Check-in frequency** field in the target records. For more information on how these values are migrated for targets with different values, see Target breakdowns migration. | Xanadu |
| Hardware Asset Management 11.0.0 | After upgrading to *Xanadu*, you can view both the *Core UI Performance Analytics* dashboards and the *Next Experience Platform Analytics* dashboards for *Hardware Asset Management*.<br>**Note:** While migrating the *Core UI Performance Analytics* dashboards to the *Next Experience Platform Analytics* dashboards, auto-migration is disabled by default to avoid duplicate dashboards. | Xanadu |

|---|---|---|
| | After you upgrade to *Xanadu*, the bot process definitions change to the new structure, which is the bot process configuration.<br><br>Although the bot process configuration doesn't replace the bot process completely, most fields are moved from the bot process to the bot process configuration. If you upgrade to *Xanadu* without updating the system property value, the tables don't extend the Application File table. To update the table changes manually, see the Restructuring RPA Hub tables to sys_metadata in Utah and beyond release article in the *Now Support* knowledge base. | |
| Security Posture Control | For a complete list of the applications that are required to implement *Security Posture Control*, see Install Security Posture Control. | Xanadu |
| Service Exchange | • *Service Exchange* 2.x.x that is being released with the *Xanadu* release does not support migration of the *Service Exchange* (Legacy) versions. If you are using a *Service Exchange* (Legacy) version, before you upgrade to the *Xanadu* release, you must follow instructions in the *Service Exchange* for Providers (Legacy) - Migration Utility (KB1499823) article in the *Now Support* Knowledge Base to migrate your configuration data.<br>• If you are upgrading from version 1.x.x of *Service Exchange*, follow the steps listed in Upgrade Guide - *Service Exchange* for Providers and Consumers application (v2.x.x release - KB1700387) to migrate your *Service Exchange* applications.<br>• Due to the introduction of mismatched version support, new entitlements cannot be activated until both the consumers and providers upgrade to the *Xanadu* release. Older active entitlements will continue to work but new ones cannot be activated. | Xanadu |
| Service Operations Workspace for ITSM | Ensure that the following applications have compatible upgraded versions:<br>• *Service Operations Workspace ITSM* Applications application (sn_sow_itsm_cont)<br>• *Service Operations Workspace ITOM* Applications application (sn_sow_itom_cont) | Xanadu |

| | **Review frequency** and **Breakdown interval** fields to the **Check-in frequency** field in the target records. For more information on how these values are migrated for targets with different values, see Target breakdowns migration. | |
| Subscription Management | *Subscription Management* version 3.2 is active by default on all instances of the *Xanadu* release. Update to *Subscription Management* version 4.0 or later to use the latest features. For more information about updating *Subscription Management*, see Update an app or plugin. | Xanadu |
| Telecommunications Network Inventory | If you are an existing user of previous releases, both legacy and new product models will be available in the Network Inventory Workspace menu after upgrading to *Xanadu*. To rectify this issue, you must migrate your legacy product model data to the new product model tables in your current instance. For more details about the procedure, see KB1695167. | Xanadu |
| Third-party Risk Management | If you are a *VRM* user upgrading to *TPRM*, when upgrading to *Vancouver* or later from an earlier release, you must run each upgrade sequentially to ensure that fix scripts run correctly. This means upgrading from *Utah* to *Vancouver*, *Vancouver* to *Washington DC*, and so on. If the scripts do not run in the correct order, it can result in data inconsistencies, broken functionalities, and conflicts.<br><br>For more information on upgrading from *VRM* to *TPRM*, see Third-party Risk Management upgrade information. | Xanadu |
| Vulnerability Response Integration with Claroty CTD | Claroty CTD v5.1 is also supported for the Vulnerability Response Integration with Claroty CTD application. | Xanadu |
| Vulnerability Response integrations | • For more information about the released versions of the *Vulnerability Response* application as well as the third-party and *ServiceNow* applications that are compatible with the *Xanadu* release, see the Vulnerability Response Compatibility Matrix and Release Schema Changes [KB0856498] article in the *Now Support* Knowledge Base.<br>• For information about the new features of *Vulnerability Response*, see Vulnerability Response release notes. | Xanadu |

| Product | Release notes | Family |
|---|---|---|
| Workflow Studio | As of *Washington DC* patch 3, updating *Workflow Studio* automatically updates all of its application dependencies such as *ServiceNow® Workflow Studio*, Playbook, and *ServiceNow® Decision Builder*. You can no longer see or update the individual application dependencies of *Workflow Studio* from the *ServiceNow® Store* or the list of plugins. | Xanadu |
| AI Control Tower | General availability release, no upgrade. | Yokohama |
| AI Search | When you upgrade to *Yokohama* from an earlier release, make knowledge block content searchable by reindexing all your indexed sources that include knowledge articles. For details on reindexing, see Index or reindex an indexed source or Index or reindex multiple indexed sources. | Yokohama |
| Accounts Payable Operations | If you're upgrading from a previous release, you must configure the reference field in the Tax Code [sn_fin_tax_code] table. The exception engine validates the invoice using the tax code and raises exceptions if necessary. | Yokohama |
| App Engine Studio | Due to a new process for assigning groups in *AEMC*, the same version of the Application Intake plugin must be activated on each of your instances.<br><br>For more information, see App Readiness and Compliance Report. | Yokohama |
| Application Manager | *Application Manager* is active by default on instances on the *Yokohama* release. Upgrade your instance to *Yokohama* patch 11 or later to use the latest features. For information about upgrading your *ServiceNow AI Platform* instance, see Prepare your upgrade. | Yokohama |
| Application Vulnerability Response | • For information about the new features of *Vulnerability Response*, see Vulnerability Response release notes.<br>• For more information about the released versions of the *Application Vulnerability Response* application as well as the third-party and *ServiceNow* applications that are compatible with the *Xanadu* release, see the Vulnerability Response Compatibility Matrix and Release Schema Changes [KB0856498] article in the *Now Support Knowledge Base*. | Yokohama |

| Product | Release notes | Family |
|---|---|---|
| Automated Test Framework | Copy and customize quick start tests provided by the *ServiceNow AI Platform*® to validate that your instance works after you make any configuration changes. For example, if you apply an upgrade or develop an application.<br><br>The tests can produce a pass result only when you run them on a base system without any customizations and with the default demo data that is provided with the application or feature plugin. To apply a quick start test to your instance-specific data, copy the quick start test and add your custom data. For more information, see Available quick start tests by application or feature. | Yokohama |
| Configuration Management Database (CMDB) | Three new indexes (parent, type), (child, type), and (child, parent, type, port) are added to the CI Relationship [cmdb_rel_ci] table to improve the performance of Identification and Reconciliation Engine (IRE) querying this table. This change is likely to increase upgrade time. For more information about the impact of this change during upgrade and to learn how to minimize that impact, see Increased Yokohama Upgrade Time due to cmdb_rel_ci index additions [KB1703367]. | Yokohama |
| Data Management | • After upgrading a self-hosted instance to *Yokohama*, the sys_physical_table_stats table doesn't display the latest data for table size, with the sample_period_start column showing dates prior to the upgrade. To see the correct table size, you can set the com.glide.stats.storage_disk_usage.information_schema system property to true, which allows the statsGatherer job to use the information schema to generate the required database statistics.<br><br>• A data management policy record is automatically created for each table that is configured with an archive rule or a table cleaner rule prior to the upgrade. | Yokohama |
| Data Privacy | Licensing changes enable you to install *Data Discovery*, *Data Discovery* APIs, Data Anonymization, and *Data Privacy* APIs without an entitlement, but you must have an entitlement to run a job. | Yokohama |
| DevOps Change Velocity | If you are a new customer or are using a zBoot instance and you want to create type-based workflow change requests in *DevOps Change Velocity*, you must add the *com.snc.change_management.change_model.type_compatibility* property and set it to True. For more information, see Add a system property. | Yokohama |

| Product | Release notes | Family |
|---|---|---|
| | If you are an upgrading customer, you must run the **ReConfigure Bitbucket Server Repositories for PullRequest** job to re-configure your existing Bitbucket Server or Bitbucket Data Center repositories so that pull request records can be imported. You can navigate to **All > System Definition > Scheduled Jobs** to search for this job and run it. | |
| Encryption Key Management | • The GlideEncrypter API uses the three-key Triple Data Encryption Standard (3DES) encryption standard which NIST 800-131A Rev 2 has recommended against using after 2023. The following changes are taking place in the *Yokohama* release in preparation for a full deprecation of GlideEncrypter/3DES in the future.<br>  ○ New *Yokohama* instances can't use GlideEncrypter. All base system scripts have been changed to use alternative encryption processes.<br>  ○ if you're upgrading your *Yokohama* instances, you can still use 3DES, but you can also disable 3DES usage with a system property.<br>  ○ Learn more about 3DES deprecation in KB1704481. | Yokohama |
| External Content Connectors | Beginning with version 2 of the External Content Connectors application, external content connectors implement semantic vector indexing for crawled items. When you upgrade to a version that supports semantic vector indexing, your existing connectors will reindex all previously retrieved items the next time they're visited by a crawl, even if those items' content is unchanged. To force semantic vector indexing of your external content items as soon as possible after upgrading, cancel any running crawls, then restart the canceled crawls manually.<br><br>When you upgrade to version 4 of the External Content Connectors application from an earlier version, searches may not show all previously crawled content until you've completed both a content crawl and a user mapping crawl for each upgraded connector. The first content crawl run after the upgrade will reindex all searchable content from the source system, and the user mapping crawl will reindex all security principals from the source system. All crawled content should be shown in searches after both of these crawls are complete. | Yokohama |
| Field Service Management | • Upgrading to Yokohama may extend the upgrade maintenance time of a customer due to Appointment Booking. The Appointment Booking configuration tables get extended to the Application File [sys_metadata] table as a part of the upgrade. After upgrading to Yokohama, re-parenting occurs automatically and the duration of the re-parenting depends on the number of records in Application File [sys_metadata] table. | Yokohama |

| Product | Release notes | Family |
|---|---|---|
| | • Effective March 1, 2025, Google has designated the Places API, Directions API, and Distance Matrix API as Legacy services. The newer versions of these services are Places API (New) and Routes API. You can't enable or generate new API keys for these legacy services. However, you can continue using these services with the existing API keys. If you need to create a new Google API key after March 1, 2025, you must enable the new APIs from Google Console and upgrade to Yokohama Patch 3 version or higher to ensure compatibility. | |
| Financial Services Card Operations | During the upgrade to *Yokohama*, the *Financial Services Card Operations* plugin reparents the Card Disputes Transaction table [sn_bom_credit_card_disputes_transaction] to the Financial Task table [sn_bom_task] in *Financial Services Operations Core*.<br><br>Reparenting leverages the benefits and advancements of *ServiceNow® Financial Services Operations Core* while preserving the functionality of existing applications.<br><br>**Note:**<br>If your instance uses the Card Disputes Transaction table [sn_bom_credit_card_disputes_transaction] and it contains a large amount of data, you may experience increased upgrade times. | Yokohama |
| Generative AI Controller | *Generative AI Controller* is installed and updated when you install or update any *Now Assist* application. If you have issues installing or updating applications, see this knowledge article for steps that may address your issue. Otherwise, you can make a Support case. | Yokohama |
| ITOM Visibility | 3DES support is planned for permanent removal from the *MID Server* for *MID Servers* with SSH-based Discovery or SSH-based integrations. For more information, see 3DES deprecation in SSH from Xanadu [KB1644950].<br><br>After upgrading to Yokohama, a Fix Script named "Add Explicit Public SNMP Credential" might create a public SNMP credential in Production instances. This could lead to unnecessary records via *Discovery*. The Fix Script is present in Yokohama instances, including OOB. Before applying the upgrade of *Discovery* core, Yokohama version, verify the fix script behavior in a sandbox environment. Remove the public SNMP credentials if not required. | Yokohama |

| Service Exchange | • When using *Service Exchange* for Providers and *Service Exchange* for Consumers in a single instance, you must upgrade both applications simultaneously to the same version to maintain compatibility.<br>• The *Service Exchange* Global Script Include is automatically installed or updated when you install the *Service Exchange* application on the following platform versions:<br>  ○ *Washington DC* Patch 9<br>  ○ *Xanadu* Patch 4<br>  ○ *Yokohama*<br>• *Service Exchange* 2.x.x, which was first released with the *Xanadu* release, does not support migration of *Service Exchange* (Legacy) versions. If you are using a *Service Exchange* (Legacy) version, before you upgrade to the *Yokohama* release, you must follow instructions in the *Service Exchange* for Providers (Legacy) - Migration Utility [KB1499823] article in the *Now Support* Knowledge Base to migrate your configuration data.<br>• If you are upgrading from *Service Exchange* version 1.x.x, follow the steps in Upgrade Guide - *Service Exchange* for Providers and Consumers application (v2.x.x release) [KB1700387] to migrate your *Service Exchange* applications.<br>• Due to the introduction of mismatched version support, new entitlements cannot be activated until both the consumers and providers upgrade to *Service Exchange* version 2.x.x. Older active entitlements will continue to work but new ones cannot be activated.<br>• If you upgrade to *Service Exchange* version 2.0.55 with *Sales Customer Relationship Management* plug-in version 1.0.4 before upgrading the platform to the *Yokohama* release, the new Deny ACLs will not be installed. To ensure the Deny ACLs get installed, after upgrading to *Yokohama*, you must click Repair to reinstall the *Service Exchange* application. | Yokohama |
| Service Operations Workspace for ITSM | Ensure that the following applications have compatible upgraded versions:<br>• *Service Operations Workspace ITSM* Applications application (sn_sow_itsm_cont)<br>• *Service Operations Workspace ITOM* Applications application (sn_sow_itom_cont) | Yokohama |

| | For more information on compatible versions, see Version compatibility between Service Operations Workspace for ITSM and Service Operations Workspace ITOM. | |
| ServiceNow IDE | *ServiceNow IDE* version 1.1.4 is active by default on instances on the *Yokohama* release. Update to *ServiceNow IDE* version 2.0 or later to use the latest features. For information about updating *ServiceNow IDE*, see Updating apps. | Yokohama |
| ServiceNow SDK | Upgrade to the latest version of the *ServiceNow SDK* with the `now-sdk upgrade` command. For more information, see Upgrade the ServiceNow SDK.<br><br>*ServiceNow SDK* version 3.0 supports integrating with *ServiceNow* instances beginning with the *Washington DC* release.<br><br>**Note:**<br>For more information about minor releases of the *ServiceNow SDK*, see the ServiceNow IDE, SDK, and Fluent articles in the *ServiceNow Community*. | Yokohama |
| ServiceNow Studio | *ServiceNow Studio* no longer has to be downloaded from the *ServiceNow Store*. It's available on the *ServiceNow AI Platform* by default. | Yokohama |
| Software Asset Management | Starting from the *Yokohama* release, all the reconciliation script includes are being moved from the family release to the *Software Asset Management* store application (com.sn_itam_samp). When upgrading to *Yokohama*, if you have made customizations to reconciliation script includes, you must move your customizations to the new script includes. The old script includes will be deprecated.<br><br>When upgrading to *Yokohama* Patch 1 with the *Software Asset Management* (sn_itam_samp) 2.1.0 store application installed, you must delete the entitlements for the existing *CrowdStrike* integration profiles. Then, create new entitlements for various *CrowdStrike* products, such as *CrowdStrike* Falcon Endpoint Protection and *CrowdStrike* Falcon Discover, based on their license metrics. These metrics include the Reserved Hourly Average Sensor and Sensor Subscription, which are found under the *CrowdStrike* License Metric Group.<br>• If any existing *CrowdStrike* profiles are in the Draft state, create new integration profiles and delete the existing ones.<br>• If any existing *CrowdStrike* profiles are in the Published state, their state changes to Draft. | Yokohama |

| Product | Release notes | Family |
|---|---|---|
| Strategic Planning | After upgrading to *Strategic Planning* v4.7.0, the following changes apply to user preferences:<br>• Custom view settings previously saved under user preferences will be cleared. You must reapply these changes and create views as needed. For instructions, see Create a portfolio plan view in Strategic Planning and Create a free-form roadmap view in Strategic Planning.<br>• Customizations made to the Timeline and Kanban views in the **Roadmap** tab, and the Kanban view in the **Prioritization** tab at the portfolio plan level, will be copied to the Default view of the portfolio plan. Similarly, any customizations made to the Timeline and Kanban views in the free-form roadmap will also be copied to the Default view of the free-form roadmap. | Yokohama |
| Subscription Management | *Subscription Management* version 4.1 is active by default on all instances of the *Yokohama* release. Update to *Subscription Management* version 6.0.2 or later to use the latest features. For more information about updating *Subscription Management*, see Update an app or plugin. | Yokohama |
| Telecommunications Network Inventory | The *Yokohama* release needs the *Xanadu* platform version to support the Design and Assign playbook feature. | Yokohama |
| Telecommunications Service Operations Management (TSOM) | After installing *Telecommunications Service Operations Management* TSOM, any customized IRE identification rules applied to interface cards, slots, sub-slots and network interfaces may be affected. You must review and validate the rules to ensure proper functionality. | Yokohama |
| Third-party Risk Management | Starting with the *Vancouver* release, if you're a *VRM* user upgrading to *TPRM*, from an earlier release, you must run each upgrade sequentially to ensure that fix scripts run correctly. This means upgrading from one release to the next rather than skipping to the latest release. Not running scripts in the correct order can result in data inconsistencies, broken functionalities, and conflicts.<br>For more information on upgrading from *VRM* to *TPRM*, see Third-party Risk Management upgrade information.<br>For existing *TPRM* customers, after upgrading to version 20.2.4, data from the Industry column in the Company [core_company] table is automatically migrated to the tprm_industry column. Migration can take several hours depending on the number of records in the Company | Yokohama |

## Upgrade planning checklist

Plan and track the activities related to your ServiceNow instance upgrade. To help ensure that you complete all the tasks for a successful upgrade, follow the step-by-step instructions in the upgrade planning checklist to track and plan the upgrade.

Some optional steps may not be appropriate depending on the number of instances, customizations, and so forth. Mark the ones you do not need in the **N/A** column.

**Tip:**
To download a PDF version of this checklist, click here.

The process for completing steps for self-hosted customers may vary (for example, requesting an instance clone or upgrades). These differences must be considered during planning.

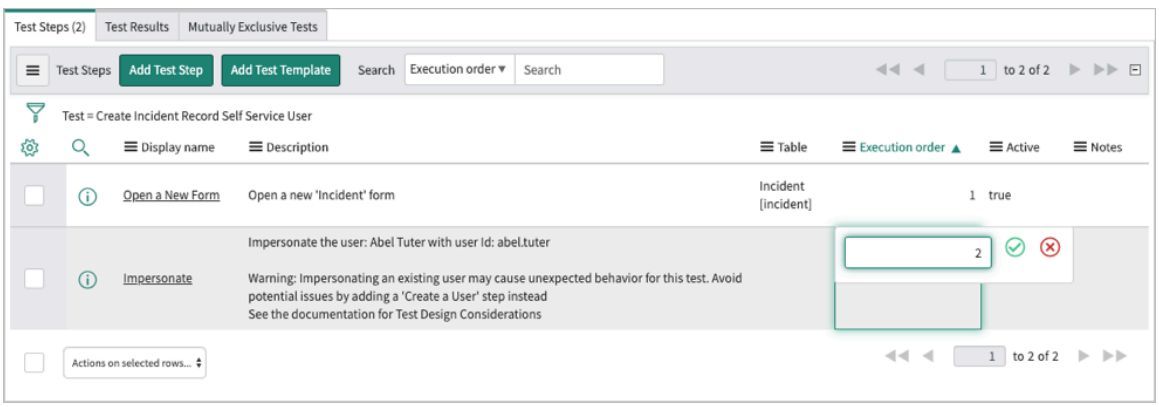
## Upgrade tools and resources

Learn about ServiceNow products and tools that can improve your upgrade experience.



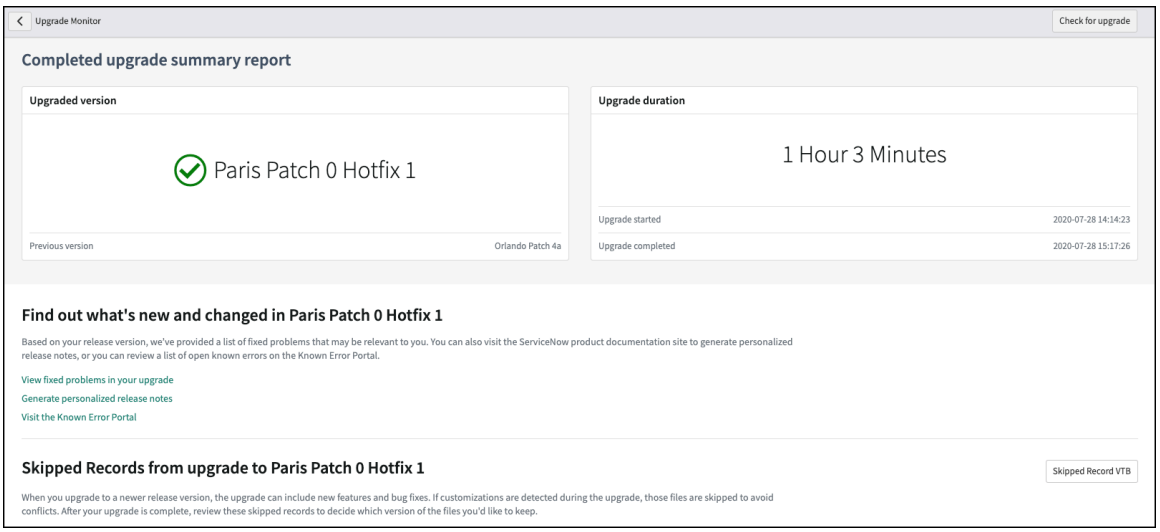
### Products

Use these ServiceNow products to automate parts of your upgrade testing and manage your upgrades from one central place.

#### Automated Test Framework

The Automated Test Framework (ATF) enables you to create and run automated tests to confirm that your instance works after making a change. For example, after an upgrade, during application development, or when deploying instance configurations with update sets. Review failed test results to identify the changes that caused the failure and the changes that you should review.

**Note:**
By default, the system property to run automated tests is disabled to prevent you from accidentally running them on a production system. Run tests only on development, test, and other non-production instances to avoid data corruption and outage.



#### Upgrade Center

Use ServiceNow® Upgrade Center to plan and manage your upgrades. Use the Upgrade Preview module to explore different release versions available to you

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

and gain insights about the experience of an upgrade without actually upgrading your instance. You can also monitor the status of any ongoing upgrade and view the summary of your latest upgrade with the new Upgrade Monitor module. The Upgrade Center also features an Upgrade visual task board (VTB) to manage post-upgrade skips. A separate Upgrade History module can be used to view all your past upgrades.

## Upgrade tools

In addition to upgrade-related products, you can also use ServiceNow's upgrade tools.

### Now Support upgrade assist

Stay current by automating your ServiceNow upgrades. Use an automated service to offload upgrade scheduling tasks.

### Known Error portal

Review a list of known issues in selected patch release versions.

### Sample upgrade project plans

The Upgrade planning checklist provides a quick look at the steps in an upgrade. If you'd like to track your upgrade progress in Excel, PDF, or Microsoft Project, you can download these sample project plans to get started.

- PDF
- Excel
- MPP

## Best practices

Visit the ServiceNow Customer Success Center website for information on upgrade value and best practices.

### Upgrade value calculator

Determine the potential business value of staying current with ServiceNow upgrades.

### Playbook: Upgrade quickly and maintain platform health

Use upgrade processes and tools to conduct your upgrades, and learn how to make changes to your baseline system when required.

### Balance value and risk with platform customizations

## Upgrades and the ServiceNow Store

The ServiceNow Store includes official applications that are developed and released by ServiceNow. Users can download, access, and configure Xanadu apps on their instances. Store application versions can be upgraded when you upgrade your instance to a new release version.

New versions for a ServiceNow® Store app can be defined in patch and family releases. This includes the ability to define a minimum version and/or a hotfix for a version you already have installed. If your instance has an installed app version below the defined minimum version, the app will be upgraded to the minimum required version. Similarly, if your instance has an installed app below the defined hotfix version, your app will be upgraded to the hotfix version.

For example, consider an application that defines these versions in a release: 1.7.0, 2.4.1, and 3.0.1. In this example, version 1.7.0 is the minimum version. Versions 2.4.1 and 3.0.1 are hotfix versions.

When an instance upgrades to the release version, the following behavior occurs:

#### Minimum version upgrades

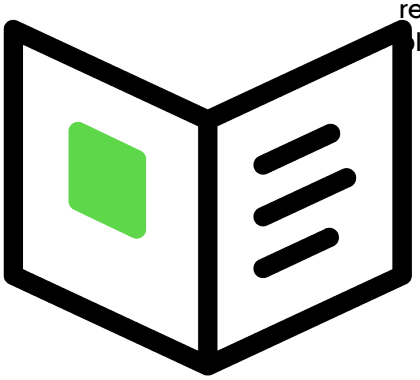
| Version installed before the upgrade | Expected version after the upgrade |
|---|---|
| 1.0.0 | 1.7.0 - The version upgrades to the minimum version |
| 1.3.2 | 1.7.0 - The version upgrades to the minimum version |
| 1.7.0 | 1.7.0 - The version stays the same, because the instance was already on the minimum version |
| 1.7.2 | 1.7.2 - The version stays the same, because the instance was already ahead of the minimum version |

#### Hotfix version upgrades

| Version installed before the upgrade | Expected version after the upgrade |
|---|---|
| 1.8.0 | 1.8.0 - The version stays the same, because the instance was already ahead of the defined hotfix version |

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

**Hotfix version upgrades (continued)**



| Version installed before the upgrade | Expected version after the upgrade |
|---|---|
| 2.0.0 | 2.4.1 - The version upgrades to the defined hotfix version |
| 2.6.0 | 2.6.0 - The version stays the same, because the instance was already ahead of the defined hotfix version |
| 3.0.0 | 3.0.1 - The version upgrades to the defined hotfix version |
| 3.0.5 | 3.0.5 - The version stays the same, because the instance was already ahead of the defined hotfix version |
| 4.0.0 | 4.0.0 - The version stays the same, because there are no hotfix versions defined for 4.0.0+. |

# Upgrade to the Xanadu release

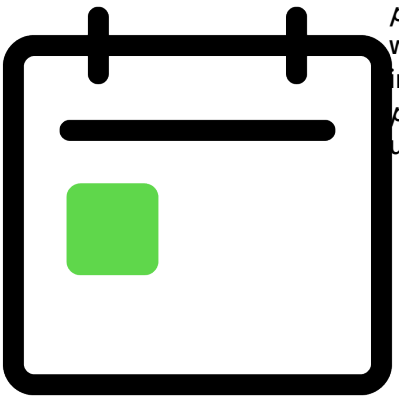
Upgrading and patching your instance requires planning, testing, and validation. To ensure a safe and effective upgrade, read the release notes, create upgrade plans, and test your upgrade on non-production instances before upgrading your production instance.

**Important:**
These topics contain in-depth explanations about upgrades. For a step-by-step reference of upgrade steps, refer to the Upgrade planning checklist.

### Phase 1 - Read the release notes and plan your upgrade

Before you begin the upgrade process, it is essential to read the release notes for your target version so you understand the required upgrade and migration tasks. This information helps you plan a safe and effective upgrade.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



### Phase 2 - Prepare for the development instance upgrade

For a better understanding of your production upgrade duration, request a full clone of your production instance (including large tables and attachments) onto a non-production instance. Confirm your current and target release versions, because you will later use this information when scheduling your upgrade in Now Support.

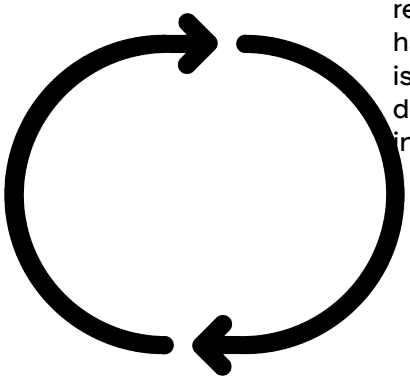
---

### Phase 3 - Verify your upgrade configurations and schedule the development instance upgrade in Now Support

Check the configuration of the *`Check distribution for possible upgrade`* scheduled job to view how often and when it runs. Review information about timing your upgrade in coordination with the *`Check distribution for possible upgrade`* scheduled job. Then, schedule your upgrade in Now Support.

---

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



### Phase 4 - Upgrade and validate the development instance

Track the progress of your upgrades with the Upgrade Monitor. For your first non-production instance upgrade (your development instance), use the Upgrade Monitor to process the skipped list of records that were not addressed in the upgrade. Then identify your update sets and perform functional testing.

---

### Phase 5 - If applicable: Upgrade and validate your other non-production instances, such as your test instance

After you've configured and refined your development instance, request to upgrade any other non-production instances you have, such as a test instance. Immediately after the upgrade is complete, apply the post-upgrade changes made to your development instance, including activating optional plugins, installing and upgrading applications, and applying update sets.

---

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

### Phase 6 - Prepare to upgrade the production instance

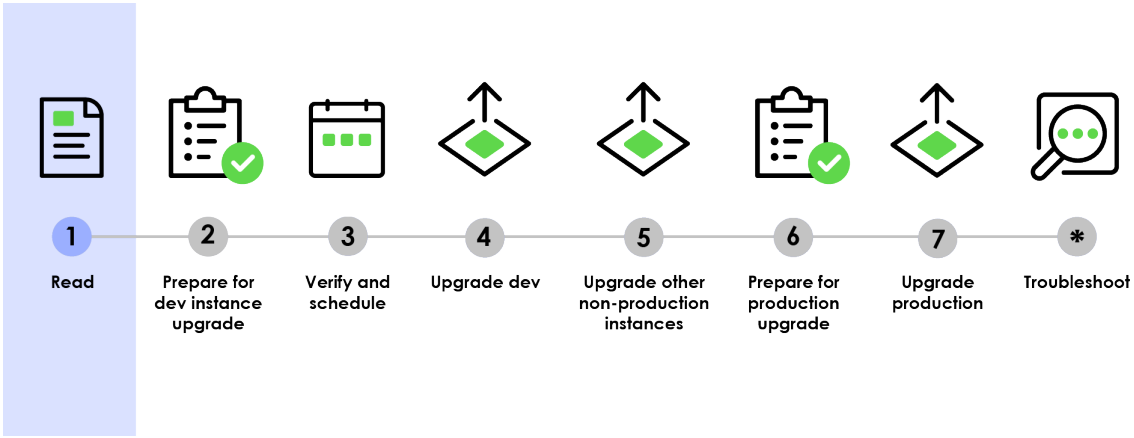
After you have configured and refined your test environment to be a good representation of your production environment, prepare to upgrade your production instance.

### Phase 7 - Upgrade the production instance

After you have upgraded your development, non-production, and test instances, upgrade your production instance last. Then validate that the upgrade was complete, apply update sets and fix scripts, and perform post-upgrade user acceptance testing (UAT).

## Phase 1 - Read the release notes and plan your upgrade

Before you begin the upgrade process, it is essential to read the release notes for your target version so you understand the required upgrade and migration tasks. This information helps you plan a safe and effective upgrade.



**Before you begin**

**Important:**
If multiple software versions are involved in your upgrade, be sure to consult the release notes for each version between your current version and the target version.

Role required: admin.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## About this task

## Procedure

1. Read the release notes for your target version.
   Review upgrade and migration tasks that you will need to complete before or after your upgrade.

   - ServiceNow provides release notes for every release. The release notes offer valuable information about new functionality, notable changes, and fixes available in a particular version. Read the Xanadu release notes to determine whether the upgrade contains functionality you need and fixes that resolve any issues affecting your instance. The release notes can also help you determine whether items you previously customized are being upgraded.
   - For Xanadu -specific upgrade considerations, see Pre- and post-upgrade tasks for various products.
   - If you are thinking about upgrading to the Xanadu family, problem (PRB) fixes can be an important factor in your upgrade plans. You can generate a list of . Compare the lists of fixed problems across various Xanadu upgrade scenarios to help you decide which release version to upgrade to.

2. Complete the preparation and planning tasks in Phase 2 of the Upgrade planning checklist.

   The checklist contains a list of planning tasks that guide you through various aspects of upgrade preparation. You are guided through tasks such as scoping, gathering stakeholders, identifying features to disable and enable, and creating test plans to use throughout the upgrade. Follow these steps to ensure that all aspects of your organization are ready for the upgrade.

3. To better prepare for the upgrade, evaluate the level of customizations on your instances.

   For information on customization best practice guidelines, visit the Customer Success Center website.

| Complexity score | Customization examples |
| --- | --- |
| Low | ○ Modification to form layout/design<br>○ Add fields and/or UI policies to forms<br>○ Build simple custom integration<br>○ Extend an existing table (such as incident) in scope with new fields only |

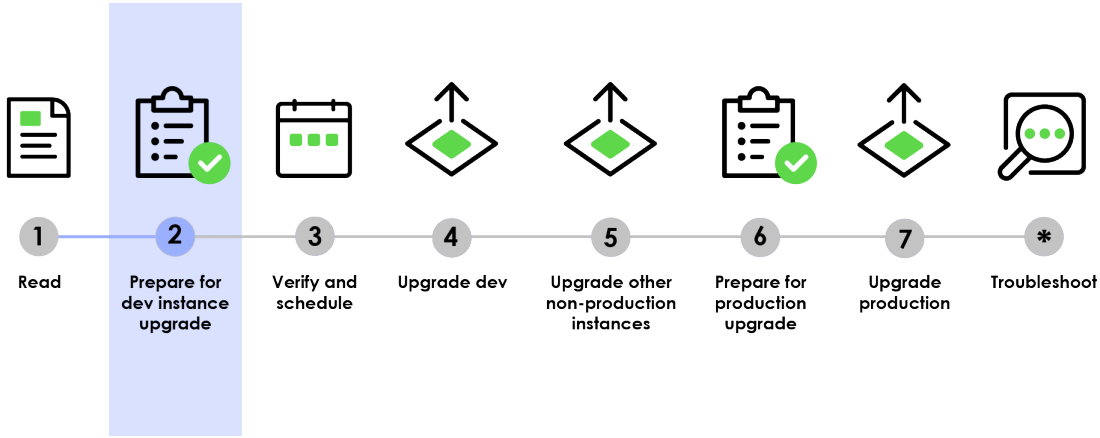
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

| Complexity score | Customization examples |
|---|---|
| Low-medium | ○ Extend an existing table (such as incident) in scope with some scripting<br>○ Extend an existing table (such as incident) as the basis for a different application, such as HR |
| Medium | Build a new scoped application |
| Medium-high | Build a new global application |
| High | ○ Change baseline business rules (such as modifying the SLA process)<br>○ Build a complex custom integration |

4. Create a comprehensive test plan that includes test cases for all core instance functionality and integrations, including any customizations you may have.

   To efficiently test and evaluate system functionality, create a set of detailed test scripts for your testing team to use. You will use this test plan throughout each instance upgrade.

| Instance | Type of testing required |
|---|---|
| Development | Conduct smoke tests. |
| Test | ○ Use the ServiceNow Automated Test Framework to assist you in testing your non-production instances.<br>○ You can use Automated Test Framework quick start tests and product testing suites to help you jump start your testing before and after upgrades. For a list of available tests and activation information, see Quick start tests.<br>○ For extra testing coverage, you can also conduct user acceptance testing (UAT) on your non-production instances. |
| Production | Conduct UAT.<br>**Note:** The Automated Test Framework is intended for use on non-production instances. On your production instance, conduct UAT only. |



## Phase 2 - Prepare for the development instance upgrade

For a better understanding of your production upgrade duration, request a full clone of your production instance (including large tables and attachments) onto a non-production instance. Confirm your current and target release versions, because you will later use this information when scheduling your upgrade in Now Support.

**Before you begin**
Role required: admin.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

### About this task

### Procedure

1. On your production instance, create a system clone and select your development instance as the **Target instance**.

   The clone provides you with an exact copy of production. Performing an upgrade on your clone allows you to simulate an upgrade on your production configuration in a non-production environment. Refer to System clone for details.

   **Important:**

   For effective upgrade testing, use this clone to test on a system that reflects the production instance as closely as possible. If your non-production and production instances are the same size, include the production audit log and the attachment data on your production clone. To ensure that all production data is included with the clone, make sure that you clear all the **Exclude** check boxes on the Request Clone form. On your non-production instance, replicate typical user behaviors that occur on your production instance to enhance an estimate of your upgrade duration.

2. Set expectations for performance during upgrades.

   During an upgrade, your performance may be impacted because your nodes initiate the distribution upgrade. All nodes are restarted during an upgrade, but your multi-node instances are available during an upgrade because ServiceNow instances operate on a multi-node system. This multi-node system staggers node distribution upgrades, ensuring that there is at least one active pair of nodes for multi-node instances during an upgrade.

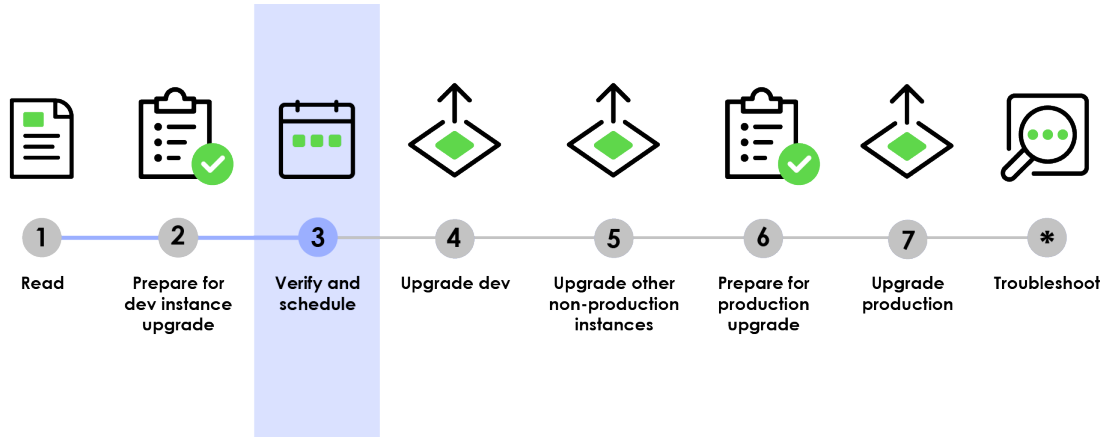
   To help you set accurate expectations for performance during upgrades, be aware of the differences between the nodes on your non-production and production instances. Instances with one node experience a short period of downtime during the upgrade, but multi-node instances do not have UI downtime. For details on your nodes and their status, see the Upgrade Progress screen.

## Phase 3 - Verify your upgrade configurations and schedule the development instance upgrade in Now Support

Check the configuration of the *Check distribution for possible upgrade* scheduled job to view how often and when it runs. Review information about timing your upgrade in coordination with the *Check distribution for possible upgrade* scheduled job. Then, schedule your upgrade in Now Support.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## Before you begin



Role required: admin.

You must check the configuration of the **Check distribution for possible upgrade** and **Check database for possible upgrade** sys_triggers, which are essential to making sure your instance upgrades to the correct target version.

**Note:**
Starting in the Paris release, 'Upgrade' job has been renamed to 'Check distribution for possible upgrade'. In addition, the 'Check Upgrade Script' job has been renamed to 'Check database for possible upgrade'.

| sys_trigger | Function |
|---|---|
| Check distribution for possible upgrade | • Queries Now Support to ask whether an upgrade is going to happen in a given time interval, which is determined by the configuration for the *Check distribution for possible upgrade* scheduled job.<br>• Asks whether the instance should be running a different version. If so, the distribution for that version is downloaded, and your instance upgrades to the target version. |
| Check database for possible upgrade | • Runs after the distribution has been upgraded.<br>• Performs the database upgrade. |

## About this task

**Important:**
Your upgrades are orchestrated out of your instance, not Now Support.

Now Support keeps records of what version you should be running, and your instance periodically queries Now Support to check its assigned version. When you designate a time for your upgrade, your instance begins the upgrade at that time. For example:

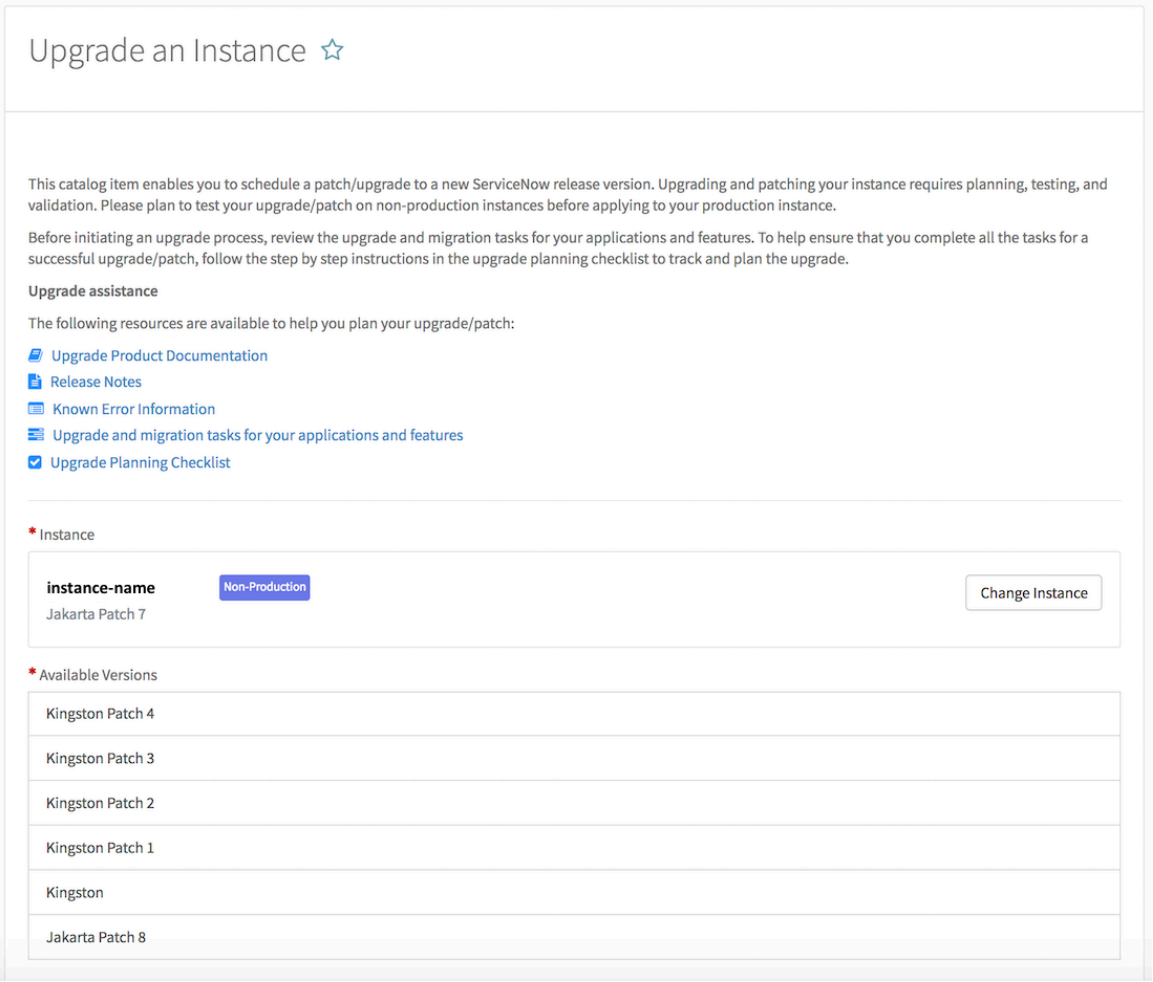
| Action | Result |
|---|---|
| You schedule an upgrade to Xanadu Patch 8 to take place on June 10 at 3:00pm. | Now Support changes its records to reflect that you should be on Xanadu Patch 8 on June 10 at 3:00pm. |

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

| Action | Result |
| --- | --- |
| Now Support waits to get pinged by your instance after the scheduled time on June 10. | Your instance continues to operate on its current release version, and it periodically pings Now Support. |
| After the scheduled time on June 10, Now Support receives a ping from your instance. | Now Support tells your instance that it should be on Xanadu Patch 8. |
| Your instance receives a Now Support notification that it should be running a different version. | Your instance starts the upgrade. |

How to schedule and manage instance upgrades on Now Support

You can browse the Now Support service catalog to request and self-service tasks such as scheduling an upgrade.



Request plugins and self-service tasks using service catalog on Now Support

### Procedure

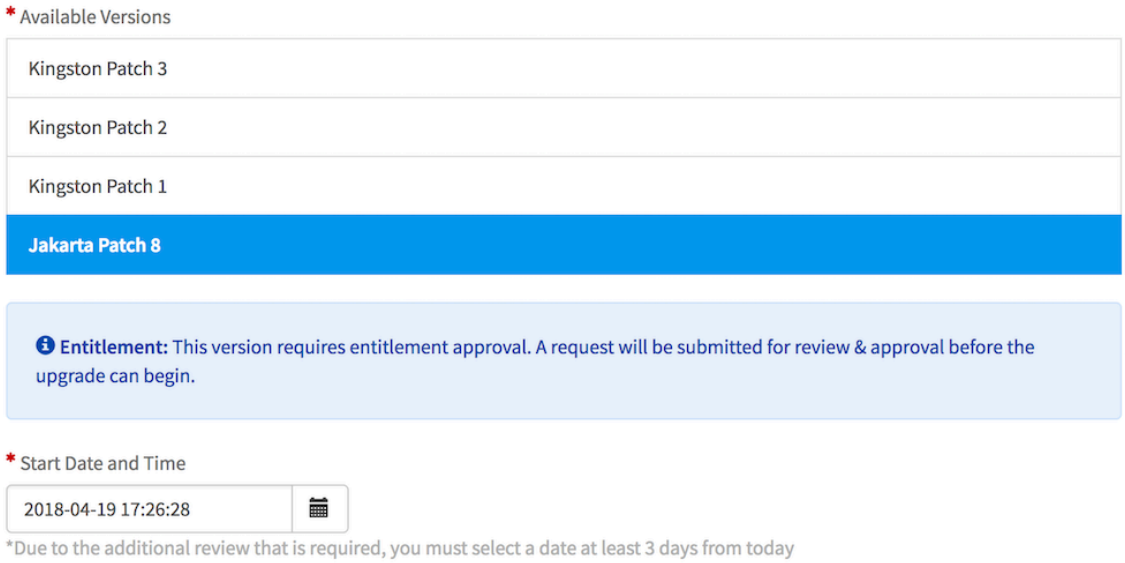
1. Check the configuration of the *Check distribution for possible upgrade* scheduled job to view how often and when it runs.
   a. Navigate to **System Scheduler** > **Scheduled Jobs** > **Scheduled Jobs**.
   b. In the list, find the *Check distribution for possible upgrade* scheduled job.
   c. View the **Next action** column to determine when the job next runs.
2. Verify that the **Check distribution for possible upgrade** sys_trigger is set properly for upgrading.
   a. Navigate to **System Scheduler** > **Scheduled Jobs** > **Scheduled Jobs**.
   b. Find and click the *Check distribution for possible upgrade* scheduled job.
   c. Make sure that the **Trigger type** is set to **Interval**.
   d. Make sure that the **System ID** is set to **None**.
3. Verify that the **Check database for possible upgrade** sys_trigger is set properly for upgrading.
   a. Navigate to **System Scheduler** > **Scheduled Jobs** > **Scheduled Jobs**.
   b. Find and click the *Check database for possible upgrade* scheduled job.
   c. Make sure that the **Trigger type** is set to **Run at System Startup**.
4. Schedule the upgrade in Now Support.
   a. Log in to Now Support.
   b. Click **Instances** in the left navigation menu.
   c. Select **Manage Instances**.
   d. Partners only: From the user menu, use the **Switch Company** feature to select a company.
   e. Select the instance that you want to upgrade or patch.
   f. In the **Actions** menu, click **Upgrade Instance**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The **Upgrade an Instance** Service Catalog item opens up. It is prepopulated with the instance name and available versions to which you can upgrade or patch the instance.

**g.** To specify a date and time for the upgrade or patch, click the calendar icon next to the **Start Date and Time** field.

**h.** Click the clock icon to select the time for the upgrade or patch.



> **Note:**
> Setting the time for an upgrade or patch is important. Set the upgrade or patch to start 10–15 minutes before the *`Check distribution for possible upgrade`* scheduled job runs. This setting allows enough time for the upgrade or patch request to update Now Support 's records about which release version your instance should be on before the *`Check distribution for possible upgrade`* scheduled job runs.

**i.** Click **Submit**.
A confirmation message appears. If you do not need an entitlement, a change request is created.

**5.** If applicable, request a version entitlement.

**a.** In the **Actions** column, click **Schedule**.
If the version does require an entitlement, this screen appears:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

**b.** Click the calendar icon and specify a date and time at least three days in the future.

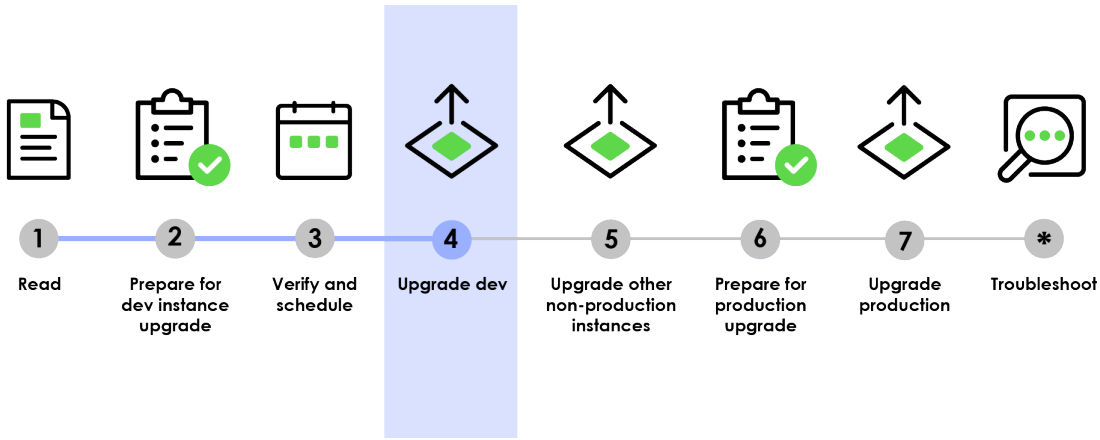
ServiceNow entitlement managers respond to your entitlement request within three days.

> **Note:**
> Setting the time for an upgrade or patch is important. Set the upgrade or patch to start 10–15 minutes before the *`Check distribution for possible upgrade`* scheduled job runs. This setting allows enough time for the upgrade or patch request to update Now Support 's records about which release version your instance should be on before the *`Check distribution for possible upgrade`* scheduled job runs.

**c.** Click **Schedule**.
A confirmation message appears. If you need an entitlement, the entitlement request number is included. Click the entitlement request number to view the request.

**d.** If you have any questions about your entitlement, comment on your entitlement request after you have submitted it.

## Phase 4 - Upgrade and validate the development instance



Track the progress of your upgrades with the Upgrade Monitor. For your first non-production instance upgrade (your development instance), use the Upgrade Monitor to process the skipped list of records that were not addressed in the upgrade. Then identify your update sets and perform functional testing.

### Before you begin

Role required: admin.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

## About this task

The Upgrade Monitor helps you upgrade an individual instance. You can monitor the progress of an upgrade and resolve conflicts between the upgrade and customizations.

## Procedure

1. Using the Upgrade Monitor, monitor the upgrade to your instance and validate that the upgrade to your development instance is complete.
2. After the upgrade for your development instance is complete, process the skipped records list in the Upgrade Monitor.

   As you are processing the skipped list, you may merge and revert records, resolve conflicts for an individual record, and make additional customizations. These changes go into the latest version, which goes into your current update set.
3. Identify your update sets.

   You need these update sets for your subsequent non-production instances. If there are issues that must be addressed after the upgrade, make the appropriate changes and they will go into your current update set. Collect the update sets that:

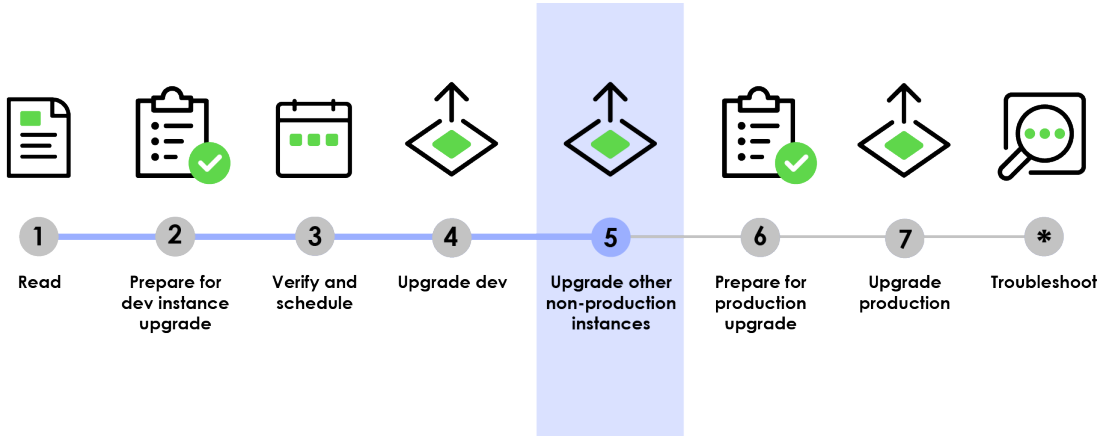
   - Were created while reviewing the skipped updates list.
   - Were created while changing customizations to work with the latest release.
   - Must go live immediately after your next upgrade.

   Gathering these update sets before your upgrade expedites the process of exporting, importing, and committing them onto your other instances. After the correct update sets are identified, follow the standard process for moving and applying those update sets. Refer to System update sets for details.
4. Before and after upgrading, conduct smoke tests on your development instance. Use your comprehensive test plan to perform functional testing.

   After upgrading, track any defects or deviations from the pre-upgrade testing results. Defect tracking can help identify root causes and create fixes. When a fix is identified, capture the fix in a single update set. The resulting update sets hold the cumulative fixes that should be applied to the production instance.

   To help automate your testing and validation on non-production instances, use the Automated Test Framework. You can use Automated Test Framework quick start tests and product testing suites to help you jump start your testing before and after upgrades. For a list of available tests and activation information, see Quick start tests.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



# Phase 5 - If applicable: Upgrade and validate your other non-production instances, such as your test instance

After you've configured and refined your development instance, request to upgrade any other non-production instances you have, such as a test instance. Immediately after the upgrade is complete, apply the post-upgrade changes made to your development instance, including activating optional plugins, installing and upgrading applications, and applying update sets.

## Before you begin

Role required: admin.

## About this task

This instance naming convention assumes that you have three ServiceNow instances. If you have three instances, upgrade your instances in this order:

1. Development
2. Test
3. Production

If you have more or less than three instances, or if you are using Team Development, these instance labels will be different. In general, upgrade your instances furthest from production towards your production instance.

After you have applied your development update sets to your test instance, perform the following tasks on your test instance (and other non-production instances, if applicable).

## Procedure

1. Create a system clone down from your production instance.
2. Schedule the non-production upgrade in Now Support and verify your upgrade configurations.
3. Validate that the upgrade to your non-production instance is complete.
4. Install any optional plugins that were installed on your development instance.
5. Install any custom applications and post-upgrade fix scripts that you need.
6. Install update sets.
   Use these update sets to move your initial changes into your subsequent non-production instances.
7. Perform functional testing and monitor the performance of your instance.
   Reproduce the typical user activities that occur on your production instance. The Automated Test Framework can greatly assist you in testing your non-production instances. You can use

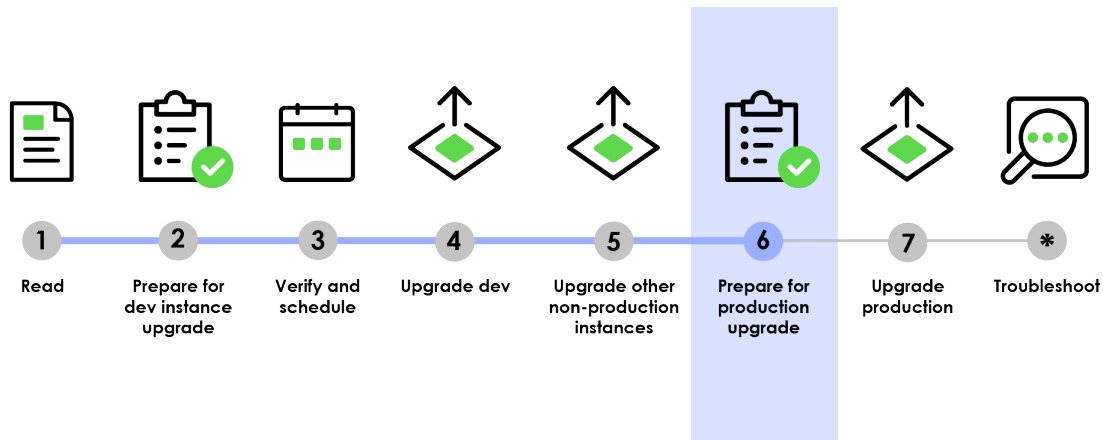
Automated Test Framework quick start tests and product testing suites to help you jump start your testing before and after upgrades. For a list of available tests and activation information, see Quick start tests. For extra testing coverage, you can also conduct user acceptance testing (UAT).

## Phase 6 - Prepare to upgrade the production instance

After you have configured and refined your test environment to be a good representation of your production environment, prepare to upgrade your production instance.

### Before you begin

Role required: admin.



To ensure that all stakeholders in your company are prepared for the final production upgrade, complete the administrative planning tasks in Phase 6 of the Upgrade planning checklist. When upgrading a production instance:

- Obtain confirmation from IT and management that all non-production instance defects have been fixed, validated, and included in an update set.
- Use the change management process established by your organization to track the upgrade.
- Communicate effectively with your user community regarding changes, new features, and process updates resulting from the upgrade.
- Negotiate a suitable upgrade time for all users of the ServiceNow system.

  For example, schedule the upgrade after hours, to minimize impact to your users. Remember to schedule the upgrade to occur 15–20 minutes before the *Upgrade* scheduled job interval.

- Allow time in your change window to run all test cases and validate that all integrations, key business functionality, and system performance are acceptable. Add a time buffer for responding to errors without breaching the change window.

### About this task

### Procedure

1. Profile the performance of your instance before upgrading.

   Pre-upgrade instance validation can provide a reliable benchmark of the current operating environment and alert you to any issues that may appear after the upgrade. For example, it sometimes appears that specific functionality is broken by an upgrade. Analysis might show that the functionality did not work properly in the production instance, even before the upgrade.

Before performing the upgrade, analyze the current operating environment. Specifically, review:

- Key functionality
- Integrations
- Instance performance

2. Use the ServiceNow Performance homepage to document the performance of your instance before the upgrade.

   You will later compare and contrast this information during your post-upgrade validation and testing. Benchmarks will be different for each of your instances.

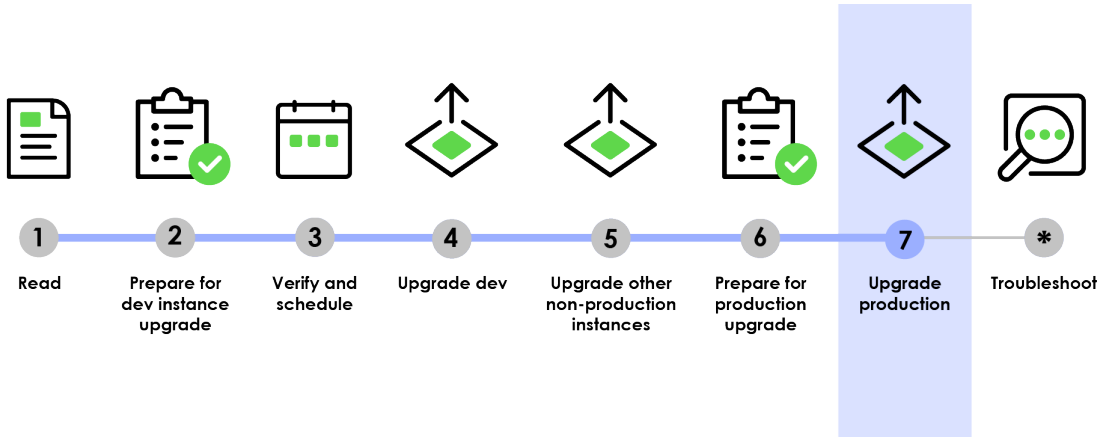
   To access the ServiceNow Performance homepage:

   a. Log in to your instance.

   b. From the list in the top left of the instance homepage, select **ServiceNow Performance**.

3. On your clone, perform functional testing and monitor the performance of your instance. Replicate typical user behaviors that occur on your production instance. Assign a consistent core team of power users and key stakeholders to validate important functionality in the ServiceNow instance before and after upgrades.

## Phase 7 - Upgrade the production instance



After you have upgraded your development, non-production, and test instances, upgrade your production instance last. Then validate that the upgrade was complete, apply update sets and fix scripts, and perform post-upgrade user acceptance testing (UAT).

## Before you begin

Role required: admin.

## About this task

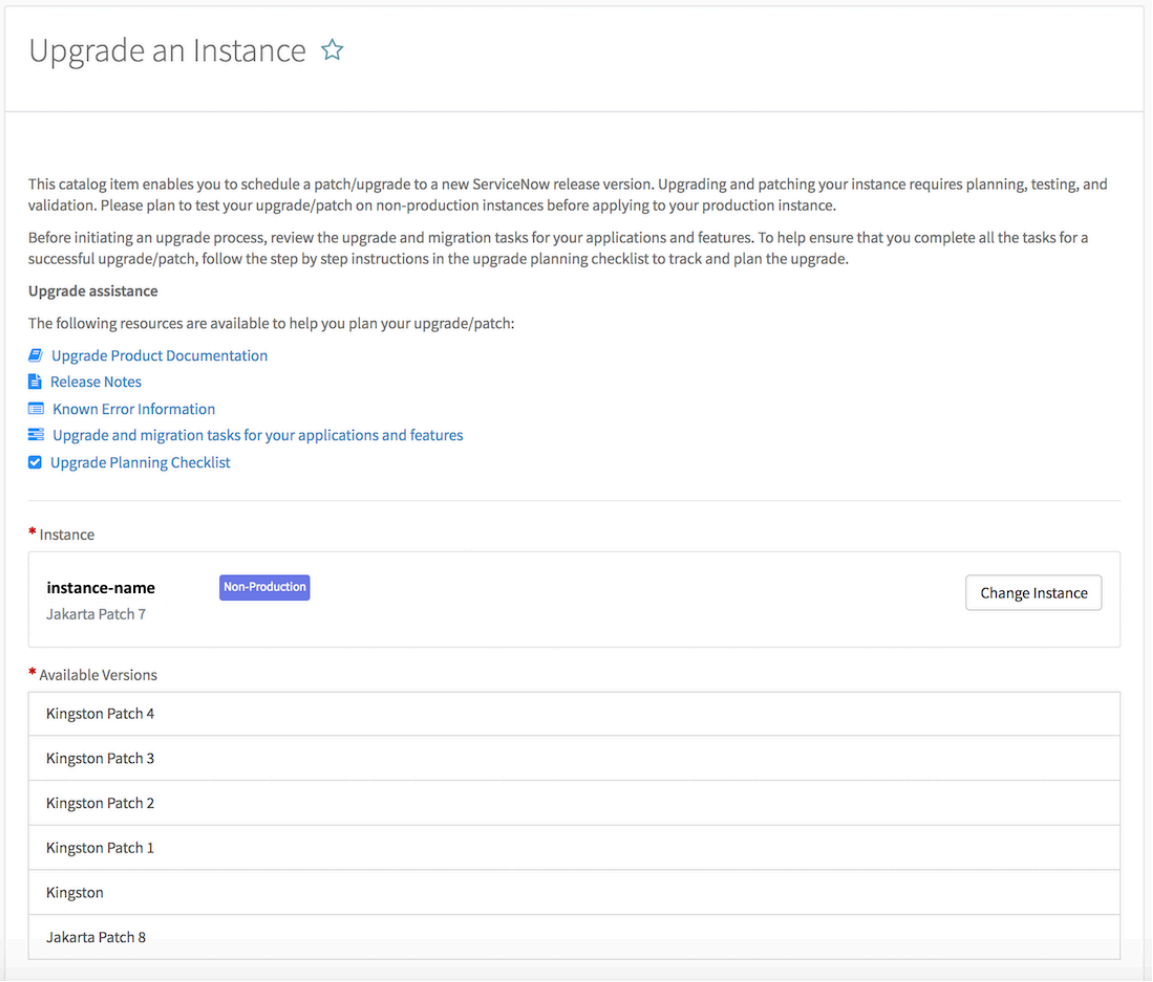
## Procedure

**1.** Schedule the upgrade in Now Support.

**a.** Log in to Now Support.

**b.** Click **Instances** in the left navigation menu.

**c.** Select **Manage Instances**.



**d.** Partners only: From the user menu, use the **Switch Company** feature to select a company.

**e.** Select the instance that you want to upgrade or patch.

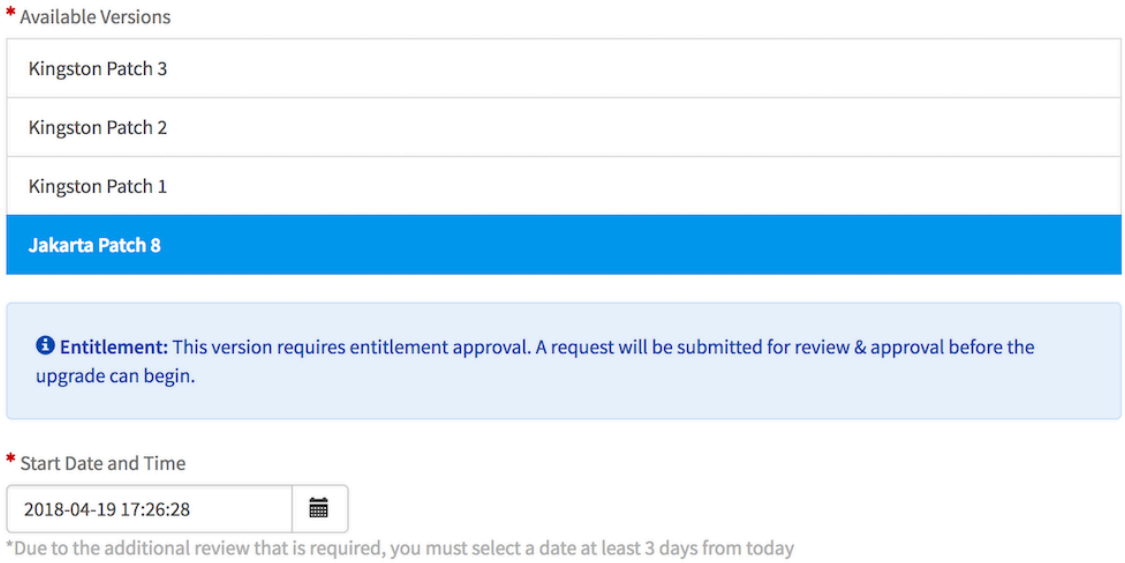
**f.** In the **Actions** menu, click **Upgrade Instance**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The **Upgrade an Instance** Service Catalog item opens up. It is prepopulated with the instance name and available versions to which you can upgrade or patch the instance.

**g.** To specify a date and time for the upgrade or patch, click the calendar icon next to the **Start Date and Time** field.

**h.** Click the clock icon to select the time for the upgrade or patch.



> **Note:**
> Setting the time for an upgrade or patch is important. Set the upgrade or patch to start 10–15 minutes before the *`Check distribution for possible upgrade`* scheduled job runs. This setting allows enough time for the upgrade or patch request to update Now Support 's records about which release version your instance should be on before the *`Check distribution for possible upgrade`* scheduled job runs.

**i.** Click **Submit**.
A confirmation message appears. If you do not need an entitlement, a change request is created.

**2.** If applicable, request a version entitlement.

**a.** In the **Actions** column, click **Schedule**.
If the version does require an entitlement, this screen appears:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

**b.** Click the calendar icon and specify a date and time at least three days in the future.

ServiceNow entitlement managers respond to your entitlement request within three days.

> **Note:**
> Setting the time for an upgrade or patch is important. Set the upgrade or patch to start 10–15 minutes before the *`Check distribution for possible upgrade`* scheduled job runs. This setting allows enough time for the upgrade or patch request to update Now Support 's records about which release version your instance should be on before the *`Check distribution for possible upgrade`* scheduled job runs.

**c.** Click **Schedule**.
A confirmation message appears. If you need an entitlement, the entitlement request number is included. Click the entitlement request number to view the request.

**d.** If you have any questions about your entitlement, comment on your entitlement request after you have submitted it.

3. Monitor the upgrade to your instance and validate that the upgrade to your production instance is complete.
There are several methods of verifying that your upgrade is complete:
   - Navigate to the **System Diagnostics** > **Upgrade Monitor**.
   - Navigate to **System Diagnostics** > **Upgrade Log** and locate the `Notifying HI that upgrade has been completed` message.
   - Navigate to **System Definition** > **System Upgrades**. Information about all system upgrades is listed.
   - Navigate to **System Diagnostics** > **Upgrade History** and search for the most recent upgrade.
4. Apply any update sets and post-upgrade fix scripts that you have.
5. Validate and test your instance by conducting user acceptance testing (UAT).
Performance and operating information is available in the system logs, which offer an excellent source of information for evaluating the inner workings of a ServiceNow instance. Use this

information to help resolve as many errors as possible. To access the log data, navigate to **System Logs** > **System Log** > **Errors**.

**Note:**
Not all errors in the error log are results of your upgrade. Error messages are often present in pre-upgrade instances, and many of these messages do not affect users or performance.
